From Herbert Hoover, Secretary of Commerce, has come national recognition of the safety work being done at the Bristol mine, Crystal Falls, Mich. The mine is operated by Oglebay, Norton & Co., Cleveland. The award, "Sentinels of Safety" trophy, is in recognition of the mine's having won first place in the national safety competition. In addition to the trophy each employee is given a certificate of honor.

Crispin Oglebay, president, says: "The mine operated throughout 1927 without one lost-time accident. During that period we took 375,265 tons of iron ore from the ground and used 434,916 man-hours in doing so. However, the actual non-accident record of the mine started May 12, 1926, and continues to date. In the two-year period we mined 748,420 tons of ore and employed 868,944 man-hours."

In his letter announcing the award, Secretary Hoover says: "Your record is one in which you and your employees may feel a just pride. It represents a definite contribution to the personal welfare of industrial workers, and marks a forward step in the elimination of unnecessary accidents in American industry."

Chicago to Pacific Rail-and-Water Rates Effective May 31

WASHINGTON, May 28.—The Interstate Commerce Commission today voted not to suspend the Illinois Central-Redwood steamship tariffs equalizing rates on iron and steel products from the Chicago district to Pacific ports by way of New Orleans with those from the Pittsburgh district to Pacific ports by way of Atlantic ports.

The Illinois Central-Redwood rates therefore will become effective May 31. They range from 56c. per 100 lb. on tin plate to 86c. on numerous iron and steel products. A rate of 61c. will apply to most of the products in the list.

Pig Iron Rates from Erie and Johnstown, Pa., Reduced

WASHINGTON, May 28.—Passing upon a complaint by the Perry Iron Co., the Interstate Commerce Commission in a decision announced today ordered rates on pig iron from Erie, Pa., to the New York rate group reduced from $5.42 to $4.90 and to the Boston rate group from $5.92 to $5.10 per gross ton. The new rates are to become effective Aug. 4.

In a simultaneous opinion, the commission held that the rate of $5.54 per gross ton on pig iron from Johnstown, Pa., to Westfield, Mass., is unreasonable to the extent it exceeds $5.04 per ton, with a minimum carload of 56,000 lb. The new rate, growing out of a complaint by the H. B. Smith Co., Westfield, is to become effective July 20.

The commission also held that the present rate from Erie to Boston is unduly prejudicial to the Perry Iron Co. and unduly preferential of shippers of pig iron from DuBois and Punxsutawney, Pa., to the extent that the Erie-Boston rate exceeds the rate from DuBois and Punxsutawney to Boston. Inasmuch as the rate from DuBois and Punxsutawney to Boston is $4.91 the railroads either will have to reduce the Erie-Boston rate to this basis or increase the rate of $4.91 to $5.10. it is expected the latter course will be adopted.

Deoxidation with Silicon in the Open-Hearth Furnace

One of the primary factors in the rate of elimination of silicates from open-hearth steel is the size of the particle formed on deoxidation. If excess silicon is added to a medium or high-carbon steel, very small glassy particles are formed which rise slowly out of the steel. On the other hand, if there is sufficient iron oxide or manganese oxide to flux the silica, a rapid increase in rate of elimination is found due to the increased size of the silicate particle.

From the results of laboratory work on deoxidation with silicon performed by the United States Bureau of Mines, it is possible to predict just what type of inclusion will be formed with any silicon addition to any type of open-hearth steel, provided manganese is not added at the same time. Predictions from the laboratory work have been checked on various open-hearth heats and, out of 67 steel samples studied, only six samples showed types different from that predicted. These results make it possible to designate the optimum amount of silicon to add to any open-hearth heat in killing in the furnace and show that, if clean steel is desired, certain grades of steel should be killed in the furnace with silicon and manganese rather than silicon alone. Investigation of the properties of the manganese silicates thus formed is now in progress.

GERMAN STEEL PRICES RISE

Higher Coal a Factor—Profits Smaller as Exports Expand and Domestic Trade Contracts

BERLIN, GERMANY, May 11.—As a result of the rise in the price of Ruhr coal following the decision of the arbitration court for an 8 per cent increase in miners' wages, the iron and steel market has advanced to a considerably higher level. Increases in coal prices averaging about 1 m. (24c.) a ton were sanctioned by the Reichskohlenverband (National Coal Union) and the Reichskohlenrat (Federal Coal Council). Permission was given to distribute this increase among the different qualities of coal. As higher prices can be made effective only in the so-called non-competitive districts, where British, Polish or Dutch coal cannot be sold, the advances will probably average about 2 m. (48c.) per ton, or about 14 per cent in such territory, leaving the market substantially unchanged in the sections where there is competition. Coke prices are unchanged.

Pig Iron Prices Unchanged

As many blast furnaces have no coal mines or coke ovens and can buy coke in the open market at unchanged prices, no advance was announced in pig iron prices. The dullness of the iron market militated against an upward revision of prices at this time. On products controlled by the Ingot Steel Syndicate the following changes in prices per metric ton were made:

	New Price		Former Price	
Ingots	104.00m.	($24.89)	100.00m.	($23.93)
Blooms	111.50	(26.68)	107.50	(25.72)
Billets	119.00	(28.48)	115.00	(27.52)
Slabs	124.00	(29.67)	120.00	(28.72)
Steel bars				
f.o.b. Oberhausen	141.00	(33.74)	137.00	(32.78)
f.o.b. Neunkirchen	135.00	(32.30)	131.00	(31.35)
Structural shapes				
f.o.b. Oberhausen	138.00	(33.02)	134.00	(32.07)
f.o.b. Neunkirchen	132.00	(31.59)	128.00	(30.63)
Steel bands				
f.o.b. Oberhausen	164.00	(39.25)	158.00	(37.81)
f.o.b. Neunkirchen	160.00	(38.29)	154.00	(36.85)
Heavy sheets	158.00	(37.81)	151.00	(36.13)
Wire rods	159.30	(38.12)	152.30	(36.49)

Although these prices have been accepted by the organized consumers, many manufacturers are objecting to the advances, claiming that they cannot be passed on to domestic buyers. The new prices will have no effect on manufacturers for export, as the price rebates granted to exporting manufactures will be increased. Steel producers, however, point out that domestic business has been declining, except for a brief buying movement that preceded the rise in the market. They further point out that decreased domestic sales and increased export sales have reduced profits. A few months ago 75 per cent of all business was domestic and 25 per cent was export. Today the proportion of domestic business has declined to about 60 per cent of the total and exports represent about 40 per cent.

Steel Cartel Reports Increased Output

The report of the International Steel Cartel for the first quarter shows increased production in the four principal member countries, compared with the output in the corresponding period in 1927. The following comparison is in metric tons:

	First Quarter 1928	First Quarter 1927
Germany	4,212,940	3,956,405
France	2,295,000	2,005,350
Belgium	923,860	899,570
Luxemburg	638,382	582,518

British steel output showed a decline of about 8 per cent compared with the first quarter of 1927.

Recent demonstration of an American track-laying tractor at a road building exhibition in Durban, Natal, South Africa, created a favorable impression, according to a report received by the Department of Commerce from Edward B. Lawson, assistant trade commissioner at Johannesburg. Adoption of such equipment is reported as being contemplated by South African municipalities, which are making extensive road expenditures.

BELGIAN PRICES ADVANCING

Mills Well Booked with Tonnage and Exporters Seeking to Cover on Sales at Low Prices

ANTWERP, BELGIUM, May 11.—The market is developing greater firmness, and, with makers well booked, in many cases through July and August, further advances in prices are expected. An added factor for market strength is the lack of serious competition from Germany or France, producers in both countries being well occupied with domestic business. Exporters in London and Hamburg are now seeking to place tonnage for export which they had been withholding in hope of securing lower prices. Makers point out that, based on actual costs of production, the price level is not high, and are confident that the market will remain active for some time. Few are willing to give options or contract for future deliveries except at sharp advances in prices.

Pig Iron.—Domestic demand continues good, and inquiry from foreign consumers is improving. No. 3 phosphoric foundry iron is quoted for export at £3 2s. to £3 2s. 6d. ($15.10 to $15.21) per ton, f.o.b. Antwerp. British competition in foreign markets is keen. Basic iron is quoted at £2 16s. to £2 18s. ($13.64 to $14.13) per ton, f.o.b. Antwerp. Demand for iron and steel scrap is better. Heavy melting steel for open-hearth furnaces is quoted at 460 fr. ($12.80) per ton, and blast furnace scrap at 450 fr. ($12.50) per ton.

Semi-Finished Material.—Demand for billets, blooms and sheet bars is in excess of the available supply and prices have advanced. Blooms range from £4 4s. ($20.45) per ton for 8-in. to £4 12s. ($22.41) per ton for 4-in.; billets from £4 13s. ($22.65) per ton for 3-in. to £4 16s. ($23.38) per ton for 2-in. Sheet bars are quoted at about £4 17s. ($23.63) per ton, f.o.b. Antwerp.

Finished Material.—Prices are irregular, but with a decided upward tendency. Despite higher quotations, transactions are numerous, with a large number of exporters and merchants seeking to cover on sales made when the market was less buoyant. Prices are higher on most products and promise to advance further. Demand for hoops is greater than for some time, with prices rising rapidly.

New German Plant to Produce Magnesium Metal

HAMBURG, GERMANY, May 5.—While duralumin is the principal raw material used in the manufacture of aircraft in Germany, partial use of steel, wood and other materials having practically ceased, magnesium metal is being introduced and promises to increase in use for this purpose.

Following numerous experiments the I. G. Farben Co. is erecting a new plant for the manufacture of Electron or magnesium alloyed with fractional percentages of aluminum, zinc and magnesium by a new process. Costs of production are said to have been materially reduced and lower selling prices are apparently in prospect. The tensile strength of the magnesium alloy is also said to have been increased.

In the past, this metal has been produced with a tensile strength of 36 to 42 kg. per sq. mm. maximum (approximately 60,000 lb. per sq. in.) and it had a Brinell hardness test of 60 to 70. The weight was about one-third less than the weight of duralumin, but the price was much higher. It is believed that with the greater strength of the new alloy aircraft builders may construct planes to carry more powerful motors and more passengers. Production at the new plants of the I. G. Farben Co. is expected to begin by the end of the year.

A classified directory of 208 pages has been issued by *Engineering*, London, made up from advertisements appearing in that publication. It is covered in English, French, Spanish, Italian and German, and gives telegraphic addresses, codes, trade names and a wide variety of details of the products of the advertisers.

This Issue in Brief

Ignorance of costs is an important cause of price-cutting. Manufacturers with the best cost systems seem to have the most backbone in maintaining prices which insure a fair profit.—Page 1584.

Skill of the maker is more important than quantitative chemistry in manufacturing alloy steels, says speaker at Steel Institute meeting. Intangible physical properties demanded by customers are usually intimately associated with the finishing stage of the heat, and are so intimately connected that the judgment of trained melters usually cannot be relied upon and certain specific routines are set up.—Page 1578.

In fixing your selling price do not overlook the fact that it must be high enough to provide a satisfactory profit over a period of years, lean and fat. Too many manufacturers price a new product at an optimistically low figure, based on faulty cost data, only to find that a fair profit can not be made without an advance, allowing nothing for losses accumulated during the time the product was under-priced.—Page 1533.

Even though less machinable than high-speed steel, the high-carbon, high-chromium steels, with about 2.25 per cent carbon and 12 per cent chromium, are becoming increasingly popular, says metallurgist, because of their excellent wearing qualities.—Page 1541.

In seeking to eliminate waste in your plant, it is better to aim too high than too low. Many manufacturers who assume, for example, that 5 per cent waste is unavoidable, will find that 2 per cent can be attained without a great deal of trouble.—Page 1545.

Coolant made of sulphur-base oil mixed with machine oil or paraffine oil gives good results. Machine-tool builder uses it on majority of work.—Page 1541.

Need ingot molds be tapered? It is questionable whether taper is needed for ease in stripping, says steel maker. Another declares that decreasing the taper improves the quality of the steel.—Page 1580.

Foundry doubles production and halves direct labor cost by utilizing overhead space. Vertical and overhead core ovens release floor space for molding and pouring. Continuous conveyors carry cores through ovens. The gas flow is counter to the direction of travel of the conveyors.—Page 1523.

Moderate decline in business is not far distant, Dr. Haney indicates. But a prolonged or severe readjustment is unlikely, owing to the fact that commodity supplies in general are not sufficiently in excess of demand to warrant it.—Page 1542.

High-pressure distribution is wasting the money saved by scientific, low-cost product. "Competition is *not* the life of trade," says distributer. Competitors should cooperate. It is nearly as essential to be on good terms with one's competitors as with customers.—Page 1583.

Delve into your costs, and you will be surprised at the reductions you can achieve. Too few plants know their costs as well as they should. In most instances the foreman takes the word of the man at the machine, and the superintendent takes the word of the foreman, without actual investigation. If the workmen do not know what to aim at, costs are bound to be much higher than they should be.—Page 1545.

More steel is coming into the United States and less steel is leaving it. Exports for first four months of 1928 were almost 3 per cent below same period of 1927, while imports gained more than 9 per cent.—Page 1575.

Will security prices be forced down by readjustment of abnormal volume of bank credits? Credits are at record-breaking levels, without equivalent volume of business. The difference is due to excessive speculation, and Dr. Haney believes readjustment will bring about a decline in security prices.—Page 1543.

Pays salesmen on a profit-sharing basis. Distributer reports successful experience with plan of paying each salesman a fixed percentage of his sales, out of which salary and expenses are drawn, the remainder being retained by the salesman as a commission.—Page 1583.

Sellers are as much to blame as buyers for beating down prices, is decision arrived at in conference of buyers and sellers. Few sellers quote their lowest price first, so buyers can hardly be blamed for "testing the market." A one-bid policy would greatly simplify matters for both buyer and seller.—Page 1584.

Unless "existing laws are modified" low margin of profits in steel industry will continue, C. M. Schwab believes. Wants a committee of steel men appointed to study the problem and recommend changes in statutes.—Page 1528.

Machinability does not depend solely upon the material itself. There are four other factors, and one of the most important is the human element. The machine operator will shy at the new steel, even if it be more machinable than the old.—Page 1541.

A Gary Medal of Steel

A UNANIMOUS vote applauded the resolution of the directors of the American Iron and Steel Institute to establish a medal rather than a memorial tablet to the late Elbert H. Gary. Many tablets to him will doubtless be erected by his friends at fitting places to commemorate his impress on the life and industry of a community. But no tablet could perpetuate the memory of his organizing ability and general influence so well as an award given yearly by the whole industry to that man, irrespective of age or nationality, who has done most for the advancement of the steel and iron business—either by technology, organization, humanitarianism, selling, or contribution to international relations.

Now, before the plans are entirely perfected, and the artists' conception approved, is the time to urge upon the committee in charge the fitness of making the award in *Steel*.

A medal is an enduring evidence of gratitude for services of outstanding value. It is eminently fitting that in centuries gone by such medals should have been struck in gold. Donors strove thus to compress the highest value by expending great artistic skill in design and execution, and employing the most valuable material.

But the best reason for continuing to make medals in gold today is custom. There are other good metals. Gold has no longer the virtue of being the most valuable metal. Platinum costs more and is equally permanent. Had Judge Gary been an eminent jeweler, it would be fitting to make the award of materials in which he worked in his lifetime — a gem-inlaid plaque of gold or platinum would be most appropriate. But he was a man of steel. What more fitting than that this award in his honor should be of steel?

An objection that steel tarnishes, gets ugly, and finally rusts entirely away is no longer tenable. For we have stainless iron and steels, of beautiful silvery color and luster. These alloys too are malleable. Doubtless the United States Mint would fail if it tried to strike a medal of stainless steel, using the routine for a double eagle, but drop forgers know how to do it. For that matter, if forging could not develop the clean-cut outlines desired by the artist, his cast might be used as a master pattern and the award engraved from a flat disk, not only giving each one the virtue of an unreproducible original, but also recognizing the fact that machine shops are as essential to the conversion of iron ore to useful tools as are furnaces and forge.

That a stainless steel medal does not have any bullion value is more of a virtue than a fault. Gold medals are so tempting to light-fingered bystanders that a bronze replica is usually donated for show purposes, the real medal being locked up in a safe deposit vault, in the dark, where it does no one any good. (An economist would even say that this practice violates sound law.)

The Gary Medal to its owner will be a priceless thing, no matter how it is made. No doubt the committee will see to it that the artistic creation is beautiful and appropriate. It is most fitting that it should be cut from steel. There is no more valuable metal.

Gains in Rolled Steel and in Castings

SOME recent references to the growth of the steel industry have seemed in conflict with more general references to the iron and steel industry as a whole. The disparity has been due to the fact that iron and steel castings have grown much less than rolled steel, while rolled iron has decreased.

A broad statistical view, covering a period of 20 years, should be of interest, and to cover temporary fluctuations three-year averages are taken. It chances that 1905, 1906 and 1907 were all active years, and so likewise have been the past three years. There are precise statistics of production of steel castings, steel ingots, finished rolled steel and finished rolled iron. Production of iron castings may be estimated with sufficient accuracy for the purpose by adding one-fourth to the reported production of foundry pig iron, malleable pig iron and ferrosilicon. It must be well understood that such estimates are only very rough, although presumably quite adequate for comparative purposes. The comparison is made below. Steel ingots are included but do not of course enter into the total:

Production at 20-Year Interval

	1905-6-7 Gross Tons	1925-6-7 Gross Tons	Change Per Cent
Iron castings.....	7,058,000	9,117,000	+29.2
Steel castings....	712,530	1,256,271	+76.3
Steel ingots......	(21,549,029)	(44,951,253)	+108.6
Rolled steel......	16,615,557	33,271,137	+100.2
Rolled iron	2,148,878	649,491	— 69.8
Total	26,535,000	44,294,000	+66.9

We see that in 20 years rolled steel doubled, whereas the total product of the iron and steel industry increased by a shade more than two-thirds. By the general comparison steel castings more than held their own in rate of growth, iron castings did not, and rolled iron almost disappeared.

By such a comparison one sees that rolled steel has had quite a gain directly at the expense of rolled iron and it has gained at what might be said to be the expense of iron castings. That is, had there been no rolled material consumers no doubt would have tried in many cases to fill their wants with castings. The material might not have been as serviceable and the tonnage increase might have been all the larger. By the same token, alloying and heat-treating steel and other improvements tend to restrict steel tonnage growth.

Rolled steel, being now by far the preponderating material, constituting 75 per cent in the last three years against only 62.5 per cent 20 years earlier, is thus largely deprived of one source of tonnage increase; yet the public is given greater service and frequently the producer of the better steel fails to collect money for the increased value.

For Better Steel Earnings

IN his institute address last week Mr. Schwab pursued his familiar and appropriate line, that the steel industry needs and deserves a better return upon its capital. He said that the present investment in steel making is five billion dollars, about a billion and a half having been put in during the last 14 years, while earnings are now only slightly more than they were 15 years ago; i. e., the additional investment is bringing in practically nothing.

One comment on Mr. Schwab's remarks is suggested by the general character of the steel market in the last few years as compared with its character before the war. Taking the steel market of the past five years, since the culmination of the general advance in finished steel prices, with one upward movement in 1922 and an additional one in the early months of 1923, totally different behavior is seen in these years from that in all the market movements preceding.

The familiar course formerly was for all steel products to advance or decline together, not exactly *pari passu,* but quite in harmony. Steel was steel, and that was about all there was to it. In the last five years one steel product has had no decline, two have had a single decline each, not large, and some have tumbled and tumbled. It has not been a matter of demand relative to capacity, for some lines with little surplus capacity have declined more than others, with greater surplus. It has been largely a matter of the particular circumstances in the individual line. In other words, if one were permitted to indulge in personalities he would tell certain groups in the steel trade to take pattern after certain other groups.

Mr. Schwab's complaint of cross hauling as a dissipation of profits in unnecessary transportation has a real foundation. The issues involved here are highly complicated and are by no means confined to the steel industry, though undoubtedly the embarrassments of steel producers have been much increased by the abolition of Pittsburgh basing. That order has been followed by a series of drives for a recasting of the freight rate structure that has sharply accentuated the competition of district against district for the trade of consumers in zones more remote from the centers of steel production.

In saying that the situation in respect to the steel industry's profits raises the question "whether the laws should not be changed," Mr. Schwab recalls the like attitude of Judge Gary in his presidential address at the institute meeting of October 23, 1925. Judge Gary then asked whether it would not be "advisable to make another effort to stabilize the business" in case the Department of Justice would be willing to participate. In commenting on that proposal THE IRON AGE said that price stabilization was a question on which the Government and the public were not likely to see eye to eye with the leaders of the steel industry. In the two and a half years that have intervened the pressure of the farming community for legislative remedy for its disabilities has increased to a degree that has made farm relief a foremost political issue, and in like measure the possibility of Department of Justice cooperation in a stabilizing movement in steel has become more remote.

The increasing reasonableness of the Government's attitude toward business, as expressed by its judicial and executive departments, has been ground for satisfaction to the steel industry and to all industry. The question may well be raised, indeed, in view of the Supreme Court decisions in the Maple Flooring and Cement Association cases in June, 1925, whether the remedy for the present unsatisfactory conditions is not largely within the reach of the steel producers themselves, without further aid of Federal authority.

Have Mergers Brought Stabilization?

STABILIZATION in steel prices in recent years is revealed by the record. The fact has not been generally apprehended because the stabilization has been at a low level and, if anything, has served to accent the claims of low returns on capital invested in the steel industry.

Meanwhile there is abroad the view that the steadiness arises from the fewer companies now in competition—the result of mergers and acquisitions. If that be true, a stiffening as well as stabilization ought to be the outcome. Instead prices in recent years tell the story of a buyers' market, while the reduction in wave heights shows how the mass of economic statistics now available has helped to flatten the curves of the business cycle.

Now as to the record: The price swing in 1912, as indicated by THE IRON AGE composite price for finished steel, was 0.331c. a pound, between high and low, or $6.62 a net ton. The next year it was $6.54. Yet in 1925 it was $3.26; in 1926, $0.74; in 1927, $2.66 and, so far this year, $1 a ton. When referred to the average price for the year, the swings for the two years just preceding the war were over 20 per cent of the average, while they fell from about 12 per cent of the average in 1923 and 1924 to 1½ per cent in 1926, 5½ per cent last year and 2.1 per cent for 1928 to date. Very long swings occurred in the years following the war, $17.06 (or 23.2 per cent of the year's average), for high-pressure 1920 and $19 (or 37½ per cent of the average price) for calamitous 1921.

Similar showings may be made in the case of specific commodities. Steel bars changed $8 a net ton in 1919 ($28 in 1920), but for 1925, 1926 and 1927 the fluctuations were $4, $2 and $5, respectively. Plates, which had a range of $10 in 1919, changed $4, $2 and $3 in the last three years. So it was with shapes. In sheets, a volatile product market-wise, the swing was $63 in 1920 and $32 in 1921, while for the last three years it was $10, $5 and $6. Plain wire suffered a change of $17 a net ton in 1919, but only $3 in 1925, nothing in 1926 and $2 last year.

There are now one-third fewer companies making the bulk of the bars, plates, shapes, sheets and wire than five years ago. Yet, while price changes have occurred less frequently and therefore have made for shorter swings in a given year, the finished steel composite price has dropped from $54.76 a ton, the 1923 average, to $47, the average for the first third of 1928, a difference of $7.76 a ton. No wonder there have been marked economies in manufacturing. Market conditions compelled them and at the same time the savings in production cost contributed to the decline.

It thus appears that amalgamations have not lifted steel prices, whatever they may have done to forestall more drastic reductions, with possible receiverships. While the problem is primarily the producers' rather than the buyers', yet if it be true, as is widely asserted, that buyers are disposed as never before to pay fair prices because they are good for industry in general, both sides of the market are interested in giving widest publicity to the facts shown above.

Consumers appreciate that they are getting steel of a quality superior to that of a few years ago; at the same time, they cannot be blamed for applying pressure where weak selling is in evidence. Plainly much is yet to be done in the direction of better selling and in creating new outlets for the products of the steel mill, also in bringing the buyer to a right appraisal of basic things that are fully as important as price.

Dropping Absentees from the Payroll

IT is the common practice, where an employee of an industrial plant is sick or injured or for other reason is absent from his work, even for a protracted period, to keep his name on the payroll unless, of course, there is no intention of taking him back. Although he is not producing and is receiving no pay envelope, he is still considered as a member of the working force. Some employers have found this plan to have its disadvantages and have dropped it. Where the number of workers is large and the return of absentees to their places is accompanied by no numerical change in the employee list there is confusion as to the relation of output to working force that it is desirable to avoid.

One manufacturing company employing a large working force has had in effect for some time the rule that at the end of two weeks' absence, for any cause whatever, the worker's name shall be removed from the payroll. The man's chance at his job has not been jeopardized, however, if his services have been satisfactory. When he is ready to return he will be taken back. But he must re-enter through the employment office, making application as if he were a new man. The worker who is hired to operate his machine goes on the roll, but as a substitute and not as a permanent employee. When the first man returns to work, after passing through the employment office, his substitute turns the machine over to him, and reports back to the employment office. It often happens that another job is found for the substitute, but the company had assumed no obligation to keep him continuously employed.

An important reason for the automatic dropping of absent employees grows out of the system of compulsory physical examination which the company in question maintains. The returning employee presents himself at the employment office and submits to reexamination, which is a good thing for him as well as for the company, especially where absence has been due to disease or injuries.

CORRESPONDENCE

Recent Progress in Special Steels in England and Sweden

To the Editor: You have asked for my impressions of the progress of steel manufacture in Sweden and in Sheffield, England, where I have recently spent some time. I had the opportunity of visiting several of the steel works and manufacturing plants in Sweden, as well as in Sheffield. I came into close contact with some of the leading metallurgists of Sweden and England and my observations brought home to me the fact that the steel industry in both of these countries is on the mend and that they are making very rapid progress in new metallurgical developments.

While there has been some industrial trouble in Sweden in the iron mines and in the wood pulp mills, all of the steel works have sufficient stocks of pig iron and ore to continue operations for many months. So that this strike, unless it is protracted, will not affect the output of steel in Sweden.

Several of the works in Sweden, notably Forsbacka and Sandviken, have been very successful recently in securing large orders, particularly from the Continent, for ball-bearing steel, both hollow and solid. Whereas some years ago they ran into serious competition with the German mills, the quality of the steel from these Swedish mills is such that they are now firmly established and are selling some of the leading manufacturers of bearings on the Continent, as well as makers of automobiles.

These mills are also enjoying good business in their hollow drill steel, being the only mills making hollow drill steel by the so-called mandrel process. I understand one other works has developed a successful drill steel, particularly in the South African mining field, by rolling the steel by the sand-core process, inserting a mild steel tube into the billet after it is drilled. The claim is that the mild steel wall on the inside of the hole is less subject to corrosion than high-carbon steel, and therefore drill steel made by this process retains a smoother and more uniform hole after use than the ordinary sand-cored hollow drill steel. This is the Gimo-Osterby works.

At one of the mills visited, namely, Forsbacka, they are also making some very interesting experiments for producing rustless or stainless steel direct from the ore, producing this steel in a small electric furnace by a new process patented in Sweden. I understand that Forsbacka, having done the initial experimenting, has free use of the original patent. While steel made by this process is still in the experimental stage, results have shown that the process is practicable, and it is only a question of further developments and experiments until stainless steel can be produced successfully by this method. By this process the cost of manufacturing stainless steel will be greatly reduced, possibly by one third, which of course will tremendously widen the field for it. Making steel by this process will require a large use of electricity, but this can easily be supplied in Sweden because of the cheap water-power available in that country. I understand that the patent has been granted to other works in Sweden and that one of them has already started the erection of a furnace.

During my visit to Sheffield I visited several of the largest and best known manufacturers of high quality steel. The steel business in Great Britain is in very good shape, and at some of the works they are now melting somewhat more steel than in war time.

At the Imperial Steel Works I had an opportunity of seeing high-speed steel made by the new so-called "wireless" process. This is really a crucible furnace heated electrically, purely by induction. It is an entirely new process and as far as I know the Imperial Steel Works has the only plant in the world making steel by this process. By this so-called "wireless" method, they are able to make about 1100 lb. of steel, which is a cast, in about 1 hr., and because of the design of the furnace they are able to get an absolutely perfect and thorough dead melt. By applying a patented nozzle, a direct and clean pour is made into the ingot molds without any sputtering and splashing, which sometimes occurs by teeming the ordinary crucible. Furthermore, by using this furnace they can easily pour ingots up to 300 lb., which, of course, is not possible with the old clay pot crucible without "doubling." The metallurgists with whom I talked said they felt very sure that by this method they could produce finer and more uniform steel than they ever had been able to get in the clay pot crucible, and this I consider quite an admission when you realize that Sheffield is the home of crucible melting.

It is rather unfortunate that the high American tariff, particularly on tungsten steels, will almost prohibit the sale of this very special steel in this country, or will make the price so high to the American user.

They are continually developing in Sheffield new steels for special purposes—airplane motors, turning tools, etc. Furthermore, their stainless steel business is very large, which is easy to understand, as the original patent for stainless steel was developed in Sheffield.

One of the mills in Sheffield has developed a new alloy steel giving rustless properties, especially adapted for faucets, taps, etc. Judging from tests, it appears that this steel can compete very favorably with brass and copper for various household and plumbing uses.

The works in Sheffield all appear to be busy and I noticed a tremendous difference in their attitude in Sheffield since my last visit there seven years ago.

They have now made some new and interesting developments in rolling hollow drill steel, which has met with great success in South Africa, their principal market. Whether the American tariff will permit the importation of these steels is a question. The tariff has hurt the Sheffield trade in the United States.

The manufacturers of cutlery steel and the cutlers are busy, and it is interesting to note that the fine makers of cutlery in Germany are once more going to Sheffield, and particularly to Wardlow, to get their cutlery steel.

New York, May 17.

Stainless Qualities of Iron and Steel

To the Editor: It appears from reading the extracts of the writer's talk at the heat treating conference at Purdue University published in THE IRON AGE of May 17, that there are some errors in the report of what was said. For example, we refer to the following sentence: "From the standpoint of commercial use the stainless qualities of iron and steel are among those least desired by users." That statement is incorrect and what the writer did say was to the effect that the stainless qualities, having been exploited to the extent they have, have led users to overlook the remarkable engineering properties of stainless iron. The writer did not intend, under any circumstances, and he is sure he did not convey, the impression that the stainless properties were not of tremendous importance to industry.

We also want to call your attention to a sentence under the heading "New Alloys Developed by Krupp" that begins, "It is subject to grain growth at higher temperatures, so that annealing must be limited to the range of 1800 to 2200 deg. Fahr." What the writer said was to the effect that it could be annealed between that range of temperatures, but that, due to the fact that it was subject to grain growth, annealing with best results should be done at 1800 deg. Fahr.

We want to call to your attention also the fact that in speaking of the new alloy V-2A, developed by the Krupps in Germany, the writer mentioned that this same product is produced in England under the name of Stabrite and in this country by the company with which the writer is associated, under the name of Allegheny metal.

Greatly Augmented Output of Airplanes in 1927

Sixty-one establishments in the United States engaged primarily in the manufacture of aircraft in 1927 built 1857 airplanes, valued at $12,024,085, and 105 seaplanes and amphibians, valued at $2,226,520, according to data collected by the Bureau of Census at the biennial census of manufactures taken in 1928. The production in 1926 was 1125 airplanes, valued at $7,448,679, and 61 seaplanes and amphibians, valued at $1,422,348. The increase in 1927 was 65.4 per cent in the number of aircraft built and 60.6 per cent in the value. A similar comparison for 1925 and 1927, based on a production of 789 aircraft, valued at $6,673,659, in 1925, shows increases of 148.7 per cent in number and 113.5 per cent in value.

Of the 61 establishments reporting for last year, 15 were situated in New York, nine each in California and Michigan, four each in Illinois, Missouri and Ohio, three each in New Jersey and Pennsylvania, two in Maryland and one each in Colorado, Connecticut, Iowa, Kansas, Nebraska, Virginia, Washington and Wisconsin.

Ohio River Iron and Steel Shipments Break Record in April

Shipments of iron and steel products on the Ohio River in April, as reported by the Pittsburgh office United States Engineer Corps, were 110,356 net tons, which was a new high monthly record.

Ohio River shipments reflect the movement to distant points and the effort of Pittsburgh district manufacturers to reach markets to which they would be barred if solely dependent upon rail deliveries.

For the first four months of the year, Ohio River shipments amounted to 345,686 tons, compared with 134,766 tons in the same period last year.

Since 1921 the foreign commerce service of the Department of Commerce has increased from 23 offices with 51 foreign representatives to 51 offices with 148 foreign representatives. Local offices in industrial centers in the United States, for supplying information collected abroad and by the commodity divisions in Washington, have grown from seven in 1921 to 23 this year.

Iron and Steel Markets

Further Decline in Production

Steel Output at Chicago Recedes to 92 Per Cent—Bars, Plates, Shapes Advanced $1 a Ton for Next Quarter—Divergent Price Tendencies in Pig Iron

WITH new business light and unfilled tonnage declining, steel production has given further ground. A low rate of demand from the railroads and the oil industry and a gradual decline in business from motor car builders have been offset to some extent by the requirements of miscellaneous users.

Specifying remains in fair volume, but, with new buying on a hand-to-mouth basis, there have been no additional recessions in finished steel prices. On the contrary, leading makers of plates, shapes and bars have opened their books for third quarter at 1.90c., Pittsburgh, an advance of $1 a ton.

Further weakness has appeared in pig iron. Foundry iron in the Valley has declined 25c. a ton, and Cleveland producers of foundry and malleable grades continue to reach out into competitive districts at the expense of prices. On the other hand, Southern producers are again quoting $16, base Birmingham, following recent sales at $15.50.

Steel mill operations, although receding, are still on a high plane. The average output of Steel Corporation subsidiaries is estimated at 82 per cent, compared with 84 to 85 per cent of capacity a week ago. The production of the leading Eastern steel company is holding without change at an 80 per cent rate. Among the producing districts, the Greater Pittsburgh area remains on a 75 per cent basis, but Chicago mills have curtailed their operations, which now average 92 per cent against 95 per cent recently. Rail mills there are approaching the end of their backlogs.

The automobile industry is not taking steel quite so freely, and motor car production is expected to slow down in June, when some manufacturers will discontinue their present models. One builder of low-priced cars is now reducing operations and has curtailed specifications for steel.

Building promises to call for a heavy tonnage of steel during the summer, notwithstanding that current structural steel lettings are light. Among new projects up for bids is a Louisville bridge, requiring 14,000 tons. Grade elimination work at Cleveland for the Nickel Plate railroad may take 20,000 tons.

Depression in the oil industry is holding down the volume of business in steel pipe. However, jobbers in standard-weight pipe are finding it necessary to replenish stocks, and mills report no difficulty in securing the higher prices announced at the beginning of April. Some of the large oil and gas pipe lines that have been in prospect for several months are maturing. The Texas Co. has placed a line calling for 25,000 tons of electrically welded pipe.

Unabated demand for tin plate is reflected in production, which averages well over 90 per cent of mill capacity, or considerably above the rate of other classes of finishing mills.

The price situation among steel products, despite recent weakness in some lines, has its encouraging side. The ruling Pittsburgh base price of plates, shapes and bars is now 1.85c. on both specifications and spot business, an advance of $2 a ton or more over the low point reached in the fourth quarter of last year. A leading mill has announced a third quarter contract price of 1.90c. on plates, shapes and bars, and an independent has taken similar action on bars. Consumers are not yet ready to commit themselves for that period, but, if the advance operates like those previously made this year, it will drive in heavy specifications against expiring second quarter contracts.

Demand for the heavier finished products, especially bars, is holding up unusually well at Chicago. Bar specifications received by Chicago mills this month are 30 per cent in excess of those in April. Orders from farm implement works show little decline in the face of approaching inventories, and some of these plants have planned heavy manufacturing schedules for July.

The amount of business from miscellaneous consumers is surprisingly large. Makers of steam shovels and locomotive cranes are taking substantial tonnages of plates, as well as other material, and Chicago mills look for still larger demands from them as a result of the passage of the Mississippi flood control bill.

Price reductions on pig iron in the Valleys covered foundry, Bessemer and gray forge grades. On the other hand, an opposing tendency may be indicated by the marking up of quotations on Southern iron and efforts of Buffalo furnaces to strengthen prices for Eastern shipment. Weakness in the Chicago territory, following receipts by boat of Lake Erie iron, has extended as far as St. Louis. Chicago producers may retaliate for Lake Erie shipments by sending their iron to Cleveland by water.

The outstanding purchase of the week was 25,000 tons of basic iron for a Butler, Pa., steel works. Detroit and Cleveland report a decline in the melt of pig iron for automobile castings, but Cleveland sales in the week were large at 36,000 tons, mostly for third quarter.

THE IRON AGE composite price for pig iron is $17.39 a ton, against $17.34 last week. The finished steel composite remains for the fourth week at 2.348c. a lb.

---

*The average switching charge for delivery to foundries in the Chicago district is 61c. per ton.

On export business there are frequent variations from the above prices. Also, in domestic business, there is at times a range of prices on various products, as shown in our market reports on other pages.

Pittsburgh

Steel Order Books Shrinking and Production Again Declines Slightly—Foundry Iron Lower

PITTSBURGH, May 28.—The past week has made a less favorable showing in specifications and orders for steel products than the first three weeks of the month. The motor car builders are not taking steel quite so freely as they did recently, and the loss of tonnage in that direction is not being made up by larger wants of other consuming sources.

Fabricated steel inquiries are more numerous than they have been, but among the other major consuming sources no appreciable increase in demand is noted, this being especially true of the railroads and the oil and gas industry.

As the great bulk of the shipments of steel over the past month has been against contracts and new buying has been moderate, order books have been shrinking and some curtailment of steel production has been necessary. None of the companies in this district now is making as much steel as two weeks ago, and 75 per cent of capacity is a fair estimate of production as the month draws to a close. The principal loss has been in the Youngstown district, but some of the independent Pittsburgh companies are producing less heavily than they were as recently as a fortnight ago.

The leading producer of plates, shapes and bars has stated that its third quarter price is to be 1.90c., base Pittsburgh, and one independent maker of bars also has announced the same price for that period. There is not much interest yet in third quarter supplies or prices. Some of the motor car builders have sought prices on third quarter tonnages of sheets and strips, but do not find makers very anxious to quote at this time. The sheet market is weak, and, except on the very narrow widths of strips, prices of that product are flexible.

Pig Iron.—The American Rolling Mill Co. has closed against its 25,000-ton inquiry for basic iron for delivery to its Butler, Pa., works. The iron will come from Valley furnaces and the price is approximately $16, furnace. Foundry iron has settled to $17, Valley furnace for No. 2 grade, a decline of 25c. a ton. The Richmond Radiator Co., Uniontown, Pa., has not yet closed for 5000 tons of No. 2 and No. 2X iron for third quarter shipment. This is the only important foundry iron inquiry in the market. Recent sales of malleable iron have been at $17.25, Valley furnace. Small lots of Bessemer iron have been moved at $17.25.

Prices per gross ton, f.o.b. Valley furnace:	
Basic	$16.00
Bessemer	$17.00 to 17.25
Gray forge	16.50 to 16.75
No. 2 foundry	17.00 to 17.25
No. 3 foundry	16.50 to 16.75
Malleable	17.25
Low phosphorus, copper free	26.50

Freight rate to the Pittsburgh or Cleveland district, $1.76.

Ferroalloys.—Some of the smaller consumers of ferromanganese have signed contracts covering their requirements for the last half of the year, but the larger users are taking their time, although the price, as has been the case for the first half, is guaranteed against a decline. Specifications on contracts are large, for while actual requirements are less with lighter steel works operations, there is some tendency to stock against the higher price that becomes effective on contract deliveries after July 1. There is a good movement of spiegeleisen on contracts. Ferrosilicon is being specified steadily.

Semi-Finished Steel.—There is no rush on the part of non-integrated sheet makers to sign contracts for third quarter tonnages, and the effort of producers to firmly establish $34, Pittsburgh or Youngstown, has not been seriously tested. Billets and slabs are fairly active in point of specifications, while the movement of skelp is all that could be expected in view of a rather slow market in pipe. There is only moderate releasing of shipments of wire rods on second quarter contracts, as there were few users which did not have stocks or tonnage due them on older agreements. Some shipments have been made on $44 contracts, but most of the tonnage has carried a lower figure.

Rails and Track Supplies.—Shipments of standard-sections rails on 1928 contracts are heavy, and there is a good movement on old orders for track fastenings. New business is quiet. Light-section rails are not showing much activity, but makers are holding firmly to $36, base, for those rolled from billets. Old rails are becoming more highly valued for melting, and in this connection there is a report that makers of standard-section rails are considering selling on a basis of an allowance for the old rails, such a plan now being used by carwheel and rolling mill roll makers.

Wire Products.—Business of all producers this month suffers by comparison with that of last month and the month before. The market is in a digestive period, owing to the fact that during the first four months of the year mill shipments ran ahead of actual consumption. Since all wire products are higher now than during the early part of the year, there is a natural tendency on the part of distributers and consumers to keep down new takings. In this territory makers are holding firmly to $2.65 per keg, base Pittsburgh, on nails.

Tubular Goods.—Jobbers are beginning to find it necessary to replenish stocks of standard-weight pipe and makers report no great difficulty in securing the higher prices announced at the beginning of April. In a general way, pipe business is making a poor showing compared with the average of the past three years, largely because of the depression in the oil industry and in oil prices, which discourages new development work. The several gas pipe line projects discussed earlier in the year have become quiescent.

Tin Plate.—Specifications against contracts still are ample to sustain mill operations at well above the rate of other classes of finishing mills. The leading producer has more than 90 per cent of its mills in operation and some of the independent companies are running full. Container manufacturers still talk cheerfully about the outlook for the pack of fruits and vegetables.

Cold-Finished Steel Bars and Shafting.—Specifications are numerous, but individually are for smaller tonnages than was the case a few weeks ago. Parts makers serving the Ford Motor Co. and the Chevrolet division of the General Motors Corporation constitute the backbone of the demand. No deviations from 2.20c., base Pittsburgh, are reported, although there is some pressure against prices on the part of large consumers.

Hot-Rolled Flats.—The market is holding well on cooperage stock, which is commanding 2.30c., base. On narrow bands, makers rarely have to go under 2.20c., base. But on strips prices are largely of buyers' making, particularly on widths of 6 in. or more. Strictly new business is light, and as specifications against old orders are depleting order books, selling pressure is increasing.

Bars, Plates and Shapes.—The leading producer has notified its sales offices that the third quarter contract price on plates, shapes and bars is 1.90c., base Pittsburgh. One of the independent companies also has announced the same figure on third quarter bar tonnages. There is not much inclination among consumers to commit themselves for that period, and the mills are more bent on getting specifications on contracts for this quarter than in soliciting orders for the following three months. Steel mills generally are more in need of early shipment business than they were a few weeks ago, and the ruling price on both specifications and new prompt delivery business is 1.85c. Fabricating companies report inquiries to be more numerous than they have been, but that the tonnage involved is rather small. Bar requirements of cold-finished steel bar and bolt and nuts makers continue to decrease.

Sheets.—The market still is irregular on the common finishes, but not as weak in the natural markets of Pittsburgh district mills as it is in some other consuming sections. Galvanized sheets for roofing and siding are going practically at buyers' valuations in the South, which is the principal market for that grade. Mills not only have to meet the competition of substitute material, but buyers are helped by something of a struggle between mills favored by freight rates in serving that territory. On flat galvanized sheets, producers say they do not have to go under 3.65c., base. Blue annealed sheets of the widths most commonly used are commanding 2c. to 2.10c., base, and lower prices refer to wide strips. Black sheets usually sell from 2.70c. to 2.75c., but occasionally 2.80c. is obtained. Business is lighter than it has been. Mills have had chances to quote against third quarter inquiries but are not anxious to do so.

Cold-Rolled Strips.—Incoming orders have shown shrinkage in the past week, but most makers still have some business to work on. Prices are fairly steady at 3c. to 3.15c., base Pittsburgh, for 1 to 3 tons.

Bolts, Nuts and Rivets.—There is a fairly steady demand for these products, but individual specifications run lighter than those of last month. Prices are firm.

Coke and Coal.—Interest in coke on the part of blast furnace and foundry operators still is light, and the coal market also lacks activity, as industrial demands are moderate. Pending a decision in the matter of the rail rates of Lake cargo coal, buyers in the Northwest are not actively seeking tonnages. Prices are unchanged.

THE IRON AGE Composite Prices

Finished Steel

May 28, 1928, 2.348c. a Lb.

One week ago	2.348c.
One month ago	2.355c.
One year ago	2.374c.
10-year pre-war average	1.689c.

Based on steel bars, beams, tank plates, wire, rails, black pipe and black sheets. These products constitute 87 per cent of the United States output of finished steel.

Wire Products

(To jobbers in car lots, f.o.b. Pittsburgh and Cleveland)

	Base Per Keg
Wire nails	$2.55 to $2.65
Galvanized nails	4.55 to 4.65
Galvanized staples	3.25 to 3.35
Polished staples	3.00 to 3.10
Cement coated nails	2.55 to 2.65

	Base Per 100 Lb.
Bright plain wire, No. 9 gage	$2.50
Annealed fence wire	2.65
Spring wire	3.50
Galv'd wire, No. 9	3.10
Barbed wire, galv'd	3.35
Barbed wire, painted	3.10

Chicago district mill and delivered Chicago prices are $1 per ton above the foregoing. Birmingham mill prices $3 a ton higher; Worcester, Mass., (wire) mill $3 a ton higher on production of that plant; Duluth, Minn., mill $2 a ton higher; Anderson, Ind., $1 higher.

Woven Wire Fence

	Base to Retailers Per Net Ton
F.o.b. Pittsburgh	$65.00
F.o.b. Cleveland	65.00
F.o.b. Anderson, Ind.	66.00
F.o.b. Chicago district mills	67.00
F.o.b. Duluth	68.00
F.o.b. Birmingham	68.00

Sheets

Blue Annealed

	Base Per Lb.
Nos. 9 and 10, f.o.b. P'gh	2.00c. to 2.10c.

6100	Chromium Vanadium Spring Steel	0.95	3.60
9250	Silicon Manganese Spring Steel	0.25	2.90
	Chromium Nickel Vanadium	1.50	4.15
	Carbon Vanadium	0.95	3.60

Above prices are for hot-rolled steel bars, forging quality. The ordinary differential for cold-drawn bars is 1c. per lb. higher. For billets 4 x 4 to 10 x 10 in., the price for a gross ton is the net price for bars of the same analysis. For billets under 4 x 4 in. down to and including 2½ in. squares, the price is $5 a gross ton above the 4 x 4 billet price.

Slabs with sectional area of 16 in. or over carry the billet price; slabs with sectional area of 12 in. to 16 in. carry a $5 extra above the billet price and slabs with a sectional area under 12 in. carry the bar price.

Band sizes are 40c. per 100 lb. higher.

Rails

	Per Gross Ton
Standard, f.o.b. mill	$43.00
Light (from billets), f.o.b. mill	36.00
Light (from rail steel), f.o.b. mill	34.00
Light (from billets), f.o.b. Ch'go mill	36.00

Track Equipment

	Base Per 100 Lb.
Spikes, 9/16 in. and larger	$2.80
Spikes ½ in. and smaller	2.80
Spikes, boat and barge	3.00
Tie plates, steel	2.15
Angle bars	2.75
Track bolts, to steam railroads	$3.80 to 4.00
Track bolts, to jobbers, all sizes, per 100 count	70 per cent off list

Welded Pipe

Base Discounts, f.o.b. Pittsburgh District and Lorain, Ohio, Mills

Butt Weld

Steel			Iron		
Inches	Black	Galv.	Inches	Black	Galv.
⅛	45	19½	¼ to ⅜	+11	+39
¼ to ⅜	51	25½	½	22	2
½	56	42½	¾	28	11

9 and 10	45	32½	9 to 12	16	2
11 and 12	44	31½			

On carloads the above discounts on steel pipe are increased on black by one point, with supplementary discount of 5%, and on galvanized by 1½ points, with supplementary discount of 5%. On iron pipe, both black and galvanized, the above discounts are increased to jobbers by one point with supplementary discounts of 5 and 2½%.

Note.—Chicago district mills have a base two points less than the above discounts. Chicago delivered base is 2½ points less. Freight is figured from Pittsburgh, Lorain, Ohio, and Chicago district mills, the billing being from the point producing the lowest price to destination.

Boiler Tubes

Base Discounts, f.o.b. Pittsburgh

Lap Welded Steel		Charcoal Iron	
2 to 2¼ in.	27	1½ in.	+18
2½ to 2¾ in.	37	1¾ to 1⅞ in.	+ 8
3 in.	40	2 to 2¼ in.	— 2
3¼ to 3¾ in.	42½	2½ to 3 in.	— 7
4 to 13 in.	46	3¼ to 4½ in.	— 9

Beyond the above discounts, 7 fives extra are given on lap welded steel tubes and 2 tens to 2 tens and 1 five on charcoal iron tubes.

Standard Commercial Seamless Boiler Tubes

Cold Drawn

1 in.	60	3 in.	45
1¼ to 1½ in.	52	3¼ to 3½ in.	47
1¾ in.	36	4 in.	50
2 to 2¼ in.	31	4½, 5 and 6 in.	45
2½ to 2¾ in.	39		

Hot Rolled

2 and 2¼ in.	37	3¼ and 3½ in.	53
2½ and 2¾ in.	45	4 in.	56
3 in.	51	4½, 5 and 6 in.	51

Less carloads, 4 points less. Add $8 per net ton for more than four gages heavier than standard. No extra for lengths up to and including 24 ft. Sizes smaller than 1 in. and lighter than standard gage to be held at mechanical tubes list and discount. Intermediate sizes and gages not listed take price of next larger outside diameter and heavier gage.

Seamless Mechanical Tubing

	Per Cent Off List
Carbon, 0.10% to 0.30%, base	55
Carbon, 0.30% to 0.40%, base	50

Plus differentials for lengths over 18 ft. and for commercial exact lengths. Warehouse discounts on small lots are less than the above.

Old Material.—As a whole, the market is soft, but there is no occasion to materially change prices from those of a week ago. The steel producers are not much interested in supplies, and some of them, on account of lighter production, find scrap stocks getting ahead of steel production and are holding down shipments on old purchases. The steel foundries cannot be persuaded to buy, since their needs are limited, and that also is the case with the gray iron foundries in this district. Heavy melting steel takes a range of $14.50 to $15.50, the lower figure representing small lots that dealers can pick up and the higher price is the idea of dealers on a round lot of No. 1 railroad steel or its equivalent. In a general way, $15 is representative of the market on this grade, as no considerable tonnage appears available at less, while dealers are not pressed hard enough for shipments on old orders to be inclined to pay more.

The June scrap list of the Baltimore & Ohio Railroad amounts to 18,040 gross tons, including 4200 tons of No. 1 heavy melting steel and 7200 tons of No. 1 rails.

Prices per gross ton delivered consumers' yards in Pittsburgh and points taking the Pittsburgh district freight rate:

Basic Open-Hearth Furnace Grades:		
Heavy melting steel	$14.50 to	$15.50
Scrap rails	14.50 to	15.00
Compressed sheet steel	14.75 to	15.00
Bundled sheets, sides and ends	13.75 to	14.00
Cast iron carwheels	14.50 to	15.00
Sheet bar crops, ordinary	15.50 to	16.00
Heavy breakable cast	12.50 to	13.00
No. 2 railroad wrought	15.00 to	15.50
Heavy steel axle turnings	13.00 to	13.50
Machine shop turnings		10.00
Acid Open-Hearth Furnace Grades:		
Railroad knuckles and couplers	16.00 to	16.50
Railroad coil and leaf springs	16.00 to	16.50
Rolled steel wheels	16.00 to	16.50
Low phosphorus billet and bloom ends	19.00 to	19.50
Low phosphorus, mill plate	17.50 to	18.00
Low phosphorus, light grade	16.50 to	17.00
Low phosphorus sheet bar crops	17.50 to	18.00
Heavy steel axle turnings	13.00 to	13.50
Electric Furnace Grades:		
Low phosphorus punchings	16.50 to	17.00
Heavy steel axle turnings	13.00 to	13.50
Blast Furnace Grades:		
Short shoveling steel turnings	10.75 to	11.00
Short mixed borings and turnings	10.75 to	11.00
Cast iron borings	10.75 to	11.00
No. 2 busheling	10.00 to	10.50
Rolling Mill Grades:		
Steel car axles	18.00 to	19.00
No. 1 railroad wrought	11.00 to	12.00
Sheet bar crops	17.00 to	17.50
Cupola Grades:		
No. 1 cast	14.50 to	15.00
Rails 3 ft. and under	16.00 to	16.50
Malleable Grades:		
Railroad	14.50 to	15.00
Industrial	14.00 to	14.50
Agricultural	13.50 to	14.00

Common wire nails, per keg	3.00
Cement coated nails, per keg	3.05

More Than 230,000,000 Hp. Installed in United States

Total capacity of all the power-generating equipment installed in the various industries in the United States in 1923, from the highest type of steam turbine and internal-combustion engine down to the erratic windmill and the farm-work animal, was 230,514,000 hp., exclusive of the power of pleasure automobiles. The total horsepower capacity of the internal-combustion engines of pleasure automobiles is nearly twice as much as that used in all the industries, according to the Department of the Interior. The total power capacity for 1923, including pleasure automobiles, was 684,044,000 hp.

This great capacity, if converted into man power, would furnish about 60 able-bodied servants for every man, woman and child in the United States. The horsepower of industrial prime movers in 1923 was distributed as follows: Manufactures, 9 per cent; mines and quarries, 2 per cent; agriculture, 17 per cent; electric central stations and electric railroads, 11 per cent; steam railroads, 32 per cent; ships, 4 per cent; work animals not on farms, 1 per cent; automobiles not classed as pleasure cars, 23 per cent; miscellaneous, 1 per cent.

While the population of the United States increased 45 per cent from 1899 to 1923, the capacity of industrial-power equipment increased 260 per cent. In 1849, 66 per cent of the total industrial power equipment of the country was installed in farms; in 1923, only 17 per cent. The greater part is now utilized by steam railroads, manufactures, central stations, electric railroads and working automobiles.

Desulphurization of Iron by Blast Furnace Slags

The viscosity, as well as the composition, undoubtedly is a factor in determining the relative desulphurizing powers of blast furnace slags. Few investigators have attempted to measure the viscosity of such slags, due to difficulties encountered in making such determinations at temperatures existing in the blast furnace. Feild and Royster, in Bureau of Mines Technical Paper 157, described the torsion viscometer used by them in their investigation of viscosities of blast furnace slags. In order to have another method for determining viscosities of such slags to check results obtained by means of the torsion viscometer, investigators at the north central experiment station of the Bureau of Mines, Minneapolis, Minn., constructed a capillary viscometer entirely of graphite. The results obtained on a number of slags indicated that the capillary type of viscometer is more accurate within certain ranges than the torsion viscometer.

Blue Book of Southern Progress

Continuing a series of annual volumes devoted to a survey of the progress of the Southern States, *Manufacturers Record*, Baltimore, has put out the 1928 edition of "Blue Book of Southern Progress." This is a volume of 324 pages filled with a wealth of statistics and other data covering all phases of industrial and other business activities in the 16 States listed as Southern. Comparisons are made in most cases with the total United States figures for the same commodities.

The present edition depicts the growing use of machinery in the South in agriculture, the expansion of public utilities in that section, and the greatly augmented products of manufacturing. It shows a growth in manufacturing value in that area from $3,000,000,000 in 1909 to more than $10,000,000,000 in 1925. Wages paid in the latter year aggregated more than $1,550,000,000, or about one-seventh the total for the United States.

A topical index has been added to this year's edition, making it easy for anyone to find the particular information sought.

Semi-Finished Steel, Raw Materials, Bolts and Rivets

Mill Prices of Semi-Finished Steel

F.o.b. Pittsburgh or Youngstown

Billets and Blooms

	Per Gross Ton
Rerolling, 4-in. and over	$33.00
Rerolling, under 4-in. to and including 1¾-in.	$33.50 to 34.00
Forging, ordinary	38.00
Forging, guaranteed	43.00

Sheet Bars

	Per Gross Ton
Open-hearth or Bessemer	$34.00

Slabs

	Per Gross Ton
8 in. x 2 in. and larger	$33.00
Smaller than 8 in. x 2 in	34.00

Skelp

	Per Lb.
Grooved	1.85c. to 1.90c.
Sheared	1.85c. to 1.90c.
Universal	1.85c. to 1.90c.

Wire Rods

	Per Gross Ton
*Common soft, base	$42.00 to $44.00
Screw stock	$5.00 per ton over base

---

*Chicago mill base is $45. Cleveland mill base, $44.

Prices of Raw Material

Ores

Lake Superior Ores, Delivered Lower Lake Ports

	Per Gross Ton
Old range Bessemer, 51.50% iron	$4.55
Old range non-Bessemer, 51.50% iron	4.40
Mesabi Bessemer, 51.50% iron	4.40
Mesabi non-Bessemer, 51.50% iron	4.25
High phosphorus, 51.50% iron	4.15

Foreign Ore, c.i.f. Philadelphia or Baltimore

	Per Unit
Iron ore, low phos., copper free, 55 to 58% iron in dry Spanish or Algeria	10.00c.
Iron ore, Swedish, average 66% iron,	9.25c. to 9.50c.
Manganese ore, washed, 52% manganese, from the Caucasus	39c.
Manganese ore, Brazilian, African or Indian, basis 50%	38c. to 39c.
Tungsten ore, high grade, per unit, in 60% concentrates	$10.85 to $11.00
	Per Gross Ton
Chrome ore, 45 to 50% Cr_2O_3, crude, c.i.f. Atlantic seaboard	$22.00 to $24.00
	Per Lb.
Molybdenum ore, 85% concentrates of MoS_2, delivered	50c. to 55c.

Coke

	Per Net Ton
Furnace, f.o.b. Connellsville prompt	$2.60 to $2.75
Foundry, f.o.b. Connellsville prompt	3.50 to 4.25
Foundry, by-product, Ch'go ovens	9.00
Foundry, by-product, New England, del'd	11.00
Foundry, by-product, Newark or Jersey City, delivered	9.00 to 9.40
Foundry, Birmingham	5.00
Foundry, by-product, St. Louis	9.75

Coal

	Per Net Ton
Mine run steam coal, f.o.b. W. Pa. mines	$1.40 to $1.80
Mine run coking coal, f.o.b. W. Pa. mines	1.50 to 1.75
Gas coal, ¾-in., f.o.b. Pa. mines	2.00 to 2.10
Mine run gas coal, f.o.b. Pa. mines	1.75 to 1.90
Steam slack, f.o.b. W. Pa. mines	1.05 to 1.10
Gas slack, f.o.b. W. Pa. mines	1.10 to 1.25

Ferromanganese

	Per Gross Ton
Domestic, 80%, furnace or seab'd	$105.00
Foreign, 80%, Atlantic or Gulf port, duty paid	105.00

Spiegeleisen

	Per Gross Ton Furnace
Domestic, 19 to 21%	$31.00 to $32.00
Domestic, 16 to 19%	29.00

Electric Ferrosilicon

	Per Gross Ton Delivered
50%	$83.50 to $88.50
75%	130.00 to 140.00

	Per Gross Ton Furnace		*Per Gross Ton Furnace*
10%	$35.00	12%	$39.00
11%	37.00	14 to 16%	45.00

Bessemer Ferrosilicon

F.o.b. Jackson County, Ohio, Furnace

	Per Gross Ton		*Per Gross Ton*
10%	$30.00	12%	$34.00
11%	32.00		

Silvery Iron

F.o.b. Jackson County, Ohio, Furnace

	Per Gross Ton		*Per Gross Ton*
6%	$23.00	10%	$28.00
7%	24.00	11%	30.00
8%	25.00	12%	32.00
9%	26.00		

Other Ferroalloys

Ferrotungsten, per lb. contained metal, del'd	95c.
Ferrochromium, 4 to 6% carbon and up, 65 to 70% Cr., per lb. contained Cr. delivered, in carloads	11.00c.
Ferrovanadium, per lb. contained vanadium, f.o.b. furnace	$3.15 to $3.65
Ferrocarbontitanium, 15 to 18%, per net ton, f.o.b. furnace, in carloads	$200.00
Ferrophosphorus, electric or blast furnace material, in carloads, 18%, Rockdale, Tenn., base, per gross ton	$91.00
Ferrophosphorus, electric, 24%, f.o.b. Anniston, Ala., per gross ton	$122.50

Fluxes and Refractories

Fluorspar

	Per Net Ton
Domestic, 85% and over calcium fluoride, not over 5% silica, gravel, f.o.b. Illinois and Kentucky mines	$16.00
No. 2 lump, Illinois and Kentucky mines	$20.00
Foreign, 85% calcium fluoride, not over 5% silica, c.i.f. Atlantic port, duty paid	$16.00
Domestic, No. 1 ground bulk, 95 to 98% calcium fluoride, not over 2½% silica, f.o.b. Illinois and Kentucky mines	$32.50

Fire Clay

Per 1000 f.o.b. Works	First Quality	Second Quality
Pennsylvania	$43.00 to $46.00	$35.00 to $38.00
Maryland	43.00 to 46.00	35.00 to 38.00
New Jersey	50.00 to 65.00	——
Ohio	43.00 to 46.00	35.00 to 38.00
Kentucky	43.00 to 46.00	35.00 to 38.00
Missouri	43.00 to 46.00	35.00 to 38.00
Illinois	43.00 to 46.00	35.00 to 38.00
Ground fire clay, per ton	7.00	

Silica Brick

	Per 1000 f.o.b. Works
Pennsylvania	$43.00
Chicago	52.00
Birmingham	50.00
Silica clay, per ton	$8.50 to 10.00

Magnesite Brick

	Per Net Ton
Standard sizes, f.o.b. Baltimore and Chester, Pa	$65.00
Grain magnesite, f.o.b. Baltimore and Chester, Pa	40.00

Chrome Brick

	Per Net Ton
Standard size	$45.00

Mill Prices of Bolts, Nuts, Rivets and Set Screws

Bolts and Nuts

Per 100 Pieces

(F.o.b. Pittsburgh, Cleveland, Birmingham or Chicago)

	Per Cent Off List
†Machine bolts	70
†Carriage bolts	70
Lag bolts	70
Plow bolts, Nos. 1, 2, 3 and 7 heads	70
Hot-pressed nuts, blank or tapped, square	70
Hot-pressed nuts, blank or tapped, hexagons	.70
C.p.c. and t. square or hex. nuts, blank or tapped	70
Washers*	6.75c. to 6.50c. per lb. off list

---

*F.o.b. Chicago, New York and Pittsburgh.

†Bolts with rolled thread up to and including ⅝ in. x 6 in. take 10 per cent lower list prices.

Bolts and Nuts

	Per Cent Off List
Semi-finished hexagon nuts	70
Semi-finished hexagon castellated nuts, S.A.E.	70
Stove bolts in packages, Pittsburgh	80, 10 and 2½
Stove bolts in packages, Chicago	75, 20, 10 and 5
Stove bolts in bulk, Pittsburgh	80, 10 and5
Stove bolts in bulk, Chicago	75, 20, 10, 5 and 2½
Tire bolts	60, 5 and 5

Discounts of 70 per cent off on bolts and nuts applied on carload business. For less than carload orders discounts of 55 to 60 per cent apply.

Large Rivets

(½-In. and Larger)

	Base per 100 Lb.
F.o.b. Pittsburgh or Cleveland	$2.90
F.o.b. Chicago	3.00

Small Rivets

(7/16-In. and Smaller)

	Per Cent Off List
F.o.b. Pittsburgh	70 and 10 to 70
F.o.b. Cleveland	70 and 10 to 70
F.o.b. Chicago	70 and 10 to 70

Cap and Set Screws

(Freight allowed up to but not exceeding 50c. per 100 lb. on lots of 200 lb. or more)

	Per Cent Off List
Milled cap screws	80, 10 and 10
Milled standard set screws, case hardened,	80 and 10
Milled headless set screws, cut thread	80
Upset hex, head cap screws, U.S.S. thread,	85 and 5
Upset hex. cap screws, S.A.E. thread	85 and 5
Upset set screws	80, 10 and 10
Milled studs	70 and 5

Chicago

Ingot Output Continues Downward Trend—Steel Specifications Gain in the Week

CHICAGO, May 28.—Downward trend in ingot output noted a week ago is still in evidence, and the average for this district is now close to 92 per cent. The change is slow, but may be accelerated when rail mill production is cut, a development which is not far in the future. Specifications for finished steel products have gained, owing to unusually large releases for bar mill products. The structural market remains brisk, with good prospects. It is now definitely known that the American Bridge Co. has been awarded 2000 tons for the Holmes Garage, Chicago.

Steel producers expect lighter specifications from car builders following the ordering out of the bulk of steel required for the last freight car business taken by Western shops. The Southern Pacific has ordered 46 passenger cars, of which at least 25 will be built in Western shops. The Galesburg, Ill., shops of the Burlington are again busy on new car construction, the program calling for 250 stock cars.

Pig Iron.—Sales of Northern foundry iron totaled not less than 25,000 tons in the last seven days, and new inquiry has developed for a like amount. A melter in western Michigan will take 6000 tons of foundry and malleable iron. Contract buyers have been little disturbed by recent price changes, some of them extending their purchases to the end of the year. Carload sales are less numerous since the cut of 50c. a ton. A cargo of Lake Erie iron is due in Chicago in the next day or two and another boat will unload here a few days later. Several consumers have ordered small lots of charcoal iron, which is steady at $24 a ton at furnaces.

Prices per gross ton at Chicago:

Northern No. 2 foundry, sil. 1.75 to 2.25		$18.00
N'th'n No. 1 fdy., sil. 2.25 to 2.75		18.50
Malleable, not over 2.25 sil.		18.00
High phosphorus		18.00
Lake Superior charcoal, averaging sil. 1.50		27.04
Southern No. 2 fdy. (all rail)		21.51
Southern No. 2 (barge and rail)		20.68
Low phos., sil. 1 to 2 per cent, copper free	$28.50 to	29.00
Silvery, sil. 8 per cent		29.79
Bessemer ferrosilicon, 14 to 15 per cent		46.79

Prices are delivered consumers' yards except on Northern foundry, high phosphorus and malleable, which are f.o.b. local furnace, not including an average switching charge of 61c. per gross ton.

Ferroalloys.—Odd lots of ferromanganese are being sold at $105, seaboard. The spot market for 50 per cent ferrosilicon is moderately active at $87.50, delivered Chicago. New purchases in spiegeleisen are few, but specifications are in fair volume.

Prices delivered Chicago: 80 per cent ferromanganese, $112.56; 50 per cent ferrosilicon, $83.50 to $87.50; spiegeleisen, 19 to 21 per cent, $37.76 to $39.76.

Plates.—Specifications for plates show improvement from many sources this week. The largest single item, which helps to account for tonnage that has run nearly 40 per cent over the third week in May, was the ordering out of the bulk of the steel required for the Chicago, Milwaukee, St. Paul & Pacific cars. The Chicago market is unusually dull from the viewpoint of railroad equipment business. Specifications for tankage steel are large, but only a moderate tonnage of new business is in sight. A Pacific Coast oil producer is in the market for 500 tons of tankage material. Shipments of plates have eaten heavily into mill backlogs. The delivery situation is slowly improving and producers are now able to make promises of three to four weeks on practically all sizes. Prices in Chicago and nearby territory are steady at 2c. to the general run of users, but $1 a ton lower is commonly named to the east and south and special concessions are being offered fabricators in practically all parts of the Chicago territory.

Mill prices on plates per lb.: 2.00c., base Chicago.

Structural Material.—It has been months since the steel-frame building outlook was more favorable than it is now. This is owing, not alone to the number and tonnage of inquiries that are actually before the trade, but also to the fact that several large projects, for a time dormant, are now taking on renewed life. The outstanding award this week is for 2000 tons for a garage in Chicago. The American Bridge Co. has been awarded close to 600 tons for a hotel at Anderson, Ind. Among new projects is 1700 tons for miscellaneous highway bridges in Illinois and Kansas. Bids are being tabulated on the proposals for the reconstruction of the Fine Arts Building, Chicago, and an inquiry for a local apartment building, requiring 1250 tons, has been revived. Although there appears to be every indication that shops will have a substantial volume of business during the early summer months, it is noticeable that competition is no less keen and prices have dipped to lower levels because of the willingness of mills to allow special concessions in prices for specific jobs.

Mill prices on plain material per lb.: 2.00c., base, Chicago.

Rails and Track Supplies.—New buying in standard-section rails is dull. Inquiry for 4000 tons noted last week is still open; it is now reported that only half of the tonnage will come to Western mills. Several railroads have ordered a total of 1100 tons of angle bars, 2000 kegs of spikes and 4000 kegs of bolts. Fresh inquiry is promising, with 10,000 kegs of spikes and bolts and a sizable tonnage of the plates now before the trade. Orders for light rails are scarce.

Prices f.o.b. mill, per gross ton: Standard-section open-hearth and Bessemer rails, $43; light rails, rolled from billets, $36. *Per lb.:* Standard railroad spikes, 2.80c.; track bolts with square nuts, 3.80c.; steel tie plates, 2.25c.; angle bars, 2.75c.

Cast Iron Pipe.—This commodity continues to mark time. The United States Cast Iron Pipe & Foundry Co. has taken 180 tons of 30-in., class C lugged pipe and 3 tons of special fittings for Milwaukee. The Alabama Pipe & Foundry Co. is low bidder on fittings for Chicago and the American Cast Iron Pipe Co. is low on 120 tons of 6-in., class B pipe at Detroit. The inquiry for 1100 tons of 5 to 16-in. pipe at St. Paul is still being held open until figures are prepared to show the relative cost between laying 12-ft. and 16-ft. length pipe. To the west and south of Chicago, public utilities appear to have covered for their early summer requirements, but companies operating in Wisconsin are fairly active in the cast iron pipe market. Prices for 6-in. and larger diameters are steady at $31 to $33, Birmingham, or $38.20 to $41.20, delivered Chicago.

Prices per net ton, delivered Chicago: Water pipe, 6-in. and over, $38.20 to $41.20; 4-in., $42.20 to $45.20; Class A and gas pipe, $4 extra.

Sheets.—Prices continue weak under pressure to sell. Orders in the last few days are heavier than during the low point a week ago, but business is not of the character that affords mills either satisfactory schedules or assurance as to what rate of operations will be maintained in the next seven days. The most pronounced falling off in business is in galvanized and black sheets. On blue annealed sheets, deliveries range from four to five weeks and mill backlogs are not far from 50 days. As a general rule, manufacturing consumers are busy and are taking their full share for this time of the year. On the other hand, jobbers are finding turnover relatively slow. Chicago delivered prices are 2.85c. to 2.95c. for black, 3.75c. to 3.85c. for galvanized, and 2.20c. to 2.30c. for blue annealed.

Base prices per lb., delivered from mill in Chicago: No. 24 black, 2.85c. to 2.95c.; No. 24 galvanized, 3.75c. to 3.85c.; No. 10 blue annealed, 2.20c. to 2.30c. Delivered prices at other Western points are equal to the freight from Gary plus the mill prices, which are 5c. per 100 lb. lower than the Chicago delivered prices.

Hot-Rolled Strip.—Chicago mills are heavily engaged. Deliveries are now at an average of three weeks. Prices are steady at 2c., Chicago, as the minimum on strips 6 in. and wider.

Bars.—Specifications for mild steel bars show further improvement and for the week now closing are fully equal to the average so far this year. Deliveries have lengthened, being not far from six weeks. Total specifications for May are fully 30 per cent heavier than those in April. Orders from agricultural implement manufacturers show little decline, notwithstanding that the inventory period is near at hand. It is believed that July manufacturing schedules for some farm machinery plants are heavy and that steel being taken now is added to stock to serve for the summer months. Prices for mild steel bars are steady at 2c., Chicago, except to the east and south. New orders for alloy steel bars are undiminished in number and size and local mills continue to produce at capacity. New buying is not far in advance and backlogs are holding steady at 30 to 45 days. The iron bar market is quiet. Output at rail steel bar mills has been increased, following several weeks in which specifications have topped production by a comfortable margin. Backlogs are of fair size and show little change for the reason that new sales are about equal to shipments. Farm implement manufacturers are taking larger quantities and barn equipment makers are finding business more brisk than is to be expected at this time of the year. Hard steel bar prices are steady at 1.85c., local mills.

Mill prices per lb.: Soft steel bars, 2.00c., base, Chicago; common bar iron, 2.00c., base, Chicago; rail steel bars, 1.85c., base, Chicago Heights mill.

Bolts, Nuts and Rivets.—Specifications for these commodities show further decline and are now affecting output, which for the industry as a whole is not above 65 per cent of capacity. Sellers plan to send out third quarter contracts during the second week in June. Prices for all of these commodities are steady.

Wire Products.—This market remains steady except for a slackening in demand from the Northwest, where lack of rain and the necessity for reseeding have changed the crop outlook of several weeks ago. Jobbers in the Central States are enjoying a fair volume of business and shipments of woven wire fencing and barbed wire to the Southwest are large for this time of the year. A feature of this market is the steady demand from the manufacturing trade. As a usual thing these buyers are not committed far in advance, but orders received from them are steady and provide satisfactory schedules at mills. Nails still remain the least active of all wire mill products; prices are unchanged at $2.60 to $2.70 per keg, base Chicago. Quotations on bright plain wire are steady at $2.55 per 100 lb., Chicago.

Coke.—Users of by-product foundry coke who contract by the half year are showing interest in this commodity, which is steady at $9, f.o.b. local ovens, and $9.50, delivered in the Chicago switching district. Shipments in May will vary little from the average in April, indicating uniformity in foundry melt. Producers plan to open second half books about June 15.

Reinforcing Bars.—A decided upturn both in orders and fresh inquiry for reinforcing bars has developed within the past week. Outstanding among awards is 1008 tons for a building for the Continental Can Co., Chicago, and new inquiry now before the trade calls for 600 tons for a warehouse and 400 tons for a bank building, both in Chicago. Small purchases are more numerous and shop operations are well sustained. New price levels are holding, though not a few projects on which protection was given at lower quotations are still being held up by contractors and owners. In fact, it is estimated in some quarters that fully 10,000 tons in low priced quotations is still to be placed. New awards and fresh inquiry are shown on page 1570.

Warehouse Prices, f.o.b. Chicago

	Base per Lb.
Plates and structural shapes	3.10c.
Soft steel bars	3.00c.
Reinforcing bars, billet steel	2.30c. to 3.00c.
Reinforcing bars, hard steel	2.00c. to 2.70c.
Cold-finished steel bars and shafting—	
Rounds and hexagons	3.60c.
Flats and squares	4.10c.
Bands	3.65c.
Hoops	4.15c.
Black sheets (No. 24)	3.95c.
Galvanized sheets (No. 24)	4.80c.
Blue annealed sheets (No. 10)	3.50c.
Spikes, standard railroad	3.55c.
Track bolts	4.55c.
Rivets, structural	3.60c.
Rivets, boiler	3.60c.
	Per Cent Off List
Machine bolts	60
Carriage bolts	60
Coach or lag screws	60
Hot-pressed nuts, squares, tapped or blank	60
Hot-pressed nuts, hexagons, tapped or blank	60
No. 8 black annealed wire, per 100 lb	$3.30
Common wire nails, base per keg	3.10
Cement coated nails, base per keg	3.10

Old Material.—Dealers are showing less confidence in the Chicago scrap market and they are now willing to take prices that they refused a week ago. Changes in quotations, for the most part, are downward, the heavy tonnage grades being more affected than specialties. On dealer trade, $12.75 to $13 is common for heavy melting steel, following refusal by a large buyer to take a tonnage at $13.25 a gross ton, delivered. Shipments by producers and deliveries at points of consumption are heavy, thus adding further stress to the price situation. In late weeks rejections of heavy melting steel have been light, but this is owing to the fact that sellers have learned that buyers insist on the grade specified and it in no way indicates that melters are hungry for scrap and must take whatever is offered. The supply of cast iron borings is well above demand and prices are weak. A Detroit broker is reported to have entered the Chicago market with a tonnage that will be shipped from that city. Stocks in the hands of purchasers are not large, but they are sufficient in most cases for the current rate of operations. Railroad lists include 4000 tons by the Burlington, 5000 tons by the Illinois Central and a small list by the Big Four.

Prices delivered consumers' yards, Chicago:

Per Gross Ton	
Basic Open-Hearth Grades:	
Heavy melting steel	$12.75 to $13.25
Shoveling steel	12.75 to 13.25
Frogs, switches and guards, cut apart, and miscellaneous rails	13.50 to 14.00
Hydraulic compressed sheets	11.25 to 11.75
Drop forge flashings	9.50 to 10.00
Forged, cast and rolled steel carwheels	15.75 to 16.25
Railroad tires, charging box size	16.25 to 16.75
Railroad leaf springs, cut apart	16.25 to 16.75
Acid Open-Hearth Grades:	
Steel couplers and knuckles	14.50 to 15.00
Coil springs	17.00 to 17.50
Electric Furnace Grades:	
Axle turnings	13.00 to 13.50
Low phosphorus punchings	14.25 to 14.75
Low phosphorus plate, 12 in. and under	14.25 to 14.75
Blast Furnace Grades:	
Axle turnings	10.00 to 10.50
Cast iron borings	9.25 to 9.75
Short shoveling turnings	9.25 to 9.75
Machine shop turnings	6.75 to 7.25
Rolling Mill Grades:	
Iron rails	14.00 to 14.50
Rerolling rails	15.00 to 15.50
Cupola Grades:	
Steel rails less than 3 ft	15.50 to 16.00
Angle bars, steel	14.50 to 15.00
Cast iron carwheels	13.25 to 13.75
Malleable Grades:	
Railroad	13.00 to 13.50
Agricultural	12.00 to 12.50
Miscellaneous:	
*Relaying rails, 56 to 60 lb	23.00 to 25.00
*Relaying rails, 65 lb. and heavier	26.00 to 31.00
Per Net Ton	
Rolling Mill Grades:	
Iron angles and splice bars	14.25 to 14.75
Iron arch bars and transoms	19.50 to 20.00
Iron car axles	23.00 to 23.50
Steel car axles	15.75 to 16.25
No. 1 railroad wrought	11.50 to 12.00
No. 2 railroad wrought	11.25 to 11.75
No. 1 busheling	10.00 to 10.50
No. 2 busheling	5.75 to 6.25
Locomotive tires, smooth	12.00 to 12.50
Pipes and flues	8.00 to 8.50
Cupola Grades:	
No. 1 machinery cast	14.00 to 14.50
No. 1 railroad cast	12.75 to 13.25
No. 1 agricultural cast	12.50 to 13.00
Stove plate	11.25 to 11.75
Grate bars	11.25 to 11.75
Brake shoes	11.00 to 11.50

---

*Relaying rails, including angle bars to match, are quoted f.o.b. dealers' yards.

The Wisconsin Steel Founders' Research Group will meet at the University Club, Milwaukee, June 13, to hear a report of its sand committee on the results of a survey of steel foundry molding sands.

Reduction to $1.89 per gross ton in the rate on pig iron, effective on or before July 10, from Ironton, Ohio, to Point Pleasant, W. Va., was ordered by the Interstate Commerce Commission in a recent decision. The present rate is $2.27.

New York

Pig Iron Sales 7000 Tons—9000 Tons of Steel Wanted for Subway

NEW YORK, May 28.—Sales of pig iron in this district, at 7000 tons, equaled those of the previous week. From one-quarter to one-third of the tonnage bought was for shipment before July 1, indicating that melters' stocks are low. Shipping instructions from foundries are also heavier than for several weeks. There has been little change in pig iron prices realized, but one Buffalo furnace has advanced its quotations on foundry iron to $17, base, and another producer is asking $16.50, base. Sales at $16, base Buffalo, are still reported, however. A few sales of Virginia foundry iron in small lots have been made at $20, base furnace. Eastern Pennsylvania producers continue to quote foundry iron at $20, base furnace, without obtaining much business in this territory. Furnaces in eastern New York and New England continue to meet delivered prices from Buffalo. Makers of pig iron regard a recent 5 per cent advance by three leading radiator manufacturers as an indication of improvement in building prospects. The Richmond Radiator Co., New York, has not yet closed on 5000 tons of foundry for its Uniontown, Pa., works. The Ingersoll-Rand Co., New York, is understood to have closed, at least in part, against an inquiry for 2000 tons of malleable and foundry iron. Fairbanks, Morse & Co., St. Johnsbury, Vt., have placed 500 tons of No. 2X. The Crompton & Knowles Loom Works, Worcester, Mass., is in the market for 1000 tons of No. 2 plain, No. 2X and No. 1X for third quarter delivery.

Prices per gross ton, delivered New York district:

Buffalo No. 2 fdy., sil. 1.75 to 2.25	$20.91 to $21.91
East. Pa. No. 2 fdy., sil. 1.75 to 2.25	20.39 to 22.52
East. Pa. No. 2X fdy., sil. 2.25 to 2.75	20.89 to 23.02
East. Pa. No. 1X fdy., sil. 2.75 to 3.25	21.39 to 23.52

Freight rates: $4.91 from Buffalo, $1.39 to $2.52 from eastern Pennsylvania.

Finished Steel.—Market conditions in this territory have changed little in the last week, although the gradual decline in business which has been apparent for two or three weeks, has continued. Specifications are coming in at a fair rate, but new buying is on a hand-to-mouth basis, a condition which in some cases enables the mills to get slightly better prices than would be possible on large orders. Sheets continue weak in price, while the volume of new business is very light. On galvanized sheets, 3.55c., Pittsburgh, is easily obtainable on attractive tonnages and little, if any, business is being placed at more than 3.60c. Black and blue annealed sheets are available at 2.70c. and 2c. respectively, with occasional sfall orders going at slightly higher figures. The strip market is quiet, with no further decline in prices. Plain wire and nails are quoted at 2.50c. and 2.65c., Pittsburgh, respectively, but these prices are not always adhered to, shading amounting to $1 or even $2 a ton in some cases. Demand for oil country pipe is showing improvement, and one large project for the Texas Co., involving 22,000 to 25,000 tons, is reported to have been awarded. Fabricated structural steel business has not been large in the last week. An office building in Manhattan, requiring 4000 tons, was the outstanding award. A section of the subway, on which bids will be taken June 15, calls for 9000 tons.

Mill prices per lb., delivered New York: Soft steel bars, 2.19c. to 2.24c.; plates, 2.12½c. to 2.22½c.; structural shapes, 2.14½c. to 2.19½c.; bar iron, 2.14c.

Warehouse Business.—Shading of prices on black and galvanized sheets continues, but the concessions of 10c. to 20c. per 100 lb. are usually available only on certain gages. The larger jobbers carrying complete stocks occasionally meet this competition, but on most transactions maintain the market price of 4c. per lb., base, on black and 4.70c., base, on galvanized. Demand for structural material is good, but competition is keen and small concessions from the quoted schedule of prices are not uncommon.

Cast Iron Pipe.—Bids will be taken on June 1 on 3160 tons of 4 to 16-in. class B pipe for a water district near New Brunswick, N. J. This is the only project of importance which has come out in the last week, and the market is unusually quiet. Prices, however, are well maintained by both Northern and Southern makers. The former are quoting $38.60 per ton, delivered New York, while Southern foundries are asking $31 per ton, Birmingham, for less than 200 tons and $31 for larger orders.

Prices per net ton, delivered New York: Water pipe 6-in. and larger, $37.60 to $38.60; 4-in. and 5-in., $42.60 to $43.60; 3-in., $52.60 to $53.60; Class A and gas pipe, $4 to $5 extra.

Reinforcing Bars.—Several fair-sized jobs, involving about 1200 tons of bars, have been let in the last week. No inquiries of outstanding size have come before the trade, but distributers are figuring several sizable projects, which are expected to be placed in the early sum-

Warehouse Prices, f.o.b. New York

	Base per Lb.
Plates and structural shapes	3.30c.
Soft steel bars and small shapes	3.25c.
Iron bars	3.24c.
Iron bars, Swedish charcoal	7.00c. to 7.25c.
Cold-finished shafting and screw stock—	
Rounds and hexagons	3.40c.
Flats and squares	3.90c.
Cold-rolled strip, soft and quarter hard,	5.15c. to 5.40c.
Hoops	4.50c.
Bands	4.00c.
Blue annealed sheets (No. 10 gage)	3.90c.
Long terne sheets (No. 24)	5.80c.
Standard tool steel	12.00c.
Wire, black annealed	4.50c.
Wire, galvanized annealed	5.15c.
Tire steel, 1½ x ½ in. and larger	3.30c.
Smooth finish, 1 to 2½ x ¼ in. and larger	3.65c.
Open-hearth spring steel, bases	4.50c. to 7.00c.

Machine bolts, cut thread:	Per Cent Off List
¾ x 6 in. and smaller	55 to 60
1 x 30 in. and smaller	50 to 50 and 10
Carriage bolts, cut thread:	
½ x 6 in. and smaller	55 to 60
¾ x 20 in. and smaller	50 to 50 and 10
Coach screws:	
½ x 6 in. and smaller	55 to 60
1 x 16 in. and smaller	50 to 50 and 10

Boiler Tubes—	Per 100 Ft.
Lap welded, 2-in	$17.33

---

*No. 28 and lighter, 36 in. wide, 20c. higher per 100 lb.

mer. Competition with foreign steel continues rather severe, and the imported material has now become a factor in road work. Prices are unchanged.

Coke.—All the special brands of Connellsville foundry coke have now been reduced to $4.85 per net ton at ovens. Occasional small lots for spot shipment are being sold, but the market is comparatively inactive. New England producers, which last week opened their books for the second half, are reported to have made contracts for approximately 100,000 tons. Delivered prices on special brands of foundry coke are: To northern New Jersey, Jersey City and Newark, $8.56 per net ton; to New York and Brooklyn, $9.44 per net ton. By-product foundry coke ranges from $9 to $9.40 per net ton, Newark or Jersey City, and from $10.06 to $10.29 per ton, New York or Brooklyn.

Old Material.—An eastern Pennsylvania consumer of blast furnace scrap, which has been offering $10 per ton, delivered, on a low freight rate is reported to have made a small purchase at this price. A Phoenixville plant is still offering to buy machine shop turnings at $10.50 per ton, delivered, but is not yet reported to have closed on a tonnage. Specification pipe is being purchased at $12 per ton, delivered Lebanon, Pa., and occasionally as high as $12.50 per ton is paid for this delivery. Blast furnace scrap is still being shipped to Swedeland, Pa., brokers paying $10 per ton, delivered. Shipments of No. 1 heavy melting steel to Conshohocken, Pa., are still suspended.

Dealers' buying prices per gross ton f.o.b. New York:

No. 1 heavy melting steel	$10.00 to	$10.85
Heavy melting steel (yard)	6.75 to	7.25
No. 1 heavy breakable cast	11.25 to	12.00
Stove plate (steel works)	7.25 to	7.50
Locomotive grate bars	7.50 to	8.00
Machine shop turnings	6.25 to	7.25
Short shoveling turnings	6.25 to	7.25
Cast borings (blast furnace or steel works)	6.25 to	7.25
Mixed borings and turnings	6.25 to	7.25
Steel car axles	15.00 to	15.50
Iron car axles	23.75 to	24.75
Iron and steel pipe (1 in. dia., not under 2 ft. long)	8.25 to	8.75
Forge fire	6.50 to	6.75
No. 1 railroad wrought	10.00 to	10.50
No. 1 yard wrought long	8.50 to	9.00
Rails for rolling	10.00 to	10.50
Cast iron carwheels	11.00 to	11.50
Stove plate (foundry)	8.50 to	9.00
Malleable cast (railroad)		10.00
Cast borings (chemical)	10.75 to	11.25

Prices per gross ton, delivered local foundries:

No. 1 machinery cast	$13.50 to	$14.00
No. 1 heavy cast (columns, building materials, etc.), cupola size	11.50 to	12.00
No. 2 cast (radiators, cast boilers, etc.)	11.00 to	11.50

Cleveland

Present Prices on Hot-Rolled Strip and Alloy Bars Named for Third Quarter

CLEVELAND, May 28.—A manufacturer of hot-rolled strip steel has announced its willingness to take business for the next quarter at present prices. An effort to advance the price of hot-rolled strip for the second quarter did not meet with much success. An Ohio mill has taken some business in blue annealed sheets for the third quarter at the current prices, but others have not opened their books and it is not expected that many consumers will show an interest in contracts until well along in June. Present prices on alloy steel bars have been reestablished for the third quarter. The volume of business in steel bars and structural material is fair, but orders generally are for small lots and many buyers are pressing mills for deliveries. New business is light. Plates are moving very slowly.

While specifications from the automotive industry show some decline, they are still good. There will be considerable slowing down in production of motor cars in June, when some of the manufacturers will discontinue their present models. One builder of low-priced cars is reducing operations and has curtailed specifications.

Structural inquiry is light. Grade crossing elimination work in connection with the Cleveland Terminal development will require a round tonnage of steel, but inquiry for this may not be out for some time.

Prices are firm at 1.85c., Pittsburgh, for steel bars, plates and structural material. Cleveland mills quote steel bars at 1.85c., Cleveland. Another Ohio mill names 1.90c., mill, for forging bars.

Pig Iron.—Business increased in the past week, during which Cleveland interests sold 36,000 tons of foundry and malleable iron, largely for the third quarter. With local production of merchant iron in excess of the demand in this territory, local furnaces continue to reach out into competitive districts. An inquiry for 6000 tons of foundry and malleable iron is pending from Benton Harbor, Mich., and on this a Cleveland producer is understood to have quoted $16, furnace, or the same price at which it recently sold a round block of iron in Indiana. Boat shipments from Cleveland to Chicago and efforts to take business at a western Michigan point in the Chicago territory have caused talk that Chicago furnaces will adopt retaliatory tactics and compete with Cleveland furnaces by offering iron in this city to be shipped by water. The local market has settled down to a maximum of $16.50 for outside shipment, although one Lake furnace interest is holding to a $17 minimum. The Michigan range is unchanged at $17.50 to $18. An inquiry is pending from a South Bend, Ind., consumer for 2000 tons.

Prices per gross ton at Cleveland:

N'th'n No. 2 fdy., sil. 1.75 to 2.25		$18.50
Southern fdy., sil. 1.75 to 2.25	$21.50 to	$22.00
Malleable		18.50
Ohio silvery, 8 per cent		28.00
Basic Valley furnace		16.00
Standard low phos., Valley furnace		26.50

Prices, except on basic and low phosphorus, are delivered Cleveland. Freight rates: 50c. from local furnaces; $3 from Jackson, Ohio; $6 from Birmingham.

Alloy Steel.—Present prices on alloy steel bars, which became effective March 16, and which have been well maintained since that time, have been reaffirmed for the third quarter. Specifications are good, although not as heavy as a few weeks ago.

Semi-Finished Steel.—Prices for the third quarter have not yet been named. Specifications for sheet bars continue heavy, but the demand for slabs and billets is rather slow. The current price on the three products is $33, Cleveland.

Sheets.—Specifications are fair, but there is very little new business. Prices remain at about recent levels, being so low on black and blue annealed sheets that mills are not inclined to make further reductions. On blue annealed sheets, 2c., Pittsburgh, is the common price, although some mills are going to 1.90c. for material carrying good extras. Black sheets range from 2.65c. to 2.70c., Pittsburgh, and 2.70c. to 2.75c., Valley. Further weakness has developed in galvanized sheets in some sections, where jobbers are offering car lots at 3.50c., Valley mill, although 3.55c. is the more common minimum price.

Strip Steel.—An Ohio producer has opened its books for hot-holled strip for the third quarter at present prices. Most consumers have recently specified rather heavily and specifications have since slowed down. New business is light. The price is unchanged at 1.75c., Pittsburgh, for 6-in. and wider material. There is little activity in cold-rolled strip. The price is unchanged at 2.75c., Cleveland, except for small lots.

Warehouse Prices, f.o.b. Cleveland

		Base per Lb.
Plates and structural shapes		3.00c.
Soft steel bars		3.00c.
Reinforcing steel bars	2.25c. to	2.75c.
Cold-finished rounds and hexagons		3.65c.
Cold-finished flats and squares		4.15c.
Hoops and bands		3.65c.
Cold-finished strip		*5.95c.
Black sheets (No. 24)		3.75c.
Galvanized sheets (No. 24)	4.40c. to	4.50c.
Blue annealed sheets (No. 10)		3.25c.
No. 9 annealed wire, per 100 lb		$2.85
No. 9 galvanized wire, per 100 lb		3.30
Common wire nails, base per keg		2.85

---

*Net base, including boxing and cutting to length.

Warehouse Business.—Sales are light, the May volume falling somewhat below that of April. There is some irregularity in galvanized sheets but other prices are fairly firm.

Coke.—One Connellsville district producer has reduced its price from $5.10 to $4.85 per ton for its premium brand of foundry coke, and the latter is now the maximum price. This brand is being offered for the last half at the reduced price. Some grades of Connellsville foundry coke are available at $3.50. The price of Ashland by-product foundry coke has been set at $6, Connellsville basis, for June shipment, or the same price that was in effect this month. Foundry coke specifications are holding up well, but there is very little new business.

Bolts, Nuts and Rivets.—The demand for bolts and nuts continues fair, but May business will fall slightly below that of April. Rivets remain dull. Prices are well maintained on both lines of products.

Old Material.—No new consumer demand developed during the week and activity was confined to buying by dealers to cover old orders. Steel-making scrap is plentiful at quoted prices. Dealers are paying up to $9.50 for blast furnace grades. The market has a weaker tone in the Valley district, where dealers are now paying $14.50 for heavy melting steel and $14 for compressed steel scrap for Youngstown delivery. Small lots of cast scrap have moved locally at $16.50. The scrap lists of the Michigan automobile companies for June are about the same size as last month, except the Chevrolet list, which aggregates 10,000 tons, being much larger than usual. Other lists include: Chrysler, 2000 tons; Buick, 2500 tons, and other General Motors units, 1500 tons.

Prices per gross ton, delivered consumers' yards:

Basic Open-Hearth Grades		
No. 1 heavy melting steel	$13.00 to	$13.25
No. 2 heavy melting steel	12.50 to	12.75
Compressed sheet steel	12.50 to	13.00
Light bundled sheet stampings	11.50 to	11.75
Drop forge flashings	11.50 to	11.75
Machine shop turnings	7.00 to	7.50
No. 1 railroad wrought	11.50 to	12.00
No. 2 railroad wrought	13.50 to	13.75
No. 1 busheling	11.00 to	11.25
Pipes and flues	9.00 to	9.50
Steel axle turnings	12.50 to	13.00
Acid Open-Hearth Grades		
Low phosphorus forging crops	16.50 to	17.00
Low phosphorus, billet, bloom and slab crops	17.00 to	17.50
Low phosphorus sheet bar crops	16.50 to	17.00
Low phosphorus plate scrap	16.00 to	16.50
Blast Furnace Grades		
Cast iron borings	9.15 to	9.50
Mixed borings and short turnings	9.15 to	9.50
No. 2 busheling	9.15 to	9.50
Cupola Grades		
No. 1 cast	16.25 to	16.75
Railroad grate bars	11.00 to	12.00
Stove plate	12.00 to	12.50
Rails under 3 ft.	16.75 to	17.25
Miscellaneous		
Railroad malleable	15.00 to	15.50
Rails for rolling	16.25 to	16.50

Warehouse Prices, f.o.b. Philadelphia

	Base per Lb.

†For 50 bundles or more; 10 to 49 bundles, 5.10c. base; 1 to 9 bundles, 5.45c. base.

Philadelphia

Prices Easier on Sheets and Bars—Scrap Market Weaker

PHILADELPHIA, May 28.—Mill operations are beginning to show a slight recession, but there is a fair tonnage of steel moving to consumers against contract. Prices continue irregular, with a slight downward tendency on desirable business. On most steel bar orders, 1.85c., base Pittsburgh, is maintained, but this is reported by buyers to have been shaded occasionally by $1 a ton. Plates are being maintained at 2c., Coatesville, and shapes are quoted at 2c., Pencoyd and Bethlehem. Sheet prices are still unstable, with black and galvanized decidedly weak.

Pig Iron.—Inquiry for third quarter delivery has been small, consumers evidently preferring to delay in making commitments, covering requirements as they arise. Foundry iron is unchanged at $20, base furnace, and there is no apparent inclination on the part of sellers to recede from this level. The fact that Buffalo iron is offered to consumers in this market at lower delivered prices and yet is not being sold to any extent gives rise to the belief that lower eastern Pennsylvania prices would develop little business. Occasional carload lots of low phosphorus are being sold. A recent sale of basic to a Harrisburg consumer was made by an eastern Pennsylvania furnace interest at $19.25 per ton, delivered. Virginia iron prices are unchanged.

Prices per gross ton at Philadelphia:

East. Pa. No. 2 plain, 1.75 to 2.25 sil.		$20.76
East. Pa. No. 2X, 2.25 to 2.75 sil.		21.26
East. Pa. No. 1X		21.76
Basic (delivered eastern Pa.)	$19.00 to	19.50
Gray forge	19.75 to	20.25
Malleable	21.00 to	21.50
Standard low phos. (f.o.b. New York State furnace)	22.00 to	23.00
Copper bearing low phos. (f.o.b. furnace)	23.50 to	24.00
Virginia No. 2 plain, 1.75 to 2.25 sil.	24.54 to	25.04
Virginia No. 2X, 2.25 to 2.75 sil.	25.04 to	25.54

Prices, except as specified otherwise, are delivered Philadelphia. Freight rates: 76c. to $1.64 from eastern Pennsylvania furnaces; $4.54 from Virginia furnaces.

Ferromanganese.—Large consumers have shown little interest in second half requirements, but there have been a few contracts for 100 to 200 tons for delivery in the next quarter at $105 per ton, seaboard.

Bars.—For prompt delivery of current small orders, 1.85c., Pittsburgh, applies. Buyers claim, however, to be able to buy at $1 a ton lower, when any considerable tonnage is involved.

Shapes.—Fabricated steel projects are limited. Plain material prices are low, ranging from 2c., Pencoyd, or 2.06c., delivered Philadelphia, to 2c., Bethlehem, or 2.13c., delivered Philadelphia. On the small specifications, mills are firmer than on the larger sizes, in which competition from special beams is encountered. The building for the Y. M. C. A., which will require about 2400 tons of steel, is reported to have been awarded to Bethlehem Fabricators, Inc.,

Plates.—Greater strength is evident in prices of plates than in those on bars and shapes. In the eastern Pennsylvania territory, 2.05c., Coatesville, is being obtained on small orders for prompt shipment and 2c., Coatesville, on more desirable business. Delivered prices are 2.10c. to 2.15c. per lb., Philadelphia. Although new business is limited to orders scarcely larger than the usual warehouse transactions, shipments on contracts are still in good volume and mills are maintaining a fair rate of operation.

Sheets.—Eastern Pennsylvania producers of blue annealed sheets are still seeking to maintain 2.10c. per lb., Pittsburgh, but 2c. is becoming more common, except on orders for less than carload lots. Black sheets have developed further weakness and the market is quotable at 2.65c., Pittsburgh, or 2.97c., delivered Philadelphia, the former quotation of 2.70c., Pittsburgh, applying only on small lots. Galvanized sheets are still quoted at 3.60c., Pittsburgh, or 3.92c., delivered Philadelphia, but concessions of as much as $2 a ton are reported to have been made on orders that are slightly larger than usual.

Warehouse Business.—Shipments from stock during the past month have compared favorably with those of April and there is a fair volume of current buying. Quantity differentials are being successfully maintained and some jobbers are of the opinion that an advance in prices would be possible if it were not for the softness of mill quotations.

Imports.—In the week ended May 26, a total of 249 tons of pig iron arrived at this port, 198 tons from India and 51 tons from the Netherlands. Iron ore receipts from Algeria totaled 5800 tons. Steel imports consisted of 365 tons of structural shapes from Belgium and 82 tons from Germany, 26 tons of iron bars from Sweden, 12 tons of steel bars from Belgium and one ton of strip steel from Sweden.

Old Material.—Prices of most grades of scrap are showing weakness, but the dearth of transactions renders it difficult to establish actual values. While there has been no purchase of blast furnace material at $10 per ton, a leading consumer has been offered 2500 tons at this price. Consumers of stove plate at Harrisburg and Phoenixville, Pa., have bought tonnages at $11.50 per ton, delivered, encountering no difficulty in obtaining all they required. Recent contracts for machine shop turnings have been made at $10.50 per ton, delivered, but these order have been small; the last large transaction was at $10.75 per ton, delivered Phoenixville.

Prices per gross ton delivered consumers' yards, Philadelphia district:

No. 1 heavy melting steel	$13.50 to $14.00
Scrap T rails	13.00 to 13.50
No. 2 heavy melting steel	11.00 to 11.50
No. 1 railroad wrought	14.50 to 15.00
Bundled sheets (for steel works)	10.50
Machine shop turnings (for steel works)	10.50 to 10.75
Heavy axle turnings (or equivalent)	12.00 to 12.50
Cast borings (for steel works and rolling mill)	10.50
Heavy breakable cast (for steel works)	15.50 to 15.75
Railroad grate bars	11.50
Stove plate (for steel works)	11.50
No. 1 low phos., heavy, 0.04 per cent and under	17.50 to 18.00
Couplers and knuckles	15.50
Rolled steel wheels	15.50
No. 1 blast furnace scrap	10.00 to 10.50
Machine shop turnings (for rolling mill)	11.00 to 11.25
Wrought iron and soft steel pipes and tubes (new specifications)	12.00 to 12.50
Shafting	17.50 to 18.00
Steel axles	19.00 to 20.00
No. 1 forge fire	11.00 to 11.50
Cast iron carwheels	15.50 to 16.00
No. 1 cast	16.00 to 16.50
Cast borings (for chemical plant)	14.50 to 15.00
Steel rails for rolling	14.75 to 15.25

New Portable Tinning Pot

The General Electric Co. announces a portable tinning pot as the latest addition to its line of electric heating equipment. This is described as being a convenient device for small tinning and soldering operations. The device is built on the same principle as the larger General Electric melting pots. The heating unit, which is of the cartridge type, dissipates 150 watts. It is placed in a boss cast on the bottom of the crucible and is readily removable. The crucible and base are made of cast iron and the jacket is made of sheet steel. The connecting lead is a heavy, Deltabeston heater cord and the plug is of the armored type.

This pot is particularly designed for solder and tin, having a maximum operating temperature of 500 deg. Fahr. About 15 min. are required to reduce the full contents of the pot to working temperature. While the pot is normally designed for operation on 110-volt circuits, it can be supplied for operation on 100, 120, 240-volt circuits if desired. It has an approximate shipping weight of 6 lb. and its dimensions are as follows: 2½ in. diameter and 1 in. deep inside, and 5 in. diameter and 4½ in. deep outside.

For seven consecutive weeks not a shipper anywhere in the United States has asked for a freight car without getting it on time, according to *Railway Age*. During the first 17 weeks of the year the average weekly unfilled requisitions was only 14 cars.

VENTILATED FURNACE BASES

Air Ducts Under Insulation Proposed in Open-Hearth Construction

A SUGGESTION that there should be ventilation of the region immediately below the hearth of an open-hearth furnace with a concrete base featured the discussion of a paper on the flow of heat through furnace hearths presented at the Pittsburgh meeting on May 14 of the American Society of Mechanical Engineers. The paper itself was contributed by J. D. Keller, private assistant to Prof. W. Trinks, Carnegie Institute of Technology, and covered calculations of the heat flow for several forms of furnaces, with particular emphasis on the need of insulation under the hearth and also in the junction masonry between hearth structure and the walls.

Assuming possibly that the bed of rails commonly used in furnaces bases could be made the supporting structure of the insulating stratum, there would be under the layer of rails a number of parallel air ducts or slots. For example, these might be 5 x 5 in. in cross-section separated by concrete piers of the foundation structure with the piers on 14-in. centers, making the piers 9 in. thick. With a velocity of air through the slots of 1 ft. a sec., the temperature of the top of the concrete piers would be reduced, it was calculated, from 1500 deg., with the furnace at 2200 deg., to 800 or 900 deg.

Of course the discussion covered the normal use of such furnaces in substantially continuous operation, which without means of keeping down the temperature is likely to reduce the concrete to a mass of powder. As Professor Trinks contended, ventilation is warranted in the face of slightly increased heat losses by the minimizing of troubles with the foundation. It was added also that narrower piers and narrower slots might be advisable to reduce temperature further in the upper part of the piers.

Structure of Pure Iron Is Revealed by Microscope

Iron forms the basis of so much of the metallic material used in engineering that a knowledge of its structure and properties is of very considerable importance. Ferrite, as pure iron is termed by the metallographer, is usually considered to have a simple microstructure but it sometimes shows some rather unusual structural features. These are described in a recent publication of the United States Bureau of Standards and it is shown that they are of three general kinds and are related to the three allotropic forms in which iron can exist, according to its temperature.

Two of these structural features of ferrite are associated with the condition in which iron exists at high temperatures. By means of the tiny inclusions of foreign materials which invariably exist in iron, to some extent, a record of the structure as it exists at the high temperature is preserved in the structure at ordinary temperatures. The usual mechanical properties of iron are not believed to be affected by these two structural features but there are indications that the "hot-shortness" or brittleness of iron in certain high-temperature ranges probably is.

The grains which constitute iron, as seen under the microscope, often show, when etched in the usual metallographic manner, the appearance of having been subdivided by a branching network, or "veining," into small subdivisions. Were this an actual subdivision, the strength and hardness of the metal would undoubtedly be appreciably increased. It has been shown, however, that the apparent change in the grain size is not a real one and that the veining has no appreciable strengthening effect on the iron. On the other hand, neither has it any detrimental effect. The real nature of veining is still somewhat obscure. It has been shown, however, that it is definitely related to the allotropic change which occurs in iron as it is heated to approximately 900 deg. C (1650 deg. Fahr.). Forging the iron at or slightly below this temperature develops this feature exceptionally well.

San Francisco

Steel Demand Slowing Down—Cast Iron Pipe Firmer

SAN FRANCISCO, May 26 (*By Air Mail*).—Demand for steel on the Pacific Coast during the past week showed evidence of slowing down. Plate, structural shapes and bar bookings fell off and very little new business developed. The largest letting was 685 tons of I-beams for the city of Los Angeles, placed with an unnamed interest.

Building permits issued in Los Angeles during the first 15 days of May were on a par with those for the corresponding period a year ago. Permits issued numbered 1692, with an estimated valuation of $4,518,721, compared with 1700 permits and a valuation of $4,274,535 for the same period in 1927. The total so far this year is $38,389,122, about $3,000,000 below the total last year to May 15.

Pig Iron.—Sales of foundry pig iron continue in moderate volume, the majority of bookings consisting of small lots. Operations of sanitary ware and stove foundries are on a larger scale than those of jobbing foundries. Prices remain unchanged.

Prices per gross ton at San Francisco:

*Utah basic	$25.00 to $26.00
*Utah foundry, sil. 2.75 to 3.25	25.00 to 26.00
**Indian foundry, sil. 2.75 to 3.25	24.00 to 25.00
**German foundry, sil. 2.75 to 3.25	24.25

*Delivered San Francisco.
**Duty paid, f.o.b. cars San Francisco.

Bars.—Only one award in excess of 100 tons was reported this week. An unnamed interest booked 225 tons for a loft building on Santee Street, Los Angeles. New inquiries, with one or two exceptions, involve small lots. Bids were opened this week on 155 tons for piers for the West Waterway bridge at Seattle. About 120 tons is required for a bridge for the California Highway Commission over Cache Creek in Lake County. Demand for merchant bar material is spotty and current bookings are for small lots. Out-of-stock prices on reinforcing bars in the San Francisco district continue weak, and 2c. or lower has been named recently.

Plates.—Demand for plates is exceptionally quiet. Only three projects are before the trade for figures. These projects include 1500 tons of blue annealed material for the Wildcat and Sequoia aqueducts in Oakland and 700 ton car floats for the Western Pacific and Santa Fe railroads. Tank business so far this year has been confined to small containers and elevated water towers. There is little indication that oil storage tanks will be in demand this year. Prices are firm at 2.30c., c.i.f.

Shapes.—Structural steel shape bookings in which more than 100 tons of material were involved were confined to two projects. In addition to the I-beam tonnage for Los Angeles, mentioned above, an unnamed fabricator took 110 tons for a building for the University of Southern California in Los Angeles. The only new inquiry is for 470 tons for a bridge over the Umpqua River, near Scottsburg, Ore. Plain material is firm at 2.35c., c.i.f.

Cast Iron Pipe.—Cast iron pipe prices appear somewhat firmer this week. Market quotations now range from $36 to $37 a ton, delivered, on 6-in. and larger class B. David H. Ryan, San Diego, was awarded 231 tons of 4 and 6-in. class B pipe for the improvement of San Diego Avenue, San Diego. Pending business exceeds 5700 tons. Bids have been opened on 229 tons of 4 to 10-in. class B pipe for Inglewood, Cal., and on 127 tons of 4 and 6-in. class B pipe for Redwood City, Cal. Bids were also opened on 1560 tons of 4 to 12-in. class B pipe for street improvement work at Oceanside, Cal.

Warehouse Prices, f.o.b. San Francisco

	Base per Lb.
Plates and structural shapes	3.15c.
Soft steel bars	3.15c.
Small angles, 3/16-in. and over	3.15c.
Small angles under 3/16-in.	3.55c.
Small channels and tees, ¾-in. to 2¾-in.	3.75c.
Spring steel, ¼-in. and thicker	5.00c.
Black sheets (No. 24)	4.95c.
Blue annealed sheets (No. 10)	3.90c.
Galvanized sheets (No. 24)	5.50c.
Structural rivets, ½-in. and larger	5.65c.
Common wire nails, base per keg	$3.40
Cement coated nails, 100-lb. keg	3.40

Boston

Pig Iron Business Mostly in Small Lots—Scrap Prices Easier

BOSTON, May 28.—A Vermont foundry is reported to have purchased 1000 tons No. 1X third quarter iron from a New York State furnace, but details as to price are lacking. Another report is that the lot was split two ways, the Mystic Iron Works taking 700 tons and a New York State stack the remainder. A Worcester, Mass., foundry probably will close this week on 1000 tons of No. 2 plain and No. 1X, and the Rhode Island Malleable Iron Co., Phillipsdale, R. I., on 450 tons of malleable. Aside from the Vermont purchase, business in pig iron in the past week was confined to small tonnages, with the aggregate falling below that of the previous week. There is considerable prospective business under cover, however; consequently, a more active market within the near future is expected. Prices are still unsettled, with Buffalo iron competing actively against New York State and Mystic.

Prices of foundry iron per gross ton, delivered to most New England points:

Buffalo, sil. 1.75 to 2.25	$20.91 to $21.91
Buffalo, sil. 2.25 to 2.75	21.41 to 22.41
East. Penn., sil. 1.75 to 2.25	23.15 to 23.65
East. Penn., sil. 2.25 to 2.75	23.65 to 24.15
Virginia, sil. 1.75 to 2.25	25.71
Virginia, sil. 2.25 to 2.75	26.21
Alabama, sil. 1.75 to 2.25	22.91 to 24.77
Alabama, sil. 2.25 to 2.75	23.41 to 25.27

Freight rates: $4.91 from Buffalo, $3.65 from eastern Pennsylvania, $5.21 all rail from Virginia, $6.91 to $8.77 from Alabama.

Coke.—New England foundries are signing up rapidly last half contracts for by-product foundry coke. It is estimated that approximately 70 per cent have done so. Current shipments of fuel continue to show an increase. Indications are no change will be made in June in the price, which is $11 a ton, delivered within a $3.10 freight rate zone. Owing to cold wet weather, shipments of domestic coke in May by ovens have run well head of those for the corresponding month last year.

Steel Fabricating Work.—The General Electric Co. is erecting two plant units, one at Bridgeport, Conn., and the other at Pittsfield, Mass. All structural work will be arc welded instead of riveted. A strike by iron workers in Boston for $1.50 per hour is holding up sev-

Warehouse Prices, f.o.b. Boston

	Base per Lb.
Plates	3.365c.
Structural shapes—	
Angles and beams	3.365c.
Tees	3.365c.

Cold-punched nuts	50 and 5
Stove bolts	70 and 10

*Including quantity differentials.

eral large jobs. According to union officials, 600 men left their work. Fabricators have not given their estimate of the number of strikers. The labor trouble has tended to slow up prospective fabricating jobs around Boston, but not elsewhere in New England.

Shapes and Plates.—Consumers of plates are still buying in limited quantities and only as needs dictate. There is a little better demand for standard shapes and light structural steel, according to mill representatives. Standard shapes are still selling at 1.80c. per lb., base Pittsburgh, for large tonnages and at 1.90c. for small.

Warehouse Business.—The movement of iron and steel out of warehouses is of fairly large proportions, but individual shipments generally are small, which raises the cost of doing business. Price shading is still in evidence, the result of keen competition. An advance of 10 per cent has been made on flat, round and fillister-head machine screws of brass to correspond with one recently made on the iron products. Flat and round head screws, formerly at 50 and 10 per cent discount, are now 40 and 10 per cent off; and fillister-head screws, which were 30 per cent discount, are now 25 per cent off.

Old Material.—With buying of small proportions and consumers more discriminating than ever as regards quality and prices, the old material market is unsettled and generally easier. For heavy melting steel, $9 a ton on cars, shipping point, is the peak of the market, and some sales have been made at less. Small tonnages of No. 2 steel are moving to Weirton, W. Va., for which $7.50 to $7.75 a ton is paid here. The range on railroad wrought is now $9 to $9.50 a ton, with most sales at $9.35. On mixed borings and turnings this market is 25c. a ton lower. Reductions are also reported in prices paid for steel turnings, rolling mill borings, long bundled skeleton and specification pipe. No. 1 steel for export, however, is stronger at $9.50 to $10 a ton on cars at dock here. A slackening in the call for both textile and No. 1 machinery cast has resulted in somewhat lower quotations.

Buying prices per gross ton, f.o.b. Boston rate shipping points:

No. 1 heavy melting steel	$8.60 to $9.00
Scrap T rails	8.50 to 9.00
Scrap girder rails	7.50 to 8.00
No. 1 railroad wrought	9.00 to 9.50
No. 1 yard wrought	7.00 to 7.50
Machine shop turnings	5.50 to 5.85
Cast iron borings (steel works and rolling mill)	5.50 to 5.75
Bundled skeleton, long	5.50 to 6.25
Forge flashings	5.60 to 7.00
Blast furnace borings and turnings	5.50 to 5.75
Forge scrap	6.00 to 6.25
Shafting	13.00 to 13.50
Steel car axles	15.50 to 16.00
Wrought pipe 1 in. in diameter (over 2 ft. long)	7.00 to 7.50
Rails for rolling	10.00 to 10.25
Cast iron borings, chemical	10.00 to 10.25

Prices per gross ton delivered consumers' yards:

Textile cast	$13.25 to $13.50
No. 1 machinery cast	14.00 to 14.50
No. 2 machinery cast	12.50 to 13.50
Stove plate	10.00 to 10.50
Railroad malleable	13.00 to 13.50

Canada

Steel Industry Holds to High Operations —Pig Iron in Fair Demand

TORONTO, ONT., May 28.—The iron and steel industry of Canada continues to hold its high position with regard to productive operations. New business is appearing in sufficient volume to bring forth statements from officials of leading iron and steel mills that present operations will be continued for the next four or five months. Both the Algoma Steel Corporation, Sault Ste. Marie, Ont., and the Dominion Iron & Steel Corporation, Sydney, N. S., have large tonnages of unfilled business on their books, the greater part, however, being for rails. Other rail orders are expected to appear in the course of the next few weeks. The Steel Co. of Canada, Ltd., Hamilton, Ont., is well supplied with orders of a diversified character and its plant is running almost at capacity.

Pig Iron.—Some fair-sized tonnage orders for third quarter delivery are still pending. Melters who are interested in placing tonnage are specifying water delivery, on which freight charges are much lower than by rail. Current inquiries range from 50 to 200 tons. The total volume of new business appearing weekly, however, shows no signs of falling off and is said to be much better than that of a year ago. The prevailing price of $23.10, Toronto, for foundry iron is the lowest point Canadian iron has reached since post-war days.

Prices per gross ton:

Delivered Toronto	
No. 1 foundry, sil. 2.25 to 2.75	$23.10 to $23.60
No. 2 foundry, sil. 1.75 to 2.25	23.10 to 23.60
Malleable	23.10 to 23.60
Delivered Montreal	
No. 1 foundry, sil. 2.25 to 2.75	24.50 to 25.00
No. 2 foundry, sil. 1.75 to 2.25	24.50 to 25.00
Malleable	24.50 to 25.00
Basic	24.00
Imported Iron at Montreal Warehouse	
Summerlee	33.50
Carron	33.00

Old Material.—The better demand for old material that featured local business during the past couple of weeks was of short duration. During the period of activity many melters replenished depleted stocks and the majority now have sufficient scrap ahead to keep them going for several weeks. Sales of the week were mostly confined to small tonnages, but these were fairly numerous. Prices are weak. Large accumulations are being thrown on the market, much of which is going at bargain prices.

Dealers' buying prices:

	Toronto	Montreal
Per Gross Ton		
Heavy melting steel	$9.00	$8.00
Rails, scrap	10.00	10.00
No. 1 wrought	9.00	11.00
Machine shop turnings	7.00	6.00
Boiler plate	7.00	7.00
Heavy axle turnings	7.50	7.50
Cast borings	7.50	6.00
Steel turnings	7.00	6.50
Wrought pipe	5.00	6.00
Steel axles	14.00	19.00
Axles, wrought iron	16.00	21.00
No. 1 machinery cast	....	16.00
Stove plate	....	12.00
Standard carwheels	....	14.50
Malleable	....	13.00
Per Net Ton		
No. 1 machinery cast	15.00	....
Stove plate	9.00	....
Standard carwheels	13.00	....
Malleable scrap	13.00	....

Birmingham

Some Third Quarter Pig Iron Sold— Steel Inquiries Increase

BIRMINGHAM, May 28.—Furnace interests report no evidence of change in the pig iron market. One merchant producer has booked a small third quarter tonnage at $16, which is a reaffirmation of the second quarter price. Other producers have confined sales to second quarter iron, maintaining a $16 base. Inquiries on third quarter iron are slow in developing, and indications are that the quarter will enter with buying confined to quiet negotiations, as was the case with the second quarter. Specifications against contracts are at a fair rate. The month will close with little or no iron piled. Furnace operations have been the same during the past two weeks, 18 being in blast. Of this number, 11 are on foundry, five on basic, one on recarburizing iron and one on ferromanganese.

Prices per gross ton, f.o.b. Birmingham district furnaces:

No. 2 foundry, 1.75 to 2.25 sil	$16.00
No. 1 foundry, 2.25 to 2.75 sil	16.50
Basic	15.00

Finished Steel.—Inquiries show a favorable increase over the preceding week and new business continues satisfactory in several of the more important lines. Bookings during May have been slightly in excess of the corresponding period in April. Small tonnage inquiries continue to rule the fabricated structural steel market. Bar manufacturers are enjoying a fair amount of new business, with inquiries good. Prices remain unchanged. The Tennessee company has increased its active open-hearth furnaces at Fairfield from four to five. Seven are still in operation at Ensley. The Gulf States Steel Co. continues to work four at Alabama City.

Cast Iron Pipe.—A fair volume of contract business is being received and pressure pipe manufacturers are gradually increasing their backlogs. Small orders constitute the larger portion of the new business. Stocks in the yards are being kept low and production is being increased slightly. Soil pipe business is still dull, though improvement is expected within the next two or three weeks. Quotations show no change from $31 to $33 on 6-in. and larger diameters.

Coke.—Activity in the coke market continues to dwindle. Specifications on contracts are holding up fairly well. Prices are unchanged from a $5 base.

Old Material.—The market is marked by small orders and indifferent buying. Quotations are unchanged, but are more or less nominal owing to lack of transactions.

Prices per gross ton, delivered Birmingham district consumers' yards:

Heavy melting steel	$9.00 to	$9.50
Scrap steel rails	11.00 to	11.50
Short shoveling turnings	7.50 to	8.00
Cast iron borings		8.00
Stove plate		13.50
Steel axles	19.00 to	20.00
Iron axles	20.00 to	21.00
No. 1 railroad wrought	10.00 to	10.50
Rails for rolling		13.00
No. 1 cast		14.25
Tramcar wheels	12.50 to	13.50
Cast iron carwheels	12.00 to	13.00
Cast iron borings, chemical	13.50 to	14.00

Buffalo

Pig Iron Market More Active—Large Sales of Steel Scrap

BUFFALO, May 28.—The pig iron market showed more activity in the past week than for some time. The Worthington Pump Corporation placed 325 tons of Bessemer and foundry iron for its Harrison, N. J., plant; 500 tons of foundry was bought by a district foundry, and 600 tons of foundry was placed by a Geneva, N. Y., foundry. The Central Foundry Co. purchased between 3000 and 5000 tons of foundry iron for Baltimore delivery. The Fairbanks-Morse Co. inquired for 1000 tons of foundry for Vermont. There has been quite a volume of small-lot buying. The price for eastern delivery is firmer. One producer, who has taken considerable iron for shipment to points eastward at lower than $17, is now firm at $17 for all shipments. This price applies to the base grade of foundry iron. Considerable of the iron sold in the week is to be delivered by barge. The melt is increasing, and furnacemen believe the outlook for June business is very good.

Prices per gross ton, f.o.b. furnace:

No. 2 plain fdy., sil. 1.75 to 2.25		$17.00
No. 2 foundry, sil. 2.25 to 2.75		17.50
No. 1X foundry, sil. 2.75 to 3.25		18.50
Malleable, sil. up to 2.25		17.50
Basic	$16.50 to	17.00
Lake Superior charcoal		27.28

Finished Iron and Steel.—Bar and shape business continues in fair volume. Prices are steady at 2c., Lackawanna, for carload lots and 1.95c. for more important tonnage. No third quarter prices are yet being quoted. Current sheet business is being placed at 2.75c. to 2.85c., Pittsburgh, for black, 3.55c. for galvanized and 4c. for automobile body sheets. Specifications are fair. Bolt and nut specifications continue in about the recent volume.

Old Material.—One of the local mills has made a large purchase of heavy melting steel, No. 1 and No. 2 grades, and hydraulic compressed sheets. Dealers report obtaining $14.50 on the No. 1 steel, $13 on the No. 2 steel, and the same on hydraulic compressed. One lot of 5000 tons of No. 1 heavy melting brought $14.75. There has been a further softening in prices.

Prices per gross ton, f.o.b. Buffalo consumers' plants:

Basic Open-Hearth Grades		
No. 1 heavy melting steel	$14.50 to	$14.75
No. 2 heavy melting steel	12.50 to	13.00
Scrap rails	13.50 to	14.00
Hydraulic compressed sheets	12.50 to	13.00
Hand bundled sheets	8.50 to	9.00
Drop forge flashings	12.00 to	12.50
No. 1 busheling	13.25 to	13.75
Heavy steel axle turnings	12.50 to	12.75
Machine shop turnings	8.00 to	8.50
Acid Open-Hearth Grades		
Railroad knuckles and couplers		15.50
Railroad coil and leaf springs	15.50 to	16.00
Rolled steel wheels	15.00 to	15.50
Low phosphorus billet and bloom ends	16.50 to	17.00
Electric Furnace Grades		
Heavy steel axle turnings	12.75 to	13.25
Short shoveling steel turnings	10.75 to	11.25
Blast Furnace Grades		
Short shoveling steel turnings	10.50 to	11.00
Short mixed borings and turnings	9.50 to	10.00
Cast iron borings	9.25 to	9.75
No. 2 busheling	9.00 to	9.25
Rolling Mill Grades		
Steel car axles	16.00 to	16.50
Iron axles	21.00 to	22.00
No. 1 railroad wrought	12.00 to	12.50
Cupola Grades		
No. 1 machinery cast	14.50 to	15.00
Stove plate	13.00 to	13.25
Locomotive grate bars	12.00 to	12.50
Steel rails, 3 ft. and under		16.50
Cast iron carwheels	12.50 to	13.00
Malleable Grades		
Railroad		15.00
Agricultural		15.00
Industrial		15.00

Warehouse Prices, f.o.b. Buffalo

	Base per Lb.
Plates and structural shapes	3.40c.
Soft steel bars	3.30c.
Reinforcing bars	2.75c.

Black wire, base per 100 lb.	3.90

Youngstown

Valley Steel Production Tapering—Now Between 70 and 75 Per Cent

YOUNGSTOWN, May 28.—Steel production in this district is averaging between 70 and 75 per cent of capacity, a drop of about five points from its rate of the middle of the month. While a good deal of steel still is moving from the district to the automobile builders, it is in smaller volume than it was recently and there has been no compensating increase in the demand from other directions to sustain mill and steel works operations. The Republic Iron & Steel Co. has taken off one blast furnace. Sheet mill schedules are lower and so are bar mill operations. No particular change is noted in pipe mill engagement. Tin plate and strip mills keep going well, although in the case of the latter, price flexibility is a factor. Makers need orders more urgently than consumers require supplies and the result is acceptance of business at or close to the low levels made late last year on first quarter contracts.

Prices of bars and plates are holding well at 1.85c., base Pittsburgh, and it is commonly expected that when local producers open their books for third quarter contracts they will name 1.90c., base, on these products. No heavy structural steel is rolled in this area. There are no indications of an early opening of books for third quarter sheet business. If the market were on a more profitable level, sheet makers might be interested, but to open books now would mean taking forward tonnage at prices that every mill regards as too low. It might be hard to convince buyers that they should pay more than 2.70c., base, for black sheets, or more than 3.55c., base, for galvanized. In the South, corrugated galvanized sheets are going at very low prices because of a keen struggle between mills having favorable freight rates to that territory. Also, to meet the competition of substitute roofing materials, low prices have had to be made. One of the local makers is affected by this situation, as it maintains a stock at one of the southeastern Atlantic ports.

Strip makers have a problem in getting higher prices on tonnages for shipment after July 1, because of the weakness that has developed in the past few weeks. The advance in standard pipe made at the beginning of April is holding and has had some test.

Pig iron is weak and even at $16, furnace, for the basic grade, the market is narrow, since Pittsburgh reports sales of that grade at around $17, delivered, to meet which local furnaces would have to go to about $15.25. Declining steel works operations are reflected in a lighter demand for scrap and also in lower prices, most recent sales of heavy melting steel having been at $15, while compressed sheets have gone at $14.50, in both cases, a drop of 50c. a ton as compared with prices on the last previous transactions.

St. Louis

Pig Iron Weakness Delays Buying —Steel Business in Fair Volume

ST. LOUIS, May 28.—The weakness in the pig iron market caused by the sale of a tonnage of Lake Erie iron in the Chicago territory is still felt in this industrial district, and it has had the effect of causing melters to delay purchases until conditions become more settled. The sales of the St. Louis Gas & Coke Corporation during the week totaled less than 2500 tons, including two sales of malleable, 500 tons and 200 tons respectively, and the remainder was foundry grades in lots of a carload up to 500 tons, the latter to a Moline, Ill., jobbing foundry. This maker has not changed its price in the St. Louis district, although it is meeting Chicago competition in that territory. April sales of the reporting stove foundries in the Eighth Federal Reserve District were 1.7 below the preceding month and 5.7 per cent less than in April, 1927, while April business of the reporting jobbing foundries was 7.1 per cent below the preceding month and 4.5 per cent lower than a year ago.

Prices per gross ton at St. Louis:

No. 2 fdy., sil. 1.75 to 2.25, f.o.b. Granite City, Ill.		$19.00
Northern No. 2 fdy., delivered St. Louis		20.16
Southern No. 2 fdy., delivered	$19.92 to	20.42
Northern malleable, delivered		20.16
Northern basic, delivered		20.16

Freight rates: 81c. from Granite City to St. Louis; $2.16 from Chicago; $4.42 from Birmingham.

Coke.—Buying of foundry coke continues only on a fair scale, with consumers in the district getting the fuel from by-product ovens as they require it. Buying by dealers of domestic coke is light.

Finished Iron and Steel.—The Granite City Steel Co. reports that new business continues to reach it in fair volume, and it has sufficient backlog tonnage, particularly of tin mill products, to assure full operation for several weeks. Although specifications for galvanized sheets have not been keeping pace with those for other products, a gradual increase is noticed in the number of incoming orders. Buying by the railroads is light. No reinforcing bar contracts were made during the week, and again it was a week without any new structural steel business, and none is in sight.

Warehouse Prices, f.o.b. St. Louis

	Base per Lb.
Plates and structural shapes	3.25c.
Bars, soft steel or iron	3.15c.
Cold-finished rounds, shafting and screw stock	3.75c.
Black sheets (No. 24)	4.45c.
Galvanized sheets (No. 24)	5.25c.
Blue annealed sheets (No. 10)	3.60c.
Black corrugated sheets (No. 24)	4.50c.
Galvanized corrugated sheets	5.30c.
Structural rivets	3.75c.
Boiler rivets	3.75c.
	Per Cent Off List
Tank rivets, $\frac{7}{16}$-in. and smaller, 100 lb. or more	70
Less than 100 lb.	65
Machine bolts	60
Carriage bolts	60
Lag screws	60
Hot-pressed nuts, squares, blank or tapped, 200 lb. or more	60
Less than 200 lb.	50
Hot-pressed nuts, hexagons, blank or tapped, 200 lb. or more	60
Less than 200 lb.	50

Old Material.—A leading East Side mill bought 10,000 tons of melting steel for delivery in the next 60 days at unchanged prices. Another East Side mill is expected to be in the market shortly for a considerable tonnage. Dealers' prices on melting steel, heavy shoveling steel and railroad springs are 25c. a ton lower and are 50c. a ton lower on No. 1 machinery cast. Railroad lists: Chicago, Burlington & Quincy, 4920 tons; Union Pacific, 2955 tons; Big Four, 1350 tons; Baltimore & Ohio, 250 tons; Missouri Pacific, 124 tons; Chicago & Alton, 100 tons; New Orleans Great Northern, 80 tons; Frisco, 63 carloads; Mobile & Ohio, 46 carloads; Nickel Plate, 21 carloads; Chicago, Milwaukee, St. Paul & Pacific, 10 carloads; Pullman Co., 1 carload.

Dealers' buying prices, per gross ton, f.o.b. St. Louis district:

Heavy melting steel	$11.00 to	$11.50
No. 1 locomotive tires	12.00 to	12.50
Heavy shoveling steel	11.00 to	11.50
Miscellaneous standard-section rails, including frogs, switches and guards, cut apart	12.50 to	13.00
Railroad springs	13.50 to	14.00
Bundled sheets	8.75 to	9.25
No. 2 railroad wrought	11.25 to	11.75
No. 1 busheling	9.75 to	10.25
Cast iron borings	9.00 to	9.50
Iron rails	13.00 to	13.50
Rails for rolling	13.00 to	13.50
Machine shop turnings	7.00 to	7.50
Steel car axles	17.50 to	18.00
Iron car axles	23.50 to	24.00
Wrought iron bars and transoms	21.00 to	21.50
No. 1 railroad wrought	10.00 to	10.50
Steel rails, less than 3 ft	15.00 to	15.50
Steel angle bars	12.00 to	12.50
Cast iron carwheels	13.50 to	14.00
No. 1 machinery cast	13.00 to	13.50
Railroad malleable	11.50 to	12.00
No. 1 railroad cast	13.00 to	13.50
Stove plate	12.00 to	12.50
Agricultural malleable	12.00 to	12.50
Relaying rails, 60 lb. and under	20.50 to	23.50
Relaying rails, 70 lb. and over	26.50 to	29.00

Cincinnati

Southern Irons Reestablished at $16—Steel Business Quieter

CINCINNATI, May 28.—Pig iron buying has been almost at a standstill, sales in the past week having totaled less than 3000 tons. The largest was 1000 tons of malleable for a Kokomo, Ind., consumer. Since the market is practically devoid of inquiries, no improvement is expected in the immediate future. Despite the lack of interest on the part of users, Southern makers are reported to have restored the former price of $16, base Birmingham, and it is stated that neither Alabama nor Tennessee furnaces will accept orders under that figure. In southern Ohio, foundry iron remains nominally at $19, base Ironton, although this quotation is too high to secure current business in competition with makers in other districts. There has been no change in Jackson County silvery iron, which is selling at $25 for 8 per cent.

Prices per gross ton, delivered Cincinnati:

So. Ohio fdy., sil. 1.75 to 2.25		$20.89
So. Ohio malleable	$20.14 to	20.89
Alabama fdy., sil. 1.75 to 2.25		19.69
Alabama fdy., sil. 2.25 to 2.75		20.19
Tennessee fdy., sil. 1.75 to 2.25		19.69
Southern Ohio silvery, 8 per cent		26.89

Freight rates, $1.89 from Ironton and Jackson, Ohio; $3.69 from Birmingham.

Finished Material.—The amount of new business in the last week has been light, while specifications against second quarter contracts also have been less numerous, especially in the heavy steel products. The dearth of structural steel jobs has been partly responsible for the sluggish condition of the market. Fabricators have a fair volume of small projects on hand, but have not been able to maintain normal operations on account of the slowness with which major proposals are coming out. Furthermore, consuming industries in general are in need of less material than a few weeks ago owing to a slight slowing down of production schedules. Bars, structural shapes and plates remain firm at 1.85c., base Pittsburgh. The situation in sheets has not changed materially. There are numerous isolated cases in which new low levels of prices have been reached, but these are not looked upon as sufficiently representative to establish a market. As a general rule, blue annealed sheets are being sold at 2c. to 2.10c., base Pittsburgh, black at 2.75c. to 2.85c., galvanized at 3.65c., and automobile body stock at 4c. District sheet mills are operating at about 90 per cent of capacity. More liberal specifications have come from the automobile industry, indicating that automobile production in June is likely to be sustained at a good rate. Common wire nails are quoted at $2.50 per keg, base Ironton, or $2.64, delivered in Cincinnati. Some sellers are unwilling to meet this price and consequently are practically excluded from markets along the Ohio River which can be reached by barge. Plain wire is selling at $2.40 per 100 lb., base Ironton.

Reinforcing Bars.—Bids are being taken on 200 tons of bars for the athletic stadium of St. Xavier College, Cincinnati. Prices are firm, with new billet bars at 1.85c., base Pittsburgh, and rail steel stock at 1.80c., base mill.

Warehouse Business.—From the standpoint of tonnage, sales this month have been somewhat disappointing and have declined about 5 per cent from April. Nevertheless, prices in all lines are steady and unchanged.

Coke.—There has been a further recession in specifications for by-product foundry coke, caused largely by the abatement in demand from automobile foundries. Producers at Ashland, Portsmouth and Indianapolis have announced that by-product foundry coke will remain at $7 per net ton, f.o.b. ovens, or $9.02, delivered Cincinnati, during June. The price of domestic grades also will be undisturbed, with egg size selling at $4.50, ovens, walnut at $3.50 and No. 2 nut at $3. One beehive coke maker in the Wise County district has reduced foundry and furnace coke 25c. a ton.

Foundry coke prices per net ton, delivered Cincinnati: By-product coke, $9.02; Wise County coke, $7.09 to $7.59; New River coke, $9.09 to $9.59. Freight rates, $2.14 from Ashland, Ky.; $2.59 from Wise County and New River ovens.

Old Material.—Steel plants in this district are taking less material on contract, but blast furnace grades are more active because of the blowing in of the reconstructed furnace of the Hamilton Coke & Iron Co. Cast iron scrap is sluggish, while malleable grades also are moving slowly. Prices have not changed.

Dealers' buying prices per gross ton f.o.b. cars, Cincinnati:

Heavy melting steel	$11.00 to $11.50
Scrap rails for melting	11.25 to 11.75
Loose sheet clippings	8.25 to 8.75
Bundled sheets	9.25 to 9.75
Cast iron borings	8.00 to 8.50
Machine shop turnings	7.50 to 8.00
No. 1 busheling	10.00 to 10.50
No. 2 busheling	7.00 to 7.50
Rails for rolling	12.50 to 13.00
No. 1 locomotive tires	12.75 to 13.25
No. 1 railroad wrought	10.00 to 10.50
Short rails	15.75 to 16.25
Cast iron carwheels	12.25 to 12.75
No. 1 machinery cast	15.25 to 15.75
No. 1 railroad cast	12.75 to 13.25
Burnt cast	7.50 to 8.00
Stove plate	8.25 to 8.75
Brake shoes	9.50 to 10.25
Railroad malleable	11.50 to 12.00
Agricultural malleable	11.00 to 11.50

Warehouse Prices, f.o.b. Cincinnati

	Base per Lb.
Plates and structural shapes	3.40c.
Bars, soft steel or iron	3.30c.
New billet reinforcing bars	3.15c.
Rail steel reinforcing bars	3.00c.
Hoops	4.00c. to 4.25c.
Bands	3.95c.
Cold-finished rounds and hexagons	3.85c.
Squares	4.35c.
Black sheets (No. 24)	4.05c.
Galvanized sheets (No. 24)	4.90c.
Blue annealed sheets (No. 10)	3.60c.
Structural rivets	3.85c.
Small rivets	65 per cent off list
No. 9 annealed wire, per 100 lb.	$3.00
Common wire nails, base per keg	2.95
Cement coated nails, base 100 lb. keg	2.95
Chain, per 100 lb.	7.55
	Net per 100 Ft.
Lap-welded steel boiler tubes, 2-in.	$18.00
4-in.	38.00
Seamless steel boiler tubes, 2-in.	19.00
4-in.	39.00

Pig Iron Melt for Automobile Castings Declines; Scrap Weak

DETROIT, May 28.—During the past week there has been a noticeable dropping off in the melt in the district by some of the producers of automobile castings owning to changes in models which will come out about the middle of the year.

There has been no activity in the market on old material. Prices lean toward the low side.

Dealers' buying prices per gross ton f.o.b. cars, Detroit:

Heavy melting and shoveling steel	$11.00 to $11.50
Borings and short turnings	7.25 to 7.75
Long turnings	6.75 to 7.25
No. 1 machinery cast	14.00 to 15.00
Automobile cast	19.50 to 21.00
Hydraulic compressed sheets	9.75 to 10.25
Stove plate	11.00 to 12.00
No. 1 busheling	8.50 to 9.00
Sheet clippings	6.00 to 7.00
Flashings	9.25 to 9.75

Lead Output Declined Last Year

WASHINGTON, May 27.—Production of primary lead in the United States from domestic ore amounted in 1927 to 668,320 net tons, according to reports made by producers to the Bureau of Mines. The output was nearly 2 per cent less than in 1926 and the value was 23 per cent less. The production of refined lead from foreign ore, principally from Mexico, amounted to 128,210 tons, an increase of 8 per cent over the production in 1926. Consequently the decrease in the total output of primary lead from domestic and foreign sources was only about 0.3 per cent. Over 30 per cent of the lead produced from domestic ore was derived from Missouri; nearly 23 per cent was derived from Utah and about 22 per cent came from Idaho. The apparent consumption of refined primary lead in the United States in 1927 amounted to about 663,000 tons, as compared with about 718,000 tons in 1926.

Company Activities

The Columbia Steel Co., Butler, Pa., purchased last year by the American Rolling Mill Co., has registered its trademark, Stripsheets, No. 240,563, in the United States Patent Office.

The Otis Steel Co., Cleveland, placed a new 125-ton open-hearth furnace in operation at its Riverside plant recently. The company now has six open-hearth furnaces at this plant, all operating.

The Stahlwerk Becker A. G. at Willich, Kreis Krefeld and Rheinoldhütte, Germany, maker of special tool and alloy steels, has appointed the Foreign Traders Co., 17 Battery Place, New York, agents for the United States and Canada.

The Kuhn-Lowry Co., Pittsburgh, doing a warehouse business in iron and steel products, has been succeeded by Kuhn Brothers, Inc., of which George H. Kuhn is president and Mark D. Kuhn, Jr., vice-president. The new company has opened a warehouse at Twenty-eighth and Liberty Streets, Pittsburgh.

The Cincinnati offices of the Trumbull Steel Co. and the Republic Iron & Steel Co. have been combined at 1303 First National Bank Building.

Poldi Steel Corporation of America, New York, representative in the United States of the Poldi Steel Works, Prague, Czechoslovakia, has removed its offices and warehouse to 245 West Eighteenth Street.

G. Haarmann & Co., Inc., Holyoke, Mass., structural steel fabricator, has changed its name to the Haarmann Steel Co.

NON-FERROUS METAL MARKETS

The Week's Prices

Cents per Pound for Early Delivery

	May 28	May 26	May 25	May 24	May 23
Lake copper, New York	14.87½	14.87½	14.87½	14.75	14.75
Electrolytic copper, N. Y.*	14.50	14.50	14.50	14.37½	14.37½
Straits tin, spot, N. Y.	51.00	....	51.37½	51.62½	51.62½
Lead, New York	6.20	6.20	6.20	6.10	6.10
Lead, St. Louis	6.07½	6.07½	6.05	6.00	5.97½
Zinc, New York	6.47½	6.47½	6.47½	6.47½	6.47½
Zinc, St. Louis	6.12½	6.12½	6.12½	6.12½	6.12½

*Refinery quotation; delivered price ¼c. higher.

NEW YORK, May 28.—Copper grows steadily stronger and prices have advanced sharply. The tin market continues dull, but quotations are firm. Lead prices have been advanced for the first time in nearly two months. Demand for zinc is only moderate, but quotations are steady.

Copper.—Prices have advanced all along the line. Electrolytic is now 14.75c., delivered in the Connecticut Valley, the highest price since Nov. 16, 1925. Copper Exporters, Inc., has boosted its quotation to 15c., c.i.f. European ports. Lake copper is now quoted at 14.87½c., delivered. Demand from foreign consumers continues unabated and sales have been large each day. Domestic consumers are not buying much, apparently being well covered through July. There are a few, however, who still need some July and even June metal, which is scarce and difficult to find. There is some talk of premiums for spot and June metal, particularly spot. Some attempts have been made by consumers to buy metal for August delivery but it is believed very few producers are willing to commit themselves for that position.

Tin.—Sales for the week ended Saturday, May 26, were about 1200 tons. Consumers bought a little, but most of the business was done among dealers. There was no pronounced activity or buoyancy on any day. Spot tin is still closely controlled, but there is little demand for it, what there is coming from those who had to have it, mostly in small lots. Buying interest centers in June and July delivery, particularly June. In one or two cases a little metal has been sold for December delivery. London markets are closed today, Monday, because of the Whitsuntide holiday, but cables give the Singapore price today as £232 10s., which is the same as on May 22. Private estimates indicate a slight increase in the world's visible supply at the end of May. It is expected that the data for May will show Straits shipments at between 7000 and 7500 tons, with American deliveries approximately 7000 tons. The market today was very inactive with spot Straits tin quoted at 51c., New York. Arrivals thus far this month have been 6210 tons, with 4310 tons reported afloat.

Metals from New York Warehouse

Delivered Prices Per Lb.

Tin, Straits pig	53.00c. to 54.00c.
Tin, bar	55.75c. to 56.75c.
Copper, Lake	15.75c.
Copper, electrolytic	15.50c.
Copper, casting	14.75c.
Zinc slab	7.25c. to 7.75c.
Lead, American pig	7.25c. to 7.75c.
Lead, bar	9.25c. to 10.25c.
Antimony, Asiatic	13.00c. to 13.50c.
Aluminum No. 1 ingots for remelting (guaranteed over 99 per cent pure)	25.00c. to 26.00c.
Aluminum ingots, No. 12 alloy	24.00c. to 25.00c.
Babbitt metal, commercial grade	30.00c. to 40.00c.
Solder, ½ and ½	33.25c. to 34.25c.

Metals from Cleveland Warehouse

Delivered Prices Per Lb.

Tin, Straits pig	56.50c.
Tin, bar	58.50c.
Copper, Lake	14.85c.
Copper, electrolytic	14.85c.
Copper, casting	14.00c.
Zinc, slab	7.50c.
Lead, American pig	6.95c.
Antimony, Asiatic	16.00c.
Lead, bar	9.25c.
Babbitt metal, medium grade	18.50c.
Babbitt metal, high grade	60.50c.
Solder, ½ and ½	32.75c.

Rolled Metals from New York or Cleveland Warehouse

Delivered Prices, Base Per Lb.

Sheets—	
High brass	19.00c.
Copper, hot rolled	23.25c.
Copper, cold rolled, 14 oz. and heavier	25.50c.
Seamless Tubes—	
Brass	23.87½c.
Copper	24.75c.
Brazed Brass Tubes	27.00c.
Brass Rods	16.75c.

From New York Warehouse

Delivered Prices, Base Per Lb.

Zinc sheets (No. 9), casks	9.50c. to 10.00c.
Zinc sheets open	10.50c. to 11.00c.

Lead.—After remaining unchanged since April 2, the lead price of the leading interest was advanced May 25 from 6.10c. to 6.20c., New York, as its contract price. Quotations in the outside market are correspondingly higher at 6.07½c. to 6.10c., East St. Louis. Demand from consumers is a little more active because of the higher prices.

Zinc.—Ore prices were unchanged at Joplin last week, still standing at $40 a ton, with sales at nearly 12,000 tons and production close to 11,000 tons. Prices for prime Western zinc have remained steady all week at 6.12½c. to 6.15c., St. Louis, or 6.47½c. to 6.50c., New York. Attempts of producers a week ago to obtain 6.15c., St. Louis, were successful in some cases. One statement is that more metal was sold last week at 6.15c. than at 6.12½c., St. Louis. Demand is moderate and not very much business has been done because of the attitude of sellers at the present level of prices.

Nickel.—Ingot nickel in wholesale lots is quoted at 35c., with shot nickel at 36c., and electrolytic nickel at 37c. per lb.

Antimony.—The market is quiet and Chinese metal is quoted at 11c., New York, duty paid, for all po-

Non-Ferrous Rolled Products

Mill prices on copper wire were advanced ¼c. on May 23, the quotation on this product now being 16.50c. Prices are unchanged on other copper, and on bronze and brass products. Zinc sheets are being quoted at 9c., base, and lead full sheets at 9.75c. to 10c.

List Prices, Per Lb., f.o.b. Mill

On Copper and Brass Products, Freight up to 75c. per 100 Lb. Allowed on Shipments of 500 Lb. or Over

Sheets—	
High brass	19.00c.
Copper, hot rolled	23.25c.
Zinc	9.00c.
Lead (full sheets)	9.75c. to 10.00c.
Seamless Tubes—	
High brass	23.87½c.
Copper	24.75c.
Rods—	
High brass	16.75c.
Naval brass	19.50c.
Wire—	
Copper	16.50c.
High brass	19.50c.
Copper in Rolls	22.25c.
Brazed Brass Tubing	23.00c.

Aluminum Products in Ton Lots

The carload freight rate is allowed to destinations east of Mississippi River and also allowed to St. Louis on shipments to destinations west of that river.

Sheets, 0 to 10 gage, 3 to 30 in. wide	33.00c.
Tubes, base	42.00c.
Machine rods	34.00c.

Rolled Metals, f.o.b. Chicago Warehouse

(Prices Cover Trucking to Consumers' Doors in City Limits)

	Base per Lb.
Sheets—	
High brass	19.25c.
Copper, hot rolled	23.50c.
Copper, cold rolled, 14 oz. and heavier	25.75c.
Zinc	10.00c.
Lead, wide	9.75c.
Seamless Tubes—	
Brass	25.62½c.
Copper	26.50c.
Brazed Brass Tubes	27.25c.
Brass Rods	17.00c.

sitions. Sales during the first part of the month were particularly heavy.

Aluminum.—Virgin metal, 98 to 99 per cent pure, is available at 23.90c. per lb., delivered.

Non-Ferrous Metals at Chicago

CHICAGO, May 28.—Non-ferrous metals are quiet in the Chicago market and prices generally are easier. The old metal market shows moderate activity in all grades except lead.

Prices, per lb., in carload lots: Lake copper, 14.62½c.; tin, 52c.; lead, 6.10c.; zinc, 6.20c.; in less-than-carload lots, antimony, 12.75c. On old metals we quote copper wire, crucible shapes and copper clips, 10.75c.; copper bottoms, 9.75c.; red brass, 9.50c.; yellow brass, 7.25c.; lead pipe, 4.75c.; zinc, 3.50c.; pewter, No. 1, 30c.; tin foil, 36.25c.; block tin, 45.25c.; aluminum, 12c.; all being dealers' prices for less-than-carload lots.

RAILROAD EQUIPMENT

Chicago, Burlington & Quincy Will Build 250 Stock Cars—84 Passenger Cars Ordered

AN order for 250 stock cars placed with its own shops by the Chicago, Burlington & Quincy was the outstanding transaction of the week. The Barrett Co. has ordered 100 tank cars. Orders for 84 passenger cars were placed by three roads. Details of the week's business follow:

Erie Railroad has ordered 25 suburban coaches from Standard Steel Car Co. and five baggage-express and three mail compartment cars from Pullman Car & Mfg. Corporation.

Barrett Co. has ordered 100 tank cars from American Car & Foundry Co.

Chicago, Burlington & Quincy will build 250 stock cars in its Galesburg, Ill., shops.

Chicago, Rock Island & Pacific has purchased five horse cars from American Car & Foundry Co.

International Railways of Central America have ordered 50 gondola, 25 flat and five tank cars from Magor Car Corporation.

Southern Pacific has ordered 46 passenger cars, 25 of which will be built by American Car & Foundry Co.

American Rolling Mill Co. has ordered three 300-hp. oil-electric locomotives for its Ashland, Ky., plant to be built jointly by Ingersoll-Rand Co., General Electric Co., and American Locomotive Co.

Indianapolis Union has ordered one eight-wheel switching locomotive from Baldwin Locomotive Works.

Mississippi Central is inquiring for one Mikado locomotive.

Cotter Pin Prices Advanced

Leading manufacturers of cotter pins have issued a new price list, in which advances ranging from 10 to 20 per cent are made. The new list, effective from May 24, replaces one that was adopted Oct. 5, 1922.

A new list of extras on Tobin bronze sheets and circles has been issued by the American Brass Co., Waterbury, Conn., effective May 15. Until a new catalog is issued, the extras on pages 62 and 63 of the company's present list are canceled and the extras given on a new price list apply.

Old Metals, Per Lb., New York

The buying prices represent what the large dealers are paying for miscellaneous lots from the smaller accumulators and the selling prices are those charged consumers after the metal has been properly prepared for their uses.

	Dealers' Buying Prices	Dealers' Selling Prices
Copper, heavy crucible	12.25c.	13.875c.
Copper, heavy and wire	12.25c.	13.25c.
Copper, light and bottoms	10.50c.	11.75c.
Brass, heavy	7.25c.	8.50c.
Brass, light	6.00c.	7.50c.
Heavy machine composition	9.50c.	10.875c.
No. 1 yellow brass turnings	8.25c.	9.25c.
No. 1 red brass or composition turnings	9.00c.	10.00c.
Lead, heavy	5.00c.	5.50c.
Lead, tea	4.00c.	4.50c.
Zinc	3.00c.	3.50c.
Sheet aluminum	12.75c.	14.50c.
Cast aluminum	12.50c.	14.00c.

REINFORCING STEEL

Railroad Warehouse at Boston Takes 1600 Tons —Awards Total 5900 Tons

INCLUDING a terminal warehouse at Boston for the Boston & Maine Railroad, which took 1600 tons, awards of concrete reinforcing bars reported to THE IRON AGE in the last week amounted to 5900 tons. Inquiries totaled only 2200 tons. Awards follow:

BOSTON, 1600 tons of rail steel for Boston & Maine Railroad terminal building, to Truscon Steel Co.

BOSTON, 150 tons, Falkner Hospital, to Barker Steel Co.

WEST HAVEN, CONN., 100 tons, building for Western Electric Co., to Concrete Steel Co.

NEW YORK, 300 tons, warehouse for Lee Brothers; from Turner Construction Co., general contractor, to Jones & Laughlin Steel Corporation.

NEW YORK, 350 tons, Edroyal warehouse, from White Construction Co., general contractor, to Concrete Steel Co.

GREAT NECK, N. Y., 135 tons, high school, to Joseph T. Ryerson & Son, Inc.

BINGHAMTON, N. Y., 500 tons, Ansco Building; from Turner Construction Co., general contractor, to Jones & Laughlin Steel Corporation.

PITTSBURGH, 500 tons, Brashear Reservoir, to Carlem Engineering Co., Pittsburgh.

PITTSBURGH, 100 tons, Miller Saw Trimmer Co. plant, to Truscon Steel Co.

PITTSBURGH, 200 tons, West Unit garage, to Metzger & Richardson Co., Pittsburgh.

PITTSBURGH, 400 tons, County trade school, to Metzger & Richardson Co.

SALISBURY, N. C., 100 tons, American Telephone Co. exchange, to Connors Steel Co.

CRAWFORDVILLE, GA., 175 tons, American Telephone Co. exchange, to Connors Steel Co., Birmingham.

CHICAGO, 100 tons, Jaques Building, to Concrete Engineering Co.

CHICAGO, 1008 tons, building for Continental Can Co., to Joseph T. Ryerson & Son.

LOS ANGELES, 225 tons, loft building at 1022 Santee Street, to unnamed interest.

Reinforcing Bars Pending

Inquiries for reinforcing steel bars include the following:

STATE OF CONNECTICUT, 300 tons, road work.

NEW YORK, 200 tons, building for Alno Realty Co.

NIAGARA FALLS, N. Y., 175 tons, addition to plant of Carborundum Co.; bids out.

CINCINNATI, 200 tons, athletic stadium for St. Xavier College.

CHICAGO, 400 tons, Hyde Park Bank Building.

CHICAGO, 585 tons, warehouse for Horder's stationery stores; S. N. Crowen, architect.

CHICAGO, 300 tons, garage for Glen E. Holmes, Inc.

Fulton Iron Works Buys Foos Engine Co.

The Fulton Iron Works, St. Louis, has purchased the Foos Engine Co., Springfield, Ohio, and latter company's plant will be operated as branch of St. Louis concern. The Fulton company manufactures Diesel engines of high horsepower, while the Foos organization makes similar units ranging from 60 to 300 hp. The deal will enable the Fulton company to offer engines ranging from 60 to 2000 hp. The company also manufactures machinery for the sugar refining industry.

FABRICATED STRUCTURAL STEEL

Bridge at Louisville Will Require 14,000 Tons—Awards Decline to 19,300 Tons

STRUCTURAL awards reported during the last week amounted only to 19,300 tons, one of the lowest weekly totals of the year. Included was 4000 tons for an office building in New York. A bridge across the Ohio River at Louisville, requiring 14,000 tons, and a section of the subway in New York, taking 9000 tons, brought the total of new projects to 31,000 tons. Awards follow:

State of Vermont, 220 tons, eight bridges, to McClintic-Marshall Co.

Bristol, N. H., 140 tons, bridge, to Berlin Construction Co.

New York, 4000 tons, office building on John Street to be built by Starrett Brothers, reported let to an unnamed fabricator.

New York, 500 tons, store building for Hilton Co., to Hedden Iron Construction Co.

Jamaica, N. Y., 700 tons, Passionist Monastery, to McClintic-Marshall Co.

Syracuse, N. Y., 1500 tons, Onondaga Building, to Taylor-Fichter Steel Construction Co.

Asbury Park, N. J., 1350 tons, casino, to A. E. Norton, Inc.

Pennsylvania Railroad, 800 tons, bridges; 500 tons to McClintic-Marshall Co., and 300 tons to American Bridge Co.

Philadelphia, 2400 tons, Y. M. C. A. building, reported to Bethlehem Fabricators, Inc.

Atlantic City, N. J., 500 tons, apartment building, to American Bridge Co.

State of Michigan, 100 tons, bridges for State highway department, to Massillon Bridge & Structural Co.

Fort Wayne, Ind., 1500 tons, building for International Harvester Co., to McClintic-Marshall Co., previously reported as 400 tons.

Anderson, Ind., 570 tons, hotel, to American Bridge Co.

Cleveland, 400 tons, East Thirty-seventh Street bridge for Nickel Plate Railroad, to McClintic-Marshall Co.

Cleveland, Cincinnati, Chicago & St. Louis Railroad, 225 tons, bridge work, to American Bridge Co.

Delta, Ohio, 500 tons, bridge for Detroit & Ironton Railroad, to American Bridge Co.

Lima, Ohio, 175 tons, building for Ohio Steel Foundry Co., to Massillon Bridge & Structural Co.

Chicago, 2000 tons, Glen E. Holmes, Inc., garage, to American Bridge Co.

Union Pacific Railroad, 350 tons, bridge, to American Bridge Co.

Chicago, Burlington & Quincy, 200 tons, bridge, to American Bridge Co.

Los Angeles, 685 tons I-beams for city, to unnamed interest.

Los Angeles, 110 tons, science building, for University of Southern California, to an unnamed interest.

San Francisco, 800 tons, four hangars for United States Army, to Belmont Iron Works.

Structural Projects Pending

Inquiries for fabricated steel work include the following:

Boston, 250 tons, continuation school.

Providence, R. I., 1300 tons, Washington Bridge.

Stamford, Conn., 500 tons, building for Southern New England Telephone Co.

New York, 9000 tons, subway section 2, route 109 in Brooklyn; bids June 15.

Brooklyn, 1000 tons, theater in Williamsburg section.

Garden City, N. Y., 600 tons, building for Adelphi College.

Syracuse, N. Y., 500 tons, power station.

Camden, N. J., 200 tons, building for Horn & Hardart Restaurant Co.

Pennsylvania Railroad, 300 tons, bridges.

Holtenwood, Pa., 600 tons, building for Pennsylvania Water & Power Co.

Louisville, Ky., 14,000 tons, bridge across Ohio River for city of Louisville; bids in about 30 days.

Cook County, Ill., 975 tons, highway bridges for Sanitary District.

Joliet, Ill., 100 tons, building for Public Service Co. of Northern Illinois.

Chicago, 450 tons, Hyde Park State Bank.

Wichita, Kan., 800 tons, highway bridge.

Scottsburg, Ore., 470 tons, bridge over Umpqua River; bids May 29.

EXPORT TRADE QUIET

Low Value of Yen Limits Japanese Buying—New York Importers Unable to Sell at Present European Prices

New York, May 28.—Export trade with the Far East continues small and is not expected to show much improvement until there is a recovery in the exchange value of the Japanese yen. There have been some small inquiries for tin plate from both Japan and China, but British offers are still lower than the quotations of American makers of about $5.25 per base box, c.i.f. Japanese or Chinese port. There are occasional inquiries for small tonnages of light-gage black sheets from Japanese consumers, but British sellers are quoting about £14 17s. ($72.33) per gross ton, c.i.f. Japan, and usually secure the orders not placed with the domestic producer, the Kawasaki Dockyard Co., at about $73.25 per ton. Recently, however, a few hundred tons of light-gage sheets are reported to have gone to American makers, although their prices are higher. Most American mills are asking $77 per ton, but exporters believe that with actual business in sight this price would be shaded $1 or more per ton. Earlier shipment is said to be obtainable from American mills and the quality is considered slightly better.

Practically no new business is being booked by importers of steel in New York. Continental prices show still further advances, and most importers are not inclined to make sales at the present market level of European material, in the belief that a reaction may ensue. Sales of foreign shapes are being made to consumers, but these were all purchased several weeks ago when the market abroad was lower. Current quotations range from 1.70c. to 1.80c. per lb., delivered, on shapes and from 1.80c. to 1.90c. per lb. on bars. The price on foreign steel hoops is equivalent to the current domestic market, and Continental mills are offering three to four months' delivery.

Tests made on European beams by the testing laboratory of Columbia University are reported to have shown that the material submitted compared satisfactorily with domestic steel. The domestic steel submitted by the importer was of open-hearth quality, purchased from stock in New York, while the foreign steel was of Thomas grade, taken from a shipment recently arrived.

British Non-Ferrous Metallurgists May Visit United States

At a general meeting of the Institute of Metals, held in London on May 8, the following invitation was presented on behalf of the American Institute of Mining and Metallurgical Engineers, by W. M. Corse, honorary corresponding member to the council for the United States:

> Having in mind the close similarity in field of the Institute of Metals and of the Institute of Metals and Iron and Steel Divisions of the American Institute of Mining and Metallurgical Engineers, and believing firmly that science knows no boundaries and that by additions from many sources to the common pool of knowledge is the latter extended and deepened to the mutual benefit of all contributing, and that by international visits, personal and professional bonds are built up that enhance the usefulness and prestige of professional men at the same time that they operate to strengthen the natural ties of history and ancestry between our two peoples.
>
> Now, therefore, on behalf of this institute and by authority of its board of directors, I take pleasure in extending to you a most cordial invitation to visit and meet with us in this country at such time in 1932 as may be mutually found to be convenient.
>
> (Signed) George Otis Smith,
> President, A. I. M. and M. E.

The president of the institute of metals, Dr. W. Rosenhain, suitably acknowledged the receipt of the invitation, and indicated that it would be gladly accepted. The council is endeavoring to arrange for an inclusive fare of about £100 to cover the entire cost of the trip. This, it is expected, will be of about five weeks' duration, and will take place in the autumn, both Canada and the United States to be visited.

PERSONAL

Robert Montgomery Bird has been appointed New York district sales manager for the Midvale Co., Philadelphia, succeeding Ward A. Miller. Mr. Bird was graduated in mechanical engineering from Lehigh University, Bethlehem, Pa., in 1902. During the next 22 years he was identified with the Bethlehem Steel Co., serving successively as superintendent of the heat treatment department, superintendent of the Lehigh mills, during the war in the metallurgical and heat treating division of the ordnance department and later as chief metallurgist and engineer of tests at the Bethlehem, Pa., plants. Since 1924 he has been associated with George F. Pettinos, Philadelphia, as production and operating manager of sand operations and graphite mills along the Atlantic Coast. He served as president of the American Society for Steel Treating in 1926 and is also a member of the American Iron and Steel Institute, Iron and Steel Institute (British), American Institute of Mining and Metallurgical Engineers, American Society for Testing Materials and Society of Automotive Engineers.

R. M. BIRD

F. J. Fitzgerald, purchasing agent of the Monarch Forge & Machine Works, Portland, Ore., has been elected secretary of the Oregon Purchasing Agents' Association.

Louis E. Nelson, until recently division superintendent of the Warner Corporation, Muncie, Ind., is now associated in a sales engineering capacity with the City Machine & Tool Works and the National Broach Co., both of Dayton, Ohio. He will specialize on the companies' Peerless gear tooth chamfering machine and Bolender gear grinding chuck.

C. H. Heist, formerly furnace superintendent Mayville Iron Co., Mayville, Wis., subsidiary of the Youngstown Sheet & Tube Co., has been appointed superintendent of the Campbell, Ohio, furnaces of the latter company, succeeding H. S. Braman, resigned.

J. R. Redhead has been elected president and treasurer of the Chisholm-Moore Malleable Iron Co., Cleveland, which has been formed to conduct the malleable foundry business of the Chisholm-Moore Mfg. Co. As previously announced, the chain hoist and crane manufacturing departments of this company have been merged with the Columbus-McKinnon Co., Tonawanda, N. Y., and the Cleveland branch of this company will be operated as the Chisholm-Moore Hoist Co., a division of the Tonawanda company. Mr. Redhead is vice-president and general manager of the Columbus Malleable Iron Co., Columbus, Ohio, and was formerly connected with the National Malleable & Steel Castings Co., Cleveland. Other officers of the Chisholm-Moore Malleable Iron Co. are A. H. Chappelka, vice-president, and David L. Johnson, secretary, both having been connected with the Chisholm-Moore company, in similar capacities.

Dr. R. P. Heuer, instructor in chemical engineering at the University of Pennsylvania, has resigned to become director of research for the General Refractories Co., Philadelphia. In addition to directing the company's research laboratories at Baltimore, he will devote much time to field work among refractories users on technical problems relating to the company's general products and specialties.

Charles E. Tullar has been appointed manager of the patent department of the General Electric Co., Schenectady, N. Y., succeeding the late A. D. Lunt. Mr. Tullar has been assistant manager of the department since December, 1927.

R. D. Scamehorn, who has been vice-president and purchasing agent of the Kawneer Co., Detroit, has resigned to become general manager and treasurer of the Compound & Pyrono Door Co., St. Joseph, Mich.

W. M. Corse, consulting metallurgist, Washington, and secretary of the Institute of Metals Division of the American Institute of Mining and Metallurgical Engineers, attended the meetings of the Institute of Metals of Great Britain in London during the week of May 8. He visited France, England, Sweden and Norway, and addressed the Society of Scientific and Industrial Research at Stockholm, on industrial research in the United States.

L. Citroen, G. Braud, H. Nogue and W. Simon, officials of the Citroen Cie., French automobile producer, were visitors last week at several Worcester, Mass., plants.

Harold V. Engh has been elected president of the Inland Wire & Cable Co., succeeding Arthur D. Gochenour, resigned. Mr. Engh has been engaged in the insulated wire manufacturing business for 18 years.

I. Patrick, has been made president and chief engineer of the Rockford Iron Works, Rockford, Ill., which has recently been reorganized. J. W. Holstead has been named vice-president and works manager, and J. L. Patrick, secretary and treasurer. The Rockford line of presses will be extended to include all types of presses and sheet metal working equipment.

William M. Neckerman, whose appointment as general manager of the Republic Iron & Steel Co., Youngstown, was mentioned in The Iron Age last week, will continue an association of many years with E. T. McCleary, recently elected president of the Republic company, who also came from the Youngstown Sheet & Tube Co. Mr. Neckerman has been with the Sheet & Tube company for 21 years and previously was identified with the National Tube Co. In both these positions he was active in many of the large mill installations of the companies.

W. M. NECKERMAN

Frederick W. McIntyre, vice-president and sales manager, and Anton Schneider, works manager, have been elected to the board of directors of the Reed-Prentice Corporation, Worcester, Mass.

Harry G. Stoddard, treasurer and general manager of the Wyman-Gordon Co., Worcester, Mass., manufacturer of crankshafts and other automotive forgings, is in Europe making a tour of automobile plants.

Dr. Fritz Meyer, American Radiator Co., New York, will deliver an address on the pulverized fuel cupola of that company, now in operation at Springfield, Ill., at a meeting of the Wisconsin Foundrymen's Research Group, June 6, at the Republican House, Milwaukee.

E. C. Gainsborg has been appointed district sales representative at Pittsburgh for the SKF Industries, Inc., succeeding A. A. Van Pelt, who has resigned. The company's Pittsburgh headquarters are at 1608 Benedum Trees Building.

G. S. Cook has been elected president of the C. Lee Cook Mfg. Co., Inc., Louisville, Ky., succeeding the late C. Lee Cook. F. D. Durham will continue as general manager of the company.

William H. Yawger, for many years vice-president and treasurer of the Weston Electrical Instrument Corporation, Newark, N. J., has resigned from active duty. He became associated with the Weston company in 1892, just four years after it was organized, and will remain on the board of directors with title of vice-president. Mr. Yawger was born in Lockport, N. Y., and was first associated with the Cowles Electric Smelting & Aluminum Instrument Co.

Louis C. Bihler, who has been traffic manager of the Carnegie Steel Co. since Jan. 1, 1904, has been made assistant to the president and general traffic manager, and William S. Guy, who has been assistant traffic manager, has been appointed traffic manager. Mr. Bihler has been with the Carnegie company since 1895, and Mr. Guy, who was with the old firms of Carnegie Brothers & Co. and Carnegie, Phipps & Co., dates his connection with the company to May 27, 1891. G. W. Seaman and C. W. Trust have been made assistant traffic managers.

L. C. BIHLER

R. A. Mulholland, for the past two years works manager of the Cummins Engine Co., Columbus, Ind., builder of Diesel engines, has resigned and will act as consulting production engineer for the Mulholland Sales & Engineering Co., Indianapolis.

Leigh B. Block, identified for the last four years with the Inland Steel Co., Chicago, has been appointed purchasing agent of the company, with headquarters at its Indiana Harbor, Ind., plant. He succeeds J. E. Stafford, who has resigned after 16 years with the Inland company and will be identified with the sale of refractory materials in the Chicago district.

Fred Teal, resident manager at Cincinnati for the M. A. Hanna Co. during the past two years, has joined Eaton, Rhodes & Co., Cincinnati, pig iron and coke dealers. Mr. Teal was connected with Rogers, Brown & Co. for a number of years previous to his association with the Hanna company.

Robert D. Sinclair, formerly president of Mudge & Co., Chicago, railroad equipment manufacturers, has been made president of the Fairmont Railway Motors, Inc., Fairmont, Minn., which has acquired Mudge & Co.

Robert M. Dunlap, formerly western sales manager for Holorib, Inc., Cleveland, manufacturer of insulated steel roof decks, has been appointed general sales manager for that company. J. L. Stewart, formerly with the Federal Cement Tile Co., has been made Chicago district manager.

F. H. Lewis, who has been assistant manager of the order department, Jones & Laughlin Steel Corporation, Pittsburgh, has been transferred to the sales department and made assistant district manager of sales, Pittsburgh district. Mr. Lewis has been with the company for about nine years and previously had been with the Carnegie Steel Co., Pittsburgh, and the Midvale Steel & Ordnance Co., Philadelphia.

F. C. Allen, Jr., founder and former president of the Allen & Billmyre Co., Inc., has severed his connection with that organization, and is now president of the Allen Air Appliance Co., Inc., making his headquarters at the New York office of this company in the Grand Central Terminal Building. The main office and plant of the Allen company are at Glens Falls, N. Y., and the plant includes a pattern shop and foundry as well as a machine shop and assembly departments.

Carl W. Peirce, open-hearth superintendent at Mansfield, Ohio, for the Empire Steel Corporation, has resigned. A portion of his duties has been taken over by William Hanst. Mr. Pierce was a large factor in the design of the open-hearth plant of what then was the Mansfield Sheet & Tin Plate Co., more than eight years ago, and has been in charge of its operation ever since. This plant was described in THE IRON AGE of Jan. 5, 1922, in an illustrated article signed by Mr. Peirce. His previous experience had included several years with the Jones & Laughlin Steel Co. (now, Corporation) at the South Side works in Pittsburgh, where he was in charge of operation of four large tilting open-hearth furnaces, working on the Talbot process; some time with the former New York State Steel Co., Buffalo, and in several of the units of the United States Steel Corporation. He is a graduate of Oberlin College, Oberlin, Ohio.

John A. Calahan has been elected president of the Federal Metal Hose Co., Buffalo. During the World War he was with the Curtiss Airplane Co. at Buffalo, as general manager. Later he went with the Martin-Parry Corporation, York, Pa., builder of commercial bodies, and is now vice-president and general manager of the latter concern.

James A. Farrell, president United States Steel Corporation, who has been in Europe several weeks, is now returning and is expected at his offices at 71 Broadway, New York, on June 4. While in Belgium, Mr. Farrell had an audience with King Albert.

Sheet & Tube Operating Personnel Changes

YOUNGSTOWN, May 28.—Vacancies in the operating personnel of the Youngstown Sheet & Tube Co. created by the resignations of Elmer T. McCleary and of W. M. Neckerman, who have become president and general manager respectively of the Republic Iron & Steel Co., will probably remain unfilled. Duties of Mr. McCleary will be assumed by W. C. Reilly, vice-president in charge of the western district plant, who, however, has been spending part of his time in Youngstown, and by Frank C. Farrell, Youngstown district manager. Mr. Neckerman's duties in connection with operations of the tube works will be taken over by his chief assistants in Youngstown and the manager of the company's western pipe works is to come to Youngstown. The company has not yet named a successor to W. J. Massman, who has been in charge of purchases for the Chicago district plants and who resigned recently to become purchasing agent Republic Iron & Steel Co., succeeding Shaler H. Hedges, resigned.

Eastern Steel Co. Settles Government Tax Claim

The Department of Internal Revenue has agreed to a compromise offer of the Eastern Steel Co., Pottsville, Pa., to pay $150,000, instead of the original claim of the department for taxes of $634,000. Receiver's certificates covering the $150,000 have been issued and are understood to have been liberally subscribed for in Pottsville. As a result of this settlement, the court will probably direct the bondholders and other creditors of the company to bring about a reorganization, fixing a time in which it is to be completed.

OBITUARY

Moses Taylor

Moses Taylor, who was chairman of the board of the Lackawanna Steel Co., Buffalo, at the time of its merger with the Bethlehem Steel Corporation, died on May 26 at his country home at Mount Kisco, N. Y. He was 57 years old. Mr. Taylor arrived in New York from Europe on May 15, having been taken ill in March while abroad. His death was caused by a stroke of apoplexy following a long illness of phlebitis.

Following his graduation from Yale University in 1893, Mr. Taylor became connected with the Lackawanna Steel Co., rising by various advancements to vice-president, and later he was elected chairman of the board. When in May, 1922, the Lackawanna company was taken over by the Bethlehem Steel Corporation, Mr. Taylor became a director of the latter company. Among his other business connections, Mr. Taylor was a trustee in Witherbee, Sherman & Co., Port Henry, N. Y., owners of ore properties and blast furnaces, in which the Bethlehem Steel Corporation has a one-third interest, acquired with other assets of the Lackawanna Steel Co. Mr. Taylor was formerly a member of the New York banking firm of Kean, Taylor & Co.

—

James Sheriffs Llewellyn, first vice-president of the Chicago Malleable Castings Co., West Pullman, Ill., died of pneumonia May 27. He was born in Milwaukee in 1887 and attended the University of Michigan. In 1907 he became secretary of the Chicago Malleable company.

—

George A. Newett, for many years editor of *Iron Ore*, a weekly newspaper published at Ishpeming, Mich., died on May 26, aged 72 years. He had long been a prominent figure in Lake Superior iron mining and was an authority on mining practice and ore values. What he wrote 35 to 40 years ago on developments on the Mesabi range and the place its ores would take in relation to those from the Michigan and Wisconsin ranges attracted much attention from mine owners, as well as from blast furnace operators in the Central West. In that time of divergent views on the future of the Mesabi range he was a strong partisan of the ores from the older ranges.

—

Charles G. Washburn, founder of the Wire Goods Co., now the Washburn Co., Worcester, Mass., and for nearly half a century identified with the wire industry of central Massachusetts, died suddenly at Lenox, Mass., on May 25. He was born in Worcester, Jan. 28, 1857, and was graduated from Worcester Polytechnic Institute in 1875, and from Harvard College in 1880. He then took up the study of law in the evenings, proposing to specialize in patent practice. Immediately after leaving college he also entered the manufacturing field, becoming associated with his father, Charles F. Washburn, in the wire plant which the latter had established at Quinsigamond, Mass. He participated in the plant's management until its consolidation with I. Washburn & Moen as the Washburn & Moen Mfg. Co., which is the nucleus of the present South Works, Worcester District, American Steel & Wire Co. The Wire Goods Co. was established in 1880 and grew rapidly and later Mr. Washburn took his brother, Reginald, into the business. In recent years, the younger brother, as treasurer and general manager, has been the active head, while Charles G. had continued to serve in an advisory capacity and maintained an office at the factory. In 1882 he became treasurer and manager of the Worcester Barbed Wire Fence Co., afterward sold to Washburn & Moen. In 1884 he entered the Washburn & Moen management and remained a part of it until 1891, some of the time as a director of the corporation. There followed a period during which he practised patent law, but continued his active interest in the affairs of his Wire Goods Co. Mr. Washburn represented his district in Congress from 1907 to 1911, and was particularly active in legislation having to do with the anti-trust laws, railroads and other measures affecting industry. He was for many years a trustee of the Worcester Polytechnic Institute, and was president of the board until a change in by-laws vested that office in the president of the Institute. In 1922 the institution conferred upon him the honorary degree of Doctor of Engineering. He was well known as an author on economic, political and historic subjects, and, most conspicuously, as a biographer of his Harvard classmate and friend, Theodore Roosevelt.

—

Sanford B. Belden, vice-president of the Jeffrey Mfg. Co., Columbus, Ohio, died at the Hotel Chatham, New York, on May 15. The day before his death, Mr. Belden had gone to New York on a business trip and had appeared to have been in good health. He joined the Jeffrey organization in 1896, shortly after having been graduated from the School of Mines of Ohio State University. After serving some time in the sales department he was made manager of the Jeffrey Pittsburgh office, which position he held for 12 years. In 1909 he was promoted to the position of vice-president and manager of the mining division and he continued in this position for 17 years. In 1926 he took a year's vacation, returning to the company as a vice-president and director, and in addition, he was made chairman of the board of the British Jeffrey-Diamond, Ltd., the Jeffrey British plant located at Wakefield, England.

Business Analysis and Forecast

(*Concluded from page* 1543)

In view of the facts that building permits declined sharply to a low level in April, and that a rising trend in the money markets is tending to curtail speculative building operations, it seems probable that the April upturn in building contracts will prove to be temporary and that some further recession will be seen. April bookings of fabricated structural steel fell sharply.

In April, 434,200 motor cars and trucks were produced in the United States and Canada—an average daily output of 17,370, which compares with 15,670 in March and 16,510 a year ago. Here, again, the increase is largely an ordinary seasonal occurrence, April usually being the peak month of the year. If we deduct an allowance for the merely seasonal variation, we get an index of 119.8, against 118.3 in March and 113.9 a year ago. Thus in reality there was only a very slight upward trend.

We think that automobile production is rounding off for a decline. The first two weeks of May have doubtless shown a continued large volume of production. Also Ford is probably gradually increasing his output. But we note that General Motors sales to dealers declined in April, which is unusual.

The fact remains that these two key industries in April were operating at an annual rate of between 20 and 25 per cent above average.

The unfilled orders barometer continued sharply downward in April. From December on, the rate of increase fell off, and finally a month ago came the large decrease of approximately 463,000 tons. This trend plainly reflected, if it did not anticipate, a decrease in new business. The unfilled orders curve is an excellent barometer of general business and its decline confirms the forecast of the P-V line. Both barometers are further supported by the recent renewed weakness in steel scrap, the decline of 50c. in heavy melting steel at Pittsburgh last week indicating that the scrap price curve for May will show a decline from the April level.

A course in porcelain enameling is to be given at Cleveland, July 9 to 23, by the Ferro Enameling Co., of that city. The course will be under the direction of J. E. Hansen and the porcelain enameling industry will be studied from both the technical and practical standpoint. Some of the subjects that will come up for discussion will be, "Dry Process vs. Wet Process Enameling," "Sand Blasting," "Enamel Shop Management," and "Diagnosing Enamel Shop Troubles."

Exports and Imports Above Last Year

Gain of 11 Per Cent in Four Months of Exports Due Mainly to Scrap—Finished Steel Falls Off

WASHINGTON, May 26.—Based on daily movement, exports and imports of iron and steel in April were at almost the same rate as in March. April showed a daily average of 7173 tons exported and 2411 tons imported, increases of only 14 tons and 20 tons respectively over March. For the month, the totals of exports and imports in March exceeded those of April by about 3 per cent. As stated in THE IRON AGE of May 24, exports in April aggregated 215,184 gross tons, against 221,935 tons in March, while imports in April were 72,329 tons, compared with 74,128 tons in March.

Both exports and imports for April and for the four months ended April 30 showed gains over the corresponding periods of last year, the increases being most marked in exports. Compared with the outgoing shipments of April, 1927, which amounted to 192,369 tons, exports last month showed an increase of 22,815 tons. For the four months ended with April, exports totaled 828,800 tons, an increase of 82,980 tons over the 745,820 tons exported during the corresponding period of 1927. With imports in April, 1927, amounting to 60,374 tons, the current increase was 11,955 tons. For the four months ended with April, imports were 252,720 tons, an increase of 17,667 tons over the 235,053 tons imported during the corresponding period of last year.

Of the April exports, 85,316 tons, or 39 per cent, went to Canada; for the four months ended with April, Canada took 315,644 tons, or 38 per cent of the total. Japan took 21,294 tons in April and 113,178 tons during the four months. Belgium led as the principal source of imports in April, providing 19,219 tons; the United Kingdom ranked second, with 12,378 tons; France was third, with 11,645 tons, and Germany was a close fourth, with 10,789 tons.

Scrap constituted the greatest single item of exportation in April, with a total of 40,616 tons. Of this amount, 13,555 tons went to Canada, 11,540 tons to Japan, 9317 tons to Poland and Danzig and 4951 tons to Italy. Steel rails represented the second greatest item, the outgoing shipments aggregating 24,449 tons. Chile was the largest buyer, taking 6817 tons, while Brazil ranked second, taking 4629 tons, and another South American country, Colombia, was third, with 3771 tons. Canada took 3410 tons, and China, 3387 tons; Japan took none. Of the 19,809 tons of tin plate (the third largest item) exported in April, 4483 tons went to Canada, 3602 tons to Argentina, 2477 tons to Japan and 1409 tons to Italy.

Exports of casing and oil line pipe in April were 7366 tons, 2525 tons going to Venezuela and 1024 tons to Argentina. Exports of welded black pipe amounted to 3795 tons, widely scattered over the world markets in comparatively small lots. Canada took 597 tons, the United Kingdom, 508 tons, and Mexico, 368 tons. Of the 13,653 tons of structural shapes exported during the month, 11,611 tons went to Canada, and that coun-

try took 8129 tons of the 12,660 tons of steel bars exported, while the United Kingdom took 1285 tons. Canada also took the greater part of the 10,043 tons of plates exported during the month, shipments to that country being 7728 tons. Of the 11,681 tons of black sheets exported, Canada took 7074 tons and Japan, 2953 tons.

Amounting to 20,845 tons, imports of pig iron in April showed a gain over those of March, which totaled 16,155 tons. The United Kingdom, providing 8897 tons, was the chief source of the incoming shipments. The United Kingdom also led as the source of ferromanganese imports, furnishing 1374 tons out of the total of 2566 tons, Canada providing 1079 tons. Of the 14,151 tons of manganese concentrates imported, 6305 tons came from Brazil and 3592 tons from Soviet Russia.

Of the 16,577 tons of structural shapes imported, 11,447 tons came from Belgium, 2851 tons from France and 2205 tons from Germany. Belgium supplied 3422 tons of the 8212 tons of steel bars imported; France, 2744 tons, and Germany, 1221 tons. Of the 6566 tons of cast iron pipe imported, 4896 tons came from France and 1578 tons from Belgium. "Other" pipe imports—mostly seamless tubes—amounted to 6211 tons, Germany supplying 3306 tons and the United Kingdom, 1317 tons.

Heavy Increase in Iron Ore Imports

Imports of iron ore in April are reported by the Department of Commerce at 224,841 gross tons. This is about equal to the February imports of 229,578 tons. It represents an increase of 39 per cent over the 162,654 tons coming in in March. Compared with April of last year, however, there has been a reduction of nearly 6 per cent, the figure a year ago having been 239,570 tons.

For the first four months of the year imports have been slightly greater than a year ago, the totals having been 868,251 tons this year and 862,733 tons last year. More than half of the total in each case came from Chile, with French Africa in second position this year, whereas Cuba was in second position last year.

SOURCES OF AMERICAN IMPORTS OF IRON ORE
(In Gross Tons)

	April		Four Months Ended April	
	1928	1927	1928	1927

Total	224,841	239,570	868,251	862,733

An annual municipal number has been issued by *Motor Transport*, Dorset House, London. It is devoted largely to bus traffic, but other business uses of motor cars are covered. Its editorial policy follows American lines when it says: "The future efficiency of municipal motor transport would benefit by weeding out old vehicles, the operating costs of which are greater than the corresponding costs of new machines, including depreciation allowance and interest on the capital expended upon them."

Steel Furniture and Shelving Orders Up 13 Per Cent in First Four Months

WASHINGTON, May 26.—Steel furniture stock goods to the value of $2,915,344 were ordered in April, according to reports received by the Department of Commerce from 33 manufacturers in the "business group." This compares with $3,283,329 in March. Shipments were valued at $3,065,637 and $3,169,351 respectively, while unfilled orders amounted to $2,359,877 in April as against $2,511,518 in March. Orders in this group for the first four months were valued at $12,742,699, compared with $11,431,084 for the corresponding period of last year. April orders of steel shelving were valued at $740,658, against $841,098 in March, according to reports received from 15 companies. Shipments were valued at $716,104 and $831,607 respectively, while unfilled orders were $793,903 and $774,947. For the four months ended with April orders in this group were valued at $3,091,814, against $2,546,062 for the corresponding period of 1927.

Malleable Castings Tonnage Considerably Lower In April

Production of malleable castings by 133 plants in April is reported by the Department of Commerce at 56,667 tons, compared with 63,322 tons in March, from the same 133 plants. Except for March and February, the April tonnage was the largest since last June. It compares with 59,225 tons in April, 1927.

Shipments held very close to orders, both in April and in March. In April the total was 56,964 tons. Orders booked, with a few reports missing, amounted to 53,849 tons. Capacity was operated during the month at the rate of 62.3 per cent.

Production for the first four months was 233,852 tons, against 234,469 tons a year ago.

BRITISH TRADE RECEDES

April Shows Decline in Exports and Imports —Iron and Steel Output Also Less

WASHINGTON, May 25.—British imports and exports of iron and steel decreased in April, according to a radiogram received by the Department of Commerce from the American commercial attaché in London. Imports dropped from 269,526 tons in March to 252,677 tons, a decline of 6.3 per cent. Exports were 344,333 tons in April, against 409,297 tons in March, a decline of 15.9 per cent.

Output of pig iron and steel ingots also declined in April. Pig iron production showed a decrease of 6.3 per cent, dropping 37,600 tons to a total of 555,000 tons for the month, and steel ingot output receded 149,200 tons to 644,100 tons for the month, a decline of 16.8 per cent. At the end of April there were 149 furnaces in blast, compared with 150 at the end of March. During the month 18 open-hearth furnaces were removed from the active list, leaving a total of 259 in operation.

The decline of imports in April was reflected in 11 classes; eight showed increases. Of the 22 classes of materials in the export list, 16 showed smaller shipments in April and six registered gains.

Orders for Fabricated Structural Steel Decline

Actual returns on new orders for fabricated structural steel in April amounted to 186,024 tons, or 63 per cent of the capacity of the 200 reporting firms with a monthly capacity of 293,750 tons, according to the Department of Commerce. Orders in March totaled 204,588 tons, or 69 per cent of the capacity of 213 firms with 298,580 tons capacity. Computed bookings in April were 236,250 tons, against 258,750 tons in March, while computed shipments in April were 243,750 tons, or 65 per cent of capacity, compared with 232,500 tons, or 62 per cent of capacity, in March.

Except for January, no lower computed tonnage of new orders had been reported since last June. Compared with April, 1927, the shrinkage was 10 per cent. Shipments, on the other hand, made the highest showing since last November and were 5 per cent ahead of April, 1927.

Stoker Sales Fall Sharply

Mechanical stokers to the number of 88, with aggregate rating of 31,043 hp., were sold in April, against 123 with 43,435 hp. in March, according to reports received by the Department of Commerce from 12 establishments. Of the stokers sold in April 21 with 3081 hp. were installed under firetube boilers and 67 with 27,962 hp. under watertube boilers.

Except for January, the April sales were the smallest of the year. They compare with 77 units and 26,249 hp. in April, 1927, but the average month of 1927 provided 105 units and 38,577 hp. In 1926 the average was 113 units and 45,519 hp.

Austrian Steel Works Had Larger Output in 1927

VIENNA, AUSTRIA, May 10.—The report of the Austrian Alpine Montangesellschaft for 1927 shows an improvement compared with 1926, but no dividend was declared. Iron ore production increased about 46 per cent as a result of an agreement made last year for an exchange of ore for Westphalian coke. Output of ore in 1927 was 1,584,672 metric tons, compared with 1,087,086 tons in 1926. Pig iron production in 1927 totaled 430,256 tons, compared with 330,665 tons in 1926; steel ingot output was 365,117 tons, compared with 323,618 tons in 1926; and production of rolled products was 220,308 tons, compared with 195,857 tons in 1926.

The year showed a gross profit of 16,196,440 schillings ($2,287,747.15), which was 2,086,858 schillings ($294,768.69) more than in 1926. Total net profits for the year, however, were only 79,581 schillings ($11,240.82). The increase in gross profits is attributed partly to larger business, and partly to reductions in production costs. During 1927 the company employed an average of 12,033, compared with 14,687 in 1913.

Pig Iron Imports Increase Again

Imports of pig iron in April are reported by the Department of Commerce at 20,845 gross tons. This is an increase of 29 per cent over the 16,155 tons of March and is considerably more than double the incoming movement in April, 1927, which was 8923 tons. The current figure is the largest for any month since December, 1926. More than one-third of the total came from the United Kingdom and the Netherlands.

For the first four months of the year the imports have been 54,514 tons, compared with 30,158 tons last year. Most of the increase is from the United Kingdom, which has gained more than 20,000 tons during the interval. There was an increase of more than 10,000 tons in incoming shipments from India and a decrease of almost 7000 tons in pig iron from Germany, which has dropped to only 40 tons this year. The table shows the April tonnage in 1928 and 1927 and the first four months of each of those years.

UNITED STATES IMPORTS OF PIG IRON BY COUNTRIES OF SHIPMENT
(In Gross Tons)

	April		Four Months Ended April	
	1928	1927	1928	1927

Trend of 1928 Profits

Net income of 225 general business corporations for the first quarter of 1928 was $341,000,000, compared with $318,000,000 in the first quarter of 1927, according to a statement prepared by the National Bank of Commerce, New York. This represents a gain of 7 per cent. The advance, however, is cut to 5 per cent when the United States Steel Corporation and General Motors Corporation are excluded. The significant advances in the first quarter in the individual groups were:

Number of Companies	Group	Advance (Per Cent)
18	Motor	28
8	Copper	28
13	Chain stores	18
9	Chemical	7
15	Motor equipment	6
23	Food manufacturing and allied	4

Among the groups whose earnings declined in the first quarter of this year from the first quarter of 1927 were:

Number of Companies	Group	Decline (Per Cent)
22	Petroleum	43
5	Railroad equipment	43
18	Iron and steel	20
11	Building materials	16

Earnings of 27 public utilities during the first quarter amounted to $88,000,000, compared with $77,000,000 last year, a gain of 14 per cent. The net operating income of 186 class I railroads during the first quarter was $217,000,000, a decline of 4 per cent from the $226,000,000 of the first quarter of 1927.

The Interstate Commerce Commission has dismissed the complaint of the Federated Metals Corporation, Newark, N. J., which alleged that the joint sixth-class rate of 22.5c. per 100 lb. on spelter from Newark to Sparrows Point, Md., is unreasonable.

The Interstate Commerce Commission has dismissed the complaint of the Virginia Pig Iron Association relating to rates on iron from Virginia furnaces to points in New England and other destinations north and east.

The Manufacture of Alloy Steel

(Continued from page 1532)

be checked for non-metallic inclusions by microscope and evenness of structure by hot acid etch, and must cut and harden satisfactorily."

Methods of Adding Alloys

The finishing stages of the heat are carefully checked by chemical methods, but the bulk of the work remains for skilled melting practice. The alloy heat is usually run at higher temperatures than commercial steels. The clean up is more thorough and the type of clean up is selected with relation to final use.

Conventional practice would be to add nickel as pig nickel with the scrap, while molybdenum is added after melting as ferromolybdenum or calcium molybdate. The oxidizable alloys—chromium and manganese—are added after deoxidation through the slag in the furnace as ferrochrome and ferromanganese. The vanadium, silicon and aluminum are added to the stream as it leaves the furnace going into the ladle.

Ingot Practice Must Be Good

To the writer the pouring of steel has always seemed the orphan of the steel business. The factors of temperature, nozzle size, pouring speed, mold design, solidification rate, sinkhead design and their relation to the various chemical compositions are very vaguely known.

Alloy steels are almost without exception killed steels. As such they are cast in sinkhead ingots. Considerable tonnage is cast in the big-end-up ingot. The volume of sinkhead is nearly 15 per cent of the gross volume of the liquid steel.

Extremes of care in pouring are well repaid. The ingot surfaces of special steels are unquestionably supersensitive and all precautions of clean molds and proper pouring practice are amply repaid in freedom from defects.

Slow Rolling in Smooth Rolls

The varied composition of alloy steels imposes on the rolling mill crew the definite routine of rolling from predetermined temperatures. The rate of conductivity is low and the heating time is long. Experienced optical pyrometer operators furnish temperatures to heaters both at pits and at bar mill furnaces. Specified time temperature cycles are furnished the heaters with the rolling order. These are checked and the 400 deg. Fahr. variation encountered daily in the various special alloy rolling indicated to the heaters. This method has found favor with the heater, since it insures him assistance in establishing himself without watching each lot during the rolling in order to judge temperature.

Smooth blooming mill rolls are essential. Reductions are lighter by half due to both lack of ability to bite the ingot and for the protection of the material.

The preliminary working breaks up the ingot structure and the subsequent rolling can be carried out under nearly normal commercial rolling practice. The skin of the ingot is sensitive and when broken the rupture has no tendency to heal. Every break in the surface means a defect to be removed from the billet by chipping or grinding.

On the whole, the most serious problem in the rolling mills is the wide variation of sizes that must be produced and the extremely small average quantity. The average tonnage order of alloy steel is less than ten tons. This entails a multitude of roll changes. The small average size of an order, coupled with the wide variations of characteristics, entails considerable scrap loss in starting orders.

Alloy Steels Like Old "Branded" Products

The skill of the maker is more important in the present stage of knowledge of the art than the quantitative chemistry. This means that alloy steels are really produced under routines, as were the old brand-named products. Engineering standards are gradually providing guides to replace the brands of old, but many years must elapse before technical knowledge will be competent to insure the producer of alloy steels that his product can be produced to specifications.

Fine Alloy Steels from Basic Open-Hearth

In discussing the above paper, W. J. Priestley, vice-president Electro Metallurgical Sales Corporation, New York, emphasized the fact that an alloy is by no means a plain carbon steel to which one or more metallic elements have been added. In his opinion, the chemical composition is a minor matter; the manufacturer of the best alloy steels now must know the use to which the metal is to be put and works backward in order to plan a manufacturing routine which will give the necessary physical requirements such as strength, soundness, cleanliness, machineability, and responsiveness to heat treatment. This involves so many modifications in melting practice, alloying, casting and rolling routine, finishing temperature and annealing that alloy steel making is very much an art.

Mr. Priestley cited several changes in basic open hearth practice for making alloy steels which he believes brings the product much nearer to that of the acid open-hearth today than it was 15 years ago, particularly in reference to its freedom from laminations and transverse weakness. Among these are the use of higher manganese pig iron (1½ to 2 or even 2¼ per cent) and selected, clean, heavy, high-manganese scrap, thus insuring considerable residual manganese after melting and consequently metal with lower oxygen. Low iron oxide in the metal is also insured by melting with a heavy slag, high in lime and low in iron oxide. Further deoxidation is now more thoroughly accomplished by simultaneous additions of manganese (as spiegel or ferro) and silicon (as 10 or 15-per cent sili-

Born in Harvey, New Brunswick, Canada, early in 1878, Mr. Watson moved to Massachusetts in 1888. He was educated in the New Brunswick and Massachusetts public schools and in the Lawrence Scientific School of Harvard University, where he obtained the degree of B. S. in mining and metallurgy in 1900. After graduation he was employed in the Bessemer department of the Maryland Steel Co., Sparrows Point, Md., and in 1902 joined the metallurgical department of the Carnegie Steel Co. at the Homestead Works in Munhall, Pa., later becoming chief metallurgist of the department. He became second assistant general superintendent in 1908 and superintendent of the open-hearth department in 1911. While serving in this position he spent a winter in India in an advisory capacity to the Tata Iron & Steel Co. On his return from India in 1914, he was made assistant general superintendent, and in April of this year he became general superintendent.

con pig) which forms by reaction a fluid manganese silicate slag floating readily to the top. After such deoxidation, most alloys can be added directly to the metal in the furnace with very little loss by slagging or by changing into oxides entrapped in the metal. The latter are most dangerous to quality.

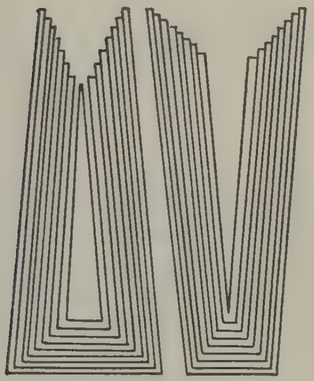
He is of the opinion that ferrochromium added in the ladle cannot make good steel. If added in the furnace after proper deoxidation of the bath, a high recovery *as metal* will be had. At least 25 min. should then be allowed before tapping. Final manganese for alloying should be made 10 to 15 min. before tapping. This stage of the heat cannot be hurried if steel of high quality is expected. Ferrozirconium and ferrosilicon are added in the ladle for protection during tapping and teeming.

Trend in Ingot Mold Design

BY RALPH H. WATSON

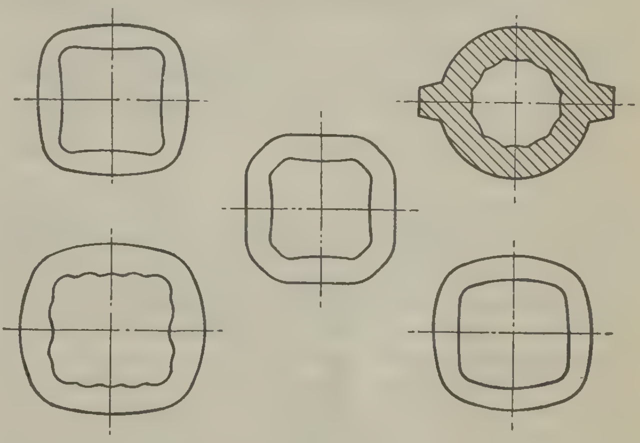
MOLTEN steel poured into an iron mold freezes in three distinct phases. The first is a very thin skin of fine-grained crystals. This is followed immediately by the well-known columnar crystals approximately perpendicular to the mold wall, which grow inward as long as influenced by the chill of the mold. They end rather abruptly, and the third phase, the formation of equiaxial crystals, completes the solidification. This crystallization, as well as the other two phases, takes place, as would be expected, roughly parallel to the walls of the mold and stool.

Crystal growth, both in the case of the columnar and the equiaxial crystals, is by the process of selective crystallization. The purer crystals separate out first, causing the mother liquor to be progressively enriched until the last to freeze carries a considerable enrichment of carbon, phosphorus, manganese, sulphur and other constituents of steel. This is segregation. Molten steel takes up more room than the metal solidified. The outer wall of the ingot is formed approximately at its final size while the interior of the ingot is still molten. The freezing is progressive from the outside. The final deficit in volume occurs along the central axis. This is pipe.



Theoretical Effect of Taper in Molds With Big End Down and With Big End Up (at Left)

Designs of Rolling-Mill Ingot Molds in Present Use (at Right)



How Taper Affects Freezing Conditions

The influence of taper on the freezing of the ingot is the starting point of any discussion of mold effect. A characteristic sketch (Fig. 1) shows the theoretical effect of taper in both the big-end-up and big-end-down mold. It is obvious that the converging lines of freezing metal will in the first shut the gate to the flow of metal from above, while in the second the larger mass of metal, and therefore the last to cool, is at the top where it can feed the shrinking mass below, and prevent pipe formation. There are modifying influences, otherwise the pipe in the ordinary ingot would be deeper than is actually the case.

Taper is given the mold for ease in stripping and to prevent the hanging of the ingot in the mold. An ingot suspended in the mold will often crack from its own weight or from being held by a fin between the mold and the stool. Formerly it was thought that a mold 70 to 76 in. long required a taper of 2 or even 3 in. Molds with this maximum taper are in present use.

Progressive mold manufacturers now recognize that good workmanship and rigid foundry equipment will permit them to make a mold with very little taper, which will successfully strip and not cause an ingot to hang. A difference of 1 in. in top and bottom dimensions is considered liberal, and full-length molds are in successful use with taper as low as ½ in., i.e., ¼ in. to the side.

Indeed, the necessity of any taper whatever is questionable. Shrinkage of the ingot and expansion of the mold will permit easy stripping without taper, unless the cross section is very small or the mold is more irregular than is now permissible. If a defect develops in the mold no amount of taper will avail, for the steel entering the defect must clear the point immediately below it. And the increase in cross section at this point, however great the taper, is infinitesimal.

Big-end-up molds for rolling mill ingots have been given considerable taper. This is undesirable from a rolling standpoint, and of doubtful necessity. One reason advanced for large taper is that the ingot through vertical shrinkage settles down nearer the mold walls, and receives more chilling effect from the mold. When the time required for full vertical shrinkage is considered, and also the fact that the ingot should never make complete contact with the mold and cause a hang, the chilling effect becomes doubtful.

A hot top should have heat insulating qualities sufficient to keep the contained steel molten for the necessary period. It should either release the ingot or itself sink with the contracting ingot, to prevent hanging. It should be made of a material which will not flake or spall when subjected to the heat of the stream when top pouring, thus introducing foreign matter into the ingot. It should leave on the ingot nothing that will subsequently melt in the soaking pits, and run down over the surface of the ingot. It should be easily applied to the mold, and not too costly. None of the tops in present use altogether meets these requirements.

[The author detailed several types and sections of molds in use, or with which he had experimented. He illustrated his paper with a number of charts showing (a) cooling effects of varying wall thicknesses in molds and (b) segregation in ingots poured in molds of varying sections and differing wall thicknesses. He paid particular attention to the question of corner radius for the ingot, mentioning "a rule adopted by Mr. Morris of Bethlehem for rectangular molds, to make the corner radius equal 13 per cent of the longest side, and for large molds somewhat less." Stools came in for discussion, particularly the dished stool, as making a lighter bottom crop.]

Avoiding Picking Up Dirt

HANDLING of the steel between the furnace and the ingot was referred to by R. S. Poister, metallurgical engineer, Pittsburgh, as a source of much trouble.

It is necessary to avoid such inclusions in the metal as are given by dirty runners or ladles. Steel picks up dirt by mechanical action and by chemical reaction. Splashes of metal on the side of the molds, which cannot be cleaned or melted off, were charged with responsibility for many snakes and scabs on the steel.

Carelessness in steel pouring, he said, is more in evidence than carelessness in steel making. Rapid pouring gives rise to oxidized steel. Splashing is worst in inverted molds. It is best to open up the stream slowly and then to give a full stream.

Sinkheads with volume at least 12 per cent of that of the ingot were advocated. This is for the purpose of keeping all of the pipe, and most or all of the segregation, above the junction between ingot and sinkhead.

Life of Molds vs. Pipes in Ingots

Large tapers on molds which are to be used with the small end up are designed for ease of handling, said Leo F. Reinartz, assistant general superintendent American Rolling Mill Co., Middletown, Ohio. This gives long life to the mold, but a maximum of pipe to ingots of 0.30 per cent carbon and up. Decreasing the taper improves the quality of the steel.

Alloy steel makers have led in improvements along this line, because they do not dare risk heavy loss of their product, from cropping, rejections, etc., to save a smaller loss on the ingot mold. In general, it does not pay to sacrifice the surface of the ingot in lengthening the life of the mold. The mold is a useful addition to the open-hearth charge—its salvage value is large—and the expenses of chipping billets might easily prove a much greater loss.

Some of the Problems of Hot Tops

Referring to hot tops, Mr. Reinartz said that the ingot with the large end down, and with the hot top, is merely a compromise, even when the hot top holds 15 per cent of the steel. It contains more internal defects than are found in an ingot poured with large end up. Even with that method, however, for the soundest steel, hot top should be provided. Brick tops are easy to apply, but some of the brick follow the ingots into the soaking pits and cause trouble. Slag tops, if the steel happens to be pretty hot, are apt to fuse into it. Sand tops, in an iron mold, are the best form. But even these, on an ingot with the big end up, are not a panacea for all the steelmaker's ills. They cannot overcome or offset bad furnace or pouring practice.

Rimmed steel contains much more in the way of segregation than killed steel. But this does not necessarily mean poor steel. Many thousands of tons of perfectly satisfactory rimmed steel has been made, free from objectionable surface and other defects and suitable for deep-drawing sheets. With thin-walled molds, however, the blowholes are much closer to the surface on this steel than when it is poured into molds of more conventional wall thickness.

[*Abstracts of other papers will be published in later issues of* THE IRON AGE.]

Causes for Expanded Market for Stainless Iron

St. Louis Steel Treaters Hear Non-Technical Talk on Commercial Aspects and Uses of High-Chromium Irons and Steels

STAINLESS steel and iron was thoroughly discussed by J. C. C. Holding, manager American Stainless Steel Co., at a meeting of the St. Louis chapter, American Society for Steel Treating, held May 18. Under three major headings—history, characteristics and applications—the speaker made out a strong case for stainless iron and steel, emphasizing its resistance to corrosion and its growing use as indicated by an increase of 600 per cent in consumption in the past three years. He also stressed the desirability of a thorough understanding between producer and consumer about the use to which the material was to be put. The former must know not only the manufacture of the material, but also its properties, and he is in a favorable position to offer advice on the grade to supply for a stated need.

"It is foolish to think of stainless steel or stainless iron as an alloy of fixed chemical analysis which must, without modification, fit the requirements of all the various applications which enthusiasm for corrosion-resisting material suggests as desirable," said Mr. Holding. "In other words, instead of one fixed alloy, the stainless steel industry offers a range of alloys of varying physical, chemical, mechanical and corrosion-resisting properties. An article in a recent issue of THE IRON AGE (March 15, page 729) by Frank R. Palmer, of the Carpenter Steel Co., emphasized this point very strongly.

"As an illustration, a certain manufacturer was experimenting with stainless steel for carpenters' hand saws. It contained 0.70 per cent carbon, and he found that, while meeting certain tests admirably, the material was too brittle to permit setting the teeth of the saw without breaking. I had no hesitancy in suggesting that the material he was using was entirely too high in carbon. It should be understood that the introduction of chromium into the alloy makes it unnecessary to run the carbon as high as in ordinary carbon steel to produce the same hardness effects.

"The stainless characteristics also vary with varying conditions. The higher chromiums are more resistant than the lower chromiums, but this is not so simple, as it seems that the carbon present in the alloy has a direct effect both upon corrosion resistance and physical properties. If the carbon is above 0.12 per cent, the material should in all probability be heat treated to bring out its stainlessness.

"The whole theory of corrosion is very complicated. One theory holds that the particles known metallurgically as free double carbides of iron and chromium, which are not in solid solution in the iron, are responsible for a corrosive tendency, setting up electrolysis with the crystals of pure iron in which they are embedded. It thus appears that if the carbides are all in solution, in the presence of a sufficient amount of chromium, there is no electrolytic action causing corrosion. In a chromium steel containing upward of 0.12 per cent carbon the carbides are not all in solution unless the steel has been heated to certain high temperatures and quenched. That is why heat treatment of stainless steel improves its stainlessness. On the other hand, if the carbon content of the chromium steel alloy is low enough—under about 0.12 per cent—there are no free carbides of iron and chromium present even in its air-cooled conditions and, therefore, the material is practically stainless without heat treatment.

"The question arises, what makes stainless iron (low-carbon stainless steel) sometimes rust if the carbides are all in solution? In the heating and rolling operations more or less scale is always formed, and this is rolled into and embedded in the surface of the bar, plate or sheet as the case may be. The presence of this scale, in contact with metal underneath, produces a galvanic action similar to that described in untreated high-chromium steel. Therefore, when complete immunity to rust or stain is required, all scale must be removed from the surface and then the surface must be polished.

"It may be wondered why polishing is necessary, either in the high-carbon heat-treated material or the low-carbon untreated material, since neither is supposed to contain the injurious free carbides, and I am frank to say that this has not been fully or satisfactorily explained.

"One cause of occasional failure of stainless steel and iron to give satisfaction is the inclusion, during manufacture, of particles of slag, cinder or dirt. These impurities, when in contact with the iron, in the presence of moisture or other corrosive agencies, have the same tendency as the free carbides to set up electrolytic corrosion. It is, therefore, important that extreme care be taken in manufacture. At least one manufacturer has found it advisable to immerse his finished product in a dilute solution of nitric acid after fabrication.

"If stainless iron is subjected to severe fabricating operations, such as drawing or bending, the internal stresses set up are likely to cause corrosion unless these conditions are relieved after fabrication by suitable heat treatment. Some such treatment as this should also be resorted to after sand blasting."

Turning to the characteristics of a standardized grade containing approximately 0.30 per cent carbon and 12 to 14 per cent chromium, known commercially as stainless steel, Mr. Holding noted that this type was discovered by Harry Brearley, and its corrosion resistance, when properly hardened and free from scale, is remarkably perfect. But even this will not resist hydrochloric, sulphuric, sulphurous and hydrofluoric acids.

Continuing, he said, "The cutlery manufacturers find that it can be forged by the same general methods as used for high-speed steel. The technique is usually worked out by each fabricator in the light of his own experience. The same is also true of subsequent heat treatment to produce certain definite desired results. It is often stated that stainless steel cutlery will not hold an edge, and it is true that much of the stainless cutlery on the market does not hold its edge. The trouble is that many manufacturers do not realize that stainless steel cannot be treated exactly as carbon steel.

"The second type, known as stainless iron, contains less than 0.12 per cent carbon. It has a much broader application in industry and is the grade which has shown the largest growth in tonnage. This material, even in the annealed condition, is highly resistant to the most common corrosive agents. Its tensile strength at room temperature is approximately 80,000 lb. per sq. in., or very considerably higher than that of ordinary mild carbon steel. It also retains its high physical properties at elevated temperatures.

"Because of its toughness, stainless iron machines more slowly than ordinary steel, and speeds and tools must be adjusted accordingly. Automatic screw machines will turn out products of stainless iron without difficulty, but of course at reduced speed. When pressing stainless sheet steel, its toughness and high physical properties require adjustment in pressures and die clearances. In other words, a manufacturer cannot change over from ordinary sheet steel, sheet copper or sheet brass to stainless iron and expect it to run through his fabricating processes without change or adjustment in the details of his operations. Deep drawing or spinning requires maximum softness and a more careful anneal than ordinary hot-rolled sheets get.

"Another characteristic is comparative freedom from scale when heated to high temperatures. Stainless iron will lose very much less weight from such oxidation than straight carbon steel."

Proposed Increase in Rod Rates Not Justified, Says Examiner

WASHINGTON, May 29.—Proposed increased rates on iron and steel rods in carloads between points in Official Classification territory were held to be not justified and a recommendation was made that the schedules be canceled, in a proposed report by Burton Fuller, examiner of the Interstate Commerce Commission, announced last Thursday. Rates on steel bars in carloads from Pittsburgh and Johnstown, Pa., Youngstown, Ohio, Buffalo and North Tonawanda, N. Y., to Pawtucket and Valley Falls, R. I., were held to be reasonable, while rates on rectangular and hexagonal steel rods in carloads from McDonald, Ohio, to Pittsburgh, Carnegie and Economy, Pa., were found inapplicable to the extent they exceeded the billet rate and reparation was awarded in the latter case to the Carnegie Steel Co., the complainant.

The proposed report covers a number of cases and largely revolved about the question as to the classification of rods. The report placed them on the billet basis. Many iron and steel makers and consumers appeared in the case and joint hearings were held by the Interstate Commerce Commission with the State commissions of New York, Pennsylvania, Ohio, Indiana and Illinois. The examiner said that under recent decisions it is immaterial whether the rods, as described in the governing tariffs, be round, rectangular or hexagonal in cross-section. In what is known as the Standard Nut & Bolt Co. case the commission, in a decision of May 10, 1927, found that the rates from Pittsburgh, Johnstown, Youngstown, Buffalo and North Tonawanda to Pawtucket and Valley Falls on steel bars, variously described in the report and order as steel rods, wire rods, and hot-rolled unfinished steel, in straight lengths, in carloads, were not unreasonable but unjustly discriminatory and unduly prejudicial to the extent that they exceed the contemporaneous rates on the same commodity (rods) when shipped in coils. The railroads thereupon, by schedules filed to become effective Dec. 10, 1927, and later dates, proposed to increase the rates on the rods to the manufactured iron and steel basis, not only between the points involved in the Standard cases, but from and to all producing and consuming points in Official Classification territory.

Upon protest of numerous shippers and receivers of bars and rods these schedules were suspended as to interstate commerce until various dates ranging from July 9 to Aug. 24, 1928. Complainants in the Standard cases took the position that their raw material, when in straight lengths, not having been drawn through a die, comes within the tariff description of rods except that it is not in coils, and that the rates should be reduced to a basis lower than applies on their finished products and no higher than applies on their raw material when in coils. The railroads contended that under the decision they could no longer make a distinction between rods and bars and that their only alternative, if they were to avoid "appalling" losses of revenue, was to increase the rates on the rods to the manufactured iron and steel basis. The protestants maintained that there was no necessity for applying the same rates on the two commodities either by reducing the rates on bars or increasing the rates on the rods. They asked that the decision in the Standard cases be modified accordingly and that the schedules proposed by the carriers be found not justified and ordered canceled.

Examiner Fuller pointed out that about 4,000,000 tons of rods are produced annually, of which about 3,670,000 tons are used in the manufacture of wire and wire products, chains and rivets, and about 330,000 tons in the manufacture of bolts and nuts. Of the total production, about 2,000,000 tons, he said, are manufactured into finished products at point of origin, and about 2,000,000 tons moved by rail to some other point for such manufacture. The increases proposed by the carriers average about 35 per cent and amount to over $600,000 a year, it was stated. They would fall heavily on manufacturers who are not self-contained, the examiner said.

Standard samples issued or in preparation are covered by an eight-page supplement to circular No. 25 of the United States Bureau of Standards. This supplement replaces the one issued July 1, 1927, and includes 78 different samples.

Warehouses Seek Reasonable Profit

(*Continued from page* 1535)

Indianapolis, stated that his company had been able to cut out 700 small and unprofitable accounts without affecting its sales volume in dollars and consequent net profits.

Profits Lower in Southeastern States

As shown in the accompanying table, the net profits of 34 members of the association amounted to only 2.06 per cent in 1927 as compared with 2.42 per cent in the previous year. In presenting these figures, A. L. Philbrick, Congdon & Carpenter Co., Providence, R. I., chairman of the committee on the cost of doing business, pointed out that costs were higher in the district comprising New England, New York and New Jersey. In these States the net profits averaged 1.46 per cent in 1927 as against 1.20 per cent in 1926, while in the district made up of Pennsylvania and the States south of the Ohio and east of the Mississippi River profits amounted to 0.14 per cent last year and 0.49 per cent in 1926. In Ohio, Indiana, Illinois, Michigan and the States between the Mississippi and the Rocky Mountains, profits aggregated 3.88 per cent in 1927 and 4.96 per cent in 1926.

R. H. Welton, reporting for the adequate margins committee, pointed out that such low profits are largely the result of a number of slow moving lines for which warehouses do not ask a satisfactory price. Although most of the member companies were able to do a fairly satisfactory business on such lines as bars, shapes, plates, sheets, bands and bolts, nuts and rivets, other lines including concrete reinforcing bars, machine screws, twist drills, reamers, machine tools and hacksaw blades usually resulted in little or no profits.

Slight Improvement in Iron and Steel

THE report of the iron and steel committee, prepared by A. J. Bragg, Egleston Brothers & Co., Inc., Long Island City, N. Y., but read in his absence by the secretary, pointed out that competition with mills and with foreign steel had affected business adversely during 1927, but that business had improved during the last four months and seemed likely to be somewhat better during the greater part of the present year. Mr. Bragg stated that the establishment of quantity differentials by a number of warehouses in the East had improved conditions considerably and that a wider adoption of these principles would lead to continued betterment. He stated that sales methods were responsible for the unsatisfactory conditions in both warehouse and mill business and that a firm sales policy was the thing most needed to restore business to a paying basis.

A. J. Lockwood, Edgar T. Ward's Sons Co., Newark, N. J., chairman of the cold finished steel committee, said that the past year had been comparatively satisfactory in that line. He said that a new card of extras introduced last October on cold finished steel bars had been successful in a number of Eastern cities and might well be extended to include other lines. He added that some warehouses had allowed these differentials to apply on orders for various products, depending upon the total tonnage, rather than upon the tonnage of single products. He made a strong plea for cooperation among the warehouses in bringing about these improvements and stated that it was nearly as essential to be on good terms with one's competitors as with customers. Group meetings in large centers, Mr. Lockwood said, aid greatly in accomplishing this.

Further thought on this same subject was offered by Charles S. Clark, sales manager Burden Iron Co., Troy, N. Y., in a talk on "The Futility of Competition Within an Industry." Mr. Clark stated that science had created a new ethical situation in business and that such old slogans as "competition is the life of trade" are no longer applicable. "Competition," said Mr. Clark, "is war, and war is destructive." He emphasized the fact that competition in the form of high pressure distribution was robbing industry of the gains made possible through scientific low cost production.

Mills Willing to Aid Jobbers

STATING that one of the purposes of the National Association of Flat Rolled Steel Manufacturers is the establishment of better relations between the mills and jobbers, George H. Charls, president of this recently formed organization, pointed out that much of the present misunderstanding may arise from a lack of understanding as to who are jobbers and who are dealers. He admitted the need for strong jobbing companies in the steel industry and asked for their support in simplification work and other activities which his association is undertaking in an effort to place the flat rolled steel industry on a firmer basis.

The steel industry, said Mr. Charls, is facing one of the most serious crises in its history, and if prices are not soon stabilized on a profitable basis, a cut in wages would seem to be the only way out. Such a move would probably be extended to other industries

Profit and Loss Details per $100 of Sales of Iron and Steel Warehouses

and seriously undermine the country's prosperity. The industry, he said, has often attempted to establish profitable prices, but seems to lack the courage to hold to them.

The need for standardizing cutting charges on steel from warehouses was voiced by W. J. Holliday, Jr. He stated that many warehouses are using a system of cutting charges established 18 years ago and that the warehouses are not being properly compensated for the work at present. Now, the speaker pointed out, the cutting charges on small orders are less than those on large purchases, a condition which should be reversed. There is little profit on small orders and therefore the cutting charges should at least pay for themselves. Mr. Holliday advocated the placing of cutting charges on a uniform charge basis, and as a result of his talk it was moved that a committee be formed to draw up such a plan. The committee will report at the next meeting of the convention.

Hope for Warehouses in Differential Movements

The need for establishing quantity differentials by mills as well as warehouses was emphasized by Walter S. Doxsey, editor *Daily Metal Trade*, Cleveland. In a talk on "The Value of the Service Rendered by the Warehouse Distributer," he pointed out that the mills have already introduced quantity differentials on hot and cold-rolled strip steel and are giving serious thought to the extension of this scheme to other lines. "On the other hand," said Mr. Doxsey, "if the warehouses are to enjoy the sizable orders which they consider as justly theirs, because these orders are smaller than the theoretical minimum package of the mills, then the prices applying to these larger quantities should approach the mill price as the size of the order approaches the size of the smallest order the mill can handle effectively." In taking definite steps to establish these quantity differentials, the speaker stated that the warehouses, particularly in the East, have shown more aggressiveness and initiative than the mills.

Mr. Doxsey's paper followed the growth of the use of extras and discounts in various Eastern distributing centers during the last year. "Surely, with plans designed to make each order share its portion of the overhead," he went on, "in practice at Boston, Philadelphia and New York, no one can deny that the movement among jobbers to obtain a just return on the expenditures they are making for service is growing and expanding rapidly."

Compensating Salesmen

A plan for the compensation of salesmen on a profit-sharing basis, which is used by the Congdon & Carpenter Co., Providence, was outlined by G. M. Congdon. He stated that a straight salary basis gave salesmen little incentive to get business and that in many cases they only got credit for sales actually placed and not for preliminary efforts. Under the plan used by his company, the sales of each man were analyzed to find out what part was salary and what expenses and what part profits. Each salesman was then given a fixed percentage of his sales out of which his salary and expenses must be drawn. The remainder of this percentage is given to the salesmen as commission. Mr. Congdon stated that percentages were fixed individually according to territory and other conditions, and since the plan had gone into effect in 1922 not a percentage rate had had to be adjusted. In every case also the salesmen had been able to increase their incomes.

H. A. Sadler Made President

H. A. Sadler, Sioux City Iron Co., Sioux City, Iowa, was elected president of the association for the coming year. He served as first vice-president last year.

A. J. Lockwood, Edgar T. Ward's Sons Co., Newark, N. J., was named first vice-president; Robert H. Sanderson, E. P. Sanderson Co., Boston, second vice-president, and B. R. Sackett, Philadelphia, was reelected secretary-treasurer.

A. J. Dietrich, Dietrich Brothers, Baltimore, and L. S. Roehm, Roehm & Davison, Detroit, were made members of the executive committee for three years, and A. J. Bragg, Egleston Brothers & Co., Inc., Long Island City, was reelected to this committee for two more years.

Trends in Industry

April production of motor vehicles in Canada, as reported by the Dominion Bureau of Statistics, included 20,546 passenger cars and 3694 trucks. This compares with 7478 passenger cars and 2246 trucks in March and with 20,890 passenger cars and 3721 trucks in April of last year.

—

Steel boilers to the number of 1325, with 1,295,170 sq. ft. of heating surface, were ordered in April, against 1247 with 1,337,116 sq. ft. in March, according to reports received by the Department of Commerce from 72 manufacturers. Of the April orders, 1301 boilers, with 1,246,852 sq. ft., were of the stationary type and 24, with 48,318 sq. ft., were marine boilers.

—

Shipments in April of fire-extinguishing equipment are reported by the Department of Commerce at 84 motor-driven pumping engines, compared with 85 in March and with 89 a year ago. Except for March, the April shipments were the largest since last August. Seventeen pieces of motor apparatus, other than pumping engines, were shipped in April, the smallest number in more than a year.

—

Industrial employment in Illinois declined 3.5 per cent in April according to statistics reported by the Illinois Bureau of Labor. Employment on building construction gained 15.2 per cent, and on road construction work 97.3 per cent. Foundries, furniture factories, printing shops, clothing establishments and meat packing plants employed fewer workers than in March.

—

Industrial production showed a slight increase in April over March, as measured by consumption of electric energy by manufacturing plants. Figures gathered by *Electrical World* place April at 119.3, compared with 118.2 in March and with 116.9 a year ago. The base of 100 is the average for 1923-1925. For the first four months, 1928 showed 120.9 against 116.5 for 1927.

—

Total apparent consumption of babbitt metal in April is reported by the Department of Commerce at 4,842,656 lb. This is slightly below the 4,927,634 lb. of March, but is a little above the 4,812,045 lb. of April, 1927. There has been a drop of 10 per cent in the first four months compared with last year. The recent total was 19,169,175 lb., against 21,330,334 lb. a year ago.

—

Improvement in employment is recorded by the monthly labor barometer of the National Metal Trades Association. For April 632,663 employees were reported, compared with 619,966 in March and with 613,979 for April, 1927. The current figure is the highest for some months and is higher than for any of the early months of last year. Wages in February were slightly higher than in January.

—

Estimated production of bituminous coal in the week ended May 19 is given by the National Coal Association as 8,200,000 net tons. This compares with Bureau of Mines figures of 8,392,000 tons in the preceding week and 8,174,000 tons in the first week of May.

—

Production of electric power by public utility power plants in the United States in March is estimated by the Geological Survey at 7222 million kwhr. This compares with 6880 in February and 7265 in January. Except for January it is the largest total on record. About 61 per cent of the total in March was provided by the consumption of fuel, and 39 per cent by water-power, compared with 37½ per cent by water-power in January.

—

Beehive coke produced in the week ended May 19 is estimated by the Bureau of Mines at 80,000 net tons, compared with 154,000 tons a year ago.

PURCHASING METHODS

Comments on the Recent Conference Between Buyers and Representatives of Sellers

IN a bulletin to members of the National Machine Tool Builders' Association, E. F. Du Brul, general manager, comments in part as follows on the recent conference in New York between purchasing agents and representatives of various industries which sell to them:

"All present at the conference were unanimous in condemning misrepresentations, deceit, lies, fraud, etc., used by some purchasing agents to beat down prices. The National Association of Purchasing Agents frowns upon these practices and does what it can through the promotion of business ethics to eliminate such illegitimate practices.

"One point strongly emphasized by all the purchasing officials present was that anxiety of sellers to get an order has more influence in the making of unprofitable prices than any act of purchasing agents. Often the purchaser does nothing more than to lay aside all proposals without saying a word to any of the would-be sellers, well knowing that some anxious seller is almost certain to make a reduction in the price previously quoted, even though his price was the lowest at the outset.

"A very common alibi of purchasing agents is to tell salesmen who have lost on the deal that their price was too high. It is also a very common alibi for a salesman who has lost an order to make the same statement in excuse for his losing it. The only remedy for this situation is for a development of actual facts concerning different transactions.

"The primary function of a purchasing agent is to procure goods that are needed by the company he represents. His secondary function, which, of course, is important, is to get the goods needed at the lowest price at which he can buy them. Of course both these things should be done in a strictly legitimate and honest fashion. For sellers, it is a painful and unpleasant fact that it is none of the buyer's immediate concern whether the seller is selling his goods at a loss or at an inadequate profit. Only in a remote and distant way need the buyer worry about the continuance on the seller's part of an unprofitable series of transactions, as long as there are other sellers ready to take the place of the one who puts himself out of business. The buyer might feel sorry to see the sellers do this, but the buyer cannot be expected to run the seller's business.

"Sellers very frequently feel that buyers ought somehow or other to insist on giving a price that would give the seller an adequate profit. This is letting personal feelings run away with common sense. The buyer certainly cannot be fully informed of the adequacy of profit of thousands of manufacturers making thousands of different articles with which the buyer has to deal.

"It was also brought out that buyers very frequently overstep the bounds of propriety when they argue that the seller's profit is too high. If the seller's losses are none of the buyer's business, as the conferees practically all agreed, then the size of the seller's profit is none of the buyer's business. The buyer should either take the seller's price or leave it, whether that price produces a large loss or a large profit. But if a given seller told some buyers that the size of his profit was none of their business, many buyers would allow their hurt feelings to influence them to cross such a seller off their lists. Of course, in doing this they are just as illogical and unbusinesslike as the seller who thinks that the buyer ought to be concerned with keeping the seller in business.

Facts the Best Basis for Buying or Selling

"The conferees agreed that facts form the best basis for sound conclusions in either buying or selling. The buyer must test the market. He cannot simply take the first offer that is made and be sure that it is the lowest possible price. It is unfortunate that few sellers give their best prices immediately, and then stand pat on that price. Consequently the buyer cannot be blamed for trying any fair means to learn the actual price that he will have to pay for goods of a given quality.

"If sellers were to adopt a one bid policy and stick to it, both the buyer's and seller's jobs would be greatly simplified. Transactions would be conducted with much more speed and less expense than is now necessary due to jockeying and testing. It was recognized that it is up to the sellers to adopt a policy and that the buyers can only recommend it.

"The conferees all agreed that reliable information as to prices at which transactions are made is extremely desirable to both parties. The conferees generally were of the opinion that if the sellers of a given commodity were to have post mortems after deals were closed, they would develop the actual facts of a transaction. Post mortems would be good for sellers and certainly would be good for the fair purchasing agent. All the facts of price, terms, statements of purchasing agents as to other prices, etc., should be laid on the table at such post mortems. The sellers would then discover which purchasing agents were indulging in illegitimate practices and the sellers' whole industry could be put on their guard against such men. The sellers would also have actual prices on closed transactions.

"It was the general opinion that if manufacturers, wherever possible, were to establish list prices for their goods and were to stick to their published lists and discounts, without deviation, as is done in many cases, the situation would be vastly improved. The purchasing agents would be saved much time that they now spend checking and rechecking prices under the system where the seller himself puts in a later bid lower than his original bid. When one seller has done this, the purchasing agent must necessarily further test the market to see which others had not given him the best price in the beginning of the transaction. All of this takes time and money for sellers, as well as buyers.

"It is also recognized that one great difficulty comes from sellers who do not have definite information regarding their own costs. Sellers who have the best cost systems also seem to have the most executive backbone when it comes to making or maintaining their prices. The price cuts of competitors do not greatly affect the price policy of the well-informed executive."

Comparative Tests on Hollow Staybolt Bars

Tests made on hollow staybolt bars of electric steel, recently made by the Old Dominion Iron & Steel Corporation, Richmond, Va., afford a comparison between carbon steel bars and nickel steel bars. The averages in tensile strength gave the nickel steel an advantage of about 6 per cent over the carbon steel, with a slightly greater advantage in the elastic limit. This was at the expense, however, of elongation, in which the carbon steel showed an advantage of about 7 per cent over the nickel steel.

Nickel steel, however, gave a greatly increased resistance in the vibration test, in which 89,248 vibrations were withstood, against only 53,923 in the carbon steel. In both cases of vibration tests, which were made under as nearly the same conditions as possible, the bolt was subjected to a longitudinal pull of about 4000 lb., which is about 12 per cent of the pull required to develop the elastic limit. The number of vibrations represents in each case complete revolutions.

Particulars of the two steels and of the test results are shown in the table. The bars were nominally of 1 in. outside diameter, with a 3/16-in. hole rolled in them. Each bar was a trifle over-size.

RESULTS OF TESTS ON STAYBOLT BARS

Averages	Carbon Steel	Electric Steel
Elastic limit, lb. per sq. in....	41,555	44,405
Tensile strength, lb. per sq. in.	58,165	61,445
Elongation in 8 in., per cent...	31.5	29.75
Reduction of area, per cent...	55.2	55.85
Vibrations withstood.........	53,923	89,248
Chemical analysis (percentages)		
Carbon	0.10	0.09
Manganese	0.32	0.28
Phosphorus	0.065	0.044
Sulphur	0.060	0.055
Nickel	...	1.59

Machinery Markets and News of the Works

SALES ON THE DECLINE

Machine Tool Business in May Will Fall Below That of April

Chicago Trade Expects Release of Orders Against Deere & Co. List Before June 1—General Electric Co. Inquires for 16 Tools

THIS week there is further evidence of the decline in machine tool sales. The falling off has been gradual, but with three-quarters of the month gone it is now certain that the total volume will be 10 per cent or more on the average below that of last month.

In the Chicago district it is estimated that sales for the month will not be more than two-thirds of the April total, but there is a possibility that orders may be released before June 1 by Deere & Co. against their recent large inquiry. Cincinnati machine tool builders report a decline for May of not less than 10 per cent.

In the East, the outstanding inquiry is that from the General Electric Co. for 16 tools. The Wright Aeronautical Corporation continues to buy.

Much of the current activity is in purchases by industrial companies in diversified lines. The automobile industry and the railroads are contributing a relatively small proportion of the month's business. Changes in models by some of the Michigan automobile companies have not yet created any special demands for machine tools, other than one order totaling about $50,000 placed with a Cincinnati company.

Evidence of the large use of existing machine tool equipment is reflected by a steady stream of orders for repair parts.

New York

NEW YORK, May 28.

INQUIRY for machine tools is smaller than for some time, but there is still a fair volume of business not yet closed. In addition to its inquiries for various service stations, the General Electric Co., Schenectady, has issued a list of about 16 tools, including turret lathes, punches and other plate working equipment for Schenectady, Pittsfield and Chicago. The Wright Aeronautical Corporation, Paterson, N. J., continues active in the purchase of tools, both new and used.

No further railroad inquiries have appeared to add to the lists from the New York, New Haven & Hartford, New York Central and Erie railroads. The New Haven is reported to be awaiting an appropriation before taking further action. The list of the Erie Railroad, which includes planers, lathes, shapers and drills for Meadville, Pa., and Port Jervis, N. Y., is still pending. The New York Central has a number of separate inquiries in the market and has closed on several tools in the past week.

Contract has been let by Bayonne Steel Ceiling Co., 223 West Nineteenth Street, New York, to Wilcox Construction Co., Inc., 1 Bridge Plaza, Long Island City, for new two-story plant at Long Island City, to cost about $85,000 with equipment. William Higginson, 101 Park Avenue, New York, is architect.

Bids will be received by superintendent of lighthouses, Staten Island, N. Y., until June 6 for approximately 7000 lb. steel castings as required during period July 1-Dec. 31, 1928, proposal 27089; also for about 20,000 iron castings required during same period, proposal 27095; until June 11 for 37 acetylene buoy bodies, proposal 27040.

Glick & Duma, 400 East Fordham Road, New York, architects, have filed plans for two-story automobile service, repair and garage building, 100 x 131 ft., to cost about $100,000 with equipment.

National Carbon Co., Inc., 30 East Forty-second Street, New York, manufacturer of electric batteries, etc., will expand production to include radio receiving sets and kindred apparatus at Long Island City and Cleveland plants.

Board of Contract and Supply, City Hall, Albany, N. Y., has approved plans for municipal airport at Colonie, with hangars, repair shops, oil storage and distributing buildings, and other structures, to cost in excess of $80,000 with equipment.

Packard Motor Car Co., Broadway and Sixty-first Street, New York, plans removal of its central service, repair and distributing plant at Long Island City to new eight-story structure on Eleventh Avenue, between Fifty-fourth and Fifty-fifth Streets, for which plans were recently drawn. New building will total about 360,000 sq. ft. floor space and will cost close to $1,000,000.

Moore & Landsiedel, Third Avenue and 148th Street, New York, architects, have completed plans for two-story automobile service, repair and garage building, 130 x 132 ft., to cost close to $140,000 with equipment.

Erie Railroad Co., 50 Church Street, New York, will make extensions and improvements in engine house, shop facilities and coach shop and yard at Cleveland, to cost close to $200,000. R. S. Parsons is chief engineer.

Board of Education, Ticonderoga, N. Y., is considering installation of manual training equipment in new two-story high school to cost close to $300,000. Tooker & Marsh, 101 Park Avenue, New York, are architects.

Stern & Peyser, 12 East First Street, Mount Vernon, N. Y., architects, have filed plans for a two-story automobile service repair and garage building, to cost $100,000 with equipment.

Board of Education, City Hall, Paterson, N. J., will take bids at once for three-story addition to vocational school at Ellison and Summer Streets, to cost approximately $115,000.

International Safety Razor Corporation, Lester Avenue, Bloomfield, N. J., is disposing of stock issue to total $1,900,000, a portion of proceeds to be used for expansion.

Refractory Engineering Co., 50 Church Street, New York, manufacturer of high temperature cements, etc., with plant at Red Bank, N. J., has leased a building at Bayway, Elizabeth, N. J., for new factory, and will remove works from Red Bank to new location and increase capacity.

Whittier Lumber & Millwork Co., 415 Adams Street, Newark, has leased three-story and basement building at 27-49 Haynes Avenue, totaling about 40,000 sq. ft. floor space, and will remodel for manufacture of sash, doors, cabinet work, etc.

Automotive Standards, Inc., 2061 Broadway, New York, manufacturer of automobile equipment, has purchased plant at Newark, comprising group of buildings on 4-acre tract of waterfront property, and will occupy at once for new works.

A. R. Newcombe Corporation, 683 Broadway, Kingston, N. Y., A. R. Newcombe, president, oil products, plans construction of new oil storage and distributing plant at New Hamburg, N. Y., to cost approximately $80,000 with equipment.

Hartmann Corporation, 81 West Main Street, Somerville, N. J., has been formed to do repair work of Hartmann Hardware & Supply Co. at same address. Plant is fully equipped and activity is being confined to heating, plumbing and sheet metal work.

Wendel Co., Inc., 155 Badger Avenue, Newark, has been organized to make wood and steel curb signs under special patent. Company has fully equipped plant, but is in market for tubing, flat bands, cap nuts and bolts.

Aerocrete Products Co., Inc., Albany, N. Y., has been formed to manufacture aerocrete fireproof building materials under patents of Aerocrete Corporation of America, 51 East Forty-second Street, New York. Company is planning erection of factory in Albany and construction work will be under direction of Russell S. Greenmen, 108 Steuben Street, Albany. Frank M. Williams, Standard Building, Albany, is president of new company.

Eagle Metal Products Co., 508 North Eleventh Street, Newark, has been formed to manufacture sheet metal products, principally radiator cabinets and shields. It has fully equipped plant where all construction and laquering is handled.

McMyler-Interstate Co., Bedford, Ohio, builder of locomotive cranes, hoisting and conveying machinery, has moved its New York sales office from 233 Broadway to room 1710, Grand Central Terminal. George T. Sinks continues as New York district sales manager.

Utica Drop Forge & Tool Co., Utica, N. Y., has acquired business of Arrow Wrench Co., Hammondsport, N. Y., and will remove equipment to Utica plant.

J. H. Gautier & Co., 1 Greene Street, Jersey City, manufacturer of crucibles, refractories, etc., whose plant was recently reported damaged by fire to extent of $75,000, states that this figure is considerably exaggerated. Very little equipment was lost, the boiler house was not touched by fire and no loss was sustained in crucible department. Company has resumed operations.

Chicago

CHICAGO, May 28.

SALES of machines tools in this district show a further decline and it is now generally estimated that the total volume of business in May will not exceed two-thirds of that booked in April. One bright spot, however, is the possibility of a release of orders before June 1 against the large list prepared by Deere & Co. for its Illinois and Iowa plants. Fresh inquiry from the railroads includes a butt welder from the Missouri Pacific and 16 12 x 3 x 1¾-in. duplex motor-driven floor grinders from the Rock Island.

Orders against the Santa Fe list have not been numerous and have not been received in as large a volume as had been anticipated by the trade a week ago. Among machine tools bought the past week by this railroad are two engine lathes and several hydraulic presses. A pump manufacturer has closed for a 16-in. x 6-ft. lathe. Taken as a whole, this has been a dull spring from the standpoint of railroad purchases. On the other hand, manufacturers of farm machinery have taken an unusually large number of tools and a fair number of orders have come from automobile and radio parts manufacturers who have need of punch presses. Many shoppers are looking for used equipment, but sales are not in proportion to inquiry.

Plans are being considered by Nehring Electrical Works, Inc., DeKalb, Ill., for rebuilding of portion of factory recently destroyed by fire, with loss reported in excess of $125,000 including equipment.

Commonwealth Utilities Corporation, Colorado Springs, Colo., is planning construction of 44,000-volt transmission line to municipal airport and vicinity, to cost more than $30,000.

Northwestern Barb Wire Co., Sterling, Ill., is considering rebuilding portion of plant recently destroyed by fire, with loss close to $300,000 including equipment.

Deere & Co., Inc., Third Avenue, Moline, Ill., manufacturer of agricultural and farming machinery, will soon take bids on general contract for six-story branch plant at Waterloo, Iowa, to cost about $175,000 with equipment. M. Sklovsky, company engineer, address noted.

Container Corporation of America, Inc., 111 West Washington Street, Chicago, manufacturer of corrugated boxes and containers, has purchased local paper board plant of Robert Gair Co., known as Chicago Coated Board Co., East North Water Street, and will operate in connection with expansion program.

Signal Corps., Procurement District, Chicago, will receive bids until June 5 for electrical supplies, including magnet wire, 1000 cable racks, 1000 hot galvanized hooks, etc., circular 104; 100 electric soldering irons, switches and cable terminals, circular 103.

Board of Education, 650 South Clark Street, Chicago, plans installation of manual training equipment in new junior high schools, each to cost $1,500,000, located at Essex Avenue and Eighty-second Street; Carmen and Christiana Avenues; Fullerton and Linder Avenues, and Foster Avenue and North Robey Street, respectively, for which plans are being drawn by John R. Christensen, school architect, address noted.

W. L. Soens, Durango, Colo., and associates have applied for permission to construct and operate a hydroelectric power plant in this section for service at Bayfield, Ignacio and vicinity, to cost upward of $200,000 with equipment.

W. M. Oates, secretary, Northern Normal and Industrial School, Aberdeen, S. D., is asking bids until June 8 for one 375-hp. boiler and auxiliaries for proposed boiler plant; specifications on file at Builders' Exchange, Minneapolis and St. Paul, Minn., and at school, Aberdeen.

Board of Education, Fairmont, Minn., is considering installation of manual training equipment in new three-story high and grade school to cost $300,000, for which bids will soon be asked on general contract. George Pass & Son, Ekle Building, Mankato, Minn., are architects.

Hudson Mfg. Co., Minneapolis, manufacturer of sheet metal products, farm equipment and garden tools, has purchased the William Warhock tank manufacturing plant at Sioux City, Iowa.

Philadelphia

PHILADELPHIA, May 28.

CONTRACT has been let by Walker Brothers, 620 South Delaware Avenue, Philadelphia, manufacturers of electrical equipment and supplies, to F. G. Stewart, 1520 Locust Street, without competition, for a one-story factory at Spring Mill, Pa., to cost about $70,000 with equipment.

Eugene A. Stopper, 10 South Eighteenth Street, Philadelphia, architect, has awarded general contract to Murphy-Quigley Co., 1518 Sansom Street, for two-story and basement service, repair and garage building, 70 x 130 ft., to be occupied under lease by Sentman Motor Co., Fifty-eighth and Walnut Streets, to cost about $100,000 with equipment.

Board of Education, Keystone Building, Philadelphia, will receive bids until June 5 for steel lockers and other school equipment. William Dick is secretary and business manager.

Max Levy & Co., 220 Roberts Avenue, Philadelphia, manufacturers of photo-engravers materials and supplies, have plans for three-story addition, to cost more than $45,000 with equipment. LeRoy B. Rothschild, 215 South Broad Street, is architect.

American Feldspar Co., Toughkenamon (Chester County), Pa., is considering rebuilding portion of plant destroyed by fire May 21, with loss reported at $50,000 with equipment.

Bellanca Aircraft Corporation, Tottenville, Staten Island, N. Y., plans to remove local plant to new works now in course of construction near New Castle, Del., and will provide considerable additional equipment. Staten Island works will be entirely discontinued. New Castle plant is reported to cost more than $75,000 with equipment.

Hahn Motor Truck Co., 40 East Walnut Street, Allentown, Pa., has asked bids on general contract for a new two-story service and repair works at Shamokin, Pa., to cost approximately $45,000 with equipment.

Board of Education, Manheim, Pa., is considering installation of manual training equipment in two-story and basement senior and junior high school to be erected at Neffsville, to cost in excess of $200,000 with equipment. H. Y. Shaub, 20 North Queen Street, Lancaster, Pa., is architect.

Pennsylvania Power & Light Co., Allentown, Pa., has organized nine subsidiary companies to construct and operate transmission lines and stations in different parts of Lycoming and Dauphin Counties.

Lycoming Mfg. Co., Williamsport, Pa., manufacturer of automobile engines and parts, will develop maximum capacity at plant. Contract has been secured from Stewart Motor Truck Co., Buffalo, for motor requirements for period of a year. Company has been carrying out expansion program to cost more than $350,000.

Pennsylvania Railroad Co., Broad Street Station, Philadelphia, has work in progress on new engine house and additions to locomotive and car repair shops at Wilmington, Del., and is scheduling completion in August. It is proposed to remove present car repair shops at Pavonia yard, Camden, N. J., to new location, with additional equipment. Trenton, N. J., shops are also being considered for similar removal to Wilmington plant, where repairs will be concentrated for this district in future. Entire program is reported to cost more than $175,000 with equipment. R. J. Bennett is general superintendent of motive power.

Board of Education, Trenton, N. J., has plans nearing completion for new central senior high school to cost more than $2,500,000, and contemplates manual training department. Bids will be asked on general contract soon. Ernest Sibley, Bluff Road, Palisade, N. J., is architect.

Hanover Engineering Co., Hanover, Pa., manufacturer of isolated electric lighting equipment, etc., is arranging for early erection of one-story addition, 125 x 200 ft., to cost in excess of $50,000 with equipment.

Giant Mfg. Co., Muirheid Avenue, Trenton, N. J., has been formed to manufacture playground apparatus, swimming pool and bathing beach equipment, flood light projectors and other products. Company will be in market for pipe, angles, tees, channels and bar stock and black and galvanized sheets.

Detroit

DETROIT, May 28.

PLANS are being completed for two-story manual arts building at central high school, Pontiac, Mich., for Board of Education, to cost close to $100,000 with equipment. Childs & Smith, 720 North Michigan Avenue, Chicago, are architects.

Briggs Mfg. Co., 11631 Mack Avenue, Detroit, manufacturer of automobile bodies, has filed plans for five-story addition, 180 x 365 ft., to cost more than $130,000 with equipment.

Unit Corporation of America, Inc., Milwaukee, recently organized to take over and consolidate a number of companies in heavy machinery lines, is planning for removal of plant of Universal Power Shovel Co., 15841 Second Avenue, Detroit, one of its subsidiaries, to works of Fuller & Sons Mfg. Co., Kalamazoo, Mich., manufacturer of automobile gears, etc., another unit in merger, where new buildings will be made available. Production will be increased at new location.

Burroughs Adding Machine Co., 6701 Second Avenue, Detroit, has awarded general contract to Corrick Brothers, Owen Building, for a one-story top addition to factory unit on York Street. Albert Kahn, Marquette Building, is architect and engineer.

Sparks-Withington Co., Jackson, Mich., manufacturer of automotive appliances, radio equipment, etc., is planning for new preferred stock issue to total $1,000,000, a portion of proceeds to be used for expansion.

City Council, Pontiac, Mich., will establish a municipal airport, with hangars, repair and reconditioning shops, oil storage and distributing plants, etc., for which an appropriation of $180,000 has been approved.

Malcolmson & Higginbotham, 1219 Griswold Street, Detroit, architects, are preparing plans for six-story automobile service, repair and garage building, to cost in excess of $400,000 with equipment.

Perfection Stamping Co., Inc., 743 Beaubien Street, Detroit, has been organized to manufacture steel stampings for automotive industry. Company is already producing stampings and expects to build its own plant within six months.

Consolidated Brass Co., Detroit, has been formed as merger of American Carburetor & Brass Co. and Sterling & Skinner Mfg. Co., both of Detroit, to manufacture brass goods. No new equipment will be required.

Gulf States

BIRMINGHAM, May 28.

PLANS are being arranged by Texas Co., Houston, Tex., for extensions in pipe lines to cost more than $3,000,000, including 50-mile line between Dallas and Corsicana, Tex.; new line from Louisiana-Arkansas fields to Port Arthur, Tex., and 150-mile line from Gray County field to Electra, Panhandle, Tex., and vicinity. Company will increase facilities at Port Arthur oil refining plant to handle 10,000 bbl. additional per day. Headquarters are at 17 Battery Place, New York.

Gentile Brothers Packing Co., Haines City, Fla., plans construction of cold storage and refrigerating plant in connection with proposed fruit canning factory, entire project to cost approximately $100,000 with machinery.

Clarke Garage Co., Inc., New Orleans, care of Favrot & Livaudias, Hibernia Bank Building, architects, has plans for four-story service, repair and garage building, 90 x 120 ft., to cost about $165,000 with equipment.

United Gas Co., Houston, Tex., operating Houston Gulf Gas Co., Dixie Gas & Utilities Co., South Texas Gas Co., and other natural gas properties, is disposing of a new stock issue to total $2,500,000, a portion of proceeds to be used for expansion and improvements.

Beaumont Import & Export Co., Perlstein Building, Beaumont, Tex., is planning construction of lumber and wood-working mill on 14-acre tract in Van Wormer district, to cost $80,000 with equipment. John W. O'Shaughnessy is general manager.

Texas Gas Utilities Co., Gunter Building, San Antonio, Tex., is planning construction of pipe line, about 35 miles, to cost approximately $100,000. It is purposed to install additional lines later totaling about 200 miles. Earl Camp is construction engineer for company.

Common Council, Collinston, La., is asking bids until June 12 for waterworks machinery, including pumping equipment and accessories, elevated steel tank and tower, steel water pipe and fittings, etc. Henry A. Mentz, Hammond, La., is consulting engineer.

United States Engineer Office, Fourth Mississippi District, New Orleans, will receive bids until June 6 for one electrically-operated air compressor, complete with accessories, circular 265; until June 4 for two electric-driven winches with special controls for remote operation, circular 259.

Texas-Louisiana Power Co., Pecos, Tex., has arranged for bond issue of $1,700,000 and preferred stock issue of $1,000,000, a portion of proceeds to be used for expansion, including acquisition of plants and properties of Texas-Gulf Power Co. An extension program will be carried out at Pecos power plant, including installation of three 1250-hp. generating units and auxiliary equipment, and further additions later; extensions will be made in transmission lines.

Board of Education, San Angelo, Tex., will soon begin superstructure for two-story vocational school, to cost about $70,000 with equipment; portion of structure will be used as cafeteria for students. Phelps & Dewees, Gunter Building, San Antonio, Tex., are architects.

Board of Education, Montgomery, Ala., plans installation of manual training equipment in new three-story high school to cost about $950,000, for which bids will be asked on general contract early in June. Frederick Ausfeld, Shepherd Building, is architect.

Cleveland

CLEVELAND, May 28.

MACHINE tool business was light the past week and there is not much new inquiry. Sales by most manufacturers and dealers during May will show a little falling off, as compared with April. Orders are from scattered sources and few are for more than single machines. The market is very dull in Detroit, where there was some activity recently. Summer changes in models by several automobile companies do not seem to have caused much of a demand for new equipment.

The Standard Tool Co., Cleveland, has purchased two 2¼-in. automatic lathes. The recent inquiry from the Erie Railroad included a 90-in. journal turning lathe for its Meadville, Pa., shops. This railroad is also inquiring for material-handling equipment.

Ohio Steel Foundry Co., Lima, Ohio, has placed a contract with the H. K. Ferguson Co., Cleveland, for a foundry addition 53 x 253 ft., to cost $75,000. A 10-ton electric traveling crane a jib crane and additional equipment will be installed.

Paper & Textile Machinery Co., Sandusky, Ohio, will erect an addition 40 x 200 ft., of steel and concrete, at an estimated cost of $200,000. It will be used for demonstration of new Millspaugh suction roll process of making paper, which is stated to be a radical departure from present paper manufacturing methods.

Plans are being drawn by Board of Trustees, Case School of Applied Science, Cleveland, for four-story and basement laboratory, 50 x 220 ft., with machine shop and other mechanical divisions to cost about $250,000. Wilbur Watson & Associates, 4614 Prospect Avenue, are architects.

Libbey-Owens Sheet Glass Co., Nicholas Building, Toledo, Ohio, has plans under way for new units to cost close to $1,000,000 with machinery. Lockwood, Greene & Co., Hanna Building, Cleveland, are architects and engineers.

Williams Alloy Products Co., Elyria, Ohio, manufacturer of automobile bearings, recently reorganized, is completing plans for one-story addition, to cost about $30,000 with equipment. New furnace and accessory apparatus will be installed.

Superior Gas Engine Co., Springfield, Ohio, has merged with National Supply Co., Toledo, Ohio, manufacturer of gas and oil well equipment and supplies. Both companies will continue plants as heretofore and there will be no change in identity of either organization.

Crane Co., 836 South Michigan Avenue, Chicago, will soon take bids on general contract for new factory branch and distributing plant at Cleveland, to cost about $75,000 with equipment. Howell & Thomas, 3868 Carnegie Avenue, are architects.

Monitor Sad Iron Co., Big Prairie, Ohio, manufacturer of gas and gasoline irons, will rebuild portion of plant destroyed by fire May 22, with loss reported at more than $25,000 including equipment.

Thomas Stoker, Inc., Cleveland, recently formed to manufacture automatic furnace stokers, will operate a plant at 5906 Park Avenue, S. E. Charles Thomas is head.

Indiana

INDIANAPOLIS, May 28.

CONTRACT has been let by Truck Engineering Co., East Pontiac Street, Fort Wayne, Ind., manufacturer of motor truck equipment, to Buesching-Hagerman & Co., 402 East Superior Street, for one-story addition, 60 x 100 ft., to cost close to $24,000. Guy Mahurin, Standard Building, is architect.

Evansville Ice & Storage Co., 10 North Eighth Street, Evansville, will ask bids early in June for new two-story cold storage and refrigerating plant, to cost about $65,000 with equipment.

Board of Trustees, Indiana University, Bloomington, has approved plans for extensions and improvements in three-story power plant, 21 x 50 ft., to cost about $50,000 including equipment. Robert F. Daggett, Continental Bank Building, Indianapolis, is architect.

Meridian Service Co., 52 West New York Street, Indianapolis, is completing plans for one-story service, repair and garage building, to cost about $40,000 with equipment. Vonnegut, Bohn & Mueller, Indiana Trust Building, are architects.

Board of Works, Hobart, Ind., is said to be planning installation of pumping machinery and other power equipment, tank, etc., in connection with proposed municipal water plant to cost about $200,000. J. Gregg, Hobart, is engineer.

Hoosier Lamp & Stamping Corporation, Evansville, has been organized and has purchased plants of F. W. Goedeke Metal Stamping Works, 213 Goodsell Street, and Hoosier Lamp Works, Eighth and Division Streets, both at Evansville. New company will operate both plants separately, manufacturing steel stampings, particularly pressed steel stove parts, at Goedeke works, and metal lamps and occasional wrought iron furniture at Hoosier plant. Additional floor space will soon be required at Goedeke works and new equipment will probably be needed. F. W. Goedeke, former owner of plant bearing his name, is retiring from active management but retains interest in new firm. T. J. Morton, Jr., is president of new company; C. Nelson Smith, vice-president; Daniel Wertz, secretary, and R. J. Morton, Sr., treasurer.

St. Louis

ST. LOUIS, May 28.

BIDS are being asked by Board of Public Service, St. Louis, O. D. Tillay, secretary, until June 5 for installation of pneumatic conveying system in coagulent station, Missouri River plant, municipal waterworks, contract 3197.

N. O. Nelson Mfg. Co., 928 Chestnut Street, St. Louis, manufacturer of plumbing equipment and supplies, has engaged P. J. Bradshaw, 718 Locust Street, architect, to prepare plans for new unit largely for storage and distributing service, to cost close to $200,000 with equipment.

Atchison, Topeka & Santa Fe Railway Co., Topeka, Kan., has plans for power plant at Emporia, Kan., 60 x 92 ft., to cost upward of $50,000 with equipment. E. A. Harrison, company headquarters, 80 East Jackson Boulevard, Chicago, is architect.

Board of Education, Board of Education Building, St. Louis, contemplates installation of manual training equipment in two-story central high school to cost $700,000, for which plans will be drawn by R. M. Milligan, Board of Education Building, architect.

Missouri Power & Light Co., Kansas City, Mo., has applied for permission to issue bonds for $1,500,000, a portion of proceeds to be used for expansion, including transmission lines.

Laclede Packing Co., Prairie Avenue and Lucky Street, St. Louis, will soon begin construction of power house, 48 x 55 ft., to cost close to $30,000 with equipment. Koerner Engineering Co., Syndicate Trust Building, is engineer.

Ward Furniture Mfg. Co., 1200 North First Street, Fort Smith, Ark., has awarded general contract to John R. Murphy, 1504 South P Street, for two-story addition, 40 x 100 ft., to cost about $45,000 with equipment.

Empire District Electric Co., Joplin, Mo., has applied for permission to construct and operate a hydroelectric generating plant on White River, to cost more than $650,000 with transmission system.

Associated Motors Terminal, Inc., 117 South Broadway, St. Louis, will soon begin erection of six-story service, repair and garage building, 80 x 105 ft., to cost $225,000 with equipment.

Ovens, power equipment, conveying and other machinery will be installed in three-story and basement plant, 130 x 132 ft., to be erected by General Baking Co., 342 Madison Avenue, New York, at Oklahoma City, Okla., to cost upward of $150,000. Archer & Gloyd, Pioneer Trust Building, Kansas City, Mo., are architects.

Parsons Foundry & Machine Works, Sterling, Kan., is completing plans for one-story and basement addition, including improvements in present plant to cost close to $19,000.

Cincinnati

CINCINNATI, May 28.

SOME machine tool builders report that this month's business has closely paralleled that of April, but others state there has been a slight recession. In the volume of fresh orders for the entire market, however, May probably will show a decline of about 10 per cent. Operations in local plants continue on a moderate scale and not much change is anticipated in the near future. The New York Central has bought two engine lathes from a Cincinnati company, while an automobile maker has placed an order for special machines, amounting to more than $50,000, with a manufacturer in this district. Several machine tool executives have commented on the increased demand for repair parts.

Dayton Airplane Engine Co., 1246 Leo Street, Dayton, is now in production on air cooled airplane engines. R. R. Grant is president and chief engineer, and George A. Funkhouser is secretary and treasurer. Company expects soon to increase its output to 10 motors a day.

Contract has been let by E. M. Hulse Furniture Co., 153 West Fulton Street, Columbus, Ohio, to E. Elford & Son, 55 Park Street, for three-story and basement factory, 100 x 260 ft., to cost approximately $275,000 with equipment. Carmichael & Millspaugh, 7 East Long Street, are architects.

Board of Education, Oxford, Ohio, is considering installation of manual training equipment in senior and junior high school to cost $165,000, for which plans will be drawn by Roman & Ingleson, 1614 North High Street, Columbus, Ohio, architects.

Air Corps, Material Division, Wright Field, Dayton, Ohio, will receive bids until June 4 for one portable grinder, one sand blast machine, two universal and tool grinding machines, one band saw and one bench shears, circular 338; until June 5 for 275 generator units for one type and 395 such units of another type, circular 333; for one 3-ft. radial drill, circular 338; until June 7 for propeller parts, including 24 sleeve assemblies, split hub, circular 342; until June 8 for 428 starters, electric inertia, 244 starters, hand inertia, and 176 electric and hand inertia, circular 332.

Atlantic Ice & Coal Co., Atlanta, Ga., plans new ice-manufacturing and cold storage plant at Knoxville, Tenn., to cost upward of $90,000 with equipment.

Athens Stove Works, Athens, Tenn., has plans for a one-story addition for molding and kindred service, to cost more than $21,000.

United States Foil Co., 2900 Grand Avenue, Louisville, will soon begin work on new one-story unit, to cost more than $35,000 with equipment.

Mills-Lupton Co., Chattanooga, Tenn., has been appointed representative of South Bend Lathe Works, South Bend, Ind.

New England

Boston, May 28.

SALES of local machine tool houses the past week were less encouraging and even companies reporting good business a week ago say sales have dropped off in both new and used tools. Bids are in for the 25 tools wanted by the Boston & Albany Railroad and it is expected that purchases will begin soon. That and other prospective business from industrial plants gives a more cheerful outlook. Among sales reported were a new small speed lathe and floor grinder with 7-in. wheel, some new and used drilling equipment, one small new tool room lathe and a used lathe. New inquiries are few and many ask an exchange of some old tool as part payment.

Small tools continue to sell well and May probably will be the best month so far this year.

Barbour Stockwell Co., 205 Broadway, Cambridge, Mass., has awarded contract for a one-story, 38 x 70 ft. brass foundry.

C. Hammond & Son, 179 North Water Street, New Bedford, Mass., closes bids June 7 for a two-story and basement vocational school on Park Street, to contain machine and electrical shops.

Plant of Albert M. Creighton Shoe Co., Lynn, Mass., has been sold to Consolidated Lamp Co., Danvers, Mass., radio tubes and incandescent lamps. A new corporation will be formed to occupy structure.

Land and plants of Rhode Island Crucible Steel Co., Inc., 604-612 South Main Street, Providence, R. I., will be sold at public auction June 1. Property is to be sold subject to a first mortgage of $10,875, overdue interest and taxes.

Narragansett Airways, Inc., has completed negotiations for erection of a hangar at Portsmouth, R. I. Walter A. Hahn is treasurer. Company has plans for a small machine shop to be erected at some future date.

Compressed Steel Shafting Co., 1587 Hyde Park Avenue, Boston, is making alterations to its plant.

Bird & Sons, Walpole, Mass., roofing materials, is building a coal pocket for which handling equipment will be required. Monks & Johnson, 99 Chauncy Street, Boston, are architects.

Production schedules of Goss & Deleeuw Machine Co., Hartford, Conn., are being increased and company has under consideration plans for further extensions.

City of Providence, R. I., will erect a junior high school addition at 56 Pleasant Avenue to contain a manual training department. T. J. Hill Pierce, City Hall, Providence, is architect.

Peerless Pressed Steel Corporation, 14 Electric Avenue, Brighton district, Boston, is going ahead with its new manufacturing plant at 24 Arlington Street, Watertown, Mass. Plans are private.

L. G. Morphy, company engineer, has completed plans for a round house at Rutland, Vt., for the Rutland Railroad Co.

American Bosch Magneto Corporation, Springfield, Mass., has leased local mill of Birnie Paper Co., with option to purchase, for branch works for assembling radio equipment, etc.

Western Electric Co., 195 Broadway, New York, has awarded general contract to T. J. Pardy Construction Co., Seaview Avenue, Bridgeport, Conn., for two-story factory branch and distributing plant, 103 x 209 ft., at West Haven, Conn., to cost $175,000 with equipment.

Patterson Chevrolet & Buick Co., 1145 Stanley Street, New Britain, Conn., representative for Chevrolet and Buick automobiles, has filed plans for one-story service, repair and garage building, to cost about $120,000 with equipment.

Watertown Electric Co., 7 Main Street, Watertown, Mass., has plans for a one-story service and repair building, 90 x 100 ft., to cost close to $70,000 with equipment.

New York, New Haven & Hartford Railroad Co., New Haven, Conn., has acquired property at New London, Conn., heretofore held by Connecticut Power Co., and is reported planning power plant on site to be erected later. Power company has plans for new equipment storage and distributing plant at Waterford, to cost more than $65,000 with equipment.

Beaudette & Graham Co., 915 Boylston Street, Boston, manufacturer of electric household appliances and equipment, is disposing of stock issue to total about $250,000, a portion of proceeds to be used for expansion.

Portland Water District, 16 Casco Street, Portland, Me., has filed plans for a two-story service and shop building, 50 x 320 ft., to cost more than $70,000 with equipment. J. C. and J. H. Stevens, 477 Congress Street, are architects.

Pratt & Whitney Aircraft Co., Capitol Avenue, Hartford, Conn., has filed plans for a one-story addition for testing airplane motors.

Peoples' Light & Power Corporation, Burlington, Vt., has acquired Burlington Light & Power Co., and Burlington Gas Co., and plans expansion including transmission line construction for connection with its other properties in this section.

Noyes-Buick Co., 857-67 Commonwealth Avenue, Boston, local representative for Buick automobiles, will soon begin superstructure for new two-story and basement service, repair and garage building, 154 x 180 ft., to cost close to $250,000 with equipment.

Buffalo

Buffalo, May 28.

CONTRACT has been let by Agfa-Ansco Corporation, Charles Street, Binghamton, N. Y., manufacturer of cameras, tripods and other photographic equipment, to Turner Construction Co., Graybar Building, New York and Buffalo, for new two, four and eight-story plant unit, 200 x 700 ft., to cost in excess of $1,000,000, with equipment. Otto S. Schlick, 136 Liberty Street, New York, is engineer.

Wiesner-Rapp Co., Inc., Buffalo, will occupy a building at 186-88 Fourth Street, for which plans have been filed, for manufacture of sheet metal and ventilating equipment.

Edmund F. Doty, 185 Vandervoort Street, North Tonawanda, N. Y., and associates have organized E. F. Doty Pump Co., with capital of $50,000, to operate local plant for manufacture of pumping machinery and parts.

New York Central Railroad Co., Buffalo, has let general contract to William M. Ballard, City Bank Building, Syracuse, N. Y., for two one-story shop units at North Yards repair plant, Buffalo, to cost more than $65,000 with equipment. F. B. Freeman, company headquarters, 466 Lexington Avenue, New York, is chief engineer.

William H. Weston, 574 Woodbine Avenue, Rochester, N. Y., and associates have formed Metal Welders Co., to operate a local welding works and plan early production.

Curtiss Aeroplane & Motor Co., Buffalo, recently placed orders for $1,000,000 worth of equipment as first step in an expansion program. Production of present plant will not only be increased, but a new plant for assembling both planes and motors will be erected.

South Atlantic States

Baltimore, May 28.

BIDS will be asked early in June by Chesapeake Paper Board Co., Key Highway and Baltimore & Ohio Railroad, Baltimore, for new one and two-story mill, to cost in excess of $250,000 with equipment, for which revised plans are being prepared by Karl A. Lefren, 171 Madison Avenue, New York, engineer. J. E. Smith is president.

Union Brothers, 37 West Cross Street, Baltimore, manufacturer of furniture, is having plans drawn for three new one-story units, each about 50 x 400 ft., to cost more than $85,000. Benjamin Frank, 517 North Charles Street, is architect.

Lykes Service Co., 35 Market Street, Asheville, N. C., has leased a three-story building, 84 x 100 ft., to be erected at Coxe and Commerce Streets, for a new service, repair and garage building, to cost close to $100,000 with equipment. V. W. Breeze, Castanea Building, is architect.

United Coast and Geodetic Survey, 205 New Jersey Avenue, S. E., Washington, is asking bids until June 22 for construction of steel Diesel electric propelled survey ship, about 770 tons displacement, with separate bids for main propelling machinery, auxiliary machinery, pumps, windlass, capstan, boat hoist, etc.

Clinchfield Sand & Feldspar Corporation, Hearst Tower Building, Baltimore, is said to have plans for new feldspar grinding mill at Brookneal, Va., to include installation of pulverizing and grinding machinery and auxiliary equipment, to cost about $40,000.

Board of Trustees, Virginia Polytechnic Institute, Blacksburg, Va., has approved plans for new electrical engineering building, to cost about $125,000 with equipment. Carneal & Johnston, Electric Building, Richmond, Va., are architects.

Reference made recently in these columns to contract award for proposed plant of Procter & Gamble Co., Gwynne Building, Cincinnati, at Baltimore, is premature and company states that no contract has been let. Harry Manley, 5 East Fifty-third Street, New York, is engineer, and bids will be asked from that office within five to six weeks. Project is reported to cost close to $4,000,000 with equipment.

American Oil Co., American Building, Baltimore, is planning early call for bids for new oil storage and distributing

The Crane Market

PROSPECTIVE buyers of overhead and locomotive cranes are slow to place business and but little new inquiry is appearing in the market. Among future purchases of locomotive cranes, seven for Dwight P. Robinson & Co. for use in Argentina and five electrically driven for the Amtorg Trading Corporation for use in Russia are outstanding lists. The Mullaney Iron Works, West New York, N. J., is reported to have closed on a 10-ton, 60-ft. span overhead crane. The Lynn Gas & Electric Co., Lynn, Mass., has closed on about 18 hand power hoists for a new plant being erected by Stone & Webster, Inc., Boston, and will probably be in the market in a few months for a 100-ton power house crane. The British-American Metals Co., Plainfield, N. J., is expected to be in the market soon for four 5-ton, 100-ft. span, electric traveling cranes. The Scullin Steel Co., St. Louis, is in the market for an electric traveling crane.

Among recent purchases are:

Pennsylvania Railroad, Philadelphia, a 20-ton, 95-ft. span electric crane for Wilmington, Del., shops from an unnamed builder.

James A. Coe Co., Newark, N. J., 8-ton, 43-ft. 6-in. span, double I-beam crane from the Chisholm-Moore Hoist Corporation.

Breen Iron Works, 276 Badger Avenue, Newark, N. J., four 2-ton, underhung hand power cranes from Chisholm-Moore Hoist Corporation.

Maine Steel Products Co., Portland, Me., 5-ton, 3-motor overhead crane and a 5-ton, 2-motor, monorail hoist from Chisholm-Moore Hoist Corporation.

Ketler Elliott Co., Chicago, 15-ton, 57-ft. span, 3-motor, overhead crane from Western builder.

Phoenix Utility Co., 71 Broadway, New York, 5-ton, 28-ft. span, 1-motor, overhead crane for Houston, Tex., from Box Crane & Hoist Corporation.

Wheeling Steel Corporation, Steubenville Works, one 60-ton, one 40-ton and four 25-ton overhead cranes from Alliance Machine Co., and two stripper and one hot metal cranes from Morgan Engineering Co.

Carnegie Steel Co., McDonald, Ohio, works, two overhead cranes from Morgan Engineering Co., and one from Alliance Machine Co.

Heppenstall Forge & Knife Co., 5-ton, 47-ft. span crane for Pittsburgh works from Alliance Machine Co., and two 5-ton, 31-ft. span cranes for Detroit works from Northern Engineering Works.

Fort Pitt Bridge Works, Canonsburg, Pa., one 10-ton, 63-ft. spane crane and two 10-ton trolleys from Northern Engineering Works.

Pittsburgh Plate Glass Co., Creighton, Pa., 10-ton, 60-ft. span crane from Northern Engineering Works.

Danville Structural Steel Co., Danville, Pa., one 5-ton and one 10-ton cranes from Northern Engineering Works.

Webb Engineering Co., for George & Shearard Paper Co., Wellsburg, W. Va., five 1-ton hoists from Northern Engineering Works.

plant in vicinity of Bridgeton, N. J., to cost more than $60,000 with equipment. T. J. O'Connell is company engineer.

Harper Motor Co., Federal Street and Government Avenue, Hickory, N. C., has plans for two-story service, repair and garage building, 60 x 130 ft., to cost close to $75,000 with equipment.

Virginia Public Service Co., Richmond, Va., is negotiating with city council, Staunton, Va., for purchase of municipal electric light and power plant, and plans expansion, including transmission line construction.

General Outdoor Advertising Co., 24 Fallsway, Baltimore, manufacturer of signs, electric displays, etc., has leased one-story building, 134 x 146 ft., to be erected on local site, and will equip for a new plant, to cost close to $100,000 with equipment. A. L. Blatchley, Baltimore, is architect.

McGowan-Motes Motor Co., Augusta, Ga., has plans for one-story service, repair and garage building, 135 x 137 ft., to cost close to $85,000 with equipment.

Pittsburgh

Pittsburgh, May 28.

MACHINE tool business has shown some improvement the past week. Several orders have been closed against which original bids were made as long ago as last October and November. Single item orders predominate. New inquiries are fairly numerous.

Bids have been asked on general contract by Star Ornamental Iron & Wire Co., 2319 Forbes Street, Pittsburgh, for a one-story addition, to cost in excess of $32,000 with equipment. Another unit of like size is contemplated.

Heppenstall Forge & Knife Co., 4620 Hatfield Street, Pittsburgh, has filed plans for a one-story addition, 100 x 190 ft., to cost close to $60,000 with equipment.

Board of Education, Fulton Building, Pittsburgh, has awarded general contract to J. G. Fullman Co., East End Trust Building, for new Clifford B. Connelly trade school, on bid of $1,081,800. Entire project will cost in excess of $1,600,000 with equipment.

Armstrong Electric & Mfg. Corporation, recently formed under Delaware laws, will take over and consolidate Armstrong Mfg. Co., Huntington, W. Va., manufacturer of electric ranges, parts, etc., and New Era Range Co., operating in same vicinity. Consolidated organization plans increased production.

Pennsylvania Transfer Co., 298 Duquesne Way, Pittsburgh, is having plans drawn for a one-story automobile service, repair and garage building to cost approximately $100,000 with equipment. J. F. McWilliams, 127 North Highland Avenue, is architect.

Fred C. Houston, Ben Avon, Pa., and George E. Matthews, Mount Lebanon, Pa., have formed Riverton Steel Co., to operate an iron and steel works in vicinity of Ben Avon.

Allegheny Metal Products Co., 1902 Brighton Road, Pittsburgh, P. C. Gasparin, president, is contemplating construction of a new plant at Verona, Pa., and will soon select architect.

Pacific Coast

San Francisco, May 23.

BIDS will soon be asked by Willys-Overland Co., Toledo, Ohio, for automobile assembling plant on 20-acre tract recently acquired near Los Angeles, with main one-story unit, 220 x 880 ft., and smaller buildings, to cost close to $1,000,000 with equipment. J. A. Sheldon of company engineering department has established temporary offices at Biltmore Hotel, Los Angeles, to carry out awards, etc.

Union Ice Co., 354 Pine Street, San Francisco, will soon take bids for new ice-manufacturing plant at San Jose, Cal., to cost approximately $200,000 with equipment. Company engineering department is in charge.

Union High School District, Huntington Park, Cal., plans construction of manual training unit in connection with new group of high school buildings, to cost $500,000. George M. Lindsey, 601 Union Insurance Building, Los Angeles, is architect.

Sure Safe Signal Co., 920 Narrows Street, Sumner, Wash., H. J. Trubshaw, secretary and treasurer, recently formed by Mr. Trubshaw and associates, is planning establishment of local plant to manufacture signal systems and devices, initial unit reported to cost about $25,000 with equipment.

City Council, Centralia, Wash., is said to be planning construction of municipal hydroelectric generating plant on Skookumchuck River, to cost about $300,000 with transmission system. Mayor D. O. Nugent is in charge.

O. L. Cowan, San Bernardino, Cal., representative for Ford and Lincoln automobiles in San Bernardino County, is having plans drawn for a one-story service, repair and garage building, 130 x 300 ft., to cost about $160,000 with equipment. John Paxton Perrine, Lincoln Building, Los Angeles, and Howard E. Jones, San Bernardino, are architects.

Fresno-Madera Ice Co., Fresno, Cal., will soon begin construction of one-story ice-manufacturing plant to cost more than $60,000 with equipment.

W. R. Ames Co., 450 Irwin Street, San Francisco, has filed plans for a one-story sheet metal-working plant, to cost about $22,000 with equipment.

North Corona Land Co., 528 South Hill Street, Los Angeles, has plans for one-story steam-operated electric power plant at Norco, Cal., to cost about $160,000, of which nearly $100,000 will be used for mechanical equipment. Ralph E. Phillips, 816 West Fifth Street, is engineer.

Barde Steel Co. of California, 531 Security Building, Los Angeles, has been formed to engage in jobbing business of steel and wire products, such as nails, barbed wire, wire netting, fencing, pipe, etc.

Portland Chain Mfg. Co., Portland, Ore., manufacturer of heavy logging and lumber chains, has removed its plant from 114 North Bradford Street to larger quarters at foot of Burlington Street.

Canada

TORONTO, May 28.

WHILE no outstanding orders for machine tools were placed the past week, single sales ran into a good total and included tools for practically all lines of industrial activity. Some large orders have been closed recently and others are in prospect for equipment for waterworks and sewage disposal plants. Demand for electric power plant machinery continues and builders of this class of equipment report a large volume of orders on hand. In general, the Canadian market shows a satisfactory volume of business and the majority of machine tool builders report operations almost at capacity.

According to J. J. Ashworth, general manager of Peterborough, Ont., plant of Canadian General Electric Co., it has been decided to extend operating facilities. Two new buildings will be erected this year at a cost of $300,000, for which equipment costing about $500,000 will be required. Company also has still further extensions in view, but these will not be undertaken until 1929 and 1930.

Kilgours, Ltd., 21 Wellington Street West, Toronto, has acquired a site, 133 x 200 ft. on Fleet and John Streets, and will erect a factory to manufacture paper bags, etc. It will be seven stories and contain 140,000 sq. ft. of floor space.

Fire, May 17, caused $18,000 damage to plant of Ontario Malleable Iron Works, Oshawa, Ont. Owners propose to rebuild immediately. John Dyer is manager.

Arthur E. Purvis, Montreal, president and managing director of Canadian Industries, Ltd., states that his company will build a plant at Winnipeg for the manufacture of explosives, etc. It will be first of its kind in western Canada and will cost $1,000,000.

Foreign

A company in Scotland is completing plans for construction of new plant at Newcastle, New South Wales, Australia, for manufacture of steel pipe, steel tubing, etc., to cost in excess of $4,500,000 with machinery. Information at office of Bureau of Foreign and Domestic Commerce, Washington, reference Australia No. 66540, also at American Consulate, Sydney, Australia, H. R. Buckley, trade commissioner.

Unterelbe Power & Light Co., Altona, near Hamburg, Germany, is disposing of bond issue of $5,000,000 in United States, close to one-half of which will be used for extensions and improvements in power plants and system, including completion of electric generating project now under way.

Electric Bond & Share Co., 2 Rector Street, New York, has purchased Companhia Carris Porto Alegrenses and Companhia Energia Electrica Rio Grandense, both operating electric power properties in State of Rio Grande do Sul, Brazil, and will operate in conjunction with other utilities in that section, under direction of American & Foreign Power Co., an affiliated organization. Purchasing company is said to be arranging an expansion and improvement program for South American light and power properties to cost more than $20,000,000.

Kaliny (Potash) Trust, Solikamsk, Russia, is planning construction of a new chemical plant in conjunction with potash and salt properties, with capacity of about 400,000 tons a year; also for electric generating station with initial output of 4500 kw. Work is now under way on development of potash mines. Amtorg Trading Corporation, 165 Broadway, New York, official buying agency for Soviet Russian Government, has information regarding project.

Allgemeine Elektricitats Gesellschaft (General Electric Co.), Berlin, Germany, known as AEG, is disposing of bond issue of $10,000,000 in United States, a portion of proceeds to be used for expansion. Company is affiliated with General Electric Co., Schenectady, N. Y.

Company in Sweden is planning construction of power plant on Lagan River, vicinity of Bohult, with initial capacity close to 100,000 hp., to include transmission lines and distributing facilities. Information at office of Bureau of Foreign and Domestic Commerce, Washington, reference Sweden No. 276297; also at American Consulate, Stockholm, Sweden, John B. Osborne, consul general.

Milwaukee

MILWAUKEE, May 28.

FOR a majority of makers, machine-tool business this month has kept the pace set in April, but a few have experienced a falling off. However, the number and character of inquiries is becoming more satisfactory and the situation is relatively favorable for summer business. Production of tools is proceeding without let-down. Foundry and machine shop labor generally is well absorbed and it is not always possible to obtain skilled help when needed.

Nekoosa-Edwards Paper Co., Nekoosa, Wis., has plans for new construction and acquisition of equipment costing in all approximately $2,000,000. Plans are being drawn for a new finishing room, wet room, recovery room, alkali room, a new diffuser, and wash rooms. E. P. Gleason is in charge as consulting engineer. J. A. Alexander is general manager.

Racine Screw Works, 1501 Clark Street, Racine, Wis., is considering bids from contractors for erection of a new automatic screw machine plant to replace shop destroyed by fire in February, with a loss of nearly $200,000. New plant will probably require new equipment throughout.

Berwind Fuel Co., St. Louis Bay, Duluth, Minn., has plans by Roland C. Buck, consulting engineer, Superior, Wis., for a new machine shop at its docks in Superior to cost about $45,000.

Weber Life-Like Fly Co., 106 Ellis Street, Stevens Point, Wis., manufacturer of fishing tackle and sporting goods, is planning erection of a new factory, 90 x 120 ft., two stories.

Appleton Machine Co., 618 South Oneida Street, Appleton, Wis., manufacturing paper mill machinery and equipment, expects to take bids after June 10 for construction of a new brick and steel foundry costing about $75,000. Plans are being completed by W. F. Dolke, consulting engineer, 1841 Asbury Avenue, Evanston, Ill.

Great Lakes Coal & Dock Co., 529 South Seventh Street, Minneapolis, Minn., is about to ask bids for construction of an additional screening unit to cost about $30,000, at its docks at Superior, Wis.

West Bend Products Co., West Bend, Wis., closes bids June 4 for erection of a manufacturing building, 30 x 85 ft., one story, and 30 x 33 ft., two stories.

Merrill Machinery & Supply Co., Merrill, Wis., has increased its capital stock from $25,000 to $75,000 for enlarging its plant and production. Details are not yet ready.

Jambor Tool & Stamping Co., 1261 Thirtieth Street, Milwaukee, has placed contracts for construction of a two-story machine shop addition, 60 x 75 ft., and a second story on a portion of the present main shop. Work will cost about $40,000 with additional equipment.

Board of Education, Superior, Wis., has plans by Roland C. Buck, local engineer, for a $125,000 addition to the Central High School, to be devoted largely to vocational shops. Bids probably will not be taken until after July 1. L. A. Nichols is secretary of board.

NEW TRADE PUBLICATIONS

Automatic Pumps.—Electric Controller & Mfg. Co., Cleveland. Folder of four pages devoted to motor-driven pumps with automatic control. Stress is laid upon the economies resulting from lack of attendants.

Specifications for Celite in Concrete.—Celite Products Co., Los Angeles. Bulletin 337 of two pages gives specifications for the use of architects and engineers, and covers the use of Celite in concrete. Directions are given in some detail, varying with the makes of concrete employed.

Unit Heater.—Bayley Blower Co., Milwaukee. Bulletin giving illustrations and information regarding the use of a unit heater for a wide variety of applications. A capacity table is given and clearance diagrams for various sizes.

Steel Industrial Floors.—Irving Iron Works Co., Long Island City, N. Y. Folder devoted to industrial floors of steel armored concrete, being of steel mesh with concrete or other plastic material poured in. This means a floor continuous in all directions.

Portable Conveyor or Loader.—George Haiss Mfg. Co., 141st Street and Park Avenue, New York. Catalog 428 of eight pages deals with a Fordson loader for digging into a pile of material and loading a truck or other carrier. It may be equipped with caterpillar tread or with wheels as required. The capacity is stated at 1 cu. yd. a minute.

Unit Air Conditioner.—Carrier Engineering Corporation, Newark, N. J. Folder of four pages announcing a new air conditioner which humidifies, washes, heats or cools air, and creates a controllable, uniform air circulation.

Renewable Fuse.—Trico Fuse Mfg. Co., Milwaukee. Folder 206-B illustrates and describes renewable fuses for electric circuits. It gives results of tests on 60-amp. and 100-amp. fuses.

Recording Liquid Level Gages.—Bristol Co., Waterbury, Conn. Catalog 1800 describes instruments working on the principle that a submerged bulb is compressed according to the amount of liquid above it, and this pressure is then transmitted by tubing to a recorder nearby. Records are transmitted any distance by three-wire electrical circuit operating an induction balance. Spherical floats are also utilized to actuate a recording pen through a suitable pulley and lever system. The water level inside boilers is gaged by a series of thermo-electric pyrometers wound on a vertical metal tube. Automatic devices may be included for maintaining levels by starting and stopping pumps, control gates or ringing alarms. Electrical clocks or telechrons can be installed in all recorders if preferred to spring-wound motors.

Grab Buckets.—Owen Bucket Co., 6200 Breakwater Avenue, Cleveland. Bulletin of 20 pages illustrating and describing clamshell buckets of wide variety for use in many types of materials. Some are fitted with interlocking teeth, while others have straight edges.

Mill Motors.—General Electric Co., Schenectady, N. Y. Folder GEB-63 of 16 pages reviews standardization of type MD-400 motors, designed primarily for steel mill use. These range from 5 to 275 hp. on 230 volts direct current, using only 11 frames.

Starting Device.—Monitor Controller Co., Baltimore, Md. Bulletin 112 of 12 pages is devoted to thermaload starters for electric motors. It is well illustrated.

High-Temperature Cement.—General Refractories Co., Philadelphia. Booklet of 24 pages devoted to Grefco, a cement with chrome base reported highly resistant to corrosion by slag, metallic oxides and ash. Many applications are suggested, while instructions are given for applying the cement.

Overhead Cranes.—Morgan Engineering Co., Alliance, Ohio. Bulletin 31 of 40 pages, illustrating and describing the standard line of Morgan cranes for steel mill and other manufacturing and heavy handling services. The illustrations are largely from installations, showing a considerable variety of uses. Some of those illustrated cover spans of more than 100 ft., while others run as high as 250 tons in capacity.

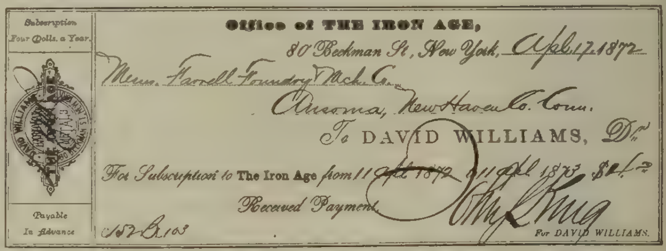
Turbo-Compressors.—Spencer Turbine Co., Hartford, Conn. Bulletin of 8 pages illustrating and describing turbo-compressors for foundry cupolas. Operating by electric motors, close control of blast is claimed for these units.

THE LAST WORD

(Contributed by the Reader Service Department of The Iron Age Publishing Co.)

"Yes," said a salesman, speaking of a certain domineering individual in a Middle Western machinery building firm, *"He's the man nobody no's."*

WHEN cleaning out some old files. Mr. C. E. Bouton of the Farrel-Birmingham Co., Ansonia, Conn., ran across this 56-year old subscription bill:



Subscription
Four Dolls. a Year.

Payable
In Advance

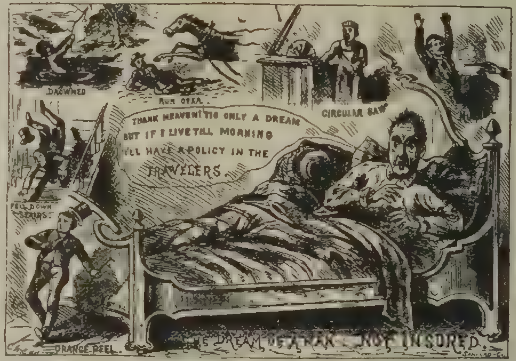
Office of THE IRON AGE,
80 Beekman St, New York, Apl. 17 1872
Messrs. Farrell Foundry & Mch. Co.
Ansonia, New Haven Co. Conn.
To DAVID WILLIAMS, Dr.
For Subscription to The Iron Age from 11 Apl. 1872 to 11 Apl. 1873 $4.00
Received Payment
152 B. 103
For DAVID WILLIAMS.

The Farrel firm is one of our oldest, if not our oldest, continuous subscriber. If the 2916 copies of THE IRON AGE mailed to that company since this bill was issued were piled one on top of the other, they would in all probability topple over.

TO find out what kind of service we were giving the Farrel people along about 1872, we dived through a foot of dust and dragged some old copies out of the safe. The small type of the reading pages looked dull and uninviting to our myopic eyes, but in the advertising pages we found romance and adventure. Here were self-righting cuspadores (sic), self-weighing cheese knives, deadly looking *seven*-shot revolvers, bung hole borers, jolly sleigh bells, bird cages, boot jacks, murderous rat traps, and mince pie meat choppers. But the *pièce de résistance* (French for piece de resistance) was this quiet advertising gem:

BEST INSURANCE FOR IRON MEN.

Accident Insurance.



DROWNED
RUN OVER.
CIRCULAR SAW
THANK HEAVEN! TIS ONLY A DREAM BUT IF I LIVE TILL MORNING I'LL HAVE A POLICY IN THE TRAVELERS.
FELL DOWN STAIRS.
ORANGE PEEL.
THE DREAM OF A MAN NOT INSURED.

Try a Yearly Policy.

TRAVELERS INSURANCE COMPANY,

OF HARTFORD, CONN.

That was when bare-handed methods were used in selling life insurance. Instead of suggesting politely that you "create an estate," and appearing wholly innocent of the fact that man is mortal, the go-getting insurance salesman of those days barked at you, "Do you want the wife and kids to go to the poorhouse when you croak?"

In his thoughtful way, Mr. Dun, the big financial register man, informs us that "condensed smoke" is the product of the E. H. Wright Co., Ltd., Kansas City, Mo. Our ignorance of condensed smoke is equaled only by our curiosity. Some kind of a reward is under consideration for the best essay on what it is, how you capture it, and what you do with it after you capture it.

VOL. 121, No. 23

Cupola Fired with Powdered Coal*

High Temperatures, Greater Strength and Lower Total Fuel Consumption Claimed—Less Absorption of Sulphur and Close Control of Carbon

THE use of powdered coal in the cupola, described in this article, is the third major development introduced in recent years to improve the efficiency of this melting unit. Some interesting results and claims are made. The Schuermann side-blast cupola, a German invention, was described in THE IRON AGE, *Oct.* 19, 1922, *page* 991, *and Nov.* 22, 1923, *page* 1377. *Among the claimed advantages was a fuel saving of* 25 *per cent and hotter iron. The Vial hot-blast cupola was discussed in* THE IRON AGE, *Oct.* 20 *and* 27, 1927. *With this a fuel saving of at least* 20 *per cent was among the advantages enumerated.*

UNTIL very recently cast iron foundries have used the old-fashioned cupola almost exclusively as a melting unit with satisfactory results. Progress in casting design, however, has demanded strength as a prime characteristic of cast iron, so it has behooved the foundrymen to meet this requirement.

Obviously, many changes calculated to produce a grade of iron having superior strength have been tried out, and, doubtless, many improvements have been made already in a normal cupola of the conventional type.

The main advantages of the old cupola over each new system of melting and over the different specially-built cupolas are the low melting cost and the simple manner of operation. Usually these advantages more than offset the disadvantages of inaccurate control of the carbons, the picking up of sulphur from the foundry coke by the iron and the possibility of oxidation.

To eliminate these disadvantages and still retain the reduced melting cost and the simple manner of operation is the problem that must be solved before any basic development can survive competition with the old style cupola.

Principle of the Powdered Coal Cupola

About a year and a half ago, D. H. Meloche, of the American Radiator Co., conceived the idea of using powdered coal as a fuel, in connection with a minimum coke charge, by burning the coal under pressure outside of the shell proper and allowing the products of combustion to pass directly to the melting zone at a velocity insuring penetration.

Under average conditions, the cost of a ton of coal is only one-half that of a ton of coke, and, because, of this, it is a fact that running on coke with the same melting ratio, namely, iron to total fuel, is more expensive than replacing a portion of the coke with coal.

The powdered coal cupola, which is operated in the Springfield, Ill., plant of the American Radiator Co., has proved that through the use of powdered coal fuel it is possible to reduce the ratio of total fuel consumed to the amount of iron melted.

In a normal cupola there is a large loss of heat because of the reaction between the carbon dioxide and the carbon of the coke above the melting zone. The complete combustion of one pound of carbon and pure oxygen to carbon dioxide sets free 14,544 B.t.u., whereas burning the same amount of carbon in an insufficient supply of oxygen to carbon monoxide sets free only 4450 B.t.u. In this reaction, part of the carbon of the coke forms CO_2, and there is a first loss of practically 10,000 B.t.u. Besides this, the breaking up of the CO_2 requires 10,094 B.t.u. These figures show very clearly the enormous amount of wasted heat, which should be free for superheating the iron charges in a normal cupola. As before mentioned, because of the small coke charges in the pulverized coal cupola, it is natural that the amount of CO_2 dissociated by the carbon of the coke above the melting zone is much lower.

In the powdered coal cupola system, the pulverized fuel comes to complete combustion in the chambers outside of the stack and the hot gases alone are blown into the melting zone, so that the full amount of B.t.u. of the coal is retained for melting the iron. The ratio between the amount of air for combustion and the amount of powdered coal is so regulated that the atmosphere in the melting zone is either mildly reducing or neutral. Due to this fact, the bed coke does not get burned out so rapidly as it does in a normal cupola. Therefore, it is possible to hold up the bed and melt on a charge of coke of only 2 to 4 per cent of the iron melted.

Accurate Control of Carbon Content

Because of the more accurate control of combustion in the powdered coal cupola, we obtain more accurate carbon control and, as we use less coke, the total carbons are likewise decreased. As the combustion of the coal takes place in the chambers and the hot gases pass into the zone of the charge, they do not pick up any of the sulphur of the powdered coal and only a very small amount of the sulphur from the coke, because, as already mentioned, only 2 to 4 per cent of coke between charges is used.

---

*From an address delivered before the Wisconsin Foundrymen's Research Group, Milwaukee, June 6, by Dr. Fritz Meyer, American Radiator Co., New York.

At the Illinois plant we ran for comparison the same iron mixture with the same grade of coke in both the powdered coal cupola and in a normal cupola and found that the sulphur in the iron melted in the powdered coal cupola was from 20 to 30 per cent lower than in the iron produced from the normal cupola, and that the total carbon decreased approximately 20 per cent. In addition to these advantages, there was less oxidation, as the air control is so regulated that a neutral or mildly reducing atmosphere is produced during the entire operation of the heat.

The two samples of iron which I will pass through the audience will show the advantageous influence of melting in the powdered coal cupola.

A cupola was running into trouble with oxidized iron. As can be seen from sample No. 1, the iron shows a dark, dead structure typical of oxidized iron. The cast iron was brittle and, consequently, had a very low transverse strength with practically no deflection. This iron was sent to our plant to be melted in the powdered coal cupola. Sample No. 2 shows the structure of this iron after having been remelted. Inspection of these samples clearly proves the influence of this new cupola. The iron was deoxidized.

Graphite Precipitation Very Fine

Microscopical research work on the product of the powdered coal cupola shows, with each kind of mixture, a very fine graphite precipitation. As a reducing atmosphere has no direct influence on the fineness of the graphite precipitation, we tried to find an explanation for this. It is as follows:

There must be, in this cupola, a zone of extremely high temperatures (a powdered coal flame shows an average temperature of 3100 deg. Fahr.). The iron drops going through this zone become highly superheated and, because of this, have a tendency to solidify with a fine graphite precipitation.

In papers and technical literature of the last three years much information has been published regarding the influence of melting temperatures on structure and quality of either high or low-carbon cast iron. Therefore, I need not go into details regarding this.

Physical Properties Compared

Comparative physical tests made on test bars, from normal cupola and powdered coal cupola, have shown that transverse strength and deflection are about 10 to 15 per cent higher on the bar from the new cupola. On the 1-in. square test bar with a bearing distance of 12 in., we found, for instance, that the same mixture, averaging 2900 lb. breaking strength with a deflection of 0.245 in. for the bar from the normal cupola, averaged 3300 lb. transverse strength with a deflection of 0.255 in. from the powdered coal cupola.

A recent test made with low-carbon iron showed a transverse strength averaging 4468 lb. with a deflection of 0.250 in., which is, you will agree, a high test for cast iron.

As before mentioned, iron from the powdered coal cupola shows 20 to 30 per cent less sulphur content than the same mixture melted in a normal cupola. Remelting our own remelt iron showed that, by replacing a sufficient amount of the coke with coal, the picked-up sulphur is practically negligible. Remelt iron with an average of 0.085 to 0.090 per cent sulphur did not show an average increase in sulphur content of more than 0.020 per cent.

How do we account for the iron not picking up sulphur? It is our theory that the sulphur passes off in the form of either sulphur dioxide, sulphurous acid or sulphuric acid. The question naturally arises: What is the source of the hydrogen? The answer lies in the fact that a coal is used with approximately 35 per cent volatile matter, which is comprised partly of hydrogen. In addition to this, the fuel carries a certain percentage of moisture, up to about 3 to 3.50 per cent. It is not necessary to dry this fuel before it is pulverized.

Equipment Necessary

The cupola stack is an ordinary straight stack and does not differ in any way from the stock Whiting cupola without the wind belt. The powdered coal cupola now in use has a melting zone diameter of 40 in. and shows an hourly output of about 6 to 7 tons. It has four combustion chambers parallel to the cupola stack. On the top of each chamber is the burner and on the bottom of each one is the entrance for the hot gases from the combustion chambers to the stack. This entrance is at the same elevation as the tuyeres in a normal cupola and replaces them.

Life of Refractories

Before starting the experiments, the present operators of the powdered coal cupola were of the opinion that the lining of the combustion chambers would not withstand the temperature, but experience has shown that the lining does not give any trouble. To date, the cupola has been running over six months without relining the combustion chambers, and from all appearances they look the same as when installed, except that the bricks are well glazed throughout.

As for the patching operation in the stack after heats, figures have been compiled which prove that it costs no more to maintain linings in this cupola than in the normal type.

Economies and Advantages Claimed

For an average heat it takes 130 lb. of fuel to melt one ton of iron, coke averaging 60 per cent of the fuel:

$$\begin{array}{lrl} 0.60 \times 130 \times \dfrac{\$10.36}{2000} = & \$0.40 & \text{Cost of coke per ton of metal} \\ 0.40 \times 130 \times \dfrac{\$5.07}{2000} = & 0.13 & \text{Cost of coal per ton of metal} \\ \text{Overhead} & 0.14 & \\ \cline{2-2} & \$0.67 & \text{Cost of fuel per ton of iron} \end{array}$$

Assuming that an 8 to 1 melting ratio is an average for coke melting, it would take 250 lb. of coke to melt a ton of iron.

$$\begin{array}{lr} 250 \times \dfrac{\$10.36}{2000} = & \$1.29 \\ \text{Overhead} & 0.06 \\ \cline{2-2} & \$1.35 = \text{Cost of melting with coke} \end{array}$$

Subtracting $0.67 from $1.35 shows a saving of $0.68, or 50.4 per cent.

The overhead for a powdered coal installation is estimated from the experience of the Whiting Corporation with Grindle pulverizers in connection with malleable iron furnaces. The costs of coal and coke are those at the Illinois plant.

Other Metallurgical Benefits

Additional benefits estimated from a metallurgical viewpoint cannot be given in dollars and cents. It is easy to understand that, with the metallurgical advantages of the use of powdered coal, a larger amount of scrap can be used in the mixtures with beneficial results.

In recent tests the fuel ratio, coke to coal, has changed in our favor, which means that we have been able to change the fuel consumption to 60 per cent coal and 40 per cent coke. Theoretically it is possible to fire the cupola with powdered coal alone, provided a sufficient refractory material can be found to support the charge. The present installation does not permit such operation, but this paper is not intended to state that the powdered coal cupola has been perfected.

Temperatures of the iron at the spout of the powdered coal cupola compare favorably with those of the normal cupola. They can best be judged by the light metal type of castings which are being poured and which have to be tested at from 400 to 1000 lb. hydraulic pressure and at 300 lb. air under water. The temperature at the spout averages between 2650 and 2700 deg.

Summarizing the advantages claimed for the powdered coal cupola:

First: Avoidance of picking up sulphur in the iron from the coal fuel.

Second: Better control of carbon in the mixture because of the more accurate control of combustion, and higher strength because of superheat.

Third: The possibility of extensive reduction in price of various mixtures.

Fourth: Saving in melting cost because of smaller amount of fuel required.

Accidents Fewer and Less Severe in Metal Industries

Frequency Rate Dropped from 35.45 to 26.59 Per Cent and Severity Rate from 2.44 to 1.85 Per Cent

MARKED decrease in both the severity and frequency of industrial accidents in the metal industries during 1927 as compared with 1926 is shown in the annual report of accident experience of members of the National Safety Council, just published by that organization. The average accident frequency rate, or number of lost-time personal injuries per one million hours' exposure, of 450 metal-working establishments reporting in 1927 was 26.59, as compared with 35.45 in 318 plants in 1926 and with an average for the five years ended with 1926 of 36.06. The accident severity rate, or loss in working days per 1000 hr. of exposure, was 1.85 in 1927, against 2.44 in the preceding year and a five-year average of 2.23. The frequency rate in 208 establishments, or 46 per cent of the total reporting in 1927, was below the previous year's figure, while 321 plants, or 71 per cent of the total, had lower severity rates in 1927 than in 1926. Thirteen establishments completed 1927 without a lost-time injury.

As the accompanying table shows, eight of 13 groups into which the metals section has been classified reported a decrease in accident severity rate in 1927 as compared with 1926. Those showing an increase were structural steel fabricators, gray iron foundries, makers of machinery and machine tools, railroad car builders and manufacturers of tubular goods. Increases in frequency rates were reported by bolt and nut manufacturers, malleable iron foundries, machinery and machine-tool makers and steel foundries, while the remaining nine groups showed decreases.

Metal Industries Close to Average

That the accident record of the metal industries approximates that of manufacturing industries as a whole is shown by the fact that 2089 establishments reported to the national council an average accident frequency rate in 1927 of 25.95 in 1927, as compared with 31.87 in 1926, and a severity rate of 1.88 last year, as against 2.50 in the preceding 12-month period. The automotive industries had a frequency rate of 21.51 in 1927 and 23.60 in the previous year, while the severity rate in this field was 1.01 in 1927 and 1.37 in 1926. The construction and petroleum divisions reported a higher rate in both severity and frequency last year than in 1926, while the frequency rate was higher in the rubber group. All the other industries reported a decrease in both the severity and frequency of accidents in 1927.

Comparison of Accident Experience in Metals Industries in 1927 and 1926

Group	No. of Companies	Average No. Employees	Total Hours Worked	No. Lost-Time Accidents	No. Days Lost	Frequency Rate	Severity Rate
Coke plants:							
1927	7	2,858	8,462,907	157	35,390	18.55	4.18
1926	7	3,228	9,266,885	401	59,947	43.27	6.47
Bolt and nut makers:

Enlarging Steel Mill Possibilities

Greater Flexibility and Increased Range of Product for Timken Plant—Unusual Electric Melting Furnace

STEEL manufacturing capacity of the Timken Roller Bearing Co., Canton, Ohio, will be considerably enlarged by the carrying out of its announced expansion program. Not only will the output both in steel making and rolling of alloy steels be materially increased, but the plant will produce a wider range of finished bar sizes than heretofore. It is expected that, with the new mill equipment and with the rearrangement of the old units, the cost of steel making will be reduced considerably and at the same time a higher quality product will be produced. The enlarged plant will have a capacity of 24,000 tons a month. Construction is now under way and it is expected that the new units will be completed by Nov. 1.

Additions will include an electric melting furnace of unusual design, two 100-ton open-hearth furnaces, a 28-22-in. bar mill, a 16-stand merchant mill which will have various interesting features, reheating furnaces, new hotbeds and tables and other auxiliary mill equipment. Several new buildings are being erected to house the new equipment and for storage. The arrangement of the mills and the tables and cooling beds provides for wide flexibility in operation. There will be a range in sizes of finished bars, from 8-in. rounds at the first finishing stand down to ¼-in. rounds at the last merchant mill stand.

Exceptional Electric Melting Unit

The new electric melting furnace, which is of the Héroult type, will doubtless attract considerable interest because it will be elliptical instead of circular in plan. In place of the usual three electrodes, it will have six electrodes arranged in two groups of three electrodes each. Power for each group will be supplied through two separate 10,000-kva. transformers housed in brick compartments, one at each side of the furnace. The dimensions of the oval furnace shell will be 20 x 29 ft. The electric furnace will be charged, with the open-hearth charging machine, through two 4-ft. 6-in. doors. There will be two additional working doors on the spout side.

Waste-heat boilers will be erected to utilize heat from the two new open-hearth furnaces. Space for these and for the new electric furnace will be provided in a 240-ft. extension to the steel plant building, which, with leanto, is 153 ft. wide. New handling equipment to be installed in the electric furnace and open-hearth departments will include a 165-ton ladle crane, a 30-ton crane over the charging floor and a 5-ton open-hearth charging machine. The stock house will be enlarged by a 105-ft. extension.

Melting equipment in the enlarged steel making plant, with the additional units, will include the new oval-type electric furnace, two 25-ton and one 7½-ton electric furnaces and three 100-ton open-hearth furnaces. In addition, there are two 6-ton electric melting furnaces in another building.

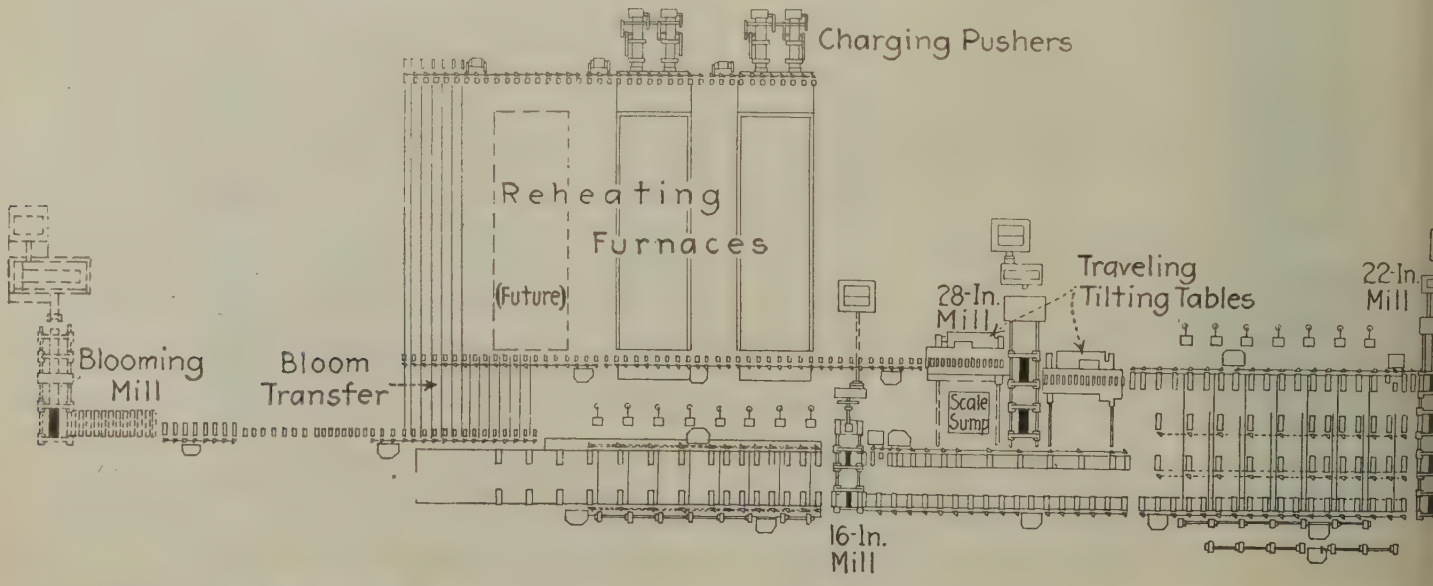
A new ingot stripping and hot top storage building, 89 x 98 ft., is being erected. This will be equipped with a 5-ton combination stripping and soaking pit crane, which will be moved from the old soaking pit building. There will also be a new mold storage building, 80 x 160 ft., equipped with a 30-ton electric traveling crane.

As the increased steel-making capacity necessitates additional soaking pits, a new soaking pit building, 80 x 165 ft., is being erected. This will have three two-hole soaking pits, each hole being 6 ft. 6 in. x 14 ft. The new pit furnaces will be served by a 7½-ton soaking pit crane.

Changes in Rolling Equipment

In the present rolling mill layout there is a 35-in. three-high blooming mill and a 22-in. four-stand bar mill, but no table connections between the two mills. As rearranged, with the new mill tables and other equipment, the blooms will pass from the 35-in. mill to a 10-in. x 10-in. shear, over a runout from the shear and on to a bloom transfer table. From this they will be transferred either to the runin table to the new 28-in. mill or to the charging end of two 40-ton continuous reheating furnaces.

These furnaces will have end charge and end discharge. They will be 20 ft. wide, approximately 70 ft. long, and natural gas fired. The charging table to



the furnaces will be 114 ft. long, accommodating space for a third (future) furnace. The furnaces will be charged directly from the 35-in. mill or with cold blooms from the chipping yard. They will be charged with double pushers electrically operated.

Direct Run to 28-In. Mill

If the blooms are not reheated, they will go directly to the 28-in. mill, which will consist of two three-high stands with rolls 84 in. long. This mill will be served by two traveling tilting tables driven by worm-gear speed reducing sets. The entering table will be equipped with manipulators. The mill will be driven by a 1500-hp. induction motor through a gear drive provided with flywheels. The runin table to the mill will be 150 ft. long. Bars in finished 6-in. to 8-in. sizes will be made on this mill. The 6-in. to 8-in. finished sections will be transferred from the mill runout table by rope transfer and past the 22-in. mill to the first hot bed.

However, most of the product is reduced to smaller sections, and the usual operation of this mill, which will be applied in rolling the smaller sections, will be to use the 28-in. mill as a roughing mill for the 22-in. mill. The latter mill, which is being rebuilt, will consist of three three-high stands and one two-high stand. The first two three-high stands will have rolls 66 in. long and the last three-high and the two-high stands will have rolls 60 in. long. This mill will be equipped with tables having solid standings and with rope transfers both at the front and back sides. This will permit giving the steel any number of passes through the rolls.

Finished bars in sizes from 7½-in. down to 1¾-in. rounds or their equivalent will be produced on the 22-in. mill. When rolls are to be changed, the mill housing and rolls will be picked up as a unit by an overhead 50-ton crane and transferred to another section of the mill building.

New Structures Necessary

The 28-in. and the 22-in. mill will be located in a new building 288 ft. long and 100 ft. wide, which will connect the old 35-in. and 22-in. mill buildings, being located in a heretofore unoccupied space between these two buildings. New structures will include also a bloom building, 385 ft. long and 100 ft. wide, to be served by two 15-ton cranes.

There will be cooling pits in this building for the slow cooling of some grades of alloy steel which have a tendency to crack when cooled in the open air. These steels, after leaving the blooming mill, will remain in the cooling pits about 24 hr. before going to the reheating furnaces. Cooling pits will be provided also for cooling bars of certain alloys after leaving the 22-in. mill.

Leaving the 22-in. mill, the bars will pass on a runout table 260 ft. long to the first of two hot saws, located in front of the hotbed. Two hot saws working together will be provided, to increase the rapidity of handling the steel. From the hot saws the larger sections from the 28-in. and 22-in. mills will go to a new hotbed 109 ft. long and 40 ft. wide. This will be of the flat skid type with dog pullovers. The hotbed table will be equipped with two motor-operated gage stops. Bars will be handled from the hotbed with a magnet, or pushed over the table, from which they will pass to a cold shear at the end of the hotbed.

Smaller sections coming from the 22-in. mill will not go to the hotbed referred to above, but will pass over a runout table at one side of this hotbed on to a smaller notched bar type hotbed, 120 ft. long and 20 ft. wide, which was a part of the old equipment and has been relocated. This will have a cold shear at the discharge end.

Making Smaller Sections

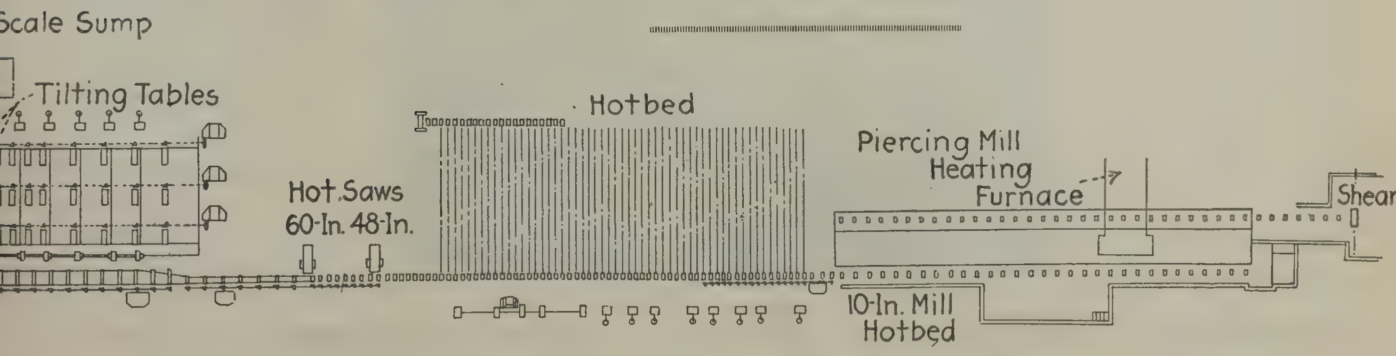
If the steel is to be further reduced after leaving the 22-in. mill, it will go to the 16-stand merchant bar mill, located back of the 22-in. mill. This mill will consist of three 18-in. two-high roughing stands, five 16-in. continuous stands and two 16-in. three-high, four 12-in. and two 10-in. stands. On this mill 3-in. x 3-in. or 4-in. x 4-in. billets rolled on the 22-in. mill, and taken from an adjoining billet storage yard, will be reduced to a range of ¼-in. to 2¼-in. round bars or equivalent sizes in other sections. From this mill the finished bars will pass to a mechanical hotbed, 240 ft. long.

All mills, mill drives, tables and cranes will be equipped with Timken tapered roller bearings.

The two 28-in. three-high mill stands and three new 22-in. mill stands and pinions, hot saw, transfer, tilting and roller tables, furnace pusher and bar shear will be supplied by the United Engineering & Foundry Co., Pittsburgh. The Wheeling Mold & Foundry Co., Wheeling, W. Va., will furnish the traveling tilting tables for the 28-in. mill. The Mesta Machine Co., Pittsburgh, will build the new merchant mill complete, and will furnish the furnace skid bed with runin table and pusher, billet shear, mill transfer and delivery tables, flying shear and the mechanical pack annealing cooling bed.

The two open-hearth furnaces will be built by Alex Laughlin & Co., Pittsburgh. The shear approach table will be furnished by the Mackintosh-Hemphill Co., Pittsburgh. The Morgan Engineering Co., Alliance, Ohio, will build the hotbed. The James Criswell Co., Pittsburgh, will build the new soaking pits. The Rust Engineering Co., Pittsburgh, will supply the three reheating furnaces. The waste-heat boilers will be furnished by the Babcock & Wilcox Co. The drive for the 28-in. mill will be furnished by Gears & Forgings, Inc., Cleveland. The American Bridge Co. will build the 20- x 29-ft. electric furnace.

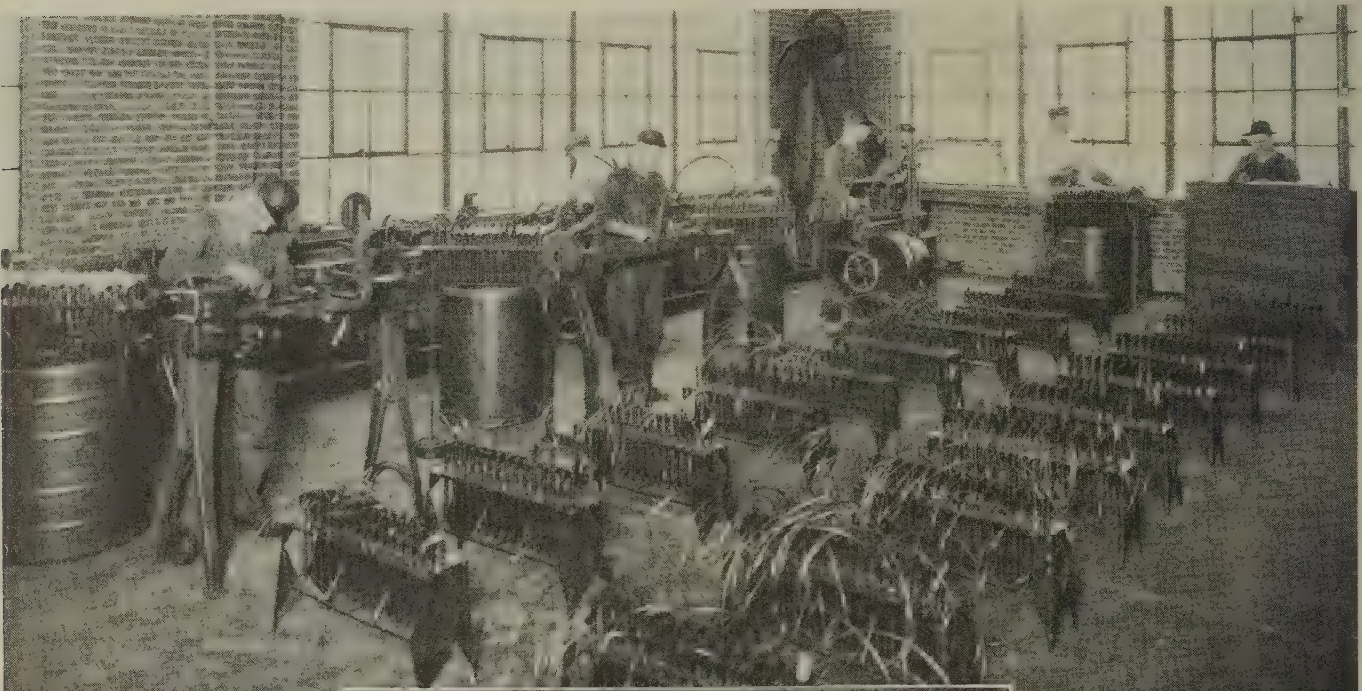
LAYOUT of the New Rolling and Intermediate Handling Equipment of the Timken Plant, from the (existing) Blooming Mill to the Shear Beyond the Hotbeds. Flexibility is a feature, it being possible to run given bars through any one of several mills in the progressive stages of breaking down the steel to finished size



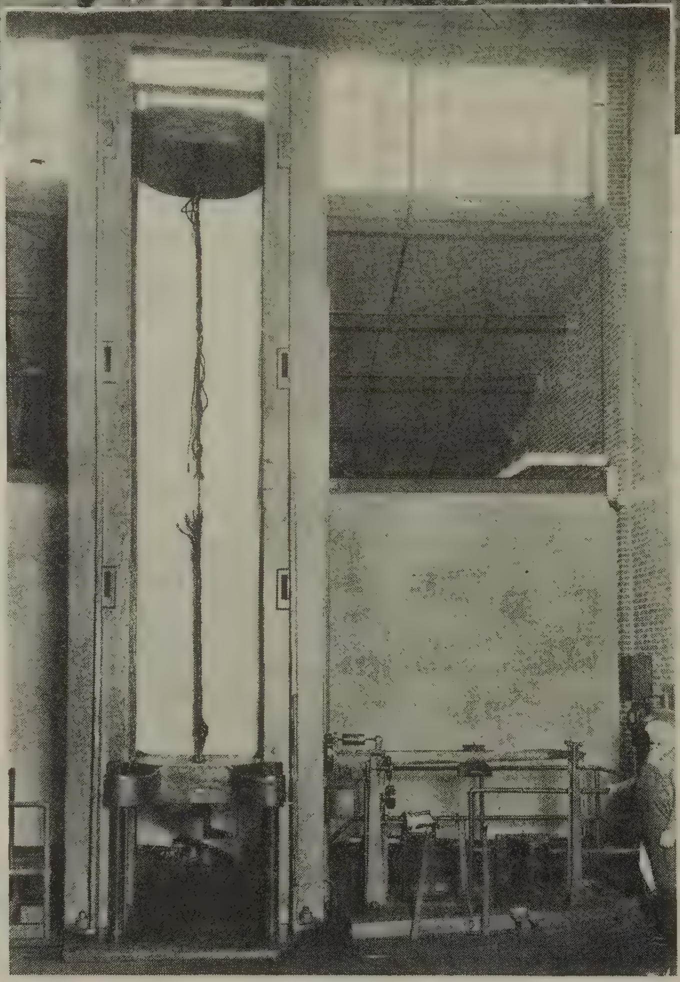
Big and Little Machines for Testing Wire Rope

MANUFACTURING plants where operations are based on the principle of quality as opposed to mass production require meticulous care in the testing of materials. An interesting example is to be found in the factory of A. Leschen & Sons Rope Co., St. Louis, manufacturer of wire rope. Research work has enabled it to ascertain the correct combination of properties of wire in order to produce rope for various exacting demands. To make sure that each individual wire meets the necessary specifications, the testing laboratory samples and tests each bundle of wire as it comes from the mill for strength, elongation, torsion and bending.

The laboratory is adjacent to the receiving department and occupies a space 168 ft. long and 77 ft. wide. It is equipped with Olsen torsion and tension machines, as well as with other special equipment. In order to avoid confusion in identifying wire which is being tested, portable holders shown in the view have been built. Each consists of 30 metal tubes, into each of which may be placed a sample of wire, the extra length dangling.



ABOVE Is Shown a Corner in the Testing Department With a Battery of Machines for Studying the Properties of Each Wire. Note the portable holders in the foreground for maintaining the identity of samples without error. They straddle waste barrels alongside machines and thus prevent accumulation of litter



NOT Only Must Every Wire Be Strong But the Cable Maker Must Be Sure That Fabrication Methods Produce a Rope of Correct Strength. At center is shown an 800,000-lb. Olsen tension testing machine, the largest ever built expressly for wire rope testing

Bronze Bearings for Heavy Duty

New Conditions Being Met by Proper Design and Crystal Structure—Some Common Errors in Design—How to Select the Right Material for Bearings

BY N. K. B. PATCH*

DURING the last few years there has been a marked development in improved materials for the manufacture of mechanical units, and this has not been confined to the steels and irons alone. The application of alloy steels, especially hardened steels, to shafts or journals in mechanical units has enabled the engineer to use new types of bronze bearings that would have been disastrous in the days of the old steels. Under present conditions of heavy duty, neither the old steel nor the old bronze would have stood the present punishment. Either or both would have been subject to condemnation not truly their due, but most assuredly the fault of the lack of knowledge on the part of the designer.

With the advent of improved materials in the shafts or journals, improved methods of obtaining accuracy in machining such rotating parts were also available. This improved accuracy no longer calls for a bronze bearing that has as one of its characteristics a conformability or plasticity to compensate for the irregularity in the workmanship of machining the journal itself. Through the elimination of this requirement of conformability, it is now possible to use the harder steels for the shafts or journals and the harder bronzes for the mating bearings. These bronzes, through their hardness, have less conformability but are, in wearing capacity in conjunction with the harder steels, a vast improvement.

Bearing Is a Mixture of Hard and Soft Crystals

A bearing bronze is essentially a mixture of hard and soft crystals, the hard crystals being the supporting media for the load and the softer crystals being the matrix in which the harder crystals are embedded. When subjected to wear, as in a bearing, the softer crystals abrade first, forming microscopical pockets in which the oil film is tenaciously held. The hard crystals, being harder than the surrounding matrix, do not abrade as fast, but to have satisfactory results from bearing bushings or other types of bearings, the hard crystal in the bronze must not be out of proportion to the hardness of the material in the shaft or journal; otherwise, the shaft or journal is scratched by these hard crystals in the bearing, friction is increased with a consequent temperature rise, which may, in turn, destroy lubrication, with disastrous results

To lay down a law relative to the relationship between the crystal hardnesses in the bearing and those in the journal or shaft is impossible in the light of present knowledge. It has, however, been definitely proved that, with the advent of the harder steels and the increased accuracy of manufacture of these shafts and journals from these steels, harder bronzes are not only an improvement but are essential to long life and satisfactory maintenance of accuracy in the fit of journal and bearing.

It is interesting to note at this point that a bronze of a given chemical analysis, such as many of those which are now used for bearings, may, if intelligently manufactured, when examined under the microscope, show a diversity of structures, each of which would have a definite hardness by reason of the difference in the amount of the hard crystals present therein.

Laboratory Control Is Essential

It is therefore apparent that laboratory control of the manufacture of the bearings or bushings from these alloys is essential to insure a uniformity of structure that may be relied upon to maintain the standard of the relationship between the hardness of the bearing and the hardness of the journal.

After an engineer has decided upon a certain kind of steel for shaft or journal, which is to have a certain heat treatment and will consequently be of a definite hardness, he will, in turn, need a definite hardness of bearing bronze to mate with it, and all of the parts so mating with the steel in the several machines must be exactly alike and uniform.

Many designers are not aware of the improved service to be derived from bronzes in which the crystal structure has been carefully controlled. Such a structure is, of course, more important where extreme accuracy is one of the governing factors, but it is also essential from the standpoint of long life and uninterrupted service of a given mechanical device.

It should be borne in mind that, with the advent of the harder steels and the use of a mating harder bronze, improved precision in workmanship on these two mating parts is imperative. This is, however, a much easier matter today by reason of the improved precision of modern machine tools as compared with those in use but a few years ago.

Too Many Oil Grooves a Common Error

Many of the plain bearings that have been condemned have not been at fault, but the workmanship in their manufacture should have been more thoroughly investigated. Take the common error of cutting quantities of oil grooves in the face of a plain bearing. Every oil groove in a bearing reduces the bearing area, not only by the amount of the area so removed by grooving, but also reducing the load-carrying capacity per unit of area of the bearing so grooved.

Examine some of these grooves and it will be found that the corners are so sharp as to become actual knife edges, cutting and destroying the necessary oil film, even though the best possible oiling mechanism is available to keep re-establishing the oil film. An oil groove should be well chamfered at its edges, so as to help the oil film to develop rather than to scrape the film from the journal.

Other Errors in Design

Again, consider the erroneous practice on the part of many manufacturers who, in order to save a small amount of money in the first cost of the bearing or bushing, recessed the back of the bushing so as to save the weight, thereby making the bushing thin enough in spots actually to weaken the bushing to a point where the load is not supported sufficiently. Thus the actual supporting area of the bearing is materially reduced, frequently to a disastrous point, causing condemnation of the bearing material, when in reality it was a case of faulty design.

---

*Secretary Lumen Bearing Co., Buffalo, N. Y.

Examine the clearances allowed between the journal and the bearing. In many instances the allowance for oil films between the two mating parts is insufficient to permit a satisfactory film to be present, and consequently some part of the bearing is dry. Obviously, plain bearings or the materials therein get a black eye here, when, as a matter of fact, the design should be held at least partly responsible.

Such errors as the few outstanding ones mentioned above are not infrequent ones, and yet the bearings, if properly manufactured from the right materials, would have given satisfactory service.

It is true that, in the production of the modern plain bearing, not only the correct bronze must be present, but the bronze must have the proper crystal structure within it to be a fit mate for such steel journals as are now available and are coming into more and more common use.

Then, too, both the steel and the bronze must be accurately machined and, if they are to give the best results, they must be properly housed in the machine itself and held in place by such means as to preclude local pressure at any one point in the bearing, and thus avoid distortion.

Vital Factors in Design of Bearings

Designers who understand the application of modern steels to modern bronzes for such bearings recognize that many factors must be borne in mind. Among these are the following:

1. Accuracy of machining.
2. Proper allowance for oil film.
3. Proper oil grooving.
4. Consideration of the heat developed by friction, and its proper radiation and control.

These, of course, are the important factors after the proper materials have been decided upon for the service intended. Such factors as speed and pressure per unit of area are, of course, the prime ones. Obviously, these have been considered since engineering has been considering the design of bearings, but now that the users of a machine or other mechanical device expect to double or triple, or frequently increase by many fold, the production from a given machine, the factor of safety in such bearings can be increased only by the use of the best bearing material for the service in conjunction with the right kind of material in a journal mating with it.

Correct Manufacture Essential

Here enters the problem of the correct manufacture of the bronze for the service. A few years ago a bronze of a given analysis would have been considered satisfactory if the chemical analysis proved to be true to formula. Today not only the chemical analysis must be correct but the crystal structure must also conform to that best suited for the service intended. Makers of bearings and bushings should be equipped to handle a bronze so as to deliver a uniform crystal structure as well as a uniform chemical analysis.

Modern Worm Gears Cited

Look at the improvement in the service of the modern worm gear as a result of the control of the crystal structure therein, so as to mate with the hardened and ground worm, giving a resulting maximum of life. Here the punishment is frequently most extreme. Lubrication is frequently inadequate, yet such gears are proving eminently satisfactory for this service and are demonstrating conclusively that the relation between the crystal structure in the bronze and that in the steel must be carefully considered to give maximum satisfaction.

Crystal structure in bronze is important from the standpoint of life under bearing service, but is also important in such materials in other types of service. Witness the leaky valve or pump body, subject to hydrostatic tests, which, if cast of the identical alloy but having proper crystal structure would develop no leaks. Here, again, one sees the importance of scientifically controlled castings for modern industrial needs.

In the preceding remarks, in using the term "new bronzes" reference is made to bronzes as produced today. They may not differ in chemical analysis from those which have been made for many years but in uniformity of structure and uniformity of analysis they are far superior. In some cases the physical characteristics of the bronze may mean heat treatment; in others, the scientific control of temperatures or the scientific control of the cooling from the liquidus to the solid. The term "new bronzes" may also refer to new applications of the bronzes, which have been well known for years, but were considered too hard for service before the advent of modern steels and modern precision in machining.

Selecting the Right Bronze for the Service

No doubt, many readers of this article will ask what is the proper crystal structure for mating with a given steel and how can this be best determined? In the writer's opinion, this is a subject for specialists to decide and each individual case must have individual consideration. To make a decision of this kind it is necessary to know many details which heretofore have been somewhat passed over as negligible. Some of the factors that must be borne in mind today are as follows:

1. Horsepower transmitted by shaft.
2. Revolutions per minute of shaft.
3. Load per square inch of bearing area.
4. Character of workmanship in machining of journal and bearing.
5. Type of material and hardness thereof in shaft.
6. Is shaft to be ground to accurate measurement after hardening or not?
7. Kind of lubrication to be used.
8. Lubricating device.
9. Type of service (whether intermittent or continuous).

These and other minor factors all have much influence on the decision as to the right bronze for the service. Further, the question of impact in service is very important. It is thus apparent that the use and application of plain bearings have advanced today to a case where a specialist in their application is quite as essential as is a specialist in many other fields.

Conference and Exhibition of Industrial Advertisers

Industrial advertisers will hold their annual conference at St. Louis, June 11, 12 and 13, with headquarters at the Hotel Chase. The speakers include J. G. Pollard, Jr., Harvard Graduate School of Business Administration; Arthur E. Little, Thew Shoved Co., Lorain, Ohio; Sherman Perry, American Rolling Mill Co., Middletown, Ohio; John K. Blitz, Detroit Steel Products Co.; George C. Miller, president Dodge Mfg. Co., Mishawaka, Ind.; G. W. Morrison, Ingersoll-Rand Co., New York; and Fred R. Davis, General Electric Co., Schenectady, N. Y.

There will be an exhibition covering industrial advertising campaigns, placed in competition for eleven different awards.

The meeting is held under the auspices of the National Industrial Advertisers Association, of which H. von P. Thomas, Bussman Mfg. Co., St. Louis, is secretary-treasurer.

East Chicago Trains Apprentices

Chamber of Commerce Organizes Group of Manufacturers and Local School System Into Cooperating Unit—Desirable Students Rapidly Recruited

BY H. R. PACKARD*

ONE million young men should be in training in our industrial plants, according to the National Industrial Conference Board; yet less than 10 per cent of this number is now being trained through formal apprenticeship. Only a few establishments maintain apprenticeship programs, because only the larger ones can set up and maintain adequate training facilities. It is difficult to realize that less than one-half of one per cent of all manufacturing establishments employ over 1000 men; more than 85 per cent employ less than 100 men. Some plan must be evolved by means of which the smaller industries can participate and do their proportionate share of the training.

About a year ago the Chamber of Commerce of East Chicago, Ind., realizing the importance of such an industrial training activity, directed its attention to the evolution of an adequate plan for its industries. It was discovered that the "community plan" for training skilled personnel was not only feasible but that it had been proved a success in other districts.

Apprentices Attend Special Classes Weekly

With the beginning of the current year, paper programs were translated into realities. At the present time 85 indentured apprentices are at work learning the essentials of their respective trades and attending school one-half day per week for the related or technical training so essential in their apprenticeship. During this period, for which they are paid apprentice wages, they attend a high school class set aside for their particular needs and conducted by the vocational educational department of the local school system.

This "continuation" plan was decided upon as being the most practical and best suited to local conditions. Apprentices are indentured to individual plants and are schooled through the essential operations of their trade at actual shop work. This portion of the plan is continuous and is distinctly different from the "cooperative" plan of education, wherein the students work and attend school in alternate periods of equal length.

Thus the two essentials of modern trade training are adequately met. The manual or craft portion of their training is provided by detailed schedules of shop work covering all essential operations. The educational phases of the trade work, which cannot be provided on the job, are supplied by class room and study. An order of studies suited to each trade is carefully pursued. In general, these cover the following four main divisions: English, mathematics adapted to the trade, technical or related studies and, finally, a general division including shop economics, safety and hygiene.

An advisory committee administers this program. Its personnel consists of representatives from each participating plant and from the local school system. The policies and general direction of the program rest with this main committee. Various sub-committees are as follows:

Apprenticeship Administration Committee deals with training programs, not only within individual plants, but also a community program where details are common to all plants.

School Methods Committee is the link between the industries and the local school organization.

Shop Schedule Committee provides an interchange of apprentices wherever complete programs are impossible in any one plant, owing either to a lack of diversity or quantity of production and manufacturing operations. In this manner adequate shop schedules can be presented to every apprentice.

Wage Scales Committee has general jurisdiction over apprentices' rates of pay. Obviously it is essential that all establishments pay the same rate of pay in any given trade.

All prospective apprentices are interviewed by the apprentice training department of the Chamber of Commerce. A complete and adequate file enables us to provide young men, as apprentices are required in the cooperating industries. Routine machinery to arrange a school program satisfactory to both shop and school, the parents and the apprentices, has been set up by the Apprenticeship Administration Committee.

Interchange Between Shops Gives Rounded Experience

Unless adequate schedules of shop work comprising the essential operation of each trade are provided in any apprentice training program, it must of necessity fail sooner or later. To insure this in the East Chicago plan, ideal schedules for each trade were prepared. Each participating plant for those trades next prepared the schedule of operations best suited and possible to its own manufacturing operations. These schedules were then compared with the ideal to insure that no large discrepancies might creep into any individual plant program.

However, where it has been impossible for an individual plant to conform quite closely to the ideal schedule, interchange of apprentices has been agreed upon. Accordingly, the apprentice from such an organization will be able to complete his training in a larger plant in the community or at least in one which can provide such operations as are lacking in his original schedule.

The apprentice, however, is indentured to an individual plant and remains the employee of that plant throughout his apprenticeship. While at work in another plant participating in the program, he comes under the immediate jurisdiction of that plant and is paid by the plant for which he is working.

Apprentices are paid at a rate which insures the possibility of supporting themselves. Rates increase every six months until at the end of the four years' training the apprentice is receiving about 75 per cent of a mechanic's rate. Changes in these schedules, which differ slightly for the various trades, can be made only under the direction of the Wage Scale Committee, whenever such revisions seem necessary. All participating plants pay the established rates.

Grade School, High School or College Graduates Accepted

The minimum educational requirement which has been set is a grade school education. A boy leaving grade school must spend four years in trade training. A young man who has completed high school is given one year's credit and will therefore complete the same shop schedule in three years. A college graduate must devote two years to the same program.

---

*Secretary-manager East Chicago Chamber of Commerce, East Chicago, Ind.

The program both as regards shop and school work has been prepared to meet the needs of these three classes, since the related school portion of this apprentice training is entirely on an individual basis. Each apprentice pursues a course of studies adapted to the trade he has entered, and he proceeds at his own pace unhampered. Instruction is devoted entirely to assistance and guidance for the individual. This is necessary, not only because of the varied previous educational experience, but also because apprentices must necessarily be inducted at any time throughout the year. The student is given 4 hr. per week on the employer's time for class room work; he is also required to spend an equal amount of time in home study.

All of the essential factors in this program are incorporated into an apprentice indenture or agreement, to which the employer and the apprentice, with his parents or guardians, are parties. The indenture sets forth in detail the shop and school schedules, as well as the rates of pay according to which the apprentice will work throughout his term of training. The employer agrees to provide employment approximately according to this schedule, and the apprentice is assured of employment regardless of business conditions, except in the case of complete shutdown. The apprentice and his parents in turn agree that he is to remain in training throughout the term specified. Each month the apprentice and his parents receive a report setting forth the shop and school grades attained.

Eighty-five apprentices now attend classes at the local high school. They are divided into five groups, one of which is in school Monday, another Tuesday, and so on, thus utilizing the teaching facilities to good advantage. Approximately 125 apprentices are employed in the eight manufacturing establishments now participating in this program. The extra 40 were previously employed and had progressed to the point where it was thought inadvisable to arrange for related classroom instruction.

More than 115 applications are on file in the Chamber of Commerce, a source of excellent recruits. Information about the plan is spread through the schools, parent-teachers' associations, and civic and social organizations in the community.

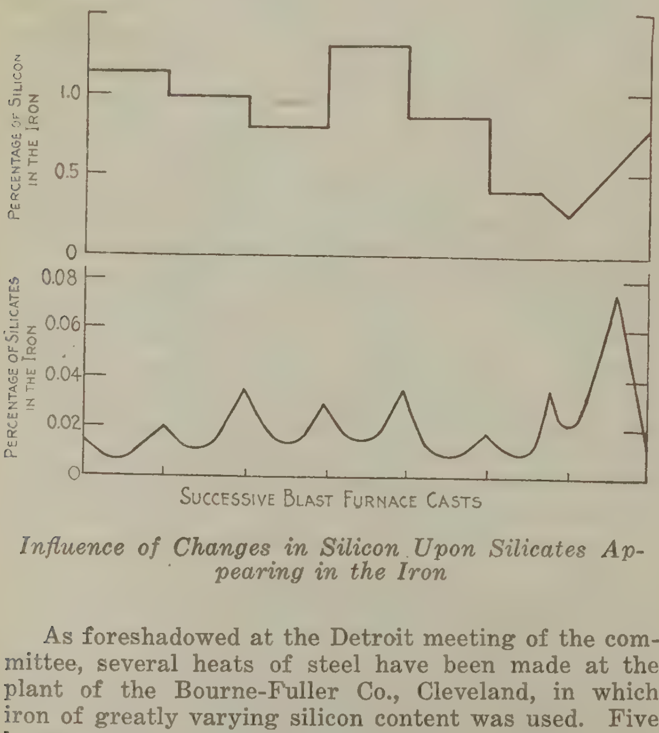
From a survey made about a year ago, it would appear that between 350 and 400 apprentices can be placed in training in the industries in East Chicago, on the present basis of employment. This maximum number will be approached gradually. New manufacturing establishments are being added to the program at intervals, thus allowing the administration of this plan to expand in a safe and reasonable manner.

The East Chicago industrial community has determined to place itself on a firm foundation as regards the skilled personnel necessary for its continued industrial well being. The plan as adopted by the Chamber of Commerce has some successful experiences in other communities to justify it. Some adaptation naturally was necessary to meet the needs of this community, but thorough preliminary study and careful organization has surmounted such difficulties as have arisen.

SOLUBILITY OF IRON OXIDE

Results of Special Heats Made to Check Up on Blast Furnace Conditions

AT the last technical session of the open-hearth committee of the American Institute of Mining and Metallurgical Engineers, held at the Hotel Ohio, Youngstown, May 4, the discussion of open-hearth problems was closed by the presentation of an informal paper dealing with the solubility of iron oxide in iron and with the influence of changes in silica upon the silicates appearing in the iron.



Influence of Changes in Silicon Upon Silicates Appearing in the Iron

As foreshadowed at the Detroit meeting of the committee, several heats of steel have been made at the plant of the Bourne-Fuller Co., Cleveland, in which iron of greatly varying silicon content was used. Five heats were reported by C. H. Herty, Jr., two with iron at about 1 per cent silicon, two in which the silicon was coming down to a low figure, and one at about 0.30 per cent silicon. These were rolled into billets and rounds and into galvanized sheets, the latter including some from the low-silicon iron as well as the normal.

It was found that, so long as the silicon in the pig iron remains approximately uniform, good results are obtained in the steel. When a change occurs in the blast furnace, however, resulting in a change in the silicon content, up come the silicates in the iron. This occurs whether the silicon content of the pig iron is increasing or decreasing. And the good results come with uniform silicon, whether it is high or low.

Very little trouble is experienced in open-hearth practice, according to Doctor Herty, unless the iron gets above 0.10 per cent in silicates. All of the steel made from these special heats was rimming steel of about 0.10 per cent carbon and 0.40 per cent manganese. On the low-silicon irons the slags were much higher in iron oxides all the way along the heat.

Four of the heats were made in about 11½ hr. each. The last one, from the low-silicon iron, took 17 hr. Doctor Herty expressed the opinion that, for 0.10 per cent carbon steel, the iron oxide in the slag ought not to run over 22 per cent. He stated that an addition of 200 deg. to the furnace temperature would get rid of three-fourths of the iron oxide content in the slag or in the steel.

Second International Conference on Bituminous Coal

Eleven different countries, represented by 60 to 70 scientists and fuel technologists, are expected to participate in the second international conference on bituminous coal. This will be held at the Carnegie Institute of Technology, Pittsburgh, in the week of Nov. 19. The list includes about 40 men from Europe, including England, France, Germany, Italy, Austria, Denmark, Belgium and Russia. Japan and Canada will be represented also.

The forty-eighth annual dinner and meeting of the Cleveland Engineering Society will be held June 12. The principal speaker will be Elmer A. Sperry, president of the Sperry Gyroscope Co., Brooklyn, whose subject will be "The Engineering Contributions of the Gyroscope."

Powdered Coal in Steel Furnaces

Thirteen Years' Experience of Eastern Steel Co.—Between 500 and 600 lb. Per Ton of Ingots and 200 Heats to One Roof

THE use of pulverized coal in basic open-hearth furnaces, covering the experiences at the plant of the Eastern Steel Co., Pottsville, Pa., was discussed in a brief paper contributed to the Pittsburgh meeting last month of the American Society of Mechanical Engineers by E. L. Herndon, receiver for the Eastern Steel Co. The experience supplies the record of 13 years' use of the fuel without any word of advocacy or otherwise for such a plant. What discussion developed on the presentation of the paper left the impression that pulverized coal for the metallurgical furnace had no particular friends among those at the Pittsburgh meeting.

However the facts and figures of the case were generously contributed by Mr. Herndon, as shown in the following, which is the paper substantially in full. The use of the powdered coal, the author mentioned at the outset, came about as the result of the continued advance in the price of fuel oil.

The open-hearth-furnace plant consists of four 50-ton furnaces and two 80-ton furnaces. All have basic bottoms, all are stationary, and all are of the ordinary design.

When the pulverized coal was first used in the furnace, it was found that the checkers were filling up with ash. It was realized that this could not be prevented, and therefore arches were substituted for the checkers because of the greater space. The arches are placed about 18 in. apart in rows, one above the other, with about 3 ft. between the rows.

The furnaces are reversed by two dampers, one placed in each flue between the checker chamber and the stack. This gives the products of combustion a direct path to the stack.

The slag pockets are equipped with removable structural-steel boxes which fill up in about 15 days. The time ordinarily required to pull two boxes and get the fuel on the furnace again is about 5 hr. The boxes used for the 50-ton furnaces are 15 ft. x 10 ft. x 2 ft. 5 in. deep; for the 80-ton furnaces, the dimensions are

18 ft. x 10 ft. x 2 ft. 5 in. All four sides of these boxes are tapered, and the boxes are lined with a 9-in. lining of old bricks laid up in common clay.

Each furnace is supplied with two storage bins for pulverized coal, which have capacity sufficient to operate a 50-ton furnace for 18 hr. and an 80-ton furnace for 15 hr. The coal is supplied to the furnace from the bins by compressed air siphons. On the 50-ton furnaces the air jet is ⅜ in. in diameter and on the 80-ton furnaces, 9/16 in. in diameter. The air pressure used is 80 lb. per sq. in.

Each furnace is supplied with the necessary equipment for using fuel oil in case of emergency. The oil supply is stored in the usual way, in a tank of considerable capacity, and is at all times on tap.

The plant for pulverizing the coal is situated near the end of the open-hearth building. Preparation of the coal consists of crushing, drying, and grinding. At various times lump, run-of-mine and slack have been used. The equipment consists of three Raymond five-roller mills and one Raymond four-roller mill. Each mill is connected to a motor. There are in addition two Cummer driers and one Jeffrey single-roll coal crusher.

When the coal is received, the railroad car is placed over a pit and the load dumped into the pit. From this it is hoisted to the top of the building, a height of about 100 ft., by an Otis automatic dump-bucket elevator. There are two buckets, which are operated in the manner of the usual blast-furnace skip.

When it reaches the top of the skip, the coal is dumped into a storage bin which has a capacity of about two carloads; thence it passes to the crusher, located directly below the bin. The crushed coal is dropped into another bin for storage before sending it to the driers. The compartments for storing dried coal are quite small because it is thought unsafe to keep any considerable quantity of dried coal in storage. Each storage compartment is situated directly over one of the pulverizing mills, and the height of the drier above these compartments is just sufficient for a steel tube to lead to each individual compartment so arranged that there is no possibility of holding any considerable amount of dried coal over the mill. The coal is ground to pass 80 per cent through a 200-mesh screen.

After the coal has been pulverized, it is conveyed to the furnaces by a Quigley compressed-air system. There are two steel tanks, each tank permanently fixed upon a scale by which the coal is weighed. The dial on the scale shows the amount of coal in the tank when it is being filled, and also shows the amount when the coal is being discharged, so that the readings show the weight of the amount taken to the furnaces. Compressed air is used for transporting the pulverized coal through a 4-in. pipe which connects the tanks just mentioned with the coal boxes over the furnaces. The distance from these tanks to the box at the farthest furnace is 450 ft. Each furnace supply box is furnished with a valve so that any box may be refilled as needed.

At a 12-in. mill located at about the same distance from the tanks as the farthest open-hearth furnace, pulverized coal is used in a continuous furnace. The same method of transport is used for this supply.

The average analysis desired for coal suitable for pulverizing for open-hearth purposes is about as follows: Volatile, 36 per cent; fixed carbon, 52 per cent; moisture, under 1.25 per cent; ash, 6 to 8 per cent; sulphur, under 1.25 per cent.

The operation of the open-hearth furnaces does not now present more difficulty than with producer gas, though it is not as simple as with oil. All-cold charge is used, and the time for charging is about 4 hr. The scrap is, in general, quite light and the percentage of pig iron is kept as low as possible because of cost. One heat in 12 hr. is considered as 100 per cent, and it is usually possible to keep fairly near this through the campaign. The life of furnaces is about 200 heats for one roof. Usually a second roof can be put on without disturbing any other part of the furnace, and then an additional 100 to 150 heats can be obtained with this second roof.

The coal required runs as low as 500 lb. and as high as 600 lb. per ton of ingots. The wide variation is partly due to character of coal, partly to the charge, to the analysis required in the product, and a little to the age of the furnace, although the time from tap to tap varies less than was formerly thought possible. The temperature maintained in the furnaces is essentially the same as that with producer gas.

There have been infrequent explosions, one in which one life was lost and considerable damage to property resulted. The others were not of consequence. The cause of the serious explosion is not known, although reasonable theories and some conjectures are held, but no proof. The experience during thirteen years does not seem to indicate extra-hazardous occupation.

WELDING ON BUILDINGS

Detroit Architect Speeds Erection with Welding and Cutting Equipment

WELDING of structural steel was discussed by Joseph Matte, Jr., of Albert Kahn, Inc., Detroit, at a meeting of the Cleveland section of the American Welding Society held at the rooms of the Cleveland Engineering Society, May 31. He cited various operations which, because of more rapid work and reduced costs, could, in his opinion, be done more advantageously by arc welding than by riveting. Field work, he said, offers opportunities for the larger welding operations, since many structural conditions are best met by that process. In a little while, he believes, there will not be many structural jobs on which an arc welder is not employed.

Comment to the effect that welding in its operation is in about the same place as riveting was 20 or 30 years ago was made by J. F. Lincoln, vice-president and general manager Lincoln Electric Co., Cleveland, who also predicted that great progress will be made in this industry.

Mr. Matte said that one of the most common objections to welding is that it depends on the human element and is not subject to inspection like riveting. However, there has not been a single failure of welding in the structural field. Welders use a factor of safety of five, and welds have been made that carry loads up to 600,000 lb. in shear. While the human element has much to do with welding, the same is true of the manufacture of the best steel. To assure good work the supervisor of welding must be a welder and should test the ability of his men, so that no one insufficiently trained is put on the job. In addition, numerous safeguards can be provided. Good welders can be secured as well as good riveters.

Some structural jobs require welding, declared the speaker. Referring to specific operations, he mentioned the erection of a large house having a complicated hip and valley roof with intricate framing. Drawing up elaborate details would be a waste of time. Instead, he would have the various sections cut to mill lengths and the welder would do the job about the way a carpenter would if wood construction were used. The real way to attach bar joist floor supports to the steel structure is by welding. The right way to build a steel swimming tank is to weld it, he said. Welding and cutting is of great assistance in factory construction for placing mechanical equipment and pipes.

Another place where welding fits in, said Mr. Matte, is when the owner of a building under construction decides on changes, which would stop the work and require new drawings and new shop fabrication. With the application of welding, beams of the right length are sent and welded in the field, an the job goes right along without delays. Mr. Matte spoke of one building where new elevators are being put in, new mezzanine floors are being erected and other changes are being made, all the work being welded.

Production of electric power by public utility power plants in the United States in April is reported by the Geological Survey at 6847 millions of kwhr. This compares with 7234 in March and with 6871 in February. It was about 5 per cent ahead of last year. Water-power provided nearly 43 per cent of the total, against 39 per cent in March.

Power and Other Steel Mill Problems

Waste-Heat Boilers, Power Plant for Steel Mills and Basic Open-Hearth Practice Discussed by American Iron and Steel Institute

ABSTRACTS of two of the papers read at the spring meeting of the American Iron and Steel Institute, New York, May 25, are given below, supplementing the abstracts of three of the papers published in THE IRON AGE of May 31. There is also published on the following pages the discussion of Dr. George B. Waterhouse's paper, "Basic Open-Hearth Steel Practice" (abstracted last week), offered by Carl W. Peirce, until recently open-hearth superintendent Empire Steel Corporation, Mansfield, Ohio, and also some of the discussion offered by H. B. Hubbard, superintendent, open-hearth department, Inland Steel Co.

Waste-Heat Boilers in the Steel Mill

BY R. H. STEVENS

OUTSIDE of a few instances, the steel industry paid little attention to conservation of waste heat until about 15 years ago, when it made a determined start to recover the enormous losses in coke-making, and to conserve heat wasted at almost all kinds of furnaces, by installation of waste-heat boilers, recuperators, etc. Of course, the waste-heat boiler had been in use for many years on puddling furnaces as the principal supply of steam for rolling and hammering the puddled iron.

[Consideration is given by the author of gas temperatures involved, composition and heating value of the gases, proper location of the boiler (s) with relation to the open-hearth furnace and the electric power-generating plant, steam pressures obtainable, possibility of explosion at valve reversal, fans for draft, superheaters and economizers, air infiltration, draft requirements, heat losses and type and design of boiler.]

It is no doubt apparent that the foregoing presentation has been based entirely upon conditions existing in the manufacture of steel and that the conclusions formed apply more particularly to that industry.

Reclamation vs. Improving Primary Unit

Periodically, in the past, we have been confronted with the reclamation problem in some form or another. Generally the first conclusion has been to install something directly for reclamation; whereas waste reduction by improving the primary unit becomes a consideration only after repeated failures at reclamation. Some years ago, smoke consumers engaged the attention of many engineers and for a while seemed destined to reimburse the manager for the losses from poor combustion.

At one time, instead of trying to reduce the coke consumption per ton of pig iron, it was considered wise by some to increase this amount, so that more blast furnace gas would be available, and thus return a profit in excess of the expenditure. The low-pressure steam turbine, in conjunction with wasteful high-pressure reciprocating engines, was once to be the true remedy for steam power wastes. Within a comparatively short time, all of these proposals have been advocated, applied and displaced by a reversion to the primary unit and the development of its possibilities.

To Obtain Better Economy

These incidents indicate that increased economies most likely can be obtained by improving the primary unit, and when that fails, the primary unit itself must be displaced. Extraordinary savings effected by a waste-heat boiler might well be accepted as a warning to improve the combustion or furnace design rather than as a cause for rejoicing.

Generally speaking, when the steam generated by the recovery of heat is returned to or utilized by the primary unit, the waste-heat boiler can possibly be advantageously and economically used. But when the steam so generated is not thus required, or when it is in excess of those demands, study of the returns from such installation costs is very apt to decide against such recovery.

Conclusions

1—While the generation of steam is in general a very feasible way of recovering waste-heat energy, an installation for the purpose is apt to be one of the most expensive, and the ultimate results no better than those possible with a less costly scheme.

2—Metallic recuperators are now capable of receiving the hot burned gases as high as 1600 deg. Fahr., or higher. This seriously affects the justification for waste-heat boilers and, when used in connection with regenerators, may exclude the necessity for installing a steam generating unit.

3—Increased knowledge and more careful observation of the laws of heat generation and absorption apparently lead to the elimination of divided or multiple systems of heat utilization, to effect maximum economy.

4—Complete utilization of heat by the primary heating unit promotes economies in excess of those represented by the performance of the boiler.

5—Apparently the field wherein the waste-heat boiler can make the best showing is the one wherein the reclaimed energy is not required directly by the process from which it came.

Comparison of Results in Practice

Five operating installations, figured from actual yearly results and costs, were compared, by W. N. Flanagan, Carnegie Steel Co., in discussing Mr. Stevens's paper. These waste-heat boiler plants were equipped as follows:

I—Fifteen horizontal fire-tube boilers, with small economizers.
II—Two Yarrow boilers with large economizers.
III—Twelve Babcock & Wilcox boilers, with no economizers.
IV—Twelve Stirling boilers with no economizers.
V—Ten Erie City boilers, with no economizers.

Of these five groups, the fire-tube boilers gave the greatest output of steam to the ton of steel made and the greatest output for each million B.t.u. furnished them. They showed 31.6 per cent of the fuel returned

IN 1888 R. H. Stevens entered the machine shop of the Edgar Thomson plant of the Carnegie Steel Co. at Braddock, Pa., as an apprentice, serving until 1891, *when he entered the drawing room of the Homestead Steel Works of the same company. In* 1898 *he became assistant mechanical engineer and in* 1902 *chief engineer, which position he held until he became chief engineer of the Midvale Steel & Ordnance Co., at Philadelphia, in* 1915. *This position he retained, except for one year as works superintendent at Coatesville, Pa., until* 1923, *when the Bethlehem Steel Co. took over the Cambria plant. Then he was transferred to his present position, that of chief engineer of the Bethlehem company at Johnstown, Pa.*

as steam, against an average of some 22 per cent for the others. Their initial installation costs, based at 100, compared with much higher costs, up to 260, for the others. Their total operating costs, again at 100, were compared with 236 for the best of the others, and 286 for the poorest.

Steel Works Power and Blowing Plant

BY WILFRED SYKES

IN 1923 the Inland Steel Co. began construction of a new power and blowing plant adjacent to the blast furnaces, to use the blast furnace gas to better advantage and to supplement the existing electric supply. The newer mills were electrically driven, power being obtained from a 20,000-kw. turbo-generating station, supplied with steam from coal-fired boilers. Extensive additions were then being made to the plant and electrification of the older steam-driven mills was contemplated.

Total power generated............		172,676,400 kwhr.
Total power cost..................		$761,826
Pig iron produced, gross tons......		811,417
Total cost of blowing.............		$397,895
Cost of blowing per ton iron produced		$0.49
Credit for gas used from blast furnaces at power house	$956,925	
Credit for gas used under boilers for steam used for other purposes.......	$105,585	
Total credit to blast furnaces for gas		$1,062,510
Credit per ton iron produced.......		$1.31
Net credit to blast furnaces, after deducting cost of blowing........		$0.82
The gas credit to the blast furnaces was based on being the equivalent of 278,874 tons of coal, the value of which was $3.81 a ton.		
Average operating cost per kwhr...		4.41c.
Capital cost per kwhr.............		1.91c.
Total cost per kwhr...............		6.32c.

There were installed three 12,500-kva. turbo-generators and five turbo-blowers for the four furnaces. In addition to supplying a. c. power for general plant use, the station also supplies direct current for the operation of the docks, blast furnaces and coke plant. For this purpose four 1000-kw. 250-volt rotary converters were installed.

[After detailing, with illustrations, the principal features in the new development, the author gave a series of interesting figures as to operating results achieved. His table showing operating costs for 1927, with some additions made in his oral presentation, appears at left.]

Economies Along Several Lines

In discussing Mr. Sykes's paper, O. Needham, Westinghouse Electric & Mfg. Co., pointed out the great economy in erection of the Inland plant, costing $58.50 for each kilowatt of installed power, against $80 to $125 for installation costs in public utility stations.

He called attention, also, to the considerable reductions in weight of turbo-generators and other units as now made, compared with the practice of only a few years ago. As much as 30 per cent of the total weight of a turbine is cut off, due to the use of welded members, instead of castings, for frames and other parts.

Quality Factors in Basic Open-Hearth*

BY CARL W. PEIRCE

YEAR by year the demand for better steel has been growing stronger but never have the products for which it was made required the care in the steel plant that they do today. The advent of the motor car and airplane, the use of high-speed tools and a thousand different uses call for steel able to withstand heavier dynamic strains. We live in a specialized age. The users of steel, being in close competition, are constantly adopting new practices in fabrication which subject the steel to harder and harder treatment. Day by day the steel manufacturer is confronted with the problem of doing something to meet this new demand.

This discussion will be confined to the three points, (1) the charge, (2) the working and (3) the casting of the heat, emphasizing the need of more supervision and closer attention to details.

The Charge

QUALITY steels cannot be made from inferior raw materials. In making up a charge for a basic heat, materials of a known composition should be used, to avoid soft and raw melting heats. When a heat is properly charged it is half made. A charge which melts soft, or high and raw, is apt to show defects in the finished product, no matter how carefully it has been worked. For this reason, the utmost care should be

---

*Discussion of paper by Dr. G. B. Waterhouse on "Basic Open-Hearth Steel Practice."

EDUCATED at Melbourne University, Melbourne, Australia, in electrical and mechanical engineering, Mr. Sykes was engaged in engineering work in that country from 1901 *to* 1906. *From* 1907 *to* 1909 *he was employed as an engineer by the Allgemeine Elektricitäts Gesellschaft in Berlin, Germany. He was an engineer with the Westinghouse Electric & Mfg. Co., East Pittsburgh, in* 1909 *to* 1920, *in charge of steel mills and other engineering work. He was also an engineer with the Steel & Tube Co. of America from* 1920 *to* 1922, *and has been with the Inland Steel Co., Chicago, from* 1923 *to the present time. He is now assistant general manager of the company.*

used in properly proportioning the materials making up the charge. Materials unloaded in the stock house should be segregated according to their analysis and physical appearance.

A definite amount of carbon in the charge is necessary to melt and refine it. Less than this gives a soft melting heat and an inferior product; more than this requires extra time to reduce, with the added danger of over-oxidizing the metal while doing it. Uniform charges containing a definite amount of each material should be used, with the proportion of iron and scrap to be governed by the speed and working of the individual furnace.

Sulphur and phosphorus can be removed from the bath in small amounts only, so that care should be used in limiting the quantity going into the charge. In one open-hearth which uses a large amount of machine shop turnings, a sulphur determination is made of each car before it is placed in the stock house, and a set amount of high-sulphur turnings is used in each heat, the stockhouse foreman keeping the number of pounds of sulphur below a given amount. In this way, 95 per cent of all heats finish below 0.030 per cent sulphur.

Too high a percentage of silicon in the pig iron being the main cause of high and raw melting heats, the amount going into the charge should be closely watched. Where cold iron is used it should be segregated according to its silicon content in at least three piles. The large pile would contain all iron ranging from 0.85 to 1.15 per cent silicon, the other two, all casts below 0.85 per cent and above 1.15 per cent. In loading for a charge, the greater amount should be taken from the 0.85 to 1.15 per cent pile, with a magnetful or two from each of the other two piles to keep them balanced.

Keeping Tabs on Mixer Iron Characteristics

In open-hearth furnaces where hot metal is used, a silicon and sulphur determination of the mixer iron should be figured after each cast from the blast furnace is poured in. This is done on the basis of averages. Over a considerable space of time mixer men have been able to check with the laboratory within seven points of silicon and three of sulphur.

Adding	Units
100 tons in mixer of 1 per cent Si=........	100
100 tons from blast furnace of 0.75 per cent=	75
200 tons into..............................	175= 0.875 per cent Si.

The sulphur content is averaged the same way. When the next cast from the blast furnace arrives, the amount of metal drawn out since the previous cast is subtracted from the 200 tons, the remainder multiplied by 0.875 per cent and the new cast and analysis added as before, checking the analysis once a day with the laboratory. To carry out this practice, the iron samples from casts should go promptly to the laboratory, to permit the analyses to reach the mixer shortly after the cast.

This arrangement gives the melter accurate knowledge at all times of the mixer iron. When the silicon runs abnormally low, the scrap should be reduced and extra iron added. As the silicon increases above 1.10 per cent, the amount of hot metal should be reduced and, when reaching 1.30 per cent, can be cut 8000 or 10,000 lb. on a 100-ton charge. By following this practice more uniform melts, with a proportionate increase in tonnage and a better quality of product, are produced.

Working of the Heat

IN setting the specifications on steel, engineers have fixed on carbon, manganese, sulphur and phosphorus as the principal elements which determine the class of the steel. The effect which a small amount of carbon has is one of the wonders of metallurgy. The whole range of steel products from the softest sheet to that of files and cutlery can be made by the combination of not to exceed 30 lb. of carbon to the ton of steel. Manganese, because of its hardening and toughening qualities and its ability as a scavenger, is important. Sulphur and phosphorus, elements detrimental to the physical properties of the steel but in some cases useful, are given fixed limits. Another element omitted from the list, but having a very determining effect on the quality of the steel, is oxygen. Composing nearly one-half of all matter, oxygen is the cause of many of the slag inclusions and cavities and blowholes in the ingots.

Great Affinity of Oxygen for Iron

Not enough consideration in the open-hearth is given to the metallurgical law that "oxygen combines readily with iron at all temperatures," and, of course, the higher the temperature the more rapid the combination. One of the chief causes of inferior heats from the open-hearth is that these heats are worked and tapped too hot, for at high temperatures iron has a stronger affinity for oxygen than does carbon. That this is true, open-hearth men agree, since it is known that a heat worked down hot will take twice the amount of ore to reduce the carbon as one worked cooler, the oxygen from the extra ore remaining in the steel as an iron oxide.

In working a heat with a charge containing sufficient carbon to permit the use of ore, the air and gas should be cut back as the line is coming up, to give a reducing instead of an oxidizing flame, and to keep the metal from getting too hot. Only enough flame should be kept in the furnace to keep the bath in a good boiling action. When the line is free from the bottom, and the heat ready for ore additions, the flame should be further reduced. The feeding of ore should be stopped while the carbon in the bath is still high enough to permit the proper shaping of the slag and attaining the correct pouring temperature. A creamy slag, rather than one too heavy or too thin, with plenty of action to the bath, is to be desired, with a tapping temperature that will leave a saucer skull in the bottom of the ladle.

To illustrate better the importance of a proper charge and the working of the heats in making good steel, I wish to relate an experience of some 14 years ago. The open-hearth shop in which I was a foreman was shut down, and I was sent to the other open-hearth as a practice inspector. It was the policy in this shop to charge the heats to melt close. The superintendent gave as his reason for this that it saved the time of feeding ore, and the extra "drink" of metal which many heats took increased the tonnage. When the quality of the steel was questioned, he did not think it made any difference.

Acting on this suggestion, during my spare time I went over the charge sheets of all rail heats, 1338 in number, made during a period of seven months. Rail heats were taken as a basis because on this type of steel it was possible to get an accurate report of the faulty steel produced. Heats that melted soft, requiring an extra drink of metal for finishing, averaged 7.1 per cent second and condemned rails, against 4.2 per cent of those using ore in the working. The report also disclosed that heats melting close, using neither ore nor extra metal, averaged as high in defective rails as those melting soft, because the furnacemen had handled their furnaces in both cases the same.

Effect of Skulls and Molds Charged

In compiling this report several interesting points were developed. Of 95 heats finishing over 10 per cent seconds, 53 melted soft, 16 were soakers or burn-out heats where brick repairs were made to the furnace while the gas-house flues were burned out, and 13 had broken molds and blast furnace ladle skulls of more than 30,000 lb. each. Of 39 heats losing the top rail or more, on account of pipe or breakage at the drop test, 15 melted soft, seven had molds and blast furnace skulls of more than 30,000 lb. each and two were soakers or burn-out heats. On one whole heat, rejected on account of the drop test, the entire iron part of the charge was made up of molds and blast furnace skulls: four molds, 27,500 lb.; broken molds, 35,260 lb.; blast furnace skulls, 15,760 lb.

Perhaps the most interesting point brought out was the difference in the quality of the steel as made by different furnacemen. A list of consecutive rail heats made during the same period on one furnace whose helpers worked their heats very hot, and used probably twice the amount of ore necessary, ran six times as high in defective rails as those made on another furnace, whose helpers worked their heats cooler and were more careful about their slags and tapping temperatures.

Furnace No. 6		Furnace No. 10

In the larger open-hearth plants it has been customary to have two melters on each turn, handling six or seven furnaces each. If an extra melter were added to each turn, giving each man charge over not more than four furnaces, better supervision could be given to the temperatures and working of each heat. The melter would then have time for observing his steel as it was being poured, and could give more attention to repairs to bad bottoms—one of the principal causes of bad heats. On a monthly output of 60,000 tons or more, the added expense for the three extra melters would be less than 3c. a ton, which could be saved many times by the better quality of the steel and the general operation of the furnaces.

Casting of the Heat

In general, throughout the United States, not enough attention has been given to the proper handling of the steel after it is tapped into the ladle. Care is given to a proper charge going into the furnace, and to the working of the heat, and high-priced deoxidizers are used to finish cleansing the steel. Then it is tapped into the ladle and sent to the platform for a foreigner to pour. Molds often are placed at the pouring platform only a few minutes before being used, no time being given for inspection or cleaning. Much more attention is given to this part of the work abroad than here.

In a paper read before the (British) Iron and Steel Institute in May, 1918, by J. N. Kilby, entitled "Causes of Defects in Steel Ingots," the author states that "teeming speed is the most important factor at any time in the process of steel making," and that top-pour ingots can be made as free from cracks as bottom-pour, provided the same length of time is taken to pour them." In another place, commenting on the practice in one open-hearth of pouring a 7200-lb. ingot in 1 min., he gives it as his experience that, if ingots of this size are poured in less than 3 min., 80 per cent will show cracks at rolling, and that the safety line is actually 6 min. He gives a table showing the effect of slow pouring of ingots of 5600-lb. weight from 40-ton heats.

Time in Minutes	Ingots Cracked in Mill, Per Cent	Bars to Chip
2	100	Nearly all
3	50	40 Per Cent
3½	40	30
4	10	8
5	5 slightly	4
6	2 very slightly	2
7	Nil	Nil

He does not state how these ingots were poured, but from the length of time consumed it is evident that most of them were either bottom-cast or through secondary ladles. Mr. Kilby also gives it as his experience that teeming speed is really of greater importance than temperature; that heats alleged to be on the hot side may produce ingots free from cracks, provided the period of filling the ingot be prolonged to the correct extent by the use of correct nozzles or secondary ladles; that the casting of heat after heat with a slight skull left behind, at the same time getting cracked ingots at the mill, points to the great importance of correct teeming speed.

Advantages of Slow Teeming

Experiments in different plants in our country point to the same experience. Slow pouring allows the metal to cool and free itself of gases, giving better rolling qualities and a superior grade of product. In an experiment carried on in the American Rolling Mill Co. in 1926, ingots of different lengths and with various speeds of pouring were cast from the same heat, and then split to determine the location of the blowholes. In the ingot poured to full length and at normal speed, the blowholes came up about 28 in. and were on the average ¾ in. from the surface. The blowholes in the ingot slowly poured, to full length, came up to the same height, but were from 1 in. to 1¼ in. from the surface.

In another open-hearth plant in which considerable trouble was being experienced with pipe in the rail steel, the A-rails of all heats cast on one 12-hr. turn being lost, the suggestion was made to hold the heats in the ladle 5 min. before opening. Instead of doing this, 5 min. extra time was taken in pouring the heats, 15 sec. being taken to pour the last foot of each ingot. The pipe trouble disappeared.

The size of pouring streams has been gradually reduced for the past 20 years. From a 2¼-in. stream on heats of 30 to 50 tons, many plants are now using 1½-in. streams for heats of 100 tons. One plant is using 1⅜-in. streams for casting soft steel of 100 tons and, with a temperature which will leave a saucer skull, heats are poured cleanly, averaging 65 ingots each.

CARNEGIE LIBRARY OF ATLA

The use of this size nozzle instead of the 2-in. increases the pouring time of each ingot 112 per cent; over the 1½-in. nozzle, 20 per cent.

Good Practice Demands Clean Molds

Another important detail to secure better ingots is attention to clean mold condition. Molds should be warm, insuring that they are dry, and should be wire brushed and graphited before being used. All cracked molds which will make a fin on the side of the ingot should be scrapped. To guarantee a straight stream that will not hit the side of a mold, a piece of gas pipe with an insert which fills the nozzle hole, and extending up through the goose-neck, should be used while the nozzle is being tamped. In casting, the nozzle should be long enough to permit the pourer to open up and pour the first foot of the ingot slowly, without having a spreading stream.

The use of magnesite nozzles for pouring low-carbon steel, to eliminate the excessive erosion incident to the employment of fire-clay nozzles, is recommended by one foreign writer who states that, with this type, the rate of casting progressively decreases from the first to the last ingot, because the nozzle does not erode and the head of metal in the ladle grows constantly less. I do not know that this type has been used in this country, but that there is a demand for such a nozzle no one will deny.

Other Departments May Bear Watching

Nor should the close attention to details be confined to the open-hearth department. Some heats of steel, because of a poor charge, will produce only a fair ingot, although the utmost care has been given to the working and casting of it. Many of these heats are made practically worthless by being washed in the soaking pits, and reduced too rapidly in the blooming mill. An inspector checking and reporting on the temperature and condition of ingots as they are drawn from the pits will pay big dividends in producing cleaner steel.

At the blooming mill, the number of passes which is given an ingot should depend on the quality of the ingot, and not on the amount of tonnage to be produced that turn. If the ingot shows a tendency to tear, the draft of the first few passes should be reduced until the ingot has a solid surface. Here, again, another inspector.

Tilting Furnaces

Because of their valuable assistance in controlling the working portion of the steel-making operation, tilting furnaces are exceptionally useful. Doctor Waterhouse brought this out clearly in his paper. Not only is the tilting furnace of great metallurgical value in permitting flushing off early slags, full of impurities from the charge, but it has large mechanical advantages as well. Holes developing on the banks may be uncovered readily and patched up with the greatest ease in a tilting furnace, with but a fraction of the delays occasioned by the same incidents in stationary furnaces. The furnace may be overcharged without the same danger of breaking out. The furnaceman has always at his hand the possibility of working a recalcitrant heat as his judgment, metallurgically, dictates, without being handicapped by considerations of close limitation on the amount of additions he can make to his bath.

Discussion by Mr. Hubbard

H. B. Hubbard, superintendent open-hearth department, Inland Steel Co., noted the following developments which were improving the furnace efficiency: The sloping back wall, larger uptakes, the suspended roof, and basic materials used in walls and roofs. In his opinion, many heats were melted with too much lime; this was supposed to cover a multitude of sins in dirty scrap. Usually it would be better economy to segregate the scrap better and throw the bad stuff back on the seller.

FACTORY TRANSPORTATION

Overhead and Ground Conveying at Westinghouse and General Electric Plants

THE materials-handling activities of the Westinghouse Electric & Mfg. Co. were described in a paper presented at the Pittsburgh meeting of the American Society of Mechanical Engineers by C. A. Fike, supervisor of transportation of the Westinghouse company at East Pittsburgh, Pa. The paper dealt with system developed under Mr. Fike's direction, detailing methods of control, the wage-incentive plans used in payment of employees of the plant transportation department, and some of the economies that were effected.

Mr. Ashman, occupying a similar position to Mr. Fike in the Schenectady works of the General Electric Co., indicated quite a difference in the systems of the two companies. Operation of the cranes and elevators at Schenectady is under separate control from the ground conveyors, although both are under one general supervisor. Internal and external plant movements are conducted separately. Mr. Ashman thought the use of tractors and trailers offered the greatest means of economies among the various kinds of vehicles used in plant transportation. At Schenectady, the plant is laid out in five zones with shuttle service to a central classification station, with each crew making six or seven collections and a like number of deliveries each day. Payment was on a straight day basis.

At East Pittsburgh, the plan is for group payment, with each member of the group, including the director of each group, sharing in pooled pay based upon time and distributed on the basis of the number of hours worked by each. There are penalties for failure to make schedules, damaged goods, etc., but no workman can be penalized more than the bonus accruing during one pay period.

Mr. Ashman thought that Mr. Fike's estimate of $130 per month as the cost of the operation of a truck was low, stating that at Schenectady it ran in labor charges alone to $220, for a two-man crew, and total charges were close to $275 per month. Mr. Fike said in answer that his costs were based upon one-man operation of trucks, and that the industrial trucks were electrically motivated, with very low upkeep and depreciation charges, some trucks having been in service 16 years, while charging of batteries was with current costing 8 mills per kwhr.

Mr. Fike also declared, in answer to a question, that the system did not require a big clerical force, since the use of stubs of routing tags took care of payments and the dispatching was done by the group leaders.

Morehead Medal Committee to Receive Papers on Acetylene

The award of the Morehead medal by the International Acetylene Association for contributions of outstanding merit toward the progress of the acetylene industry is always one of the most important events on the program of the annual fall meeting of the association. The award can be granted for technical papers which promise to be of special value in furthering the use of acetylene for any purpose. Persons who desire to submit papers of this sort should send them to the committee on the Morehead medal, International Acetylene Association, 30 East Forty-second Street, New York, before Aug. 1.

Steel & Tubes, Inc., to Build New Plant

Steel & Tubes, Inc., Cleveland, plans erection of a new plant at Ferndale, Mich., a Detroit suburb, on Grand Trunk Railroad. Negotiations are being closed for a 20-acre site. Plans provide for a building containing 105,000 sq. ft. of floor space and plant will have a capacity for making 3,000,000 ft. of welded steel tubing per month. The estimated cost of the new plant, including the site and equipment, is $700,000.

Safety in the Machine Shop

Greater Care Urged in Inspection of Chains and Cables—Need for Goggles—Education of the Men

BY WILLIAM J. FISHER*

PROGRESS in safety matters in any factory is undoubtedly in proportion to the extent to which the superintendent first, and through him the foremen, are "sold" on the idea. Most of our plants are too small to be able to employ full-time safety engineers, or to maintain a full-time safety organization, whose sole duty is to look after the safety and general welfare of its employees. Due to the lack of such an organization, continually devising new ways and means of keeping the safety idea forward, "Safety, first, last and all the time" presents a problem for the smaller factories.

It has been my observation that, unless methods of presenting safety and of handling safety matters are changed from time to time, proper observance of safe practices cannot be maintained. The small shop is thus dependent to a more or less degree upon the State Department for suggestions as to ways and means of maintaining continued interest in safety matters.

Educating the Employee

The first and most important idea to be instilled into an employee, for the elimination of accidents, is that it is his duty to his family and his home to work safely at all times. The National Safety Council is doing a great work in putting this idea across to the workman. The picture bulletins issued are attractive, are read by the employees and have a good effect.

We are living in an age when there is a continuous demand for something new. The great force back of our prosperity is the putting forth of new things to attract and thereby create a desire and demand, which in turn means more work for our factories and our employees. The ultimate objective of all safety programs is that employees may acquire the safety habit. Picture bulletins, safety meetings and the many other methods used to attract attention to safety matters are means to that end; namely, habit.

Third of importance in elimination of accidents is a common understanding between employees and management of each other's attitude toward safe practices and necessary changes, to make the plant a safe place in which to work.

Mechanical Safeguards

Modern machine tools have solved a large safety problem by having necessary guards and safety devices built into the tool itself. The continued use of old-type machines, however, necessitates the inclosing of open belts, open gears, etc. When this is found necessary I believe the open-type guard to be the most practical. Employees will keep the open-type guard in place more readily than the closed type. I have been unable to assign any reason for this except, perhaps, that men naturally want to see moving parts.

It is the duty of the management to see that mechanical safeguards are thrown around employees. Gears should be guarded, no matter how remote their location. Some of the most serious finger accidents occur in gears in which it was thought impossible for a workman to get caught. Any foreman or manager who argues against covering gears, because they may be quite a distance above a man's head or in a remote place, under or back of a machine, is arguing from lack of experience.

Motor-driven machines have solved the hazard found in the overhead belt. Practically all machine shops, however, continue to use a great many overhead belts. While they present a more or less hazardous condition, it is a difficult situation to cope with. About the only thing which can be done is to put guards under the larger and heavier belts, which, if they should tear, may cause injury to a workman. These guards must be properly designed and supported, or they may create a greater hazard than existed with the open belt. Another precaution is to inspect the belts periodically and remove any that have worn thin, or show signs of weakness.

Chains and Cables Need Care

Another hazard in the machine shop which is difficult to handle is from the chains and cables used on cranes and hoists. Especially is this true in shops where heavy work is handled. Cables should be inspected at regular intervals and, when broken strands are found, should be replaced. Chains present a more difficult problem. They likewise should be inspected periodically and, if stretch has been set up in the links, the chain should be replaced.

Chains used continuously should be annealed at regular intervals. There seems to be great difference of opinion as to how long a chain should be used before annealing, but we believe that they should not be used longer than one year.

Inspection of chains does not reveal defects so readily as in cable. A link may be defective on the inside, or it may have a defect which only the trained eye can detect. A good plan is to send the chains occasionally to the chain manufacturers and have them inspected and tested and a report rendered on the maximum load it is safe to lift with the chain.

These safety precautions are necessary to prevent accidents from breaking chains. An important point in maintaining chain efficiency is instruction to the workmen in the proper way to apply and hook up a chain to a load. Nothing contributes so much toward rendering a good chain useless as allowing a sharp edge of a heavy load to come against a link in somewhat of a shearing position. If this is done a chain may carry the load at the time and at some future time break on a light load.

Keeping Adequate Aisles Open

Another matter of importance is that of fixed and open gangways. Nothing is so conducive to good housekeeping and prevents more foot accidents than well-kept gangways. If trouble is experienced in keeping gangways open, I know of no better method than to paint lines where the aisle is to be. The painted line in itself establishes definiteness of purpose and location. While it may be necessary to replace the line two or three times, after a while the employees get the habit of maintaining a gangway and the painted line is no longer necessary.

---

*Superintendent A. B. Farquhar Co., York, Pa. This is abstract of a paper presented before the Pennsylvania State Safety Congress, in Philadelphia.

Another important factor in accident prevention is the maintaining of morale through adequate and good tools with which to work. When a workman is disgusted or discouraged, due to poor or insufficient tools, he is most liable to have an accident. In this mood, his mind is not directed to safe ways of working, but is rather concentrated on the thing which causes the discouragement.

Fatigue likewise causes accidents which would not otherwise occur. Discouragement and disgust bring on fatigue, while keeping the workman in the proper frame of mind maintains his poise and happiness—and fatigue is not brought on nearly so soon.

The items I have enumerated are some of the things which lie wholly within the power of management to do to prevent accidents. All accident prevention does not rest with the foreman or the workman. It starts with those of us who have to do with management, and we carry a definite responsibility toward creating a spirit of safety, first, last and all the time.

Elimination of Eye Hazards

Goggles provided by practically all shops are for the men to wear to prevent eye accidents. It seems to be difficult, however, to get employees to wear them. After years of patience and insistence and improvement in goggles, we have succeeded in getting the employees who do chipping to wear them rather willingly. On other operations you will invariably find the goggles in the tool box or some other place of storage. Even in grinding operations the foremen must continue to insist that they be worn, as men have not reached the place where they feel it is entirely necessary.

One problem of the machine shop is to determine in which operations goggles must be worn. All agree they should be worn in the pouring of metal, chipping, grinding and similar operations, where the hazard of flying particles is the result of the operation. But what about the lathe, drill press and some of the other machine tool operations?

One of the most serious eye accidents which ever came to my notice was when a lathe operator had trouble truing up a job in the lathe chuck. In a fit of impatience he attempted to hit it a severe blow and, instead, hit the corner of the chuck jaw. A steel chip flew into his eye, which later caused the removal of the eye. This was an unusual accident, but it is not unusual to see flying chips in lathe operations, and especially in the turning of non-ferrous metals.

Screens and many types of contrivances have been suggested, designed and used. But almost all of them are inconvenient and to most mechanics are impractical. The only safeguard against this hazard is the wearing of goggles. Practically all machine shop employees are more or less subject to eye hazards, but goggles have not reached such a stage of personal comfort that we are willing to insist upon their general use. It seems, therefore, that up to this time we have been content to see that they are worn on those operations which present glaring eye hazards. For the rest, we insist that the men go to the first aid room, rather than to a fellow employee, to have particles removed from the eyes.

It is a continuous up-hill job to get men who are compelled to wear glasses to remove them and wear goggles. For these men we are seriously in need of goggles which can be used over their own glasses, and they do not seem to be available. And to remove glasses and put on goggles creates a hazard through improper vision.

Other Causes of Accident

Then we have the hazard of the accumulation of slivers on the heads of chisels, wedges, etc. The prevention of accident from this source likewise belongs to the individual employee. But the foreman has the responsibility of instructing the employee not to use tools with improper heads.

With overhead traveling cranes we have the hazard of workmen walking under, or failing to get away from under, overhead loads. This likewise is an employee's personal responsibility, provided, of course, a warning bell is used on the crane.

Many other instances could be cited where the employees' personal responsibility is a factor in accident prevention. Our human frailties are the greatest contributors to accidents, and the greatest of these is thoughtlessness. Safety codes are a great help, as they are text books through which certain hazards are called to our attention and the methods for remedying them are suggested and established. All these mediums are important and necessary, but it seems to me our future progress is centered around "education."

As the children of today will be our people in industry tomorrow, safety education should begin with childhood. Definite programs in our public school system, which would establish indelible safety impressions, would be a great help toward creating the safety habit and eventually have its effect upon safety in industry.

Responsibility of Foremen

A great deal has been said concerning the responsibility of the foreman toward accident prevention. Some leaders have indicted the foremen as lacking the proper interest in safety matters. I question whether this criticism is just, when viewed from the broader aspect of the subject.

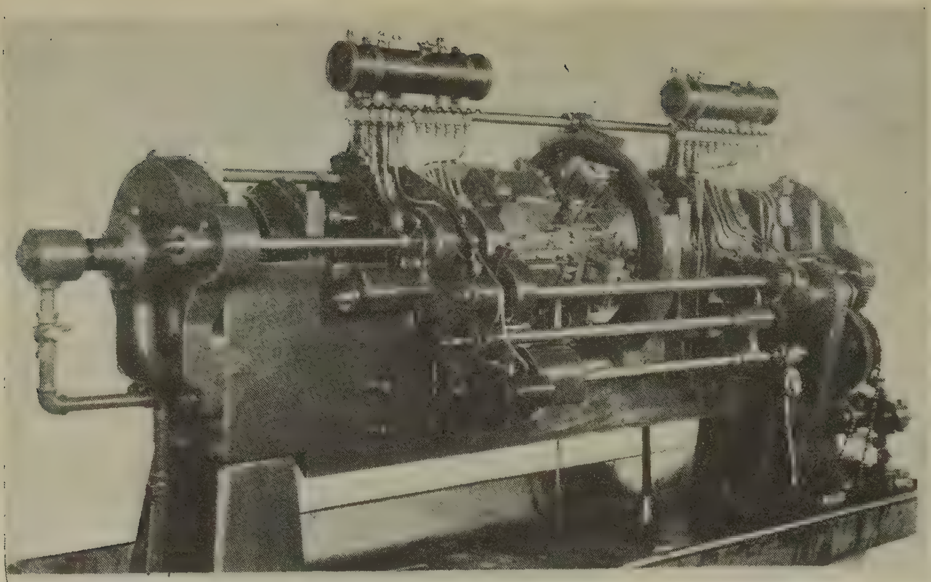
The first duty of the foreman, and rightly so, is to maintain production schedules. But I believe he realizes to its fullest extent that, to do so, he must have a steady and trained working force. He further realizes that it is to his best interest to prevent accidents which cause loss of time and serious interference in the results he desires to obtain.

Shipyard Conducts Intensive Safety Campaign

Comprehensive preparations have been made to make June a "no accident month" at the plant of the Newport News Shipbuilding & Dry Dock Co., Newport News, Va. A series of meetings has been held and extensive use has been made of posters, placards and bulletins to awaken interest in the drive.

A unique flag arrangement will be used to advertise the status of each department in lost-time accidents during the month. This consists of a safety flag which will be flown by each department every day, until a lost-time accident occurs, when the safety flag will be replaced by a black flag as a mark of demerit. Score boards will show the daily rating of all departments. Penalties will be based upon accidents that necessitate sending the injured employee home, with the result that he is unable to report for work again on his next regular shift, but penalties will not be imposed for minor injuries.

The campaign includes prize contests for the best slogan placards dealing with safety, and using letters that spell the name of the employee's own department to start the line. A silver medal will also be awarded to the employee, below the rank of supervisor, who is considered to have done most to promote safety during the month of June.



The Operator Merely Places the Hinges in the Fixture, the Work Being Located and Clamped Automatically

Hinges Drilled and Countersunk at Rate of 1200 Per Hour

The drilling and countersinking of three holes in an automobile door hinge is accomplished on a high production basis on the machine illustrated, the output being given as 1200 hinges per hour. The machine is the "non-stop" automatic drill of the Davenport Machine Tool Co., Inc., Rochester, N. Y., arranged to permit the use of five sets of work-holding fixtures and drilling heads, which revolve continuously while the cutting and clamping operations are being performed. The operator merely places the work in the fixtures and, as the fixture unit revolves, the work is automatically located and clamped.

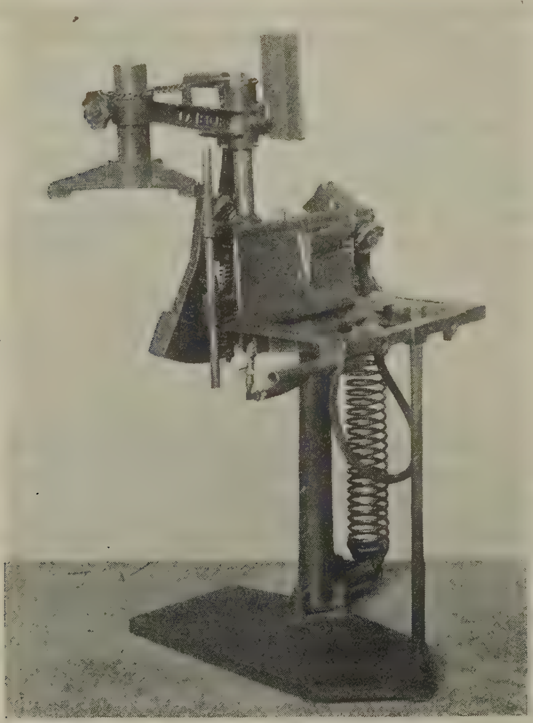
Three spindles in a cluster box on the left-hand end of the machine drill and countersink the holes simultaneously, after which they are withdrawn and three more spindles on the right-hand end approach and countersink the other side of the hinge. The clamping device is then released automatically and the work is dropped into the pan, leaving the fixture open ready to receive a new piece of work.

Although the center distance of the spindles is close, the gears that drive the spindles are of good size. Both the gears and spindles are hardened. The drill spindles are fed by cams located at each end of the machine. Ample cutting compound is supplied to the tools by a geared pump.

The production, quoted at 1200 per hour, is said to be limited only by the ability of the operator to place the work into the fixture during one-fifth of the time required to revolve the fixture holder. Although the fixtures, etc., employed make the machine a single purpose unit, it is stated that the basic principle permits a variety of work to be machined.

Core Machine Eliminates Unnecessary Moves by Operator

Elimination of unnecessary moves on the part of the operator is a feature of a core machine built by the Tabor Mfg. Co., Philadelphia. A core box is filled and the core plate placed in position in the usual manner. The clamping head is then swung into position over the core box and the draw lever, shown at the back of the picture, is pulled down one-half turn. This clamps and automatically levels in one move. The machine is then rolled over and the same draw lever reversed one-half revolution, which unclamps, draws the core and swings it out to a convenient position for the operator to carry away. This dispenses with the need for walking around the machine and any operations of handling independent clamps. In general clamping and unclamping leveling devices are eliminated.



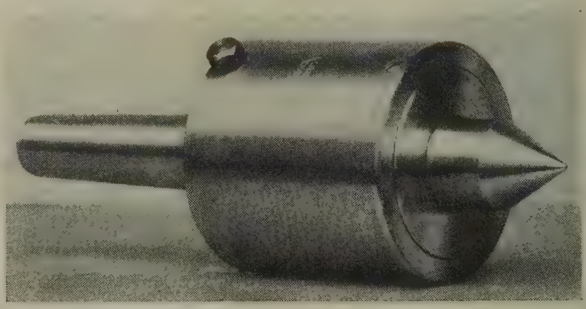
The Machine Is for Core Boxes Up to 14 In. Wide, 24 In. Long, 7 In. Deep, With 4-In. Draw

---

Anti-Friction Center for Heavy Loads

An anti-friction center, designated as the Supercenter and available in load carrying capacities up to 3 tons, has been added to the line of the Snellex Mfg. Co., Rochester, N. Y.

Features of the device, which is illustrated herewith, include automatic takeup of the expansion of the work by means of a hardened steel cushion. Lubrication is not required at the center point because two tapered roller bearings eliminate the wear between the point and the work. Wear of the roller bearings is taken up automatically. A strainer at the bottom of the oil hole serves to remove solids from the oil. Shanks can be made to any taper and any type of center point, for turning car axles, crankshafts, gears and other work, can be furnished.

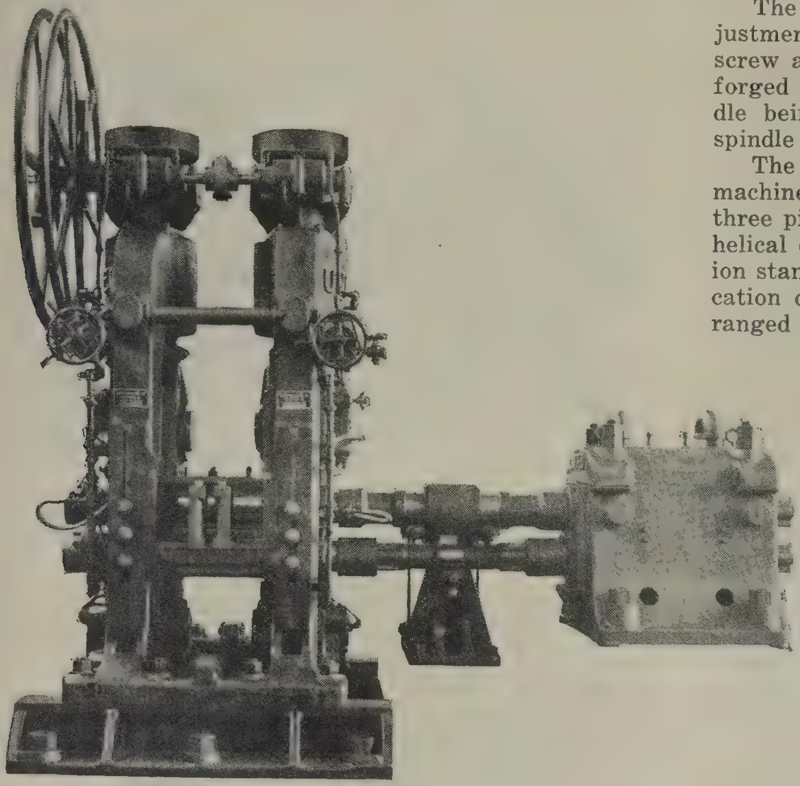


Roller Bearings Eliminate Wear Between the Center Point and the Work

TWO-HIGH HOT STRIP MILL

Large Roller Bearings Resemble Backing-Up Rolls—Better Production

SOMETHING different in hot strip mills has been developed by the United Engineering & Foundry Co., Pittsburgh. It is a two-high mill, which looks like a four-high mill because the roll necks are practically a continuation of the body and run on the large roller bearings, which give the appearance of backing-up rolls, as in four-high mills.



Large Roller Bearings in Each Half of the Housing, Above and Below the Rolls, Give the Appearance of Backing-Up Rolls. Fine screwdown adjustment, for rolling hot strip steel within narrow limits, is another feature

Side thrust is taken care of also by roller bearings. These side roller bearings are pivoted from the housings of the large roller bearings and are adjusted against the roll neck by large bolts, the heads and locknuts of which may be seen on the edge of the mill housings. The mill rolls are thrust against the large roller bearings by hardwood wedges, which are fed in between them by large center adjusting bolts, also showing on the edge of the housings.

Equipping the mill throughout with adequate roller bearings materially reduces power consumption, while maintenance of gage is made easier. Upkeep is reduced, as roller bearings do not wear appreciably, and production is speeded up. The mill is a 10½-in. by 18-in. hot strip mill and is guaranteed to roll 4 in. wide by 0.035 in. thick, hot, high-carbon steel with a variation from center to edge of not over 0.0005 in. in thickness.

The hand-operated screwdown is built for fine adjustment, has a separate handwheel for each housing screw and has drum-type indicators. The spindles are forged steel with machined wabbler ends, the top spindle being of the Flynn patented friction type. The spindle carriers are of the spoon type, spring balanced.

The pinion housing is a one-piece casting with machined windows and cast iron babbitted bearings in three pieces. The pinions are forged steel, with double helical cut teeth and machined wabbler ends. The pinion stand is fitted with oil baffles to insure proper lubrication of the pinion teeth, while the bearings are arranged for either oil or grease lubrication.

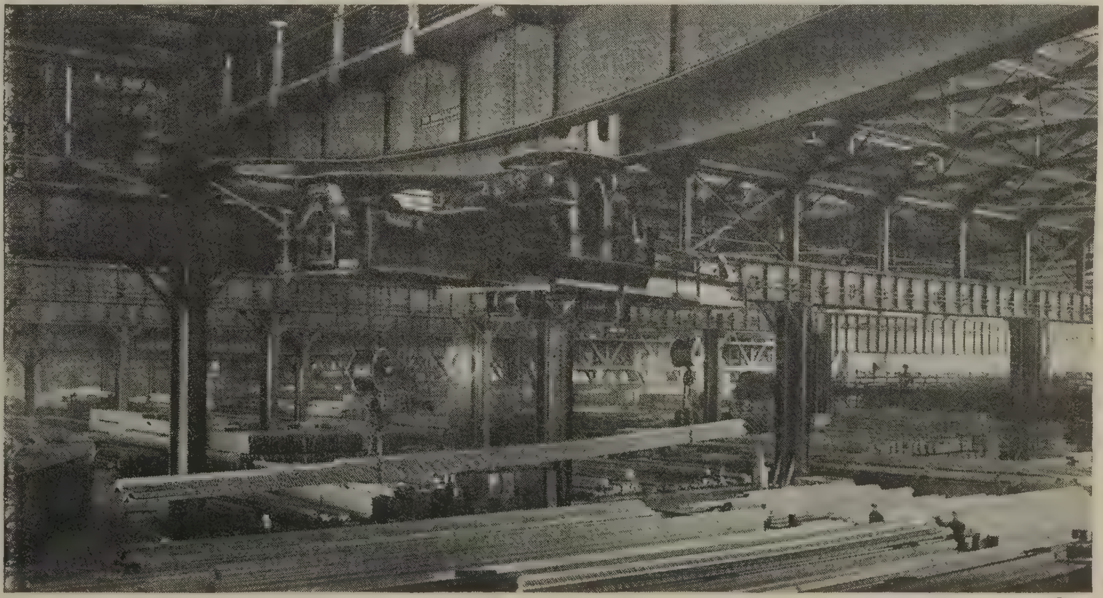
The roll stand is equipped with a large grease gun on each housing, with leads to all bearings, flexible hose being used for all parts which have not a fixed location. The mill is fitted also with adjustable entering and delivery guides, and altogether makes a compact and complete unit.

Swiveling Crane of Unusual Type

To accommodate mill shipping conditions in the new structural mills of the Carnegie Steel Co. at the Homestead works, Munhall, Pa., three 20-ton overhead traveling cranes of unique design are in use. Each crane has a rotating arm or beam with a 10-ton hoist at each end. The beam is swiveled from a turntable on the trolley and is under easy control of the operator. It is rotated with the full 20-ton load, and either end may be used to its capacity of 10 tons, without any load at the other end, and without upsetting the equilibrium of the beam. This quality is important where a load is to be picked up in a bay adjacent to that in which the crane operates.

Steel from both the 36-in. structural mill and the 52-in. mill rolling the new Carnegie beams approaches the shipping bay on a line running east and west. The

Swiveling Crane in the Shipping Yard, Serving Both the Standard Beam Mill and the H-Beam Mill. There are three of these cranes, each of 20 tons, having a 10-ton hoist at each end of the swiveling beam



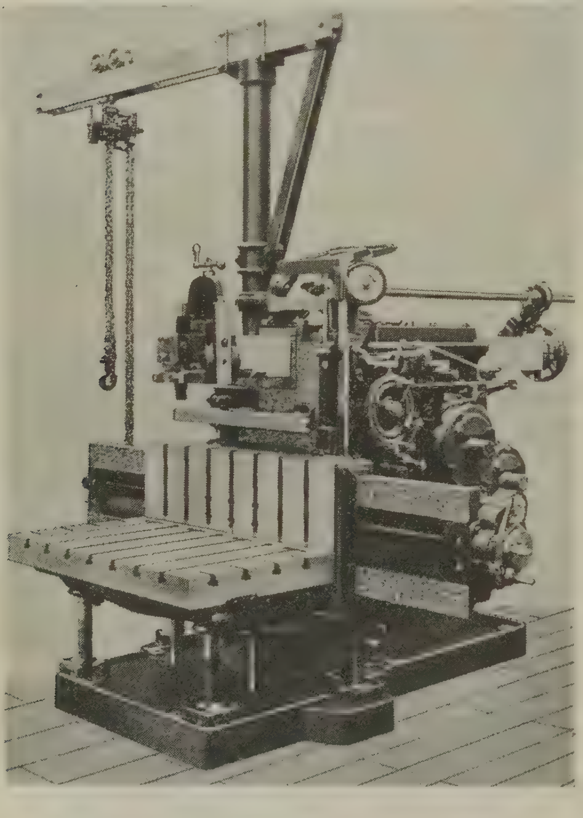
car tracks in the shipping bay, however, because of space conditions and other limitations, are on a line running north and south. Consequently, all beams have to be turned through an angle of 90 deg. for loading. That is the reason for the swiveled arrangement on the cranes in that bay.

Some of the steel shipped from that location goes out in the new 65-ft. gondola cars which were described briefly in THE IRON AGE of April 19, page 1090. These are used primarily to avoid the expensive blocking required in shipping long lengths of steel on two adjacent cars. A general description of the new Carnegie beam mill was carried in THE IRON AGE of May 17, page 1380.

Draw-Cut Planer for Railroad Work

For machining the frame fits in guide yoke tie braces and cross tie braces, the Morton Mfg. Co., Muskegon Heights, Mich., has brought out the high-duty draw-cut planer here illustrated. In addition to the special purposes for which it was designed, the planer is offered also for the machining of the guide fits on back cylinder head blocks, locomotive deck castings, the casting units between cylinders and other railroad work.

The machine has a cutting stroke of 38 in., horizontal or side feed of 60 in., and vertical feed of 21 in. Rapid traverse, both horizontal and vertical, are provided and all feeds are automatic and may be changed while the machine is in operation. The machine is of the four-screw type which permits convenient handling of large and bulky castings. It has a rotating arbor for slotting and finishing driving boxes and will accommodate all of the company's special attachments for railroad work.



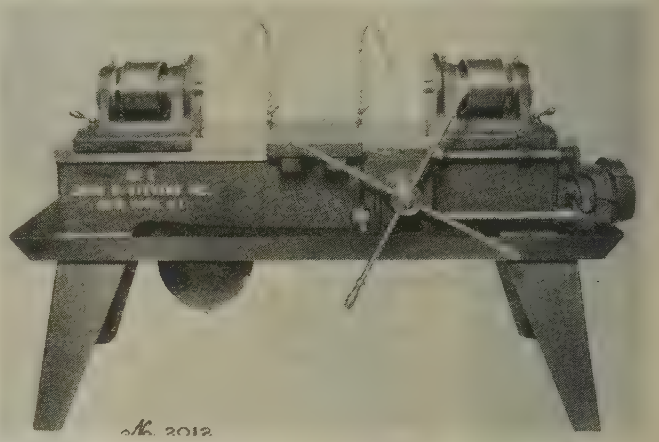
Draw-Cut Planer for Machining Frame Fits in Guide Yoke Tie Braces, and Other Work

To Exhibit Steel Mill Novelties

The Westinghouse Electric & Mfg. Co. exhibit, at the exposition in connection with the annual convention of the Association of Iron and Steel Electrical Engineers, will feature a new definite time-limit steel mill controller to be operated in connection with a type MC mill motor. An animated, electrically lighted diagram will show graphically the operation of the contactors and the motion of the armature during acceleration and plugging. Another feature will be an electrically motivated roll table, which will be operated and reversed automatically by having the billet interrupt the passage of a ray of light to a photo-electric cell.

Double-End Drill with Ball-Bearing Mounting of Spindles and Shafts

Ball bearing mounting of the spindles and other revolving parts is a feature of a No. 2 Duple horizontal drilling machine, for drilling, boring, beveling, chamfering, reaming, facing and for some classes of threading and tapping, which has been placed on the market by John B. Stevens, Inc., 27 Cleveland Place, New York. Maintenance of original accuracy of alinement, ease of operation and added power, due to the use of ball bearings, are claimed for the machine.



Construction of the Bed, Heads and Other Units Is Intended to Provide Lasting Accuracy of Alinement

The bed is deep and massive, has four wide cross braces, and Vees are of large proportions to assure maintenance of spindle alinement. The heads are also of massive design and are gibbed to the bed-Vees with adjustable taper gibs. The spindles revolve in ball bearings which take both radial and thrust loads. Cross slots engage the tangs of drills, which may be ejected by means of a knock-out rod.

Each head is fed by means of a 1½-in. diameter square-thread screw, the screw being mounted in ball bearings beneath the heads. A cross-shaft, also provided with radial and thrust ball bearings, carries a helical bevel gear, which meshes with two helical bevels, one on each of the head driving screws. The front end of the cross-shaft carries a bronze worm gear which is driven by a hardened steel worm on the worm shaft. The latter, which extends to the right as shown in the illustration, is through gears by means of a belt drive from the right-hand countershaft. Four change gears are furnished to permit three different feed changes. A safety shear pin is provided, as well as hand and automatic trips for the feed and a positive stop. Two countershafts, one for each head, are furnished.

Plain or back-geared heads may be provided on the machine. The swing over the Vees is 14 in. and the distance between spindles is 36 in., maximum, and 10⅜ in., minimum. The drilling capacity of the plain head machine in cast iron is 1⅛ in. and in steel, ⅞ in., the capacity of the back-geared head unit being 1½ in. in cast iron and 1⅛ in. in steel. Feeds of 0.003, 0.0065 and 0.014 in. per revolution of the spindle are obtainable on the plain head drill, and 0.0045, 0.0105 and 0.014 in. on the back-geared head machine. The floor space occupied is 24 by 80 in. The weight of the back-geared head unit is 2600 lb.

Electrically Welded Chain for Hoist

Great strength and great ability to withstand wear are demanded of the chain in a chain hoist. It must not stretch under heavy loads. A high-carbon, electrically welded chain is now being made for the Tribloc hoist of the Ford Chain Block Co., Second and Diamond Streets, Philadelphia. Every link is proof tested. When the chain is assembled it is again tested and must show an overload of 50 per cent above its rated capacity. Hoists are built in capacities from ¼ ton to 20 tons.

RACKS FOR SHOP RECORDS

Folds, Wrinkles and Other Damage Eliminated in Loose Leaf System

BETTER preservation of drawings, maps, records, etc., has been obtained by hanging up or suspending such sheets in specially constructed racks which have been developed by the Globe-Wernicke Co., Cincinnati. Adoption of this system has reduced sheet friction to a minimum, has eliminated unequal and extending edges and has made folds and wrinkles much less frequent and less detrimental. One system was inspected recently which had been in daily use for over 40 years. The sheets were exceptionally well preserved and the only replacement was due to thumbing the corners.

The usual method of suspension is accomplished by consolidating sheets between binders so as to form a book which is hung from a rack, mechanism being employed that permits the removal of any book. Binders, however, have not been found entirely satisfactory because of the labor in gaining access to individual sheets which must necessarily be thumbed in the process.

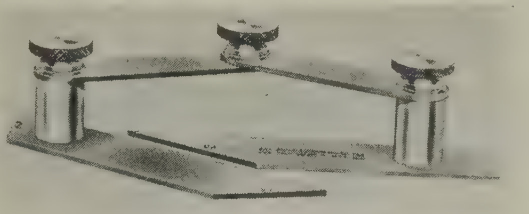
Ready Accessibility of the Filed Drawings Is Shown in This Illustration

Binders and all such accessory equipment are eliminated by the application of a loose leaf clip to the individual sheets, the clips being attached to the sheets by adhesion. The clips are snapped over horizontal rods, as shown in the accompanying illustration, and are thicker than the sheets so that there is an air space between adjacent sheets. Dust does not adhere readily to the vertical sheets and there is no sheet friction to rub into the sheets the dust that may have accumulated when the sheet was out of the file. A feature of the system is the fact that the entire surface of every sheet can be exposed for reference without removal from the file.

Suspended individual sheet filing lends itself to the application of a time-saving index. A numerical index is made possible by suspending guide cards by means of two loose leaf clips. A guide with green angle tabs is hung every 100 sheets and guides with yellow angle tabs mark the 25, 50 and 75 subdivisions. The visibility of the colored guides leads the seeker directly to the group of 25 drawings in which the desired sheet is located. If the consecutive drawing numbers are placed in the location, the sheet may be "flared" and a series of numbers exposed for the quick selection of any sheet. When drawings are removed from the files, cards bearing the word "out" can be used to replace the drawings.

Improved Combination Bevel

Unobstructed view of any angle at which the blades may be set, because of the height of the two posts, is a feature of an improved combination bevel for tool and pattern makers, which has been placed on the market by the Brown & Sharpe Mfg. Co., Providence. The posts give clearance for scribing or drawing lines the full length of the blades and also make possible the use of the blades on alternate sides of a projection up to ⅞ in. high.



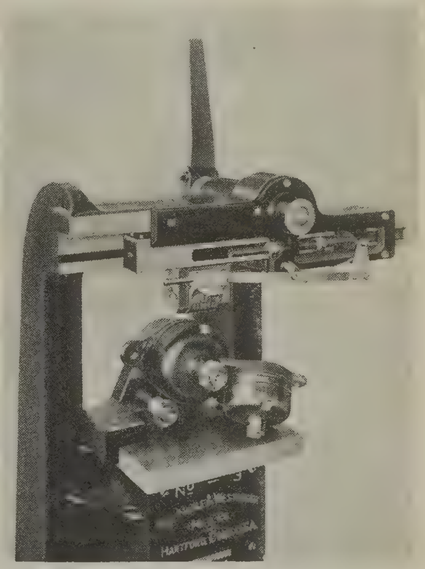
The Angle at Which the Blades Are Set May Be Seen Conveniently

The back of the tool is flat and the tool can be laid directly on the work. The clamp nuts are designed so that the blades may be moved freely without looseness, or locked securely by tightening the clamp nuts. The blades, ground on all sides, are of steel, and the ends are ground accurately to angles of 30, 45, 60 and 90 deg. To decrease the weight of the tool the posts are made of a light metal. The tool is designated as the No. 502.

Numbers Parts with Curved Surfaces

Marking equipment developed by the Noble & Westbrook Mfg. Co., East Hartford, Conn., for the serial numbering of pieces having curved surfaces is shown in the accompanying illustration. The equipment consists of one of the company's standard hand-operated marking machines equipped with a special work-head and work-holder. The machine illustrated is being employed in marking hydraulic shock absorber parts.

A Special Work-Head and Work-Holder Are Used. Change of numbers is by an automatic tripping device

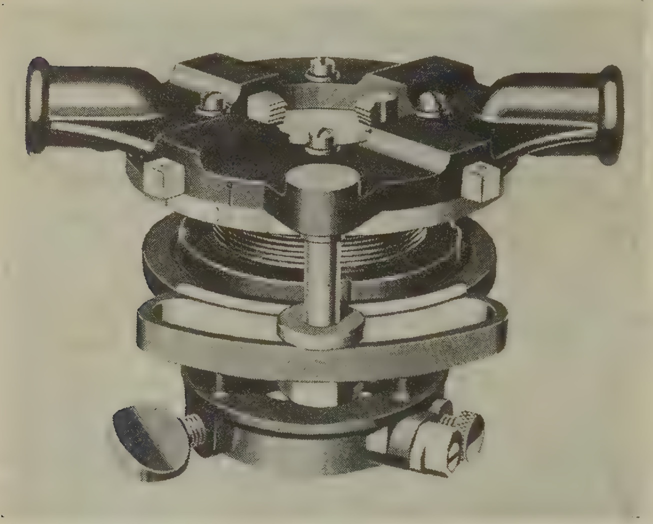


The numbering head is fitted with a special shank to adapt it for use in the marking machine, and an automatic tripping device attached to this head serves to change the numbering device to the next highest number after a mark is made. The marking of the serial number is accomplished by the forward stroke of the numbering head over the part to be marked, this part revolving on its own center on roller bearings. The wheels in the numbering head may also be operated independently by disengaging the tripping device, in case duplicate numbering is required.

Self-Contained and Adjustable Die Stocks

The Borden Co., Warren, Ohio, is bringing out two new self-contained and adjustable 1 to 2-in, die stocks, designated as the No. 11 Beaver plain tool and No. 11A Beaver ratchet tool, respectively. The former supersedes the previous No. 25 Beaver plain tool; and No. 11A supersedes the No. 26 ratchet tool. Although of as durable construction, the new die stocks are lighter in weight than the previous models and are easier working and of simpler design.

One set of dies can be rapidly set to thread 1, 1¼, 1½ or 2-in., and, being in the tool, ready for use, the dies cannot become lost or mislaid. Dies are quickly adjusted to thread under or over standard sizes, without affecting the length of the thread. Special dies are not required for threading brass pipe.

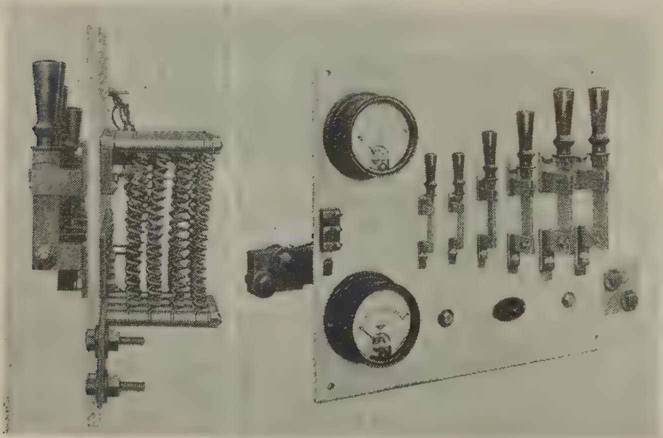


One Set of Dies Can Be Set Quickly to Cut 1, 1¼, 1½ *or 2-In. Threads*

The threading dies in the new tools are of alloy steel, and are heat treated. The die-head and threaded barrel of the tool are separate parts. The work-holder or pipe-gripping device is of new design and is said to center the pipe with unusual accuracy. Two knurled screws, which serve to hold firmly to pipe size, can be set quickly, leaving only the thumb screw to be tightened after the die stock is placed on the pipe. Loose bushings have been eliminated. After the work-holder has been set to size only a straight thread can be cut, although the holder may be adjusted conveniently for cutting crooked or drip threads if desired. It will also grip any size coupling for threading short nipples. All parts of the die stock are made on the interchangeable basis, facilitating renewals of parts.

Improved Plating Tank Rheostat

An improved type of plating tank rheostat, named the "Optimus," has been placed on the market by the Hanson-Van Winkle-Munning Co., Matawan, N. J. The rheostat is intended to facilitate the regulation of plating baths, and simplify the operation of chromium, nickel, copper, brass, cadmium, zinc, tin and other plating solutions.



Mounting of the Plating-Tank Rheostat Resistance Coils on Studs Back of the Panel Board Is Intended to Provide Better Ventilation and Eliminate Loosening of the Coils

The construction is according to power apparatus standards. Mounting of the resistance coils on studs back of the panel board is intended to provide better ventilation, increase the overload capacity and eliminate loosening of coils. Standard knife switches are employed. The type REI rheostat is equipped with voltmeter and ammeter mounted on the rheostat panel, and the instruments and shunt are said to be arranged to prevent distortion of meter readings. The voltmeter permits the plater to read, not only the line voltage, but also the voltage drop from anode to cathode directly at the tank, the latter reading being of importance in determining the conductivity of the solution. The ammeter provides visual indication of the total current passing through the solution, so that with a known cathode surface exposed the current density may be calculated readily. With this calculation made, the amount of deposit in a given time is easily and definitely determined.

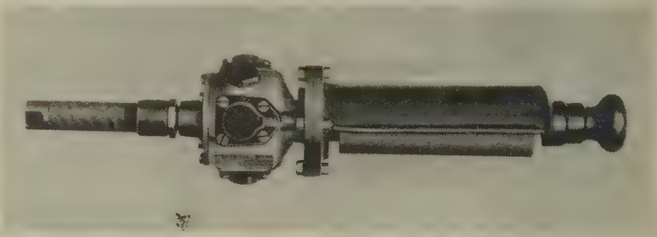
Electrical ratings of the Optimus rheostats have been developed around the standard electrical ratings of single-pole knife switches, and the resistance steps controlled by the knife switches are designed so that in normal service neither the resistance step itself nor the knife switch carries more than its rated capacity. These tank rheostats are mounted on asbestos panel boards of sturdy construction.

Portable Pneumatic Rod Grinder

For grinding and polishing locomotive side and main rods and valve motion rods, the Ingersoll-Rand Co., 11 Broadway, New York, has made available a portable pneumatic rod grinder designated as the size 63. The tool is designed to use a 6-in, grinding wheel and is provided with an outboard bearing and hand grip.

Other applications in the railroad shop include grinding welds on side rods, grinding brasses to fit main rods, grinding jaws in main rods to smooth them up for new brasses, grinding frame jaws for reseating wedges and grinding holes in frames for refitting brake pins.

In general design, the machine is similar to the other grinders manufactured by the company. The motor has three cylinders spaced about the center line of the spindle, all delivering power to one crankpin. This arrangement, together with a counterweighted crank, is intended to minimize vibration and assure a steady torque at the spindle. Each of the three cast-iron cylinders is separate from the aluminum case. The cylinders are interchangeable and may be removed readily for replacement.



Although Designed for Use on Locomotive Side Rods and Brasses, the Tool Is Adapted for Any Wide Surface That Is to Have Smooth Finish

The valve, crank and spindle are of one piece and the crank spindle is supported by three sets of ball bearings. The grinding wheels employed are 2½ in. in diameter and the average free speed is 6000 r.p.m. The length overall is 23¼ in. and the weight of the machine is 23¼ lb.

Dealer-manufacturer relations, standardization of price sheet sizes, and the appraisal system of handling the used tool problem were discussed by 34 members of the Associated Machine Tool Dealers at a three-day meeting held May 23, 24 and 25 at Granville, Ohio.

NEW FINISHING MILLER

Bearing Surface, Fillets and Ends of Car Journal Bearings Machined in One Operation

FOR finishing the bearing surface, fillets and ends of car journal bearings in one operation, after being babbitt lined, the Morton Mfg. Co., Muskegon Heights, Mich., is offering the new finishing miller here illustrated.

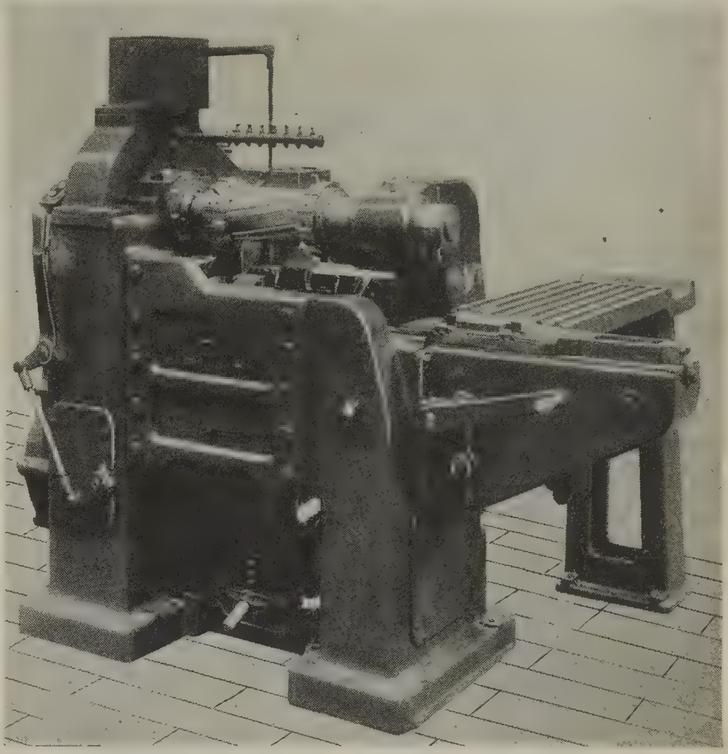
The column, of box construction, is designed with fixed center distance for the shaft and gear journal bearings in order to assure alinement at all times. The chuck for holding the brasses has rotating jaws, which open and close automatically as the chuck is raised and lowered to and from the cutter. It is fitted to a trunnion bearing between the columns and the side plates. The chuck is raised and lowered by a quill which is threaded at its lower end and is provided with locknuts for raising and lowering the connecting members for the purpose of adjustment when setting bearings of different sizes. The steel jaws furnished for various sizes of bearings may be mounted and removed conveniently. The locknuts on the quill have eight slots for the spanner wrench and when making vertical adjustment the movement from the center of one slot to another is 1/64 in.

Power for raising and lowering the chuck to and from the cutter is applied through levers and adjustable connections and through a shaft. The cam employed for raising the work to the cutter is designed so that the work moves up quickly until it comes in contact with the cutter, when it feeds the cutter in the normal manner. At the finish of the cutting operation the chuck lowers rapidly, automatically releasing the jaws and leaving the work free to be removed. Power is transmitted to the cam from the arbor through gears.

The eccentric adjustment applied to the trunnion provides means for raising the work for a second cut, when required. The controlling quadrant has three notches, each giving 0.026 in. adjustment. When because of shrinkage the bearing does not clean out perfectly in the first cut, the lever may be adjusted a notch as the chuck returns to its down position, and a second cut made without removing the work. The lever may be adjusted for third and fourth cuts where necessary.

The main driving arbor is hollow and has adjustable bronze bearings. The cutter arbor is fitted and feather keyed, permitting adjustment sidewise for alining with the work. The arbor and shafts are ground true where required. Bearings are bronze bushed and those in the main column are oiled automatically. Gears are cut from the solid and both gears and pinions are inclosed and run in oil. Lubrication of the cutter is by a gravity system.

A bearing loading column attached to the right-hand column of the machine enables the operator to place the work on the outside, eliminating any chance of injury from the cutter. The arbor journal bearing is secured to the side extension of the column, as shown, which arrangement provides a clear opening for loading and unloading the work. The bearing is on a sliding plate, and by moving a lever provided for the purpose, to left, it is set in operating position and centered with the cutter. After the cutting cycle has been completed, the lever is moved to the right and the bearing positioned for unloading.



The Loading Carriage on the Right-Hand Column Eliminates Danger to the Operator From the Cutters. With the chipping and inspection bench, only one lifting of the bearing is necessary during the entire finishing process

A chipping and inspection bench with interchangeable V-blocks for bearings of various sizes can be attached to the loading bracket, the arrangement being as shown in the illustration. The machine may be driven by constant-speed motor with starting and stopping controlled by a push button. The motor is mounted on a bracket at the rear of the machine.

High-Frequency Electric Grinders

A series of high-frequency electric grinders for speeds of 5400 to 10,800 r.p.m., and designed to use wheels ranging from 1 to 5 in. in diameter, has been added to the line of Forbes & Myers, Worcester, Mass.

One of the machines, the No. 204, a 5400-r.p.m. double-end unit with ¾-hp. motor, for operation on 180-cycle current, and designed to carry 3 to 4-in. wheels, is shown herewith. The spindle is ¾ in. in diameter at the wheels and is 23 in. long. Four ball bearings are used, with a large reservoir for grease between the two bearings in each arm. The wheel flanges are 2 in. in diameter. The motor is of the squirrel-cage induction type, fully inclosed and, except for the necessary changes in winding, is exactly like the usual induction motor for 1800 and 3600 r.p.m.

A ¾-Hp. Motor for Operation on 180-Cycle Current Is Employed. Wheels 3 to 4 in. in diameter may be used

Grinders of similar design but with the arm on one end only, or without the supporting arms, are also being offered. In the higher speeds the machines can be furnished with a threaded hole in the end of the spindle for attaching the grinding wheel. They are available in sizes from ¼ to 2 hp., for any high-frequency current.

An advantage emphasized in connection with the use of high frequency motors is that suitable speeds are secured without the use of belts or gears. The wheels are mounted directly on the motor spindle.

Bituminous coal mined in the United States in the week ended May 26 is estimated by the National Coal Association at about 8,300,000 net tons. This compares with 8,183,000 tons reported by the Bureau of Mines for the preceding week and 8,392,000 tons for the week ended May 12.

Montreal, New Haven and Cleveland Steel Treaters Name Officers

At the annual meeting of the Montreal chapter of the American Society for Steel Treating, held on May 19, Robert Job, vice-president Milton Hersey Co., was elected chairman; Fred H. Williams, assistant test engineer Canadian National Railways, vice-chairman; Gordon Sproule, assistant professor at McGill University, treasurer, and Duncan G. MacInnes, associate editor *Engineering Times*, secretary. The following were made members of the executive committee: Robert J. Noakes, superintendent Canadian Pneumatic Tool Co.; T. C. McConkey, vice-president B. J. Coghlin Co.; W. J. Hall, Montreal manager Production Materials, Ltd., and John K. Schofield, secretary-treasurer Edgar Allen & Co., Ltd.

The New Haven, Conn., chapter has elected officers as follows: Harold Fish, secretary and treasurer Ready Tool Co., Bridgeport, Conn., chairman; Thomas H. Chamberlain, metallurgist New Haven Clock Co., New Haven, vice-chairman; Fred E. Stockwell, lubricating engineer Standard Oil Co. of New York, New Haven, secretary, and Walter G. Aurand, metallurgist R. Wallace & Sons Mfg. Co., Wallingford, Conn., treasurer. The new executive committee is made up of Benjamin T. Baker, superintendent of heat treating, Bellis Heat Treating Co., Branford, Conn.; Robert L. Baldwin, metallurgist American Tube & Stamping Co., Bridgeport; Julius E. Brooks, foreman heat treating, Sargent & Co., New Haven; Percy L. Clark, master mechanic Bridgeport Brass Co., Bridgeport; Fred J. Dawless, district sales manager Crucible Steel Co. of America, New Haven; W. Paul Eddy, Jr., metallurgist Geometric Tool Co., New Haven; Rolland G. Hall, assistant superintendent R. Wallace & Sons Mfg. Co., Wallingford; James T. Kemp, metallurgist American Brass Co., Waterbury; Henry G. Keshian, metallurgist Chase Cos., Inc., Waterbury; Arthur Phillips, assistant professor of metallurgy Yale University, New Haven; Raymond T. Porter, superintendent heat treating Heppenstall Forge Co., Bridgeport; Carl J. Sauer, general manager Heppenstall Forge Co.; and Russell S. Young, metallurgist O. K. Tool Co., Shelton. W. Paul Eddy, Jr., has been made delegate to the national nominating committee; Walter G. Aurand, alternate.

The Cleveland chapter has elected D. M. Gurney, metallurgist Warner & Swasey Co., chairman; W. H. White, manager Cleveland branch, Atlas Steel Corporation, vice-chairman, and J. S. Ayling, sales manager Case Hardening Service Co., secretary-treasurer. W. E. Benninghoff, Cleveland Electric Illuminating Co.; W. T. Donkin, metallurgist Cleveland Wire Spring Co.; A. Jenkin, Case School of Applied Science; E. M. Slaughter, metallurgist National Acme Co., and H. H. Smith, superintendent of open-hearth for the Bourne-Fuller Co., have been named members of the executive committee.

Slight Reduction in Steel Works Employment

Employees in 196 iron and steel establishments in April numbered 264,386, compared with 264,526 in the same establishments in March, according to a report of the United States Bureau of Labor Statistics. The reduction is less than 0.1 per cent. There was a reduction of 2.4 per cent in the weekly payroll, which fell from $8,444,983 to $8,239,876.

An increase is reported both in employment and in wages in 990 establishments listed as foundries and machine shops. Employees went up from 229,425 to 231,801, or 1 per cent, while the payroll per week advanced 0.4 per cent, from $6,919,257 to $6,948,964. Machine tool plants, numbering 150, showed a gain of 2.7 per cent in employees and 3.3 per cent in payroll. Employees advanced from 28,835 to 29,609 and one week's payroll from $939,173 to $970,290.

For the entire number of establishments reporting in all industries, there was a reduction in employment from 3,019,966 to 3,005,964 in 10,788 establishments. The weekly payroll declined from $82,463,420 to $81,116,831.

Foundry Research Fund Established in Wisconsin

A fund of $15,000 for research in foundry metallurgy has been established by a group of Wisconsin foundries for the use of the college of engineering of the University of Wisconsin at Madison, and the board of regents has signified its acceptance. The foundries participating are: Falk Corporation, Bucyrus-Erie Co., Harnischfeger Corporation, Sivyer Steel Casting Co., Wehr Steel Co., National Brake & Electric Co., George H. Smith Steel Casting Co., and Milwaukee Steel Foundry Co., all of Milwaukee; and the Racine Steel Castings Co., Racine, Wis.

The research committee of the group, of which Harold S. Falk, vice-president and works manager Falk Corporation, is chairman, made the offer. Under its terms, the manufacturers will contribute $5,000 annually for three successive years. Each company is giving an equal share and all will benefit equally from the results.

A problem in metallurgy already has been suggested for the university to work out. It is expected to require a large part of the three years for completion, but if it should be finished before that time, another problem will be submitted. If the plan works satisfactorily and the results are encouraging, it probably will be continued after the three years. The research group of the nine concerns will meet regularly in Milwaukee to discuss shop problems and to confer with professors from the university on the progress of their experiments.

Announcing the acceptance of the gift, M. E. McCaffrey, secretary of the regents, said that just as the college of agriculture is assisting farmers in research work, so will the college of engineering aid manufacturers.

Chemical Properties of Crystals

The annual May lecture was delivered before the Institute of Metals in London on May 8 by Prof. C. H. Desch, on "The Chemical Properties of Crystals." After referring to the light thrown on the mechanical and physical properties of crystals by modern ideas as to the atomic structure of matter and the internal structure of the atom, the lecturer discussed the various ways in which atoms may be held together in a crystal by the simple exchange or sharing of electrons or by residual forces. In rock salt the molecule has disappeared, but there are many substances which are built up of molecules in the solid as well as in the liquid state. In a few simple cases it has been found possible to calculate the forces of attraction in a particular face of a crystal, and in that way the differing chemical properties of different faces possibly are explained. Such differences account for the varying habit of crystals of the same substance grown under different conditions.

When a metal is attacked by an acid, the surface is not dissolved uniformly, but distinct "etch-figures" are produced, and the shape of those must be intimately related to the internal structure of the metal crystals. The figures may vary in the most curious way when the solvent is changed, and that is shown most clearly by large single crystals of copper.

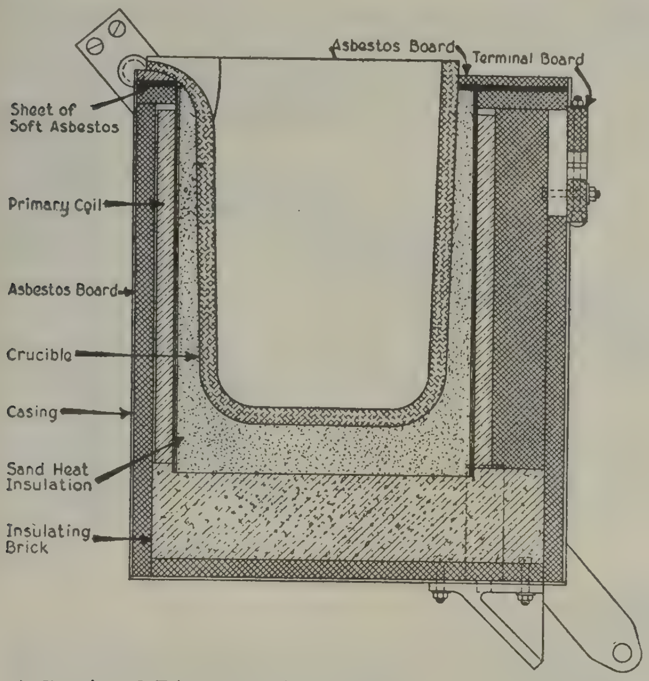
The compounds of metals with one another have puzzled chemists, as they do not follow the ordinary rules of valency, and have many anomalous properties. The modern view of the constitution of the atom makes it possible to explain them, and the relations which have been found between the forces of cohesion and of chemical affinity make it likely that there is a gradual transition from the simplest solid compounds, such as salts, through intermetallic and other compounds, to solid solutions which are regarded as mixtures.

The chemical properties of crystals are most easily illustrated by substances which do not consist of closely packed atoms, but have an open structure, such as graphite. Looseness of structure is also important for diffusion in solids, on which many technical processes depend.

New High-Speed Steel Made in Induction Furnace

British Firm Markets Tool Steels Made in Ajax-Northrup Furnace on Production Basis in 450-Lb. Heats

AN Ajax-Northrup high-frequency electric induction furnace with a capacity of 450 lb. per heat has been installed at the Imperial Steel Works of Edgar Allen & Co., Inc., Sheffield, England, and has replaced the crucible furnaces formerly used for the production of high-speed tool steels. The electrical installation consists of a 150-kva. motor-generator set, running at 3000 r.p.m. and delivering current at 1200 volts at a frequency of 2200 cycles. In order to improve the overall power factor a bank of condensers is installed to balance the current taken by the furnace. The furnace is said to take up to 900 amp. at a low lagging power factor, and the condensers are cut in by suitable switch gear to take a similar leading current. Circuit voltage is controlled by means of field rheostats at about 1200 volts.



A Sectional Diagram of a Coreless Induction Furnace

The high-frequency current passes through a water-cooled copper coil in the walls of the furnace and is efficiently insulated from the hot contents by asbestos linings. The clay crucible is also surrounded with sand. Very little heat can therefore be radiated from the crucible except through the cover. (A cross section of a coreless induction furnace of this general type is shown in the illustration taken from a recent issue of *General Electric Review.*)

One Hour Completes 450-Lb. Heat

Operation of the furnace is roughly as follows: The pot is warmed up by placing a piece of steel in it and turning on the electric current. The current passing through the copper coil induces eddy currents in the piece of steel in the pot. The currents heat the steel rapidly. When the heating is considered to be sufficient, the current is turned off, and the pot is allowed to absorb some of the heat. After this has been continued in brief alternations until the crucible is at a good temperature, the rest of the material to be melted is charged into the pot. Current is turned on, and in about an hour a full heat of 450 lb. of steel (which is the capacity of the furnace) is melted and ready to be cast into ingots. The current consumption for the first heat is at the rate of about 950 kva. per ton of ingots, and for subsequent heats at about 850 kva. per ton.

As soon as the metal contained in the pot is molten it circulates rapidly in a vertical plane, so its composition is maintained constant in all parts. Furthermore it is uncontaminated by gases of combustion or by carbon from electrodes. It is said that this vigorous mixing in a gas-free atmosphere has led the Ajax-Northrup furnace to be favored for laboratories for the ease with which experimental steels of definite analyses can be made up and cast. There is obviously no wear on the outside of the clay pot, which is so severe in the crucible steel furnace, but the circulation of the molten metal has a pronounced scouring action on its interior. Comparative figures taken from operation of a Heroult arc furnace operating on tool steels at the Sheffield steel plant show that electrode expense and cost of clay pots will be about the same.

Advantages Over Crucible Process

According to S. J. Hewitt, chief metallurgist Edgar Allen & Co., the advantages of the new furnace "over the crucible furnace are the smaller space necessary for its installation and its lower estimated cost of production, although the latter has not been finally proved yet, owing to the furnace's not having been worked to its full capacity. The resultant steel is also free from outside impurities, such as are common to the crucible process. The quickness of melting combined with the ease of control make it a remarkably useful and convenient method of melting."

It is interesting to note that this British firm, which has had extensive experience in fine steel making by both Huntsman's crucible process and Heroult's electric furnace, have issued trade literature claiming that the Ajax-Northup induction furnace produces steel of conventional analyses much superior than either of its predecessors. To quote them:

"The explanation is simple.

"(1) There is no contamination of the steel by gases, fuel or carbon electrodes. Sulphur and phosphorus, those deadly enemies of the steel maker, are eliminated to a greater extent than has ever before been possible.

"(2) Furthermore, there is a violent stirring of the molten metal electrically, which results in a thorough diffusion of the ingredients throughout the entire mass. This gives the steel greater homogeneity."

High-Speed Steel of Extra Durability Made in Induction Furnace

Special qualities are also claimed for a new brand of tool steel (called "Stag Major") made in this furnace. Whether it is substantially different in analysis from the tungsten-chromium-vanadium high-speed steels which are most favored in America, or from the English maker's other brands, is not clear from the description given. At any rate, it is said to be heat treated exactly as other high-speed steels.

Tests on single roughing lathe tools made by the Sheffield testing works gave the following results:

All tests:
Speed, 65 ft. per minute.
Depth, 3/16 in.
Feed, 1/16 in.
Lubricant, none.
Steel cut: 0.71 per cent carbon, normalized bar, Brinell hardness 235.

Time for failure:

14 per cent "Tungsten High-Speed Steel"	4 min. 30 sec.
18 per cent "Tungsten High-Speed Steel"	8 min. 12 sec.
"Special Super High-Speed Steel"	14 min. 6 sec.
"Stag Major High-Speed Steel"	23 min.

The Youngstown Sheet & Tube Co. has called a special stockholders' meeting for June 25 to approve a new issue of 250,000 shares of $100 par value preferred stock. Of this number, it is proposed to issue at this time 150,000 shares, to be designated as "Series A" bearing an annual dividend rate of 5½ per cent, and subject to redemption of $105 per share upon 30 days' notice. Present outstanding 7 per cent preferred has been called for redemption July 1, 1928.

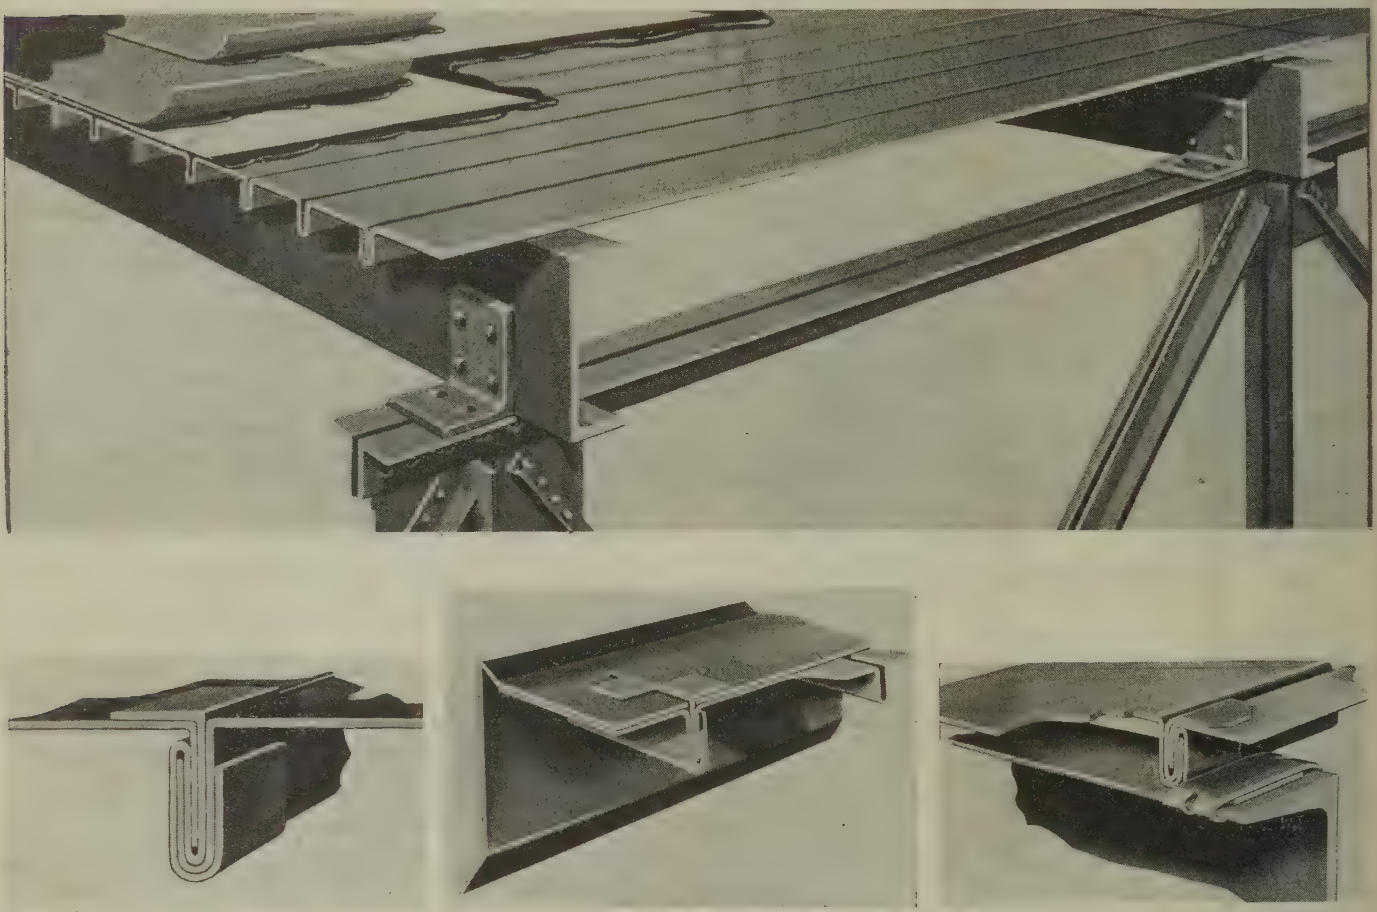
Steel Roofing System Erected with Standard Clips

A STEEL roof deck placed on the market by the R. C. Mahon Co., Detroit, and designed to be covered with water-proofing materials, is put out in standard sections with three standard clips, respectively for attaching to the purlins, for locking the plates together between purlins and for attaching flashings. Details of the attachments and of the standard plate are shown in the illustration.

All lap joints occur directly over the purlin, there being no end fittings in the installation. It is stated that the only tool needed to apply this deck is an ordinary hammer. The deck plate is furnished in copper-bearing steel No. 18 and 20 gage, painted a standard light gray. It can be furnished also in galvanized steel. The company has established No. 20 gage as the minimum thickness for satisfactory service.

When completed the deck functions as a single steel plate, as the separate units, when assembled, become an integral part of one interlocking whole. The end lap over purlins is standardized at 2 in., the plates being 12 in. wide with an intermediate rib 1½ in. deep. Every second rib, where adjacent sheets interlock, provides three thicknesses of metal. Each plate is locked with clips to the adjoining plate, to prevent sagging of individual plates from local loads. This feature avoids loosening of bond between the deck and the insulation or finish above it.

Included in the design are arrangements for taking care of saddles, flashings, fill, etc. Details have been worked out for a considerable variety of cases, including those in which ventilator openings go up through the roof, also where strainers and sumps are provided in the saddle, and where monitors, sawtooth construction and other roof types are used.



FOUR Standard Members Form the Entire Roof Above the Purlins. In the assembly view at top the ribbed deck plates are shown; below are the three forms of clips. That at left is the "intermediate" clip, used for locking the roof deck plates together midway between purlins. In center is the "flashing" clip, for attaching flashing to the deck plates. At right is the "beam" or "purlin" clip, for attaching the deck plates to the purlins, in this case a channel

---

Birmingham Producers Protest Consolidated Southwestern Decision

WASHINGTON, June 5.—A protest against the decision of the Interstate Commerce Commission in the Consolidated Southwestern cases has been filed by the Alabama Iron and Steel Shippers' Conference, Birmingham, an association of iron and steel producers, which contends that the relationships prescribed on manufactured iron and steel from Alabama producing points are not justified. The petition asks that the commission modify the decision to prescribe the same scale from Birmingham and other Alabama producing points as from Chicago and other points in Central territory. It suggests that this be done by providing a maximum scale from the Alabama points and, if necessary, a minimum scale from producing points in Central territory. It is further urged that the commission revise the grouping of the Southwestern destinations so that there will be a uniformity of the relationships, distance for distance, between the Alabama producing points on the one hand and the producing points in Central territory on the other.

The decision, which has been protested by Northern iron and steel producers also, changed the long existing adjustment of iron and steel rates to the Southwest territory, and applied a grouping arrangement based on a mileage scale which, from Birmingham and other Alabama producing points, is different and on a higher level than from producing points in the competing territory on and north of the Ohio River. The commission, when considering this point previously, declared that the differences "are no greater than necessarily result from the application of river crossing allowances at crossings south of Cairo."

Machinery Exports Continue Heavy

Four-Month Total Over $10,000,000 Ahead of Last Year—Imports About Same as in 1927

WASHINGTON, June 2.—Exports of machinery of all kinds from the United States in April were valued at $37,375,868, compared with $42,372,463 in March and with $39,771,065 in April of last year. For the four months ended with April the value was $151,951,340, against $141,739,716 for the corresponding period of last year. Exports of industrial machinery in April, 1928, were valued at $17,412,396, against $19,026,074 in March, while the value for April of last year was $18,940,682. For the four months ended with April exports of industrial machinery were valued at $68,901,637, compared with $67,986,656 for the first four months of 1927.

Exports of all power-driven metal-working machinery in April were valued at $1,827,938, against $1,960,407 in March and $1,796,305 in April of last year. For the first four months of the present year and 1927 the values were $7,818,034 and $5,737,327, respectively. Exports of power-driven metal-working machinery listed in THE IRON AGE table totaled 696 units, valued at $998,344, in April, against 740, valued at $1,103,000, in March.

Total imports of machinery and vehicles in April were valued at $2,427,259, against $2,433,564 in March and $2,667,832 in April of last year. For the four months of 1928 and 1927 the values were $8,977,710 and $9,649,088, respectively. Imports of machinery listed in THE IRON AGE table were valued at $1,935,751 in April, against $1,819,672 in March and $1,840,203 in April of last year. For the four months of the current year the value was $6,709,473, against $6,683,006 for the corresponding period of last year. Imports of industrial, office and printing machinery in April were valued at $1,378,840, against $1,404,786 in March and $1,416,598 in April of last year. For the four months of the present year and 1927 the values were $5,227,413 and $5,372,970 respectively.

German Firm Now Offering 15 Types of Steel Dwellings

WASHINGTON, June 5.—Steel dwelling houses are now offered for sale by a firm in Gleiwitz, Upper Silesia, Germany, where they are manufactured, according to a special circular just issued by the iron and steel division, Department of Commerce, and based on a report prepared by Lester L. Schnare, consul, Breslau. The circular is one of a number circulated by the division regarding the growth of steel house construction in Europe. The Gleiwitz firm has published a catalog describing 15 types of steel dwelling houses which it is prepared to sell and is attempting to introduce in southeastern Germany. So far it is the only firm in Silesia to undertake construction of dwelling houses of steel. The circular details specifications of the types of houses built, and it is stated that they are so constructed that they may be taken down and moved quickly and easily, thus making them suitable for use on construction jobs and for similar purposes where permanence is not a requisite.

This Issue in Brief

Accident rate in metal industries drops 25 per cent. In 1927 the number of accidents per million hours of exposure was 26.59, as compared with 35.45 in 1926. Severity rate was sharply reduced also. — Page 1595.

Improves quality of gray iron castings and cuts fuel cost 50 per cent by firing cupola with powdered coal. Sulphur is reduced 20 to 30 per cent; total carbon is about 20 per cent less, and transverse strength and deflection of castings are about 15 per cent higher. The powdered coal is burned outside the cupola shell proper and the hot gases are fed to the melting zone.—Page 1594.

Too many oil grooves spoil the bearing, says bearing manufacturer. Every groove reduces the bearing area. Groove edges should be chamfered; otherwise the sharp edges will scrape the oil film off the shaft.—Page 1599.

Joint apprentice-training system is operating successfully in East Chicago. Under the supervision of the Chamber of Commerce, eight manufacturers conduct a community training program, which provides for shop, shop school, and high school instruction.—Page 1601.

Open-hearth difficulty with silicon comes not from high or from low silicon in the pig iron, but from a *change* in silicon content, either up or down. When the silicon content is approximately stable, good results are obtained in the steel.—Page 1602.

Production cost of high-speed steel will be lower in new electric furnace, metallurgist believes. In new high-frequency electric induction furnace, the current passes through a water-cooled copper coil in the walls, and is insulated from the hot contents by asbestos linings. A heat is completed within one hour.—Page 1619.

Machinery exports fall 7 per cent. April shipments out of country were valued at 37.4 million dollars. But shipments for first four months of year were more than 6 per cent above same period of 1926. — Page 1621.

Arc welding will soon be used on most structural jobs, structural engineer believes. Field work offers opportunities for the larger welding operations, he says, since many structural conditions are best met by that process.—Page 1604.

Perhaps it will be more economical to improve or replace the primary unit rather than to buy equipment to convert the waste heat into steam. When steam thus generated is not required, or when it is in excess of demands, study of returns from waste-heat recovery installation costs is apt to decide against such recovery.—Page 1605.

To guard against accidents, hoisting chains should be annealed at least once a year, says manufacturing executive. In addition, it is a good plan to have them tested at intervals by the chain manufacturer.—Page 1610.

You can not make good steel from inferior raw materials, says open-hearth man. A definite amount of carbon in the charge is necessary to melt and refine it. Sulphur and phosphorus can be removed from the bath in small amounts only, so that care should be used in limiting the quantities going into the furnace.—Page 1607.

Improved accuracy in machining operations removes the need for plasticity in the bearing metal, says bearing manufacturer. Harder steels call for harder bearings, giving longer life, he says. To get the right bronze for the particular application requires a careful study of all factors.—Page 1599.

Open-hearth furnaces heated with pulverized fuel are operated with no more difficulty than with producer gas, but not so simply as when oil is the fuel. By substituting arches for checkers, Eastern steel maker has solved the difficulty of checkers filling up with ash.—Page 1603.

"Teeming speed is the most important factor in steel-making," says British steel man. Slow pouring allows the metal to cool and to free itself of gases. Minimum satisfactory pouring time of 7200-lb. ingots is 6 min., he believes.—Page 1608.

New electric melting furnace will be elliptical in shape, 20 x 29 ft. Timken furnace will have six electrodes instead of three, in two groups of three each.—Page 1596.

"Competition never seriously presses those concerns which are distinguished by superior productive ability." By failure to utilize low-cost equipment and methods, many concerns find themselves "profitless" even in times of good business. As they continue to ignore improved methods, they not only stand still but really go backward, relative to the advance of their more progressive competitors.—Page 1625.

Accident rate among foreign-born employees proves six times that among native born workers. Examination of records of large plant reveals also that accident rate is less with newly employed men than with those of longer service.—Page 1625.

Lathe builders will charge for service on each machine sold. When service charges are included in the price of the machine, the buyer who makes unreasonable demands profits at the expense of the fair buyer, the lathe builders say.—Page 1627.

Flying Apace

TRULY the aviation industry goes at a breathless pace. In the morning's paper is first-page news about a trans-Pacific flight, trans-Atlantic flyers, and Lindbergh's surveys for the air-rail transcontinental passenger service. In the morning's mail is a news release from Carnegie Institute of Technology announcing extensive plans for an aeronautical engineering branch of the Department of Mechanical Engineering, in which more than half the sophomore class wishes to enroll. The same mail brings the "Aeronautics Trade Directory" from the United States Department of Commerce, and in it we see that there are already ten universities and engineering colleges which have preceded Carnegie in the new educational fashion.

Or, if you prefer to study at home, one of 17 correspondence courses is at your service. If you only want to know how to fly, without being bothered with theory of fluid flow and such abstruse matters, why then the addresses of ground and flying schools run to seven columns; they are found in every State in the Union.

After learning to fly you can get advice from 19 consulting aeronautical engineers and one consulting meteorologist; 18 insurance companies will write your policies; you can belong to 8 associations or subscribe to 23 magazines. You may buy a plane from any one of 113 manufacturers who are represented by an appropriately long list of distributers and dealers. You can buy special aeronautical first-aid kits from no less than three houses; and parachutes from the same number; also accessories and specialties too numerous to mention.

But, of course, you need a metal hangar. Forty-four firms specialize in such constructions. If you come to grief, 56 general service and repair firms (possibly for major operations) will patch you up; minor adjustments may be done at hundreds of airports.

Perhaps you want your flying done for you. Very well; there is a list which takes up 19 columns, of men and firms who will carry your mail or parcels, who will taxi you about or conduct sightseeing parties, who will advertise and sky-write for you, spray your orchards or dust your crops, do stunts and loop the loops, take your photographs from above, or survey and map any region on the earth's surface in which you are interested.

Who wants to walk?

Exit the "Vicious Circle"

COMMENT on the economic aspects of business often used to employ terms like "vicious circle" or "ascending spiral" or "descending spiral." It is noteworthy that in recent years such references have not been made and would have been quite unfitting, for the steadiness of trade has been at once a satisfaction to business men and a cause of confusion among cyclical forecasters.

In the former time the railroads now and then called for higher freight rates, alleging higher wage costs, whereupon comment promptly arose that higher freight rates would mean higher living costs and fresh labor demands. Or a time would arise when employers in general were disposed to reduce wages, alleging low selling prices, and then would arise criticism that lower wages would mean decreased buying power, lower commodity prices still, and then fresh wage reductions, all in a "descending spiral."

The period of relative stability has now lasted so long that there is good reason to believe we are in a new order of things. The changes are largely associated with wage rates, but in more than one respect. Employers have come to recognize the general economic advantage of wages being maintained. Thereby buying power is sustained. Labor turnover is diminished. Employers in selecting men have improved on the old way of retaining the best in the periodic shaking out. On the other hand there has been no labor shortage to bring about unduly high wages or unsound competition between employers, necessitating shortly a downward readjustment.

The increasing mechanization of industry has played an important part in steadying both wage rates and prices. The competitor can see little advantage in reducing wages, for the relation between labor cost and capital cost is reduced and the importance of manning the machinery well is increased. While employers are to be commended for becoming more enlightened, no small part of the change is due simply to the march of events.

The comparative stability of wages in recent years furnishes its own testimony to there being no spiral, ascending or descending, in operation. The commodity price indexes furnish other testimony. The composites have fluctuated but little, and every time there has been an upward or downward swing some individual commodities have moved in the opposite direction, whereas those spirals of the old days involved everything moving more or less together. Also the building records have been showing a stability quite beyond the average prediction. Nobody nowadays seems to hasten a building project to escape a higher cost or to delay one to secure the benefit of a decline.

The Supply of Scrap

HEAVY melting steel scrap prices of late have been at their lowest levels since 1921; and as liquidation falls heavily upon scrap a more illuminating comparison is that scrap prices are but a shade above their pre-war level. Freight rates are much higher and were there not improvements in the handling of scrap it would be impossible in many cases to move it at present realized prices.

Several factors combine to cause such cheapness. Production statistics show that the proportion of works scrap to mill shipments of product has increased. We need not here consider how much progress has been made in producing sound ingots or how much more cropping must be done to supply present day steel quality, or whether mills carry their steel to a greater degree of finish than formerly. It is sufficient to observe from the statistics that, taking pairs of years to secure more representative averages, the proportion of rolled steel to ingots was 76.4 per cent in 1905-6, 76.2 per cent in 1912-13, and 74.0 per cent in 1925-6. Deducting a uniform scale loss there is represented about 11 per cent increase in works scrap per ton of ingots in about 20 years. Of course there is the important offset that production of Bessemer steel, which supplies scrap for associated open-hearth furnaces, has greatly decreased by the long-range comparison, but the large decrease occurred a good while ago, there being very little decrease in the last few years.

There is an increase in scrap supply, for somebody, by the decadence in production of rolled iron, which averaged 649,491 tons a year in the last three years against 2,148,878 tons 20 years earlier, when production of forge pig iron ran 669,468 tons a year and some of it was used in foundry work. Accordingly one may take it that over a million tons of scrap has been released by the iron rolling mills.

Then we have this very important principle, that if material returns as scrap a certain number of years after its production, the outcome of the latter has been increasing lately more rapidly than formerly, relative to the rate of steel production. Assume, for instance, that certain scrap arises after 20 years. Production of rolled iron and steel in 1895-6-7 was 33.3 per cent of that in 1905-6-7, but production in this second group of years was 55.3 per cent of that in 1925-6-7. Thus in the last 20 years there has been an increase in scrap relative to production of new material.

Finally, as the country becomes better filled with iron and steel the layer is denser, so to speak, and it is correspondingly easier to get at the scrap. But here arises the point that with higher freights and wages it may not pay to gather the scrap even though physically it is more accessible. It would seem therefore that the market price can go only so low and that thereupon the offerings of miscellaneous material would diminish.

The Devil Taking the Hindmost

DIFFERENT percentages of net profit are found among active producers in every competitive line of business. The prosperity of some is chronically "profitless," while others seem able to make money at all times. The production costs of the former are at or above the general level of net sales prices, while the latter are able to produce at costs low enough to afford them at least a reasonable percentage of profit. The two groups are marked off by the zone of marginal cost. As market conditions change, a few producers in the marginal zone move in one direction or the other, passing out of it into a situation of profit or of loss.

Better location or equipment and the use of better methods characterize the industrials which occupy the positions above the marginal cost line. As improved equipment and methods are continually developed, it follows that, by failing to acquire these, some producers must in due course find profitable competition impossible. By standing still they have gone backward. Yet, as we have heretofore pointed out, an enterprise once capitalized must generally be kept going and thus, to the hurt meanwhile of average competitors, the law of the survival of the fittest may work but slowly.

Aging equipment is rightly depreciated in book value; unprogressive management ought in some way to be written off also in the capital accounts. The depreciation allowance should be used to acquire better means of production just as fast as these become available.

Industries are almost always "overbuilt," if all plants possible of operation at any cost are included in the count. On the other hand, concerns which are distinguished by superior productive ability are never seriously pressed by competition.

A Study in Industrial Accidents

AN analysis has been made of disabling accidents which occurred in a year in a metal-working plant employing about 5000 men. Chief among the conclusions drawn are these: That the accident rate was much higher among foreign born workers than among native born; that newly employed men had a lower rate than those of longer service; that the blame for 87 per cent of the accidents rested with the injured man; and that machines in motion were responsible for less than one-fourth as many accidents as were caused in the handling of material.

In the year this plant had 68 disabling accidents, including two fatalities. The total of lost time was 3600 days, reckoning nothing where death resulted. This excellent record was due, to a large extent, to years of persistent training of employees in accident prevention and in use of all possible safeguards. It was considered that the victims were to blame in 59 accidents, only four being due to negligence of fellow employees, while four were classed as unavoidable. Machines in motion caused 9 accidents, and the handling of material 38, to which might be added 4 caused by material falling. Of the injuries sustained, 19 were fractures, 10 eye injuries, 8 contusions, and 7 that bane of workmen's compensation, strained back, which occurs in genuine form, naturally, but is also a favorite excuse for protracted malingering.

The wide difference in hazard between native and foreign born was astonishing. Of the 5000 employees 35 per cent or 1750 are native born. Of these only 5 suffered a disabling accident, making the rate 0.3 per 100 workers. The 3250 foreign born had 63 accidents, making their rate 1.9 per 100 or more than six times that of the native born. However, the foreign workers on the average have the more hazardous tasks. Also, a certain percentage of them had inadequate knowledge of English, which was a handicap in the training given them with the purpose of reducing their hazard.

A study of the accidents in their relation to hours of the working day brought out an anomalous situation. In the year 9 accidents occurred between 7 and 9 a. m., or 4½ per hour, and 21 accidents between 9 a. m. and 12 m., or 7 per hour. Such an increase is commonly attributed to increasing fatigue. In the 12 months there were 8 accidents between 1 and 3 p. m., or 4 per hour, and 13 between 3 and 6 p. m. or 4 1/3 per hour. It will be noted that the accident frequency in the concluding period of the day was less than in the opening morning period, when fatigue is not supposed to exist.

Men employed less than one year, numbering about 500, had 6 accidents, or 1.2 per 100; those with length of service from one to ten years, numbering about 2000, had 36 accidents, or 1.8 per 100; those whose service was more than ten years, constituting about one-half the entire force, had 26 accidents, or a trifle over 1 per 100. The rate for all men with more than one year of service was 1.32 per 100. The conclusion, if the ratios may be considered to prevail year after year, is that the novice in a plant is inclined to be careful and to take few unnecessary chances. In the following years he is not so safe a risk. Then, with maturity, comes caution.

Industry and the Graduate

FROM the head of an important Indiana company in the metal trades the request came recently to The Iron Age for copies of editorial comment which our correspondent had seen in these columns on the relationship between the college and industry. Various clippings were sent from this office and in acknowledging them this executive writes:

> I find that the editorial I wanted was in the Oct. 14, 1926, issue and was entitled "What Industry Wants in the Graduate." This is so good that I think it ought to printed again. There must be other fathers who have sons at college and many of these sons are doubtless groping for the right path. I am sure if the editorial could be reprinted it would benefit many sons and fathers, for the father does not always know and has to go through the experience of learning how to deal with a son.

Seeing that in the next fortnight thousands of young men are to go out from American colleges, it is appropriate to give our readers again the expressions which this Indiana manufacturer finds of value, and we are glad to comply with his request by reprinting the editorial of Oct. 14, 1926, herewith:

What Industry Wants in the Graduate

At recent meetings of the Mining and Metallurgical Engineers and the Steel Treaters there have been gatherings of men interested in metallurgical education. A large majority of those who attended the sessions devoted to this subject are actively engaged in teaching and doubtless this visible interest by college faculties is in part due to the investigation of engineering education now in progress under the direction of Mr. Wickenden. From the discussions one would gather that the uppermost question in educators' minds is, "What does industry want us to teach engineering students?"

A clew to the answer might be found in the audience which listens to these discussions. If the metallurgical industries were suffering from a lack of educated men, no doubt there would be a greater representation of industrialists at these conferences. No evident interest in the matter is equivalent to saying: "We have no constructive suggestions to offer; the average college graduate is good raw material."

As a matter of fact, are not the college authorities placing the wrong emphasis upon their industrial contacts? They should have learned by this time that a school of learning cannot produce specialists for industry. Each position is unique; only broad fundamentals are common to all. Hence this call upon the graduates and employers to consider details of the curriculum is of only passing significance. The colleges eventually will view the task primarily as the production of cultured citizens and secondarily as the production of high-salaried executives.

Some time back a committee was appointed by the American Institute of Mining and Metallurgical Engineers to canvass the situation and arrive at an answer to the question, "What does our industry look for in the college graduate?" Numerous prominent managers replied to the questionnaire. Their requirements of the technical subordinate were something like this: He must have integrity and loyalty. He must be clean and a good citizen; he must be energetic; he must be well grounded in the fundamentals of science. Not a word about special courses in mine timbering, flotation, steel refining, heat treatment. The answers are undoubtedly typical of those which would be given by any large employer in any line: the junior members must be men of character and ability.

College faculties will find, therefore, that the requirements of the industries are no different from the requirements of the professions, of the arts or of the state. All want men of character and ability. Whenever a college is so managed that it builds these two attributes, it is fulfilling its mission admirably.

The live questions are not specialization in the courses of study so much as wide discretion in electives and numbers of "snap" courses; not so much what the XYZ Mfg. Co. thinks of the testing laboratory as what the attitude on the campus is toward cribbing in quizzes; not so much the success of the football team as an atmosphere which encourages work, study and clean living.

This does not mean that we advocate a return to the excessive Greek and Latin of a half century ago. Science, of course, is the foundation of all engineering curricula. Agricultural students will undoubtedly spend much time on plant and animal life; the architect will be more interested in external form, and the civil engineer will learn about the strength of materials. Such specialization is obvious. But a good undergraduate spirit, an inspired faculty and a president with vision are far more to be desired by industry than special courses leading to this, that or the other degree.

Lathe Builders to Guarantee Tools and Exact Service Charge

The National Machine Tool Builders' Association announces that the lathe group of the association has decided that each manufacturer shall give a six months' guarantee with each machine sold and will charge for services of erectors and demonstrators, this charge to be on a daily rate and to include railroad fare, hotel bills and other incidental expenses.

"The machine tool builders recognize that competent users of machine tools are not given to making unfair demands," says a statement by the association, "but so many careless or unfair buyers have been making demands for service, repairs, etc., that it has been found necessary to make a charge as a reasonable restriction on such unfair buyers. It is recognized that, if the satisfying of unfair demands is included in the cost of all lathes produced, the fair buyer is unfairly discriminated against and is expected to pay for a service rendered to other people who should pay for the service they themselves exact."

The rate to be charged for service men is to be a matter of individual decision by each lathe manufacturer, the usual charge being $15 a day and expenses. A similar plan may be adopted by other groups of machine tool manufacturers.

The six months' guarantee of each machine sold is restricted to the original purchaser and provides that it is binding only if the machine has been subjected to "normal and proper usage."

Preparing to Build American Passenger Steamers and Motorships

WASHINGTON, June 5.—Taking advantage of the recently enacted Jones-White merchant marine act, Atlantic and Pacific Coast operators are preparing for the construction of fast combination passenger and cargo ships, at a total cost of approximately $66,000,000, according to E. C. Plummer of the Shipping Board. He said he had been informed that three operators on the Pacific Coast and one on the Atlantic are about to make application for loans aggregating $50,000,000 from the construction fund of $250,000,000 carried in the new law.

Pacific operators include the Oceanic Steamship Co., the Oregon Oriental Line and the American Hawaiian Steamship Co. They plan to have at least six ships, and possibly more, built. Under the law, all must be constructed in American shipyards. The Export Steamship Co. already has made application for a loan to build four vessels to be operated between Atlantic and Mediterranean ports.

Mr. Plummer said that the United States lines, which operate the only exclusive passenger service of the 21 Shipping Board lines, are not in a salable condition and that private owners could not, with these vessels, compete successfully with foreign ships. This is because of the slow speed of the American ships in the fleet, with the sole exception of the Leviathan, which has a cruising speed of 23 knots. Mr. Plummer added, however, that when the steamers Monticello and Mount Vernon, which are to be reconditioned and equipped to travel 20 knots, are fitted up, they will be in a position to compete with the finest vessels on the North Atlantic, and could be turned over to private operators with reasonable assurance that the service could be continued, and with the Leviathan would make a balanced fleet of the United States lines.

Electrical Transmission Apparatus Makers Are Merged

The National Metal Molding Co., Pittsburgh, has acquired the American Copper Products Corporation, Bayway, N. J., and the British American Metals Co., Plainfield, N. J., and the three companies have been merged into the National Electric Products Corporation. The companies entering the combination make electrical transmission apparatus, but their products are noncompetitive and the merger is essentially one of companies producing supplementary lines. Control of the Habirshaw Cable & Wire Corporation, with plants at Yonkers, N. Y., and Bridgeport, Conn., is held by the new company.

Officers are W. C. Robinson, chairman; Wylie Brown, president, and I. A. Bennett and H. H. Robinson, vice-presidents. These men and O. F. Felix, C. F. Holdship, A. L. Robinson, A. Jerome, H. C. Carpenter and C. J. Gleason constitute the board of directors.

A. O. Smith Corporation Books Order for 24,000 Tons of 8-In. Pipe

With the beginning of deliveries on an order for 21,000 tons of 16, 18 and 20-in. electrically-welded steel pipe to the Magnolia Gas Co., Latex, Tex., the A. O. Smith Corporation, Milwaukee, announces that it has booked an order for 24,000 tons of 8-in. pipe from the Texas Co. for the transportation of oil. While the Smith company has made welded pipe up to 24 in. in diameter, this is its first order for pipe as small as 8 in. It also is the first time that electrically-welded steel pipe is to be used for transportation of oil. The Magnolia order requires 800 cars, and the Texas order 1000 cars. Shipments are being handled by special trains over the Chicago, Milwaukee, St. Paul & Pacific Railroad.

Hydro-Hoist and Heil Companies Are Consolidated

The Hydro-Hoist Co., Milwaukee, manufacturer of hydraulic hoists, control of which passed several years ago to the Heil Co., Milwaukee, manufacturer of steel dump bodies, tank bodies, tanks and stacks, has now been consolidated with the Heil Co. by an exchange of stock. Capital structure of the Heil Co. has been changed from $200,000 to 75,000 common shares of no par value, and 59,892 shares are now outstanding. The Hydro-Hoist Co. was capitalized at $100,000. Julius P. Heil, founder of the business, and since its organization serving as vice-president and treasurer, as well as general manager, has been elected president and treasurer. Clement C. Smith, formerly president, has been elected chairman of the board. Herman W. Falk, who is president of the Falk Corporation, Milwaukee, is the new vice-president. W. M. Chester has been reelected secretary, and William George Thwaits has been added to the board.

Year Book of American Engineering Standards Committee

An advance copy of the 1928 Year Book of the American Engineering Standards Committee carries a foreword signed by James A. Farrell, chairman of the advisory committee on industrial executives. The book, which is of 88 pages, lists 275 projects which were under way during the year and 111 which have been approved. The general objective of the committee is "to further the development and use of national industrial standards."

Twenty-nine organizations or groups of organizations have representatives on the committee. Sponsors for projects under way include 64 organizations. Trade, technical and governmental bodies cooperating through representatives on committees number 353 and there are 2135 individuals on the various sectional committees. Total receipts during the year aggregated $58,733 and disbursements were $61,267.

May Iron Output Close to April Rate

Daily Production Declined Only 252 Tons or About ¼ of 1 Per Cent from April—Net Gain of Three Furnaces

NET operations of blast furnaces in May changed but little from those in April. Actual data from all furnaces except one show the daily rate last month to have been 105,931 gross tons, as compared with 106,183 tons per day in April, a net loss of only 252 tons per day, or about 0.25 per cent.

Total May production of pig iron was 3,283,856 tons, or 105,931 tons per day for the 31 days. This compares with 3,185,504 tons, or 106,183 tons per day for the 30 days in April. The loss of 0.25 per cent in the May daily rate compares with a gain of 2.9 per cent in April over March. The May output last year was 3,390,940 tons, or 109,385 tons per day—or about 3 per cent larger than May this year.

Net Gain of Three Furnaces

Eight furnaces were blown in and five were shut down during May, a net gain of three. Of the furnaces blown in, five were independent steel company stacks, two were merchant and one is credited to the Steel Corporation. Three merchant furnaces, one Steel Corporation and one independent steel company stack were shut down last month. Most of the net gain for the month was by independent steel companies.

There was no change in the number of possibly active furnaces, which still stands at 343.

Capacity Active on June 1

There were 198 furnaces active on June 1 having an estimated operating rate of 106,145 tons per day, as compared with an operating rate of 104,015 tons per day for the 195 furnaces blowing on May 1. The gain of three furnaces, with a slight loss in daily rate in May as compared with a net loss of two furnaces and a gain in daily rate in April, is largely explained by the irregularity in furnace operations in various months, some being pushed faster than others.

Manganese Alloy Output

Ferromanganese output in May was 29,940 tons, the largest this year and the largest since January,

Daily Average Production of Coke Pig Iron in the United States by Months Since Jan. 1, 1924—Gross Tons

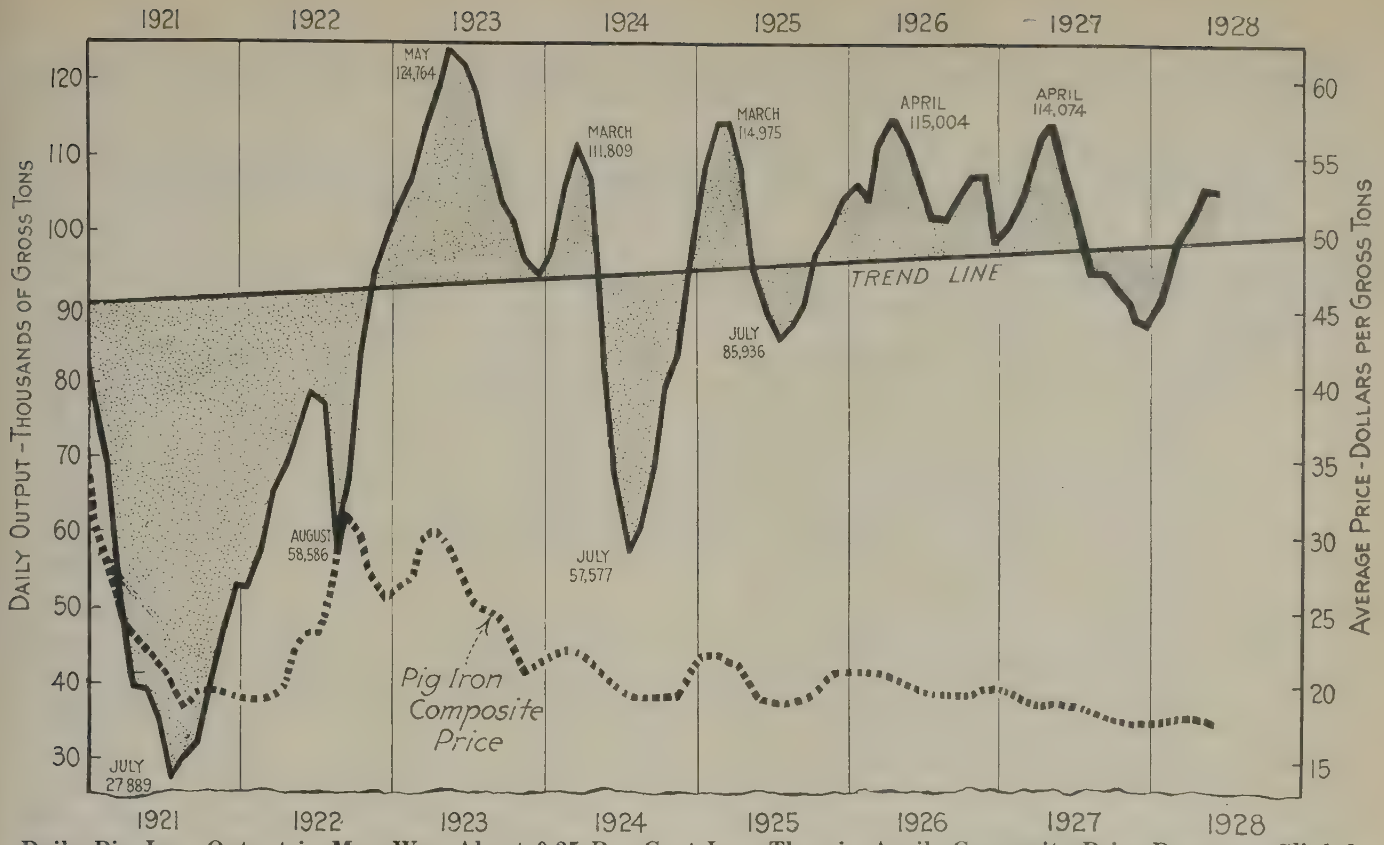
*These totals do not include charcoal pig iron. The 1927 :production of this iron was 164,569 tons.



Daily Pig Iron Output in May Was About 0.25 Per Cent Less Than in April; Composite Price Decreases Slightly

Inclined line represents the gradually increasing theoretical needs of the country, ascertained by a balancing of the ups and downs in production. Its position has been revised in the light of the showing of the last few years and shows an average yearly increase in consumption of about 415,000 tons

1927. Two companies made spiegeleisen in May, but the data cannot be published.

Furnaces Blown In and Out

During May the following furnaces were blown in: One Aliquippa furnace of the Jones & Laughlin Steel Corporation in the Pittsburgh district; the Oriskany furnace of the Lavino Furnace Co. in Virginia; one La Belle and one Riverside furnaces of the Wheeling Steel Corporation in the Wheeling district; one River furnace of the Corrigan, McKinney Steel Co. in northern Ohio; the Hamilton furnace of the American Rolling Mill Co. in southwest Ohio; one Gary furnace of the Illinois Steel Co. in the Chicago district, and one Woodward furnace of the Woodward Iron Co. in Alabama.

Furnaces blown out or banked during the month included the following: the Standish furnace in northern New York; the Marietta furnace of the Lavino Furnace Co. in the lower Susquehanna Valley; one Haselton furnace of the Republic Iron & Steel Co. in the Mahoning Valley, and one South Works furnace of the Illinois Steel Co. and one Federal furnace in the Chicago district.

Large Increase in Exports of Aircraft and Parts

WASHINGTON, June 5.—Aircraft engines, parts and accessories to the value of $815,490 were exported from the United States during the first quarter of 1928, according to the aeronautics section of the transportation division, Department of Commerce. This represents an increase of approximately 250 per cent over the corresponding quarter of last year. The percentage increase for aircraft alone, which includes both airplanes and seaplanes, was much greater than that of the total valuation of aeronautical products exported. There were 49 aircraft, valued at $509,419, exported during the first three months of the present year, compared with five units, valued at $84,576, exported during the corresponding period of 1927.

Peru was the principal market during first quarter of the current year, taking 18 units valued at $120,970. Canada was second, taking nine aircraft valued at $89,670, in addition to an old unit from the war surplus stock. The total value of aircraft parts exported during the first quarter of 1928 was $197,308, more than 130 per cent greater than this class of exports for the first quarter of last year, when the value was $83,310.

Navy Auction Includes Scrap and Machine Tools

An auction of surplus material held at the Navy Yard, New York, and the Naval Supply Depot, Brooklyn, June 5, included about 3500 tons of iron and steel scrap, 400,000 lb. of non-ferrous metals and smaller lots of pipe fittings, boat and ship fittings, electrical material, hardware and hand tools, plumbing equipment and machinery. The machine tools included one 10-in. and two 14-in. turret lathes, belt driven; two monitor lathes; one 7-in. x 3-ft. bench lathe; one 16-in. x 8-ft. engine lathe, motor driven; one 18-in. x 8-ft. engine lathe, belt driven; one 42-in. x 30-in. engine lathe, motor driven; two 18-in. crank shapers; one 12-ft. x 36-in. x 38½-in. bridge planer; one drilling machine, and one hydraulic riveter.

Iron and Steel Markets

Sharp Break in Basic Pig Iron

Valley Iron Drops to Lowest Price Since October, 1915—Gain of Three Active Blast Furnaces in May—Record Steel Production Assured for First Half

THE trend of steel production still is downward, but the rate of recession is gradual and will not prevent the first half of 1928 from establishing a new six-month record by a margin of several hundred thousand tons. While pig iron output has not been on a proportionate scale, falling considerably short of the volume of recent years, the daily rate in May showed a decline of less than ¼ per cent from that of April.

Price developments are featured by a break in basic pig iron in the Valleys from $16 to $15.37 a ton, the lowest price reached since October, 1915. It is too early to ascertain whether this decline will have a sentimental effect on the steel market. In recent years, owing to the increasing integration of steel companies, the influence of merchant pig iron prices on the finished steel market has been of diminishing importance.

The situation in steel prices, meanwhile, is mixed. Most independents have followed the lead of the Carnegie Steel Co. in announcing an advance to 1.90c. per lb., Pittsburgh, on third quarter contracts in plates, shapes and bars, but so far comparatively little business has been done on that basis. The initial effect will probably be to drive in tonnage on second quarter contracts from buyers whose specifications have fallen short of their quotas.

Weakness in sheets has not been checked and there has been another dollar a ton recession in the galvanized and black finishes to 3.50c. and 2.65c. per lb., Pittsburgh, respectively. Tin mill black plate has dropped to a maximum 2.90c., Pittsburgh, with sales reported at 2.80c.

New business in finished steel is light and specifications in many lines are diminishing. Buyers are taking little interest in committing themselves for next quarter, for which several mills have announced prices. Following the advance of $1 a ton on bars, plates and shapes, some makers of hot-rolled strip have indicated a willingness to accept third quarter business at present minimum quotations, while others aim to reestablish the prices originally announced for the current quarter. Prevailing quotations on cold-rolled strips and alloy steel bars have been reaffirmed for next quarter.

Steel mill operations, although receding, are higher than a year ago. In the Pittsburgh district ingot output is a shade below 75 per cent, against 70 per cent 12 months ago. In Chicago a slackening of rail output has caused the general average to decline to 90 per cent, which, however, is 5 to 10 points higher than in early June, 1927.

The automotive industry continues to specify liberally for bars, sheets and strip steel, indicating that motor car output in June will hold up rather well. Forge shops in the Cleveland district are operating at capacity, many of them being filled with work recently placed by the Ford Motor Co.

The expected decline in specifications from the farm implement industry is slow in materializing, according to reports from Chicago, and it is now believed that the interruption of production for inventory taking will be very short.

In the structural steel market political uncertainty is becoming more of a factor as the national conventions draw near. Fabricating awards are light and there is delay in financing new projects. An unusually large amount of work, however, is either up for bids or ready to be released for figuring, New York and Chicago alone accounting for fully 150,000 tons each.

Railroad equipment buying is almost negligible, but an Illinois Central inquiry for 3000 cars is in prospect. Rail orders for the week total 11,000 tons, but rail mill backlogs are on the down grade, as indicated by 85 per cent operations at Chicago, compared with 90 per cent a week ago. The Pennsylvania has entered the market for 12,000 tons of track accessories.

Two steel companies sold the tonnage of basic pig iron which brought a drop of 65c. a ton in the price of that grade in the Valley, a development which emphasizes the growing dominance of the steel industry in merchant pig iron business. In foundry iron there has been some covering for third quarter, but no buying movement of importance has set in. Weakness in pig iron prices extends to foundry, malleable, gray forge and Bessemer in the Pittsburgh and Ohio districts, while efforts to strengthen prices in New England and in the New York district have met with no decided success. Two cast iron pipe producers have bought a total of 15,000 tons of foundry grade from a Virginia furnace at a concession of 50c. a ton.

Pig iron production in May, as computed from returns to THE IRON AGE, averaged 105,931 tons a day, compared with 106,183 tons in April. This was the lowest May rate since 1925. The month showed a gain of three furnaces in blast, following a loss of two stacks in April. The rate of production June 1 for the 198 furnaces in blast was 106,145 tons per day, against 104,015 tons May 1 for the 195 furnaces then active.

Both of THE IRON AGE composite prices have declined. That for pig iron, at $17.23, is at the lowest level since late in 1915. Finished steel is 2.341c., against 2.348c. last week and a low for 1928 of 2.314c. on Jan. 3.

*The average switching charge for delivery to foundries in the Chicago district is 61c. per ton.

On export business there are frequent variations from the above prices. Also, in domestic business, there is at times a range of prices on various products, as shown in our market reports on other pages.

Pittsburgh

Sharp Break in Basic Pig Iron—May Steel Orders About Equal to April's

PITTSBURGH, June 5.—Weakness in pig iron, with a sharp break in the price of the Valley basic grade, overshadows in interest the steel market this week. Meeting a delivered price of $17.01 on a large tonnage for delivery to Butler, Pa., a Youngstown steel company has driven the furnace base on this grade to $15.35, a drop of 65c. from what has been considered the market price. Not since October, 1915, has the market been that low, and in view of the fact that assembling costs are considerably higher now than then, the present price is being compared with the $13 market in the middle of 1914.

Since there is a relation between the prices of the several grades of iron, the break in basic has unsettled the whole pig iron market, and some other grades have given ground. Foundry and malleable are quotable at 25c. a ton lower.

While steel prices have not for some time been based upon the prices of merchant pig iron, the possible effect of this latest break in iron upon the efforts of steel producers to obtain higher third quarter prices for plates, shapes, bars and other finished products will no doubt be closely watched by consumers.

A check-up of May bookings and shipments of steel in this and nearby districts discloses that in aggregate tonnage the month was well up to the total of April, which is commonly rated as a good month. With the turn of the last month of the first half, there has been a considerable contraction in new buying and in specifications against contracts. Consumers are now ordering only what they must have for immediate use, and future requirements are largely being left for later consideration. There is the suggestion that some large projects are being held up to await the results of this month's Presidential nominating conventions.

Steel ingot production is a shade below 75 per cent of capacity. The gradual character of the recession in steel business is commented upon favorably, and satisfaction is derived from the fact that business is better than it was at this time last year.

Prices are no lower on those products which lately have shown weakness than they have been. Independent companies quite generally are going along with the Carnegie Steel Co. in naming 1.90c., base, on plates, shapes and bars for third quarter. Makers of wire products and strip steel, in opening books for that period, are reaffirming second quarter prices, which are somewhat above what has been commonly realized on shipments lately.

Pig Iron.—Further details of the purchase of basic iron by the American Rolling Mill Co. for delivery to its Butler, Pa., works disclose that instead of a price of approximately $16, Valley furnace, the iron amounting to about 20,000 tons, was sold at $17.01, delivered. Half of the iron was sold by a Youngstown independent steel company, which has a freight rate to Butler of $1.64. This means a furnace price of $15.37. The remainder was sold by a western Pennsylvania steel company, having a freight rate of $1.76 to Butler, resulting in a price of $15.25 at the furnace. The latter had previously sold a round block of this grade to a Pittsburgh district steel company at $17, delivered, and named the same price on the American Rolling Mill Co.'s inquiry. This price was met by the Youngstown company. Thus the market on Valley basic iron, which long has been in doubt, becomes clearly defined and may be quoted at $15.35. This represents a break of 65c. a ton from what has been regarded as the market price and has unsettled the prices of all other grades. On foundry iron, $17, Valley furnace, for No. 2 grade has become the top instead of the bottom of the market, and no small part of the week's business has been at $16.75. Bessemer still is quoted at $17, but a spread of $1.25 between these grades is exceptional and few expect it to be maintained long. Malleable iron has been sold in small lots at $17.25, but also at $17. Consumers generally do not rate this grade to be worth more than Bessemer iron and formerly it took about the same price as No. 2 foundry. The furnace of the Sharpsville Furnace Co. was blown out June 4.

Prices per gross ton, f.o.b. Valley furnace:

Basic	$15.35 to $15.50
Bessemer	17.00
Gray forge	16.25 to 16.50
No. 2 foundry	16.75 to 17.00
No. 3 foundry	16.25 to 16.50
Malleable	17.00 to 17.25
Low phosphorus, copper free	26.50

Freight rate to the Pittsburgh or Cleveland district, $1.76.

Ferroalloys—Some of the larger users of ferromanganese still are slow about signing last half contracts. They seem to doubt that the recent advance to $105, with freight from Atlantic ports, will hold, but the more plausible explanation, in view of the fact that the price is guaranteed against a decline, is that consumption has been decreasing in keeping with lighter steel works operations, and there is a possibility of a fair-sized carryover of first half material. All of the important users of spiegeleisen are under cover for the last half of the year. Current specifications for this alloy are heavy.

Semi-Finished Steel.—Makers of sheet bars have not had much success in securing third quarter contracts following the effort to stiffen the price. Non-integrated sheet producers, in the absence of signs of improvement in the prices of their products, are disposed to hold off. The open price of $34, Pittsburgh or Youngstown, for sheet bars, has been subject for some time to shading. Large billets and slabs are selling at $33, but the movement reflects the fact that strip steel sales are lighter than they have been. Most of the shipments of wire rods are priced a $42, although the open quotation is $44, base. Pipe skelp is moving fairly steady at unchanged prices.

Bars, Plates and Shapes.—Most of the independent producers have followed the advance recently made by the Carnegie Steel Co. to 1.90c., base Pittsburgh, for third quarter contracts. Some makers have succeeded in getting a very fair amount of third quarter contract business at the new price, but the more general condition is that manufacturers are not pressing for such business and few consumers want to sign up now for that period. The advance appears to apply only on third quarter business, as it is still possible for consumers to place orders for early delivery at 1.85c. May tonnage of these products was little if any behind that of April, which was rated as a good month, but now the demand is governed strictly by known requirements, with future needs being held in abeyance, presumably to await the outcome of the presidential nominating conventions this month.

Rails and Track Supplies.—The local standard-section rail mill is beginning to work on a shorter schedule, as the bulk of the 1928 orders have been completed. New business is light, not only in rails but in track supplies. Light-section rails still suffer in demand from a low rate of soft coal mine operation.

Wire Products.—Several makers have reaffirmed second quarter prices for third quarter contracts, which means $2.65, base, per keg, Pittsburgh, for nails and $2.50, base, per 100 lb., for plain wire. In the quarter now drawing to a close, these prices prevailed on a comparatively small amount of the total shipments, owing to the fact that distributers became heavily stocked through liberal takings on first quarter contracts carrying lower prices, while the movement into consumption was delayed by a backward spring. Some elasticity in connection with low-priced contracts also helped to defeat the effort to secure the prices announced. As the movement into consumption lately has improved, makers are hopeful of better business and also of getting the full quotations.

Tubular Goods.—Standard-weight pipe is moving steadily, but volume still is below normal. No appreciable improvement is noted in the demand from oil and gas producers, nor do pipe makers express much optimism as to the prospect for the remainder of this year. Makers still are waiting for developments in connection with the gas pipe lines that have been so often mentioned since the first of the year. Mill operations are reported as ranging from 60 to 65 per cent, but the rating is against economically workable units rather than against standing productive capacity.

Sheets.—General business is tapering and producers are drawing rather heavily on backlogs. Sheets for metal furniture and refrigerators are doing well in point of demand, but automobile body sheets are moving with less freedom and the common finishes reflect in sales the uncertainty in prices. Blue annealed sheets are fairly firm, and in this immediate area, 2.10c., base, is frequently done, it being necessary to go to 2c. only on strip mill widths.

Tin Plate.—Mill operations remain at 90 per cent or higher. The belief still is that the packing crops will be large, although over much of the country the spring has been two to three weeks late and the crops are that much behind in development. Tin plate specifications are coming along steadily, but container manufacturers are not urging deliveries.

Cold-Finished Steel Bars and Shafting.—Reports that books had been formally opened for third quarter contracts do not refer to producers in this area, who

Chromium Nickel Vanadium		1.50	4.15
Carbon Vanadium		0.95	3.60

Above prices are for hot-rolled steel bars, forging quality. The ordinary differential for cold-drawn bars is 1c. per lb. higher. For billets 4 x 4 to 10 x 10 in., the price for a gross ton is the net price for bars of the same analysis. For billets under 4 x 4 in. down to and including 2½ in. squares, the price is $5 a gross ton above the 4 x 4 billet price.

Slabs with sectional area of 16 in. or over carry the billet price; slabs with sectional area of 12 in. to 16 in. carry a $5 extra above the billet price and slabs with a sectional area under 12 in. carry the bar price.

Band sizes are 40c. per 100 lb. higher.

Rails

	Per Gross Ton
Standard, f.o.b. mill	$43.00
Light (from billets), f.o.b. mill	36.00
Light (from rail steel), f.o.b. mill	34.00
Light (from billets), f.o.b. Ch'go mill	36.00

Track Equipment

	Base Per 100 *Lb.*
Spikes, 9/16 in. and larger	$2.80
Spikes ½ in. and smaller	2.80
Spikes, boat and barge	3.00
Tie plates, steel	2.15
Angle bars	2.75
Track bolts, to steam railroads	$3.80 to 4.00
Track bolts, to jobbers, all sizes, per 100 count	70 per cent off list

Welded Pipe

Base Discounts, f.o.b. Pittsburgh District and Lorain, Ohio, Mills

Butt Weld

Steel			*Iron*

2½ and 2¾ in.	45	4 in.	56
3 in.	51	4½, 5 and 6 in.	51

Less carloads, 4 points less. Add $8 per net ton for more than four gages heavier than standard. No extra for lengths up to and including 24 ft. Sizes smaller than 1 in. and lighter than standard gage to be held at mechanical tubes list and discount. Intermediate sizes and gages not listed take price of next larger outside diameter and heavier gage.

Seamless Mechanical Tubing

	Per Cent Off List
Carbon, 0.10% to 0.30%, base	55
Carbon, 0.30% to 0.40%, base	50

Plus differentials for lengths over 18 ft. and for commercial exact lengths. Warehouse discounts on small lots are less than the above.

find little interest on the part of consumers for such coverage, and they also want to see how fully the recently announced third quarter price of 1.90c. on hot-rolled bars is maintained. Current business is steady, but individual orders are small and for early shipment. In a general way 2.20c., base Pittsburgh, is well held.

Hot-Rolled Flats.—Several makers have opened books for third quarter contracts and are naming 2.20c. to 2.30c., base, for widths under 3 in., 2.10c. for 3 in. to 6 in., and 1.90c. for 6 in. to 12 in. These are the prices named on second quarter contracts, but they ruled most commonly on the smaller tonnages, since preferred trade had the benefit of some extension of first quarter arrangements. May business with makers in this area was equal to and in some instances in excess of that of the month before. Demand now is lighter.

Cold-Rolled Strips.—A number of makers have reaffirmed second quarter prices for third quarter contracts, quoting 3c., base, for 1 to 3 tons to large users and 3.15c., base, to smaller and more exacting customers. Not much contracting has been done. Current demands are lighter than they were last month, which proved to be almost as good as April.

Bolts, Nuts and Rivets.—Orders and specifications are fairly numerous, but individually are small and volume is well under what it was earlier in the year. Prices are firm and makers are expected to continue present quotations for third quarter contracts.

Warehouse Business.—There have been no changes in the regular warehouse price schedule, but some shading of prices, on the heavier steel items is charged to mill supply houses. Business last month registered a good increase and still is fairly active.

Coke and Coal.—Some furnace coke released through the blowing out of a Valley blast furnace has been absorbed without affecting prices. General production of beehive coke has been scaled pretty closely to actual requirements and the market is fairly steady. Soft coal production is down close to 8,000,000 tons a week, but that fact has brought no real strength to prices. An order for 3000 tons of coking coal per week for an indefinite period, placed by a Cleveland interest whose mine suffered an accident, was readily placed at recent prices. Slack coal is plentiful and weaker.

Old Material.—The market is weak and very dull. A dealer, who is short at one point in the district, has been paying $14.75 to $15 for the better grade of heavy melting steel, but for delivery at other points dealers are covering at as low as $14.25. Railroad lists closing this week will probably go at much under the prices of last month, because the steel companies do not need as much scrap as they did recently and dealers with unfilled orders are not being pressed to ship. The market is weaker on the foundry grades than on the steel works grades. Blast furnace scrap has eased off another 25c. Machine shop turnings are very weak and have been sold at as low as $9, following sales at $9.50. The June list of the Norfolk & Western Railroad offers 8000 tons of scrap.

Prices per gross ton delivered consumers' yards in Pittsburgh and points taking the Pittsburgh district freight rate:

Basic Open-Hearth Furnace Grades:	
Heavy melting steel	$14.25 to $15.00
Scrap rails	14.00 to 14.50
Compressed sheet steel	14.50
Bundled sheets, sides and ends	13.50
Cast iron carwheels	14.00 to 14.50
Sheet bar crops, ordinary	15.00 to 15.50
Heavy breakable cast	12.00 to 12.50
No. 2 railroad wrought	14.50 to 15.00
Heavy steel axle turnings	13.00 to 13.50
Machine shop turnings	9.00 to 9.50
Acid Open-Hearth Furnace Grades:	
Railroad knuckles and couplers	15.50 to 16.00
Railroad coil and leaf springs	15.50 to 16.00
Rolled steel wheels	15.50 to 16.00
Low phosphorus billet and bloom ends	19.00 to 19.50
Low phosphorus, mill plate	17.50 to 18.00
Low phosphorus, light grade	16.50 to 17.00
Low phosphorus sheet bar crops	17.50 to 18.00
Heavy steel axle turnings	13.00 to 13.50
Electric Furnace Grades:	
Low phosphorus punchings	16.50 to 17.00
Heavy steel axle turnings	13.00 to 13.50
Blast Furnace Grades:	
Short shoveling steel turnings	10.50 to 10.75
Short mixed borings and turnings	10.50 to 10.75
Cast iron borings	10.50 to 10.75
No. 2 busheling	9.00 to 9.50
Rolling Mill Grades:	
Steel car axles	18.00 to 18.50
No. 1 railroad wrought	11.00 to 11.50
Sheet bar crops	16.50 to 17.00
Cupola Grades:	
No. 1 cast	14.25 to 14.75
Rails 3 ft. and under	15.50 to 16.00
Malleable Grades:	
Railroad	14.25 to 15.00
Industrial	13.75 to 14.50
Agricultural	13.25 to 14.00

Cement coated nails, per keg	3.05

FRENCH SCRAP EXPORTS LARGE

Retention of Embargo Urged—Comite des Forges Report Reviews Progress in 1927

PARIS, FRANCE, May 18.—At its annual meeting, May 10, the Comite des Forges de France made public a report on the situation of the French metallurgical trades in 1927. The report describes the successful efforts made last year to increase business and reduce unemployment, which had reached about 80,000 in February. Despite higher prices, in gold, than in 1926, French producers of metallurgical products increased their exports by 1,300,000 tons, from 3,623,000 metric tons in 1926 to 4,921,000 tons in 1927. This was offset slightly by the fact that French consumers used 66 per cent of the total output in 1926 and only 53 per cent last year.

The report points out that world production of pig iron has increased from 78,000,000 tons in 1913 to about 84,000,000 tons in 1927, and that the Russian and Chinese markets are of little consequence at present. Costs, says the report, have been reduced and, as a result, the domestic selling prices in 1927 did not average more than 70 to 80 per cent of the corresponding pre-war market prices.

Considerable attention was given to the high level of French exports of iron and steel scrap, and the report expresses the opinion that the official statistics are lower than the actual exports. It is suggested that nearly as much as is reported to the Government as scrap is being sent abroad under other classifications. "The comparison of French and foreign statistics on scrap exports and imports," says the report, "does not permit of much doubt that this is the case, and this is a point to which we have drawn the attention of the Government, because we have noticed that in some districts and at certain periods of the year, prices of scrap have been rising to high levels. Reduction of our reserves of scrap may have, as regards the national defense in war time, very serious consequences, and this it is our duty to prevent. Therefore, we have followed with anxiety the debates of the international conference for abolition of import and export embargoes held in Geneva in October and November, 1927, in the course of which, at our suggestion, the French Government declared its intention to maintain the present restriction on scrap exports for at least a period of three years."

Semi-Finished Steel, Raw Materials, Bolts and Rivets

Mill Prices of Semi-Finished Steel

F.o.b. Pittsburgh or Youngstown

Billets and Blooms

	Per Gross Ton
Rerolling, 4-in. and over	$33.00
Rerolling, under 4-in. to and including 1¾-in.	$33.50 to 34.00
Forging, ordinary	38.00

Chicago

Steel Shipments in May Break Record —Operations Decline Slightly

CHICAGO, June 5.—Finished steel shipments from Chicago mills in the month just closed were the heaviest for any May in the history of local production. Output in the first five months of this year is well ahead of a year ago at this time and orders now on the books indicate that steel mill shipments during the first half of 1928 will be measurably ahead of the first six months of last year.

A reduction of about five points in the rate of rail mill production accounts for a slowing of ingot output to 90 per cent of capacity. Although close to 11,000 tons of rails were purchased in the week, a further downward revision in rolling schedules is to be expected.

Local producers have not officially opened books for third quarter. Purchases by miscellaneous users bulk large, the total for the week being the best in the last five. Official announcements of third quarter prices are being withheld for the time being, though it is commonly believed that 2c., Chicago, will be named on plates, shapes and bars. If there is a tendency one way or the other in the matter of price levels, it is a leaning toward the firmer side, though concessions are still to be had on attractive business and where the steel desired fits advantageously into rolling schedules.

The Omaha lines of the Chicago & North Western have ordered 200 flat cars and will buy 250 stock cars. The Rock Island will purchase 250 gondola car bodies. The trade expects the Illinois Central to enter the market for about 3000 cars in the next 60 days.

Pig Iron.—Shipments of Northern pig iron from local furnaces in May fell short of the total in April, but this situation is looked upon by the trade simply as evidence of the nearness of an expected slowing down in the summer months. Looking back over the first five months of this year, the picture is more encouraging because in that period release orders were fully 20 per cent heavier than in the corresponding months of 1927. A 6000-ton inquiry for Northern iron is still open in Michigan. New buying is slowing down. Southern iron is selling at $16, Birmingham, or $22.01, delivered all-rail to Chicago.

Prices per gross ton at Chicago:

Northern No. 2 foundry, sil. 1.75 to 2.25	$18.00
N'th'n No. 1 fdy., sil. 2.25 to 2.75	18.50
Malleable, not over 2.25 sil.	18.00
High phosphorus	18.00
Lake Superior charcoal, averaging sil. 1.50	27.04
Southern No. 2 fdy. (all rail)	22.01
Southern No. 2 (barge and rail)	21.51
Low phos., sil. 1 to 2 per cent, copper free	$28.50 to 29.00
Silvery, sil. 8 per cent	29.79
Bessemer ferrosilicon, 14 to 15 per cent	46.79

Prices are delivered consumers' yards except on Northern foundry, high phosphorus and malleable, which are f.o.b. local furnace, not including an average switching charge of 61c. per gross ton.

Ferroalloys.—It is not uncommon to find dissatisfaction among buyers over the advance in the price of ferromanganese, and it is somewhat doubtful whether third quarter coverage has been as widespread or as heavy as might reasonably be expected. Several carloads of 19 to 21 per cent spiegeleisen have been sold at $32, Hazard, Pa., and two small inquiries are before the trade. There is little interest in new buying of ferrosilicon, but specifications for this commodity are in good volume.

Prices delivered Chicago: 80 per cent ferromanganese, $112.56; 50 per cent ferrosilicon, $83.50 to $87.50; spiegeleisen, 19 to 21 per cent, $37.76 to $39.76.

Plates.—In the past 10 days new orders and specifications for plate mill products have been in larger volume. Ordering out of tankage materials has been steady, and in addition the general manufacturing trade has been purchasing liberally and asking for early delivery on such tonnage as is required to piece out the remainder of the second quarter. Not taking into account wide sizes, local mills are engaged at close to capacity, and it is significant that the universal and sheared commodities are about balanced as to shipments. Prices on the bulk of going business remain at 2c. per lb., Chicago, although 1.95c. is heard of locally and still lower quotations are being made for delivery into the Southwest. Orders for oil storage tanks total 2500 tons and fresh projects will take 1500 tons. Of 112 passenger cars recently placed by Eastern and Western railroads, not less than 99 will be constructed in shops that are tributary to Chicago mills, which will benefit to the extent of 1500 tons of steel. New business in cars is small and fresh inquiry is stagnant. The Illinois Central will take figures on two 20-ton air dump cars and the Omaha lines of the Chicago & North Western will open bids June 8 on 250 stock cars.

Mill prices on plates per lb.: 2.00c., base Chicago.

Structural Material.—From the viewpoint of sales, this market is the dullest in weeks, but this situation affords time for fabricators to busy themselves in preparing estimates on new projects that have recently come out. Shops, for the most part, are well supplied with work and fabricating schedules are better balanced as to large and small tonnage orders than in many months. In some cases orders have been taken that cannot be executed on the delivery schedules demanded and a fair tonnage in structural projects has been farmed out to shops other than those operated by the successful bidders. The report is that the upper floors of the Mercantile Mart will be constructed of reinforced concrete. The Agricultural Mart, once reported as requiring close to 80,000 tons, is now in new hands and there is some probability that the project may again go forward. The Petroleum Iron Works has taken 1700 tons for a theater at San Antonio, Tex. New bids are being taken on the South Bend, Ind., station of the New York Central. Interest among fresh inquiries is 1000 tons for a highway bridge at Manistee, Mich.

Mill prices on plain material per lb.: 2.00c., base, Chicago.

Bolts, Nuts and Rivets.—Producers are submitting contracts for the third quarter at the prices which have held for several months. Specifications from practically all sources are lighter, though as yet output has been changed only slightly. Heavier release orders from manufacturers of farm implements are expected soon after June 15.

Reinforcing Bars.—Orders for this commodity are numerous, and though users' requirements are usually in small lots, the aggregate tonnage is of good size. Shop operations are being maintained at 80 per cent of capacity. Specifications are large against orders placed earlier in the spring, and benders are having some difficulty in maintaining delivery schedules. Dry weather and moderate temperatures have contributed to extra speed in building construction throughout most of the Central West. Illinois State road programs are well under way, and heavy shipments of hard steel bars are going forward to contractors. Prices for billet and rail steel reinforcing bars are steady. Recent awards and new inquiry are shown on page 1648.

Cold-Rolled Strip.—Demand for this commodity is undiminished and shipments represent close to capacity output at mills. Although some readjustment is reported in automobile manufacture, it is not yet noticeable in specifications from that source for cold-rolled strip. Chicago delivered prices for all widths up to and including 18½ in. are steady at 3.30c. to 3.45c., in 1 to 3-ton lots.

Bars.—Bar mill products are still in heavy demand and again this week, as was the case the week before, new orders are equal to shipments. Diversity of consumer demand is a feature of this market, as is also the steadiness with which automobile manufacturers and parts makers continue to take steel, notwithstanding reports of some curtailment in automobile production. The expected drop in specifications from farm implement plants has not materialized to any great degree, and it now appears that the inventory period in that industry will be passed with an extremely short halt in production. Most of the new sales of mild steel bars are at 2c., Chicago. Individual orders are not large and indicate caution on the part of consumers, who are closely watching tendencies in prices. Although no official announcement has been made concerning third quarter prices, there is little doubt in buyers' minds that producers will now book in advance at current price levels. Specifications for iron bars are in small volume. Producers have opened books for the third quarter at 2c., Chicago, which is the price that has been maintained throughout the present quarter. Purchasers have not yet shown interest in midsummer requirements. Specifications for alloy steel bars are taxing local mills to capacity production, though deliveries are somewhat better now than in late May. Some producers have opened books for the third quarter. Prices are steady. Quotations on rail steel bars are strong at 1.85c., Chicago Heights. It is not improbable that the spread of $3 a ton between prices of hard steel and billet stock bars will be reduced to $2 if the makers of soft steel bars succeed in holding third quarter prices at 2c. per lb., Chicago. Specifications for hard steel bars are steady and afford continuance of double-turn operations at both local mills. New buying is lagging only a trifle behind shipments.

Mill prices per lb.: Soft steel bars, 2.00c., base, Chicago: common bar iron, 2.00c., base, Chicago; rail steel bars, 1.85c., base, Chicago Heights mill.

Wire Products.—Demand for wire and wire products is steady for this time of the year. Jobbers, particularly to the west, are taking out larger quantities and shipments to the manufacturing trade are undiminished. There is evidence of unsettling in prices for plain wire in the Northwest and at St. Louis. Shipments of wire nails are in small volume, and with mill stocks well balanced, production is at low ebb, in some instances being not above 30 per cent of capacity. Crop reports throughout the Middle West are more encouraging. The season is less backward than it appeared in May. Rains over much of the Mississippi River territory have materially improved conditions.

Rails and Track Supplies.—Two railroads, one operating east and the other west from Chicago, have closed for a total of 11,000 tons of standard-section rails. New business in track supplies is for fully 5000 tons. Specifications for track fastenings this week were the largest in many months. The Pennsylvania Railroad is inquiring for 12,000 tons of track accessories, about half of which is expected to come to Chicago mills. The bulk of the rail rolling schedule is now past and production at Chicago district mills has been reduced to 85 per cent of capacity.

Prices f.o.b. mill, per gross ton: Standard-section open-hearth and Bessemer rails, $43; light rails, rolled from billets, $36. *Per lb.:* Standard railroad spikes, 2.80c.; track bolts with square nuts, 3.80c.; steel tie plates, 2.25c.; angle bars, 2.75c.

Sheets.—This market is drifting. Hot mills are engaged at 60 per cent of capacity. Fresh orders are in unusually small lots and from a narrowing circle of users, who are experiencing a seasonal drop in their business and who appear to be well convinced that this is not the time to make heavy purchases. Prices for black sheets are weak, and as low as 2.80c., Chicago, has been done. Recent sales of black and galvanized sheets show that the spread between maximum and minimum prices has been narrowed to $1 a ton. Notwithstanding that total orders to mills are small, there is an insistent demand in the immediate Chicago territory for blue annealed sheets by manufacturers of furnaces, tanks, lockers, road strips and farm machinery.

Base prices per lb., delivered from mill in Chicago: No. 24 black, 2.85c. to 2.90c.; No. 24 galvanized, 3.75c. to 3.80c.; No. 10 blue annealed, 2.20c. to 2.30c. Delivered prices at other Western points are equal to the freight from Gary plus the mill prices, which are 5c. per 100 lb. lower than the Chicago delivered prices.

Warehouse Prices, f.o.b. Chicago

	Base per Lb.
Plates and structural shapes	3.10c.
Soft steel bars	3.00c.
Reinforcing bars, billet steel	2.30c. to 3.00c.
Reinforcing bars, hard steel	2.00c. to 2.70c.
Cold-finished steel bars and shafting—	
Rounds and hexagons	3.60c.
Flats and squares	4.10c.
Bands	3.65c.
Hoops	4.15c.
Black sheets (No. 24)	3.95c.
Galvanized sheets (No. 24)	4.80c.
Blue annealed sheets (No. 10)	3.50c.
Spikes, standard railroad	3.55c.
Track bolts	4.55c.
Rivets, structural	3.60c.
Rivets, boiler	3.60c.
	Per Cent Off List
Machine bolts	**60**
Carriage bolts	60
Coach or lag screws	60
Hot-pressed nuts, squares, tapped or blank	60
Hot-pressed nuts, hexagons, tapped or blank	60
No. 8 black annealed wire per 100 lb	$3.30
Common wire nails base per keg	3.10
Cement coated nails, base per keg	3.10

Cast Iron Pipe.—A feature of this market is the sudden activity on the part of contractors, who have taken not less than 5000 tons of cast iron pipe in the last seven days. Public lettings have not been large, but fresh inquiry is promising. Chicago will open bids June 11 on 1600 tons of 6 and 8-in. class B pipe. Jackson, Mich., and Cynthiana, Ind., are in the market for small tonnages. At Toledo, Ohio, an unnamed bidder secured a fair-sized order at a price somewhat better than $32, Birmingham. The railroads and public utilities are again in the market for miscellaneous current requirements.

Prices per net ton, delivered Chicago: Water pipe, 6-in. and over, $40.20 to $41.20; 4-in., $44.20 to $45.20; Class A and gas pipe, $4 extra.

Coke.—Demand is steady and prices are firm. All Chicago by-product ovens are lighted.

Old Material.—Tendencies in the local scrap market are mixed. Prices for some specialties are steady under the influence of moderate buying by melters, who hesitate to carry stocks and who are finding business moderately good. Cast iron borings have sold off 25c. during the week and 1000 tons of hydraulic compressed sheets have been taken by a user at 25c. above last week's price. Five large lists prepared by Eastern railroads have been offered to dealers. Local scrap yards are not carrying heavy stocks, but they are being operated rather actively.

Prices delivered consumers' yards, Chicago:

Per Gross Ton	
Basic Open-Hearth Grades:	
Heavy melting steel	$12.75 to $13.25
Shoveling steel	12.75 to 13.25
Frogs, switches and guards, cut apart, and miscellaneous rails	13.50 to 14.00
Hydraulic compressed sheets	11.50 to 12.00
Drop forge flashings	9.50 to 10.00
Forged, cast and rolled steel carwheels	15.75 to 16.25
Railroad tires, charging box size	16.50 to 17.00
Railroad leaf springs, cut apart	16.50 to 17.00
Acid Open-Hearth Grades:	
Steel couplers and knuckles	14.50 to 15.00
Coil springs	17.00 to 17.50
Electric Furnace Grades:	
Axle turnings	13.00 to 13.50
Low phosphorus punchings	14.25 to 14.75
Low phosphorus plate, 12 in. and under	14.25 to 14.75
Blast Furnace Grades:	
Axle turnings	10.00 to 10.50
Cast iron borings	9.00 to 9.50
Short shoveling turnings	9.00 to 9.50
Machine shop turnings	7.25 to 7.75
Rolling Mill Grades:	
Iron rails	14.00 to 14.50
Rerolling rails	15.00 to 15.50
Cupola Grades:	
Steel rails less than 3 ft	15.50 to 16.00
Angle bars, steel	14.50 to 15.00
Cast iron carwheels	13.25 to 13.75
Malleable Grades:	
Railroad	13.00 to 13.50
Agricultural	12.00 to 12.50
Miscellaneous:	
*Relaying rails, 56 to 60 lb	23.00 to 25.00
*Relaying rails, 65 lb. and heavier	26.00 to 31.00
Per Net Ton	
Rolling Mill Grades:	
Iron angles and splice bars	14.25 to 14.75
Iron arch bars and transoms	19.50 to 20.00
Iron car axles	23.00 to 23.50
Steel car axles	15.50 to 16.00
No. 1 railroad wrought	11.50 to 12.00
No. 2 railroad wrought	11.25 to 11.75
No. 1 busheling	10.00 to 10.50
No. 2 busheling	5.75 to 6.25
Locomotive tires, smooth	12.00 to 12.50
Pipes and flues	8.00 to 8.50
Cupola Grades:	
No. 1 machinery cast	14.00 to 14.50
No. 1 railroad cast	13.00 to 13.50
No. 1 agricultural cast	12.50 to 13.00
Stove plate	11.25 to 11.75
Grate bars	11.25 to 11.75
Brake shoes	11.00 to 11.50

---

*Relaying rails, including angle bars to match, are quoted f.o.b. dealers' yards.

Philadelphia

Shapes and Sheets Still Weak—Bar and Plate Prices Maintained

PHILADELPHIA, June 5.—Since the leading interest has reaffirmed 1.90c. per lb., Pittsburgh, for plates, shapes and bars for third quarter contracts, bar and plate mills have adopted a slightly firmer attitude. Consumers show no inclination to enter into third quarter commitments and sellers are not pressing for contracts.

The eastern Pennsylvania market on shapes is unchanged, despite the firmer position taken on bar and plate prices. Shapes are still quoted at 2c., Pencoyd, and Bethlehem, Pa., and these prices are shaded occasionally on desirable tonnages. Operating rates of eastern Pennsylvania mills have receded slightly from the schedules of the earlier months of the year, but are still at a fairly high level in most cases.

Blue annealed sheet prices have developed a wide spread as a result of the determined stand of eastern Pennsylvania producers, who are endeavoring to maintain 2.10c., Pittsburgh. Blue annealed sheet mills are quoting 2c. to 2.10c. per lb., Pittsburgh, and producers of continuous mill sheets have sold 1.90c. to 2c., Pittsburgh. Galvanized sheets are only moderately firm at 3.50c., Pittsburgh, but small lots bring up to 3.60c.

Pig Iron.—No contracts of size have been closed for third quarter delivery. The foundry iron price continues at $20, base furnace. The American Engineering Co., Philadelphia, has been buying No. 1X iron in 100-ton lots and in the past fortnight has placed 200 tons or more with eastern Pennsylvania producers. The Sun Shipbuilding & Dry Dock Co., Chester, Pa., is in the market for a small tonnage of foundry iron. The Virginia furnace interest has sold 15,000 tons of foundry iron to two Virginia cast iron pipe makers, 10,000 tons to the Lynchburg Foundry Co. and 5000 tons of the Glamorgan Pipe & Foundry Co. The Birmingham price was met by a concession of 50c. a ton from the $20 base. On carload lots $20 is now being quoted. The demand for low phosphorus iron is quiet.

Prices per gross ton at Philadelphia:

East, Pa. No. 2 plain, 1.75 to 2.25 sil.		$20.76
East. Pa. No. 2X 2.25 to 2.75 sil.		21.26
East. Pa. No. 1X		21.76
Basic (delivered eastern Pa.)	$19.00 to	19.50
Gray forge	19.75 to	20.25
Malleable	21.00 to	21.50
Standard low phos. (f.o.b. New York State furnace)	22.00 to	23.00
Copper bearing low phos. (f.o.b. furnace)	23.50 to	24.00
Virginia No. 2 plain 1.75 to 2.25 sil.		24.54
Virginia, No. 2X 2.25 to 2.75 sil.		25.04

Prices, except as specified otherwise, are delivered Philadelphia. Freight rates: 76c. to $1.64 from eastern Pennsylvania furnaces; $4.54 from Virginia furnaces.

Warehouse Prices, f.o.b. Philadelphia

	Base per Lb.
Plates, ¼-in. and heavier	2.50c. to 2.60c.
Plates, 3/16-in.	2.80c. to 3.00c.
Structural shapes	2.40c. to 2.60c.
Soft steel bars, small shapes and iron bars (except bands)	2.50c.
Round-edge iron	3.50c.
Round-edge steel, iron finished 1½ x 1½ in.	3.50c.
Round-edge steel, planished	4.30c.
Reinforcing steel bars, square, twisted and deformed	2.50c. to 3.00c.
Cold-finished steel, rounds and hexagons	3.35c.
Cold-finished steel, squares and flats	3.85c.
Steel hoops	3.50c.
Steel bands, No. 12 gage to 3/16-in., inclusive	3.25c.
Spring steel	5.00c.
*Black sheets (No. 24)	4.00c.
†Galvanized sheets (No. 24)	4.75c.
Blue annealed sheets (No. 10)	3.15c.
Diamond pattern floor plates—	
¼-in.	5.30c.
3/16-in.	5.50c.
Rails	3.20c.
Swedish iron bars	6.60c.

---

*For 50 bundles or more; 10 to 49 bundles, 4.25c. base; 1 to 9 bundles, 4.50c. base.

†For 50 bundles or more; 10 to 49 bundles, 5.10c. base; 1 to 9 bundles, 5.45c. base.

Bars.—Most sellers are endeavoring to reestablish 1.90c. per lb., Pittsburgh, or 2.22c., delivered Philadelphia, as the third quarter contract price, but consumers show no inclination to enter into future commitments. Orders for prompt shipment are small, and on such business quotations range from 1.85c. to 1.90c., Pittsburgh, or 2.17c. to 2.22c., Philadelphia. Consumers who have been using foreign steel are reported as buyers of small lots of domestic bars, the price of foreign steel being too high at present to offer much of a saving.

Shapes.—Despite the reaffirmation of 1.90c., Pittsburgh, last week as a current and third quarter contract price, the eastern Pennsylvania market is unaffected and still ranges from 2c., Pencoyd, or 2.06c., Philadelphia, to 2c., Bethlehem, or 2.13c., Philadelphia. There are a number of local building projects that will require fair tonnages of steel, but in general the market is inactive and competition is keen.

Plates.—Eastern Pennsylvania producers are quoting 2c. to 2.05c., Coatesville, which, with occasional exceptions on the more desirable current business, has been the range on new business since the beginning of the quarter. With 2.05c., Coatesville, as the third quarter contract price, buyers are not showing much interest in future requirements.

Ferromanganese.—Contracts for third quarter and second half delivery are still confined to the smaller consumers and seldom exceed 200 or 300 tons. Prices are reported firm at $105 per ton, seaboard.

Sheets.—Eastern Pennsylvania producers of blue annealed sheets are still seeking 2.10c., Pittsburgh, on current orders, but the market ranges from 2c. to 2.10c., Pittsburgh, or 2.32c., to 2.42c., Philadelphia, with the lower price prevailing on all but the smallest lots. Occasional sales have been made ignoring the 25c. extra for deep drawing material. Continuous mill sheets are being sold at 1.90c. to 2c. per lb., Pittsburgh, or 2.22c. to 2.32c., Philadelphia. Automobile body builders and other consumers in this market are moderately busy. Black sheets are quiet, and prices range from 2.60c. to 2.65c. per lb. Galvanized sheets are quoted from 3.50c. to 3.60c. per lb., Pittsburgh.

Old Material.—With a plentiful supply of scrap and in the absence of any substantial buying, prices still show a tendency toward weakness. Shipments of No. 1 heavy melting steel are principally to plants at Bethlehem and Steelton, Pa. A Phoenixville mill is paying $10.50 per ton for machine shop turnings, but has not bought a substantial tonnage. Blast furnace scrap is going to Swedeland and Steelton, Pa., on $10.50 per ton contracts. Couplers and knuckles and rolled steel wheels have recently sold at $15 per ton, delivered eastern Pennsylvania.

Prices per gross ton delivered consumers' yards, Philadelphia district:

No. 1 heavy melting steel	$13.50 to	$14.00
Scrap T rails	13.00 to	13.50
No. 2 heavy melting steel	11.00 to	11.50
No. 1 railroad wrought	14.50 to	15.00
Bundled sheets (for steel works)		10.50
Machine shop turnings (for steel works)	10.50 to	10.75
Heavy axle turnings (or equivalent)	12.00 to	12.50
Cast borings (for steel works and rolling mill)		10.50
Heavy breakable cast (for steel works)	15.50 to	15.75
Railroad grate bars		11.50
Stove plate (for steel works)		11.50
No. 1 low phos., heavy, 0.04 per cent and under	17.50 to	18.00
Couplers and knuckles	15.00 to	15.50
Rolled steel wheels		15.00
No. 1 blast furnace scrap	10.00 to	10.50
Machine shop turnings (for rolling mill)	11.00 to	11.25
Wrought iron and soft steel pipes and tubes (new specifications)	12.00 to	12.50
Shafting	17.50 to	18.00
Steel axles	19.00 to	20.00
No. 1 forge fire	11.00 to	11.50
Cast iron carwheels	15.50 to	16.00
No. 1 cast	16.00 to	16.50
Cast borings (for chemical plant)	14.50 to	15.00
Steel rails for rolling	14.75 to	15.25

Warehouse Business.—May sales were slightly larger than the April volume of business, but orders are small, seldom exceeding one or two tons of material. Prices are unchanged and the quantity differentials are apparently being maintained by jobbers.

Imports.—In the week ended June 2, 1140 tons of ore arrived at this port, 640 tons of chrome ore from

Portuguese Africa and 500 tons of manganese ore from India. Pig iron arrivals totaled 2301 tons from the United Kingdom and 1400 tons of ferromanganese from the same source. Steel arrivals consisted of 554 tons of shapes, 23 tons of steel bands, 5 tons of bars and 319 tons of steel skelp from Belgium and 469 tons of steel slabs and 500 tons of steel bars from France.

New York

Pig Iron Sales Increase—16,000 Tons of Steel Let for Building

NEW YORK, June 5.—Pig iron sales in this district, at over 12,000 tons, showed a gain of 5000 tons over the total for the previous week. There were few outstanding purchases; in fact, individual sales were rather small on the average and in many instances June delivery of part of the iron was asked for, indicating that melters' stocks are low. Foundry operations are spotty but, on the whole, appear to be holding at an unchanged rate. The Foran Foundry & Mfg. Co., Flemington, N. J., has closed for 1500 tons. The Ingersoll-Rand Co., New York, has bought 1000 tons of malleable for Phillipsburg, N. J., and 750 tons of malleable and 250 tons of foundry iron for Painted Post, N. Y. It is still in the market for 1000 tons of iron for delivery during the remainder of the year. The General Electric Co. has issued inquiries for 700 tons of No. 2X and No. 1X for Bayway, N. J., and 1100 tons of No. 2 plain and No. 1X for its New England plants. It also wants several hundred tons for Elmira, N. Y., and Erie, Pa., and is still in the market for 400 tons of No. 2X for Schenectady, N. Y. The Richmond Radiator Co., New York, has not yet closed on its inquiry for 5000 tons for Uniontown, Pa. Buffalo producers are trying to obtain a minimum of $16.50, base furnace, on foundry iron and have succeeded in making some small sales at that figure. Eastern Pennsylvania makers continue to quote $20, base furnace. The Standish, N. Y., furnace, maker of copper-free low phosphorus iron, was blown out May 31.

Prices per gross ton, delivered New York district:

Buffalo No. 2 fdy., sil. 1.75 to 2.25	$20.91 to $21.91
East. Pa. No. 2 fdy., sil. 1.75 to 2.25	20.39 to 22.52
East. Pa. No. 2X fdy., sil. 2.25 to 2.75	20.89 to 23.02
East. Pa. No. 1X fdy., sil. 2.75 to 3.25	21.39 to 23.52

Freight rates: $4.91 from Buffalo, $1.39 to $2.52 from eastern Pennsylvania.

Finished Steel.—Viewed by the tonnage booked and shipped in May, steel business in the New York district left little to be desired, but in the last week the tapering off in buying, both as regards contract specifications and new orders, has been marked. In some products, notably sheets, strip steel and hot-rolled bars, there are clear indications of lessened requirements. Some consumers did not fully specify their May quotas on contracts. Jobbers are taking in a fairly good tonnage of pipe to replace that going out on building jobs, and in tin plate there is a satisfactory degree of activity, but elsewhere the market has its dull spots. In structural steel, recent lettings have not been large, but the outlook for the summer continues bright, considering that a total of close to 150,000 tons is in the market or will be shortly. Steel for the Lincoln Building to be built on East Forty-second Street, requiring 16,000 tons, has been awarded, and the award of 10,000 tons for the New Yorker Hotel may come within a week or two. Local fabricators of steel pipe are figuring on 3500 tons of steel required for pipe, on which the borough of Brooklyn last week received general contract bids. A pipe job in the Bronx, amounting to 1300 tons of steel, has been awarded to the East Jersey Pipe Co. The announcement of the leading steel interest of a third quarter contract price of 1.90c., Pittsburgh, on plates, shapes and bars, though followed by some of the independent steel companies, has caused scarcely a ripple in this market. Its effect may be to stimulate specifications before the end of this month on 1.85c. second quarter contracts, but few, if any, third quarter commitments have been entered into. On current business the chief price developments are on sheets. Galvanized sheets have weakened further, so that 3.50c., Pittsburgh, is now the usual quotation to jobbers, and other trade is being asked to pay 3.55c. Black sheets have been sold at 2.65c., though 2.70c. is the more common price on the small lots that are being bought. Blue annealed remain at 2c. to 2.10c.

Mill prices per lb., delivered New York: Soft steel bars, 2.19c. to 2.24c.; plates, 2.12½c. to 2.22½c.; structural shapes, 2.14½c. to 2.19½c.; bar iron, 2.14c.

Warehouse Business.—Small lots of structural steel are in demand and there is some activity in galvanized sheets. Sheet prices are still being shaded by $1 to $2 a ton, but not on all gages, as jobbers offering such concessions apparently do not always have complete stocks. The recently adopted quantity differentials are being generally applied on warehouse purchases in this district and consumers are beginning to take advantage

Warehouse Prices, f.o.b. New York

	Base per Lb.
Plates and structural shapes	3.30c.
Soft steel bars and small shapes	3.25c.
Iron bars	3.24c.
Iron bars, Swedish charcoal	7.00c. to 7.25c.
Cold-finished shafting and screw stock—	
Rounds and hexagons	3.40c.
Flats and squares	3.90c.
Cold-rolled strip, soft and quarter hard,	5.15c. to 5.40c.
Hoops	4.50c.
Bands	4.00c.
Blue annealed sheets (No. 10 gage)	3.90c.
Long terne sheets (No. 24)	5.80c.
Standard tool steel	12.00c.
Wire, black annealed	4.50c.
Wire, galvanized annealed	5.15c.
Tire steel, 1½ x ½ in. and larger	3.30c.
Smooth finish, 1 to 2½ x ¼ in. and larger	3.65c.
Open-hearth spring steel, bases	4.50c. to 7.00c.
Machine bolts, cut thread:	Per Cent Off List
¾ x 6 in. and smaller	55 to 60
1 x 30 in. and smaller	50 to 50 and 10
Carriage bolts, cut thread:	
½ x 6 in. and smaller	55 to 60
¾ x 20 in. and smaller	50 to 50 and 10
Coach screws:	
½ x 6 in. and smaller	55 to 60
1 x 16 in. and smaller	50 to 50 and 10

of the reductions in price for larger quantities by waiting to accumulate larger orders than in the past.

Cast Iron Pipe.—Prices are unchanged, with Northern makers of pressure pipe quoting delivered prices of $37.60 to $38.60, base, and Southern foundries quoting $32 to $33, Birmingham. Interest of consumers in centrifugally cast pipe continues to increase, and on the basis of recent sales the price per foot is slightly less than that for sand cast pipe. The low bidder for a contract in Raritan Township, N. J., requiring about 3000 tons of 4 to 16-in. water pipe, was W. G. Fritz, West Orange, N. J. The Department of Purchase, New York, opens bids June 8 on a small tonnage of special castings. Wethersfield, Conn., has been taking bids on about 320 tons of 10-in. pipe. A recent inquiry from a company in New York for water pipe to be delivered to Los Angeles, Cal., specifies 36,000 ft. of 4-in., 10,000 ft. of 8-in. and 14,000 ft. of 20-in. pipe.

Prices per net ton, delivered New York: Water pipe 6-in. and larger, $37.60 to $38.60; 4-in. and 5-in., $42.60 to $43.60; 3-in., $52.60 to $53.60; Class A and gas pipe, $4 to $5 extra.

Reinforcing Bars.—A large volume of road work has been closed recently and the tonnage involved in small miscellaneous projects seems to be increasing. New business continues to come out at a fair rate and there is promise of considerable activity during the summer months. The general contract has not yet been let on the proposed building for the New York Dock Co. in Brooklyn, which will require approximately 2500 tons, and bids will be taken this week on a post office at Long Island City, involving about 275 tons, and on a printing building at Greenwich, Conn., requiring 250 tons. Competition with foreign steel is increasingly keen, but price advances by European mills seem to indicate a falling off in the volume of imported bars. On the general run of business 2c., Pittsburgh, is generally adhered to, but on large jobs concessions of $1 and occasionally $2 a ton are not infrequent. The Youngstown warehouse price is unchanged at 2.20c., or 2.57½c., on cars at New York, and out of New York warehouses distributers are quoting 2.80c. for lots of 5 tons or more, 2.95c. for lots of 2 to 5 tons and 3.24c. for less than 2 tons, all delivered at job.

Coke.—Most consumers have covered their requirements for the third quarter on both furnace and foundry coke. Standard furnace coke is being quoted at $2.75 per net ton, Connellsville. Special brands of foundry coke are $4.85 per ton at the ovens and delivered prices are: To northern New Jersey, Jersey City and Newark, $8.56 per net ton; to New York and Brooklyn, $9.44 per net ton. By-product foundry coke ranges from $9 to $9.40 per net ton, Newark or Jersey City, and from $10.06 to $10.29 per net ton, New York or Brooklyn.

Old Material.—Buying prices of No. 1 heavy melting steel, delivered to Bethlehem, Pa., have been reduced to $13 per ton and blast furnace material is now quoted by dealers at $9.50 per ton, delivered to Bethlehem or Swedeland, Pa. Machine shop turnings are quoted at $10 to $10.50 per ton, delivered. An auction sale of surplus material at the Brooklyn Navy Yard held today included about 3500 gross tons of iron and steel scrap and a small tonnage of non-ferrous metals. In addition, material at Lake Denmark, Dover, N. J., was offered, consisting of 956 tons of damaged structural steel and about 200 tons of shell steel.

Dealers' buying prices per gross ton f.o.b. New York:

No. 1 heavy melting steel	$10.00 to $10.35
Heavy melting steel (yard)	6.75 to 7.25
No. 1 heavy breakable cast	11.25 to 12.00
Stove plate (steel works)	7.25 to 7.50
Locomotive grate bars	7.50 to 8.00
Machine shop turnings	6.25 to 6.75
Short shoveling turnings	6.25 to 6.75
Cast borings (blast furnace or steel works)	6.25 to 6.75
Mixed borings and turnings	6.25 to 6.75
Steel car axles	15.00 to 15.50
Iron car axles	23.75 to 24.75
Iron and steel pipe (1 in. dia., not under 2 ft. long)	8.25 to 8.75
Forge fire	6.50 to 6.75
No. 1 railroad wrought	10.00 to 10.50
No. 1 yard wrought long	8.50 to 9.00
Rails for rolling	10.00 to 10.50
Cast iron carwheels	11.00 to 11.50
Stove plate (foundry)	8.50 to 9.00
Malleable cast (railroad)	10.00
Cast borings (chemical)	10.75 to 11.25

Prices per gross ton, delivered local foundries:

No. 1 machinery cast	$13.50 to $14.00
No. 1 heavy cast (columns, building materials, etc.), cupola size	11.50 to 12.00
No. 2 cast (radiators, cast boilers, etc.)	11.00 to 11.50

Warehouse Prices, f.o.b. Cleveland

	Base per Lb.
Plates and structural shapes	3.00c.
Soft steel bars	3.00c.
Reinforcing steel bars	2.25c. to 2.75c.
Cold-finished rounds and hexagons	3.65c.
Cold-finished flats and squares	4.15c.
Hoops and bands	3.65c.
Cold-finished strip	*5.95c.
Black sheets (No. 24)	3.75c.
Galvanized sheets (No. 24)	4.40c. to 4.50c.
Blue annealed sheets (No. 10)	3.25c.
No. 9 annealed wire, per 100 lb	$2.85
No. 9 galvanized wire, per 100 lb	3.30
Common wire nails, base per keg	2.85

*Net base, including boxing and cutting to length.

Cleveland

Mill Books Open for Third Quarter But Consumers Are Slow to Contract

CLEVELAND, June 5.—Most of the independent mills have followed the leading interest in a $1 a ton advance on steel bars, plates and structural material to 1.90c., Pittsburgh, for the third quarter, and others are expected to fall in line. Local mills will advance steel bars to 1.90c., Cleveland, if the Pittsburgh advance is maintained. Few consumers are taking any interest in the third quarter, and it may be two weeks or more before the new price is well tested. One or two consumers have made unsuccessful attempts to add additional tonnage to their second quarter contracts at 1.85c. and have them extended through the third quarter. However, as the latter price is still in effect for current business, buyers can place orders at that price for deliveries that might extend into July. The price advance is expected to drive in considerable tonnage on second quarter contracts, as quite a few consumers have been falling behind on specifications against these contracts.

Steel bar bookings held up well through May, but orders for structural material and plates fell off. Specifications for these products have been moderate the past week and new business was very light. Good specifications for steel bars are coming from forge shops in this territory that are all operating at full capacity, many of them being filled up with work recently placed by the Ford Motor Co. Good specifications also for sheets and hot and cold-rolled strip have come from the automotive industry for June, indicating that production by that industry will hold up quite well this month. However, with the expected general slowing down of the demand from this source, makers of these products see little chance for getting better prices for the next quarter.

Some of the strip steel manufacturers are willing to take contracts for the third quarter at present prices and some of the sheet mills are ready to take more business for that delivery if they can get somewhat better prices than the minimum quotations now prevailing. The reaffirming of alloy steel bar prices for the third quarter has not yet resulted in any buying for that delivery.

In the structural field considerable inquiry is coming out for small lots, but little work of any size is pending. Lake shipyards have received an inquiry for a boat requiring 1500 tons of steel. Mount Clemens, Mich., has placed a contract for a steel intake pipe for its waterworks department, requiring 350 tons of plates, which will be supplied by the Biggs Boiler Works.

Pig Iron.—Sales of foundry and malleable iron continue in fair volume, although no large tonnages are being placed. Cleveland interests during the week sold 22,000 tons, mostly in small lots covering June shipment and the third quarter. As large consumers in the automotive and other industries are not yet showing much interest in third quarter contracts, an active buying movement is not in immediate prospect. One round-lot purchase made recently by an Indiana melter was for the entire last half, but with that exception sales have been restricted to the third quarter. Prices are steady at the recent levels, with a general range by Cleveland furnaces of $16.25 to $16.50 on foundry and malleable iron for business in competitive territories, although a little tonnage has been taken at $17 for delivery in this immediate territory. For Cleveland delivery, local furnaces are holding to $18, furnace, but a small amount of business for Cleveland shipment has been taken by an outside producer at a delivered price that figures a few cents a ton lower than the local delivered price. In Michigan the price range is unchanged at $17.50 to $18, furnace. The 6000 tons of malleable iron inquired for by a Benton Harbor, Mich., consumer, on which a Cleveland producer figured, will probably be supplied by a Chicago furnace. It has developed that the basic iron recently purchased for a Butler, Pa., plant was bought at $17, delivered, a large block of it being placed with a Mahoning Valley furnace, the furnace price being $15.37. This indicates a further 50c. decline on basic, the Valley basic price no longer being above $15.50. An Ohio steel maker will purchase 10,000 tons of basic this month. Pig iron shipments by Cleveland interests in May held up to the April volume and June shipping orders are starting out well.

Prices per gross ton at Cleveland:

N'th'n No. 2 fdy., sil. 1.75 to 2.25		$18.50
Southern fdy., sil. 1.75 to 2.25	$21.50 to	22.00
Malleable		18.50
Ohio silvery, 8 per cent		28.00
Basic Valley furnace	15.35 to	15.50
Standard low phos., Valley furn'ce		26.50

Prices, except on basic and low phosphorus, are delivered Cleveland. Freight rates: 50c. from local furnaces; $3 from Jackson, Ohio; $6 from Birmingham.

Iron Ore.—The late start in Lake navigation is reflected in the figures showing the water movement of iron ore for the first two months of the season. The total movement to June 1 was 5,368,761 tons, a decrease of 3,943,796 tons or 42.35 per cent, compared with the corresponding period last year. The May movement was 5,362,815 tons, a decrease of 2,389,656 tons, compared with May last year. The ore market is virtually at a standstill.

Coke.—A moderate amount of activity has developed in contracts for Connellsville foundry coke for the third quarter and some of the foundries are combining orders for their June requirements with these contracts, having already taken all the coke covered by their second quarter contracts. Prices are unchanged at $3.50 to $4.85 for standard Connellsville foundry coke and $7.75, Painesville, for June shipment of Ohio by-product foundry coke.

Semi-Finished Steel.—A sheet mill in the Central Western district has purchased 22,000 tons of sheet bars for the third quarter from a Cleveland maker subject to the price that is eventually established. Some non-integrated producers are urging the naming of third quarter prices, but producers are holding off. Specifications are keeping up to the recent good volume against $33, Cleveland, contracts for sheet bars, billets and slabs.

Bolts, Nuts and Rivets.—Present discounts on bolts and nuts will probably be reaffirmed for the third quarter, as some of the bolt and nut manufacturers plan to open their books late this week for contracts for the next quarter at the prevailing discounts. Orders are keeping up in fair volume. The demand for rivets is still slow.

Sheets.—Mills having contracts with automobile manufacturers have received liberal specifications for June shipment, but otherwise the demand in this territory is light. The market continues weak and irregular. Blue annealed sheets are rather freely offered at 1.90c., Pittsburgh, and some of the mills are waiving the 10c. extra for 40-in. and wider material. However, one important producer is refusing to shade 2.10c. Black sheets are available at 2.65c., Pittsburgh. Galvanized sheets are quoted at 3.50c., Pittsburgh and Valley. Shading to 2.80c., Pittsburgh, is reported on tin mill black plate. Some consumers are willing to place third quarter contracts at present minimum prices, but mills are unwilling to go that low for contracts. Auto body sheets are firm at 4c., which probably will be reestablished as the price for the third quarter. One producer has already opened its books at that price and will take blue annealed sheets at 2c., Pittsburgh, for the next quarter.

Strip Steel.—Mills continue to get good specifications against contracts from the automotive industry, but there is very little new demand. Hot-rolled strip is fairly steady at 1.75c., Pittsburgh, for 6-in. and wider material and at 1.85c. for 3-in. to 6-in. material. Cold-rolled strip is firm at 2.75c., Cleveland, for 3 tons and over. In the face of a decreased demand for the third quarter, producers see little chance of getting better prices and some are willing to take contracts for the quarter at the above prices.

Wire Products.—One producer has opened its books for the third quarter at the present regular quotations of $2.65 per keg for nails and 2.50c. per lb. for wire. Wire nails appear slightly firmer than recently and have a price range of $2.55 to $2.65 per keg.

Cold-Finished Steel Bars.—Specifications against contracts are good, but there is little new buying. The market is firm at 2.25c., Cleveland.

Warehouse Business.—The demand continues rather slow and orders generally are small. Regular prices are being well maintained.

Old Material.—A Cleveland consumer, who has been securing considerable scrap from Detroit, has purchased 10,000 tons of steel-making scrap for water shipment from that city. This is the only activity reported on the part of consumers. Dealers are buying very little scrap, as they have all the material they need to fill mill orders, on which shipments are still restricted. The market shows no price tendency in either direction. Scrap is plentiful at the quoted prices.

Prices per gross ton, delivered consumers' yards:

Basic Open-Hearth Grades		
No. 1 heavy melting steel	$13.00 to	$13.25
No. 2 heavy melting steel	12.50 to	12.75
Compressed sheet steel	12.50 to	13.00
Light bundled sheet stampings	11.50 to	11.75
Drop forge flashings	11.50 to	11.75
Machine shop turnings	7.00 to	7.50
No. 1 railroad wrought	11.50 to	12.00
No. 2 railroad wrought	13.50 to	13.75
No. 1 busheling	11.00 to	11.25
Pipes and flues	9.00 to	9.50
Steel axle turnings	12.50 to	13.00
Acid Open-Hearth Grades		
Low phosphorus forging crops	16.50 to	17.00
Low phosphorus, billet, bloom and slab crops	17.00 to	17.50
Low phosphorus sheet bar crops	16.50 to	17.00
Low phosphorus plate scrap	16.00 to	16.50
Blast Furnace Grades		
Cast iron borings	9.15 to	9.50
Mixed borings and short turnings	9.15 to	9.50
No. 2 busheling	9.15 to	9.50
Cupola Grades		
No. 1 cast	16.25 to	16.75
Railroad grate bars	11.00 to	12.00
Stove plate	12.00 to	12.50
Rails under 3 ft.	16.75 to	17.25
Miscellaneous		
Railroad malleable	15.00 to	15.50
Rails for rolling	16.25 to	16.50

New York Structural Engineers Organize

The Structural Engineers Society of New York has been formed in that city by a group of structural engineers specializing in building work. The object of the society as set forth in the constitution is the "creation of a better understanding and bond between individuals engaged in the profession, the elimination of practices which are injurious and the promotion of those which are beneficial to the true service of the structural engineer and the upholding of proper standards for the engineer in his relation to other members of the building industry."

The officers of the society are: F. A. Burdett, president; L. A. Ball and N. A. Richards, vice-presidents; E. E. Seelye, secretary; and H. H. Burroughs, treasurer. These men, together with Charles Mayer and A. N. Van Vleck, constitute the board of directors. Headquarters are at room 1111, 101 Park Avenue, New York.

San Francisco

Structural Steel Bookings Large but Other Steel Buying Declines

SAN FRANCISCO, June 2 (*By Air Mail*).—Demand for steel products generally on the Pacific Coast has fallen off, although structural steel bookings this week were the heaviest in over 10 weeks. Most of this tonnage, however, developed in the Los Angeles district. The price structure is not as firm as it was a month ago; plate prices have been shaded $2 a ton by one independent producer.

Outstanding developments include the placing of 1600 tons of blue annealed sheets, 1800 tons of reinforcing bars for the Wildcat and Sequoia aqueducts in Oakland with the Columbia Steel Corporation, the award of 1400 tons of shapes for a theater at Avalon, Cal., and 1300 tons for the Willys-Overland factory in Los Angeles with the Llewellyn Iron Works. The Southern Pacific Co. has inquired for material for 100 cars and eight locomotives, requiring about 5000 tons of plates and shapes.

The Southern Pacific Co. has approved preliminary plans for a bridge across the Carquinez Straits to supplant the present train ferry service. This project will require between 12,000 and 20,000 tons of steel. There will be 10 480-ft. spans, one 750-ft. steel viaduct, and one deck and one lift span totaling a little over 5500 ft. The total cost will be about $10,000,000.

Pig Iron.—No outstanding sales or inquiries are reported. Imports during March totaled 2350 tons, compared with 974 tons for the same month last year. Most of this iron came from British India. Quotations are unchanged.

Prices per gross ton at San Francisco:

*Utah basic	$25.00 to $26.00
*Utah foundry, sil. 2.75 to 3.25	25.00 to 26.00
**Indian foundry, sil. 2.75 to 3.25	24.00 to 25.00
**German foundry, sil. 2.75 to 3.25	24.25

*Delivered San Francisco.
**Duty paid, f.o.b. cars San Francisco.

Bars.—Awards were more numerous this week, the total exceeding 3000 tons. In addition to the 1800 tons for the Oakland aqueducts, mentioned above, 325 tons for a warehouse in San Francisco and 250 tons for the Veterans' barracks at Yountville, Cal., were placed with San Francisco distributers. With few exceptions, pending business is confined to lots of less than 100 tons. Out-of-stock prices in the bay district are extremely low, in some cases 1.80c. has been quoted. On less desirable lots 2c. is being obtained. Importations of bars during March totaled 6875 tons, compared with 3678 tons for March last year. Belgian mills sent in 5179 tons and French producers 1393 tons. San Francisco interests took 3814 tons of the total, Los Angeles users 1679 tons and Portland concerns 1206 tons.

Plates.—Few plate awards of size have been made during the past two weeks. The Southern Pacific Co. has taken bids on about 1100 tons of firebox, boiler and sheared plates for eight locomotives and 18 tenders and on 250 tons of material for 50 caboose and 50 gondola cars. Awards are expected next week on two car floats, one for the Santa Fe and one for the Western Pacific, each requiring 700 tons. Prices have weakened; as low as 2.20c. has been quoted, though on the general run of orders 2.30c. still applies.

Shapes.—The structural shape market continues the most active on the Coast; the week's awards totaled 5868 tons. Lettings, other than those mentioned above, included 400 tons for the second unit of the Firestone tire plant in Los Angeles and 300 tons for a grade crossing in the same city, both booked by the Llewellyn Iron Works, and 480 tons for three apartments in San Francisco, taken by McClintic-Marshall Co. Central Works. New and pending business exceeds 13,000 tons. Prices on plain material remain firm at 2.35c., c.i.f. Imports of shapes during March were 4366 tons, compared with 4528 tons for the same month in 1927. San Francisco interests took 1759 tons, Los Angeles users 1517 tons, Portland and Seattle consumers each about 550 tons. Belgian mills shipped 2500 tons and French producers 1550 tons.

Warehouse Prices, f.o.b. San Francisco

	Base per Lb.
Plates and structural shapes	3.15c.
Soft steel bars	3.15c.
Small angles, 3/16-in. and over	3.15c.
Small angles under 3/16-in.	3.55c.
Small channels and tees, ¾-in. to 2¾-in.	3.75c.
Spring steel, ¼-in. and thicker	5.00c.
Black sheets (No. 24)	4.95c.
Blue annealed sheets (No. 10)	3.90c.
Galvanized sheets (No. 24)	5.50c.
Structural rivets, ½-in. and larger	5.65c.
Common wire nails, base per keg	$3.40
Cement coated nails, 100-lb. keg	3.40

Cast Iron Pipe.—Demand for cast iron pipe has fallen off during the past month, and little new business is up for figures. The National Cast Iron Pipe Co. took 229 tons of 4 to 10-in. class B pipe for Inglewood, Cal. San Diego, Cal., placed 227 tons of 4 and 6-in. class B for the improvement of the Otay district with the Miracle Construction Co. of San Diego and 131 tons of 10 and 14-in. class B pipe for a sewer at Pacific Beach with Frank Doran of San Diego. The United States Cast Iron Pipe & Foundry Co. took 100 tons of 4 and 6-in. class 150 pipe for Redwood City, Cal. Bids have been opened on 224 tons of 4 to 10-in. class C pipe for Wells, Nev. The Holdener Construction Co., Sacramento, Cal., was low bidder on 887 tons of 10 to 14-in. class 150 pipe for Lovelock, Nev. Imports in March totaled 2522 tons, compared with 3107 for March last year.

Sheets.—Sheet demand remains spotty. Most of the sales and inquiries involve lots seldom exceeding a carload. The Columbia Steel Corporation took 1600 tons of No. 14 gage blue annealed sheets for the Wildcat and Sequoia aqueducts in Oakland, securing the business from the Lock-Joint Pipe Co., Ampere, N. J., general contractor.

Coke.—Activity in this market reflects the quiet condition noted in the market for pig iron. Melters continue to order in small lots. Imports in March amounted to 7121 tons. English beehive coke is quoted from $15 to $16 a net ton, delivered at dock, while by-product coke ranges from $11.50 to $13 a ton.

Birmingham

Steel Business Keeps Up at Good Rate —Pig Iron Dull

BIRMINGHAM, June 5.—Consumers are showing very little interest in third quarter pig iron. Less than a half dozen inquiries have been sent out. One company reports sales for the week to be smaller than for some time, while others notice no change in the volume, all orders being for small tonnage. Shipments are equal to the weekly average for May, which was sufficient to take care of production during the month. A base of $16 is being maintained on foundry iron. The Tennessee company changed furnace No. 5 at Ensley from foundry to basic on May 26. No other changes have been made. Eighteen furnaces are still in blast, 10 on foundry, six on basic, one on recarburizing iron and one on ferromanganese.

Prices per gross ton, f.o.b. Birmingham district furnaces:

No. 2 foundry, 1.75 to 2.25 sil	$16.00
No. 1 foundry, 2.25 to 2.75 sil	16.50
Basic	15.00

Finished Steel.—New business booked during the week showed a marked increase over the previous week. Demand is good in the majority of the lines, and sales officials foresee an extension of current production and shipping levels into the next quarter. Two good-sized orders for railroad equipment were reported. The Ingalls Iron Works Co. received an order for 2300 tons of fabricated structural steel for the E-Z Opener Bag Co. plant at Tuscaloosa, Ala. Other new business in this line was made up of small orders. Reinforcing steel fabricators experienced a light week from the standpoint of sales, though inquiries were fair. Prices are substantially the same, with the exception of a few slight changes in sheets. The Tennessee company is now operating seven or eight open-hearths at Ensley and five at Fairfield. The Gulf States Steel Co. continues to work four at Alabama City.

Cast Iron Pipe.—Sales during the week were confined to small tonnages, the largest 225 tons for Talladega, Ala. Bids were opened on a small job at Kings Mountain, Tenn. Recent inquiries have been unimportant in size, but demand from small projects is supporting the market fairly well. Quotations for pressure pipe have strengthened considerably during the past few weeks, and the base prices are now given as $32 to $33 on 6-in. and larger sizes. Shipments during May were the heaviest for several months. Plant operations are unchanged.

Coke.—Current sales of foundry coke are slightly less than a week ago. Fair specifications are being issued by foundries for coke under contract. Quotations remain at $5.

Old Material.—Prices on heavy melting steel have dropped 50c. Other prices continue low and unchanged. Demand is spotty, and sales are in small lots for immediate needs. Shipments are light.

Prices per gross ton delivered Birmingham district consumers' yards:

Heavy melting steel	$8.50 to	$9.00
Scrap steel rails	11.00 to	11.50
Short shoveling turnings	7.50 to	8.00
Cast iron borings		8.00
Stove plate		13.50
Steel axles	19.00 to	20.00
Iron axles	20.00 to	21.00
No. 1 railroad wrought	10.00 to	10.50
Rails for rolling		13.00
No. 1 cast		14.25
Tramcar wheels	12.50 to	13.50
Cast iron carwheels	12.00 to	13.00
Cast iron borings chemical	13.50 to	14.00

Buffalo

Larger Inquiries for Pig Iron—Steel Operations 80 to 85 Per Cent

BUFFALO, June 5.—The General Electric Co. has sent out an inquiry for 3650 tons of foundry and malleable pig iron for delivery to Erie, Pa., Schenectady and Elmira, N. Y., and Bayway, N. J. A Syracuse foundry wants a tonnage of foundry iron, but did not specify the exact amount. Two New Jersey inquiries are in the market, one for 350 tons and the other for 1500 tons of foundry iron. One 200-ton lot of foundry was sold to an eastern New York melter. Miscellaneous inquiry for the week, coupled with the above mentioned, brings the total of pending business to between 6000 and 10,000 tons. Furnaces report that shipments of iron are large.

Prices per gross ton, f.o.b. furnace:

No. 2 plain fdy., sil. 1.75 to 2.25	$17.00
No. 2 foundry, sil. 2.25 to 2.75	17.50
No. 1X foundry, sil. 2.75 to 3.25	18.50
Malleable, sil. up to 2.25	17.50
Basic	$16.50 to 17.00
Lake Superior charcoal	27.28

Finished Iron and Steel.—Mill operations continue at about 80 to 85 per cent. Bar and shape business is fair at previously quoted prices. Reinforcing bar business has been brisk. The new Riverside High School, Buffalo, requires 150 tons of bars and 250,000 sq. ft. of wire mesh, which have been placed. The Cazenovia Creek bridge, previously estimated at 800 to 1000 tons, will require 600 tons. The Agfa Ansco Co., Binghamton, placed 450 tons of bars. An addition to the Great Lakes Cement Co.'s plant requires 100 tons. The new Rand Building will require 200 tons. Sheet business is fair. Bolt and nut business is being placed in fairly good volume.

Warehouse Prices, f.o.b. Buffalo

	Base per Lb.
Plates and structural shapes	3.40c.
Soft steel bars	3.30c.
Reinforcing bars	2.75c.
Cold-finishing flats, squares and hexagons	4.45c.
Rounds	3.95c.
Cold-rolled strip steel	5.85c.
Black sheets (No. 24)	4.30c.
Galvanized sheets (No. 24)	5.15c.
Blue annealed sheets (No. 10)	3.80c.
Common wire nails, base per keg	$3.65
Black wire, base per 100 lb.	3.90

Old Material.—There has been very little new buying. Dealers are busy filling the order reported last week, which now develops to have been for 30,000 tons of No. 1 and No. 2 heavy melting steel and hydraulic compressed sheets. This buyer is also receiving boatload shipments of scrap from Detroit at the rate of about two a week. One of the larger foundries is holding up shipments and another foundry is on a quota basis. A small tonnage of short borings and turnings was sold at $10.

Prices per gross ton, f.o.b. Buffalo consumers' plants:

Basic Open-Hearth Grades		
No. 1 heavy melting steel	$14.50 to	$14.75
No. 2 heavy melting steel	12.50 to	13.00
Scrap rails	13.50 to	14.00
Hydraulic compressed sheets	12.50 to	13.00
Hand bundled sheets	8.50 to	9.00
Drop forge flashings	12.00 to	12.50
No. 1 busheling	13.00 to	13.50
Heavy steel axle turnings	12.50 to	13.00
Machine shop turnings	8.00 to	8.50
Acid Open-Hearth Grades		
Railroad knuckles and couplers		15.50
Railroad coil and leaf springs	15.50 to	16.00
Rolled steel wheels	15.00 to	15.50
Low phosphorus billet and bloom ends	16.50 to	17.00
Electric Furnace Grades		
Heavy steel axle turnings	12.75 to	13.25
Short shoveling steel turnings	10.75 to	11.25
Blast Furnace Grades		
Short shoveling steel turnings	10.50 to	11.00
Short mixed borings and turnings	9.50 to	10.00
Cast iron borings	9.25 to	9.75
No. 2 busheling	9.00 to	9.25
Rolling Mill Grades		
Steel car axles	16.00 to	16.50
Iron axles	21.00 to	22.00
No. 1 railroad wrought	12.00 to	12.50
Cupola Grades		
No. 1 machinery cast	14.50 to	15.00
Stove plate	13.00 to	13.25
Locomotive grate bars	11.50 to	12.00
Steel rails, 3 ft. and under		16.50
Cast iron carwheels	12.50 to	13.00
Malleable Grades		
Railroad		15.00
Agricultural		15.00
Industrial		15.00

St. Louis

Pig Iron Melt Declining and Buying Is Light

ST. LOUIS, June 5.—Buying of pig iron in this market continues light. Sales of the St. Louis Gas & Coke Corporation totaled less than 2500 tons. The market is still unsettled as a result of the recent decline of 50c. a ton in the price of Northern iron at Chicago because of Lake competition, and the melt has declined, so that most consumers have sufficient stocks to last them through the second quarter. Buying for third quarter has been light, but makers expect there will be renewed activity in the latter part of June. The principal sale of the Granite City maker was 125 tons of malleable

Warehouse Prices, f.o.b. St. Louis

	Base per Lb.
Plates and structural shapes	3.25c.
Bars soft steel or iron	3.15c.
Cold-finished rounds, shafting and screw stock	3.75c.
Black sheets (No. 24)	4.45c.
Galvanized Sheets (No. 24)	5.25c.
Blue annealed sheets (No. 10)	3.60c.
Black corrugated sheets (No. 24)	4.50c.
Galvanized corrugated sheets	5.30c.
Structural rivets	3.75c.
Boiler rivets	3.75c.
	Per Cent Off List
Tank rivets, $\frac{7}{16}$-in. and smaller 100 lb. or more	70
Less than 100 lb.	65
Machine bolts	60
Carriage bolts	60
Lag screws	60
Hot-pressed nuts, squares, blank or tapped, 200 lb. or more	60
Less than 200 lb.	50
Hot-pressed nuts, hexagons, blank or tapped, 200 lb. or more	60
Less than 200 lb.	50

to an Illinois jobbing foundry. An Iowa implement maker took 500 tons of foundry iron. The Granite City maker has not changed its prices.

Prices per gross ton at St. Louis:

No. 2 fdy., sil. 1.75 to 2.25, f.o.b. Granite City, Ill.	$19.00
Northern No. 2 fdy., delivered St. Louis	20.16
Southern No. 2 fdy., delivered	$19.92 to 20.42
Northern malleable, delivered	20.16
Northern basic, delivered	20.16

Freight rates: 81c. from Granite City to St. Louis; $2.16 from Chicago; $4.42 from Birmingham.

Coke.—Consumption of foundry grades has fallen off as a result of the smaller melt of pig iron, and takings from the ovens are below contract obligations.

Finished Iron and Steel.—The Granite City Steel Co. reports that the slight improvement in the demand for galvanized sheets, which manifested itself a week or two ago, continues and its volume is quite a bit greater than it was a few weeks ago. The tonnage booked during May was above that taken in April, although not quite as heavy as March specifications. While figures are not complete, warehouse business for May is expected to run about the same as in April, but about 20 per cent less than in May, 1927. Structural awards during the week totaled 650 tons, all to the Mississippi Valley Structural Steel Co., and the only reinforcing bar project of consequence, a waterworks reservoir at Evansville, Ind., 600 tons, went to the Laclede Steel Co.

Old Material.—The market for old material is quiet. The only price change is a reduction of 50c. a ton on stove plate. Consumers bought very little during the week, and about the only activity is among dealers, who are buying to cover recent heavy orders for heavy melting steel. Railroad lists follow: Pennsylvania, 45,630 tons; Baltimore & Ohio, 18,045 tons; Atchison, Topeka & Santa Fe, 5945 tons; Chicago & Western Indiana, 14 carloads.

Dealers' buying prices, per gross ton, f.o.b. St. Louis district:

Heavy melting steel	$11.00 to $11.50
No. 1 locomotive tires	12.00 to 12.50
Heavy shoveling steel	11.00 to 11.50
Miscellaneous standard-section rails, including frogs, switches and guards, cut apart	12.50 to 13.00
Railroad springs	13.50 to 14.00
Bundled sheets	8.75 to 9.25
No. 2 railroad wrought	11.25 to 11.75
No. 1 busheling	9.75 to 10.25
Cast iron borings	9.00 to 9.50
Iron rails	13.00 to 13.50
Rails for rolling	13.00 to 13.50
Machine shop turnings	7.00 to 7.50
Steel car axles	17.50 to 18.00
Iron car axles	23.50 to 24.00
Wrought iron bars and transoms	21.00 to 21.50
No. 1 railroad wrought	10.00 to 10.50
Steel rails, less than 3 ft.	15.00 to 15.50
Steel angle bars	12.00 to 12.50
Cast iron carwheels	13.50 to 14.00
No. 1 machinery cast	13.00 to 13.50
Railroad malleable	11.50 to 12.00
No. 1 railroad cast	13.00 to 13.50
Stove plate	11.50 to 12.00
Agricultural malleable	12.00 to 12.50
Relaying rails, 60 lb. and under	20.50 to 23.50
Relaying rails, 70 lb. and over	26.50 to 29.00

Youngstown

Steel Production Continues This Week at 70 to 75 Per Cent

YOUNGSTOWN, June 5.—Steel production in the Youngstown district continues for the first week in June at 70 to 75 per cent. The Steel Corporation properties are averaging somewhat higher than those of the independents. Production of the Valley plants of the A. M. Byers Co., Pittsburgh, is being accelerated. Finishing mills of the Byers properties are operating three shifts of 8 hr. each continuously from Sunday night until the following Saturday morning. Puddle mill departments operate five days per week, two turns daily, which is considered close to capacity. This production rate compares with an operation of 50 per cent at the beginning of the year and reflects the larger demand for wrought iron by the company's finishing mills.

Of 53 independent open-hearth furnaces in the Mahoning Valley, 34 are melting, a rate little changed from that of preceding weeks; 108 of 127 sheet mills are under power; tin plate output averages 70 per cent with the independents and 80 per cent with the district plants of the American Sheet & Tin Plate Co.; independent bar mills are at 60 per cent, with Steel Corporation units at 75 per cent. There has been a moderate decrease in steel pipe schedules, but 12 of 20 mills are rolling.

It is the opinion of President Elmer T. McCleary of the Republic Iron & Steel Co. that independents will be able to maintain a fairly satisfactory production rate during the summer. He bases this belief upon the fact that important consumers have been keeping purchases at a minimum for some time and their stocks of steel in consequence are low. In order for them to maintain manufacturing operations, he believes they will come into the market in a fairly active way during the mid-summer months. The usual summer recession in the industry, he feels, will not be so pronounced nor of such long duration this year.

Cincinnati

Melters Slow to Buy Third Quarter Pig Iron—Sheet Orders Heavier

CINCINNATI, June 5.—While third quarter pig iron inquiries have appeared in slightly greater volume, sales have been negligible. The largest order in the past week called for 500 tons of Southern foundry for a consumer in the Cincinnati district. Pending business includes 750 tons of malleable for a Richmond, Ind., foundry, 500 tons of Northern foundry for a Hamilton, Ohio, company and 500 tons of foundry for a central Indiana melter. Dealers estimate that only a small percentage of the iron required for third quarter has been purchased by users in this territory. The hesitancy in forward buying is attributed to the uncertainty regarding the turn which business is likely to take and also to the rather weak price situation. There has been no change in quotations. Alabama and Tennessee irons remain firm at $16, base Birmingham, southern Ohio foundry at $19, base Ironton, and Jackson County silvery at $25, base furnace, for 8 per cent.

Prices per gross ton, delivered Cincinnati:

So. Ohio fdy., sil. 1.75 to 2.25	$20.89
So. Ohio malleable	$20.14 to 20.89
Alabama fdy. sil. 1.75 to 2.25	19.69
Alabama fdy. sil. 2.25 to 2.75	20.19
Tennessee fdy. sil. 1.75 to 2.25	19.69
Southern Ohio silvery 8 per cent	26.89

Freight rates $1.89 from Ironton and Jackson Ohio; $3.69 from Birmingham.

Warehouse Prices, f.o.b. Cincinnati

	Base per Lb.
Plates and structural shapes	3.40c.
Bars soft steel or iron	3.30c.
New billet reinforcing bars	3.15c.
Rail steel reinforcing bars	3.00c.
Hoops	4.00c. to 4.25c.
Bands	3.95c.
Cold-finished rounds and hexagons	3.85c.
Squares	4.35c.
Black sheets (No. 24)	4.05c.
Galvanized sheets (No. 24)	4.90c.
Blue annealed sheets (No. 10)	3.60c.
Structural rivets	3.85c.
Small rivets	65 per cent off list
No. 9 annealed wire per 100 lb	$3.00
Common wire nails base per keg	2.95
Cement coated nails base 100 lb. keg	2.95
Chain per 100 lb	7.55
	Net per 100 Ft.
Lap-welded steel boiler tubes 2-in.	$18.00
4-in.	38.00
Seamless steel boiler tubes 2-in.	19.00
4-in.	39.00

Dealers' buying prices per gross ton f.o.b. cars, Detroit:

Heavy melting and shoveling steel	$11.00 to $11.50
Borings and short turnings	7.25 to 7.75
Long turnings	6.75 to 7.25
No. 1 machinery cast	14.00 to 15.00
Automobile cast	19.50 to 21.00
Hydraulic compressed sheets	9.75 to 10.25
Stove plate	11.00 to 12.00
No. 1 busheling	8.50 to 9.00
Sheet clippings	6.00 to 7.00
Flashings	9.25 to 9.75

Finished Material.—The situation is more encouraging than a week ago, the favorable turn having been caused by heavy specifications and orders for steel sheets received by district sheet mills. The activity in this line, however, is in contrast with the dullness which continues in bars, structural shapes and plates. Demand for structural steel is still lagging below normal for this time of the year, and prospects for the immediate future are not good. The only major project pending at the moment is 400 tons for airplane hangars at Wright Flying Field, Dayton, Ohio, but a highway bridge across the Ohio River at Louisville, requiring about 14,000 tons of steel, is expected to come out for bids before the end of June. Meanwhile, fabricators are moderately busy on numerous small jobs. Bars, structural shapes and plates are firm at 1.85c., base Pittsburgh, and indications are that an attempt will be made to secure $2 a ton more for third quarter, although practically no inquiry for that delivery has developed. In wire goods, shipments have been about equal to those in the same period of 1927. Common wire nails are reported to be bringing $2.50 per keg, base Ironton, plus a barge rate for delivery to Ohio River consuming points. Plain wire remains at $2.40 per 100 lb., base Ironton. Releases of contract specifications for sheets have been heavy and in the case of one district mill, bookings have been the second largest in the company's history. For blue annealed stock, sellers are getting 2c., base Pittsburgh, on the average run of material, but this is shaded possibly $2 a ton on large orders. Black sheets range from 2.70c. to 2.80c., base Pittsburgh, while automobile body sheets are steady at 4c.

Reinforcing Bars.—Despite the scarcity of major projects, the number of jobs ranging from 25 to 100 tons is large enough to keep the volume of sales up to a fairly good level. New billet bars are quoted at 1.85c. base Pittsburgh, and rail steel bars at 1.80c., base mill.

Warehouse Business.—Shipments of reinforcing bars out of local warehouses have been liberal in volume, while orders for soft steel bars, structural shapes and plates also have been well sustained. Sales of steel sheets, however, have been rather light. There has been no change in prices, which are firm.

Coke.—Shipments of by-product foundry coke have fallen off sharply in the past week, and one important dealer declares that specifications have declined almost to the low point reached last fall. There also has been a lessened interest in domestic grades, although sales have been fairly well maintained. The slowing down in the demand for by-product foundry coke is reported to be responsible for plans to lower prices at Detroit. Just how much of a cut will be made has not yet been determined, but some dealers believe that it may amount to $1 a ton.

Foundry coke prices per net ton delivered Cincinnati: By-product coke $9.02; Wise County coke, $7.09 to $7.59: New River coke, $9.09 to $9.59 Freight rates $2.14 from Ashland, Ky.; $2.59 from Wise County and New River ovens.

Old Material.—Heavy melting steel has declined 25c. a ton and other items reflect the weakness of the market. Curtailment of steel plant operations and the dullness in foundry grades are the immediate causes of the decrease. The Norfolk & Western is taking bids this week on its monthly list totaling approximately 10,000 tons, while the Louisville & Nashville has put out a special list consisting of 12,000 tons of No. 1 steel rails.

Dealers' buying prices per gross ton f.o.b. cars, Cincinnati:

Heavy melting steel	$10.75 to	$11.25
Scrap rails for melting	11.25 to	11.75
Loose sheet clippings	8.25 to	8.75
Bundled sheets	9.25 to	9.75
Cast iron borings	7.75 to	8.25
Machine shop turnings	7.25 to	7.75
No. 1 busheling	10.00 to	10.50
No. 2 busheling	7.00 to	7.50
Rails for rolling	12.50 to	13.00
No. 1 locomotive tires	12.75 to	13.25
No. 1 railroad wrought	10.00 to	10.50
Short rails	15.75 to	16.25
Cast iron carwheels	12.25 to	12.75
No. 1 machinery cast	15.25 to	15.75
No. 1 railroad cast	12.75 to	13.25
Burnt cast	7.50 to	8.00
Stove plate	8.25 to	8.75
Brake shoes	9.50 to	10.25
Railroad malleable	11.50 to	12.00
Agricultural malleable	11.00 to	11.50

Boston

Heavy Scrap Exports to Danzig—Pig Iron Competition Keen

BOSTON, June 5.—The Mystic and Champlain furnaces have taken most of the pig iron business placed in New England during the past week. The competition between these furnaces is very keen. Their combined sales in the last two weeks were about 10,000 tons. The price situation has shown no improvement. Buffalo iron is still being offered at $16, base furnace, and the Mystic and Champlain stacks are meeting the Buffalo delivered prices when necessary. Buffalo malleable iron has been offered in this market at $16.50, furnace. The Rhode Island Malleable Co., Phillipsdale, R. I., bought 450 tons of malleable iron at a reported delivered price of $21, and may take about 450 tons additional. The Mystic furnace sold 1200 tons to a Worcester melter, making a total of 1500 tons, whereas the foundry's original inquiry was for 500 to 1000 tons. Another Worcester plant has bought 300 tons. There is only one open inquiry in the market, that being for 500 to 1000 tons of No. 1X for third quarter, with an option on fourth quarter delivery on part of it.

Prices of foundry iron per gross ton, delivered to most New England points:

Buffalo, sil. 1.75 to 2.25	$20.91 to	$21.91
Buffalo, sil. 2.25 to 2.75	21.41 to	22.41
East. Penn., sil. 1.75 to 2.25	23.15 to	23.65
East. Penn., sil. 2.25 to 2.75	23.65 to	24.15
Virginia, sil. 1.75 to 2.25		25.71
Virginia, sil. 2.25 to 2.75		26.21
Alabama, sil. 1.75 to 2.25	22.91 to	24.77
Alabama, sil. 2.25 to 2.75	23.41 to	25.27

Freight rates: $4.91 from Buffalo, $3.65 from eastern Pennsylvania, $5.21 all rail from Virginia, $6.91 to $8.77 from Alabama.

Importations.—Importations of pig iron here in May, at 248 tons, were the smallest for any month this year. Importations for the first five months of this year totaled 4731 tons, compared with 13,487 tons in the corresponding months of last year. Imports of ore in May amounted to 16,828 tons.

Coke.—The New England Coal & Coke Co. and the Providence Gas Co. report that 100 per cent of regular customers have signed contracts for last half by-product foundry coke requirements. Current foundry requirements are larger than a month ago and a year ago, yet are below normal. June shipments are being made at $11 a ton, delivered within a $3.10 freight rate zone. Domestic coke is moving in large volume, almost exclusively, however, to dealers who are stocking up for fall and winter.

Shapes and Plates.—The naming of 1.90c. per lb., base Pittsburgh, on shapes and plates by leading mills has failed so far to force third quarter contracting. The largest consumers are still protected to a degree on

Warehouse Prices, f.o.b. Boston

prospective tonnages, and owing to the labor situation there is little incentive to anticipate steel requirements.

Steel Fabricating Work.—The Boston iron workers' strike situation is deadlocked. Except on one local job, operating on cost plus, striking workers are still out. Intimations are that fabricators propose to establish themselves on an open shop basis. The strike has spread to outside points. In addition, other branches of the building trades are striking for higher wages, and automobile truck drivers employed by fabricators are on "vacation." The construction situation is decidedly unsettled at the moment. Members of iron workers' unions employed on bridges in western Massachusetts, New Hampshire, Vermont and Maine are still working.

Bars.—Most of the large mills have advanced steel bars to 1.90c. per lb., base Pittsburgh. Regardless of the stiffer mill prices, all local jobs on reinforcing bars are going at less than 2.90c. per lb., base, from stock.

Cold-Rolled Strip.—Cold-rolled strip makers have opened their books for third quarter. Orders are coming in very slowly. The American Steel & Wire Co. quotes 3.30c. per lb., base Worcester, for 1 to 3 ton lots, while other rollers ask 3.15c. per lb., base Pittsburgh. Less than 3.30c., Worcester, can be done on large lots.

Old Material.—Exports of scrap from this port to Danzig continue to feature the market. A steamer with 5000 tons left Boston May 30, the fourth shipment this year. Another steamer finished loading 4500 tons June 2 and sailed the following day; still another will complete loading approximately 4500 tons this week; and another with about 5000 tons is due to sail July 5. For export, $9.50 to $10 on cars, dock, is paid for No. 1 steel, and around $7.25 for good yard steel. Total exports on this movement, according to report, will approximate 50,000 tons and will, it is believed, be used in the production of structural steel. Small tonnages will have been exported from other New England ports. The scrap market, aside from export business, is dull. Apparently there has been some modifications in prices on a few materials, but no significance is attached to such changes. Sales of railroad malleable to New England consumers at $13.50 a ton, delivered, were made. Machinery cast sales were few and far between at former prices.

Buying prices per gross ton, f.o.b. Boston rate shipping points:

No. 1 heavy melting steel	$8.60 to $9.00
Scrap T rails	8.50 to 9.00
Scrap girder rails	7.50 to 8.00
No. 1 railroad wrought	9.00 to 9.50
No. 1 yard wrought	7.00 to 7.50
Machine shop turnings	5.50 to 5.75
Cast iron borings (steel works and rolling mill)	5.75 to 6.25
Bundled skeleton, long	5.50 to 6.25
Forge flashings	5.60 to 7.00
Blast furnace borings and turnings	5.50 to 5.75
Forge scrap	6.00 to 6.25
Shafting	13.00 to 13.50
Steel car axles	14.50 to 15.00
Wrought pipe 1 in. in. diameter (over 2 ft. long)	7.00 to 7.50
Rails for rolling	10.00 to 10.25
Cast iron borings, chemical	10.00 to 10.25

Prices per gross ton delivered consumers' yards:

Textile cast	$13.25 to $13.50
No. 1 machinery cast	14.00 to 14.50
No. 2 machinery cast	12.50 to 13.50
Stove plate	10.00 to 10.50
Railroad malleable	13.00 to 13.50

Canada

Blowing in of Port Colborne Furnace May Curb Pig Iron Imports

TORONTO, ONT., June 5.—Pig iron sales show very little change from those of a week ago. Some inquiry for forward delivery is appearing, but producers and consumers appear to have difficulty in reaching a satisfactory price level, and as a consequence business of this kind is delayed. The demand for prompt shipment, however, is holding to the recent level. Local blast furnace representatives report a steady flow of orders ranging from 50 to 200 tons. The blowing in of the Victoria furnace of the Canadian Furnace Co., Port Colborne, Ont., on May 24 brings the total number of active stacks in Canada to seven. The blowing in of the Port Colborne stack will, it is expected, have a tendency to curb imports of foundry and malleable iron in the Niagara peninsula, as it is ideally located to supply the local market as well as other districts in Ontario, especially on the Great Lakes. Canadian pig iron prices are unchanged, although shading continues in some districts.

Prices per gross ton:

Delivered Toronto	
No. 1 foundry, sil. 2.25 to 2.75	$23.10 to $23.60
No. 2 foundry, sil. 1.75 to 2.25	23.10 to 23.60
Malleable	23.10 to 23.60
Delivered Montreal	
No. 1 foundry, sil. 2.25 to 2.75	24.50 to 25.00
No. 2 foundry sil. 1.75 to 2.25	24.50 to 25.00
Malleable	24.50 to 25.00
Basic	24.00
Imported Iron at Montreal Warehouse	
Sumerlee	33.50
Carron	33.00

Old Material.—Current demand is confined to small tonnages. Mills are receiving deliveries against old contracts and in some instances are placing orders for special grades. Foundries are responsible for the greater part of current demand. Electric furnace requirements are large. Prices are unchanged but are weak.

Dealers' buying prices:

Per Gross Ton	Toronto	Montreal
Heavy melting steel	$9.00	$8.00
Rails, scrap	10.00	10.00
No. 1 wrought	9.00	11.00
Machine shop turnings	7.00	6.00
Boiler plate	7.00	7.00
Heavy axle turnings	7.50	7.50
Cast borings	7.50	6.00
Steel turnings	7.00	6.50
Wrought pipe	5.00	6.00
Steel axles	14.00	19.00
Axles wrought iron	16.00	21.00
No. 1 machinery cast	....	16.00
Stove plate	....	12.00
Standard carwheels	....	14.50
Malleable	....	13.00
Per Net Ton		
No. 1 machinery cast	15.00	....
Stove plate	9.00	....
Standard carwheels	13.00	....
Malleable scrap	13.00	....

Detroit

May Automobile Production Gained and Outlook for June Is Good

DETROIT, June 5.—The May totals of automobile production thus far available include those for Dodge Brothers, Hudson-Essex, Hupp, Packard and Reo, and show a combined total of 71,431, as against 68,226 for April, or a gain of nearly 5 per cent. Dodge Brothers' May production dropped 2716 units below that of April, the May total being 19,717 units. This is the only case, from the figures now at hand, of a decline from April.

The merger of the Dodge and Chrysler companies gives a potential output in existing plants of the two companies of 1,000,000 cars a year. Construction is just being started at the Jefferson Avenue plant of a building 150 x 1600 ft. for the manufacture of the Chrysler 62. Three Chrysler models will be built at the Jefferson Avenue plant; the Fargo truck will be built in the Highland Park plant, and the Dodge Brothers' models and Graham trucks are to be continued in the Hamtramck plant. The total number of units produced by Dodge Brothers in the first five months of this year ran 102,560, against 83,781 in the corresponding period of 1927, or a gain of 22.4 per cent.

Production of Hudson and Essex cars during May amounted to 32,450 units, or an increase of more than 12 per cent over that of April. Total shipments to June 1 were 151,886, compared with 145,252 in the corresponding period of 1927. The first five months of this year were the largest five-months' period in Hudson-Essex history. June is scheduled at approximately 30,000 cars.

Hupp also made a record in May, with shipments of

*Refinery quotation; delivered price ¼c. higher.

New York, June 5.—The holiday last week slowed up activity somewhat. Copper continues strong, but not so active. Tin prices have fallen quite sharply, with buying fairly large. Lead has been advanced again, but quotations for zinc have remained practically unchanged for nearly two weeks.

Copper.—Sales of copper for May are estimated by the trade at not less than 415,000,000 lb., and approximately half of this was for export. Sales to foreign consumers in May were therefore a record for all time. Naturally the market is not as active as it has been. Domestic consumers are not buying much, but sales to foreign users continue in good volume. June metal is scarce, although a premium has not yet been asked for spot or June. Electrolytic copper is quoted at 14.75c., delivered in the Connecticut Valley, and Copper Exporters, Inc., continues to maintain its quotation unchanged at 15c., c.i.f. European ports. Lake copper is obtainable at 14.87½c., delivered.

Copper Averages.—The average price of Lake copper for the month of May, based on daily quotations in The Iron Age, was 14.50c., delivered. The average price of electrolytic copper was 14.19c., refinery, or 14.44c., delivered in the Connecticut Valley.

Tin.—With two holidays, one in London and one in New York, this market has had a short week. Total sales for the week ended June 2 amounted to about 700 to 800 tons. The feature of the market has been a sharp decline in prices, which has been caused by declarations of 800 to 1000 tons of tin available for June delivery thus early in the month. This has caused spot prices to fall, with the situation for this delivery changing from a premium to a discount. On May 29 spot tin was sold at a premium of about ¼c. over August, but on June 1 it dropped to a discount of ⅜c. from the August position. Deliveries into consumption in May were 5335 tons, which is much smaller than for some time, and the amount of tin in stock and landing on May 31 was 3708 tons, which is much the largest in many months. The increase in stocks in store was large, but this metal could have been shipped away if consumers had needed it. The visible supply in the United States on May 31 was 10,282 tons, regarded as ample, and the increase in the world's visible supply was 2063 tons, bringing it to 17,064 tons. The most active day in the past week was May 29 when 400 to 500 tons changed hands. Yesterday, Monday, about 250 tons changed hands and today the market has been quite dull, with spot Straits tin quoted at 49.25c., New York, the lowest since Oct. 9, 1924. London prices today were: Spot standard, £223 15s.; future standard, £232 5s., and spot Straits, £226 5s. The Singapore price today was £226 5s.

Lead.—On May 29 the American Smelting & Refining Co. advanced its contract price for the third time recently from 6.20c. to 6.30c., New York. In the outside market prices are correspondingly higher and firm at 6.17½c. to 6.20c., St. Louis. Consumers have been buying in good volume, but demand is not so large as in the early period of the advance. Some desire to buy for August, but producers are not eager to sell for that position.

Zinc.—Producers report a fairly good demand each day with specifications on contract eminently satisfactory. Most of them are asking and obtaining 6.15c., St. Louis, at which level most sales are being made, but some prime Western zinc is still available at 6.12½c., St. Louis. The market is quotable at 6.12½c. to 6.15c., St. Louis, or 6.47½c. to 6.50c., New York. Ore prices were unchanged last week at $40 per ton,

Metals from New York Warehouse

Delivered Prices Per Lb.

Tin, Straits pig	52.00c. to 53.00c.
Tin, bar	54.00c. to 55.00c.

with sales of about 13,500 tons and production about 11,000 tons.

Nickel.—Wholesale lots of ingot nickel are quoted unchanged at 35c., with shot nickel at 36c. and electrolytic nickel at 37c. per lb.

Antimony.—The market is dull with a tendency to weakness and Chinese metal is quoted nominal at 10.50c., New York, duty paid, for all positions.

Aluminum.—Virgin metal, 98 to 99 per cent pure, is available at 23.90c. per lb., delivered.

Non-Ferrous Metals at Chicago

CHICAGO, June 5.—Price advances are noted in lead and zinc and quotations are lower on tin. Sales in this district have been in fair volume. Old metal prices are steady in a moderately active market.

Prices, per lb., in carload lots: Lake copper, 14.62½c.; tin, 51.50c.; lead, 6.35c.; zinc, 6.25c.; in less-than-carload lots, antimony, 12.75c. On old metals we quote copper wire, crucible shapes and copper clips, 10.75c.; copper bottoms, 9.75c.; red brass, 9.50c.; yellow brass, 7.25c.; lead pipe, 4.75c.; zinc, 3.50c; pewter, No. 1, 30c.; tin foil, 36.25c.; block tin, 45.25c.; aluminum, 12c.; all being dealers' prices for less-than-carload lots.

RAILROAD EQUIPMENT

Order for 200 Flat Cars and Inquiry for 250 Stock Cars

THE Chicago, St. Paul, Minneapolis & Omaha has purchased 200 flat cars and has come into the market for 250 stock cars. An inquiry from the Chicago, Rock Island & Pacific calls for 250 gondola bodies. Distribution of the Southern Pacific's order for 62 passenger train cars has been announced.

Class I railroads installed 561 locomotives in the first four months this year, according to reports filed by the carriers with the Car Service Division of the American Railway Association. This was a decrease of 73, as compared with the corresponding period last year, and of 198 compared with the corresponding period in 1926. During April the railroads placed in service 96 locomotives, compared with 187 in April, 1927. Locomotives on order on May 1 totaled 137, compared with 217 on May 1, 1927.

Freight cars installed in service in the first four months of 1928 totaled 15,635, compared with 22,066 for the same period in 1927 and 31,980 in the first four months of 1926. Freight cars installed in April this year totaled 5571, compared with 6270 in April, 1927. The railroads had 22,242 freight cars on order May 1, compared with 26,675 on the same date last year and 48,762 on May 1, 1926.

Details of the week's business follow:

Chicago & Illinois Midland is in the market for two Mikado locomotives.

Vancouver Harbor Commission, Vancouver, B. C., has ordered one locomotive from American Locomotive Co.

Chicago, St. Paul, Minneapolis & Omaha has ordered 200 flat cars from Pullman Car & Mfg. Corporation. This road has also made definite inquiry for 250 stock cars.

Illinois Central will purchase two 20-ton air dump cars.

Chicago, Rock Island & Pacific is in the market for 250 50-ton gondola car bodies.

Missouri-Kansas-Texas expects to buy six baggage-mail cars.

American Oil Co., Baltimore, has ordered two three-compartment tank cars from General American Tank Car Corporation.

Southern Pacific's order for 62 passenger cars, mentioned in this column last week, was distributed as follows: Six dining cars and five compartment coaches with Pullman Car & Mfg. Corporation, 10 baggage cars and 10 coaches with Standard Steel Car Co., 25 steel coaches with American Car & Foundry Co., and six baggage and mail cars with Bethlehem Steel Co.

Old Metals, Per Lb., New York

The buying prices represent what the large dealers are paying for miscellaneous lots from the smaller accumulators and the selling prices are those charged consumers after the metal has been properly prepared for their uses.

	Dealers' Buying Prices	Dealers' Selling Prices
Copper, heavy crucible	12.25c.	13.875c.
Copper, heavy and wire	12.25c.	13.25c.
Copper, light and bottoms	10.50c.	11.75c.
Brass, heavy	7.25c.	8.50c.
Brass, light	6.00c.	7.50c.
Heavy machine composition	9.50c.	10.875c.
No. 1 yellow brass turnings	8.25c.	9.25c.
No. 1 red brass or composition turnings	9.00c.	10.00c.
Lead, heavy	5.00c.	5.50c.
Lead, tea	4.00c.	4.50c.
Zinc	3.00c.	3.50c.
Sheet aluminum	12.75c.	14.50c.
Cast aluminum	12.50c.	14.00c.

Columbus & Greenville has ordered two 73-ft. gas-electric rail motor cars and two 73-ft. passenger trailers from J. G. Brill Co.

Southern Cotton Oil Co., Savannah, Ga., has ordered 10 8000-gal. tank cars from American Car & Foundry Co. and 10 from General American Tank Car Corporation.

REINFORCING STEEL

Chicago Mercantile Mart Will Take 6000 Tons —1800 Tons in California Aqueducts

AWARDS of 6300 tons included 1800 tons for two aqueducts at Oakland, Cal. The Chicago Mercantile Mart, requiring 6000 tons, and an apartment development in the same city, calling for 1600 tons, made up the bulk of new projects reported for the week, the total being 8300 tons. Awards follow:

STATE OF NEW JERSEY, 600 tons, road work, to Igoe Brothers; 250 tons from C. H. Winans Co., Elizabeth, general contractor, and 350 tons from Ross & Taylor, Trenton.

BUFFALO, 100 tons, addition to plant of Great Lakes Cement Co., to a local maker.

BUFFALO, 150 tons and 250,000 sq. ft. of mesh, Riverside High School, to a Buffalo maker.

EVANSVILLE, IND., 600 tons of rail steel, reservoir for municipal waterworks, to Laclede Steel Co.

EVANSTON, ILL., 280 tons of rail steel bars, apartment building at Hinman Avenue and Grove Street, to Calumet Steel Co.

STATE OF ILLINOIS, 200 tons of rail steel bars, road work, to Calumet Steel Co.

CHICAGO, 130 tons, St. Michaels High School, to an unnamed bidder.

CHICAGO, 160 tons, Hugoelet apartment building, to Concrete Steel Co.

CHICAGO, 100 tons, Wabash Avenue Exchange for Illinois Bell Telephone Co., to Jones & Laughlin Steel Corporation.

CHICAGO, 250 tons, Shiller Park viaduct, to Jones & Laughlin Steel Corporation.

CHICAGO, 700 tons, building for Cuneo Printing Co., to Truscon Steel Co.

SAN FRANCISCO, 325 tons, warehouse, Third and Paul Streets, to Badt-Falk Co.

OAKLAND, 1800 tons, Wildcat and Sequoia aqueducts, to Columbia Steel Corporation.

SACRAMENTO, CAL., 166 tons, paving in Marin County, to Hanrahan Co., San Francisco.

SACRAMENTO, 100 tons, five bridges in Sacramento County, to unnamed company.

IONE, CAL., 125 tons, three school buildings for Preston State School, to San Francisco jobber.

YOUNTVILLE, CAL., 350 tons, State Veterans' Barracks, to San Francisco jobber.

SEATTLE, WASH., 155 tons, piers for West Waterway bridge, to Puget Sound Bridge & Dredging Co.

Reinforcing Bars Pending

Inquiries for reinforcing steel bars include the following:

GREENWICH, CONN., 250 tons, printing building for Condé Nast Publications, Inc.; bids June 5.

LONG ISLAND CITY, N. Y., 275 tons, post office; bids June 7.

BUFFALO, 200 tons, Rand Building.

CHICAGO, 1600 tons, apartment community development by Marshall Field Estate.

CHICAGO, 6000 tons, Mercantile Mart.

CARNEGIE LIBRARY OF

"OVERCAPACITY NO ALIBI"

O. H. Cheney, Banker, Tells Flat Rolled Steel Executives It Does Not Excuse Price Cutting and Low Profits

White Sulphur Springs, W. Va., June 5.—Declaring that excess producing capacity is the chief alibi of steel companies in cutting prices and that this factor cannot justly be held accountable for the unsatisfactory profits which have ruled recently, O. H. Cheney, vice-president American Exchange-Irving Trust Co., New York, at the opening business session this morning of the first annual meeting of Flat-Rolled Steel Executives at the Greenbrier Hotel suggested that it is the fear of excess capacity that has contributed to the present unhealthy situation. Mr. Cheney emphasized that research and education will play the largest parts in maintaining and extending markets as well as in stabilizing conditions in the flat-rolled steel industry and that the trade association is the legitimate and logical means for promoting this work.

Charles O. Hadly, vice-president Alan Wood Iron & Steel Co., Philadelphia, presided at the session, and on behalf of the sheet industry welcomed the executives of the hot and cold-rolled strip industry to the meeting. F. C. Gifford, vice-president Acme Steel Co., Chicago, responded as the representative of the strip industry.

At a meeting of the executive committee of the National Association of Flat-Rolled Steel Manufacturers this morning, B. E. Kibbee, vice-president Sharon Steel Hoop Co., Sharon, Pa., and C. G. Thomas, president Thomas Steel Products Co., Warren, Ohio, were added to the board of directors, which now has 18 members.

Wednesday morning's session will be devoted to a discussion of trade extension work and the final session on Thursday to association activities. The program also includes group meetings of the sheet steel, hot-rolled strip and cold-rolled divisions.

FABRICATED STRUCTURAL STEEL

New York Office Building Takes 16,000 Tons—10,000 Tons Needed for Hotel

With an office building in New York taking 16,000 tons, awards reported during the week amounted to 32,900 tons. New projects totaled only 14,600 tons, 10,000 tons of which will be required for a New York hotel. Awards follow:

Stockbridge, Mass., 100 tons, bridge, to Palmer Steel Co.

New York, 16,000 tons, Lincoln Building on East Forty-second Street, to an unnamed fabricator.

New York, 4000 tons, office building on John Street, from Starrett Brothers, general contractors, to Hedden Iron Construction Co.; reported last week to unnamed fabricator.

Buffalo, 200 tons, stand pipes for Western New York Water Co., to Pittsburgh-Des Moines Steel Co.

Philadelphia, 510 tons, Pennsylvania Railroad warehouse at Venango and D Streets, to Belmont Iron Works.

Philadelphia, 200 tons, building for Kensington Trust Co., to Bethlehem Steel Co.

Reading Railroad, 140 tons, two single track girder spans on Shamokin division, to Phoenix Bridge Co.

Pennsylvania Railroad, 600 tons, bridges, to Bethlehem Steel Co.

Nazareth, Pa., 450 tons, kiln building and turbine room for Nazareth Cement Co., to Bethlehem Construction Co.

Imperial, Pa., 130 tons, bridge work, to McClintic-Marshall Co.

Southern Railway, 900 tons, bridges, to American Bridge Co.

Tuscaloosa, Ala., 2300 tons, E-Z Opener Paper Bag Co. plant, to Ingalls Iron Works Co.

San Antonio, Tex., 1700 tons, theater, to Petroleum Iron Works, Beaumont, Tex.

Cleveland, 600 tons, Parkhurst and Nathan Hale schools, to Wellman-Seaver-Morgan Co.

Cleveland, 975 tons, Lake Shore Hotel, to Forest City Structural Steel Co.

Toledo, Ohio, 325 tons, Toledo Hospital extension, to American Bridge Co.

Marietta, Ohio, 110 tons, bridge for State of Ohio, to Pittsburgh-Des Moines Steel Co.

Middletown, Ohio, 167 tons, storage runway, to McClintic-Marshall Co.

Gary, Ind., 700 tons, Lake County Court House, to A. Bolter's Sons, Chicago.

State of Illinois, 260 tons, highway bridge, to Lakeside Bridge & Steel Co.

South Chicago, Ill., tonnage not stated, frame work for coke handling plant for Youngstown Sheet & Tube Co., to Vierling Steel Works, Chicago.

Chicago, 215 tons, store building at Diversey Boulevard and Broadway, to Duffin Iron Co., local.

Milwaukee, 200 tons, new Lincoln Avenue bridge, to Milwaukee Bridge Co.

St. Louis, 650 tons, girders and columns for warehouse for J. C. Penney Co., 350 tons; columns for Lennox Hotel, Ninth and Washington Avenues, 300 tons, to Mississippi Valley Structural Steel Co.

Manhattan, Kan., 260 tons, State highway bridge, to St. Joseph Structural Steel Co.

San Francisco, 150 tons, office building, Pine and Leisdorff Streets, to California Steel Co.

San Francisco, 480 tons, three apartment buildings, to McClintic-Marshall Co.

Oakland, 140 tons, office building, Fourteenth and Webster Streets, to Pacific Coast Engineering Co.

San Jose, Cal., 100 tons, laundry building, to Herrick Iron Works.

Los Angeles, 400 tons, second unit Firestone Tire & Rubber Co. plant, to Llewellyn Iron Works.

Los Angeles, 300 tons, grade crossing, Riverside Drive, to Llewellyn Iron Works.

Los Angeles, 1300 tons, Willys-Overland automobile plant, to Llewellyn Iron Works.

Los Angeles, 250 tons, apartment building, Kenmore and Wilshire Boulevards, to Llewellyn Iron Works.

Los Angeles, 140 tons, apartment building, Union and Ingram Streets, to Union Iron Works.

Avalon, Cal., 1400 tons, theater, to Llewellyn Iron Works.

Westwood, Cal., 348 tons, steel stage for Fox Film Corporation, to Baker Iron Works.

Glendale, Cal., 260 tons, First Methodist Church, to Llewellyn Iron Works.

Structural Projects Pending

Inquiries for fabricated steel work include the following:

Maine Central Railroad, 400 tons, bridge at Lunenberg, Vt.

State of Vermont, 775 tons, highway bridges.

Boston & Maine Railroad, 400 tons, bridges.

Westchester County, N. Y., 250 tons, highway bridge.

New York, 500 tons, loft building on East Sixty-first Street.

New York, 10,000 tons, New Yorker Hotel at Eighth Avenue, Thirty-fifth and Thirty-sixth Streets.

Cleveland, 100 tons, addition for Ohio Foundry Co.

Toledo, Ohio, 500 tons, building for Libbey-Owens Glass Co.

Dayton, Ohio, 400 tons, airplane hangars at Wright Flying Field; bids in.

Manistee, Mich., 1000 tons, highway bridge.

Janesville, Wis., 125 tons, Center Avenue overhead bridge; bids about June 15.

Powerton, Ill., 150 tons, stack and supports for Super Power Co.

Sheet Mill Wage Scales Reaffirmed

Youngstown, June 5.—The sheet and tin plate wage scale will be continued for 12 months, beginning July 1, on basis of present agreement, following conference just concluded at Atlantic City. The old scale was largely reaffirmed. Representatives of workers had requested that tonnage rates be based on average selling price of tin plate, rather than on Nos. 26, 27 and 28-gage black sheets.

This week, the conference over the bar iron scale is under way at Atlantic City.

PERSONAL

George C. Scott has been elected president of the United States Steel Products Co., 71 Broadway, New York, succeeding E. P. Thomas, who was recently elected vice-president of the United States Steel Corporation. Mr. Scott started work with the St. Louis Wire Mill Co., under John W. Gates. This company was absorbed by the Consolidated Steel & Wire Co., at which time he was transferred to the latter company's Cleveland office, in charge of export business to the Far East. The company merged with the American Steel & Wire Co. of Illinois in 1898, and Mr. Scott was then transferred to New York, where he was associated in handling the export business with James A. Farrell, then manager of the export department. On the formation of the United States Steel Products Co. in 1903, Mr. Scott became a departmental manager in charge of sales to the Far East, Australia and South Africa. He has traveled extensively and has visited most of the important markets throughout the world.

GEORGE C. SCOTT

—

F. H. Frankland, who has been supervising structural engineer, specializing in steel work, for Dwight P. Robinson & Co., New York, has been made head of the engineering service bureau created by the American Institute of Steel Construction, New York. This bureau will direct and coordinate the work of the ten field engineers recently appointed by the institute. After attending the Sheffield Scientific School of Yale University, Mr. Frankland was engaged in structural engineering work in New Zealand and Australia. Later he returned to the United States and was identified with the design of bridges and industrial structures in California and Louisiana. He was for four years managing engineer for Waddell & Son, New York, and later was general manager and chief engineer in charge of design, estimating and production for the Bancroft-Jones Corporation, Buffalo.

—

Dr. J. M. Lohr, formerly in charge of melting for the Hoskins Mfg. Co., Detroit, and who later installed and managed the department of melting and hot rolling of nickel chromium and various other nickel alloys for the Electrical Alloy Co., Morristown, N. J., is now plant metallurgist for the Driver-Harris Co., Harrison, N. J. He received his doctor's degree from Cornell University and for many years has made an intensive study of the melting and manufacture of nickel and nickel-chromium alloys.

—

J. R. Allison, most recently identified with the construction department of the Homestead works, Carnegie Steel Co., has been appointed Pittsburgh district manager for the C. O. Bartlett & Snow Co., Cleveland, with headquarters at 406 Bessemer Building. He was graduated in mechanical engineering from the University of Pittsburgh and was first employed as field engineer for the Edgewater Steel Co., Pittsburgh. Later he was engaged in the mechanical department of the Pennsylvania Railroad, and during the war served as a first lieutenant in the engineers corps, United States Army.

—

William H. Page has resigned as head of the bureau of public relations of the American Institute of Steel Construction, New York, and has been succeeded by V. Gilmore Iden, most recently one of the editors of the *United States Daily*, Washington, and previously identified with the *Journal of Commerce*, New York, and the Penton Publishing Co., Cleveland. A. T. North has also resigned as head of the institute's bureau of architectural relations.

—

Howard C. Yost, most recently associated with the Lewis Bolt & Nut Co., Minneapolis, and previously in the metallurgical department of the Carnegie Steel Co., Pittsburgh, has become identified with the St. Paul, Minn., district sales office of the Inland Steel Co., Chicago.

—

W. Parker, director of sales for British Furnaces, Ltd., representative in Great Britain for the Surface Combustion Co., Toledo, Ohio, has been traveling in the United States during the last few weeks studying the new types of furnaces being used by various industries. He has given particular attention to the use of automatic heat control equipment and automatic furnaces used extensively in blast furnaces and steel mills, automotive plants and the chemical industry.

—

D. J. Hanna has been appointed district sales manager in Michigan for the Jessop Steel Co., Washington, Pa., and will have offices at 2208 Fort Street, Detroit.

—

J. E. McLain, who has been Pittsburgh district manager of sales for the Bethlehem Steel Co., has been appointed special representative in the Pittsburgh district, and will devote his attention to the company's larger accounts in the territory. His successor as Pittsburgh district manager of sales is James P. Kratzer, who has been assistant manager of sales in the bar department at the general offices of the company in Bethlehem, Pa. Mr. McLain has been identified with the steel industry since 1897, the year following his graduation from Princeton University, when he became an assistant to his father, then Pittsburgh district sales manager Cambria Steel Co., Johnstown, Pa. He succeeded his father upon the latter's retirement in 1911, and continued in the position when the company was acquired during the World War by the Midvale Steel & Ordnance Co., and was reappointed when the latter was absorbed by Bethlehem Steel Co. in 1923. Mr. Kratzer has been identified with the Bethlehem company since 1912, and except for a brief period in the open-hearth department in Bethlehem, has spent all of that time in the general sales department.

J. E. McLAIN

—

A. H. Deute, Borden Co., New York, has been made vice-president of the Billings & Spencer Co., Hartford, Conn., to succeed the late Arthur W. Fox.

—

Luke E. Fichthorn, president of the Peck, Stow & Wilcox Co., Southington, Conn., has resigned, and George S. Case, Lamson & Sessions Co., Cleveland, has been elected to succeed him. Mr. Fichthorn has been president of the Southington company since 1919. Charles F. Treadway, New Haven, Conn., a director of the company for several years, has been made treasurer.

—

Spencer Allen, associated for the past two years with the scrap department of the Cincinnati office of Hickman, Williams & Co., has resigned. Previously he had been connected with the company in its St. Louis office.

Gilbert S. Sank, formerly in charge of the Philadelphia office of E. Arthur Tutein, Inc., has become associated with Hickman, Williams & Co., Inc., at its Philadelphia office. Mr. Sank will specialize in coke, both domestic and foundry.

—

William G. Christy, for the past two years executive secretary of the Citizens' Smoke Abatement League, St. Louis, has tendered his resignation, effective July 1. As chairman of the St. Louis Section of the American Society of Mechanical Engineers, he was active in the organization of the league, which, under his direction, ran a campaign to raise $250,000 by popular subscription to carry out a three years' smoke abatement program. He was formerly superintendent of the St. Louis Boat & Engineering Co. and during the war was district manager of the United States Shipping Board. He will continue for the present to maintain his offices in the Railway Exchange Building, St. Louis, as mechanical engineer.

—

A. C. Kingston has been appointed assistant general manager in charge of sales of the Boston Woven Hose & Rubber Co., Boston, and also elected a member of the board of directors. J. W. Fellows, factory manager, has also been elected to the board.

—

Samuel A. Curry has been appointed superintendent of inspection and test at the South Philadelphia Works of the Westinghouse Electric & Mfg. Co., succeeding the late John T. Snyder. U. A. Taddiken, formerly in the condenser engineering department, has been named to succeed Mr. Curry.

—

Dr. Walter Cross has become associated with the Babcock & Wilcox Co., New York, as consulting chemical engineer. While his duties will necessitate his spending some time in New York, he will make his headquarters in Kansas City as heretofore.

—

Works Manager George N. Jeppson having been advanced to vice-president in charge of production, and Howard W. Dunbar to the position of works manager of the machine division of the Norton Co., Worcester, Mass., several other changes have been made in that organization. Hugo H. W. Beth has been made production manager of the wheel division and Dwight C. Daniels production manager of the machine division. Clarence R. King has been appointed consulting engineer and Duane E. Webster engineer of organic products, and Irving B. Loud has been assigned to the supervision of the silicate wheel department in addition to his other departments. W. La Coste Neilson, vice-president and general sales manager, announces these changes in the wheel division sales organization: Ralph M. Johnson, district manager at Hartford, Conn., made district manager at Philadelphia; W. Earle Shumway of the sales engineering department made manager of Connecticut district; H. K. Clark of the Chicago office made sales manager of the Deutche Norton Gesellschaft, the company's German subsidiary.

—

J. L. Jennings, vice-president and director of sales of the Lamson & Sessions Co., Cleveland, sailed May 31 for a two-months' trip to Europe.

—

Julius A. Dyblie, for many years chief engineer at the Joliet works, Illinois Steel Co., and associated with the company for 29 years, retired from active service on June 1. He was born in Norway 76 years ago, but has been in this country since 1879. During his long association with the steel industry he has been credited with the invention of many furnace devices, particularly a rotary reversing gas valve and an air check valve for blowing engines.

—

Charles P. Perin, Perin & Marshall, consulting engineers, New York, has returned from an extended trip to India, South Africa and Spain.

BACKED-UP STRIP ROLLS

Predicted That They Will Wholly Supplant Two-High Sets Now Common

STEEL mill engineers, operating officials and steel company executives took advantage, in large numbers, of an inspection tour under the auspices of the Association of Iron and Steel Electrical Engineers on Saturday, June 2, visiting the Salem, Ohio, works of E. W. Bliss Co. and seeing a new set of cold-rolling mills built by that company. They saw also a demonstration of cold-rolling by an electrically-driven cluster-type mill. More than 200 men interested in the cold-rolling mills and their product were present.

The mills are to be installed at the new plant of the Sharon Steel Hoop Co., and are expected to be in operation late next month or early in August. They comprise eight stands of cluster mills and 16 stands of two-high mills. These attracted much attention and there was much favorable comment on the clean grain surface of the roll housing castings.

At a gathering of the visitors in the auditorium of the Elks Club, J. H. Van Campen, chief engineer E. W. Bliss Co., read a paper: "General Characteristics of Cold-Rolling Mill Equipment." In this he pointed out the important features of the backed-up working roll mills, and described the mills and the auxiliary equipment later seen on the tour of the plant. He predicted that the mill in which small working rolls are backed up by larger rolls would one day supplant the two-high mill, now so commonly employed in cold rolling. He said that close grained cast iron housings reduce the springing tendency of the rolls, and that the use of anti-friction roller bearings eliminates the heating of roll necks and permits higher speed in rolling, while the use of universal spindles prevents back-lashing.

High Speed on Continuous Run

He mentioned the possibility of a speed of 375 ft. a minute on low-carbon steel on 16-in., 18-in. and 20-in. mills of four stands. The first mill would be used to take out irregularities in the strip and, in addition to making a light reduction, would deliver a constant supply to the other stands. On the second stand a reduction of 30 to 40 per cent was the objective and on the third stand one of from 25 to 30 per cent, with a fourth stand to be used for planishing and a reduction of about 10 per cent.

In the demonstration of the electrically-driven cluster-type mill, which followed the inspection of the mills for Sharon Steel Hoop Co., strips 15 in. wide by about 6 ft. long and 0.095 in. thick were successfully reduced in four passes to a thickness of 0.031 in. The reduction in the first pass was 30.9 per cent, in the second pass 25 per cent, in the third 23.4 per cent and in the final pass 13.8 per cent.

Among Those Present

Severn P. Ker, president Sharon Steel Hoop Co., who recently returned from a trip to Europe; T. P. Draper, vice-president and general manager of that company; James Lippincott, president and general manager, and Charles S. Todd, assistant to the president, West Leechburg Steel Co.; C. H. Hunt, chief engineer Weirton Steel Co.; Frank Flynn, assistant to the general manager Trumbull Works, Republic Iron & Steel Co., Warren, Ohio; and David Pride, superintendent Superior Steel Corporation, Carnegie, Pa., were among the interested spectators at the demonstration of the cluster-type mill.

Meeting of Blast Furnace and Coke Oven Association

B. F. Fairless, president Central Alloy Steel Corporation, Massillon, Ohio, will be the principal speaker at the summer meeting of the Eastern States Blast Furnace and Coke Oven Association to be held at the Edgewood Country Club, Edgewood, Pa., June 12. His subject will be "The Importance of Coke and Pig Iron in the Production of Quality Steel." At this meeting officers for the ensuing year will be elected.

OBITUARY

IRA H. SPENCER

Ira Hobart Spencer, founder and president of the Spencer Turbine Co., Hartford, Conn., whose recent death was mentioned in The Iron Age of May 10, was one of the country's leading authorities on blowers and exhausters and had more than 100 patents registered in his name. His interest in mechanics developed at an early age, and in 1892, at the age of 18 years, he constructed a water motor for use in pumping church organs. A number of these motors are still in use. In 1895 he organized the Spencer Motor Co., which later was sold to the L. E. Rhodes Co. and some time afterward became the Organ Power Co., maker of some of the first practical electrically operated organ blowers. In 1904, Mr. Spencer began experiments with stationary exhausters for cleaning buildings by the vacuum method, and in 1907 he organized the Spencer Turbine Cleaner Co. to exploit this cleaner. In 1918 this company was consolidated with the Organ Power Co. as the Spencer Turbine Co., with Mr. Spencer as president. He continued his experimentations with air machines and produced the line of Spencer turbo-compressors used for operating oil and gas-fired furnaces and ovens and for cupolas.

Edward Allen Whitworth, formerly general superintendent of the Bourne-Fuller Co., Cleveland, and widely known in the steel making industry, died suddenly at his home in Buffalo, May 31. For some time he had been prominently identified with the organization of open-hearth superintendents and for two years had served as chairman of this organization, which holds conferences to discuss open-hearth problems as an extension of the open-hearth committee of the American Institute of Mining and Metallurgical Engineers. Mr. Whitworth was connected with the Bourne-Fuller Co. about eight years, first as open-hearth superintendent, and later as general superintendent. On leaving the Bourne-Fuller Co. in 1925 he became affiliated with the Gathmann Engineering Co., Baltimore. At the time of his death he was connected with the Federal Concrete Co., in Buffalo, where he had made his home for several months. He was 45 years of age and had graduated from Pennsylvania State College in 1904.

Michael Rosenberg, president Rosenberg Iron & Metal Co., Chicago, dealer in scrap metals, died May 31.

Frank L. Wells, president and treasurer Frank L. Wells Mfg. Co., Kenosha, Wis., died Monday, May 28, after a brief illness. He was widely known in machinery and general manufacturing circles.

John Seymour Bycroft, Sr., in charge of purchases for the Stewart Furnace Co., Sharon, Pa., died suddenly June 1, aged 65 years. He had been associated for 30 years with the Stewart company.

Maurice N. Landay, president M. N. Landay Co., Pittsburgh, dealer in scrap iron and steel, died at his home in that city May 31. He was born in Washington, Pa., 42 years ago and attended Washington and Jefferson College. For many years he had been Pittsburgh representative of the Hyman, Michaels Co., Chicago, and when that company discontinued its Pittsburgh office he organized his own company, which became the Pittsburgh representative of the Hyman, Michaels Co. and of the Perry-Buxton-Doane Co., Boston.

Jacob Trautman, Pacific Coast manager for the Colonial Steel Co., Pittsburgh, and for several years general sales manager of that company, died at Los Angeles June 2. He was born in Pittsburgh 53 years ago, and had been identified with the Colonial company for 35 years, all of that time in the sales department. He had been an active member of the Pittsburgh chapter of the American Society for Steel Treating.

Alfred G. Smith, president and formerly general manager of the American Shipbuilding Co., Cleveland, a leading shipbuilder on the Great Lakes, died June 5, after a four months' illness, aged 53 years.

Detroit Iron and Steel Market

(*Concluded from page* 1646)

8361 cars, which is 279 units greater than April figure, and considerably greater than the 3516 units built in May, 1927. Hupp production during the first five months of this year was also a record, totaling 33,313 units, compared with 19,431 units in 1927, an increase of 13,882, or 71 per cent. It is reported that Hupp goes into June with 2180 unfilled orders.

Packard built 4782 cars in May, an increase of 2681, or 127 per cent, over the May, 1927, figure, and 348 units above the April output. The first nine months of Packard's fiscal year show a production of 33,930 units, compared with 24,265 units for the same period in the previous fiscal year, an increase of 9665, or about 40 per cent.

The Reo Motor Car Co. developed a new high record in May, with a production of 6121 units, or an increase of 576 units over that of May, 1927, and an increase of 844 units over the output of April, this year, and had 6400 unfilled orders on June 1.

Ford production is still increasing. During the week ended May 23 employment by the Ford Motor Co. totaled 112,683 men, a record at that time in the history of the company. The previous peak occurred in 1926, with 110,000 men at work. Figures on Ford employment released June 1 showed an addition of 2748 men, bringing present operating strength to 115,431 men, of whom 77,924 are working at Fordson, 32,795 at Highland Park and the remaining 4712 at the Lincoln plant. Production on the Ford Fordor sedan was started about 10 days ago. Thus far, the Ford Co. of Canada has produced somewhat in excess of 12,000 model A cars, and output at present runs about 325 cars a day, or 66 per cent of capacity.

The Willys-Overland plant is maintaining peak production, shipments of 11,583 units establishing a new weekly figure. The previous high mark for a week was 10,850 cars. The company is reported to have about 30,000 unfilled orders on the books. Employment at the Toledo plants continues at 22,000 men.

The Lakey Foundry & Machine Co. has received a contract for cylinder castings amounting approximately to $700,000. This, with other recent orders, is expected to double the output of the plant for the fiscal year ending Oct. 31.

Shipments for the first 15 days of May by the Hayes Body Corporation totaled approximately $1,400,000 worth of product, compared with $815,000 worth during the like period of 1927. Production now stands at about 800 bodies a day.

Rate on Non-Ferrous Scrap from Texas to St. Louis Upheld

Affirming a previous decision, the Interstate Commerce Commission, upon reconsideration of a complaint of the Southern Metal Co., in a recent opinion, held that the carload rate of 66.5c. per 100 lb. on non-ferrous scrap metals from Beaumont, Galveston and Houston, Tex., to St. Louis, is not unreasonable. It held that the rate is unduly prejudicial in certain instances.

European Prices Continue to Advance

German Consumers Oppose High Domestic Market to Aid Export—British Mills Discuss Central Selling Agency

(*By Cable*)

LONDON, ENGLAND, June 4.

CLEVELAND pig iron is still quiet, but makers are well booked and prices are being maintained. The hematite market is dull and values have an easy tendency, as unsold stocks at furnaces are still large. Foreign ore is quiet and consumers are well covered.

Finished steel mills are resuming after the holidays with only a few orders for heavy material. Negotiations for the formation of a central selling agency for steel have been resumed, but the outcome is uncertain as there is little unanimity among makers. It is understood, however, that arrangements may be made to combine in competing for large orders in certain overseas markets.

Welsh tin plate bar makers have raised the official price to £6 ($29.22) per ton delivered and some sellers are not inclined to enter into forward contracts because of the uncertain scrap situation. Foreign sheet bars are offered at £5 10s. ($26.79) per ton delivered, but buyers prefer the Welsh product. Tin plate is firm as a result of the steel situation and a good general demand.

Galvanized sheets are quiet but prices are steady because of increased foreign steel costs. There is a good demand for black sheets from the Far East in both heavy and light gages. Japanese specification thin gage sheets have been advanced.

Clyde shipbuilding in May totaled 28 vessels of 49,500 tons.

The Continental market is quiet in trade with British buyers, but prices are generally maintained. In Belgium 55 furnaces were in blast on April 30. Production in April was 313,300 tons of pig iron and 295,700 tons of steel ingots. April production in Luxemburg was 227,000 tons of pig iron and 202,600 tons of steel ingots. The Polish output in March was 58,000 tons of pig iron, 118,200 tons of steel ingots and 91,000 tons of rolled products.

German Steel Prices Unchanged—Good Machinery Trade

(*By Radio*)

BERLIN, GERMANY, June 4.

ALL syndicate prices for May have been retained for June. The domestic steel market is weaker and production is declining, but the syndicates report satisfactory business to be assured for the coming two and a half months.

The pig iron market is quiet. Foundries report an increasing volume of orders. Export trade is continuing to improve and prices are firm, particularly in bars, bands, heavy and light gage sheets and wire. Export activity in wire rods and tubes has decreased. Domestic prices on all wire products have been raised by 15 m. ($3.59) per ton.

The domestic machinery market is satisfactory, except in textile machines. All home prices of machinery have been raised as a result of the rise in steel prices last month. Foreign orders for textile and paper-making machinery are increasing.

Steel Cartel Fines Represent Small Loss

HAMBURG, GERMANY, May 12.—The advantage of penalty payments in the International Steel Cartel has been discussed recently in the steel industry. In the past quarter French mills, for the first time since organization of the cartel, exceeded their allotment by 12,000 tons. Austria, Luxemburg and the Saar, which have been below the full quota in the past, also exceeded their allotments. All members are fined for overproduction but, after refunding by the cartel, have only slightly less than they have paid in to the treasury. Germany, for example, receives about 97c. of every dollar paid and other countries receive 93c. to $1.11 for each dollar. With the total financial advantage or disadvantage so small, it is argued that fines

are not particularly effective, and it is further pointed out that, despite the penalties exacted for overproduction since formation of the cartel, production has continued at apparently as high a level as possible in the individual countries which are members.

GERMAN COSTS INCREASING

Wages, Freight Rates and Unemployment Insurance Are Factors—Arbitration Law Opposed

Hamburg, Germany, May 19.—Steel mills report that considerable difficulty is being encountered in the introduction of the three-shift schedule, or 8-hr. day, which the Government has ordered to be in effect within six months after Jan. 1 of this year. They claim that production costs have been greatly increased, Thomas steel producers being forced to increase the number of their workmen by 15 to 20 per cent and open-hearth plants by 10 to 15 per cent.

Costs are estimated to have increased 12m. ($2.87) per ton since March, 1927. Since then, there have been increases in wages, overtime pay, unemployment insurance costs, railroad freight rates and water transportation rates on the Rhine. Still further increases are expected if shorter working days are introduced at blast furnaces, sheet mills and wire mills in the next two months.

The recent rise in domestic prices on steel, averaging 3 to 7m. (72c. to $1.67) per ton, was necessary, according to the steel producers to offset losses on the 40 per cent of their production that is exported. Further increases in costs of production and distribution, however, cannot be passed on to the consumer, as prices are now practically as high as in Great Britain. World market prices are at a high level today, but, should there be a decline in export quotations, German mills, with additional costs of production, would be at a decided disadvantage.

This situation has resulted in a demand from the steel industry, which is supported by the machinery builders and non-ferrous metal producers, that compulsory arbitration be abandoned. It is claimed that immediate losses by strikes and lockouts would be preferable to the loss of trade over a long period through inability to meet competition.

GERMANS OPPOSE PRICE RISE

Consumers Object to Paying High Prices to Aid Export—Elimination of Tariff Suggested

Berlin, Germany, May 19.—Announcement has been made by the Minister of Industry that the controversy over the recent increase in prices by the steel syndicate will be considered by the cabinet immediately following the general election May 20. The advance of 3 to 7m. (72c. to $1.67) in domestic prices of steel has resulted in considerable opposition from consumers and the liberal press. The Frankfurter *Zeitung* has characterized the domestic syndicate system as a ruthless monopoly, under which the domestic consumer bears the losses suffered by the mills as a result of selling for export to enable them to avoid reducing their production quotas.

The opposition to the price increase is also directed toward the International Steel Cartel. It is pointed out that the purpose of Germany's participation in the cartel originally was to aid in bringing the level of world market prices up to the domestic market. In general, however, the difference in prices quoted in these two markets has increased. The producers of steel argue that their costs have advanced since entry into the cartel because of the heavy fines they have been forced to pay for overproduction.

Some consumers are urging the complete abolition of import duties on steel, to compel German mills to sell in their home market at the world market level. The present duties are as follows: Ingots, 10 m. ($2.39) per ton; blooms, 10 m. ($2.39); billets, 15 m. ($3.59); slabs, 15 m. ($3.59); structural shapes, bars, bands and wire rods, 25 m. ($5.98); heavy sheets, 55 m. ($13.16).

In support of their present price policy, steel producers point out that the latest rise in coal prices increased production costs of steel 4 to 7 m. (96c. to $1.67) per metric ton. On semi-finished products, it is claimed, production costs have advanced 7.25 m. ($1.73) per ton, on steel bars 5 m. ($1.19) per ton, on bands 9.66 m. ($2.32), on structural shapes 4.65 m. ($1.11), and on heavy sheets 10 m. ($2.39). Using steel bars as an example, the mills claim that the average export price has declined since last December from 121 m. ($28.95) per ton to 119 m. ($28.48), but that it costs 125 m. ($29.91) per ton to produce bars, even in the most modern mills. Furthermore, this does not include the cost of price rebates to exporting manufacturers or penalties for overproduction exacted by the International Steel Cartel.

Price rebates to exporting manufacturers are becoming an increasing burden to the mills, as the exports of finished products, on which such rebates are paid, are rapidly increasing. These rebates in May are: blooms, billets and slabs, 19 m. ($4.54) per ton; structural shapes, 35 m. ($8.36); bars, 28 m. ($6.70); bands, 35 m. ($8.36); wire rods, 21.50 m. ($5.14), and heavy sheets, 22 m. ($5.26). These rebates are less than at the end of last year, as a result of the advance in world market prices, but, unless export prices show a further increase, larger rebates will be paid next month because of the advance in the domestic market.

JAPANESE MARKET UNSETTLED

Prices Show Tendency to Advance Despite Political Conditions—Tin Plate Output Higher

Uncertainty of the political situation continues to exercise a depressing effect on business, says the report for April of A. Cameron & Co., Kobe, Japan. There is discussion of a second dissolution of the House of Representatives. Prices of various commodities, however, have shown a decided tendency to advance during the past month. The yen weakened considerably in foreign exchange under pressure from New York and Shanghai, as a result of the unstable political situation in China and the dispatch of Japanese troops to the war zone. The Fifteenth Bank has reopened and the money market is weak, showing signs of a further decline. There are reports that the gold embargo will be abolished soon, but the foremost financial authorities consider a return to a gold basis unsafe unless special arrangements have been granted by the Bank of Japan for recovery of its readjustments with the closed banks.

Flotation of a large loan for the Tokio Electric Light Co. is in prospect. A good sign is the gradual reduction of the large excess of imports in the past few years. The total of Japanese credit and capital invested in foreign countries at present is estimated at Y. 2,138,000,000, exclusive of private investments. Against this is the debt of the Japanese Government and private companies to foreign countries, including foreign capital invested in Japan, given as Y. 2,131,000,000, which shows an actual credit balance in Japan's favor. Japanese loans and investments in China total Y. 1,112,000,000, and these are yielding no interest or profit at present. About the only profitable investments in China are in the spinning plants.

During March, says the report, imports of black sheets totaled 19,951 tons, of which 9927 tons came from the United States, 8546 tons from Great Britain, 1322 from Germany and 156 tons from Belgium. This total exceeded the February imports by 8200 tons. The Kawasaki Dockyard Co. reduced its selling prices on black sheets by about Y. 5 ($2.34) per ton to meet the threatened competition from foreign mills, and this was followed by an advance of Y. 2 (94c.) per ton later in April when the yen began to decline. The market is at present overstocked with large supplies of sheets purchased when it was believed that the tariff might be increased.

Imports of tin plate last year were larger than in 1925 or 1926, but, with a continued increase in the tin plate output of the Government works, the total for this year is not expected to be so large. The following shows the imports and the production of the Government works in metric tons for the past five years:

	Government Works	Imports
1923	795	55,343
1924	4,850	71,434
1925	7,037	58,367
1926	11,366	49,995
1927	14,390	61,051

Improvement in the wire rod market, which began in March, has continued, and prices have advanced, about the middle of the month reaching Y. 98 ($45.82) per ton and at the end of April Y. 102 ($47.69) per ton. However, replacement prices of German wire rods are Y. 92.50 ($43.24) per ton and of American Y. 94.50 ($44.18) per ton.

STEEL IMPORTS DECLINE

Continental Prices Too High to Interest Consumers Here—Japan Inquires for Gas Pipe

NEW YORK, June 5.—The volume of business being done by importers of steel in New York is rapidly diminishing as the Continental steel market continues to rise. Steel bars have reached a prohibitive level, following a further advance last week which brought the delivered price, Atlantic port, to 1.90c. per lb., duty paid, for Thomas grade. On this basis, open-hearth steel bars would be 2c. per lb., duty paid, or about 2.10c. per lb., delivered to the local consumer from the dock, representing a saving from the domestic price on the basis of 1.80c. per lb., Pittsburgh, of less than $1 per ton. Steel hoops and bands are at the domestic level, representing no saving to the consumer here, and on some sizes of hot-rolled strip steel the European delivered price is only about 80c. a ton less than the delivered price from American mills.

Structural shapes of Thomas grade are quoted at about 1.80c. per lb., duty paid, which is still a small reduction from the domestic market level, but deliveries on all Continental steel products are rather extended, ranging from three to four months in most cases, so that it is difficult to do business. A fair tonnage of Continental steel continues to arrive on old orders placed with foreign mills prior to the recent price advances, but only a small tonnage of new business is being placed for future delivery, importers not being inclined to risk a possible decline in the European market, which might result in cancellation of orders by their customers here.

Export business continues quiet. Japanese demand is confined to small lots of special materials, with the exception of an occasional inquiry from a large consumer. The Tokio Gas Co. is in the market for about 900,000 ft. of ¾-in. and 75,000 ft. of ½-in. black gas pipe. Recent sales to the Far East have included about 5600 boxes of odd-sized tin plate to a consumer in Takow, Formosa, as well as some small tin plate orders from China.

German Freight Rates on Copper Reduced

HAMBURG, GERMANY, May 19.—The freight rates on imported copper from German frontier points or ports to Danube River ports have been reduced by the German Railroad Directory. The reduced rates will be effective for nine months. It is believed that this will serve to increase the sale of American copper to Austria, Hungary, Jugoslavia and Czechoslovakia by way of Germany.

Sheets of various standard and special types, including monel metal sheets in different finishes, a complete line of sheet metal forming and fabricating equipment and various supplies used by the sheet metal contractors were exhibited by the J. M. & L. A. Osborn Co., Cleveland, at a sheet metal show held at its plant in conjunction with the joint convention of the National Association of Sheet Metal Contractors and the Ohio Sheet Metal Contractors' Association held in Cleveland May 22-25.

FRENCH STEEL TRADE GOOD

Domestic Market Active and Foreign Projects Promise Future Business—Prices Advancing

PARIS, FRANCE, May 18.—Business is satisfactory, and the revival of buying expected as a result of the elections is beginning to develop. Large consumers are buying, no longer expecting a recession of prices. In addition, there are important public projects in course of execution in the East and in South America, for which bridge and building materials, rails and rolling stock will be required. Recently it was decided by the French railroads that all freight cars should be equipped with continuous brakes.

This flow of new business is favorably influencing the market, and deliveries are becoming more extended. Mills show no inclination to commit themselves for distant shipment.

Pig Iron.—Producers of pig iron met last week and decided to make no change in the tonnage and prices for June. A total of 38,000 tons of phosphoric foundry iron and 40,000 tons of hematite iron will be available to domestic consumers in June. Negotiations for formation of an association of hematite iron producers are continuing and a successful conclusion is expected.

Semi-Finished Material.—The comptoir controlling semi-finished material and beams has decided to make no change in prices. Most French consumers are fairly well covered. Blooms range from £4 4s. to £4 12s. 6d. ($20.46 to $22.53) per metric ton, billets from £4 12s. to £4 15s. 6d. ($22.41 to $23.26) per ton, and sheet bars from £4 16s. to £4 17s. ($23.38 to $23.63) per ton, f.o.b. Antwerp.

Finished Material.—Except on beams, prices are higher. Most French consumers of beams built up sizable stocks early in the year, when prices were lower, and are not seeking supplies at present. For export, beams are quoted at £4 16s. to £4 16s. 6d. per ton (1.06c. to 1.07c. per lb.), f.o.b. Antwerp. Steel bar prices continue to advance in both the domestic and export markets. Sheet prices are firm, with the market active. Boiler plates have been advanced in the domestic field, and some mills are quoting deliveries up to three months.

Foreign Trade.—Imports of iron and steel in March totaled 14,712 metric tons, compared with 8295 tons in February. Exports were 382,131 tons in March and 422,160 tons in February. Imports of iron and steel scrap were only 2225 tons in March and 1471 tons in February, but exports totaled 39,950 tons in March and 32,610 tons in February. The largest exports were in semi-finished products, shapes and bars, totaling 242,351 tons in March, while shipments of pig iron were only 57,534 tons.

American Lock Maker Reported to Have Bought German Company

HAMBURG, GERMANY, May 12.—The Yale & Towne Mfg. Co., Stamford, Conn., which recently acquired Damm & Ludwig, Velbert, Germany, is reported to have purchased Boge & Kastens, another large German lock manufacturer. Negotiations are reported for acquisition by the Yale & Towne Mfg. Co. of a third German lock company.

Boge & Kastens are large exporters of door locks and with Damm & Ludwig formerly produced about 88 per cent of the total German output of locks. Apparently the new ownership plans no expansion of production, as it is reported that, after May 10, these plants will operate only three days a week, although other German lock manufacturers are on a full six-day week. It is suggested in the German hardware trade that the purpose of buying these companies was to eliminate competitors, and it is pointed out that the largest German hinge and strap producer, Carl vom Bruck, Velbert, is now the property of the Stanley Works of New Britain, Conn.

Machinery Markets and News of the Works

MAY BUYING DECLINED

Machine Tool Orders Generally Fell Off—June Prospects Good

Chicago Market Is the Most Active—Deere & Co. Placing Large Orders Against Recent Inquiry

MACHINE tool buying declined in May from the April volume, but a good deal of business is pending, so that prospects for June appear fairly promising. The outstanding activity is at Chicago, where orders have been placed by Deere & Co., manufacturers of agricultural implements, against a recent large inquiry. Further purchasing of tools by the J. I. Case Threshing Machine Co. and the Monarch tractor plant of the Allis-Chalmers Mfg. Co. will probably come soon.

The General Electric Co., Schenectady, N. Y., has issued additional inquiries for about 20 tools, bringing its list of pending requirements up to nearly 40 items. Most of this equipment is to be bought for its electric refrigeration department.

Automobile manufacturers have made scattered purchases, but in the aggregate they constitute only a small part of current machine tool buying.

Railroad inquiry is usually limited to single machines. At Chicago, purchases are still to be made by the Santa Fe against recent inquiries. Orders are expected at Boston from the Boston & Albany, Boston & Maine and New York, New Haven & Hartford railroads. Few of the recent inquiries of the New York Central have developed into purchases.

An export order totaling about $50,000 for a European country has been booked by a Cincinnati company.

New York

NEW YORK, June 5.

MACHINE tool sales in this territory in May fell off considerably from the April volume, not less than 10 or 15 per cent in most cases and as much as 40 or 50 per cent in a few instances. However, the amount of business pending, plus the day-to-day inquiries, gives promise that June business may exceed that of last month. Additional inquiries have been sent out by the General Electric Co. for about 20 machines, making a total of close to 40 that this company may buy within the near future. The week's sales included seven 13 x 30-in. lathes and two 16 x 36-in. lathes to one company and two 13 x 30-in. lathes to another company; two 14-in. vertical surface grinders to one company and two No. 2 Pratt & Whitney die sinkers to another. A manufacturer bought four Ransom No. 43 grinders. Some makers of grinders and multiple spindle drilling machines have announced an advance in prices of about 10 per cent.

Yonkers Electric Light & Power Co., Yonkers, N. Y., has filed plans for a four-story equipment storage and distributing plant addition with repair shop, including improvements in present unit on adjoining site, to cost about $200,000.

Abraham Baxter, 638 Coster Street, New York, plumbing and heating equipment, has plans for a one-story factory, 50 x 100 ft., to cost about $28,000 with equipment. S. F. Oppenheim, Inc., 156 East Forty-second Street, is architect.

William Shary, 41 Union Square, New York, architect, will soon take bids for a two-story automobile service, repair and garage building, 115 x 150 ft., at Corona, L. I., to cost close to $100,000 with equipment.

New York Edison Co., Irving Place and Fifteenth Street, New York, has plans for an addition to power station at 151-53 East Thirty-ninth Street, 81 x 138 ft., to cost in excess of $300,000 with equipment.

Automatic Musical Instrument Co., 15 East Fortieth Street, New York, manufacturer of coin-operated musical instruments, is disposing of stock issue to total $960,000, a portion of proceeds to be used for expansion, including manufacture of recently perfected selective automatic talking machine and parts.

American Smelting & Refining Co., 120 Broadway, New York, has acquired controlling interest in Silver Reef Mines Co., with properties in Utah. New owner plans extensive development and installation of additional equipment. H. A. Guess, vice-president of purchasing company, will be president of Silver Reef organization.

Charles Schaefer, Jr., 332 East 149th Street, New York, architect, has plans for two-story automobile service, repair and garage building, 100 x 100 ft., to cost approximately $100,000 with equipment.

A. J. Kolonics, 3 Knickerbocker Avenue, Brooklyn, manufacturer of harness and kindred products, metal trimmings, etc., has filed plans for new one-story plant, 75 x 105 ft., to cost about $22,000. Louis Berger & Co., 1701 Myrtle Avenue, are architects.

Board of Education, Ossining, N. Y., has engaged J. G. Rogers, 156 East Forty-first Street, New York, architect, to prepare plans for new high school with manual training facilities, to cost $750,000.

Franz Wolfgang, 535 East Tremont Avenue, New York, architect, is completing plans for a two-story automobile service, repair and garage building, to cost $100,000 with equipment.

Bureau of Yards and Docks, Navy Department, Washington, will receive bids until June 20 for ice-making and refrigerating equipment for naval air station, Lakehurst, N. J., Specification 5423.

Newark Compressed Steel Corporation, 457 Peshine Avenue, Newark, has filed plans for one-story addition, 31 x 50 ft. P. D. Ackerman is architect.

F. L. Smidth & Co., North Avenue, Elizabeth, N. J., engineers for cement mills, etc., operating Smidth's Foundry, Inc., same location, have plans for one-story foundry addition, 20 x 50 ft., and extension in crane runway. Bids will be asked soon. Headquarters are at 50 Church Street, New York.

Carrier Engineering Co., 750 Frelinghuysen Avenue, Newark, manufacturer of air conditioning machinery, has purchased former plant of General Electric Co., at Frelinghuysen and Evergreen Avenues, comprising four-story structure with 110,000 sq. ft. floor space on 6½-acre tract. Purchasing company will continue present factory and will use purchased plant for expansion.

Bayonne Bolt & Nut Corporation, Trask Avenue and Second Street, Bayonne, N. J., is reported planning early rebuilding of portion of plant destroyed by fire several weeks ago, with loss in excess of $75,000 including equipment.

Goodwin-Pray, Inc., 102 Murray Street, Newark, manufacturer of electrical products, with electrical repair works, has acquired two-story factory at 290-92 Chestnut Street, 50 x 151 ft., and will remove present works to new location and increase capacity.

The duPont Viscoloid Co., Arlington, N. J., subsidiary of E. I. duPont de Nemours & Co., Wilmington, Del., will rebuild portion of plant destroyed by fire June 1, with loss in excess of $50,000 with equipment, tanks, etc.

Public Service Electric & Gas Co., Public Service Terminal, Newark, is said to be completing plans for two-story equipment storage and distributing plant, with automobile service and garage building, at West New York, N. J., to cost close to $200,000 with equipment.

Equipment at plant of E. V. Hartford, Inc. (Hartford Shock Absorber Co.), Carbon Place, Jersey City, will be sold at auction on June 26 and 27 by Industrial Plants Corporation, New York. Company formerly manufactured shock absorbers and wheel shimmy eliminators. Sale includes power presses, lathes, milling machines, grinders, drill presses, shapers, motors, screw machines, tappers, office furniture and equipment, tools and fixtures.

West Virginia Pulp & Paper Co., 200 Fifth Avenue, New York, has awarded contract for additions to its plant at Mechanicville, N. Y., to cost more than $500,000. Morton C. Tuttle Co., Boston is engineer and builder.

Contract for a $50,000 addition to sheet metal department of John Waldron Co., New Brunswick, N. J., has been awarded to H. K. Ferguson Co., Cleveland. It will be one story, with 20,000 sq. ft. of floor space and, with equipment, will cost about $75,000. A mono-rail crane will be installed.

Chicago

CHICAGO, June 4.

ORDERS released the last week in May against the list of Deere & Co., enlarged many dealers' books so that sales last month dropped only slightly below the total in April. Prospects for June appear favorable. The Santa Fe list is still only partly covered and Deere & Co. are placing new orders daily. The Allis-Chalmers Mfg. Co., Milwaukee, is in need of additional machine-tools for its Monarch tractor plant at Springfield, Ill. It is also probable that the remaining items on the list of the J. I. Case Threshing Machine Co., Racine, Wis., will be purchased this month.

Machine-tool inquiries of the Rock Island Railroad are still open. The Burlington is asking for a 30-in. x 14-ft. motor-driven engine lathe. The General Electric Co., Chicago, will buy a 72-in. vertical boring mill, a 48-in. x 18-ft. lathe and a 36 x 36 x 8-ft. open-side planer. A fair number of used tools is moving from dealers' floors.

Work will soon begin on two-story addition, 40 x 120 ft., to plant of Ingersoll Milling Machine Co., Rockford, Ill., for which general contract has been let to E. W. Schmeling & Sons, 1031 School Street, to cost close to $50,000 with equipment. A. G. Eliel, Stewart Building, is architect.

Huguelet Brothers, 908 North Huguelet Place, Chicago, have awarded general contract to Schmidt Brothers Construction Co., 22 East Huron Street, for four-story automobile service, repair and garage building, to cost $160,000 with equipment. Schmidt, Garden & Erickson, 104 South Michigan Avenue, are architects.

Great Northern Railway Co., St. Paul, Minn., is understood to be planning early call for bids for equipment for new engine house addition and shop, with power plant at Fargo, N. D. Work on superstructure has been begun. Entire project is reported to cost in excess of $90,000. T. D. McMahon is company architect.

Minnesota Power & Light Co., 30 West Superior Street, Duluth, Minn., will soon take bids on general contract for a new two-story equipment storage and distributing plant, to cost $140,000 with equipment.

Adams Co., 111 West Sixth Street, Dubuque, Iowa, manufacturer of milling machines and other machine-tools, has filed plans for a one-story addition to machine shop and foundry, to cost more than $40,000 with equipment.

Fairmont Railway Motors, Inc., Fairmont, Minn., manufacturer of railroad equipment, has merged with Mudge & Co., 80 East Jackson Boulevard, Chicago, manufacturer of kindred products. Consolidated organization will operate under first noted name; both plants will be continued in service and an expansion program carried out. New company will have capital of $400,000 and surplus of $650,000. H. E. Wade, president of Fairmont company, will be chairman of board of consolidated organization.

Public Service Co. of Colorado, Denver, Colo., in conjunction with Prairie Oil & Gas Co., Independence, Kan., and other interests, has plans for new gas compressor plant in vicinity of Devine, Colo., to cost more than $400,000 with equipment.

Des Moines Casket Co., 405 S. W. Eighth Street, Des Moines, Iowa, has plans for new two-story plant, 100 x 150 ft., to cost more than $45,000 with equipment.

West End Scrap Iron & Metal Co., 1920 West Michigan Street, Duluth, Minn., has plans for a two-story storage and distributing plant, to cost about $32,000 with equipment. Thomas J. Shefchik, Glencoe Building, is architect.

Blackhawk Foundry & Machine Co., Davenport, Iowa, has awarded general contract for one-story foundry addition, 42 x 90 ft., to Priester Construction Co., Davenport, to cost about $20,000 with equipment.

Midway Foundry Co., St. Paul, Minn., is completing an addition, 75 x 100 ft., which will increase output about 100 per cent.

Joseph J. Kovar Co., Owatonna, Minn., has been incorporated with capital stock of $200,000 to manufacture agricultural tools and equipment, continuing line of products manufactured by Joseph J. Kovar and successors for 14 years. Company has factory and necessary equipment.

Burgess Battery Co., 111 West Monroe Street, Chicago, maker of sound absorbing ceilings and sidings, has changed its name to C. F. Burgess Laboratories, Inc., and removed offices to Madison, Wis.

Lewis Signal & Alarm Corporation, 207 Commerce Building, Sioux City, Iowa, has been organized to manufacture burglar alarm equipment. Operations are being carried on in company's own shop and necessary equipment has been purchased, but it is in market from time to time for 14 to 20-gage black sheets, electrical wire, relays, gongs, batteries and other kindred equipment.

Philadelphia

PHILADELPHIA, June 4.

PLANS are being completed by Proctor & Schwartz, Inc., Seventh Street and Tabor Road, Philadelphia, manufacturer of mechanical drying equipment, air conditioning apparatus, etc., for a two-story and basement addition, 50 x 146 ft., to cost in excess of $65,000 with equipment. Day & Zimmermann, Inc., 1600 Walnut Street, is engineer.

Architectural Steel Engineering Co., Philadelphia, has been formed with capital of $50,000 to take over and expand company of same name with plant at 1512-20 North Thirteenth Street, and will develop facilities for production of structural steel and ornamental iron products. Daniel Boyle and Joseph M. Thomas are heads.

York Ice Machinery Co., Belmont and Thompson Streets, Philadelphia, manufacturer of ice-making and refrigerating machinery, has asked bids on general contract for an addition, to cost more than $60,000 with equipment.

Philadelphia Coke Co., Richmond Street, near Orthodox Street, Philadelphia, an interest of Koppers Co., Pittsburgh, has taken out a permit for two two-story units to cost about $500,000.

Eugene A. Stopper, 10 South Eighteenth Street, Philadelphia, architect, has awarded general contract to Golder Construction Co., 1600 Arch Street, for two-story factory, 60 x 275 ft., to cost close to $80,000, to be occupied under lease by Welsbach Street Lighting Co. of America, Twentieth and Arch Streets, manufacturer and operator of gas-lighting equipment.

Pennsylvania Railroad Co., Philadelphia, has awarded general contract to Sinclair & Grigg, Sixteenth and Walnut Streets, for one-story and basement storage and distributing building, 90 x 460 ft., with elevating, conveying and other mechanical handling equipment, to cost about $390,000. William Cookman is company architect.

Vacuum Oil Co., 61 Broadway, New York, has awarded general contract to White Construction Co., Jefferson Building, Philadelphia, for two-story and basement addition to refinery at Paulsboro, N. J., 122 x 225 ft., with one-story extension, 31 x 46 ft., and wing addition, 32 x 40 ft., to cost in excess of $125,000. Portion will be used as a can factory, and for storage and distributing service.

Joint school boards of Westgrove, Avondale and Londongrove townships, Pa., C. E. Patton, Westgrove, chairman of building commission, plans installation of manual training equipment in new senior and junior high school to be erected between Westgrove and Avondale, to cost $250,000, for which bids have been asked on general contract. E. W. Martin, duPont Building, Wilmington, Del., is architect.

Pennsylvania Power & Light Co., Allentown, Pa., has applied for permission to take over and consolidate 35 electric light and power companies operating in different counties, and will carry out expansion and improvement program, including transmission line construction. Company also requests authority to secure a controlling interest in 11 other light and power utilities. It is under direction of Electric Bond & Share Co., 2 Rector Street, New York.

David E. and Alvin Street, 110 South Lehigh Street, Allentown, Pa., have organized Universal Safety Signal Mfg. Co., with capital of $100,000, to operate a local plant for manufacture of automobile signal and safety devices and systems. Alvin Street will be treasurer and representative.

The Crane Market

INQUIRIES for locomotive cranes continue, but the overhead crane field is still rather quiet. Most of the present activity in locomotive cranes is from contractors. The list of crawl-tread cranes and steam shovels for Dwight P. Robinson & Co., New York, has not yet been acted upon. Purchase of a 10-ton, overhead crane by the New York Central Railroad for its West Albany, N. Y., shops is expected soon.

Among recent purchases are:

Ford, Bacon & Davis, New York, 10-ton, 1-motor, overhead crane for Nazareth Cement Co., Nazareth, Pa., from Whiting Corporation.

Union Bag & Paper Co., New York, 16 chain blocks, 5 to 10-ton capacity, ranging up to 51-ft. lift, reported purchased from Harrington Co., Philadelphia.

Crucible Steel Co. of America, Pittsburgh, 25-ton overhead crane with 5-ton auxiliary for Park works, from a Western builder.

National Carbon Co., Inc., Keokuk, Iowa, 4-motor, 35-ft. span, 1½-yd. bucket gantry crane from Milwaukee Electric Crane & Mfg. Corporation.

Victor Chemical Works, Chicago Heights, Ill., 10-ton, electric crane from Whiting Corporation.

Bliss & Laughlin, Inc., Harvey, Ill., an electric traveling crane from Harnischfeger Corporation.

Shipbuilding division of American Brown Boveri Electric Corporation, New York, operating at former plant of New York Shipbuilding Co., Camden, N. J., has taken option on portion of former shipyards of William Cramp & Sons Ship & Engine Building Co., Philadelphia, and is said to be planning to use property for building ocean-going liners. Company will also expand operations at Camden yards, placing work in progress on several transoceanic liners, provided with airplanes and landings. Lawrence R. Wilder is head.

Metropolitan Edison Co., Reading, Pa., is arranging for increase in capital from 900,000 shares to 1,500,000 shares of stock, preferred and common, and will increase indebtedness from $50,000,000 to $100,000,000, a portion of proceeds to be used for expansion in plants and system, including acquisition of new properties in this district.

Interstate Supply Co., Commercial Trust Building, Philadelphia, has been appointed direct factory representative in Philadelphia and vicinity for Northern Engineering Works, Detroit, maker of cranes and hoists. W. H. Beyer of Interstate company, will have personal supervision of account.

Philadelphia Chain Block & Mfg. Co., Mascher and Norris Streets, Philadelphia, has been formed to manufacture chain blocks and trolleys. Plant is equipped to do all kinds of machine work and to furnish chain either hand, electric or die welded. Company will not be in market for additional material for three or four weeks. John A. Bailey, formerly superintendent Ford Chain Block Co., is president.

Detroit

DETROIT, June 4.

A NEW smelting furnace and auxiliary equipment will be installed by Calumet & Hecla Co., Calumet, Mich., in connection with expansion and improvement program under way. New unit will be 20 x 70 ft., designed for capacity of 225 tons of copper ore per day. Entire project will cost more than $1,000,000.

Board of Education, 1354 Broadway, Detroit, is reported planning installation of manual training equipment in two-story addition to Southeastern high school to cost $375,000, for which plans will be drawn by Malcomson & Higginbotham, 1257 Griswold Street, architects. McColl, Snyder & McLean, Penobscot Building, are mechanical engineers.

Detroit Edison Co., 2000 Second Avenue, Detroit, will install three 50,000-kw. turbo-generators, six boiler units and auxiliary equipment at its new Delray power plant No. 3, now in course of construction, scheduled to be ready for operation late in 1929. Work will be carried out in connection with recently approved $30,000,000 expansion and betterment program, which will include construction of four new automatic power substations, and extensions in present power substations at Grand River, Hart, Amsterdam and Cortland, with new transmission lines in these and other districts.

Detroit Motorbus Co., 14401 Dexter Boulevard, Detroit, has awarded general contract without competition to Bryant & Detwiler, Dime Bank Building, for one-story addition to service, repair and garage building, reported to cost in excess of $70,000 with equipment.

Valley Castings & Pattern Co., Bay City, Mich., has work under way on one-story addition, to be used largely as a brass foundry, which will more than double output in this department. Extensions will be made also in pattern shop.

Ex-Cell-O Tool & Mfg. Co., 1469 East Grand Boulevard, Detroit, has awarded general contract to Austin Co., General Motors Building, for new two-story unit, 130 x 190 ft., to cost close to $80,000 with equipment. It will be equipped primarily as machine shop and tool division.

Chrysler Motor Corporation, Highland Park, Detroit, has awarded general contract to Walbridge-Aldinger, Inc., Penobscot Building, for new assembling plant on East Jefferson Avenue, to cost close to $500,000 with machinery. Smith, Hinchman & Grylls, Marquette Building, are architects and engineers.

Accuralite Co., Terrace Street, Muskegon, Mich., manufacturer of piston rings and other precision products, has awarded general contract to Austin Co. for one-story addition, 80 x 200 ft., to cost about $40,000 with equipment.

Woodin & Day, 1085 Detroit Street, Flint, Mich., will build a one-story battery service and repair works to cost about $21,000.

Rich Products Corporation, Battle Creek, Mich., has been organized to take over former Rich Steel Products Co., manufacturer of automotive valves and tappets, with plants at Battle Creek and Marshall, Mich. Marshall plant is at present under construction and will partly take place of unit formerly operated in California which has been sold.

Melling Machine Co., Jackson, Mich., has been formed as subsidiary of Jackson Motor Shaft Co. to drill crankshafts for latter organization. Plant has been completed and no new equipment or materials will be required at present.

National Brass Co., Grand Rapids, Mich., has been purchased by S. D. Stanley and Samuel Silverman, who operate Stanley Foundry Co. of that city. National plant will be known as Stanley plant No. 2.

Gulf States

BIRMINGHAM, June 4.

PROPERTY is being acquired at Houston, Tex., by Eternit, Inc., 225 South Fifteenth Street, Philadelphia, manufacturer of asbestos shingles, etc., as site for branch plant, to cost close to $1,000,000 with equipment. It will include power house and machine shop.

Common Council, Stamford, Tex., is planning extensions and improvements in municipal electric light and power plant, including installation of additional generating equipment. Henry Cook, superintendent of water, is in charge.

Houston Oil Co., Petroleum Building, Houston, Tex., is disposing of a bond issue of $8,000,000, a portion of proceeds to be used for extensions and improvements, including pipe line construction.

Alamo Heights School Board, San Antonio, Tex., is considering installation of manual training equipment in new junior high and grade school to cost $250,000, for which superstructure will soon begin. Harvey P. Smith, National Bank of Commerce, is architect.

Gulf Fertilizer Co., Thirty-sixth Street, Tampa, Fla., has awarded general contract to Austin Co., Cleveland, for new one-story mill, 160 x 306 ft., with two wing extensions, each 80 ft. long, to cost close to $200,000 with machinery.

Southern Produce Co., Flatonia, Fla., has plans for one-story cold storage and refrigerating plant, to cost close to $40,000 with equipment.

Mississippi Power & Light Co., Jackson, Miss., is said to be planning construction of steam-operated electric power house at Myrtle, Miss., to cost about $35,000. Extensions will be made in transmission lines.

E. K. Ahler and H. L. Shaw, State National Bank Building, Corpus Christi, Tex., architects and engineers, have plans for a new cotton compress plant, 280 x 1400 ft., in vicinity of Agua Dulce, Tex., for company whose name is temporarily withheld, to cost about $170,000 with equipment.

Chalona Brothers, Buras, La., operating a local packing plant, are planning construction of an electric light and power plant for service in this district, to cost close to $25,000.

City Commissioners, City Hall, Orlando, Fla., are asking bids until June 13 for one airplane hangar for municipal airport, as per specifications on file, city engineer office.

Henry Brothers & Co., Tampa, Fla., plan installation of cold storage and refrigerating equipment in connection with proposed meat-packing plant, to cost close to $55,000.

Dallas Vocational School, Dallas, Tex., C. A. Jay, director, is arranging fund of about $500,000 for institutional buildings on Cedar Springs Road. It is expected to begin work late in fall. Chamber of Commerce is interested in project.

Commission Council, City Hall, Baton Rouge, La., is asking bids until June 26 for equipment for municipal sewage system, including two 2500-gal. per min. pumping units, with auxiliary equipment. L. J. Voorhies, City Hall, is consulting engineer.

Common Council, Greenville, Miss., is considering installation of municipal electric light and power plant, to cost in excess of $50,000 with equipment. Burns, McDonnell & Smith, Interstate Building, Kansas City, Mo., are consulting engineers.

Palm Beach County Board of Public Instruction, Palm Beach, Fla., plans installation of manual training equipment in new junior high school at South Palm Beach, for which tract of 20 acres has been purchased. Plans will soon be prepared. It is reported to cost in excess of $250,000.

State Board of Control, Austin, Tex., is asking bids until June 21 for highway equipment as follows: 20 60-hp. crawler-type tractors; 30 12-ft. engine hitch graders; 21 5-ton three-wheel rollers; 38 asphalt heating kettles, mounted on rubber-tired tractors, approximate capacity 300 gal.; 28 rotary steel broom street sweepers; five portable air compressors complete with 1-ton trucks; two portable crushing and sizing plants, approximate capacity 75 tons per day. Specifications at office of State highway department, Austin; R. I. Tennant, purchasing division, in charge.

Dedman Foundry & Machine Co., foot of Buffalo Street, Houston, Tex., has been formed to operate general jobbing shop, manufacturing gray iron, brass and aluminum castings and patterns and doing machine work of all descriptions. Company has building and equipment and does not contemplate any purchases at present.

Webb Tank & Tile Co., Baton Rouge, La., has been organized to manufacture patented septic tank and concrete drain pipe. Manufacturing building has been erected.

St. Louis

St. Louis, June 4.

PLANS are being drawn by United States Cold Storage Co., 500 East Third Street, Kansas City, Mo., for a new six-story cold storage and refrigerating plant, to cost about $1,000,000 with machinery. A. Epstein, 2001 West Pershing Road, Chicago, is engineer.

Following recent sale of its plant on Kingshighway, Valley Electric Co., St. Louis, manufacturer of electrical equipment and supplies, has leased a building at 4221 Forest Park Bouveland for new plant. Early occupancy is planned. Former plant has been acquired by Superior Oxy-Acetylene Co., for new works.

Underwood Compress Co., Hollis, Okla., is completing plans for one-story cotton compressing plant, 220 x 600 ft., to cost close to $150,000 with equipment.

Jean P. Fleming, 4460 Gibson Avenue, St. Louis, and associates are planning new three-story automobile service, repair and garage building, to cost more than $160,000 with equipment.

Public Service Co., Bartlesville, Okla., plans construction of power transmission line from Bartlesville to Nowata, Okla., with new power substation at latter place, to cost close to $50,000.

Long-Bell Lumber Co., R. A. Long Building, Kansas City, Mo., is reported planning early rebuilding of portion of mill at Oklahoma City, Okla., recently destroyed by fire, with loss reported upward of $175,000 including equipment.

Common Council, Stanberry, Mo., is considering installation of municipal electric light and power plant, and will secure estimates of cost soon.

Oklahoma Gas & Electric Co., Oklahoma City, Okla., has purchased local Belle Isle generating plant of Oklahoma Railway Co., with rated capacity of 13,000 kw., and has leased transmission lines owned by same company. Expansion will be carried out for service at Norman, El Reno and vicinity, including power line construction.

Consolidated School District, Normandy, Mo., has awarded general contract to I. L. Davis Construction Co., 707 Park Avenue, Columbia, Mo., for two-story vocational school, to cost $125,000 with equipment. W. B. Ittner, Inc., 911 Locust Street, St. Louis, is architect.

Best Brothers-Keene Cement Co., Medicine Lodge, Kan., has plans for a one-story addition, 80 x 100 ft., to cost more than $75,000 with equipment.

Foster-Hall Tire Co., 1221 Frederick Street, St. Joseph, Mo., is having plans drawn for a one-story automobile service, repair and garage building, with tire storage and distributing building adjoining, to cost upward of $125,000 with equipment. Walter Boschen, Tootle-Lacy Bank Building, is architect.

Oliver Iron & Steel Corporation, Pittsburgh, manufacturer of galvanized pole line hardware and construction specialties, has opened new warehouse at Nineteenth and Campbell Street, Kansas City, Mo., where a complete stock of pole line material will be maintained. W. M. Watters, district manager of Oliver corporation, formerly at 209 Baltimore Building, will be in charge.

Indiana

Indianapolis, June 4.

PLANS are being prepared by Anderson Stove Works, Anderson, for a one-story addition, to cost close to $45,000 with equipment.

Southern Indiana Gas & Electric Co., Evansville, will make extensions and improvements in power plant, with installation of new equipment, to cost in excess of $200,000. Expansion will be carried out also in central steam-heating system in vicinity of Eighth Street.

Dubois-Robineau Furniture Co., Dubois, is considering early rebuilding of two-story plant recently destroyed by fire, with loss reported at $100,000 including equipment. J. M. Schanaum is treasurer.

Indiana Hydro-Electric Power Co., Lafayette, has arranged for bond issue of $3,000,000, a portion of proceeds to be used for expansion and improvements, including transmission line construction. Company has acquired properties of Tippecanoe Hydraulic Co., and Tippecanoe Electric & Power Co., including three power sites in vicinity of Monticello. E. Van Arsdel is president.

Major Brothers Packing Co., South Logan Street, Mishawaka, is considering installation of cold storage and power machinery in new three-story packing plant, to cost in excess of $300,000 with equipment. Packers' Architectural & Engineering Co., 431 South Dearborn Street, Chicago, is architect and engineer.

Martin-Parry Corporation, 1100 West Henry Street, Indianapolis, manufacturer of commercial automobile bodies, has arranged for sale of plant of Oakes Corporation on Roosevelt Avenue to Harris, Small & Co., for price in excess of $1,000,000. Plant has been used heretofore for production of metal stampings for automobile bodies, and this production will be carried on by Martin-Parry organization at its own plant.

Indianapolis Water Co., 113 Monument Circle, Indianapolis, is disposing of a preferred stock issue to total $704,700, portion of proceeds to be used for extensions and improvements in waterworks and system, including additional equipment.

Dean Forging Co., Muncie, is said to be arranging for immediate rebuilding of portion of plant recently destroyed by fire, with loss in excess of $50,000 including equipment.

Cleveland

Cleveland, June 4.

MACHINE-TOOL business and inquiry are slowing down, although some manufacturers and dealers report a fair volume of single tool orders. Larger types of machine tools are inactive. While orders are well scattered, there is more activity in the automotive than in other fields. Buying is rather light in the Detroit territory, as no large lists are coming from automobile manufacturers. Railroad inquiry is limited to small single machines. In the electrical field motors are moving quite well.

Midland Steel Products Co., Cleveland, will enlarge its Detroit plant by an addition of 48,000 sq. ft. of floor space and add considerably to its departments devoted to manufacture of automobile frames and other stampings. Some new equipment will be installed. An appropriation of $250,000 has been authorized by board of directors for these extensions. Entire building program for Detroit plant involves an estimated expenditure of $600,000, general plans having been approved for a large extension to department for manufacturing automobile brakes. Details of this part of extension program have not been approved.

Akron Lamp Co., 600 South High Street, Akron, Ohio, is planning new two-story plant, 60 x 75 ft., to cost in excess of $25,000 with equipment.

Henry & Murphy, Second National Bank Building, Akron, Ohio, architects, have revised plans for two-story automobile service, repair and garage building, to cost close to $100,000 with equipment.

City Ice & Fuel Co., 6611 Euclid Avenue, Cleveland, operating ice-manufacturing plants, is arranging for a preferred stock issue of $35,000,000 and increase in common stock from 1,000,000 to 3,000,000 shares, a portion of proceeds to be used for expansion, including acquisition of other ice-making and cold storage plants.

Ohio Public Service Co., Hanna Building, Cleveland, will soon take bids on general contract for a one-story equipment storage and distributing plant at Elyria, Ohio, to cost about $80,000 with equipment. R. S. Silsbee, Elyria Savings & Trust Building, is architect.

Seiberling Rubber Co., West Hopocan Avenue, Barberton, Ohio, manufacturer of automobile tires and tubes, is considering a three-story addition, to cost about $140,000 with equipment.

Plant and real estate of Warren Iron & Steel Co., Warren, Ohio, will be sold at auction during July by Industrial Plants Corporation, New York. Sale will include rolling mills, stamping plant, presses, shears, cranes, machine shop equipment, dies for circular saws, agricultural equipment, etc. Date of sale will be announced later.

Builders & Industrial Supply Co., 4090 Detroit Street, Toledo, Ohio, has been appointed distributer in Toledo and vicinity for products of Botfield Refractories Co., Philadelphia.

Detroit Steel Barrel Co., Toledo, Ohio, has been organized to succeed Detroit Range Boiler & Steel Barrel Co., and will continue manufacture of steel barrels and drums.

Cincinnati

CINCINNATI, June 4.

A MILD recession in machine-tool buying, largely of a seasonal character, is noted and indications are that June bookings will likely fall somewhat short of those in May. A number of builders, however, are fairly well satisfied with the volume of sales, which are made up mostly of orders from companies in many different industries. Automobile manufacturers have made scattered purchases, but in the aggregate, they constitute a rather small percentage of the total business. In the foreign field there has been one sizable transaction, negotiated by a local company, calling for machines amounting to from $50,000 to $60,000 to be shipped to a European country.

The United Engineering & Foundry Co., Pittsburgh, has bought a 30-in. x 24-ft. heavy-duty engine lathe, and an eastern Pennsylvania company has purchased a 24-in. slotter. Production in Cincinnati machine-tool plants is irregular, some shops having enough work ahead to sustain a good schedule of operations for fully 30 days, others being forced to curtail activities on account of the dearth of orders.

Bids will be received by State Department of Public Welfare, Columbus, Ohio, until June 14 for an ice-manufacturing plant at institution at Gallipolis, to cost about $45,000. H. B. Briggs, Hartman Hotel Building, is State architect.

Springfield Metallic Casket Co., Springfield, Ohio, is planning early call for bids on general contract for a five-story addition, to cost close to $100,000 with equipment.

Cleveland, Cincinnati, Chicago & St. Louis Railroad Co., Big Four System, Cincinnati, is having plans drawn for new locomotive and car repair shops at Bellefontaine, Ohio, to cost close to $160,000 with equipment.

Air Corps, Material Division, Wright Field, Dayton, Ohio, is asking bids until June 12 for 268 airspeed indicators and 373 single throat assemblies, circular 17; until June 14 for 120 aircraft altimeters, circular 19.

Lexington Utilities Co., Main Street and Broadway, Lexington, Ky., operating electric light and power properties, is arranging for increase in capital to $5,250,000, a portion of proceeds to be used for expansion, including transmission lines.

Officials of Hope Engineering & Supply Co., Mount Vernon, Ohio, have organized Kentucky Fuel Gas Corporation, Ashland, Ky., to take over and expand natural gas properties of American Rolling Mill Co., in Greenup, Carter and Boyd Counties. New company is disposing of bond issue of $5,000,000, a portion of fund to be used for purchase of properties and for expansion. Company will be under direction of Hope Engineering organization. C. W. Sears is president.

City Council, Kingsport, Tenn., is asking bids until June 26 for equipment for municipal waterworks, including raw water pumping station and filtration plant of 2,000,000-gal. per day capacity, and 1,000,000-gal. steel storage tank, with accessories. Wiedeman & Singleton, Atlanta, Ga., are engineers.

Ramsey Mfg. Co., 143 North Fifth Street, Columbus, Ohio, manufacturer of vacuum cleaners, blowers, etc., is planning installation of additional equipment, including slitting power shears, forming machines and other tools.

House-Hasson Hardware Co., 759 Western Avenue, Knoxville, Tenn., has awarded general contract to A. H. Whisman, 422 Front Street, for new three-story storage and distributing plant, 50 x 170 ft., on adjoining site, to cost close to $50,000 with equipment. R. F. Graf & Son, Journal Building, are architects.

Board of Education, Newark, Ohio, plans installation of manual training equipment in new three-story junior high school at East Newark to cost upward of $200,000, for which bids will be received on general contract June 15. Vernon Redding, Walpark Building, is architect. O. J. Barnes is general superintendent.

Midwest Locomotive Works, Cincinnati, maker of industrial locomotives, has been taken over by owners of Columbia Machine Tool Co. and Ceramic Machinery Co., Hamilton, Ohio. Plant has been moved to latter city where locomotives from 3 to 15-tons capacity will be manufactured. Larger sizes will be added. Repairs for Burton friction drive locomotives, formerly built by Burton Co., predecessor of Midwest company, will be furnished as heretofore. Locomotive business will be operated as division of Columbia and Ceramic companies and equipment and space is available in plants of these companies.

Shartle Machine Co., 359 Dublin Avenue, Columbus, Ohio, maker of machinery and power equipment, is in market for one 175 to 225-hp. gas engine of modern design, preferably three-cylinder, and one 300-hp. engine direct connected to 200-kw., 250-volt generator.

New England

BOSTON, June 4.

JUNE opened with no increased activity in the machine-tool market. However, tools sold the past week, although few in number, were of more importance than those of the previous week and included three new radial drills and a new surface grinder to a Hartford plant; a used 24-in. Bullard vertical boring mill to a Worcester plant; a used No. 52 Bliss press to a Worcester company; a practically new 24-in. lathe to a Connecticut firm; a fairly large used planer and a large used shear to Massachusetts plants, in addition to a half-dozen smaller tools. A good volume of repair parts has also been sold.

An encouraging feature is the sizable amount of prospective business which is still considered active. This includes a list for the Boston & Albany Railroad, some tools for the New Haven and the Boston & Maine railroads, as well as a fairly long list of one, two, three or more items of equipment required by industrial plants. When these tools will be purchased is uncertain, but in all probability not until after the political conventions are over.

Small tools continue active. May was the best month for some in the trade so far this year.

Crofut & Knapp Co., South Norwalk, Conn., has plans for expansion, work on which will start about July 1.

Taunton-New Bedford Copper Co., 24 North Front Street, New Bedford, Mass., contemplates an addition for a new treatment of metals. Details will be announced later.

Bids have closed on a coal pocket to be erected by Staples Coal Co. at Warren, R. I., for which conveying equipment is required. O. Perry Sarle, 95 Franklin Street, Providence, is architect.

William Higginson, 101 Park Avenue, New York, architect, has plans for a one and two-story printing plant at Greenwich, Conn., for the Condé Nast Publishing Co. Motors and miscellaneous equipment are required.

Plans will be ready about Aug. 1 for a trade school at Westfield, Mass., to cost, without equipment, $80,000. Ralph M. Sizer, 12 Elm Street, Westfield, is architect.

Fletcher Thompson, Inc., 542 Fairfield Ave., Bridgeport, Conn., architect, closed bids June 4 on a one-story 100 x 150-ft. machine shop addition for Baird Machine Co., Stratford, Conn.

Dayton Mfg. Co., Torrington, Conn., automobile accessories and supplies will erect a two-story plant to meet needs of increasing business.

Package Machinery Co., Springfield, Mass., has purchased Furguson & Haas, Inc., New York, wrapping machinery, and will move raw material, unfinished work and equipment to

Springfield plant. Official staff and directors of Springfield company will remain as heretofore. Mr. Furguson and Mr. Haas will be actively identified with new owners.

Hartford Electric Light Co., Hartford, Conn., will increase capacity of steam-operated electric power plant on Commerce Street, to cost about $200,000 including equipment.

L. G. Balfour & Co., 25 County Street, Attleboro, Mass., manufacturer of plated jewelry products, metal novelties, etc., has plans for a two-story addition, to cost upward of $50,000 with equipment. F. B. Perry, 44 Franklin Street, Providence, R. I., is architect.

Kidder Press Co., Dover, N. H., manufacturer of printing presses, paper mill machinery, etc., has concluded merger with National Woodworking Machinery Co., of same place, and United Printing Machinery Co., 470 Atlantic Avenue, Boston, under first-noted name. It is understood that present plants will be continued as heretofore and expansion in manufacture carried out. Offices will be maintained at Boston, New York, Chicago and Toronto. Joel F. Shepard, formerly head of National company, will be vice-president and general manager of consolidated company.

Nashoba Cold Storage Co., Ayer, Mass., care of Haynes & Mason, 280 Main Street, Fitchburg, Mass., has plans for a two-story cold storage and refrigerating plant, 75 x 160 ft., to cost about $65,000 with equipment.

Colonial Air Transport Co., care of Springfield Airport Corporation, Springfield, Mass., has leased portion of Fisk Park airport and plans early construction of hangars, repair shop, tool house, and oil storage and distributing building.

A. F. Curtin Valve Co., 76 Ship Avenue, Medford, Mass., has awarded general contract to J. A. Ricker, 36 Dudley Street, for a one-story addition, to cost about $23,000 with equipment.

W. E. Louttit, 93 Cranston Street, Providence, R. I., has filed plans for a one-story automobile service, repair and garage building to cost close to $100,000 with equipment.

James Purdon, 50 Congress Street, Boston, architect, has completed plans for a two-story automobile service, repair and garage building, 100 x 150 ft., at Winchester, Mass., to cost about $100,000 with equipment.

Metal Craftsmen, Inc., 141 Georgia Avenue, Providence, R. I., has been organized to manufacture patented window ventilator. It contemplates enlargement of plant soon and will then probably be in market for materials and equipment.

Buffalo

BUFFALO, June 4.

BOARD OF EDUCATION, Genesee Building, Buffalo, will soon complete plans for two-story Burgard vocational school at Kensington and Fillmore Avenues, to cost approximately $1,000,000 with equipment. Ernest Crimi, Genesee Building, is architect.

Work has been started on new airport at LeRoy, N. Y., by Donald Woodward, LeRoy, and associates, to include hangar, 100 x 140 ft., repair shop, tool department, and oil storage and distributing building to cost more than $70,000 with equipment.

Roger D. DeWolf, 330 Barrington Street, Rochester, N. Y., and associates have organized DeWolf Furnace Corporation with capital of $25,000, to operate a local plant for manufacture of furnaces, parts, etc. Wirt D. Seeley, 24 Mayfield Street, is interested in company.

Laclede Mfg. Co., 1443 Niagara Street, Buffalo, manufacturer of paper goods, has asked bids on general contract for new one-story plant, to cost close to $100,000 with equipment. E. G. Speyer, Ellicott Square, is architect and engineer.

Lincoln Radiator Co., Utica, N. Y., has leased vacant plant of National Radiator Co., North Tonawanda, N. Y., and will occupy for new plant for production of cast iron radiators for domestic and other heating service.

George C. Rounds, White Building, Buffalo, is having plans drawn for a six-story automobile service, repair and garage building, to cost $230,000 with equipment.

City Council, Buffalo, is considering extensions in municipal airport, including new hangar units and repair shops. Lieut. Edwin M. Ronne is director.

Plant and real estate of Standard Turbine Corporation, Scio, N. Y., will be sold at auction during August by Industrial Plants Corporation, New York. Sale will include new machine shop and power house, boring mills, heavy-duty lathes, radial drills, open-side planers, shapers, grinders, turret lathes, drills, compressors, etc. Date of sale will be announced later.

Henry L. Kohlmetz Iron Works, formerly on North Water Street, Rochester, N. Y., manufacturer of stairs, grills, gates and other ornamental iron products, has removed its plant to larger quarters at Mill and Furnace Streets.

Border Metal Products, Inc., 1449 Niagara Street, Buffalo, has been organized to manufacture metal and allied products, particularly nickel stove pipe, furnace pipe and hot air registers. Company has plant at above address and will soon be in market for materials and equipment.

United States Hoffman Machinery Corporation, Syracuse, N. Y., has taken title to tract of 12 acres, northeast of the city, for erection of a new plant with 140,000 sq. ft. of floor space, to cost $500,000. Lockwood, Greene & Co., New York, are engineers.

South Atlantic States

BALTIMORE, June 4.

CONTRACT has been let by Bowker Chemical Co., First Street and Tenth Avenue, Baltimore, to Consolidated Engineering Co., 20 East Franklin Street, for rebuilding portion of plant recently destroyed by fire, including three two and three-story buildings, to cost more than $80,000. Engineering department of American Agricultural Chemical Co., 419 Fourth Avenue, New York, parent organization, is in charge.

DeLion Tire & Rubber Corporation, Eager and Fifth Streets, Baltimore, is reported considering one or two-story addition to cost approximately $35,000 with equipment. S. C. Cooke is company official in charge.

Plant and equipment of Hampstead Mill & Body Works, Inc., Hampstead (Carroll County), Md., will be sold at public auction, June 13, by L. C. Caltrider and C. R. Wattenscheidt, receivers.

Arrington Cold Storage Corporation, Arrington, Va., has awarded general contract to John P. Pettijohn, Lynchburg, Va., for four-story cold storage and refrigerating plant, 103 x 124 ft., to cost upward of $100,000 with machinery. Ballinger Co., Twelfth and Chestnut Streets, Philadelphia, is architect and engineer.

Prudential Refining Corporation, Baltimore, formerly Prudential Oil Corporation, with refinery in Curtis Bay section, is disposing of bond issue of $2,000,000, considerable portion of fund to be used for extensions and improvements, including modernization of present refinery, to develop daily capacity for handling 10,000 bbl. of crude oil.

Carroll Independent Coal Co., Baltimore, has acquired site on Twenty-fifth Street, now used in part for company plant, and contemplates extensions in storage and distributing facilities, including one-story automobile service, repair and garage building, to cost $100,000.

City Council, Macon, Ga., has acquired tract of 250 acres for municipal airport, to be known as Miller field, and plans construction of hangars, repair shops and other buildings.

General purchasing officer, Panama Canal, Washington, is asking bids until June 19 for wire rope, chains, staybolt iron, shovels, chisels, hammers and other tools, Panama schedule 1881.

Georgia Manganese & Iron Co., care of Joel Hurt, Hurt Building, Atlanta, Ga., is planning development of manganese properties near Cartersville, Ga., including installation of mining and refining equipment for production of about 200,000 tons per annum. A large capacity mechanical washing plant will be provided, entire project to cost close to $1,500,000.

Public Improvement Commission, City Hall, Baltimore, is arranging fund of close to $6,500,000 for extensions and betterments in municipal waterworks, including new pumping plant for Mount Royal-Vernon section, to cost about $625,000 with machinery, and pumping station for Curtis Bay district, to cost approximately $70,000. Water department will be in charge.

Quartermaster, Fort Monroe, Va., is asking bids until June 16, for construction of two standard hangars at Langley Field, Va., units to be of steel type, with repair facilities.

In connection with proposed rayon mill on James River, near Richmond, Va., American Enka Corporation, 114 East Thirty-second Street, New York, contemplates construction of power house, machine shop and other mechanical units. Entire project is reported to cost more than $1,200,000.

Bureau of Fisheries, Washington, is asking bids until June 28 for one full Diesel heavy-duty, direct-connected, reversible type marine engine of 150 hp., for installation in vessel at Boothbay Harbor, Me.

Airport Committee, Chamber of Commerce, Marion, N. C., W. S. Shiflet, chairman, is considering early establishment of municipal airport, with hangars, repair shops and other mechanical units.

Chapman-Storm Lumber Corporation, Holly Hill, S. C., A. F. Storm, president, is planning purchase of steel water tank, about 25,000-gal. capacity.

Spartanburg Textile Machinery Co., Spartanburg, S. C., is said to have concluded arrangements for purchase of local plant of American Machine Shops and will equip for new branch plant.

Common Council, Vass, N. C., is asking bids until June 12 for municipal waterworks system, including 100,000-gal. capacity tank on steel tower, deep-well pumping station, etc. Carolina Engineering Co., Johnston Building, Charlotte, N. C., is engineer.

Superintendent of prisons, Department of Justice, Washington, will receive bids until June 11 for one gasoline power shovel and extra boom, with approximately 40-ft. two-way block and fall to convert shovel into crane.

Samuel H. Kennedy, Tunnel Hill, Ga., is organizing Samuel H. Kennedy Co., with $150,000 capital stock, to manufacture automotive and agricultural appliances, also builders' equipment designed by organizer.

Pittsburgh

PITTSBURGH, June 4.

MACHINE-TOOL sales in this district for May were fairly good. Betterment, which set in about the middle of the month, continued and sales during the last half were sufficient to bring the total above that of April and well up toward the average for the first three months of the year. Single tool orders have been the rule. The third quarter tool list of the Westinghouse Electric & Mfg. Co. is expected to be out about the end of this month, and as purchases against the first and second quarter lists were limited, a heavy third quarter inquiry is looked for.

Contract has been let by Miller Saw Trimmer Co., Penn Avenue and Water Street, Pittsburgh, manufacturer of printers' machinery and parts, to Hughes-Foulkrod Co., 421 Seventh Avenue, for a one and two-story addition, to cost close to $200,000 with equipment. Hunting, Davis & Dunnells, Century Building, are architects.

South Penn Oil Co., 541-49 William Penn Way, Pittsburgh, has completed plans for new oil storage and distributing plant at Wheeling, W. Va., to cost about $125,000 with equipment. J. F. Kuntz, Westinghouse Building, Pittsburgh, is architect.

Pittsburgh Parking Garage, Inc., 555 Sixth Avenue, Pittsburgh, J. Wilworth, president, will soon take bids on general contract for seven-story service, repair and garage building, to cost $175,000 with equipment.

City Controller, City-County Building, Pittsburgh, will receive bids until June 21 for furnishing and installing power house equipment at Pittsburgh city home and hospital, Mayview, Pa. (contract No. 7); water-softening equipment at same place (contract No. 8); steam lines and appurtenances (contract No. 2); power lines and auxiliary equipment (contract No. 3); and sewer, water and gas lines (contract No. 5). Plans and specifications at office of Morris Knowles, Inc., Westinghouse Building, engineer.

W. J. Burkart, 518 North Pennsylvania Avenue, Greensburg, Pa., and associates have organized Continental Boiler & Radiator Co., to operate plant in vicinity of West Newton, Westmoreland County, for manufacture of boilers, radiators, gas-fitting specialties and kindred equipment. J. A. Henry, Jeanette, Pa., will be an official of new company.

Board of Education, Washington, Pa., plans installation of manual training equipment in new high school to cost $850,000, for which C. L. Wooldridge, Fulton Building, Pittsburgh, engineer, will prepare plans.

American Instrument Works, 18 East Lacock Street, Pittsburgh, maker of jigs, fixtures, tools, etc., has changed its name to American Die & Instrument Works. E. A. Schurk is secretary and treasurer.

Milwaukee

MILWAUKEE, June 3.

MODERATE activity in new business is reported by manufacturers of machine-tools. In several instances, shops entered the month with more specifications than at the beginning of May, but as a rule, the May volume fell below April. Demand continues spotty, but a fair aggregate is being furnished by a widely diversified list of buyers. There has been an improvement in the foundry business, due mainly to a better call for automotive castings.

Business of Lang & Scharmann, foundry and machine shop, Marshfield, Wis., has been incorporated as Lang & Scharmann, Inc., with a capital stock of $50,000. George J. Lang and Otto T. Scharmann continue as principal owners and active managers. Some improvements in plant and equipment are being made.

Milwaukee assembling plant of Ford Motor Co., which closed down June 8, 1927, is expected to resume operation June 11. About 600 men are expected to be employed by July 1. Harry M. Buckley is branch manager.

Green Bay & Western Railway, Green Bay, Wis., is starting work on a warehouse and service shop at its terminal, 60 x 200 ft. With equipment cost is estimated at $50,000.

Hurd Lumber Co., Medford, Wis., is purchasing miscellaneous equipment for a cutting plant addition, 90 x 100 ft., costing about $40,000. H. M. Hurd is president and general manager.

Plans for a one-story addition, 74 x 80 ft., to gray iron shop of Armstrong Foundry Co., 1530 Junction Avenue, Racine, Wis., are being revised by J. Mandor Matson, local architect, and new bids will be taken about June 15.

Nash Motors Co., Kenosha, Wis., is pushing work on two one-story additions, 30 x 128 and 80 x 160 ft., to its branch factory at Racine, Wis., and is placing final orders for new equipment.

Beloit Box Board Co., Second Street, Beloit, Wis., is breaking ground for a two-story addition, 103 x 110 ft., to cost $60,000 with machinery.

Appleton Coated Paper Co., Appleton, Wis., has plans for a new finishing room addition, 104 x 240 ft., two stories, requiring super-calendering and sheet cutting equipment with electric motor drive. It is to be ready about Oct. 15. Charles S. Boyd is general manager.

Devereaux-Olson Construction Co., 716 Eleventh Avenue, South, Minneapolis, Minn., is low bidder at $29,000 for erection of a new central heat and power plant, 57 x 115 ft., at State Teachers College, Oshkosh, Wis. It will require three 150-hp. boilers with automatic stokers, 600 tons coal storage capacity, ash-handling equipment, and contain a general machine and repair shop. The total cost will be $80,000.

City of Waukesha, Wis., closes bids June 11 for construction of a municipal sewage disposal plant costing $190,000, designed by Alvord, Burdick & Howson, consulting engineers, Chicago. Bids are being asked on (a) sewage disposal plant construction, (b) tank equipment and accessories, (c) pumping equipment, and (d) cast iron pipe and fittings. A. R. Schuh is city engineer.

Drott Tractor Co., 123 Wisconsin Avenue, Milwaukee, distributer of Caterpillar tractors and equipment, has let general contract to Paul Riesen's Sons Co., 1018 Humboldt Avenue, local, for construction of a $90,000 headquarters building for sales, service and repairs. It will contain a complete machine and forge shop. Architects are M. Tullgren & Sons Co., 20 Prospect Avenue, Milwaukee.

Pacific Coast

SAN FRANCISCO, May 31.

PLANS are under way by California Wire & Cable Co., Orange, Cal., for one-story addition, 42 x 85 ft., to cost approximately $18,000 with equipment.

Apple Growers' Cold Storage Co., Watsonville, Cal., is asking bids on general contract for one-story cold storage and refrigerating plant, 300 x 500 ft., to cost $250,000 with equipment. Uttley & Kleindinst, 354 Hobart Street, Oakland, Cal., are engineers.

National Paper Products Co., 562 Battery Street, San Francisco, an interest of Zellerbach Co., same address, is considering construction of second unit at kraft paper mill at Port Townsend, Wash., where first unit is now being completed. New structure will double capacity, and is reported to cost more than $2,000,000 with equipment.

City Council, Idaho Falls, Idaho, is arranging bond issue of $100,000 for municipal hydroelectric power plant on Snake River.

Moreland Motor Truck Co., Twenty-fourth and Main Streets, Los Angeles, with plant at Burbank, Cal., is reported planning construction of branch assembling and distributing plant at Seattle, where site will soon be selected, to cost more than $80,000 with equipment.

Union Pacific Railroad Co., Omaha, Neb., has approved plans for an addition to engine house and shops at Ogden, Utah, to cost about $40,000 with equipment.

California Petroleum Corporation, 929 South Broadway, Los Angeles, has plans for a one-story storage and distributing plant at San Pedro, with pumping station, etc., to cost about $45,000.

Moran Co., Garland Building, Los Angeles, architect, is preparing plans for one-story mechanical shop and woodworking plant, 100 x 200 ft., for company whose name is temporarily withheld, to cost close to $35,000 with equipment.

Sellers & Stone, Yakima, Wash., have filed plans for one-story cold storage and refrigerating plant, to cost approximately $100,000 with machinery.

American States Public Service Co., Los Angeles, operating Los Angeles Gas & Suburban Water Co., South Coast Gas Co., and other utilities, is disposing of bond issue of $1,250,000, portion of proceeds to be used for expansion and improvements in plants and system.

Oregon Portland Cement Co., Portland, has filed plans for three-story and basement storage and distributing plant, 100 x 100 ft., to cost in excess of $60,000 with elevating, conveying and other equipment. L. L. Dougan, Kraemer Building, is architect.

Richfield Oil Co. of California, Inc., Los Angeles, has been organized to take over and consolidate company of same name, with local refineries, and United Oil Co., with similar plants. Amalgamated company will carry out expansion program and has arranged for note issue of $5,000,000, a portion of proceeds to be used for that purpose.

Southwestern Machine Co., 316 Azusa Street, Los Angeles, has been formed to succeed Western Machine & Mfg. Co. and will manufacture special machinery, double-end punches and shears, inclinable presses in plain, back-geared and combination and worm speed reduction units up to 7½ hp. Special machinery will be built under contract and materials and equipment for other lines have been contracted for.

Canada

TORONTO, June. 4.

WHILE the general demand for machine-tools is confined to single orders, several small lists of a half-dozen tools have recently appeared. The past week the Advisory Vocational Committee placed orders for tools for the Toronto technical school. Some good sized orders are in prospect for new works now under construction which are expected to appear within the next two or three weeks. While most of the automotive buying is for replacement needs, additions are under way for two or three plants for which equipment will soon be required. Garages and repair plants are steady buyers of single tools. The Canadian General Electric Co. will spend approximately $500,000 on machinery and tools for additions to its Peterboro, Ont., plant.

International Nickel Co. has started work on addition to its plant at Port Colborne, Ont., to cost $75,000, and expects to start work soon on a second unit of same size and cost.

Studebaker Corporation plans to re-equip its plant at Walkerville, Ont., for manufacture of Studebaker and Erskine cars from parts made in Canada. About 400 additional men will be employed.

Canadan I. T. S. Rubber Co., Toronto, has taken out a permit for erection of a $90,000 factory building at corner of Royce and Edwin Avenues.

Drury Co., Montreal, Que., has awarded contract for erection of a $2,500,000 cold storage plant at Halifax, consisting of a group of four buildings. Two units will be six stories.

Canadian General Electric Co., head office, Toronto, will build two extensions to its plant at Peterboro, Ont., 100 x 328 ft. and 90 x 100 ft. Buildings will cost approximately $300,000 and equipment about $500,000.

Smith Brothers, 188 Duke Street, Toronto, manufacturers of automobile and truck bodies, etc., have purchased a two-acre site for erection of a plant to cost $150,000.

Hill, Clarke & Francis, New Liskeard, Ont., have contract for the erection of a factory at New Liskeard for the Standard Diamond Drill Co., to cost $20,000.

Canadian Engine & Tool Co., Ltd., 10 Church Street, Windsor, Ont., has let contract to W. Pierce, 192 Partington Avenue, Sandwich, Ont., for erection of a one-story factory, 45 x 156 ft.

Nova Scotia Power Commission, Halifax, N. S., has awarded contract to Foundation Co. of Canada, Ltd., 746 Sherbrooke Street West., Montreal, for construction of a 30,000-hp., hydroelectric power development plant on Mersey River to cost $3,000,000.

Griswold & Co., Ltd., 1111 Beaver Hall Hill, Montreal, has been awarded contract for machinery, etc., for hydroelectric plant and dam to be built for Cie Electrique de Charlevoix, at Les Eboulements, Que. Tenders for power house and dam construction will be called later. Langlais, Ricard & Royer, 126 St. Peter Street, Quebec, are engineers.

London Shipping Containers, Ltd., 745 Yorke Street, London, Ont., manufacturer of corrugated paper boxes, wrappers, etc., is having plans prepared by John M. Moore & Sons, London, for erection of a plant at Windsor, Ont., to cost $50,000.

Atlas Construction Co., 37 Belmont Street, Montreal, has been awarded general contract for erection of a 2,000,000-bu. elevator with marine tower and grain conveyors, for Quebec Harbor Commission. It will cost approximately $1,000,000.

Anglin-Norcross, Ltd., Montreal, has contract for erection of locomotive and machine shops at Point St. Charles, Montreal, for Canadian National Railways. T. T. Irving, room 436, New Union Station, Toronto, is regional engineer.

Bates Valve Bag Co., Ltd., Cap de la Madeleine, Que., manufacturer of automatic bag filling and weighing machinery, etc., is having plans prepared for a 1½ story addition, 40 x 200 ft.

Otto Higel Co., Ltd., 680 King Street West, Toronto, is having plans prepared by G. M. Miller & Co., 71 Mutual Street, for a factory at St. Hyacinthe, Que., to manufacture piano actions, musical instruments.

E. G. M. Cape Co., 10 Cathcart Street, Montreal, has contract for an addition to plant of Simmons, Ltd., manufacturer of metal beds, 400 St. Ambrose Street, Montreal, to cost $240,000. Ross & MacDonald, 1 Belmont Street, are architects.

Bids are being received by B. H. & F. Prack, architect, 42 James Street North, Hamilton, Ont., for an addition to plant of Canadian Westinghouse Co., Ltd., Sanford Avenue North, Hamilton.

H. J. Heintz Co. is building a factory at Leamington, Ont., and will also erect a power plant.

Western Canada

Bids will be called soon by Hutton & Souter, architects, 6 James Street South, Hamilton, Ont., for erection of a distributing and assembly plant at Saskatoon, Sask., for General Motors of Canada, Ltd., head office, Oshawa, Ont. It will be one story, 80 x 300 ft., and cost $1,000,000.

Dominion Electric Co., Watrous, Sask., will build an addition to its power plant at Estevan, Sask.

Mid-West Utilities, Calgary, Alta., contemplates erection of a power plant at Nokomis, Sask., and power line from Nokomis to Watrous, Imperial and Simpson.

Dominion Electric Co., Watrous, Sask., is completing arrangements for construction of a power plant at Craik, Sask.

Plans are being prepared by J. A. Foester, City Hall, Prince Albert, Sask., for an addition to city power plant to cost $100,000.

General Steel Wares, Ltd., 305 Water Street, Vancouver, B. C., has started work on a one-story factory and warehouse, 125 x 250 ft.

Vulcan Iron Works, Ltd., Point Douglas, Man., will build an addition to its plant, one-story and three-story wing, 72 x 196 ft., steel and corrugated iron construction.

Bids are being received by J. C. Holden, District Engineer, Canadian Pacific Railway Co., Winnipeg, Man., for an addition to Weston freight car shops, Winnipeg, 305 x 317 ft.

Foreign

COMPANY manufacturing cutlery at Sheffield, England, has acquired site at Germiston, near Johannesburg, South Africa, and plans construction of branch plant. Information at office of Bureau of Foreign and Domestic Commerce, Washington, reference South Africa No. 66562; also at American Consulate,, Johannesburg, William L. Kilcoin, assistant trade commissioner.

Electric Bond & Share Co., 2 Rector Street, New York, is reported considering plans for hydroelectric generating plant at Agos Falls, Agos River, Lanao, Philippine Islands, with initial capacity of about 25,000 kw., to cost more than $1,000,000 with transmission lines. Lyman B. Hammond is vice-president in charge.

Huff-Deland Dusters, Inc., subsidiary of Keystone Aircraft Corporation, 475 Fifth Avenue, New York, with plant at Bristol, Pa., has secured concession from Government of Peru for establishment and operation of passenger and mail air service between that country and United States. Planes will be constructed and landing fields arranged, including hangars, repair shops, oil storage and distributing plants, and other structures.

A company has been formed at Teschen, Silesia, Poland, to construct and operate a hydroelectric power plant on Sola River, for which concession has been granted by Ministry of Communications. Considerable portion of output will be used for operation of electric railroad line to be built from Oswiecim and Zywiec, Poland. Entire project is reported to cost more than $1,500,000. Information at American Consulate, Warsaw, Poland, Gilbert Redfern, assistant trade commissioner.

Imperial Chemical Industry, Ltd., London, England, is arranging for a stock issue to total about £4,300,000 (approximately $20,650,000), a considerable portion of fund to be used for expansion in manufacturing facilities.

Officials of Thomson-Houston Co., Paris, France, manufacturer of electrical machinery, associated with International General Electric Co., New York, and Societe Alsacienne de Constructions Mecaniques, manufacturer of similar equipment, with plant in Alsace-Lorraine, are organizing a new company to centralize production and distribution of both interests for electric and electro-mechanical equipment, and will develop expansion in both lines of manufacture. New company will be capitalized at 400,000,000 fr., of which about 150,000,000 fr. will represent working capital for production.

Koholyt Corporation, Berlin, Germany, manufacturer of sulphite pulp for paper manufacture, controlled by Inveresk Paper Co., Ltd., London, England, is arranging for sale of bonds in United States to total $4,000,000, a portion of proceeds to be used for expansion.

New Trade Publications

Oxyacetylene Welding in the Foundry.—Air Reduction Sales Co., 342 Madison Avenue, New York. Pamphlet of 12 pages, containing the text of a paper read by G. F. Wieser, engineering research department, before a recent welding conference at the University of Wisconsin. It emphasizes the ability to meet severe production schedules by reclamation of defective castings.

Woven Screens.—Ludlow-Saylor Wire Co., St. Louis. Booklet of 20 pages, illustrating and describing a line of woven screens with square holes, made of steel or other resistant materials. Larger openings are claimed for them than with round perforations in plates. Steel screens are listed with openings ranging from 4 in. square down to 1¼ in. and made of wire from 1 in. to No. 7 gage.

Sand-Conditioning Equipment.—C. O. Bartlett & Snow Co., Cleveland. Bulletin 61 of 20 pages illustrates and describes a variety of equipment for handling sand. Most of the illustrations are from installations, starting with the shake-out and going through the list to delivery of sand into flasks.

Concrete Floors.—Master Builders Co., 7016 Euclid Avenue, Cleveland. Booklet of 32 pages covering a survey of concrete floor conditions in industrial plants. A strong plea is made against accepting lowest bids on jobs, if a thoroughly satisfactory floor is to be obtained. Tested materials and skillful workmanship are needed for best wearing results.

Arc Welder.—General Electric Co., Schenectady, N. Y. Bulletin G. E. A.-874, of four pages, illustrates and describes an arc welder rated at 200 amp. furnished in both stationary and portable forms. It is driven by belt, motor or gas engine and has a current range from 50 to 300 amp. It is adaptable to metallic electrodes from 1/16 to ¼ in.

Ball Bearings.—New Departure Mfg. Co., Bristol, Conn. Dimensions and load data and price list in a pocket-size pamphlet of 40 pages. The sheets are punched for use in ring binder.

Material-Handling Equipment.—Elwell-Parker Electric Co., Cleveland. Catalog 150 of 40 pages illustrates and describes a wide variety of industrial electric tractors and trucks, including the units carrying cranes. The elevator tructor is featured.

THE LAST WORD

(Contributed by the Reader Service Department of the Iron Age Publishing Co.)

LIKE the little Spartan boy who registered no sign of pain while the fox gnawed his vitals, the great bulk of our readers observed the resumption of "The Last Word" with disappointing stoicism.

But not all were mute. A few (two) tossed laurels. Others may have sighed and murmured something about being grateful that it did not take up a whole page.

Now, we like criticism, but it must be constructive. We should probably say we lean toward having it favorable. By far the pleasantest comment came in metrical form, written by Miss V. E. Atwell, of Arlington, Cranston, R. I., whose nom de typewriter is "Eva."

Greetings—Desert Song

WAS I the first from whom you heard
When discontinuing "The Last Word"?
As at that time I wrote to you,
My weekly task is to review
Items of interest, more or less,
Appearing in the trading press.
And as I waded, pen in hand,
Through much I could not understand,
Details which nothing could make plain
To my poor feeble woman's brain,
My energy was always spurred
By "Soon I'll come to 'The Last Word' "!
"The desert ship" of other lands
Must tramp Sahara's shimmering sands;
But does the thought occur to him
Of the oasis' shadows dim?
Of evening's rest, and safe retreat
Beneath the palm trees, cool and sweet?
Of voices singirg, soft and low
Where streams of living water flow?
If thus he dreams, I'm telling you
I likewise had my visions, too;
"Soon all this technique I will spurn,
And to 'The Last Word' gladly turn"!
But when you took that hope away,
My light went out, my sky was gray;
Things technical I had to read,
The palm trees all had gone to seed,
The shadows fled, the well ran dry,
(So were the *pages;* so was *I*)!
But now I look those pages o'er,
Lured by a bright hope, as before.
The camel now may drink his fill,
The palm trees wave, the night is still,
And up above the desert's rim
The rising moon appears to him.
Accept my thanks, good gentlemen,
"The Last Word" has appeared again!

EVA.

Thank you, Eva.

Extra! Extra! Foreign Visitor Mistakes the Iron Age for a Bar Room

Clipping from the New York *World:*

> *Believe It or Not!*
>
> "An English friend of mine who is visiting this country chanced to glance through a New York telephone directory while at my home recently," said A. L. Glasser. "He seemed unusually interested, and I inquired the reason.
>
> " 'Why,' he answered, 'I thought Prohibition was at least theoretically in force in New York, but here I find listed a number of barrooms.'
>
> " 'Impossible!' I exclaimed. 'You must be mistaken.'
>
> " 'Not at all,' he replied. 'Look here,' and he turned the pages rapidly, indicating the names Iron Age, *Judge,* the *New Yorker* and many others, next to each of which was the description 'a pub.' "

Mr. A. Steel is roll designer for the Judson Mfg. Co., San Francisco, Cal., steel producers.

And if the 231 million words, which have been printed in the copies of THE IRON AGE mailed to the Farrel-Birmingham Co. from 1872 to date, were placed end to end in a single line, including the marks of punctuation, nobody would read them. A. H. D.

Service Is Best Test of Steel

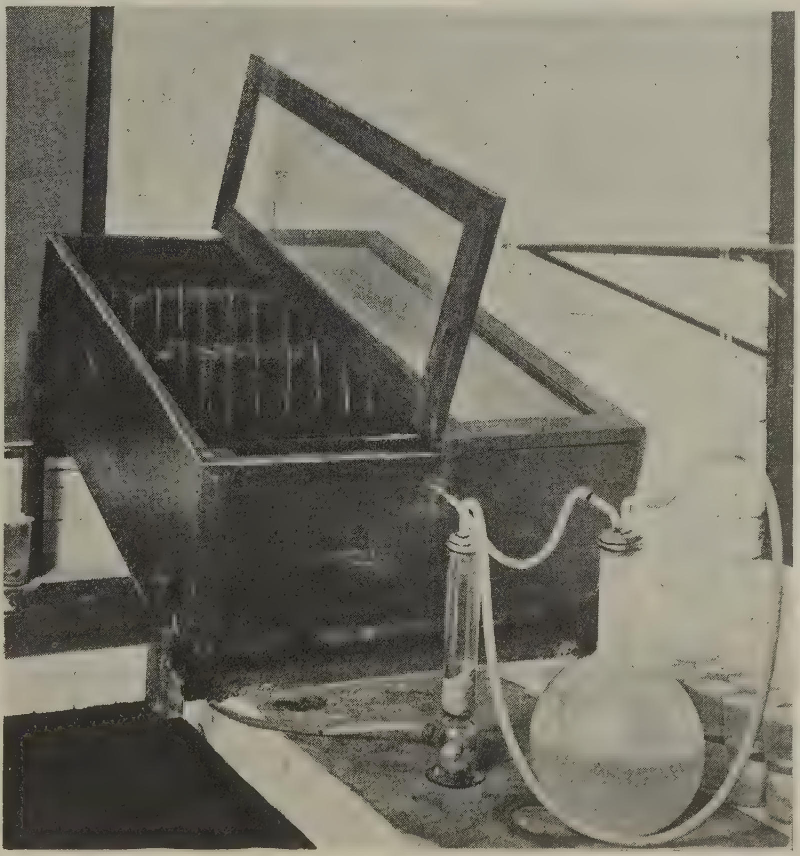
Accelerated Tests Not Conclusive—Many Acid Tests for Corrosion Are Misleading—Variables Which Discredit Are Numerous

BY H. M. BOYLSTON*

WHAT is the importance of the time element in testing metals? This question is a challenge to the chemist, the physicist, the engineer and the metallurgist—and one not easily answered.

The time element has but little effect in some of the important tests such as those for hardness and tensile strength. The metallurgist gages hardness with the Brinell testing machine by pressing a ball into the surface of the metal under known pressure and then measuring the resulting indentation. Since the load is applied for only a few seconds, elapsed time between tests does not affect the result. (Even in the case of tensile tests and Brinell tests it is well known that different results may be obtained if the tests are made immediately after the test bar has been machined or the metal has been quenched than will be obtained after waiting 20 min. to ½ hr. during which a so-called "aging" effect occurs.) A Brinell test made today will show the same result as one made next week.

Other tests, devised to determine the effect of corrosion upon iron and steel, are dependent upon time. Science has repeatedly conducted research investigations to determine some fair and accurate measuring stick by which relative corrosion resistance might be computed. All of this study has been conducted to make possible a prediction of the performance of a specific material under specific environment—thus enabling the purchasing public to select the material best adapted to particular needs.



The Salt Spray Test Is Helpful in Determining the Effect of Salt Spray upon Metals. It is not comparable with actual seacoast conditions—it is only an indicator

In an effort to make determinations in a short length of time, many tests have been conceived for iron and steel in which the action is speeded up. Laboratory conditions are closely noted and recorded, but the results remain inconclusive since true service conditions cannot be simulated by accelerated tests.

Observations have been made through artificial tests, but the many difficulties experienced have eliminated them as a true criterion of service.

Salt Spray Test Not Conclusive

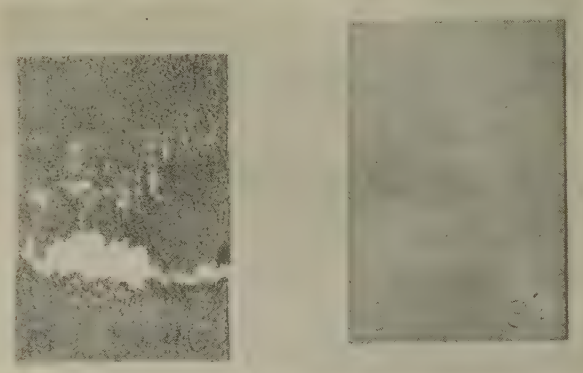
An interesting test has been worked out in which iron and steel sheets are placed in a box and subjected to an accelerated salt spray. Exact records are kept as to the strength and amount of spray, the temperature, and the time during which the test is conducted.

---

*Professor of metallurgy Case School of Applied Science, and metallurgical engineer, Cleveland.

These tests merely show that the particular samples used will withstand a given spray for a certain length of time—that's all. If a sheet deteriorates in this box, there is no assurance that it will do so in the same way or at the same rate if used as roofing on sea coast buildings where vastly different conditions prevail.

The ocean spray might be much more severe, or it might be only intermittent. The temperature would also vary. The spray test, therefore, cannot be looked upon as conclusive.



These Samples Were Exposed for Six Hours in 5 Per Cent Nitric Acid. At the left is a special iron to which other metals have been added; at the right is stainless steel

The Acid Test Often Misleads

Another instance in which the time element is an important factor is in the acid test. Two of the illustrations show the confusing results obtained by putting a special iron, to which other metals have been added and stainless steel, in acid solutions.

In the first acid tests, the two samples were submerged for 6 hr. in 5 per cent nitric acid. The special iron was practically destroyed, but the stainless steel suffered little deterioration. In the second test, samples of the same materials were immersed for two weeks in 10 per cent hydrochloric acid. The special iron remained in good condition, while the stainless steel was almost eaten away.

In other words, although other conditions remain the same, the results are reversed if the acid is changed. The test is mentioned, not to reflect discredit on the special iron or upon stainless steel, but to show that acid tests can be used to prove superior or inferior "corrosion" resistance of the same material, and are, therefore, unreliable.

Variables Which Discredit Tests

Such tests, of course, bear no relation to the actual corrosion of metals in service. Some of the variables which discredit these tests are:

1—**Temperature.** A varying temperature may change the results greatly.

2—**Time.** Shortening or extending the period during which the test is conducted changes the result.

3—**Strength of solution.** For each acid there is usually a particular strength of solution which has the most deleterious effect upon any particular metal. Hence comparison of different metals by means of an arbitrarily chosen acid strength is manifestly impossible.

4—**Agitation.** Movement of the sample in the solution brings more of the acid in contact with the metal and therefore increases the reaction.

5—**Aeration.** The presence of air in the solution often greatly increases activity. Naturally, it is practically impossible to have different locations in an "acid test" solution contain equal amounts of air.

6—**Kind of solution.** Different acids react differently, as the illustrations show. An acid test shows only that a certain piece of metal lasts a longer or shorter time in the particular acid and particular strength of acid used.

7—**Foreign or dust particles.** Such factors may have a retarding or accelerating effect upon the reaction.

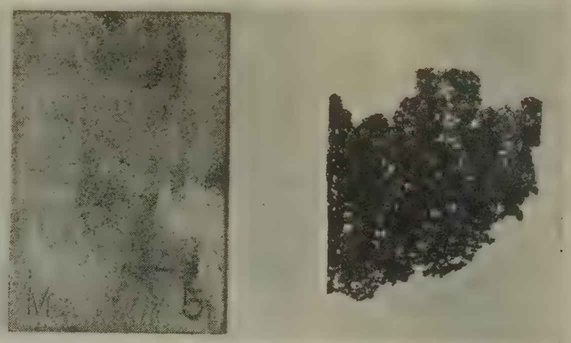
8—**Position of specimen.** A great deal depends upon whether the specimen is completely immersed, or only partly so. It is also important whether it is in a vertical or a horizontal position. Such minute details affect the rate of the acid corrosion.

9—**Surface area.** It is very important to compute the ratio between the surface area of the sample and the volume of the solution. A thick piece of metal with a comparatively small surface area will not lose, in any given time, as great a percentage of its weight in a corrosive solution as will a thinner piece of metal of the same weight with a comparatively larger surface. Therefore, the weight of all samples would have to be of exactly the same proportional ratio to the volume.

10—**Time of changing solution.** The strength of a solution is dissipated after a certain length of time. It may be changed and brought up to full strength. When this is done, the time of changing introduces a variable difficult to evaluate in comparing results of acid effect on different materials, since the acid is not consumed at equal rates with different metals.

11—**Surface of the metal.** In general, a polished surface is less subject to attack by a corroding medium than is a rough one.

And so on, almost without end, can uncontrollable factors in making comparisons by acid tests lead to erroneous deductions. Surface oxide, different annealing treatments, different processings in manufacture, surface density, and many more variables preclude the possibility of securing representative samples of different metals.



These Samples Were Exposed for Two Weeks in 10 Per Cent Hydrochloric Acid. Special iron at the left; stainless steel at the right. Change the acid and the results are reversed. Almost any desired performance can be demonstrated by accelerated tests

From a review of all these variables, it is apparent that an acid corrosion test is quite unreliable as a measure of atmospheric, water or soil corrosion.

Views of Testing Engineers

It is interesting and enlightening to note the stand taken by scientific bodies on the question of acid tests. The opinion of the American Society for Testing Maerials regarding such tests was given as early as the 1911 report, Vol. 11, page 100:

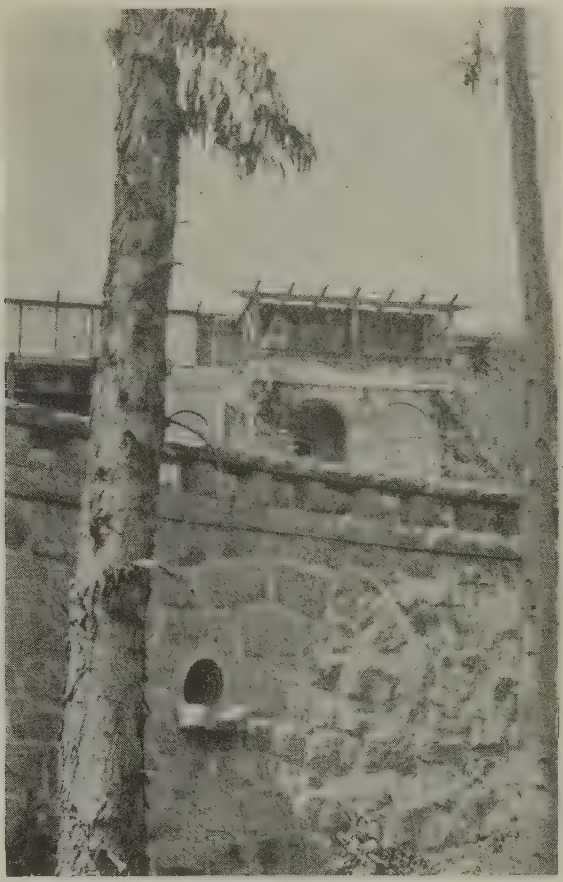
> The results of such tests are unreliable as truly measuring the tendency to natural corrosion. For this reason, the committee desires at this time to again disclaim any recommendation or indorsement of the acid test as a measure of natural corrosion.

In like manner, the British Institution of Civil Engineers faced the same question and went on record in 1920 by saying:

> Numerous attempts have been made to determine the relative corrodibility of various samples of metals by elaborate laboratory methods, known as "acceleration tests."
>
> A method held in high esteem by manufacturers within recent years consisted in exposing the metal to the action of dilute sulphuric acid for set periods of time, and noting the losses in weight due to solution. It was found, however, that results obtained in this way give no indication whatever of the relative resistance offered by metals to corrosion in actual practice.

Actual Service Proves the Durability of this Iron Culvert Installed on the Riviera at Santa Barbara, Cal. The picture below was taken in 1913 when the culvert was installed

The other view, taken in 1923, shows a eucalyptus tree that grew during the period of the culvert's service



The inaccuracies of such methods have been recognized by the United States Bureau of Standards, which has also gone on record regarding the value of accelerated tests. In Bureau of Standards Circular Letter No. 192 on corrosion tests, appears the following:

> Proof of superiority in service requires that the different materials shall have been used under the same conditions. . . .
>
> A common error in the consideration of corrosion tests is to assume that satisfactory or unsatisfactory performance under one set of conditions means that performance will be similar under another set of conditions. The relative standing of different materials is very often altered as the conditions are altered. . . .

A similar statement appeared in the *Chemical Age* (London) on Jan. 7, 1928:

> As for the "accelerated" tests, many firms of the highest repute have long since discarded them. It is pretty generally felt that they may mean anything or nothing and have hardly any practical value, except possibly for testing the "resistance to corrosion" of specific alloys required to be subjected to the action of specific acids. This is to make corrosion synonymous with solution, which may suit some chemists, but will not suit all. If we know anything at all it is that failure, when it comes, or begins, often occurs very suddenly, and that "simulated" time tests may often give the most misleading results.

Other Tests Questioned

In addition to acid tests, other forms of artificial tests have been used in an effort to simulate service conditions and still not wait the length of time that service usually necessitates before conclusions can be drawn. These tests do not escape the dangers which affect those mentioned above. They remain isolated examples and, due to unknown or unappreciated variables, can give and have given results which run entirely counter to the testimony of years of experience gained before and after such tests were run. In those cases, it would seem proper to question the value of the test rather than the material tested.

Among the most comprehensive tests of this nature were those run by the American Society for Testing Materials. Every effort was made to keep these on an absolutely scientific basis, but some of the results obtained showed a surprising variation with the facts established from many years of service life. The *Bulletin* of the society for November, 1925, makes the following comment that is of interest in connection with the foregoing:

> Paralleling the tests of uncoated steel sheets exposed to the weather, which have been in progress for several years, and on the same lots of samples, the committee has been observing the corrosion effect in water immersion tests at three locations representing mine, fresh and brackish water conditions. More recently, similar tests have been installed in two locations where true sea water conditions prevail. The results do not follow the path of the atmospheric tests; and they indicate the error of attempting to draw sweeping conclusions from a single set of conditions, and of supposing that the relative merit of materials for resisting one kind of corrosion will hold for service of a different character.

Scientists as well as practical engineers agree that the only true and sure method of forecasting the durability of materials is through the observation of service rendered by actual installations. If we turn to the field of service, we find what different metals will do.

"In studying corrosion as an economic problem, the experience of actual users of equipment is a phase of study occasionally overlooked, whereas in reality commercial usage is the final criterion as to the real worth of any materials," says Dr. D. J. Demorest, professor of metallurgy at Ohio State University, in the June, 1926, issue of *Chemical and Metallurgical Engineering.*

That's the question—what will it do? If an iron culvert, for example, lasts 40 years in its first location, it stands to reason that another iron culvert, similarly manufactured and installed under the same conditions, will last the same length of time.

Investigations have been made in which various types of culverts were compared as to service life, installation conditions, and so on. On the basis of such facts, one can estimate quite accurately how long culverts will last.

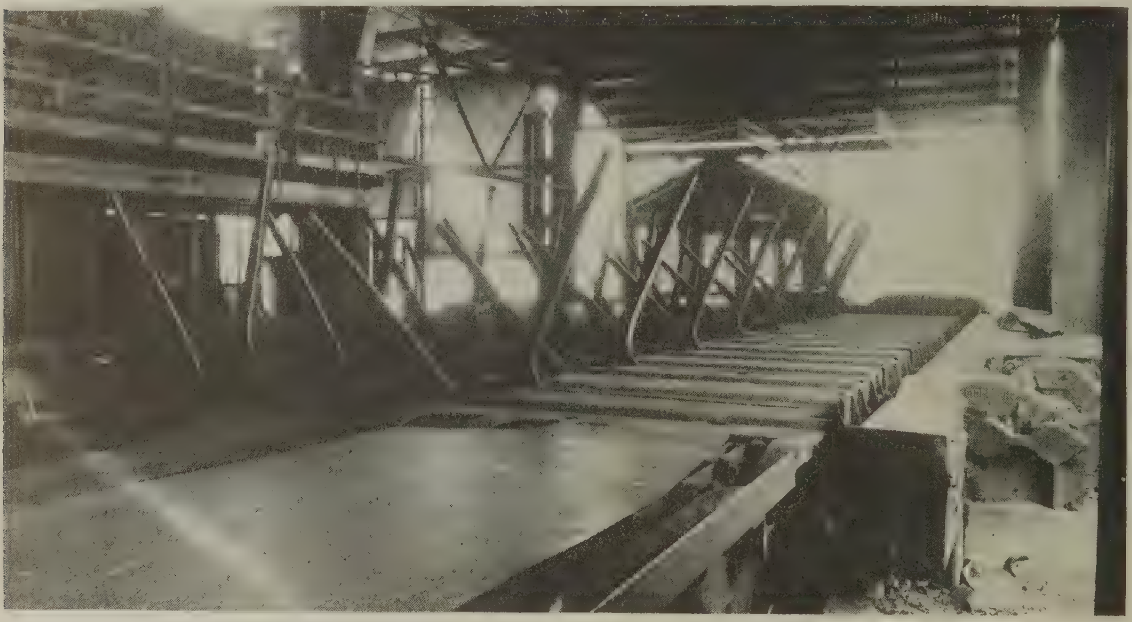
Service the Only Authoritative Guide

Metallurgists everywhere have come to the conclusion that service is the only conclusive and authoritative guide. They know that an accelerated laboratory test is theoretical, and further that, when a certain metal lasts for 15 or 20 years on the roof of a building where it is lashed by corrosive salt spray, this fact speaks volumes for its durability and carries complete justification as a sound basis of purchase.

Double Plate Turn-Over for Inspecting

Device for Turning Plate Twice, Permitting Examination of Both Sides Before Shearing

STEEL plates, after their final pass through the rolls, undergo a series of rigid inspections. A plant lacking proper equipment for such inspection usually suffers a heavy loss of time in the manipulation and handling of its product. This obstacle to production has been eliminated in the Lukens Steel Co., Coatesville, Pa., by a mechanical device for turning over steel plates from one side to another to facilitate inspection. Known as a "double plate turn-over," this equipment was designed and built by Birdsboro Steel Foundry & Machine Co., Birdsboro, Pa.



INSPECTION of Both Sides of the Plate Is Facilitated by the Use of This Double Turn-Over Device. After the second turn the plate travels back to the shears for trimming to shipping size

After leaving the rolling mill, steel plates are fed through an annealing furnace, where they are subjected to a heat treatment which also gives them their final coloring. From the furnace the plates pass through a leveler, a machine employed to straighten the plates, removing warps and flutes. Upon leaving the leveler, a chain conveyor takes the plates forward to the first inspection table. The rollers of this table are mounted on Hyatt roller bearings. On this table the plates receive their first examination for blemishes, excess scale, etc. Inspection of the plates is made here on one side only, and it is now that the turn-over device performs.

Between rollers on the inspection tables, every 5 ft., are movable arms of approximately 5-ft. length, resting beneath the roller surface in a recess cored in the table aprons. These arms are pivoted at one end on their own bearings, and operated through a corresponding arm, lying in opposite direction, with segment gears cast on to them and meshed with one another. The arms, whose position rests opposite those of the first inspection table, are operated by a main shaft on which they are keyed. This shaft is oscillated by a crank movement at one end through a gear reduction unit and a 20-hp. motor, compound wound, of 600 r.p.m.

As the operator works his controls, the shaft moves slightly, drawing the opponent arms together, with a scissor-like movement and in an almost vertical position, with a slight lean toward the second inspection table. The operator now returns the arms to their former position and the plate has been turned bottom side up, and rests on a platform of supported rails between the two tables.

A second inspection now takes place on the reversed side of the plate, after which it is ready for its final turn-over to the second roller table, which is identical with that of the first, with the exception of the direction of travel. A second tier of arms, operated like the first, by a second driving unit of the same power and reduction, grasps the plate and gently turns it over and on to the second table.

The turn-over operation is now complete and the plate moves backward over the rotary shear approach table to the shear, where its edges are trimmed. A final shearing, that of cutting the plate to a given length, completes the making of this steel product.

This double plate turn-over is capable of handling plates with maximum dimensions of 84 in. wide, ¼ in. thick and 37 ft. long. The minimum dimensions of plates handled are 30 in. wide, 1/16 in. thick and 8 ft. long. The turn-over has a capacity of 80 light plates an hour.

Iron Industry Facing Great Changes

First Period of Sharply Arrested Growth in 150 Years Puts a Premium on Operating Economies and Marked Departures in Processes—Ore Reserves Under No Strain

BY EDWIN C. ECKEL*

IN writing on the subject of world ore reserves in the early summer of 1914, it was possible to summarize† both the status and the prospects of our pre-war world as regards the iron industry, and to do so without laying excessive stress upon political or governmental influences on the future as it then promised. Writing in 1920, in a later attempt at a forecast,‡ it was necessary to give possible government actions first rank as future factors in iron development. Today, with the war 10 years behind us, the effects of such action on the iron industry can perhaps be estimated more closely. In the present brief study an attempt at such an estimate will be made.

Chief Factors in Trend of World Output

Looking back over the industrial trend of the past years, we can see now very clearly indeed that the broad effects have been about as follows:

(1) The demand for war supplies, an emergency demand practically without price limits, gave an unnatural stimulus to production in the few countries where raw materials and labor were still abundant, and whose output could be shipped into military zones.

(2) This forced demand in certain countries served to cover up the fact that, though these countries showed increased output in some lines, world demand and supply, taken as a total, had fallen off in almost every line of industry. For the first time in 150 years we are passing through decades in which the world iron industry, which for that long period had consistently expanded some 50 per cent each 10 years, is now merely holding its position.

(3) Boundary changes resulting from the war have markedly changed the relative importance of our leading European competitors, seriously crippling the former leader, but creating a new industrial center.

(4) Every nation in the world, urged both by financial necessities and by the outstanding lessons of the war, has embarked definitely upon a policy of protection—or of still higher protection, in case it was already a high tariff country. Wherever we look we find the definite idea, whether publicly expressed or not, that each country must for its own safety make everything possible in the way of necessary manufactured products.

(5) Meantime, world commodity prices are falling slowly, and are likely to fall irregularly for 20 years or so to come. Wages, which theoretically should fall concurrently, are not likely to do so, at least immediately, as the labor groups of all countries strengthened their position greatly during the war. Yet unless prices and wages do move together, the result will be a choice between extensive labor troubles and a very sharply reduced rate of profit.

Production Likely to Become More Decentralized

Each of these factors has been noted separately and independently. But it will be seen that all of them are working in the same direction, acting as brakes on increased output of heavy commodities. It seems difficult, if not impossible, to escape from accepting two conclusions. The first is that we are not likely to resume our normal or pre-war rate of world increase for a good many years to come. The second is that the world output of heavy commodities is likely to show increasing *decentralization*, rather than, as before the war, increasing *concentration* in certain countries and centers.

As against these factors we may, however, set another of far different type, to whose action in the near future we may look forward with entire confidence, even though we must admit that we cannot foretell exactly when that factor will intervene and exactly which industry will be favored first. This favorable factor, on which all progress ultimately depends, is technical improvement and invention. During a period of great prosperity there is no inducement to work out new processes, or to adopt them if they are invented. But during a long period of narrow profits, and especially with a relatively high wage level, there is every reason to search for improved methods and to adopt them promptly when they are found. So we may look forward with confidence to the fact that just as the hot blast and the Bessemer processes came out of the long post-Napoleonic depression, and the basic Bessemer and open-hearth processes out of the post-Civil War period, so some new epoch-making discovery will develop within the next two decades. It may be the success of our long-awaited direct process; it may be something entirely new and unforeseen in the way of new steels or alloys. We cannot tell what it will be, but we may be absolutely sure that the stage is being set for its appearance.

New developments of the sort suggested are far

THE iron industry of the world has temporarily stopped growing, not even keeping pace with increases in population.

World production of pig iron in 1920 *was* 8 *per cent lower than in* 1910. *This was the first decade to show a decrease since* 1780.

In 1913 *world output of pig iron reached a high point of* 78 *million tons; it took* 14 *years to regain that level.*

The need for economies in production and better marketing is more pressing than in the past, the incentive for new processes is greater and new epoch-making discoveries may be expected within the next two decades.

---

*Mining geologist, 1503 Decatur Street, Washington, D. C.

†"Iron Ores," New York, 1914.

‡"Coal, Iron and War," New York, 1920.

more likely to arise in Europe than in America, not because of any superiority in the European mind, but because the industrial strain is greater there than here, and because the industrial and financial units are smaller. The first condition is an incentive to search for new processes; the second condition makes it easier to get them adopted.

Europe was a continent with a vast amount of accumulated wealth, but with a very slow rate of increase of that wealth. The war swept away much of the accumulation. Europe is for the moment very poor, and barring another war may take a century to regain her pre-war position. During a very long period, in any case, the entire continent will have urgent reasons to work hard, to save, and to devise new methods for cutting costs or extending markets.

Within Europe itself the war and the post-war developments have changed the iron and iron ore situation very strikingly. The shift of greatest present and future importance is of course that which gave the ores of German Lorraine to France; and its exact effect on the European ore reserve status is summarized very simply in the few lines below:

Iron Ore Reserves of France, Germany and All Europe, 1913-1928

	Pre-War, 1913		Post-War, 1928	
	Millions of Tons	Per Cent	Millions of Tons	Per Cent
All Europe ...	12,000	100	12,000	100
France	3,300	27	6,000	50
Germany	3,900	33	1,200	10

Along with this tremendous gain in tonnage due to a boundary shift, France has gained another almost equally large increment through mere recognition of a geologic fact which seems obvious enough to us but which French geologists were very slow to realize—the fact that the iron ores of Brittany and Normandy are not mere surface patches but are very extensive sedimentary beds, exactly like our own Birmingham and Wabana deposits. So now, in place of a hundred million tons of reserve credited to western France in 1913, current estimates would probably be put around 1500 million tons or more for that neglected portion of the country. The first flat statement of the facts of the origin of these deposits was, I think, in my own book of 1914. The very obvious deduction had not permeated the intelligence of the French or British steel companies when I was there a year ago; and it may easily be that some of our own people will be first to take advantage of the situation. At present it is not much different from what the Birmingham field must have been up to 1905, when everyone was busily working the outcrop and overlooking the fact that if the ores were sedimentary they could be found under cover as well.

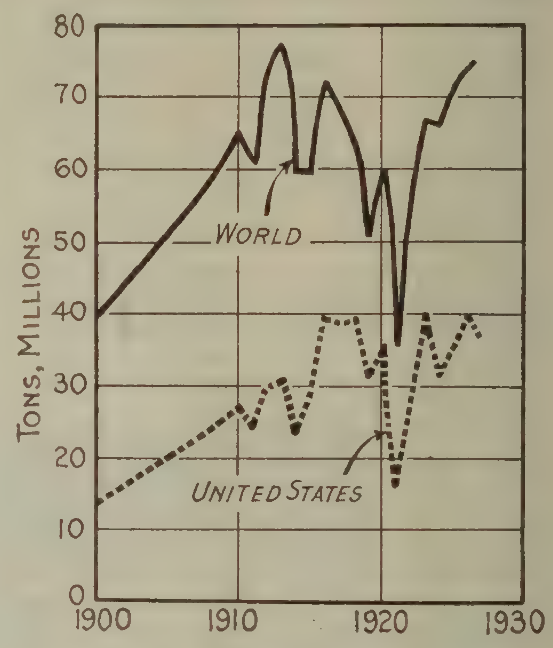
Franco-Belgian Industry Looms as Serious Competitor

The war, therefore, plus a slow recognition of geologic fact, has made possible a very serious Franco-Belgian industrial unit, to replace or compete with our old German adversary. It is true that efficiency has been decreased in the process, since the main coal fields were still left on the German side of the frontier. Under normal conditions we might feel that ultimately the ore would go to the coal fields for iron making. But, under the conditions which actually exist, this otherwise normal process may be reversed. Under the pressure of reparation payments there is far more necessity for Germany to sell coal or coke than for France to sell ore. And, if we look upon European furnaces and mills as chiefly export points, it is logical that the assembling point for ore and coke should be on or near the Atlantic or the Channel, rather than in the interior.

The other changes in Europe do not seriously affect our problem. Great Britain will still have to buy her main ore supply from Spain, Algeria, France or Scandinavia. Austria has disappeared as a unit, Czechoslovakia being her chief legatee so far as the iron industry is concerned. Italy has become a first-class political danger, but is still negligible in coal and iron. Russia is slowly coming back into industry, but can never become a serious exporter of steel. So the chief center for use of iron ores will still be west Germany, Belgium and Luxemburg, and northern and northwestern France. And here there are ample reserves of cheaply mined ores; the limiting factor will be coke and not ore.

Pressure on Lake Superior Ores Likely to Be Checked

Before saying anything about our own country and closely related areas, the other continents may be dismissed with brief mention. South America and Africa are still, and always will be, producers of raw material and consumers of manufactured products; so all the development of those continents makes for the advantage of European and North American mills. Australia, under a Socialist labor control, will be able to produce her chief manufactured necessities but will be unable to export heavily. In Asia, Indian iron output is growing at a healthy rate, but possible Chinese development has been dampened for 16 years by recurrent revolution and civil war. The very satisfactory iron ore development in Manchuria is Japanese in control; and the output will probably be limited to supplying Japanese necessities.



American and World Pig Iron Output, 1900-1927

In the United States, despite the fact that for 15 years it has been the one continuously prosperous portion of the world, ore reserves apparently have not fallen off proportionately to the tonnage mined. In part this stability is due to drilling which has put more ore into the estimates; in part, to increased concentration of ores, which is making use of grades earlier disregarded. This last factor has become important enough to check the slow falling off in average grade of Lake ore shipments, a gradual decrease which had been in progress for many years.

Within the United States the two matters which are likely to have most future bearing on iron ore use and reserves are the recent growth of Southern output and the decline in importance of the merchant furnace. The Southern growth tends to extend the average life of our ore reserves, because it increases the amounts taken from the vast red ore deposits, whose life has never been estimated in terms of decades or even centuries. If the process continues it will finally decrease also the strain on the Lake reserves, not necessarily by actually decreasing the annual draft on the Lake supplies, but by discouraging any large future increases in that draft. The second feature—the decline of merchant furnaces—bears to some extent also against the smaller merchant mines; and that effect is very directly an economic gain. The larger units can in general operate, through alternations of good and bad times, with less wastage of ore reserves.

Wabana and Mayari Ores Possible Sources of Alumina Cement

The two vast ore fields near our borders on the south and north, in Cuba and in Newfoundland, have not lived up to the expectations of pre-war days so far as growth in annual output is concerned; neither of them is as important today, relatively to other shipping fields, as it was in 1912-1913. In the case of the Wabana field the prostration of the Canadian and British steel industries has operated to restrict growth, the bulk of the 1928 shipments from this field being destined for German furnaces—where they will replace Breton and similar European ores. In the case of Mayari, the repressing influence seems to be that the ore itself does not fit in well with the technical policy of the chief owning company. But it may not be out of place to call the reader's attention to the fact that these high-alumina ores, difficult perhaps when looked on merely as sources of iron, assume very great importance when looked on as sources of alumina cement with iron as a by-product. Since the growth of these new cements is apparently just beginning, we may look to see Cuban north-coast ores brought back to the center of the stage in a new and very profitable way. It is one thing to use 2 tons of a difficult ore merely to make $15 to $20 worth of pig iron; it is obviously an entirely different matter if, while making that iron, we also make $40 worth of cement. And those are rather under-statements of the facts as prices run today.

Taking the North American continent as a whole, we may say therefore that the pre-war pressure on Lake ore reserves seems likely to be lessened as steel interest turns southward; but that the annual tonnage from the Mayari and Wabana fields has not grown as expected, so that these two great deposits are still doing little toward conservation of our Lake ore resources.

The Projected and Actual Trends of World Output

Meantime our chief concern is with regard to the probable future rate of iron and iron ore production, and here the past is of service merely as affording a basis for estimating the unknown years to come. In attempting this I will refer to some of my own earlier work on that subject, and I will take this occasion to admit frankly that, though my prophetic ability seems to shine by comparison with many other published forecasts, my estimates were still more optimistic than were justified by subsequent events. The full extent of the change that has overtaken the iron industry of the world does not seem, in many quarters, to be realized even now. It may be of service to put it into both statistical and graphic form, as I am doing here.

During the whole period of our modern industrial civilization based on steam and steel, say from 1780 down to recent days, the world has become so accustomed to a steady and rather high rate of progress that any slackening in the rate involves serious financial and social dislocations; and an absolute cessation of increase would suggest even more serious consequences. Yet some such cessation is what we have been experiencing for over a decade past. *It is the first such period of complete failure to progress that the world has seen in* 150 *years.* Yet in the face of it the stock exchanges register mad enthusiasm, the labor unions ask for still higher wages, and the politicians point with pride to this period of prosperity.

World Market Has Stopped Growing

The facts as to our own industry are easily stated. In the little table which follows I have noted the percentage of increase for each decade since 1800, shown by the iron production of the world. The table, except for the last lines, is that which I worked out and published in my 1920 book, when figures for 1920 were still unobtainable, but when I hazarded the prediction that we were likely to find the lowest rate of increase of any decade since 1800 I understated my case.

Increase of World Iron Output

Decade	Per Cent	Decade	Per Cent
1800-1810	38	1870-1880	52
1810-1820	33	1880-1890	49
1820-1830	83	1890-1900	46
1830-1840	71	1900-1910	62
1840-1850	57	1910-1920	8*
1850-1860	72	1920-1927	30
1860-1870	77		

---

*Decrease.

From 1800 to 1910 the rate of increase of our industry was on the average 58 per cent in each 10 years, and everything connected with the industry was planned on the idea that some such rate of increase would continue. If that rate had held the world pig iron output of 1920 would have been around 100 million tons in 1920, and 140 million tons in 1927. It is somewhat over half that now, and the result is what one amiable commentator has called "profitless prosperity."

The high point in the industry was reached in 1913, with an output of some 78 million tons; it has taken us 14 years to regain that level. And, whether we look at the facts in tables or in diagrams, whether we consider world outputs or our own national production, we come back always to the same conclusions: That we are now passing through a stagnant period entirely unlike anything known to our industrial world in the past 150 years; that the world iron industry has temporarily stopped growing, not even keeping pace with ordinary population increase; and that we have no really sound basis for estimating when a new period of renewed growth is likely to commence. We have been looking on at a world-wide phenomenon, and giving it merely local explanations. In America we talk of foreign competition, in France of ruined mines, in Germany of lost ore-fields and reparations, in England of dear coke. Each of these explanations may be sound as for one country, but the final truth is that for almost two decades the total world market has stopped growing.

As for the re-commencement of growth, that is another matter. All we know is that it will come about from factors of world-wide importance, such as the intensive development and modernization of one of the backward continents—probably Africa, possibly South America. It could be delayed some years by world-wide depression, arising from poor crop seasons or other broad causes. It could be put off indefinitely by another great war.

In the meantime, pending resumption of growth at something like the old rate, there will be closer competition between and within the nations, serious incentives to rigid operating economies, and overwhelming reasons for rapid adoption of any improvements in basal methods of manufacture. Slackness and stupidity may survive in boom times, but they disappear, via the bankruptcy court, during periods of cramped world markets. The strain on ore reserves will not be so noticeable, but the necessity for economies in developing, mining and marketing the ores will be greater than in the past.

Larger Production at Lower Cost

Rearrangement of Enameling Department Reduces Floor Space Required, Handling Expense and Time of Process

BY E. D. SMITH*

FOURTEEN processes were required formerly in putting the enameled finish on cabinets and parts for cash registers. This made a great deal of handling, with the possibility of much potential damage to materials in process. The complexity of the problem may be realized from the fact that upward of 15,000 parts a day are put through, ranging in size from that of a 25c. piece to a full-size cabinet cover. The 14 processes were as follows:

Wash parts in suitable solution and dry.
Spray with first ground coat color.
Bake 90 min. at 230 deg. Fahr.
Putty, where necessary, to get perfectly smooth surface.
Spray with second ground coat color.
Bake 90 min. at 230 deg. Fahr.
Sand for smoothness.
Grain to produce natural wood appearance.
Bake 90 min. at 230 deg. Fahr.
Spray with first coat of lacquer.
Bake 45 min. at 110 deg. Fahr.
Spray with second coat of lacquer.
Bake 45 min. at 110 deg. Fahr.
Rub.

BASEMENT

Layout of the Fourth Floor, Where the Enamel Finish Is Applied, and of Its Conveyor Connection to the Basement for Movement, Upward, of Raw Cabinet Stock and, Downward, of Finished Parts

With that system in use the enameling department occupied an entire floor, 60 x 540 ft., and 2400 sq. ft. on another floor, an aggregate of 34,800 sq. ft. In handling a daily output of 600 cabinets 625 trucks were required, fitted with 8400 trays. These trucks occupied almost 4700 sq. ft. of floor space, or 15 per cent of the total area.

Raw stock parts, taken from the stock room at one end of the basement, were placed on trucks and carried by elevator to the enameling floor. After completion of enameling they were returned in the same manner to the finished stock room at the opposite end of the same basement. When maximum production was under way the elevators frequently were so congested with this cabinet traffic as to interfere wtih production in other departments of the building. The enameling department itself was badly congested at times, making it difficult to obtain the required production during periods of high output. A total of 58 handlings of parts was needed, at high labor cost.

How to Get Better Results

In studying means of alleviating this condition, the effort was made to obtain greater production without increasing the floor space; to reduce the cost for each unit of finished product; to reduce the inventory of material in process; to produce these results with a smaller amount of supervision, under conditions of a group bonus system for the whole department.

It soon became evident that a continuous-flow method of handling would effect a great reduction of the time each cabinet part was in the department. This would also correspondingly decrease the number of cabinets in process at any one time.

As there are 14 parts to each cabinet, a schedule of 800 cabinets a day means that 11,200 parts must pass a given point in 9 hr. A conveyor speed was therefore desirable which would be slow enough to permit the spraying operation, without removing the part from the chain. The speed at the same time should be such that parts might remain in ovens of reasonable dimensions for as long as 90 min.

*Maintenance engineer National Cash Register Co., Dayton, Ohio. Abstract of a paper delivered at Philadelphia, April 24, before the national materials handling meeting of the American Society of Mechanical Engineers. The paper was illustrated by both lantern slides and a moving picture.

Sanding Room Showing, Left, Cabinet Parts Coming Out of Oven; Right, Parts Leaving for Next Operation

Much time and attention were given to the design of suitable hangers for the work, such that it could be grouped properly and conserve space on the moving chain. Some 75 or 80 different hangers were made and tested, but only nine were retained for permanent use. In studying this problem, a short length of chain was set up, in conjunction with a temporary spray booth, and many arrangements and designs were tried out before the present system was definitely adopted.

One of the first changes from the old procedure was the installation of a conveyor type of burn-off oven to take the place of the washing machine. This oven is installed in the raw stock room in the basement, whereas the washing machine was on the floor above the enameling department. The cabinet parts, taken directly from stock, are inspected and then put through the burn-off oven. This does away with placing them on trucks, hoisting them to the fifth floor for washing, and then lowering them to the fourth floor for enameling. It also saves the 2400 sq. ft. of space occupied by the former washing room.

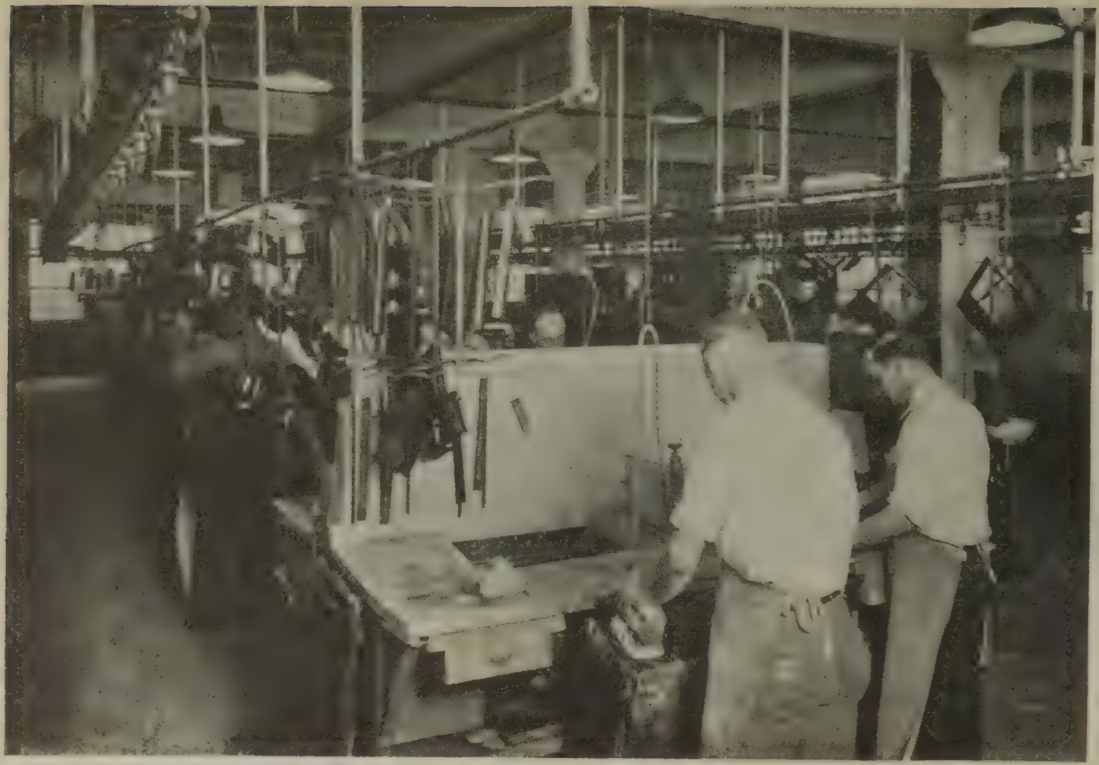
Chain Conveyor Replaces Elevators

After passing through the oven the parts are wiped off and hung on suitable hangers on a conveyor chain installed in a shaft back of the elevators. From this point they are carried to the fourth floor in a series of turns and risers, the angle of rise being 20 deg. Here they pass immediately through a spray booth, where the first ground coat color is applied without removing them from the chain. Still remaining on the chain, they are baked in the upper deck of an oven for 90 min. at a temperature of 230 deg. Fahr. This oven is 100 ft. long and about 20 ft. wide. Its size was determined by consideration of the chain speed as set for other operations, and the length of time the parts had to remain at the elevated temperature.

Leaving the oven, the parts are removed from the chain and receive on work benches whatever putty treatment may be necessary. They are then hung on another chain and, while in motion, are sprayed in a booth with the second ground coat color. They then pass through the lower deck of the same oven, without removal from the chain, and are baked for another 90 min. Again they are removed from the chain, for sanding on work benches, being immediately after hung on a third chain, which transports them to other benches where they are removed for graining.

After this operation they are hung on a fourth chain, passing through a second oven, where again they are baked at 230 deg. for 90 min. Leaving this oven, they are sprayed with the first lacquer coat while moving through a booth, and are then baked at 120 deg. for 45 min. in a third oven. Continuing their travel on the same chain, a second lacquer coat is ap-

Graining Room, Showing Conveyor at Left Delivering Cabinet Parts. At right, parts are being removed



RUBBING Section, Showing Chains Running Down Inside of Room Delivering Parts. Those at outside of room (reader's left) are removing parts and taking them down the spiral conveyor to basement

plied in another booth, after which they pass back into another section of the oven they have just left and receive another treatment at 120 deg. for 45 min.

Parts then are removed from the chain for rubbing. After this they are hung on a fifth chain, which carries them back to the other end of the basement by a descent in curves and inclines similar to that by which they came up from the raw stock department. Here they are inspected while still on the chain and then are packed in trays for taking to the different assembly rooms.

Conditions of Operation

Altogether there are five chain units, varying in length from 586 ft. to nearly 2200 ft., with an aggregate of about 6500 ft. The regular rate of travel of the chain, in operation, is 7½ ft. a minute. There are nine different patterns of hangers, each suspended from the chain on a swiveled hook. This permits the operator to turn the part around at will, which is particularly essential in the spraying booths, where all sides must be readily accessible for lacquer.

Between the five runs of chain are four stations where the parts are removed from the chains. As detailed above, these are the stations for puttying, sanding, graining and rubbing. At each of these locations racks are suspended from the ceiling to permit loaded hangers to be placed alongside the operators. This provides also a small temporary storage space at each side of the operator, so that he need never be without material. It also facilitates keeping together certain parts, when they must be grouped.

To eliminate fire hazard in the spray rooms, and at the same time to keep the atmosphere in those rooms in the best possible condition for the operators, each spray room is maintained under a slight static pressure. Filtered air is delivered into the room from a blower. To avoid drafts, the air leaves the end of the pipe through a large canvas bag. Fumes are removed from the spray booth by the exhaust system at the top of each unit. All paint or lacquer is removed from the air through a filter screen of excelsior before the air is discharged outdoors.

Each operator in each spray room has three spray

ONE of the Four Spray Booths, Where Cabinets Receive Either First and Second Ground Colors, or First and Second Lacquer Coats. For the first coat two men are employed, taking alternate pieces as the conveyor carries them past guns carrying that many different colors. Two operators are required to apply the first ground coat color. In regular procedure the first operator takes every alternate piece as it comes to him along the chain. The second man takes the pieces not taken by the first man. This provides even distribution of the work. One man can take care of the second ground coat color, and one man is provided for each of the lacquer coats. Thus five operators, altogether, apply four coats of material to 800 cabinets a day.

Heating of the baking ovens mentioned above is by air blast over steam coils. The burn-off oven, which carries a temperature of 1000 deg. Fahr., and in which the parts remain for 4 min., is gas fired, with burners both above and below the parts carried through.

Results Obtained Are Excellent

By the new process, the number of handlings has been reduced from 58 to 20. The number of trucks required has been reduced from 625 to 150. The length of time a part is in the enameling department has been cut from seven and a half days to one and a half days. The inventory of finished stock and stock in process has declined by 80 per cent. A greater uniformity in finish is obtainable by this method, partly because of the regularity and celerity of the movements.

After this system had been put into full production, it was found that the output had been increased from 600 complete cabinets a day to 800. The floor space required had meantime been reduced by 10,000 sq. ft., or nearly 30 per cent. It is estimated that the annual payroll for the enameling department, on the basis of an average of 700 units a day, has been reduced by $59,000.

Better working conditions have been obtained, partly by the air control systems mentioned and partly due to elimination of congestion at various points. Uniformity of baking, together with decreased handling, are credited with an improvement in the quality of the product. Elevator service, badly needed by other departments, has been almost wholly released so far as the enameling department is concerned.

CABINET Parts Coming Through Burn-off Oven in Basement and Being Hung on Conveyor, Which Delivers to the Enameling Department, Fourth Floor. This is the finish of the first operation the parts receive after coming from raw cabinet storage

Salvage Conference Plans Clearing House for Scrap Disposal

At a conference on salvage disposal held June 6 and 7 at the plant of E. I. du Pont de Nemours & Co., Wilmington, Del., and attended by about 50 representatives of industrial and public utility corporations, plans were made for the operation of a clearing house, through which members may dispose of surplus supplies and surplus or obsolete equipment.

The meeting was organized by the National Association of Waste Material Dealers, Inc., New York, and those in attendance were guests of the du Pont company. Among those who delivered addresses at the conference were Henry Lissberger, president Federated Metals Corporation, who is president of the National Association of Waste Material Dealers; Harry R. De Groat, A. M. Wood & Co., Philadelphia; G. H. Bangs, Western Electric Co.; Thomas A. Wright, Lucius Pitkin, Inc.; R. W. Phillips, E. I. du Pont de Nemours & Co.; C. H. Steel, Eastman Kodak Co.; Louis Birkenstein, S. Birkenstein & Sons, Inc.; John Y. Bayliss, chairman of Purchases and Stores division of the Engineering Association of American Electric Railway Association.

The new benzol plant of the Lake Superior Corporation at Sault Ste. Marie, Ont., will be operating by Nov. 1, according to J. D. Jones, general manager Algoma Steel Corporation. The contract, which has been awarded to the Wilputte Coke Oven Corporation, New York, calls for an expenditure of $250,000.

The plant of the Ashland Steel Co., Ashland, Ky., was sold at public auction June 7 to John Russell, Ashland, for $176,000. The sale was conducted by O. D. Hayes and T. A. Field, who had been appointed by the Federal Court as trustees of the property.

Incentives Aid Good Management

Bonuses for Quality, Quantity, Waste Elimination and Time Saved Promote Operating Efficiency—Proper Training of Foremen Also a Requisite of Good Supervision

THE relation of monetary incentives for both manual workers and supervisors of labor to the training of these classes of employees was clearly brought out at a meeting of the production executives' division of the American Management Association, held at the Hotel Statler, Buffalo, June 6 to 9. In a number of sessions given over to a consideration of such specific subjects as "Group versus Individual Incentives," "Extra Incentives for Supervisors and Indirect Labor," "The Training of Foremen" and "The Training of Manual Workers," it was made evident that incentive plans, particularly when applied to group labor, invariably lead to the better training in the ways of cooperation and increased and more economical production.

In the consideration of training methods, both as applied to foremen and manual workers, spirited discussion arose as to the best methods of approach, and it was brought out that two definite techniques of foreman training have sprung up. One of these emphasizes the value of a good theoretical foundation in the science of teaching, while the other tends to discard textbook practice and approach its individual problems without preconceived ideas as to how each one should be handled. Discussion led to a mutual acceptance of the fact that the training of foremen is one of the most important functions of industrial management.

Bonuses Should Not Nullify Savings Made

THAT incentives should grow more slowly than production and that group incentives should lead to autonomous production are principles in the establishment of bonus plans set forth by Walter N. Polakov, consulting engineer, New York. Speaking broadly, Mr. Polakov suggested the complexity of the problem of establishing incentive plans, dealing as they do with the organization of human energy, and thus involving situations that cannot be handled with the definite assurance of science. Human engineering, he stated, is growing more important in industry than engineering as applied directly to materials and equipment.

In outlining the establishment of a group incentive plan, Mr. Polakov stated that the group should be made up of men in the same sort of work or on the same job. Each function should then be analyzed and records kept both of individual performance and of the performance of the group. Further information on the working of individual and group incentive systems was brought out in papers describing the plans now being used by three large companies.

Paying Incentives on Dollar Basis

Reduced labor costs, lower inventory, better supervision of workmen and the establishment of group rather than individual effort were cited as the objectives of a group bonus plan installed by the National Cash Register Co., Dayton, Ohio. In describing this plan, R. F. Whisler, head of the company's rate and time study department, stated that at first the incentive standards were expressed in decimal hours. This system was not understood by the men in the plant and was soon discarded for one in which the standard was changed from hours to dollars. Definite control of rates on various types of work seemed necessary and standard rates were set up by the time study and job analysis departments. Under the dollar standard the foreman is given full supervision of the distribution of the cost of different articles and is required to turn out a certain number of pieces costing so much, the distribution of the cost and the consequent bonus earned by the group depending entirely upon him. In this manner cooperation within the group is obtained, as the bonus earned must depend entirely upon group effort.

Under this bonus plan the quality of the manufactured product went up, but to secure further precision a quality bonus is in use which entitles the group to an additional reward if there are no rejections of work above a certain fixed standard. Inventory costs are also reduced under the group bonus plan, as work in process is cleaned up by the workers, who are anxious to turn out as much production as possible. Budgetary control is also made more feasible by this plan, as it enables the management to know definitely the cost of work before it is scheduled.

Bonus Plan in Shipping Department

Introduction of an incentive plan in the shipping department of the Eberhard Mfg. Co., Cleveland, enabled the management to reduce the working force in that department 46 per cent, to reduce the payroll 33 per cent and to increase the wages of the remaining employees in the department 25 per cent. The plan, which was described by Brooks Shepard, production manager and secretary of the company, has placed the work done by the department upon a tonnage basis, the bonus being paid on tonnage got out above a certain fixed amount for which the men are paid on a day-work rate. The company has since applied the incentive plan to its foundry, the trimming and sorting and the annealing departments.

Paying Men for Time Saved

The Bridgeport Brass Co., Bridgeport, Conn., pays its men a bonus for time saved under the standard task rate set by its time study department. W. R. Clark, general works manager for the company, who outlined the plan, stated that he believed it could also be applied to continuous assembly work and that it is equally successful for group endeavor and individual piecework. The incentive is computed by dividing the actual production by the amount of time saved by the operator compared with the standard time set for the job. Mr. Clark stated that the earnings of employees under this plan are usually from 25 to 35 per cent above the base rate, particularly since they have become accustomed to its operation. He placed the readiness with which workmen are able to understand an incentive plan as one of its essential features, if not the chief requisite.

R. S. Perry, production manager Hudson Motor Car Co., Detroit, stated that his company has been able to apply incentive plans to very large groups with considerable success and thus is able to cut down greatly the cost of time study. The Hudson company also places a limit on the amount of bonus which can be earned, in that way preventing the cost of its incentives from nullifying the amount gained by increased production.

In discussing the difference between the group and individual bonus plans, Mr. Polakov stated that a group incentive is better when there is a difference in the functions performed by several men in one operation, while the individual incentive should be used when each worker performs a complete operation.

Application of Incentives Is an Art

In a paper upon incentives for workers and executives and their use in the training of new personnel, Carle M. Bigelow, president Bigelow, Kent, Willard & Co., Inc., Boston, emphasized the fact that, although science plays an important part in incentive plans, their actual application is an art. "In the application of incentives," he said, "the best results seem to be attained not by the application of any one theory or set of theories, but by the practical, intelligent, experienced application by an individual peculiarly fitted for such effort."

Mr. Bigelow stressed the instruction value of incentives and stated that the important considerations which should be made before placing a task or position upon an incentive basis are as follows: "Is a definite instructional procedure necessary for the proper accomplishment of this task or position, and is it essential that an incentive be paid in order to obtain the best effort of the individual?" He also expressed himself as being strongly in favor of direct financial incentives, based so far as possible upon individual accomplishment. This led to a consideration of individual as opposed to group incentives, and the speaker stated that he believed any attempt to establish group rates without a proper background of the application of individual rates or very carefully compiled past performance records would not lead to satisfactory results.

"In paying incentives to an executive," the paper stated, "it is necessary to determine the exact result over which he has individual control and that proportion of his reward he is to receive for control of his individual functions, as well as that proportion of the incentive which he is to be allowed for the results of the operations as a whole."

Eliminating Waste

When the raw material involves a large part of the cost of a product, incentives for eliminating waste are more important than production incentives. In introducing the subject of waste elimination bonuses, Francis T. Mack, production manager Mohawk Carpet Mills, Inc., Amsterdam, N. Y., stated that this sort of an incentive plan may usually be introduced by determining the method by which the best results may be obtained with a minimum of waste, thus setting up a standard upon which bonuses can be paid. In many cases waste elimination incentives may be consolidated with production incentives, but payment should be made separately to impress workmen with the importance of saving materials.

T. H. Blair, Newport News Shipbuilding & Dry Dock Co., Newport News, Va., stated that his company had been able to eliminate many wasteful methods by asking for suggestions from the workers in a prize contest, and that since that time further suggestions had been taken care of under the organization's employee representation plan.

Quality and Attendance Bonuses

Quality incentives were suggested by Oscar Grothe, vice-president White Sewing Machine Corporation, Cleveland, as a means of bringing management's attention to poor quality of raw materials. Under a quality incentive plan, he pointed out, the machine operator is quick to report any defects in the materials given him to work, and thus the source of the trouble may be detected and checked.

A discussion of paying bonuses for regular attendance without tardiness brought out the suggestion that any group incentive plan makes for regular attendance, as each man knows that his absence from the job will penalize the earnings of the entire group. Mr. Perry of the Hudson company, however, questioned the worth of the attendance incentive idea, saying that there is no way to know whether or not it really pays for itself. "We know such a plan costs a certain amount," he said, "but we do not know whether it saves that much. Before instituting such a system we should know just how much absence and tardiness cost a company and then find out whether or not paying a bonus will offset that amount." In reply to this, W. J. Rhodes, works manager Carter's Ink Co., Boston, stated that he considered the attendance bonus really a part of the workman's wage and that, rather than an incentive, it was a method of penalizing labor for irregularity.

G. K. Wilson, Deere & Co., Moline, Ill., suggested a fallacy in the entire theory of incentives by stating that workmen are paid for producing a definite amount of goods of a certain quality, without any more waste than necessary, and that they are expected to report regularly for work. Why, then, should extra bonuses be paid? L. A. Hartley, educational director National Founders Association, Chicago, supplemented this question by asking whether or not bonuses are the tool of poor management. Mr. Polakov answered this by stating that if incentives are introduced by management merely as a hit or miss method of increasing production, quality or economy, this may be true, but if they are instituted with the definite aid of management, that is, with proper training and supervision, they become the tool of good management.

Incentives Develop Better Department Foremen

QUICKER deliveries, a lessening of the effects of hand-to-mouth buying, increased production, wider distribution of incentives, better service and improved quality of products were named as results of a foreman incentive plan used by the W. A. Jones Foundry & Machine Co., Chicago, in a paper by W. F. Coleman, treasurer and general superintendent of the company. On the other hand, the speaker pointed out, the plan did not increase the company's profits nor did it decrease the cost of foremanship per dollar of sales.

The foreman incentive plan was introduced, Mr. Coleman explained, when profits had declined during the post-war years and the need for greater volume seemed uppermost. As a result the total value of sales in one of the company's best quarters was set up as par, and an incentive of $25 was offered the foreman for each quarter this par was equaled. Further incentives were offered when the par was bettered. The bonuses are paid promptly and the men are notified regularly of their progress. Although the plan has been very beneficial in some respects, it has defects which have been recognized by the company. From its experiences with the plan, however, Mr. Coleman stated that the company has learned that any incentive should lessen the cost of the sales dollar in the division of the business in which the bonus happens to be paid. No incentive plan should allow a higher cost for the last of the units produced than for the average unit produced during ordinary operation. As the plan used by the Jones company does not reduce costs, the speaker pointed out that a change is contemplated, establishing an incentive plan for foremen which would combine reduction in cost of sales dollar with an increase in production.

In this connection W. S. Berry, Scovill Mfg. Co., Waterbury, Conn., asked if a comprehensive training program for foremen might not accomplish essentially the same results as a bonus system, particularly if the bonus system did not bring about a definite reduction of manufacturing expenses. Mr. Coleman replied that a foreman training plan is being introduced into the plant, and, although he did not believe it could ever be substituted for an incentive plan, it would undoubtedly become a valuable adjunct.

Incentives for Department Efficiency

In the plant of the Dahlstrom Metallic Door Co., Jamestown, N. Y., bonuses are paid to foremen upon a basis of their department's total production hours worked on bonus, combined with the average efficiency of the direct labor in the department. Under this system the performance of the department depends largely upon the foreman. Standard time rates are set for various operations and direct labor efficiency is found by dividing the total standard hours required for turning out work by the total actual hours worked. In describing the plan, Kenneth Anderson of the Dahlstrom company stated that it over-emphasizes the reduction of labor costs, but as the result of a budgetary control system recently introduced, other manufacturing costs are also brought to the attention of the foremen. Allotments for each product are listed, along with actual expense of turning it out by the department, and in this way the foremen are urged to distribute the costs evenly. Since introducing this feature, Mr. Anderson stated, the company has achieved a 25 per cent reduction in the amount of steel scrapped.

Incentives Which Benefit Customers

Customers as well as the company benefit directly from an incentive plan for foremen used by the Rome Wire Co., Rome, N. Y. This plan, which was outlined by M. A. Kent, the company's factory manager, provides for the payment of a bonus to foremen and department managers for the saving of labor and scrap, for delivering goods to customers when promised and for the quality of the products, based upon complaints or rejections by customers. Standards are set up for each of these factors and actual performance in each is compared with the standards, the foreman being able to earn a maximum of 10 per cent on each count as a bonus for the performance of his department. The plan has resulted in higher compensation for foremen, lower production costs, better quality and improved service. Decreased losses in scrap alone have more than offset the cost of the bonus, and during 1927 the company was able to make 98.9 per cent of its deliveries on time. At the same time complaints and rejections by customers declined 5 per cent.

How Shall Foremen Be Taught to Train?

THE underlying needs for and principles of teaching foremen how to train the workers under their direction were brought out in a paper by A. B. Gates, assistant manager of industrial relations for the Commonwealth Edison Co., Chicago. He outlined the assumptions upon which foreman training is based as "the importance of training the holder for any position, the fact that training is a definite function of supervision, and the further fact that improvements can be made both in the methods of training supervisors for their own jobs and for the jobs of training others." He further assumed that "supervisory training is a logical part of job training, because supervisors are holding a definite job which has many special features."

"In establishing a training program," Mr. Gates went on, "determination has to be made at the outset as to whether it shall begin from the bottom and go up or start at the top with a major executive and go down. Most training programs are, because of existing conditions, a compromise between these two. Before beginning training, an outline of procedure has to be prepared in order that points shall be considered in their logical order. This analysis needs to be made in order that proper stress shall be placed upon difficulties discovered. In all of this work the supervisors and other members of the line organization are drawn in, in order to cement their interests and connection with the program.

"Having collected the necessary material for training, the next step is to determine whether the instructions shall be individual or in groups, and, when this decision has been made, the training material may be set up for use. In divisions in which the turnover is very small, it is best to have the training done individually by a supervisor. In cases where the turnover is much larger, it may be preferable to carry on the work in group discussions. So far as is possible, some means of measurement should be devised to indicate to the management what benefits have resulted from the training given. The more definite this measurement can be the better.

"The training program should never become final, but should always be sufficiently elastic so that such changes as time and experience prove necessary may be made. Training is nothing more or less than keeping up with progress. The supervisors, as the key-men in industry, should be those who are trained most thoroughly, both for their own sake and so that they may better train those men for whom they are responsible."

Training Methods Lack Definite Technique

In a review of tendencies of foreman training during recent years, Dr. J. A. Randall, president Rochester Mechanics Institute, Rochester, N. Y., recognized the growth of well balanced training programs as well as the lack of a definite technique both in the planning and application of foreman training. In the discussion which followed, W. S. Berry stated that it is necessary to teach the foreman educational methods or the basic technique of teaching before he can be expected to train the men under him.

W. J. Donald, managing director American Management Association, took exception to this plan, saying that men could not be taught to train out of a textbook. Acceptance of academic training methods, he brought out, is one of the fallacies of industry, and the best results in foreman training may be obtained by urging the foreman to bring his individual instruction problems into a joint conference of foremen and management, where they may be dealt with separately. Such a plan would soon lead to the building up of a practical and workable training technique. Mr. Donald also took exception to the assumption made so generally in industry that the older foreman and workman cannot be taught new methods.

John G. Wegman, general foreman North East Electric Co., Rochester, N. Y., expressed the opinion that, while the foreman has usually been taught in the school of experience how to supervise the men under him, he is quick to absorb new methods of teaching and is eager to be given access, through schools, libraries and such, to additional information which will build up his background and enable him better to cope with training problems. Byron F. Field, Commonwealth Edison Co., Chicago, emphasized the need for tact and mutual effort in the introduction of better training methods to foremen. The training department will be successful, he stated, if it can put together the best methods now being used by foremen and develop the miscellaneous information into a unified and workable training technique.

Training Manual Workers Similar

Consideration of the problem of training manual workers brought out the fact that they are fundamentally the same as those of foreman training. Russell G. Keppel, Standard Oil Co. of New Jersey, Bayonne, N. J., reviewed the methods now being used for workers of different classes and in different stages of training. He stated that training work now is at about the same stage in industry as accident prevention work was 15 years ago, but that its importance has been recognized, with the promise of wide application and far-reaching results in the near future.

Training of Apprentices

Selection of the right type of boys and assuring their gradual progression by a definite program of work and study were cited as the most important factors in the success of an apprentice training program, in a paper by E. W. Kempton, educational director American Steel & Wire Co., Cleveland. In the choosing of prospective apprentices, Mr. Kempton stated, determination of the amount of previous scholastic training required should first be made. The boy should then be subjected to various examinations to determine his mechanical ability, general intelligence, scholastic progress and physical condition. His personal desires and ambitions should also be determined and the full understanding and cooperation of his parents should be assured.

Actual training, according to Mr. Kempton, should begin with a probationary period which should not be too short, lasting if possible for six months. During this period the progress of the apprentice should be checked regularly, with a view to determining his capacity and general ability or aptitude. It was brought out that the rate of pay at the beginning is not, or at least should not be, as important to the apprentice as his opportunity for advancement, and that a definite program of progression and added responsibility would help bring about this feeling. The general promotional policy of the company should also be stressed, and the boy should be made to understand that continued advancement depends entirely upon himself.

Regarding actual training in the shop, Mr. Kempton stated that, if the number of apprentices beginning at the same time is large, it is well to have a supervisor of apprentice training, to whom the apprentice may look for aid at all times and who fully understands the training program. However, the foremen in the different departments should cooperate fully and, if the number of apprentices employed is small, must necessarily be in charge of the training. In the Steel & Wire company foremen are required to report monthly the number of hours put in and the progress of each apprentice, and a more detailed report is required quarterly. Advances in wages should be regular and automatic, and the graduate apprentice should receive about the same compensation as the journeyman.

In a paper by George F. Kent, manager of industrial relations for the Bucyrus-Erie Co., South Milwaukee, Wis., it was brought out that the compensation of apprentices is not provided so much in his wages as in the valuable experience gained. The value of apprenticeship training to the company was emphasized by the fact that in the Bucyrus-Erie Co. the hourly rate of apprentices is only about half that of the journeymen, while their efficiency is only 15 to 25 per cent less than that of the older men. Labor turnover is also greatly reduced, and this company is able to draw most of its trained mechanics from its apprentice classes. Dependable foremen are also developed in this manner, and the company has been able to develop a higher standard of cooperation and loyalty.

New Competition Places Emphasis on Merchandising

Industries Must Organize to Hold Old Markets and Cultivate New Ones; More Intensive Advertising Essential, Says Charles F. Abbott

"THE problems of production and of financing industry have been largely solved," said Charles F. Abbott, executive director American Institute of Steel Construction, Inc., New York, in an address before the Rochester Ad Club, Rochester, N. Y., June 8. "We are now face to face with the problems of distribution, of scientific marketing and selling, and we must depend upon research to chart our course. Today, old markets, if we are to hold them, must be intensively cultivated. New outlets must be developed, in order that excess plant capacity may be fully absorbed.

"Increased competition to meet new conditions has developed and, to a large extent," asserted Mr. Abbott, "is responsible for most of our present-day difficulties. The transition we are witnessing is bringing with it a new competition which, in turn, calls for a radical readjustment of merchandising policies.

"We now find industry organized against industry for the purpose of encroaching upon the market of another by substitution of products."

As a consequence, Mr. Abbott added, the organization of industries, and their cooperation in advertising and selling, is becoming a leading issue of the day. The principles of sales management must be applied to an industry just as they are used by individual companies.

"The individual concern," stated the speaker, "has found itself totally unable to cope with the new struggle for markets. The vision to see that the individual concern can prosper only as the industry prospers offers the sole hope for survival.

Cooperative Advertising Needed

"Such cooperative activity, aimed primarily at better mechandising methods, offers the one assurance of prosperity during the period of transition that is bringing into the limelight, as the future problem, the locating of buyers to absorb what we produce and to make them want what we have for sale.

"To the sales and advertising manager this transition should prove of tremendous importance and interest. It opens a field for their activities large enough to satisfy their greatest ambitions. Whereas now they deal with many individual concerns, each with a limited appropriation for advertising, tomorrow they will be called upon to serve whole industries or great sections of the country.

"However slow they may be to act upon their knowledge, most business men can readily be brought to a realization of the value of research, particularly as it applies to markets or to standardization and its resulting economies. But as we approach the less tangible elements of modern business, we find growing confusion and increasing reluctance on the part of any individual to admit that he is in any way responsible for the unfortunate conditions as may exist.

"Owen B. Young, chairman of the board of the General Electric Co., has said that the solution of business problems lies in group action. Charles M. Schwab, chairman Bethlehem Steel Corporation, has made the statement that cordial cooperation among the various elements of the steel industry would be worth more than a billion dollars.

"Most of the executives of the steel industry have been trained to think in terms of tonnage output per man per day. Their experience covers a period when the market for steel products was not a serious factor. Today a large tonnage of steel is being displaced as competing materials are now offering aggressive competition.

"Undoubtedly officials in the steel industry will recognize the need of applying modern methods of selling and advertising and adopt the principles of organization to develop a public consciousness of steel and extend its use. The recognition of the producers' distributive industry and the extension of the desired cooperation and application of efficient selling policies would all go a long way toward improving conditions within the steel industry wherein prices and profits would be more in keeping with the results being displayed in other industries, the attention of which is being devoted to the necessary policies to meet present-day requirements.

"To broaden the market and encourage cooperative effort and the application of better methods will become the chief aim of each industry."

"Advertising and the application of the most improved methods of salesmanship supplemented by individual advertising and promotional effort will prove the most economical method of advancing the welfare of an industry," said Mr. Abbott in his concluding remarks.

The Merchandising Plan of the Future

"The merchandising plan of the future will call for the following requisites:

1. The development of new and original ideas.
2. The formation and adoption of sound selling policies to meet the present-day conditions.
3. The application of intensive and aggressive advertising and selling.
4. The program to be supported by constant research in the development of new uses and the exploitation of new markets.

Details of Successful Methods fo Stamping, the Undercoat of Nickel

BY CHARL

Scratch Buffing Steering Knuckles Before a Heavy Chromium Deposit, Using Superior Tampico Brush

VERY often information about polishing metal surfaces before plating with chromium is promised by the title of an article appearing in the technical press. Usually such articles are disappointments. We are again told that the process is difficult, but no directions are given to overcome the difficulties.

In the following paragraphs is given some practical information on this difficult subject. These methods have been tried out in the Detroit plant of the General Chromium Corporation, and in the plants of many of its licensees. Some of the steps may turn out to be unnecessary on production work, but directions such as these are complete enough to prepare high-class job work.

Chromium Plate Reproduces Defects in Surface

Due to the special properties of chromium plate, the art of polishing and buffing metal surfaces before chromium plating has called for the development of special technique. The chief factor in the increased cost over nickel plate is the fact that the metal surface before chromium plating must be almost perfect in its finish. Such a "jewelry job"—and that phrase is often used—costs money. In no other line of electroplating is the magnifying glass so often called into service.

Chromium plate will not flow as do softer deposits, and cannot be depended upon to cover up polishing marks. It will not only exactly reproduce all the underlying polishing marks and scratches but seems to magnify them. A polished surface of nickel or copper plate that appears faultless will show many polishing marks, seams or pits after being chromium plated. In fact, a very important use of chromium plate for covering engraving plates depends upon this property of reproducing with great fidelity and added sharpness the fine details of the engraving. Pits, seams, sand holes, and such defects that nickel or copper plate will cover, must be completely polished out.

Speed of Lathes

The recommended speed of lathes is:

Grinding	1200 to 1800 r.p.m.
Polishing	1800 to 2200 r.p.m.
Buffing	2200 to 2700 r.p.m.
Chromium buffing	2700 to 3000 r.p.m.

These figures are important. A high speed combined with a light pressure will give the highest finish. In chromium buffing especially (that is, the final "coloring" of a chromium-plated surface), it is impossible to buff a flat surface at slow speed. Without high speed, the surface will show fine scratches or buff marks.

Since the widest application of chromium plating seems to be on automobile hardware, chiefly of steel, and on brass plumbing fixtures, the preparation of these surfaces will be discussed in detail. A high finish chromium plate directly on steel is but seldom used. Most preparation on the steel is for the copper and nickel put on before entering the chromium bath.

Preparation of Pressed Steel Sheet

On smooth steel pieces of various kinds the preparation differs but little. For pressed steel, such as radiator shells, the following is recommended for a very high class finish:

(a) Rough out on a rag wheel with No. 120 emery.
(b) Use No. 140 emery on a greased rag wheel.
(c) Use No. 160 emery on a greased sheepskin wheel.
(d) Use No. 180 emery on a greased sheepskin wheel.
(e) Finish on a Tampico brush with No. 180 emery cake.

For a production job a two-wheel finish with No. 140 and No. 180 emery on sheepskin wheels may be used.

Rough Cast or Forged Steel Needs Preliminary Smoothing

On rough steel, such as used for bumpers, forgings or castings, the above method must be preceded with emery for roughing out. A series starting with

hromium Plate

eparation of Rough Casting or d the Final Chromium Plate

LDRIDGE*

No. 36 emery, ranging to No. 60, No. 80 or No. 100, is recommended. A production job may need only two grades, such as No. 60 and No. 120, depending upon the requirements of the purchaser.

Forged iron and cast iron are prepared as above, although sometimes grinding is necessary before the polishing operation.

Steel surfaces prepared as outlined above are ready for copper plating, or for a duplex copper nickel, or nickel copper-nickel, plating before chromium plating.

Brass Castings Need Finer Finish

Preparation of cast brass is similar to the routine for a high-class preparation before nickel plating. More reliance must be given to a fine emery finish, and less to a cutting down and buffing operation. Pits, seams and sand holes in cast brass will drag out if buffing is overdone, and the final chromium-plated surface will not please. Contrary to general expectations, nickel plating of brass will not cover such imperfections sufficiently well to prevent flaws in the final chromium plate.

The following operations have been found to give good results:

(a) Rough out with No. 80 emery, using a felt or rag wheel.
(b) Use No. 120 emery on a felt or rag wheel.
(c) Use No. 150 emery on a greased felt or sheepskin wheel.
(d) Finish with No. 180 emery flour on greased felt wheel.
(e) Cut down, using a sewed buff with tripoli as an abrasive.

BUFFING Radiator Shells on Hall Curtis "Hi-Speed" Lathes. At left are two shells with a preliminary copper plate; at the right is the "coloring" operation on shells after chromium plating

Buffing Nickel Plate on Automobile Trunk Rack and Cowl Bars

(f) Color-buff on a soft linen buff, using a high-grade Vienna lime or other white finishing compound.

For a production job, (a) and (d) may be omitted.

Preparation of Nickel and Copper-Plated Surfaces for Chromium Plating

The buffing of brass and steel objects, after being nickel plated, and before being chromium plated, must be of the highest quality. As a rule, a soft linen buff is used, and such a buff is to be as small as the nature of the work will permit. The minimum of nickel plate is to be removed; at the same time a very bright luster is necessary. The surface before chromium plating must be as free from imperfections as possible, and to be free of all buff marks, leave-off marks and composition. Such a perfect surface calls for an extra operation called "color-buffing." For this operation a flannel buff is used with Vienna lime as an abrasive.

Copper-plated surfaces are treated in much the same way as nickeled surfaces. The copper plate must be of sufficient thickness to stand a good cutting down operation with a combination of tripoli or "white diamond." We have found Stevens' "double duty" compound to be highly satisfactory. A color-buffing must then follow.

Soft Die-Cast Metal, White Metal, and Nickel Brasses

For metal parts like die castings and pieces made of white alloys, such as nickel brasses (German silver), the following methods may be regarded as standard:

(a) Starting with the rough casting, according to its condition, use the following series: No. 140, No. 160, No. 180 to No. 200 flour emery. Use a sheepskin or a felt wheel—the former is preferred. Use grease freely on all wheels.

(b) Buff lightly on sewed buffs, using a greasy composition such as "white diamond" or tripoli.

(c) Color-buff on a soft linen buff, using "white finish" or "Acme" Vienna lime. In some cases Vienna lime dipped in kerosene will give to the above metals a high finish otherwise not obtainable.

Buffing the Final Chromium Plate

Unless the article comes from the chromium plating bath with a perfect finish, it is necessary to buff the surface. Often this is desirable to give an otherwise unattainable life or "snap" to the surface. This process is called "chrome buffing" or "coloring."

Chromium plate is unfamiliar to most buffers, and a humiliating (from the workman's viewpoint) educational stage must be gone through, but a good operator will become skillful at this class of work in a short time. This preliminary training is important, as a large percentage of success depends upon the buffer.

The lathe should run at a speed of from 2700 to 3000 r.p.m. A hard sewed buff is recommended, although in some cases a soft linen buff will be found to work satisfactorily. Green chromic acid compound has been found to be most useful as an abrasive. It can also be used to cut down burned edges and corners. Green compound is very hard to remove from threads and depressions and leaves the work in an unsightly condition, but on smooth surfaces that will wipe off readily, such as radiator shells and bumpers, green composition is hard to beat. A hot strong solution of whale oil soap (6 oz. per gal.) will readily loosen green compounds from corners and depressions; ordinary electrocleaners will not loosen it.

For irregular work, such as plumbing fixtures, a brown chromium oxide has been found most useful. Such a compound wipes out easily. Some white compounds made of levigated alumina are on the market, but no brand has made a lasting success.

What Sheet Industry Needs to Do

Go Into Cooperative Research and Education, as Through Advertising, and Forget Fear of Excess Capacity

THE low prices and low earnings of the steel trade in general and of the sheet and strip steel industry in particular came in for special attention in an address made last week at White Sulphur Springs, W. Va., at a meeting of the National Association of Flat-Rolled Steel Manufacturers by O. H. Cheney, vice-president American Exchange Irving Trust Co., New York. In a brief telegraphed statement from the meeting, given on page 1649 of THE IRON AGE of June 7, some of the high spots of the speech were reported. In the following are the main points substantially in full:

The Alibi of Excess Capacity

"The present condition of the steel industry cannot be blamed on anybody but the steel men. . . . You will tell me that the real trouble is the excess capacity of the flat rolled steel producers. 'Excess capacity' has become a favorite alibi for American business men—and as soon as an alibi becomes popular I begin to be doubtful about its significance. A large proportion of manufacturers are using it to justify price-cutting and extreme tactics of competition. Most of them sincerely believe their complaint—their very sincerity has blinded them to the truth. Excess capacity is not the cause of price-cutting—the real cause is fear of excess capacity.

"Many industries, including the automobile industry, are making money in spite of excess capacity. I cannot think of a single industry which is not overextended in plant. It is estimated that your industry has about 25 per cent excess capacity—it would not really matter if the excess were 10 per cent or 50 per cent.

"Of course, you know the answer—'mergers.' The idea has become part of our economic creed that business must grow bigger and the bigger the better. It is time we got over the notion that any merger is a good merger—that it immediately makes the combined plants more efficient, cuts the overhead and increases profits. There is too much talk of 'putting through a merger.' Mergers cannot be put through—they must be built up. Practically any business can improve itself by taking thought—but merely putting two businesses together, without thought, does not automatically improve them.

Establishing a One-Price Policy

"But how can this price-cutting be stopped? Only by casting out the craze for volume at any cost and the fear of not getting the volume. This means the scientific quoting of prices based on actual costs plus a reasonable profit. It means sticking to quotations. It means going after only a reasonable proportion of the total business, based on the average for previous years—and being satisfied with that volume. It means sticking as much as possible to your own economic territory instead of trying to flood the country. It means getting a reasonable volume of business by sane and ethical methods and making sure of a legitimate profit on it.

"The one-price policy revolutionized retail merchandising—it can revolutionize the steel industry. The best way to carry out a one-price policy is to forget competition. It should be much easier to do in steel than it used to be because steel is no longer just steel. An increasing proportion of steel is in the class which would be called special a few years ago.

"The only sound way to increase the volume of each company which deserves to exist at all is to increase the total volume of steel sold—to extend its use—to improve it so that its service may be extended.

Research and Education the Two Weapons

"Here are two definite programs which offer the only solution of the steel industry's problem—and both of them demand the form of close cooperation which is known as the trade association. I am sorry I cannot suggest some new remedy—something simple and exciting. The trade association is simple and exciting—but only with the simplicity and excitement of hard work.

"Any industry which does not wake up to the new competition may wake up to find itself dead. Your own line is in a constant state of flux—every day new pressures are changing its very nature, not only in production but in uses and markets.

"The two weapons in winning new markets are research and education. Certain of your member companies have already demonstrated what these weapons can accomplish. Some of those companies which have developed new products and intelligently promoted their use will be found heading the list of profit-makers. But if the industry as a whole is going forth to conquer new markets, should the burden be placed on two or three companies? Whose steel industry is it?

"Speaking of cooperative advertising, what kind of cooperative advertising would you call that which knocks steel—and is paid for by steel producers? Horrible examples of the defects of steel are graphically pictured in these advertisements—rusting and its cost and unsightliness. What is the effect on the consumer? Doesn't such advertising leave the reader with a growing feeling against steel in general? If your steel is better, say so, but keep on saying that all steel is good.

"But why should the steel producers pay to promote products which they don't make? You don't make furniture or shelving or roofing—but how much money you make depends vitally on how well your customers sell. The sales problem of the consuming industries is your sales problem and you are tied together by the unbreakable bonds of modern industry.

"This new cooperation as a weapon in the new competition extends to the other important phase of the new competition—the competition between the different factors in the industry. Just as your prosperity depends on that of the consuming industries, so does it also depend on the distribution machinery. Trying to beat the jobber is too much like knocking your head. Only a spirit of understanding and sound cooperation can make the steel industry one in its war against the other industries.

Mr. Cheney also touched at length on the inadequate returns from the steel industry and of the flat rolled steel industry in particular. An analysis of the records of nine of the member companies of the association, he said, shows that the per cent of earnings to capitalization was only 5.27 last year. The year before it was 7.76 per cent. One of the leading members last year suffered a decline in net profits, as compared with the preceding year, of 53.6 per cent. He pointed out that the steel industry in the last few years has spent hundreds of millions of dollars in improving methods and cutting costs. One company has spent $150,000,000 in five years and as a result has been able to cut the average cost of production per ton of finished steel by $7.27.

"What happened to that $7.27?" he asked. "The average billing price of this company per ton of its finished and rolled steel has gone down $8.60 in the same five-year period. This steel producer therefore paid $150,000,000 for the privilege of giving away $1.33 with every ton of steel.

"It is true that the steel consuming industries have made more money than the steel producers. Analyzing the operating finances of a group of over a hundred steel consuming companies in ten leading lines, we find a percentage of earnings to stockholders' investment of 15.3—three times as high as that of the steel producers. In the case of the companies manufacturing automobiles, trucks and airplanes, the percentage is 24.9; in farm implements and tractors, 10.6, and in office equipment, 15.7." (These figures were all given in THE IRON AGE of April 26.)

Training Minor Operating Executives

How the Problem in a Rapidly Growing Organization Has Been Met by American Rolling Mill Co.

THE problem of maintaining a trained working force in a rapidly expanding organization was discussed by A. J. Beatty, director of training, American Rolling Mill Co., Middletown, Ohio, at the recent Pittsburgh meeting of the American Society of Mechanical Engineers.

Formerly the company had a training course known as the Works' School, in which were enrolled men who were headed either toward minor executive positions in the operating division or toward the sales division. The course did not satisfy the operating management because the course was so frequently used by ambitious young operating men, with a leaning toward sales. To remedy this defect, two courses were organized to replace the Works' School; one known as the Operating Training Course, and the other, the Sales Apprentice Course.

In interviewing men who are candidates for the Operating Training Course, the following are some of the questions asked to determine their line of thought:

> What is ahead of you on your present job?
>
> What is the next job ahead?
>
> What efforts have you made to fit yourself better for your work?
>
> What study do you need to help you on your job?
>
> Are you prepared to handle a more responsible job just now?
>
> Has anyone ever been promoted over you? Why?
>
> What is your idea in applying for this course, and what do you expect to gain by it?
>
> What do you expect to be doing five years from now?
>
> What do you read?
>
> What do you do with your spare time?
>
> How much time are you willing to give to study to master the knowledge of the steel business?

These and other questions usually elicit answers which enable the interviewer to determine how intelligently and how seriously a candidate is considering the necessary means for his own progress. While his schooling is one of the determining factors in enrolling a candidate in the course, his experience and his record are given a good deal more weight than scholarship. Expert ability, knowledge of his job and his department, and ability to handle men are the important factors. Of the men who have taken this course about half have not been high-school graduates, about 25 per cent high-school graduates, and about 25 per cent college graduates. Several have been engineering graduates.

An outline of the operating training course follows:

Foremanship is a required subject for men enrolled in the operating training course; for all others it is optional. A new course is outlined and followed each year in order to encourage men to continue this study from year to year.

Each September the first step in organizing for the study of foremanship is to enlist a smaller group of leading foremen—six to ten in number—which is called the foremen's cabinet. The men selected for this cabinet are successful foremen, judged by their record of accomplishment in getting work done and in developing men.

The foremen's cabinet serves in an advisory capacity to suggest and outline topics for discussion consistent with the above general outline. The foremen's cabinet is not a fixed group. Each member is invited to serve for three or four weeks, at the end of which time he may be dropped to make room for another man who is selected to fill his place, generally on the basis of his interest and activity in discussion groups. This plan provides enough holdover men to give a degree of permanence to the cabinet and, at the same time, the addition of new members constantly introduces new blood and new points of view.

The outline for the year being set up, an announcement of the proposed course is sent to all foremen with an invitation to enroll. Those who enroll are grouped into classes of from fifteen to twenty for round-table discussion.

The conference method is used. By this is meant that the chairman or leader, while he has in mind just the ground he plans to cover and the conclusions he hopes to reach, undertakes to draw out from the group members the facts and the conclusions so that whatever conclusions are reached are the conclusions of the group. He must also keep the discussion from going too far afield, and lead the group to right conclusions.

The method of handling study groups in economics is the same as that outlined for the foremanship-management groups. Each group has a leader and an assistant leader, these being chosen partly on account of their previous training and interest in economics, and partly on account of their recognized leadership and stability.

The director of training has a regular weekly meeting of these leaders. Here he presents an outline of the next study topic with discussion-provoking questions. In this group leaders' class are worked out the plans and methods of presenting the various topics.

Most of these groups meet one evening each week on their own time, the sessions lasting from 1½ to 2 hr. The courses vary in length as follows:

Foremanship, 10 weeks	Business English, 16 weeks
Economics, 24 weeks	Public speaking, 16 weeks.
Business law, 18 weeks	
Metallurgy, 72 weeks.	

Another phase of the program for the development of minor executives is a course in company products, processes, and policies. This course is designed to give a complete picture of all departments of the plant and the part each department plays in producing the finished product. Groups taking this course are limited to fifteen to twenty, and one session of the course is given to each of ten departments, including the open hearths, the blooming and bar mill, the hot mills, the processing, the galvanizing, the finishing, the personal-service, the sales, the publicity, and the service-engineering departments.

The sessions in the production division include inspection trips through various departments, followed by discussions led by the superintendents of these departments. The sessions in the non-production departments are each in charge of a representative of that department.

Perhaps the most important part of this training course is the specific training which each man gets in the department in which he is most interested, or in which he is headed for promotion. An arrangement is made with his superintendent so that he is given special attention and opportunity to get all-round experience and knowledge of the department; he makes special studies, and finally writes a report on the department, and submits to a quiz to determine his mastery of the department, the department superintendent and the training department being the inquisitors.

Another means by which the company undertakes to develop executive talent is to keep its foremen posted on business conditions in general, and the company's business in particular. Whenever the management has any important message to get over to the organization relating either to company policies or to business conditions, or to any important change in working conditions, the entire foremen's group is called together in what is called, officially, "The Foremen's Forum."

Perhaps the one feature of the program for developing minor-executive talent that reaches the greatest number is the Armco Foremen's Bulletin. This is a one-page, mimeographed bulletin which is issued weekly by the training department and is sent to every foreman of the company and also to every man of higher rank than foreman.

Each bulletin is confined to a single topic of management, or of production, or of organization building, or of economics, or of personal development.

This bulletin is effective in these ways:

1. It serves as a means of carrying important announcements and items of information to foremen.
2. It is an effective forum for the discussion of organization problems such as: "What Is the Foreman Paid For?" and "Have You an Understudy?"
3. It presents new ideas, or old ones in new garb, to keep the foremen thinking outside and beyond their jobs. "How to Handle the Boss," and "Thinking in Dollars," are examples of this type.
4. It ties in with foremen's group discussions, some bulletins furnishing the topics for discussion, such as "Encouraging Suggestions," and "Why Men Like Their Jobs." Others summarize such discussions as "What Is Overhead?" and "How I Get Suggestions from My Men."

Classes in Morning on Company Time

R. G. Forbes, superintendent of instruction, National Tube Co., Ellwood City, Pa., in discussing the paper told of a class held some time ago in economics at the Ellwood Works of the National Tube Co. The class convened at 5.30 in the evening. Although a standard text book was used and the class was led by a competent instructor, the class terminated with but a fair measure of success due in large measure to a natural physical and mental reaction that set in after a hard day's work was done. It would seem then that the most advantageous plan would be to conduct all classes during the morning, rather than either in the afternoon or evening, on company time, since it is evident that the company is more interested in developing minor executives than it is in the quantity of production of any individual during his training period.

President Clyde of Carnegie Steel Co. Optimistic on Pittsburgh Future

PITTSBURGH, June 9.—In an interview given a local newspaper, William G. Clyde, president Carnegie Steel Co., said that his company had spent approximately $100,000,000 in improvements and betterments in the immediate Pittsburgh district, and emphasized the fact that this sum would not have been invested had the United States Steel Corporation's officials any doubts about the continuance of Pittsburgh as the center of iron and steel production.

"This more than $100,000,000 covers only such work as has been completed," said Mr. Clyde. "It does not take into consideration work that is in progress, for which many more millions have been appropriated. Neither does it consider the mills at Farrell and New Castle, Pa., and Youngstown and Mingo Junction, Ohio, nor does it take account of like expansion and reconstruction by other Steel Corporation companies in this district.

"In a little over three years the Homestead plant has undergone a complete reconstruction that has made it the last word in steel-making equipment. Today it is the most modern steel plant in the world. At this one plant more than $40,000,000 has been spent. At the by-product coke plant at Clairton more than $37,000,000 has been spent and there still is work in progress which we are not considering in this phase of the situation. Here we already had the largest by-product coke plant in the world. In four years it has been doubled. From something more than 700 coke ovens it has been increased to 1432 ovens, into which, every day, is fed 30,000 tons of coal.

"Carnegie Steel Co. has spent four years and $5,000,000 in building up a river fleet—an 'industrial navy'—for the transportation of our steel to Southern and Southwestern ports. This navy now consists of 14 steamers and between 300 and 400 barges, which number is being continually augmented.

"In this period of a little over four years Carnegie Steel Co. has shipped nearly 300,000 tons of steel down the Ohio and Mississippi rivers, and this shipping is growing in tonnage each month.

"The Edgar Thomson plant at Braddock has been making steel for 53 years, and just lately has broken a lot of production records," he said. "And I am absolutely convinced that 53 years from now these great Pittsburgh district plants will still be making steel—and breaking records doing it.

"The men and the organizations who helped to make Pittsburgh are not in any doubt as to her future."

William A. Hopple, Jr., secretary and treasurer of the Hall Safe Co., 3253 Spring Grove Avenue, Cincinnati, manufacturer of steel safes and vaults, has been appointed receiver of the company upon action filed with the local Common Pleas Court by Mrs. Anna S. Hall, widow of Edward C. Hall, founder of the company. Mrs. Hall, in her petition, stated that the company is solvent, but market conditions and inability to realize on its assets has placed it in a position where it is unable to meet maturing obligations.

To Increase Trade Extension Work

Flat-Rolled Steel Executives, Including Sheet and Strip Makers, Plan Widened Promotion Activities — Low Profits and Forced Production Called Menace to Industry

THAT manufacturers of flat-rolled steel will unite in promoting a program of trade extension activities and of market research was the most important development at the first annual meeting of Flat-Rolled Steel Executives, held at the Greenbrier Hotel, White Sulphur Springs, W. Va., June 5, 6 and 7. The meeting was sponsored by the recently organized National Association of Flat-Rolled Steel Manufacturers, into which were merged the National Association of Sheet and Tin Plate Manufacturers, the Hot-Rolled Strip Steel Institute and the Cold-Rolled Strip Steel Institute.

Decision of the entire flat-rolled steel industry to cooperate in promoting the use of all flat-rolled steel products means that hot-rolled strip steel and cold-rolled strip steel manufacturers will contribute to the support of the movement, which heretofore has been financed exclusively by sheet steel companies. Furthermore, it assures the executives in charge of the movement of having at their command more adequate funds than in the past to help fabricators of flat-rolled steel in extending present markets and in finding new uses for their products, as well as to reach the ultimate consumer and to educate him.

Need for Adequate Profits Stressed

Prominent in the discussions at the business sessions was the need of getting on a profitable basis so that companies can obtain an adequate return on their capital investments instead of the meager profits which have prevailed in the past few years. In this respect the address of O. H. Cheney, vice-president of the American Exchange Irving Trust Co., New York, on "Whose Steel Industry Is It?" was a feature. It is published in this issue of THE IRON AGE on page 1682.

Metal Lath Manufacturers Increase Tonnage

At the session devoted to trade extension activities, W. W. Galbreath, president Youngstown Pressed Steel Co., Warren, Ohio, told of the way in which metal lath manufacturers, by means of advertising and other promotion work, have increased their consumption of steel sheets from 10,000 tons annually in 1918 to 100,000 tons in 1927. In the past year and a half they have emphasized "better plastering" and in this way have secured the active support of architects and of trade unions. Of the 100,000 tons of sheets now purchased each year, only 10,000 tons goes into building construction. Mr. Galbreath mentioned various products which are being made from pressed steel, the use of which is considered especially desirable because of its lightness of weight. He urged the flat-rolled steel manufacturers, in their trade extension program, to advertise to the ultimate consumer and to cooperate with present associations of companies using flat-rolled steel by paying a percentage of the cost of educational advertising. Furthermore, he suggested that salesmen of flat-rolled steel makers should not be used in the educational work.

Declaring that more work along the lines of market research is one of the most important matters to be pushed by the flat-rolled steel industry, J. J. Rockwell, vice-president of the Crosby-Chicago Co., Chicago, advertising counsel for the Sheet Steel Trade Extension Committee, pointed out that in the three-year period from 1925 to 1927, inclusive, the sale of steel sheets increased 2,500,000 tons as compared with the previous three years. At least a part of the increase is attributable to trade extension work, and the improved demand for steel roofing is almost directly traceable to the promotional program of the committee.

Mr. Rockwell stated that flat-rolled steel manufacturers have a splendid opportunity for broadening their markets in the agricultural field and that farm organizations and agricultural colleges have offered assistance in carrying on research work to provide rural sections with fireproof structures. He also declared that firms specializing in hardwood trim for the interior of buildings have complained about the inroads made upon their business by companies making interior trim of steel, much of which is supplied by strip steel manufacturers.

Market Extension Work Offers Possibilities

A. N. Flora, vice-president National Association of Flat-Rolled Steel Manufacturers, in an address at the session devoted to trade extension activities, stated that sheet metal contractors, of which there are about 32,000 in the United States, should be organized in regional groups working under the National Association of Sheet Metal Contractors and in this way can be made a tremendous force in carrying out the plans of the Trade Extension Committee. The committee is already in touch with a number of associations, the members of which are fabricators of flat-rolled steel, and it is the committee's purpose to cooperate with these agencies in market research and trade extension activities.

Referring to the possibilities for furthering the use of metal lath, Mr. Flora said that if one new house in 10 used this material, the output of light gage sheets would be increased 72,000 tons annually. He declared that if manufacturers of steel doors and trim for buildings could extend the sale of their products up to 50 per cent of the class of buildings they are now selling, approximately 200,000 tons of full-finished strip steel and steel sheets would be required in addition to the amount being produced today.

Another important product capable of immense development, according to Mr. Flora, is metal shelving, manufacturers of which estimate that its potential market would call for 250,000 tons of sheets and of hot and cold-rolled strips each year. With the advent of chain stores has come a desirable market for this class of material, while its possibilities in other fields are almost unlimited.

Low Prices Called Industry's Greatest Menace

In opening the convention, Charles O. Hadly, vice-president Alan Wood Iron & Steel Co., Philadelphia, cited the fact that, although the cost of materials going into flat-rolled steel, as well as taxes and expenses of production by new processes, is lower today than in 1924, the reduction is not in line with the decrease of

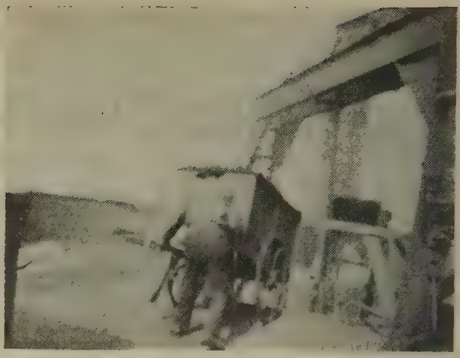
Fig. 2 — (Right) Loaded Coke Buggy Being Dumped on the Bell



Blast Furnace Gas as

THIS paper aims to present and interpret some practical features of blast furnace gas, and to show the relation that these features bear to the chemical and metallurgical reactions going on inside the furnace.

Although the operation of the blast furnace is a continuous process, the periodic casting of the furnace may be considered to divide the operations into separate units. Ordinarily, extreme or radical changes in conditions do not take place from one cast to the next. The changes which do occur are generally slow, steady movements which gradually emerge from one set of conditions into another set of conditions.

There is plenty of time during which ample warning is given as to which way the furnace is going, so that if the practical operating conditions are observed, and properly interpreted, the furnace may be kept entirely under control at all times. Occasionally, however, quick, radical changes do take place and prompt action is necessary to forestall even more aggravated conditions.

Irregular driving, slips, etc., decrease the tonnage and produce "off" iron, to say nothing of the hard physical labor necessary to clean up the iron and slag runners. Smooth operation is accompanied by good driving, large production and low fuel consumption. One of the practical indicators of great importance is the gas. The character of the gas may be observed at the following places:

1. The furnace top
2. The stove stacks
3. The bleeders
4. The boilers
5. The engines
6. The cinder notch
7. The tap hole

The old open-top furnace furnishes the best opportunity to study the quality and character of blast furnace gas. Every time the bell is lowered to drop in the charge, the gas escapes freely into the air, and burns with a flame which has special characteristics for each set of furnace conditions. When the furnace is hot, one kind of flame is seen; when the furnace is cold, there is a different kind of flame; and with each varying set of conditions the flame burns in a different manner.

Fig. 1 shows the stoves and the vertical hoist on a hand-filled furnace, and Figs. 2, 4 and 5, loaded coke, ore and stone buggies being dumped on the bell. Figs. 5 and 6 show coke on the bell. Note the difference in the way the coke lies on the bell in the two pictures. When the hopper is entirely open, as shown in Fig. 5, the coke has a tendency to distribute itself into four piles. When the hopper is partly closed the charge piles up around the bell rod.

Small square and round baskets of incandescent coke hanging at the side of the hopper are for the purpose of igniting the escaping gases when the bell is lowered. The bell is raised and lowered by a steam cylinder plainly seen in the foreground of Figs. 3 and 10.

Fig. 4—Loaded Limestone Buggy Being Dumped on the Bell. The large white pieces of limestone can be plainly seen

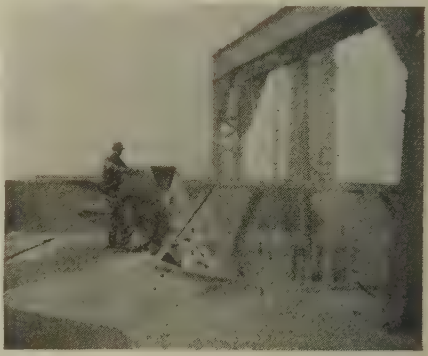


Fig. 10 shows the bell lowered and the burning flames of gas coming out of the top of the furnace. The character of this flame is especially valuable in interpreting the metallurgical reactions going on inside the furnace.

The "flame" is made up of two distinct parts, the actual burning flames, and the smoke. The burning flame may be yellow, orange, red, purple or blue, and the smoke may be a thin blue, heavy white, brick red, brown or black.

Great volumes of heavy, white smoke, and burning gas flames that are a bright yellow color, are found on a hot, limey furnace making low-sulphur foundry iron. The furnace was very hot all day. Heavy, white fumes could be seen at the stove stacks and boilers. The furnace was hot at the tuyeres. The heat could be felt at the eye latch. The steam was good all day and the steam pressure regular. The driving was smooth

---

This article, written by Wallace G. Imhoff, metallurgical engineer, Sixty-second Street and Allegheny Valley Railroad, Pittsburgh, is the first of a series of three.

Condition Indicator

and the furnace did not stick or slip. On the day turn 46 charges were put in, and 49 charges at night. At the 8 o'clock cast 16½ beds of iron were made; at 2 o'clock 21½ beds; at 7 o'clock 23½ beds; at 12 o'clock 24 beds; and at 5 o'clock 16½ beds. (A bed of iron is equal to slightly over 1½ tons.)

The 2 p. m. cast was a typical cast to illustrate the ideal conditions of lime combining with sulphur to form CaS. The gas in the furnace was clouded with great volumes of heavy, white fume and the burning gas was a bright yellow color, showing it to be carrying a large amount of fine carbon particles, similar to the yellow gas of a candle flame. The schedule of ores used in filling is given in Table I.

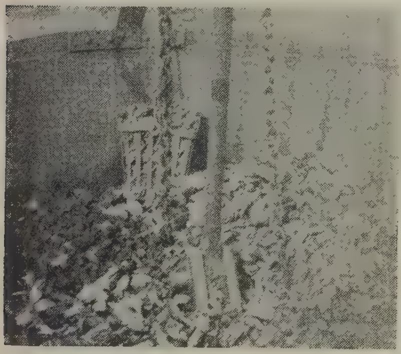

Fig. 5—Coke on the Bell, With Hopper Entirely Open, Permitting the Material to Settle Down into the Furnace

It is of particular interest to inspect the filling record to see how the furnace is driving when this heavy, yellow type of gas is being produced. The complete filling record in detail is given in Table II. It is important, also, to have the engine house record with this type of gas, as in Table III.

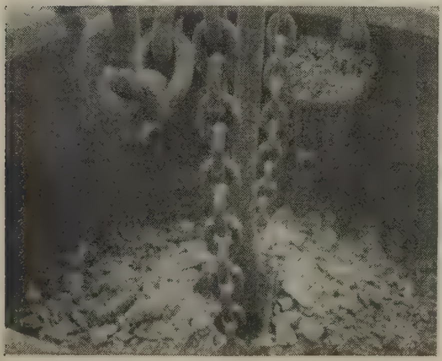
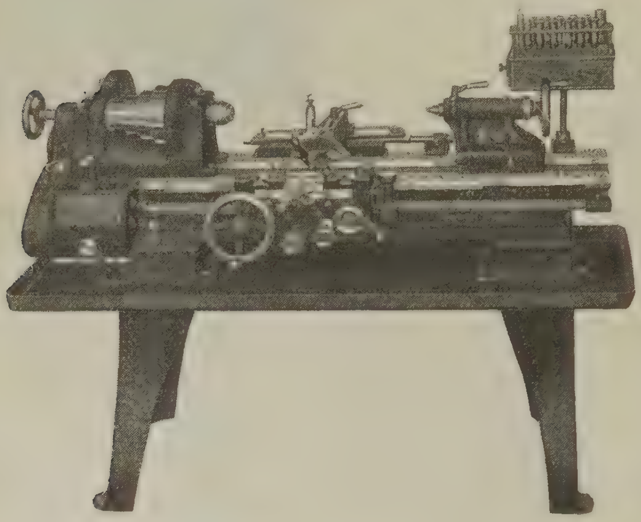


Figs. 8 and 9—Limestone on the Bell. There is a difference in the way the material lies on the bell, depending on whether the hopper is open as in Fig. 9 (right) or closed as in Fig. 8

New Precision Tool-Room Lathe

A 13-in. by 5-ft. tool-room lathe, a back-geared screw cutting tool with eight spindle speeds, has been added to the line of the South Bend Lathe Works, South Bend, Ind. Four of the speeds are obtained by belt and four through back gears. The lathe is intended for the machining of master gages, master screws, taps, dies, jigs, fixtures and other precision work.

Special attachments for the machine include a handwheel draw-in collet chuck, which may be used in the production of small metal parts as well as for general tool-room work. Round, square and hexagonal collets may be used, adapting the attachment for tubing and bar work up to ⅝ in. in diameter. The headstock spindle is hollow, which permits tubing, long rods and bars up to 1 in. in diameter to be passed through while being machined. Other attachments include a taper attachment, thread dial, oil pan, micrometer carriage stop and collet cabinet and bracket.



Attachments Include a Handwheel Draw-in Collet Chuck, Adapting the Machine for Production of Small Parts, as Well as for Tool-Room Work

The carriage of the lathe has power longitudinal and power cross feeds, which are obtained by a splined lead-screw and worm in the lathe apron, independently of the lead-screw thread. Instantaneous change in direction of operation of the lead-screw, for cutting right or left-hand threads and feeding the tool in either direction across the work, is obtained by means of a quick-acting latch reverse lever. The machine is arranged for drive from an overhead countershaft or by motor.

Vertical Float Friction Drive Chuck

For the multiple tapping of bottom holes, and holes in tough metals, the Apex Machine Co., Dayton, Ohio, is offering a new vertical float friction drive chuck.

The device is arranged so that if one tap sticks or strikes bottom, the friction will slip while the float takes care of the spindle travel. The quick-change collets, in which the tap is free to float, are the same as those in other types of the company's tapping chucks. The friction unit, consisting of a multiple-disk clutch, is the same as used in the standard Apex friction chuck and when adjusted will maintain the setting over a period of weeks. Thrust of the spindle does not affect the friction. Two sizes of the chuck are available, one of which, the type MA, has capacity for ⅜-in. taps and is of 1 5/16 in. outside diameter. The larger size, designated as the type MB, has capacity for ¾-in. taps and is 1⅞ in. in outside diameter.

Vertical Float Chuck Intended for Multiple Tapping of Bottom Holes

New Paint Spray Gun

Two new features are reported for a spray gun being put out by the Alexander Milburn Co., Baltimore. The first is a dialed head, which provides numerous spray adjustments, varying from a circular spray to a fan of a wider field than heretofore. The dialing permits the operator to obtain the desired spray without making preliminary tests.

The second is a series of indicator numerals on the paint valve plunger. Setting the pointer to the proper numeral produces the volume of spray wanted, without loss of time for testing. The operator thus sets his volume gage and his spraying adjustments and then proceeds.

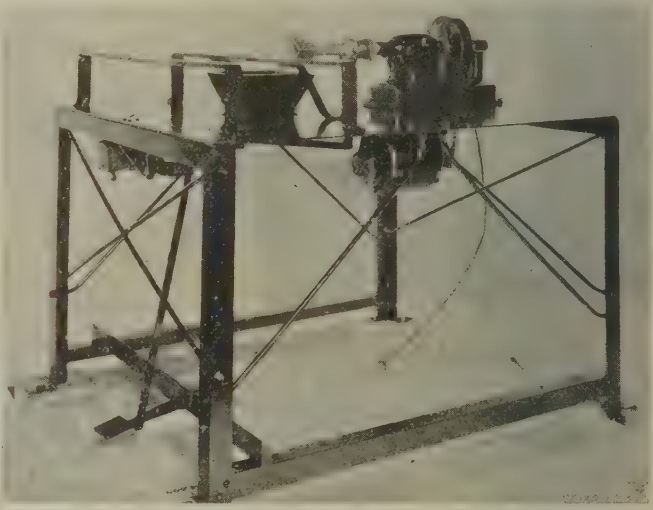
While this new spray gun is complete in itself, the new dialed air control valve and the plunger have been made interchangeable and can be inserted in the (older) type E unit. This change is made in the factory.

Machine for Driving and Removing Nuts

For driving and removing nuts from threaded work, the Procunier Safety Chuck Co., 18 South Clinton Street, Chicago, has developed the equipment illustrated herewith.

The machine comprises a bench tapping unit, which is mounted on a table equipped with a special socket wrench and a Procunier safety friction chuck. The drive is by individual motor, through sprocket and chain. The friction chuck slips when the nut is driven "home" and protection against damage from having the friction set too tight is afforded by an electrical overload switch that automatically breaks the electrical circuit when the machine is overloaded. In case the switch is thus thrown off, the machine may be restarted merely by throwing this switch back.

The particular machine illustrated is for handling large U-bolts, which are laid across the rack-bars on the table, thus bringing the nuts into a convenient position for application of the socket wrench. To back off the nut, the foot treadle is tripped, which engages the reverse clutch of the tapping unit. When the nut has been backed off, it drops through the hopper into a container placed beneath the table.



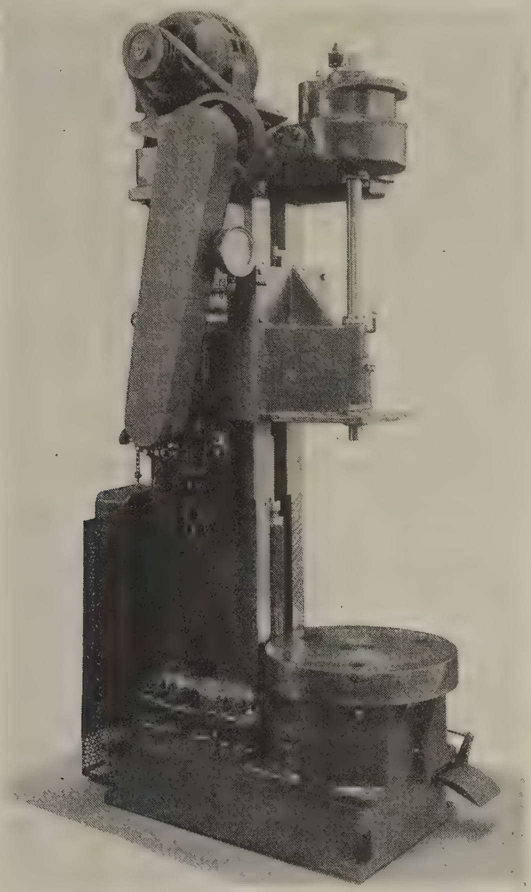
Nut Driving Unit Adapted for Driving or Backing Off Large U-Bolts

Pipe Nipple Standards

Acting upon a request from the Pipe Nipple Standards Corporation, representing the producers of this industry, J. J. Fairchild, commercial standards unit, Department of Commerce, Washington, has called a general conference of producers, distributers and consumers, for 10 a.m., Friday, June 29, at the department building, to consider the establishment of standards for steel and wrought iron pipe nipples. With the announcement were sent copies of proposed commercial standards for pipe nipples, dated April 17 and June 1 respectively, which will be used as a basis for discussion.

New Hydraulic-Feed Boring and Drilling Machine

Baker Brothers, Inc., Toledo, Ohio, has added to its line of hydraulic-feed boring and drilling machines the No. 10-H heavy-duty unit illustrated, which is intended for a wide range of work. The machine here illustrated is fitted with a flanged head for the application of a multiple-spindle head, but the design is such that any style of head, single-spindle or multiple-spindle types, can be attached, depending upon requirements. The machine can also be fitted with a plain table, for single-spindle work, or with a 24-in. indexing table, for successive operations, and any number of indexes can be provided. The saddle is mounted on carefully scraped ways of ample proportion to maintain alinement over a long period.



Single-Spindle or Multiple-Spindle Heads May Be Employed, as Well as Plain or Indexing Tables

The machine is furnished only as a motor-driven unit, with a 10-hp. 1200-r.p.m. or smaller motor, mounted on top of the machine and transmitting power by a Texrope drive, as illustrated. The drive for the Oilgear pump, which actuates the feeding mechanism, is by belt from the main drive shaft of the machine, only one motor being required both for the pump and the main drive of the machine.

Speed changes are made by means of slip change gears which may be changed quickly when desired. With the hydraulic feed mechanism a wide range of feeds is available, due to the ease of adjustment of the Oilgear pump. The hydraulic cylinder is mounted on the base and inside of the frame of the machine, providing a pull stroke to the head when in operation.

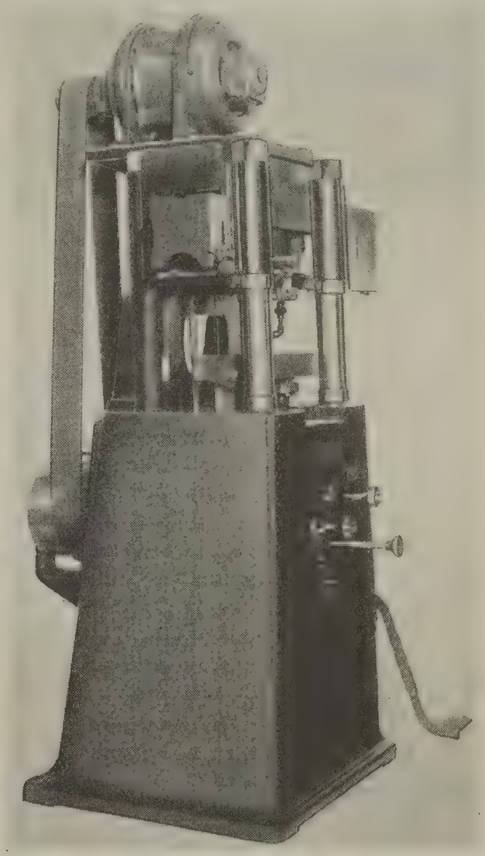
Rapid advance of the head to the work, automatic tripping to a predetermined feed and automatic rapid return of the head, with the mechanism stopping at the top of the stroke, are features of the machine. The point of change from rapid advance to feed and to rapid return may be changed conveniently by cams mounted on the side of the saddle.

Specifications are, in part, as follows: Range of speed of main vertical shaft, 165 to 245 r.p.m.; maximum distance from vertical shaft to face of frame, 14 in.; maximum distance from the lower edge of the saddle to the base, 50 in.; length of saddle, 20 in.; and travel of head, 16 in. Multiple spindle machines have spindles with vertical adjustment up to 3 in.

Hydraulic Marking Machine for Heavy Pressures

For the marking, knurling and scoring of articles of steel, iron, brass and other materials, the Martin Machine Co., Turners Falls, Mass., has brought out a new hydraulically operated roll-type marking machine designated as the No. 14. The principles of design are the same as those of the company's No. 12 machine, but the new unit is designed for higher pressures. A feature claimed for both machines is the ability to mark even and clear impressions on work which varies in thickness or diameter. Increase in life of dies is attributed to the hydraulic operation, which obviates hammer effect on the dies.

Work to be marked is placed in a suitable fixture on the table of the machine. For flat work a round die is used, the die being held in a holder that is fitted into the slide of the machine. Pressure on the foot treadle causes the table and work to rise to the die, and when in contact with the die the latter rolls across the work and thus marks it. The table then lowers to the starting position, the slide also returning to its initial position. The hydraulic system comprises an oil tank in the base of the machine, a small pump and suitable valves or cylinders for operating the table and slide.



Increase in Life of Dies Is Attributed to Hydraulic Operation

Features of the machine include the arrangement for stopping the slide at the left-hand end of its stroke, which provides more clearance than formerly for the insertion and removal of irregularly shaped pieces of work. The table can be arranged to stay in contact with the die long enough to permit several passes of the die, thus permitting making of heavier impressions when necessary. Adjustments for different pressures and speeds of operation are provided. Rigid construction is also a feature.

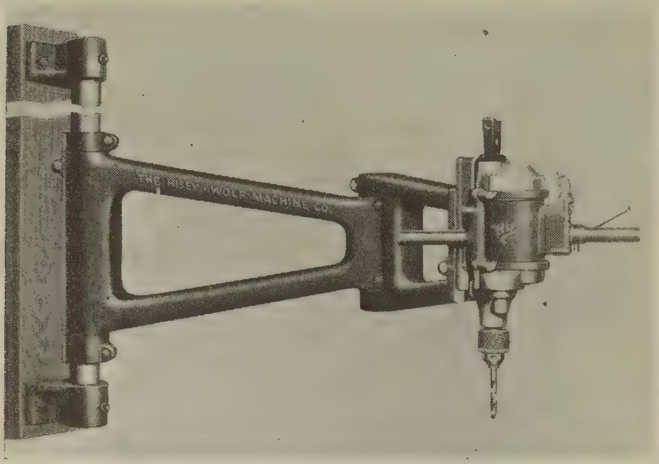
The machine is self-contained, the driving motor being mounted on the top as shown in the illustration. Floor space occupied is approximately 36 x 36 in. and the weight of the machine is 2000 lb.

The Ohio Electric & Controller Co., Cleveland, announces appointment of the following representatives: Charles L. Ward Co., 701 Midland Building, Kansas City, Mo., covering the territory of Kansas City, Omaha, Neb., and Dallas, Tex., and the territory adjacent thereto; J. Dale Reynolds, Apartado 428, Monterrey, N. L., Mexico, covering Mexico.

Radial Arm for Portable Electric Drills

A double radial arm for Hisey portable electric drills of ⅞ in. and smaller capacity has been made available by the Hisey-Wolf Machine Co., Cincinnati.

Arrangement of the device may be noted from the illustration. The lever feed is operated through rack and pinion, the same as in a drill press, permitting positive control. The motor-holding brackets are designed so that the portable drill unit can be attached without removing a single part of the machine, which saves time and prevents loss of parts. The radial arm is mounted on a ball thrust bearing, which is inclosed in a dust-proof housing, to minimize friction and facilitate adjustment. Either the long or the short arms can be locked independently, by means of individual clamps; if the work requires it, both arms may be locked in any fixed angular position.

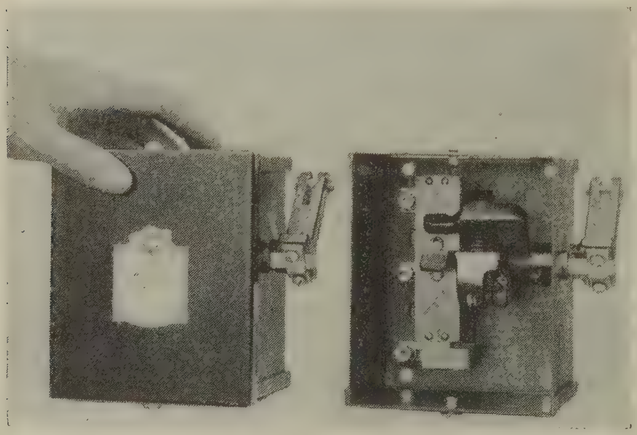


Lever Feed and Convenience of Attaching the Drill to the Arm Are Features

The vertical adjustment, without resetting, by means of the lever which actuates the rack and pinion, is 7½ in., and the vertical adjustment up and down the column is 25 in., which provides a total of 32½ in. vertical adjustment. The main column is 2½ in. in diameter. The double arm may be swung through an arc of 240 deg. and the short arm through an arc of 245 deg. The maximum reach from the drill spindle to the column is 36¾ in. The weight of the radial arm is 215 lb. net.

Lever-Operated Master Switch

A new switch, designed especially for splined shaft or shipper rod operation, has been put out by the Cutler-Hammer Mfg. Co., Milwaukee. This switch is for use as a pilot circuit control device on lathes, textile machinery and other equipment where starting and stopping of the machine is to be governed by a splined shaft, shipper rod or similar device. Low-voltage protection is an important feature. Should the motor stop, because of low voltage or for any other reason, it will not re-start until the switch has been operated again. Accidents and damage to machine caused by unexpected re-starts are thus eliminated.



Switch Designed for Splined Shaft or Shipper Rod Operation

Other outstanding features are: Non-stubbing contacts; shear pin to protect mechanism; few parts and simple construction; operating lever can be placed in any one of four operating positions, 90 deg. apart, to suit any installation requirement; long, steel-to-bronze main bearing with oil hole; small size; fully inclosed in heavy steel case; cover can be removed by loosening only two screws. The switch is designed especially for three-wire control, but can be used also for two-wire control on pilot circuits up to 550 volts.

Portable Lubricating Unit

For lathes, drill presses and other uses, a new portable cutting tool lubricator has been put out by the Curran Machine Works, 159 Newtown Road, Long Island City, New York. As shown by the illustration, the lubricant is supplied by the foot treadle as desired. This leaves the operator's hands free for his work. The device may be clamped anywhere that is convenient and the lubricant directed at the point where most needed.

This unit is a high-speed lubricator for use on all machines not equipped with their own lubricating systems. The amount of lubricant delivered at each stroke of the pump is adjustable by a finger nut. As the only attachment to be made is the quick-acting clamp which holds the pipe in position, the lubricator may be moved readily from one machine to another.

The Supply of Lubricant Is Controlled by the Foot Pedal

German Tests of Wire Rope

Recent wire rope tests conducted by the engineer in charge of the "Official Institute for Inspection of Steam Boilers, Cologne," are reported from Germany. Boiled down to its essence, this report and research mean that on an elevator carrying over 3000 lb. of dead weight, a preformed wire rope made nearly 10,000 round trips without a single break or fracture, while the ordinary twisted type of wire rope accomplished the same work only after a fracture of 8 wires in the rope attached to the cage and 17 wires in the rope working on the counterweight. In a second test, the preformed wire rope made a total of 18,600 round trips and suffered only one single broken wire, while the ordinary rope subjected to the same test suffered 44 fractures in the rope attached to the cage and 190 fractures in the rope working on the counterweight.

Business Analysis and Forecast

BY DR. LEWIS H. HANEY

DIRECTOR, NEW YORK UNIVERSITY BUREAU OF BUSINESS RESEARCH

Statistical Data Concerning the Chief Consuming Industries Indicate That:

High activity in chief consuming industries has been due largely to the way building construction has held up and automobile production has been maintained.

Car and locomotive buying have made slight improvement from their low levels, and surplus cars give little promise of early orders.

Automobile production is well sustained and has been a recent leader in upholding steel demand.

Building volume continues large, but appears to center on small operations; structural sales are declining.

Iron and steel exports decreased more than usual in April.

APRIL turned out to be a somewhat better month as to the activity prevailing among the chief steel-consuming industries than was anticipated. It held about level with March, and thus came nearer to justifying the ingot output of the month than seemed possible 30 days ago. As the ingot output curve rose considerably above the demand curve, however, the general conclusion reached last month still holds—namely, that steel production is at too high a rate, considering the season, to be maintained, and that as a result weakness in prices is likely to persist.

Demand Continued High in April

THE fairly good April showing made by the composite demand line was due chiefly to a recovery in building activity (which carried contracts awarded to 125 per cent of the 1921-1927 average, against 119 per cent in March). General manufacturing activity (excluding iron and steel and automobiles) also held about level and the machine tool business picked up considerably. Mining, including oil production, showed a slight gain. These developments offset declines in railroad transportation and in exports. The net result for April was a steel-consumer activity index of about 116 per cent of the 1921-1927 average, against 115.2 per cent in March.

Complete statistics for May are still lacking. We know that railroad freight traffic failed to make the usual seasonal gain, while, on the other hand, building activity and automobile production increased somewhat more than usual for the season. It seems probable that the *potential* requirements of the chief consuming industries increased somewhat last month, but that unfavorable financial and political developments probably prevented these from materializing in a proportionate gain in steel buying. More detailed comment concerning steel consuming industries follows:

Conditions in Particular Industries

The *building situation* is discussed below. The combination of higher interest rates and growing political uncertainty is tending to curtail speculative building activity, and a more than seasonal decline is to be expected within a month or two. It is notable that recent gains in building have not resulted in increased buying of fabricated structural steel or steel sheets. The sustained miscellaneous demand, however, is doubtless partly due to building activity, and the gain in May permits and contracts should find some expression in the steel business during June and July.

The demand for steel from the *railroads* is likely to continue disappointing. April figures show the gross revenue of the carriers to have been 4.9 per cent below a year ago and their net operating income to have been about 4 per cent lower. The average return on their total investment was only 4.07 per cent. Car loadings were about 7 per cent less than in April, 1927, and a large surplus of equipment exists. May traffic has run something like 5 per cent below a year ago and there is no prospect of early expansion in general business.

Automobile production was well maintained in May,

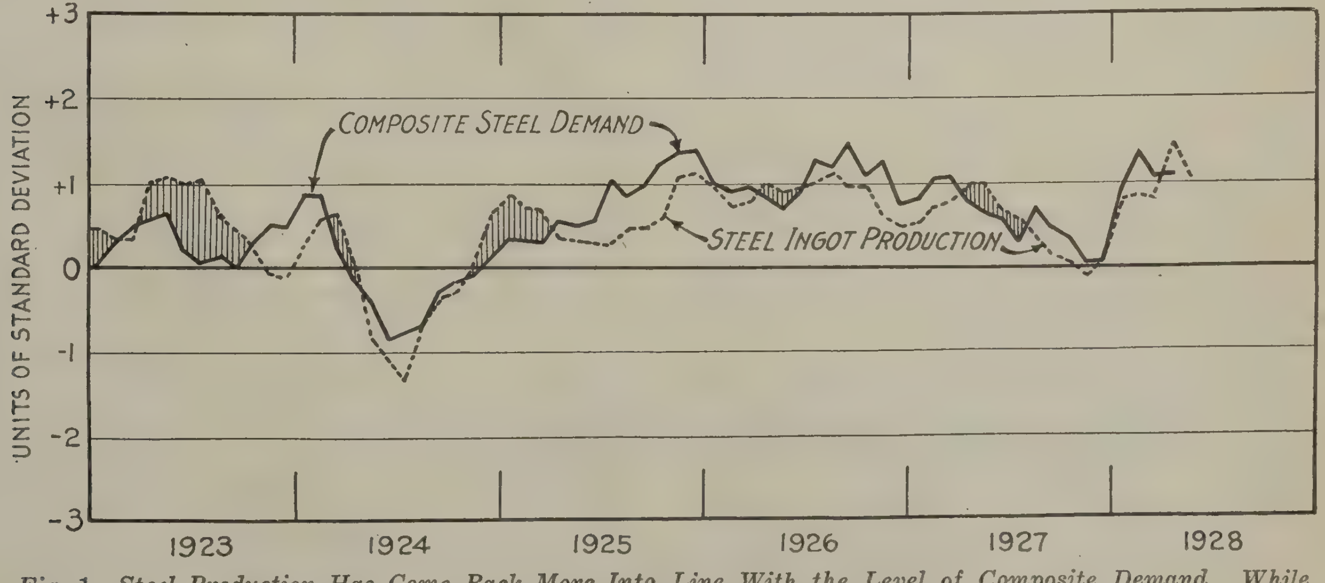


Fig. 1—Steel Production Has Come Back More Into Line With the Level of Composite Demand. While this curve declined in March, it made a moderate recovery in April

at least by several of the leading companies, and the Ford output has gradually increased. Preliminary estimates for the month indicate about 467,000 cars and trucks to have been produced in the United States and Canada, which gives an adjusted average daily index that is 20 per cent above the average for 1921-1927 and the highest since September, 1926. The period of seasonal decline, however, is now at hand and already appears to be reflected in a declining volume of sheet business, although up to date there is no indication of any unusual recession and the outlook seems fair.

General manufacturing activity continues in good volume and seems likely to furnish large miscellaneous steel business, notably in the case of agricultural implements and such items as electrical refrigerators. The volume of machine tool orders was unusually large in April, but apparently fell off in May.

Oil Drilling at Low Level

Our composite index of *mining and oil production* continues about sidewise at the average level for 1921-1927. Drilling activity in the petroleum industry is the lowest in many years, but production has been only slightly reduced, and increased a little during the last two weeks—a condition which indicates a poor demand for oil-well material and a fair demand for oil-tank material. Bituminous coal production continues below average. Copper production in April stood at the highest rate since February, 1927. In general, a moderately well sustained demand for mine material is indicated.

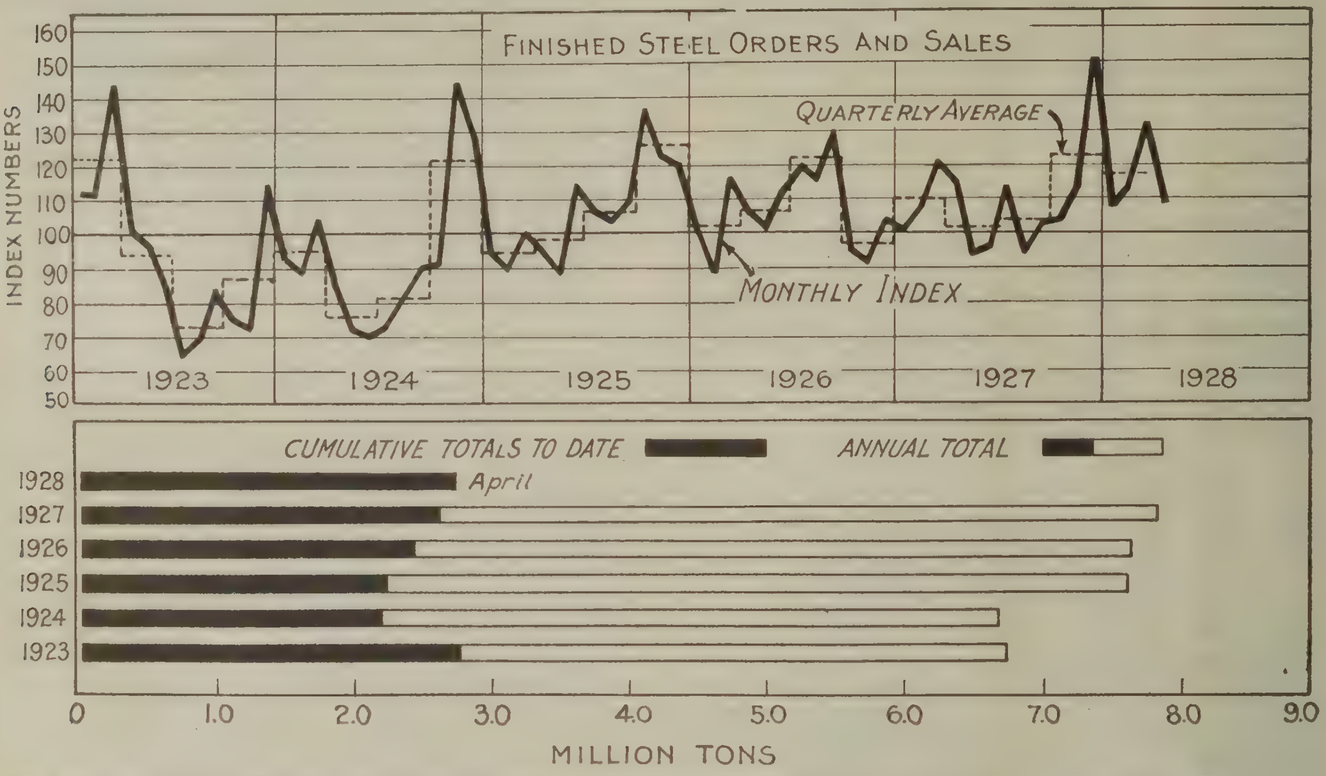

Fig. 2—Buying of Finished Steel Dropped in April After a Good Seasonal Increase in March. The cumulative total is the greatest since 1923 *and is only* 2 *per cent behind that year*

Farm prices advanced sharply between April 15 and May 15, with some decline since the latter date. The purchasing power of the farm dollar has increased and the total income from the sale of farm products was larger during the first four months of the year than in any recent similar period. Continued activity in agricultural machinery and implement production is indicated, and the sharp recovery in Chicago mail order sales during May is to be noted.

Exports of iron and steel decreased in April more than usual and were the lowest, considering the season, since January. Some recovery in May would be a seasonal occurrence and would probably be followed by a declining trend through September.

The general outlook for the steel requirements of the country seems fair. No large decline in general manufacturing and mineral production is in prospect; automobile production, while uncertain, has held up remarkably well through May; building activity has been large, though below peak levels (considering the season) and not finding expression in structural steel awards; a probability exists that the composite demand line will show a little rise in May, when the data for that month become available. As the adjusted curve of steel production declined in May, we may infer that the steel output of the country is in good balance with *potential* requirements. *But political uncertainties, the state of bank credits, and higher interest rates—to say nothing of low profit margins and increasing business failures—are all operating to keep the potentialities from becoming actualities during the near future.*

Four-Month Sales Largest Since 1923

APRIL orders and sales covering some of the chief items of finished steel fell off from March. This is a usual seasonal occurrence; but the decline was the sharpest for the month that has occurred since 1923. The April orders and sales also fell considerably below a year ago and were lower than the average for the first quarter. This is in accord with the sharp decline in unfilled orders. In each of the past five years, orders and sales in May have shown a considerable further decline, and in view of trade reports the past month apparently affords no exception. Probably the final returns will carry the curve of orders and sales well below the base line which represents the average for 1923-1926 (see Fig. 2).

The fact remains, however, that the first four months of 1928 brought the largest volume of finished steel business that has developed in this period since the year 1923, and that the second quarter of 1928, if not so good as in 1926, is likely to be up to the 1925 level.

The chief factor in the declining trend of our index of orders and sales was the particularly sharp recession in the sales of sheets—284,000 tons in April, against 399,000 tons in March, and 293,000 tons a year ago. This decline may reflect some let-up in the activity of automobile producers and possibly in certain classes of building. It is connected with the pronounced weakness in sheet prices. Bookings of structural steel, also, fell below March and were much under a year ago. A further decline in this item is indicated by the current trade reports. New business in steel castings held about steady at a low level. The buying of fabricated plates picked up a little, amounting to 48,500 tons in April, against 45,100 tons in March and 47,300 tons in April, 1927, making it the best April

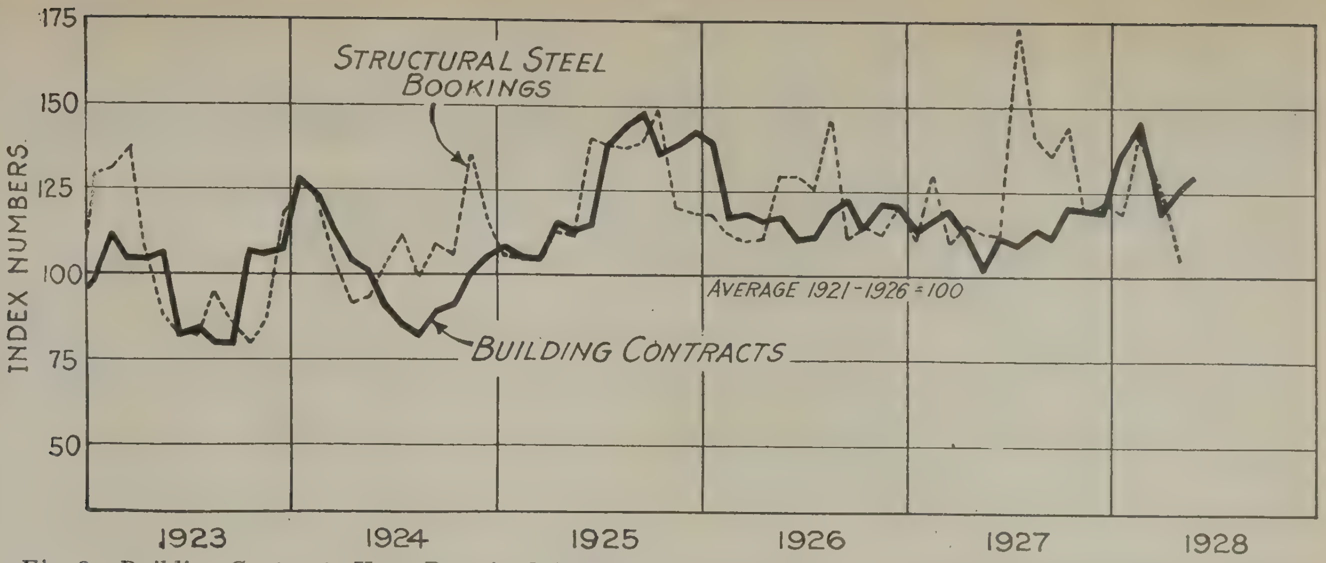

Fig. 3—Building Contracts Have Remained High, But the Slackening of Structural Steel Bookings Indicates That Much of the New Construction Is Residential

business since 1923. Plate buying for tank construction and general manufacturing purposes has been good.

Building Continues at Unusual Rate

ONE of the chief reasons for the well sustained current demand for steel is shown in the third chart, this being the better-than-seasonal activity in May building. Floor space in the total building contracts awarded in 37 States, as reported by F. W. Dodge Corporation, amounted last month to 95,256,000 sq. ft., which is a slight increase over April. Of course, April was a short month as to working days, while May was a long one, which may affect the total; but there is usually a decrease of over 2 per cent between the two months, and the actual gain of a little under 1 per cent brings our adjusted index of building contracts up to 128.7, against 124.5 in April and 100.1 a year ago—the average for 1921-1927 being 100. While, considering the season, this is much below the January-February peak, April and May represent the two largest building months on record.

Furthermore, building permits, after a long, sharp decline, took a turn for the better in May. On an average daily basis, with adjustments for seasonal variation, they ran 20 per cent above the average for 1921-1925, which is a better showing than in either March or April. Of course, permits may not be used. Also it is to be noted that most of the gain occurred in New York City.

The trend of permits suggests the possibility that the May building gains may have been largely in residential construction, a hypothesis that fits the fact that structural steel awards have declined so sharply. Be that as it may, our index of the bookings of fabricated structural steel, after adjustment for seasonal variation, fell in April to only 104 per cent of the average for 1921-1927, against 122 per cent in March and 115 per cent a year ago. This is the lowest point reached since August, 1924, and there is every indication from current reports that the May figure will show a further decline. Evidently recent construction, though increasing, has required less structural steel.

Little to Expect from the Carriers

RAILROAD equipment orders, while continuing poor in comparison with past years, have made a little improvement in recent months. The orders for freight cars in May amounted to only 2354, against 5683 in March, and 4378 a year ago. This is the lowest since January, but there is usually a sharp seasonal drop at this time of year, so it can be said that freight car orders are holding up fairly well. The rather pronounced decline in surplus freight cars since December is unusual at this season, but a further reduction will be required before the excess is sufficiently reduced to become the occasion for any large buying.

The locomotive business appears to have touched an irreducible minimum, and total shipments of all locomotives were the lowest in May since April, 1922. Domestic orders for steam locomotives, however, appear to be picking up, amounting to 52 in May, against 33 in April. The gain since January has been fairly steady, and the unfilled orders are the highest since the beginning of the year. The May orders were much below a year ago, but were about the same as in May, 1926, and in May, 1927.

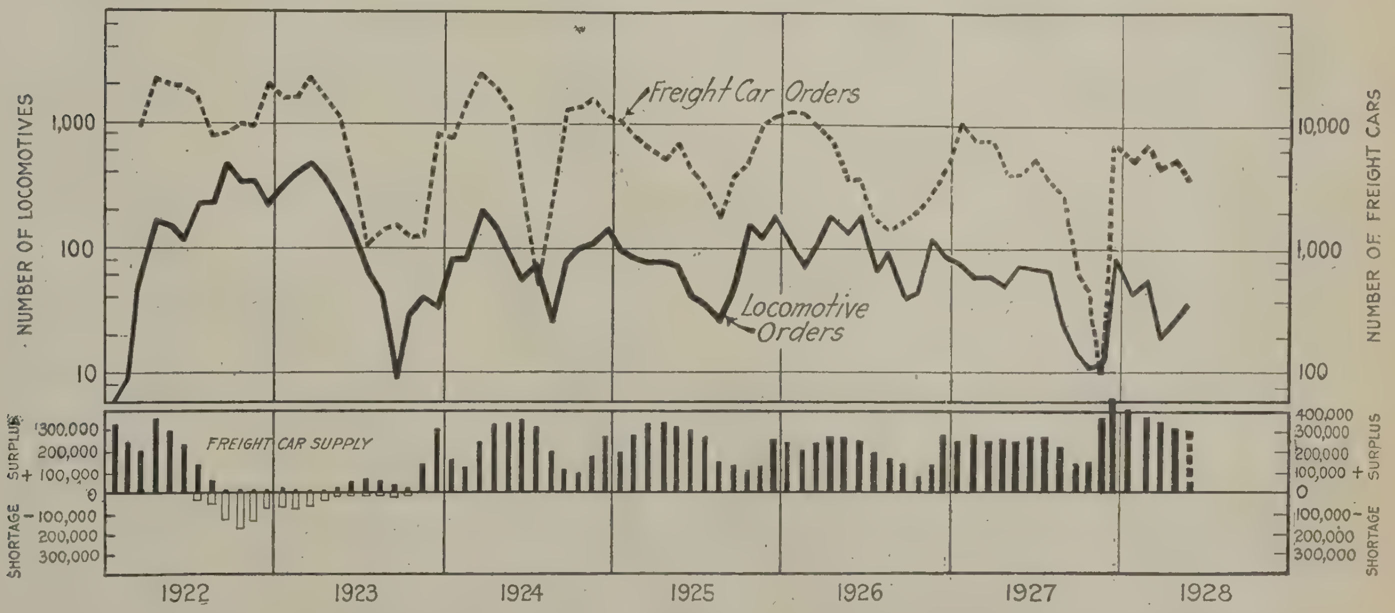

Fig. 4—Locomotive and Railroad Car Orders Continue Discouragingly Low. And the large surplus of cars does not indicate immediate need for heavy purchases

No Evidence of European Recession

Prices Firm and Deliveries Extended—American Mills May Increase Exports With Competitors' Prices Higher

(*By Cable*)

LONDON, ENGLAND, June 11.

CLEVELAND pig iron is dull with domestic and export users buying sparingly as the period of inventory is approaching. Cleveland prices are being maintained as a result of producers' well filled order books. Hematite is very quiet and further curtailment of output is considered as stocks are still large. Foreign ore continues quiet.

Finished steel business is inactive and plate mills particularly are pressing for business, but the association is unwilling to reduce prices, so that buyers continue scarce.

Welsh tin plate bar makers are well sold and some mills are asking 2s. 6d. (61c.) per ton more than the association price of £6 ($29.22) for forward deliveries. Continental sheet bars are quoted up to £5 12s. 6d. ($27.40) per ton, delivered, but sales are few because of the extended deliveries offered.

Demand for Welsh tin plate continues good and few supplies are obtainable from makers before the end of August or early September. Output is at about 95 per cent of capacity. Galvanized sheets are quiet. Japanese demand for light gage black sheets is well maintained and makers order books are well filled.

The Continental iron and steel markets are inactive so far as British traders are concerned, but prices are being maintained as the mills show less interest in booking new orders.

New Iron and Steel Exchange for London

LONDON, ENGLAND, May 24.—The London Iron and Steel Exchange enters upon a new phase in its existence on June 5, when a new exchange is to be opened at Imrie House, King William Street. This new exchange has been organized with a number of features which are not common to the majority of commercial exchanges. The new headquarters provide for the first time in the history of the British iron and steel trade a daily meeting place for manufacturers, merchants and others connected with the industry.

When the exchange was opened in 1919 it was thought that a weekly meeting would suffice to meet the demands of the trade, but it has now become apparent that a daily session is required. In the early days of its existence the weekly gatherings took place in the Great Hall of the Cannon Street Hotel, a much-used place for business conferences, but subsequently the exchange rented the rooms of the London Metal Exchange.

The new exchange is designed to provide a central London headquarters where buyers and sellers can get into touch quickly and easily. An unusual feature is that the new exchange is provided with a dining room and smoking room and a refreshment buffet and, in order to give these additional advantages, the new exchange has been registered as a business men's club.

Provincial and overseas members especially have experienced difficulty in the limited time afforded by their visits to London to transact business, which includes matters of freight and insurance.

Luxemburg Mills Well Booked and Export Business Is Fair

LUXEMBURG, May 26.—The market was rather weak during the early part of April, but toward the end of the month demand improved materially. The wage increases to German miners, followed by advances in the German iron and steel markets, have contributed to a firm and active market here. French mills are well booked with orders from their own domestic market, and Belgian producers, although not doing so large a volume of business, are well committed for several months.

Export business shows some slight improvement,

British and Continental European prices per gross ton, except where otherwise stated, f.o.b. makers' works, with American equivalent figured at $4.87 per £ as follows:

Durham coke, del'd.	£0 17¾s.		$4.33	
Bilbao Rubio ore*	1 2½		5.48	
Cleveland No. 1 fdy.	3 8½		16.56

although British purchases seem to be limited to immediate requirements. Trade with Argentina is more active, but Brazil is quiet. There has been some small activity in the Chinese market, but Japanese business for the most part, is going to domestic producers, who are quoting low prices.

Luxemburg works have good bookings, with deliveries lengthening. Pig iron output in April was 226,983 tons, and the steel production, 202,586 tons. There were 39 furnaces in blast on May 1, out of a total of 47 in Luxemburg.

GERMAN EXPORTS INCREASING

Decline in Domestic Activity Foreseen—Machinery Output and Exports at High Level

BERLIN, GERMANY, May 30.—Decline in the total number of unemployed continues, but this circumstance is attributed to seasonal improvement, as business activity in general shows evidences of slackening. Railroad traffic, which was steadily above the figures for the same period of last year until the end of April, has suddenly begun to decline. Output of manufactured goods has decreased, and raw material demand is beginning to lessen. However, despite the apparent close of the long period of intense industrial activity that began with the British strike, there is as yet no indication of a serious depression.

Production of steel ingots and rolled products declined in April from the March figure, the first recession in output following a long upward movement. Steel ingot output in April was 1,161,405 metric tons, compared with 1,450,352 tons in March, and production of rolled material was 917,673 tons, compared with 1,149,997 tons in March.

Domestic business is quiet except among foundries. Pig iron prices were not raised when the steel market advanced early in May, and demand for pig iron is undiminished. The general business situation is not unfavorable, and at the recent meetings of the ingot steel, A-products and bar syndicates it was stated that the steel industry is in a satisfactory position for the next few months. This belief is evidently based upon the relatively large unfilled tonnages on the books of most mills and on increasing activity and rising prices in the export market.

Export prices are firm, and, in the Belgian market, steel bars have advanced since last November from about £4 10s. per ton (0.99c. per lb.) to the present market level of about £5 17s. per ton (1.29c. per lb.). There is a heavy demand for semi-finished material. "World market prices," which are determined by the German Steel Syndicate and the consuming manufacturers for the purpose of fixing price rebates on material made for export, have been advanced again for June. Steel ingots, which were 79 m. ($18.90) per ton in May, have been increased to 81 m. ($19.38) per ton. Blooms have been advanced from 84 m. ($20.10) to 86 m. ($20.58) per ton, billets from 93 m. ($22.25) to 95 m. ($22.73), slabs from 96 m. ($22.97) to 98 m. ($23.45), bars from 105 m. ($25.13) to 110 m. ($26.32), shapes from 92.50 m. ($22.14) to 97.50 m. ($23.33), and heavy gages of sheets from 125 m. ($29.91) to 128 m. ($30.63).

Deliveries from most mills have been extending. Only small stocks are on hand at producers' plants, and deliveries on steel bars are from four to eight weeks, with structural shapes at two to six weeks. Steel bands are in good demand both from domestic users and foreign consumers. There is a moderate volume of activity in heavy and medium-gage sheets, but thin sheets are inactive and there has been a decline in wire products. Following the recent increase of 7 m. ($1.68) per ton in wire rod prices by the International Wire Rod Cartel, the German Wire Syndicate advanced its quotations on wire products by about 15 m. ($3.59) per ton.

Export inquiry for machinery is better, but the domestic market is slightly quieter. The Verein Deutscher Maschinenbauanstalten has made public the result of an inquiry into German production and sales of machinery. In 1913 output was valued at 2,800,000,000 m. ($670,040,000), in 1925 at 2,900,000,000 m. ($693,970,000), in 1926 at 2,500,000,000 m. ($598,250,000) and in 1927 at 3,400,000,000 m. ($813,620,000). At present prices, the 1913 output would be worth 3,800,000,000 m. ($909,340,000), so that even in 1927 the pre-war value of production was not reached.

Statistics on the proportion of sales to domestic and foreign consumers show that in years of poor domestic business Germany forced export trade, and that in the poor year of 1926 exports advanced to 34 per cent of output, compared with about 28 per cent in 1927. Both in 1926 and 1927 the proportion of exports to production was larger than in 1913. In 1913, domestic sales were 2,050,000,000 m. ($490,565,000), and export sales, 750,000,000 m. ($179,475,000). In 1925 domestic sales totaled 2,140,000,000 m. ($512,102,000), and exports 760,000,000 m. ($181,868,000). In 1926 domestic sales were 1,660,000,000 m. ($397,238,000) and export sales 840,000,000 m. ($201,012,000), and in 1927 domestic sales totaled 2,440,000,000 m. ($583,892,000) and export sales 960,000,000 m. ($229,728,000).

FRENCH PRICES FIRM

Domestic Market Active—Steel Cartel May Fix Larger Quotas for Third Quarter

PARIS, FRANCE, May 28.—Prices are firm both in the domestic market and for export. Activity is well distributed among all steel products, and most mills have sufficient business to take an independent position for the next two to three months. There has been some improvement in demand for fabricated material, and a number of engineering projects are in prospect. Consumers of bolts, screws and hardware are active, and automobile builders report good business.

The decision of the French railroads to equip all freight cars with continuous brakes at a total cost of about 1,600,000,000 fr. ($62,880,000) includes 260,000,000 fr. ($10,218,000) to cover the cost of installing the brakes on the cars. The first part of the contract is to be placed at once, 300,000,000 fr. ($11,790,000) to be reserved for French bidders and an order for 50,000,000 m. ($11,935,000) to go to Germany on reparations account.

At the end of June the International Steel Cartel will hold its quarterly meeting in Düsseldorf to determine the production quota for the third quarter. It is rather generally believed that the total tonnage fixed by the cartel will be increased by at least 1,000,000 tons. France, Belgium and Luxemburg as a group probably will ask for an increase of about 2,000,000 tons, but Germany is expected to oppose such a large advance in production. There has been a decided gain in output during the present quarter, and further increases are in prospect, with four new blast furnaces under construction in Belgium. By the end of the present quarter it is believed that Polish producers will have become cartel members. It is reported that, prior to the next meeting of the cartel, Central European steel producers will hold a conference to discuss questions relative to their competition in European export markets.

At the meeting of the International Wire Rod Cartel, June 8, at Cologne, it is expected that the price of wire rods will be advanced from £5 15s. ($28) per ton to £5 17s. 6d. ($28.62) per ton. Such an increase seems necessary, as the present price, f.o.b. Antwerp, is the same as on merchant bars.

Pig Iron.—Export demand for pig iron has improved, despite British competition, and prices are firmer. Recent transactions in pig iron have been at about £3 4s. ($15.59) per ton, f.o.b. Antwerp, for phosphoric foundry iron. Prices of basic iron are still subject to negotiation, but there is a tendency toward greater strength. In the domestic field, foundry consumers are active, but castings prices are low, despite the higher level of the pig iron market. There is still considerable discussion of a projected association of steel foundries.

Semi-Finished Material.—The export market is firm, and prices continue to advance. Deliveries generally extend to the middle of August. Buyers, however, have evidently covered their immediate requirements and are not so active as a few weeks ago.

Finished Material.—Prices are firm but cover a rather wide range, depending upon the deliveries the mills are able to offer. Mills in a position to quote fairly prompt shipment obtain high prices, while those offering up to five or six weeks are on a lower price level. Open-hearth material is being quoted at an extra of 100 fr. ($3.93) per ton. Most finished products have shown advances within the past fortnight of 3 to 5 fr. (12c. to 20c.) per ton. Merchant bars are quoted at £5 15s. to £5 16s. per ton (1.27c. to 1.28c. per lb.), and beams at £4 18s. to £5 2s. per ton (1.08c. to 1.12c. per lb.), depending upon the specifications.

Sheets.—Export prices are firm, except on the lighter gages, in which British competition is encountered. Black sheets of 0.5 mm. thickness are quoted at £10 12s. 6d. to £10 15s. per ton (2.34c. to 2.37c. per lb.), f.o.b. Antwerp. Sheets 1/16 in. thick range from £6 17s. 6d. to £6 18s. per ton (1.51c. to 1.52c. per lb.).

BELGIAN PRICES STRONG

Buying Light But Mills Are Well Booked—British Light Sheet Competition Keen

ANTWERP, BELGIUM, May 25.—Advances in prices continue so rapidly as to cause some confusion as to the exact level of the market on many products. Mills are quoting a wide range of prices, depending upon how well booked they are in the sizes and products under consideration. Recently the number of orders in the domestic market has begun to decrease, but, as producers are booked with tonnage enough to carry them through July and well into August, there is no prospect of any immediate recession of prices. Speculative buyers of steel seem to have covered their immediate requirements of material for short sales and are no longer very active. Exporters are inactive. While there are continued offers from French mills seeking to sell into the Belgian market, their quotations are as high as the Belgian prices and their deliveries are also extended.

Pig Iron.—Prices and general market conditions are unchanged. Demand is fairly active in the domestic market, and export inquiry is evidently improving. For export recent quotations on phosphoric foundry iron have been £3 2s. to £3 2s. 6d. ($14.98 to $15.10) per ton, f.o.b. Antwerp. Bessemer hematite iron is offered at about 660 fr. ($18.25) per ton, f.o.b. Antwerp.

Semi-Finished Material.—Although demand is still active, available supplies are small and many mills are not interested in new business. In consequence, the market is firm with a tendency to advance. Nominally, blooms, which are scarce, are quoted at £4 6s. to £4 12s. 6d. ($21.05 to $22.65) per ton, f.o.b. Antwerp. Billet prices range from £4 13s. to £4 16s. ($22.80 to $23.50) per ton, f.o.b. Antwerp, for 2-in. to 3-in., and sheet bars are quoted at about £4 19s. ($24) per ton, f.o.b. Antwerp.

Finished Material.—With speculators and exporters covered on their immediate requirements and consumers' stocks fairly well replenished, the market is quiet. Prices, however, are quite firm, with most mills well committed for the next 60 days. Steel bars are scarce and premiums on the present price of £5 16s. per ton (1.28c. per lb.) are being asked in many cases. There are occasional reports of quotations by French and German mills of £5 15s. per ton (1.27c. per lb.), but these seem to be the exception rather than the rule. Prices of angles are firm and beam quotations are advancing. Current offers are £5 per ton (1.10c. per lb.) for beams and £5 7s. per ton (1.18c. per lb.), for angles. Wire rods are quoted at £5 15s. per ton (1.27c. per lb.) and hot-rolled hoops at £6 17s. 6d. per ton (1.40c. per lb.), f.o.b. Antwerp. The sheet market is firm, following the recent advances. Most mills are fully booked with business, even on the lighter gages. British competition for light-gage sheets is keen.

Shipments of electric industrial trucks and tractors in May are reported by the Department of Commerce at 116 units, of which 13 were for export. This compares with a total of 137 in April and with 106 in May last year. For the first five months the shipments have aggregated 615 this year, against 555 a year ago.

STEEL EXPORTS MAY GAIN

High European Prices Suggest Possibility of United States Mills Selling More in Foreign Markets

NEW YORK, June 12.—Prices of foreign steel have continued to advance, and plain steel bars of Thomas grade are now quoted at 1.88c. to 1.93c. per lb., duty paid, New York. Recently importers found it possible to do some business in concrete bars when the smaller sizes were specified, as European makers in a few cases were not fully booked. There is still a small tonnage of structural material being sold by importers, but most of this was purchased from the European mills prior to recent price advances. Even on large tonnages of hoops and bands, prices equivalent to the American mill quotations are being asked by Continental makers.

In the past few weeks, with Continental sellers quoting higher prices in foreign markets, exporters of American material have been able to secure an increasing volume of business. Sales to Japan and China are still rather limited, but galvanized sheets, wire and wire nails have been sold to South American markets and some small bar business is reported. Exporters here express the opinion that there may be a decided improvement in export of steel products from this country if the European price level continues as high as at present, which seems likely.

In addition to recent export business in sheets, wire and nails with South American markets, Japan has appeared as a buyer of gas pipe, the Tokio Gas Co. having closed in the past week on 975,000 ft. of black gas pipe, the order to be placed by the exporter with American makers. About 15 miles of 60-lb. rails for a Japanese railroad are reported to have gone to the Government Works in Japan. A few inquiries for wire rods are reported in the market from Japanese consumers, but offers are only about $37 per ton, c.i.f. Japan, while the current price of American mills is about $42 per ton, c.i.f. The Canadian interest which usually sells a fair tonnage of wire rods to Japan when there is any demand is reported well booked with business and temporarily quoting high prices.

Only a small tonnage of tin plate is in the market for Japanese consumers. With the exception of the leading American producer, which is reported to be in a position to offer some tin plate for movement this month, most mills are quoting August-September shipment to Japan. British tin plate makers are booked with business well into the fall and are unable to make early shipment, but exporters claim that brokers and exporters in the United Kingdom can offer practically any shipment required, although at prices higher than the current Welsh quotation.

German Domestic Market for Machinery Sustains Activity

WASHINGTON, June 12.—For the German machinery industry 1927 was a period of high-pitch activity, according to a report prepared by Consul-General C. B. Hurst, Berlin, made public by the Department of Commerce. Although total sales, amounting to 2,600,000 tons, were 600,000 tons smaller than during the prewar times, the improvement of economic conditions in Germany brought about an increase of domestic sales. In spite of considerable difficulties, German manufacturers succeeded in regaining their position in the international trade and in bringing about an increase in exports of machinery.

During the year German machinery exports ranked second after those of the United States. The value of the excess of German machinery exports over imports amounted to 7,500,000 m. ($1,800,000), thereby representing the highest export value of all German industries. These favorable results were reached although the cost of production rose considerably during 1927, while, owing to severe competition, an increase of prices was not possible. A lively demand existed for steam engines and particularly for steam engines for vessels, as efforts are being made to reorganize the German commercial fleet along modern lines.

Buyer Talks on Pressed Metal Selling

W. B. Calkins, General Purchasing Agent Willys-Overland Co., Discusses Prices and Other Factors at Meeting of Manufacturers of Stampings

THE Pressed Metal Institute, consisting of manufacturers of metal stampings, was addressed at its meeting in Toledo, Ohio, on June 7 by W. B. Calkins, general purchasing agent Willys-Overland Co., who discussed various selling methods, the making of prices and other subjects having to do with the relations between the purchasing department and the purveyor of stampings and other products used in the manufacture of automobiles.

"You are best known," he said to these manufacturers, "through the contact of your salesmen. Are they selected because of their detailed knowledge of your business and your products or because of their affability? Can they and do they convey your message clearly and briefly, or do they consume unnecessary time by general conversation on the topics of the day? Not that the buyer isn't interested, but if his office hours are to be successfully applied it must be through the securing of the greatest possible amount of information in the time available.

"From an advertising standpoint, your salesmen should give as interesting an outline of your affairs and the advantages of your service as it is possible to give. Fortunately, the so-called art of high-pressure salesmanship is becoming obsolete, but where it does exist it can be expected to have as much effect as the winds out on the prairie, as a buyer would not be suitable for the position he occupies if high-pressure selling were allowed to affect his judgment.

"When the salesman reaches the point where he is trying to close the business, he undoubtedly will make very strong claims that the prices quoted are the lowest that can be offered with any profit at all, and that if another concern offers lower prices it cannot successfully continue in business and will be unable to furnish satisfactory deliveries and a suitable quality. The salesman will finally wind up by asking, as a 'special favor,' what price he must quote to get the business. This information, if the buyer gave it to him, certainly would not increase the other bidders' confidence in the fair play of American business.

Some Reasons for Price Differences

"In numerous instances we have found that concerns which stated to us that they could not make lower prices have come back within a year and have quoted prices lower than the one which originally won the business. An outstanding reason is a difference of 10 or 15 per cent in the quality, kind or amount of the raw material which various concerns claim is required to produce the article. Do not overlook the fact that you are the buyer of this raw material and that it constitutes more than 50 per cent of your sales invoice price. You then wonder why the buyer often believes there is a similar difference in the other factors which go to make up the total price.

"Sometimes it may be that the buyer is unable to use a certain material unless the price is low enough. We have had such a condition, and after sales engineers have spent a month with our designers they have quoted a prohibitive price. Then we would invite in another concern, and upon receiving materially lower quotations have caused an inquiry to be made of the original bidder as to the care exercised in the study of the subject. Then the first bidder would request a little more time to reconsider before the business was placed; then quote a price about 30 per cent below the first price—and this without pressure on the part of the buyer or the creating of a so-called buyer's market. This situation clearly indicates that too many times a constructive study of the subject is not carried out in the first instance."

Mr. Calkins said that the question is often raised as to how a buyer decides who shall have the business when prices are equal. He answered that this sometimes depends on the location of the seller's plant, his reputation as to dependability, and, more frequently, on whether the seller has ever offered the buyer any constructive suggestions regarding the articles he produces, such as simplifying the design or any other point which would tend to improve quality or reduce costs or both.

Correct Cost Finding Prevents Revision of Quotations

The speaker also advocated better cost-finding methods for manufacturers of metal stampings. This is now done by estimating and planning departments, but frequently no comprehensive study is made and the seller does not know what his real costs are going to be until the job has gone through his shop. Correct cost finding in the first instance, before prices are quoted, would, according to Mr. Calkins, prevent a repetition of business calls and the revision of quotations, and the expense incurred would be no greater than under the present method.

"To develop cost finding," he said, "it is desirable that the manufacturing, estimating and sales departments collectively go over the subject and anticipate how new methods can be applied to the production of the article. In doing this you will establish a bond of sympathy and cooperative education of the various departments, thus producing a joint understanding as to what is required in the administration of your affairs, reaching down to your foremen. This will continually bring out from your organization suggestions as to improvements in methods, eliminations of waste and an ability to exceed your past performance in the use of the smallest amount of floor space and equipment with the least amount of handling (that by mechanical means if practical) in the shortest possible time from the receipt of your raw material at your receiving doors to the finished product in your shipping department.

"It has been found that concerns which do not have the best of equipment often exceed others by having well directed and loyal employees, who produce equal or better results by reason of a study of the problem of producing with the facilities which they possess; by the addition of special equipment they have secured final results and selling prices which competitors do not equal, thus causing the latter to make claims that such prices will not produce profits.

"The question has been asked as to how the stampings manufacturer can hold business that the buyer may be undertaking to produce for himself. This can only be accomplished by developing such advanced methods and economies of operation that the buyer, on analyzing the subject, will find no advantage in producing the article. This policy has been followed by one concern we know for at least 20 years; it has been almost their golden rule, and successfully so, even causing them to enter into the manufacture of their own basic materials, and in our opinion they are more firmly established today than ever."

The Columbia Tool Steel Co., Chicago Heights, Ill., has called attention recently to its trade mark Superdie, which was adopted for the modification of the high-carbon high-chromium tool steel it developed in 1926. The company at that time received registered trade mark No. 230,327 covering the use of the word "super" in conjunction with the word "die" on tool steels, metals, metal castings and forgings.

DISTRIBUTION CONFERENCE

Wider Application of Bolt, Nut and Rivet Plan to Be Discussed

IN response to the suggestion contained in a pamphlet issued by the Bolt, Nut and Rivet Manufacturers Association in April, a conference of manufacturers of products handled through hardware, jobbing and mill supply channels for a discussion of sales and distribution problems will be held at the Waldorf-Astoria Hotel, New York, June 28 and 29, under the auspices of the bolt, nut and rivet industry. In addition, all of the chairman of the 34 district committees of jobbers, formed to facilitate the distribution of bolts, nuts and rivets, are expected to be present.

A belief that wider application can be given the plan of the bolt, nut and rivet industry for the economical distribution of its products will form the basis of the discussions at the conference. The basic principle of the bolt, nut and rivet distribution plan, which incidentally has proved highly successful, is the elimination of the manufacturer as the leading competitor of the jobber.

The program of the conference calls for general meetings, morning and afternoon of both days, with a banquet scheduled for Thursday evening, June 28. C. J. Graham, who is chairman of the general committee of the 56 manufacturers of bolts, nuts and rivets, who are to be hosts to the gathering, will open the first general conference with an outline of the plan of the meeting, and detail the results which have attended its application in that industry. This is to be followed by an open discussion by manufacturers present, who will be asked to express their ideas on the practicability of this or some similar plan in their own particular industry. At the afternoon session, jobbers will be given a chance to present their ideas. On Friday morning, governmental representatives will be heard, and the afternoon is to be given over to organization of the plan. Charles M. Schwab has indicated his intention to be present and to make an address. It is expected that between 250 and 300 executives of the leading industries in the country will attend the conference. The chairmen of the jobbers' committees are as follows: R. H. Welton, Chase, Parker & Co., Boston; W. E. Hansen, Hansen & Yorke, New York; A. B. Paull, Beals, McCarthy & Rodgers, Buffalo; W. E. Bittenbender, Bittenbender Co., Scranton, Pa.; Fitzwilliam Sargent, Standard Supply & Equipment Co., Philadelphia; Louis Moller, Anderson & Ireland, Baltimore; Alvin M. Smith, Smith-Courtney Co., Richmond, Va.; Charles Nuchols, American Hardware & Equipment Co., Charlotte, N. C.; George Winship, Fulton Supply Co., Atlanta, Ga.; L. J. Larzelere, Farquhar Machinery Co., Jacksonville, Fla.; W. L. Rodgers, Pittsburgh Gage & Supply Co., Pittsburgh; H. H. Riddle, George Worthington Co., Cleveland; W. H. Basse, Joseph T. Ryerson & Sons, Inc., Detroit; F. T. Holliday, W. J. Holliday & Co., Indianapolis; George Puchta, Queen City Supply Co., Cincinnati; Brown Buford, Buford Brothers, Nashville, Tenn.; W. W. French, Moore-Handley Hardware Co., Birmingham, Ala.; James Pidgeon, Pidgeon-Thomas Iron Co., Memphis, Tenn.; George K. Conant, Sligo Iron Store, St. Louis; A. M. Mueller, Joseph T. Ryerson & Son, Inc., Chicago; I. R. Shadbolt, Shadbolt & Boyd Iron Co., Milwaukee; William J. Dean, Nichols, Dean & Gregg, St. Paul, Minn.; W. E. Muir, Luthe Hardware Co., Des Moines, Iowa; Edward O. Faeth, Stowe Supply Co., Kansas City; S. E. Clarkson, Oklahoma City Hardware Co., Oklahoma City, Okla.; Alfred Weaver, Briggs-Weaver Machinery Co., Dallas, Tex.; D. D. Peden, Peden Iron & Steel Co., Houston, Tex.; J. B. Simmons, Woodward-Wight Co., New Orleans; P. R. Helm, Pratt-Gilbert Hardware Co., Phoenix, Ariz.; H. V. Waterman, Hendrie & Bolthoff Machinery & Supply Co., Denver; H. P. Lambrecht, Salt Lake Hardware Co., Salt Lake City; George W. Boole, A. M. STEEL PRICE STABILIZATION

Movement Progressive, but Downward, Along With Fewer Producing Companies

PROGRESSIVE stabilization in steel prices, particularly stabilization at low prices, is indicated in the accompanying table. This shows recent yearly averages of THE IRON AGE finished steel composite price. Also it shows the extreme swing in each year between the high and low composite prices. What is outstanding is that, notwithstanding the higher prices obtaining in recent years as compared with those before the war, the swings are only a fraction of those in, say, 1912 and 1913. The fact is brought out in the last column, by expressing the swing as a percentage of the price.

Thus, while the composite prices for a period before the war averaged somewhat over $28 a net ton, or 1.40c. a lb., the fluctuations brought a range in a year of over $6.50 a ton, or a swing of 20 per cent, roughly. In 1926, on the other hand, the fluctuations had dampened to a maximum swing of 74c. a ton, or only 1½ per cent of the larger composite average of nearly $49 a ton. In other words, with prices in recent years two-thirds higher than before the war, the price swings, taking the last three years, have been only one-tenth to four-tenths of the pre-war price swings.

The number of companies making the bulk of the rolled steel has been reduced one-third in the last five years. In 1922 about 80 per cent of the steel bars produced came from 35 companies, while last year that percentage was supplied by 20 companies. Twelve companies today supply 80 per cent of the plates, against 21 in 1922. There are six companies accounting for 85 per cent of the structural shapes, against 9 six years ago. In like comparison, roughly 20 companies can turn out 70 per cent of the sheets, against 29 in 1922.

Counting the leading producers of bars, plates, shapes, sheets and wire, (although there has been little change in the number of companies making wire products), the total number of leading sources of supply in 1922 was 117 (If one company made three forms of steel, it is considered as providing three competitive sources of supply, etc.) and in 1927 it was 78, a loss, as by consolidations, of 39, or one-third. The figures show fewer companies, with progressive stabilization but lower prices.

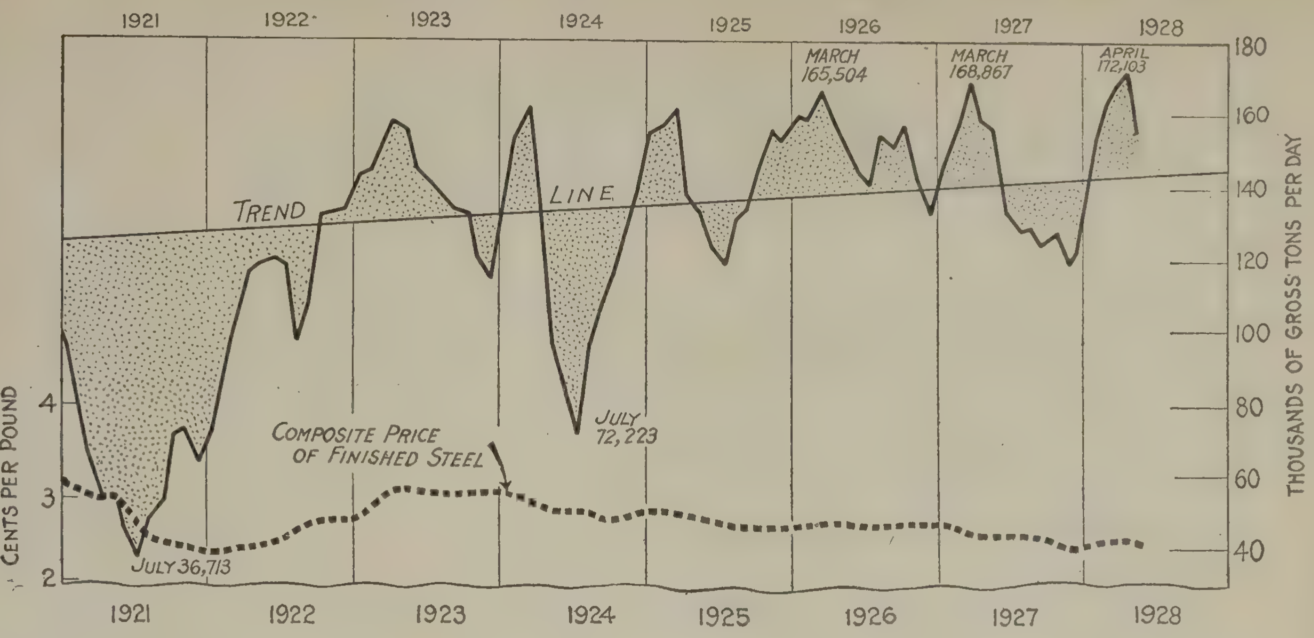
Fluctuations in Prices of Finished Steel

Year	Rolled Steel Produced Per Capita, Lb.	Composite Price Per Net Ton	Price Swing Per Net Ton	Per Cent of Swing
1912	540	$28.28	$6.62	21.6
1913	540	29.36	6.54	19.6
1919	515	57.94	7.34	11.8
1920	650	85.52	17.06	23.2
1921	315	50.64	19.00	37.5
1922	525	44.40	9.08	20.5
1923	650	54.76	6.90	12.6
1924	545	52.18	6.38	12.7
1925	645	49.30	3.26	6.6
1926	680	48.78	0.74	1.5
1927	620	47.14	2.66	5.5
1928 (5 mos.)	710	47.00	1.00	2,1

Trumbull Steel Co. Assets to Be Distributed

Final chapters are being written in the history of the Trumbull Steel Co., Warren, Ohio, whose properties were recently taken over by the Republic Iron & Steel Co., Youngstown, and now constitute the Warren plant of Republic. Proceeds of the sale of the Trumbull company's assets to Republic are now to be distributed. The Trumbull company has for distribution 296,000 shares of the common stock of Republic Steel and $296,000 in cash, the latter representing the $1 a share dividend on Republic common, which was paid June 1. Each holder of Trumbull preferred will receive 1 2/3 shares of Republic common for each share of preferred, while each holder of Trumbull common receives one-fifth of a share of Republic common for each share of Trumbull. With this distribution, the Trumbull company will become a corporate nonentity, without assets of any kind, and its corporate identity will be dissolved.

While Dropping 10 Per Cent from the Record-Breaking April Daily Rate, Production of Steel Ingots in May Was the Seventh Largest for Any Month We Have Yet Had. Prices, as measured by THE IRON AGE *finished steel composite price, were slightly lower*



Steel Ingot Production Less in May

Daily Output 9½ Per Cent Off from April, but Total Is Still High —Five-Month Tonnage Largest Ever Reached

PRODUCTION of open-hearth and Bessemer steel ingots in the United States in May is calculated by the American Iron and Steel Institute at 4,203,190 gross tons, an average of 155,674 tons for each of the 27 working days. This shows a reduction from the April total of 4,302,573 tons in 25 days, or the record-breaking average of 172,103 tons a day. The May total has been exceeded only by April and March of this year, March, 1927, March, 1926, March, 1924, and May, 1923.

For the five months of the year the calculated output is 21,049,919 tons, which exceeds the corresponding figure for last year by 3.7 per cent. It is ahead of the 20,419,656 tons of the first five months of 1926—the previous record—by approximately 3 per cent. The operations are based on returns from companies which in 1927 made 94.68 per cent of the open-hearth and Bessemer ingot production of that year.

Production of Steel Ingots*

(Gross Tons)

Dec.	2,557,955	448,154	3,175,484	122,134
Total..	34,932,552	6,150,434	43,397,743	139,543

*Excluding crucible and electric steel ingots.

Further movement away from the use of Bessemer steel is shown by returns for the five months, in which the Bessemer tonnage reported was 3.2 per cent less than last year, whereas open-hearth production increased 4.8 per cent. But May showed a gain in Bessemer over April, and a decline in open-hearth steel.

Estimating production in April of electric and crucible steel ingots (no longer covered in the institute's monthly figures) at 1400 tons a day, the total April ingot output appears to have been at the rate of about 157,000 tons for each working day. Details of the past 17 months are given in the table.

Tin and Sheet Workers Scales Renewed Except for Minor Changes

The wage scales to be paid in sheet and tin mills operated under an agreement with the Amalgamated Association of Iron, Steel and Tin Workers for the 1928-29 scale year will be substantially the same as in the year which ends June 30. The conference at Atlantic City between representatives of the manufacturers and the wage scale committee of the Amalgamated Association reached an agreement on a continuance of the 1927-28 scale, except that the manufacturers concede a 5 per cent increase for tin mill pair heaters on No. 28 gage and heavier and the screw boy on No. 27 gage and lighter, while in mills working on the three-part system, the crew, except the operator of the mechanical doubler, will receive the four-part system prices when working matched iron of Nos. 27, 28, 29 and 30 gages, and the single boy and screw boy are granted a 5 per cent increase on steel No. 27 gage and lighter.

Affirming a previous opinion that rates on pig iron from points in Alabama, Kentucky and Tennessee to Ansonia, Conn., are not unreasonable, the Interstate Commerce Commission upon reconsideration has handed down a second report holding that the rates are unduly prejudicial to the complainant, the Farrell Foundry & Machine Co., Ansonia, to the extent they exceed corresponding rates maintained from the same points of origin to Derby and Shelton, Conn.

This Issue in Brief

Cuts labor cost 33-1/3 per cent by adoption of incentive plan. Working force in shipping department is almost halved, and wages of remaining employees are increased 25 per cent by paying group bonus.—Page 1676.

World output of iron is virtually at a standstill for first time in 150 years. The steady and high rate of progress to which the world has been accustomed ceased during the past decade, with attendant unsettlement of conditions in every producing country.—Page 1671.

"Excess capacity" is no excuse for insufficient profits, says banker. Practically every industry is over-expanded, yet many are enjoying adequate earnings. The craze for volume regardless of cost of getting business is the primary cause of unsatisfactory returns.—Page 1682.

Continued weakness in steel prices is likely to persist, says Dr. Haney. Steel output is too high in relation to demand, he believes.—Page 1691.

Should a bonus be paid for **regular attendance** at work? Before adopting a bonus system of this kind, the manufacturer should find out just how much tardiness or absence is costing him. He may find that the bonus system will cost more than it will be worth.—Page 1677.

Accelerated tests are not conclusive, and are frequently unreliable. Owing to variations in temperature, time, kind of solutions, position of specimen, etc. accelerated tests serve merely as an indicator. The best test is commercial usage. The experience of actual users, frequently overlooked, provides the manufacturer with a fund of concrete, definite data.—Page 1668.

Chromium-plating demands an almost perfect surface. Chromium plate will not flow as the softer deposits do, and will not only reproduce all defects, but actually seems to magnify them.—Page 1680.

Payment of bonus for saving of scrap and labor increases manufacturer's profits. Foremen are paid a bonus for performance as compared with predetermined standards. In computing the bonus allowance is made for meeting delivery promises and for reduction of complaints and rejections by customers.—Page 1678.

Reduces finished stock and stock in process 80 per cent and saves $59,000 by rearranging enameling department. Cash register manufacturer cuts floor space 30 per cent, gets parts through the department in one-fifth the time formerly consumed, and increases output one-third by installing conveying systems and re-routing work.—Page 1672.

World commodity prices are likely to fall irregularly for the next 20 years, says economist. Wages are not likely to do so, at least not immediately, owing to strength of labor groups in all countries. Yet, unless prices and wages move together, there will be extensive labor troubles or a sharply reduced rate of profit.—Page 1669.

Are there too many mergers? "It is time we got over the notion that any merger is a good merger," says banker. Merely putting two businesses together does not automatically improve them.—Page 1682.

Character of the gas reveals what is going on inside the blast furnace. Observing the character of the gas will enable the operator to keep the furnace under better control and so reduce the output of "off" iron.—Page 1686.

Decentralization of output of heavy commodities will increase, rather than tend to concentrate in certain countries and centers, as before the war, economist believes. This is due to protective tariffs and to the worldwide belief that safety lies in each country making everything possible in the way of necessary manufactured products.—Page 1669.

Drop of almost a half million tons in Steel Corporation's unfilled orders. At May 31 the unfilled tonnage was 3,416,822, the lowest since October, 1927.—Page 1729.

Should foremen use "school room" methods in training workers? No, says management association executive. Men cannot be trained out of a text book, he holds. Best results are obtained when the foremen bring their individual instruction problems into a joint conference of foremen and management.—Page 1678.

Group bonus distribution is put entirely in the hands of the foreman. Cash register manufacturer requires the foreman to turn out a certain number of pieces costing so much, and gives him full supervision of the distribution of the bonus to the men under him. Expressing incentive standards in decimal hours was not understood by employees, so the standards were changed to dollars, with satisfactory results.—Page 1676.

Seller's ignorance of costs weakens buyer's confidence. Purchasing agent of automobile manufacturing firm decries two-bid methods of sellers who do not know their costs. Tells pressed metal manufacturers that the best way to get business and to hold it is to get accurate cost data and then develop such advanced methods and economies that the buyer can find no advantage in producing the article himself.—Page 1697.

New Steel Era—New Methods

A YOUNG industry has reached maturity. Iron and steel masters whose experience taught them to think in terms of rapid increases in production face a changed situation. No longer must they strain to keep abreast of consumption. No longer is demand forcing expansion of capacity. For several years world consumption of iron and steel has been virtually static. As pointed out by Edwin C. Eckel in an article in this issue of THE IRON AGE, it was only in 1927 that world production recovered the ground lost after 1913.

Undoubtedly the great economic losses suffered during the war had much to do with checking the expansion of steel trade, but whether arrested development is a post-bellum phenomenon or marks the passing of the industry's adolescent growth, the problem remains the same. The time has passed when steadily mounting demand can be taken for granted. Steel makers must take the initiative in uncovering and cultivating new and larger markets. Research departments and sales organizations must collaborate more effectively in discovering and promoting new uses for steel; financiers, economists and governments must be enlisted to accelerate the development of backward industries and districts, not to mention the almost untapped continents, South America and Africa. The task is a new one and calls for new ideas.

The keynote of this new period was sounded by Eugene G. Grace, one of the industry's forward-looking executives, who at a 1926 meeting of the American Iron and Steel Institute said, "We must be better merchants." Better merchandising means more than greater stability in prices, desirable as that end is. It implies a careful study of human wants and skillful publicity to stimulate their satisfaction. It involves the broadest conception of the economic development that is essential to continued growth of steel production. It must envision great potential markets that are waiting to be taken by the makers of steel.

The steel industry did not lack imagination in creating productive capacity. It will not be found wanting in solving its new problem. Before the war the steel maker had steel to *make;* today he has steel to *merchandise.*

Better Machine Tool Marketing

MACHINE tool manufacturers recently have shown a disposition to grapple with their problems in a way that not only promises concrete results but also points the way to other business groups. Some of the latter have long followed the familiar routine of discussing trade ills at conventions, and then passing resolutions, after which the members depart to their homes to do little or nothing until the next year's convention rolls around, when the same procedure is gone over again.

A besetting problem of the machine tool industry, as pointed out at the recent convention of the National Machine Tool Builders' Association in Chicago, by P. E. Bliss, president, is the great amount of free service demanded by tool users. Now the lathe group of the association has decided upon a per diem service charge, plus legitimate expenses, and if the plan succeeds other machine tool manufacturers will undoubtedly take a like stand.

Another enemy of profit with which the industry has wrestled until recently with doubtful results is that of the "trade-in" of used tools when new tools are purchased. Dealers operating second-hand tool departments were frequently disposed to allow an amount for an old tool that was considerably in excess of the price it would bring when resold. This plainly was tantamount to a cutting of prices. J. R. Porter, a Chicago dealer, told the machine tool builders at their convention that not so long ago his company, in one instance, allowed $300 more for an old machine than it actually brought at resale. The $300, of course, came out of the dealer's commission on the sale of the new tool. In Chicago and in New York an appraisal plan is now being applied in the trade-in of used tools that promises to eliminate most, if not all, of the abuses so long under complaint. A group of dealers in one center selects a second-hand machinery dealer as an appraiser for all used tools offered in exchange for new tools. The appraiser puts a price on the old machine, this price usually being one at which the appraiser is willing to buy the tool. Thus, all dealers who are quoting on the new machine use the same figure as the trade-in allowance.

According to Mr. Porter the new method is being accepted as "good business" by the trade in districts where it has been tried out. Formerly, there was a good deal of dickering by machine tool users on the valuation of the old machine, and not infrequently the dealer making the largest allowance got the order for the new machine. Under the plan adopted it is believed that much price haggling will be eliminated and that new tools will be bought to a larger extent on their merits and not because of the size of the trade-in allowance.

Congress Adjourned

IN the theory of our Government Congress represents the people. The founders supposed that it would act collectively in the interest of all the people. It was not foreseen that the country would become so big and would have so many diverse interests that the representatives of some sections would unite with representatives of others to pass utterly selfish legislation. It was not foreseen that political blocs with great power for mischief would develop; and it was not foreseen that political office holding would become quite so much a matter of professional business as it is. Fortunate is it, therefore, that the president was clothed with great power as the disinterested representative of all the people. It is of course just this that creates the hostility that comes into existence between all presidents and all congresses.

In the Congress that has just adjourned from one session the President was a great bulwark of the people. He stopped an outrageous Mississippi River flood control bill, vetoed an agrarian bill that was running over with folly, and pocketed the foolish Muscle Shoals bill for putting the Government into a commercial business. We may believe that he will also stand in the way of the selfish and reckless Boulder Dam bill if, when and as that ever reaches him.

Several important bills that were a mixture of good and bad he felt constrained to accept out of consideration that the good preponderated. Thus the shipping bill, although it would have been far better to have had a bill for the liquidation of that money-losing business. Likewise the bill reducing taxes, as regards which Congress bowed to the President in respect to reduction in the aggregate, but not in the manner of making it. The intermediate incomes, which have had but little relief, continue to be disregarded in spite of the administration, for envious congressmen believe in punishing competency; yet the tax on automobiles, which drew some payment for road building from those who use the roads, was rescinded. Anathema to a congressman is anything of the nature of a consumption tax that is bound to be of widespread incidence.

Congress all but perpetrated the atrocity of throwing all income tax returns open to public inspection. This illustrated its spirit. It is vexatious and unrepresentative. Yet those who have a sense of sardonic humor can find a certain amusement out of what is really sad. The Senate converts itself into a detective bureau, but does not intrigue us as Sherlock Holmes used to do, or even the Pinkertons. Congress raves over the nullification of a recent constitutional amendment, but is oblivious to what has happened to some older ones. Itself has been trampling upon an article of the constitution requiring the House of Representatives to reapportion its members after every decennial census.

Most humorous of all is the anxiety exhibited by members as election time approaches, to ascertain what their constituents want and to imagine that their constituents in mass know anything in respect to economic subjects beyond what in New York is symbolized by the five-cent fare, which is perhaps the finest lolly-pop that was ever invented in a country where democracy rules. Compared with that the recent congressional removal of taxation on amusement tickets up to $3 was kindergarten work.

An Unexpected Steel Record

PRODUCTION of steel ingots in the first half of 1928 will make a new high figure for any half-year. The present record is 24,153,809 tons, made in the first half of 1926. For the first half of 1927 the total was about 1½ per cent lower. No second half-year has come within 5 per cent of the 1926 first half in point of tonnage.

Returns for the first five months of 1928, as calculated by the American Iron and Steel Institute, showed 21,049,919 tons. Production in June, therefore, may fall as low as 3,105,000 tons and still the six months would have a new record. But production in June, with 26 working days, even assuming a drop of 20 per cent (which is most unlikely) from the May daily rate, would be about 3,239,000 tons, or 134,000 tons more than enough to establish the record. At 4,203,190 tons, May ranks as the seventh month in point of gross output in the history of the industry.

Building and automobile consumption of steel have had their part in bringing up production this year, whereas the railroads have been below their average consumption of the past five years. Probably no one whose judgment on the matter is entitled to have weight believed as this year came in that the steel industry would outdo itself in the first half of 1928. But it appears that the uncounted and steadily mounting minor uses of steel in a multitude of channels new and old have again gone beyond the ken of those best able to know of the movement and to take its measure.

Pittsburgh in Steel

INFLUENCED in part no doubt by the fact that in recent years not a few Pittsburgh business men have been doubtful of the Pittsburgh district retaining its supremacy in steel manufacture, President W. G. Clyde of the Carnegie Steel Co. has given an interview to the *Post-Gazette*, Pittsburgh's morning newspaper. Confidently he tells Pittsburghers that the district will remain in its important position in steel. Expenditures of more than $100,000,000 in improvements in a little over four years by the Carnegie Steel Co. alone, in the

Pittsburgh district alone, are referred to as crucial testimony to the faith of the United States Steel Corporation in the district's future. This leaves out of the reckoning expenditures of other Steel Corporation subsidiaries, also Carnegie expenditures at Farrell, New Castle, Youngstown and Mingo Junction.

Mr. Clyde refers to the large river fleet the Carnegie Steel Co. has been constructing, with an expenditure of $5,000,000 in four years. Pittsburgh has this freshly developed, and developing, means of cheap transportation; it has its good railroad facilities, and in Mr. Clyde's words it is "close enough to Baltimore and Philadelphia for a grip on the export business."

Pittsburgh's misgivings about her industrial future, which this interview is calculated to allay, arose nearly a quarter of a century ago. Previously there had been a complacency not altogether consistent with progress. Formation of the United States Steel Corporation in 1901, involving apparently a removal of ownership of a large part of the Pittsburgh district's steel making and steel finishing capacity, was followed in 1905 by announcement of the corporation's intention to build the Gary plant. Naturally enough the project received much attention, but this was partly due to the fact that this was apparently the first instance of a perfectly new steel plant of any such size being built from the ground up at one operation. Lackawanna was such a plant, but had appeared to the public as a removal. A train of thought started in the Pittsburgh mind which has continued to the present day.

It is very easy, on paper, to overrate or underrate the advantages or disadvantages of any producing district. Freight rates may be made to appear of paramount importance, for the thing is done on every working day of the Interstate Commerce Commission. The steel industry is largely a fixed thing. Plants cannot be moved, and the relative production of different districts can change only gradually, chiefly by growth at one point and decadence at another, a slow process at most.

For many years the steel industry's total tonnage grew rapidly, as for instance, from less than 5,000,000 tons of ingots and castings in 1892 to more than 10,000,000 tons in 1899, then to 20,000,000 tons in 1905, 31,000,000 tons in 1912 and 45,000,000 tons in 1917. It was in such times that important shifts in relationships could occur, and Pittsburgh readily survived, retaining a dominant position. In the last five years the country's total steel production has increased but little in point of tonnage. It is a simple matter for the Steel Corporation executives to pursue a policy of keeping its Pittsburgh district plants up to the point of maximum efficiency, and it is easy to show from the records that Pittsburgh is in a secure position.

WITH pith and point the *Business Conditions Weekly* of the Alexander Hamilton Institute says in its last issue:

> It is time that business men began to pay less attention to speculation and more to their own knitting.

Of like purport is this from the June letter of the National City Bank, New York, Vice-President George E. Roberts, editor:

> Never before has stock speculation involved so many people of all classes, and one hears the frequent complaint that one trouble with business is that business men are paying too much attention to the stock market and not enough to the conduct of their own establishments.

What has happened in Wall Street in the past week must have suggested to divers and sundry participants in the greatest bull market in all history that it is high time to heed the call of neglected business.

Our Estimates of Steel Output

OCCASIONAL comments come to THE IRON AGE on the statements made in our market summary relative to the rate at which the steel companies are producing. Some time ago one reader made this criticism: "On the day you printed Pittsburgh production at 75 per cent of capacity, the Clairton mills were running only one turn." Another comment said: "You estimate that the industry is producing ingots at 84 per cent of capacity, whereas every available furnace in my district is being crowded to its utmost."

In every instance the commentators fall into the error of thinking that the rate of production is uniform throughout the country (whereas all last year the Chicago district was several per cent nearer capacity than any other) or that ingot production and rolling mill activity are identical. Week after week estimates are given of ingot production, rail mill activity, sheet mill operations, and all such data as are available and worthy of comment. These figures are by no means identical. Sheet mills may be running strong the same day that plate mills are slack.

In order to convince himself on this point, a member of THE IRON AGE editoral staff who has never had a hand in collecting the market data, and who therefore could approach the problem with an unprejudiced mind, critically examined the statements of operation rates made in the 52 market summaries for 1927. In nearly every issue some estimate is given concerning the current production of ingots, either for the Pittsburgh, Youngstown, Chicago, or Southern district, or for the Steel Corporation and the independents. These are given in terms of percentage, thus: "Chicago ingot output has passed 95 per cent of capacity." In each month these published figures were weighted according to the ingots produced by the given district or organization during 1926, as taken from the annual statistical report of the American Iron and Steel Institute, and a weighted average secured for the month. Results are given in the second column of the following table:

Month, 1927	THE IRON AGE Average of Spot Estimates, Per Cent Capacity	Computed Ingot Production, Daily—Gross Tons	Actual Ingot Production, Daily—Gross Tons
January	75	140,000	145,764
February	82.5	154,000	158,835
March	90	168,000	167,973
April	87.5	163,000	158,744
May	80.5	150,000	155,663
June	73	136,000	134,446
July	65	121,000	128,165
August	66	123,000	129,576
September ...	64	119,000	125,726
October	63	117,000	127,550
November	62	114,000	120,270
December	63	117,000	122,134

To translate these percentages into tonnage, a knowledge of the ingot capacity of the whole country is necessary. According to the American Iron and Steel Institute the theoretical capacity of the Bessemer and open-hearth furnaces in the United States on Dec. 31, 1926, was 57¼ million tons per year. On Dec. 31, 1927, it was 58¾ million tons. Assuming 311 working days in 1927, all the steel plants could turn out about 186,500 tons of ingots per day. Multiplying the factors given in the percentage column by this figure gives the computed ingot production daily, as estimated by THE IRON AGE representatives from information gathered on the spot.

That these estimates are uncannily accurate is seen from a comparison of the actual production statistics, as gathered and checked much more leisurely by the American Iron and Steel Institute. The average error for the year is a little over 3 per cent low!

CORRESPONDENCE

"What Price Airplanes?"

To the Editor: The statistics quoted in the editorial "Flying Apace" in the June 7 issue of THE IRON AGE certainly reveal an interesting panorama of aviation in the United States today. To those of us intimately associated with or vitally interested in flying they also reveal a condition that is at least far from assuring. The most logical medium of comparison for the airplane is the automobile. And when we compare these two closely associated mediums of modern transportation we encounter a rather unusual situation.

The cryptic last sentence of the editorial "Who wants to walk?" may well be answered by a similar query, "What price airplanes?" When we note that there are listed 113 manufacturers of airplanes, we can quickly grasp why an airplane is so many more times as expensive as an automobile. The success of the modern automobile, unparalleled in the history of industry, may be directly traced to the mass production methods possible with metal construction. Obviously, the demand today for airplanes has not been sufficiently great for a single manufacturer to launch a program which would give production at a price comparable with automobile production, with its accompanying tremendous investment in machine tools.

Metal construction is advancing rapidly from an engineering viewpoint, but it is safe to say that the vast majority of the 113 airplane manufacturers listed still build a major portion of their structure of wood. Engineering design has advanced to a point where it is no longer the major competitive factor, but has been replaced by price. Until financial resources at present unheard of in aeronautics, and comparable with those in the automobile industry, are marshaled to the assistance of aeronautics, the factor of 113 manufacturers of airplanes indicates a weakness rather than a growing strength. Numbers of manufacturers mean diversity of design, which leads to high prices, since no single manufacturer or group of manufacturers has a volume sufficiently large to apply modern production methods. So, if the automobile analogy is followed out, a decrease in the number of airplane manufacturers rather than an increase will be an index of progress.

Another startling figure is that of 56 general service and repair firms to patch you up if you come to grief. Taken literally, this means only one service station for every two manufacturers. Even if we go to the other extreme and regard every other facility listed (such as manufacturers, ground schools, etc.) and regard them as a possible service station, the comparison with the automobile, with thousands of service stations for every manufacturer, is rather astounding. Next to modern machine tools as applied to metal construction, the next greatest factor in the vast distribution of the automobile has been the ease of service. No matter where you go, automobile service is readily and promptly available. Not so with the airplane. Many times a repair means weeks of waiting while a replacement part travels across the country to catch up with the disabled plane or engine.

Here lies the real future for every ambitious community that aspires to be air-minded. Rather than to lend local encouragement and capital to a local embryo manufacturer of airplanes, who is hopefully entering a field already overcrowded so far as mere numbers go, wouldn't it be far more logical to encourage a local air service station, with flying field, repair shop and general service facilities? The outlook for future success would at least be far more reasonable, and the contribution to the progress of aeronautics far more substantial and permanent.

JOHN F. HARDECKER,
Chief Draftsman.

Naval Aircraft Factory, United States Navy Yard,
Philadelphia, June 8.

Detroit-Windsor Tunnel Started; 13,000 Tons of Steel Awarded

Work on the international vehicular tunnel between Detroit and Windsor, Ont., was begun last week. It is expected the tunnel will be ready for use by June 1, 1930. Two-minute travel between the two cities will be made possible by the new roadway under the Detroit River, which will lack only a few feet of being a mile in length. The estimated cost of the new project exceeds $18,000,000. Speakers at the opening ceremonies on the American side included public officials of both the United States and Canadian Governments, Detroit city officials and prominent business men interested in the conduct of the tunnel enterprise.

The contract for the fabricated structural steel for the under-river portion of the tunnel, amounting to about 13,000 tons, has been awarded to the Canadian Bridge Co., Walkerville, Ont., a subsidiary of the United States Steel Corporation.

Baldwin Locomotive Works at Eddystone, Pa., to Be Formally Opened

To celebrate the completion of the transfer of its manufacturing departments and offices from Philadelphia to Eddystone, Pa., the Baldwin Locomotive Works has invited a large number of persons, including many from the steel trade, to visit its new plant on June 28. Special trains for guests will leave from Philadelphia. Among the speakers at the plant opening will be Secretary of Labor James J. Davis.

The Eddystone plant, comprising about 225 acres, was established in 1915 with the erection of two temporary buildings for the manufacture of war munitions, although the site had been owned by the company since 1905. In the past few months all of the machinery and equipment in the Philadelphia works has been moved to new buildings recently completed at Eddystone.

St. Louis Foundrymen Elect Officers

The St. Louis District Foundrymen's Club has elected the following officers: President, Roy A. Jacobsen, Commercial Foundry Co.; vice-president, Walter C. Raithel, Mound City Foundry; secretary-treasurer, Leo J. Filstead, John C. Kupferle Foundry Co.; all of St. Louis. The executive committee includes William J. Hall, Southern Manganese Steel Co., St. Louis; William J. Hommell, Banner Iron Works, St. Louis; F. T. O'Hare, Central Brass & Aluminum Foundry Co., St. Louis; C. R. Culling, Carondelet Foundry Co., St. Louis; George Mellow, Liberty Foundry Co., St. Louis; and Frank Rogers, Excelsior Foundry Co., Belleville, Ill. The club will hold its first annual picnic at Stolberg's Park, Belleville, Ill., on June 16.

Iron and Steel Markets

Steel Buyers Are Cautious

Little Interest Shown in Third Quarter Contracts, But Specifications Support Output at High Level—Prices of Semi-Finished Steel Weaker

STEEL buyers are increasingly cautious as mill output continues to decline. The opening of books for third quarter in finished products has found buyers unresponsive, and new business, as a rule, is too light to develop further changes in current prices.

The recent announcement of a price of 1.90c. a lb., Pittsburgh, on plates, shapes and bars for next quarter has not yet had the expected effect of driving in heavier specifications on current contracts. Buyers have until the end of the month to act, however, and many of the larger users have sufficient tonnage unspecified to carry them well through July. Meanwhile, the acceptance by some mills of additions to contracts at 1.85c. also tends to defer a real test of the $1 a ton advance. In contrast with the effort to advance prices at Pittsburgh, the market on plates, shapes and bars at Birmingham has declined $1 a ton.

In view of the conservative attitude of the trade, it is not surprising that shipping orders are in close step with the actual needs of consuming plants. What does command attention, however, is the fact that specifications are supporting so high a rate of production.

The drop of 455,311 tons in the unfilled orders of the Steel Corporation in May, following declines in the two previous months, is a better measure of the changed psychology of buyers than of the trend of consumption. Early in the year, when prices were advancing, users had an incentive to anticipate their requirements. Today, hand-to-mouth buying is again the rule.

Mill backlogs are being reduced still further this month, but operations remain at a high level. Ingot production in the Greater Pittsburgh district ranges from 70 to 75 per cent, against 70 per cent a year ago, while output at Chicago averages 87 per cent, compared with 80 per cent at this time in 1927.

It is evident that mill operations not only are maintaining their lead over last year, but also over 1926. While production this month will undoubtedly show a decline compared with May, output up to June 1 was 3 per cent ahead of the first five months of 1926, the previous record, and little doubt remains that there will be a new high half-year total by a fair margin.

Consumption of steel by makers of farm implements and tractors has shown no reduction. Specifications from the automotive industry are holding up well, and it is now predicted that there will be no decided slump in motor car production before August. Awards of fabricated steel are light, in contrast with the large volume of building contracts, but considerable structural steel work is being held in abeyance. The largest structural steel letting of the week, 13,000 tons for the Detroit vehicular tunnel, went to a Canadian shop. Railroad car buying continues light, but an inquiry has been issued by the Seaboard Air Line for 1000 box cars.

The sharp break in the price of basic pig iron in the Valleys a week ago and weakness in scrap are credited with adversely affecting the market on semi-finished steel. Sheet bars have been sold at the equivalent of $33, Pittsburgh, a decline of $1 a ton. Billets and slabs are down to $32, also a drop of $1 a ton.

An inquiry for 6000 tons of basic pig iron in the Pittsburgh district is said to have brought out a price of not less than $16, Valley, notwithstanding the fact that a much larger tonnage was recently sold at about $15.35, furnace. Other grades of iron made in that district have been weakened by the low price on basic, though no further reductions have occurred. Buying for third quarter has not assumed major proportions, but sales of 29,000 tons by Cleveland interests, 16,000 tons at St. Louis and 14,000 tons at New York, stand out in a generally quiet market.

Heavier American exports of steel are looked for as a result of continued price advances by European mills.

Both of THE IRON AGE composite prices remain unchanged at last week's levels, that for finished steel at 2.341c. a lb. and that for pig iron at $17.23 a ton—$1.73 lower than a year ago.

On export business there are frequent variations from the above prices. Also, in domestic business, there is at times a range of prices on various products, as shown in our market reports on other pages.

Pittsburgh

Steel Production Sagging — Carnegie Takes Off Three Blast Furnaces

PITTSBURGH, June 12.—Production of steel ingots is sagging, in keeping with a lighter demand for practically all of the finished products. Reference is made frequently to the fact that both orders and steel plant engagement are heavier than they were at this time last year, but the explanation is simple. Business and output have been spread out more evenly this year and there has been a nicer balance between orders and production. Last year at this time output was declining at a faster rate than the actual consumption, as measured by shipments then. This was due chiefly to the fact that in the early months of 1927 ingot output for a time was in excess of actual business and much cold steel went on the banks to be later heated and rolled. There was little such building up of stocks this year.

Evidence still is lacking that the total production of automobiles has reached peak for the year, as the movement of steel to that industry still is large. While some automobile plants are slowing down as they develop new models, others are passing out of that stage and consuming enough more steel to counterbalance the lighter takings of other builders. But this industry usually does its best in the first rather than the last half of the year and indications suggest no change this year.

The railroads still are sparing buyers, although the report common to Presidential years is current that they will soon pour much business into the market. Important steel consuming industries are buying in strict accord with actual needs, which rarely are as heavy at this season as they are at some other periods of the year.

Ingot production for this and nearby districts averages between 70 and 75 per cent of capacity, but is probably nearer the lower than the higher figure. Dropping of three blast furnaces by the Carnegie Steel Co. in one week is indicative of the steel production trend, in spite of the fact that this company is figuring more prominently as a buyer of scrap. Companies, long free users of scrap, are largely out of the market and some are not pressing for deliveries of material they have purchased.

The pig iron market still is staggering from the steep break in the basic grade reported a week ago. There is greater interest in supplies on the part of melters, but they expect to buy Bessemer, malleable and foundry iron at prices a little nearer to normal relationship with basic iron than they are at present.

Weakness in semi-finished steel is credited in part to the low prices that now rule for scrap and basic iron. Both materials are at low levels and naturally occasion some fresh figuring of the cost of making billets, slabs and sheet bars. There does not seem to be much confidence in the efforts of mills to obtain the higher prices recently announced on bars, plates and shapes for third quarter, and as a rule buyers are in no hurry to sign contracts. There is uncertainty in strip prices and sheet prices are unimproved from the viewpoint of producers.

Pig Iron.—The idea that the recent break in basic pig iron might extend to other grades has stimulated interest in the market, but it is of a bargain hunting character and little business has developed. Merchant producers commonly regard the sale of basic iron at $15.35, Valley furnace, as having been made primarily to establish a settling price on iron moving on trade paper average prices to a steel plant recently acquired by the company which made the sale. Consequently they do not think it likely that another sale will be made at that low figure and are resisting efforts to depress the prices of other grades.

The Edgewater Steel Co., following the sale at $17.01, delivered Butler, Pa., entered the market for 6000 tons of basic iron. This inquiry is said to have brought out no lower price than $16, Valley furnace, but evidence is lacking that the business has been closed. The Carnegie Steel Co. has taken off blast furnaces at Duquesne, Braddock and Clairton and now has 31 of its 49 stacks in production. Three are on ferromanganese.

Prices per gross ton, f.o.b. Valley furnace:

Basic	$15.35 to $15.50
Bessemer	17.00
Gray forge	16.25 to 16.50
No. 2 foundry	16.75 to 17.00
No. 3 foundry	16.25 to 16.50
Malleable	17.00 to 17.25
Low phosphorus, copper free	26.50

Freight rate to the Pittsburgh or Cleveland district, $1.76.

Ferroalloys.—Large users of ferromanganese still hesitate about contracting for their last half requirements. They have no fears about being able to get all they want when they want it and see no reason for hurry about closing, since they do not expect the price to go higher. Deliveries of spiegeleisen against contracts continue heavy, but specifications for ferromanganese and ferrosilicon are lighter, in keeping with reduced steel works operations.

Semi-Finished Steel.—Instead of bringing up invoice prices to the published quotations, makers are finding it necessary to make concessions to interest non-integrated manufacturers. In addition to the extreme weakness in sheets and in most widths of strip steel, buyers are using the low prices of pig iron and scrap as an argument in favor of lower prices on billets, slabs and sheet bars. One maker of sheets is getting sheet bars at $34, delivered, which would mean approximately $33, f.o.b. Pittsburgh. The bars are coming from an outside source. Billets and slabs are commonly quoted at $33 for 4 in. and larger, but so far as sales are concerned, $32 is the prevailing price. Forging quality billets are selling at $38, base. On wire rods $44, base, is asked, but not often obtained.

Alloy Steel Bars.—Demand shows some decrease, but prices are holding well.

Bars, Plates and Shapes.—Manufacturers are more intent upon getting specifications against existing contracts than in trying to get buyers to sign up for third quarter tonnages. Altogether, there is not much confidence in the announced third quarter price of 1.90c. Buyers seem to look upon the advance as an effort to sustain the present price of 1.85c. Day-to-day orders reach a fairly large total, but there is little forward buying.

Rails and Track Supplies.—A fairly large sprinkling of releases of spikes and track supplies keeps business from being called dull. No new business of importance is reported in standard-section rails. Light-section rails are very dull.

Wire Products.—Scarcely enough business is developing to prove anything as to prices. Makers still call the market $2.65 per keg, base, Pittsburgh, for nails and $2.50, base, per 100 lb., for plain wire, but distributers still seem to be living off their stocks, as new business is very limited. There is no rush on the part of jobbers to sign up for third quarter.

Tubular Goods.—Business continues to make a disappointing showing. While buttwelded pipe is moving steadily, the demands are very easily met. Orders for lapwelded and seamless pipe for oil and gas wells still drag and the mills have little line pipe business before them. The price situation is described as steadier than it has been in two years; this is the satisfactory phase of the market, as costs must be high with only about 60 per cent of productive capacity engaged.

Sheets.—The market is said to be neither better nor worse from a price standpoint than it has been, but business is decreasing and orders have to be passed on promptly to the mills to maintain operating schedules. Makers here disclaim having encountered less than 2.65c., base, on black sheets and say that the 3.50c. base price on galvanized sheets refers to material for roofing and siding as distinct from that finding other uses. Mill operations range from 75 to 80 per cent of capacity.

Tin Plate.—Mill operations still are 90 per cent or more of capacity, but there is beginning to be some doubt that this rate will be held much longer. Already some August tin plate is in process and as the season is from two to three weeks late over most of the country, a good deal of production for packers' cans has not yet begun to move actively into consumption. The belief in generous yields persists, but there is also the condition that tin plate production has discounted them.

Cold-Finished Steel Bars.—Automobile parts makers are specifying steadily, but usually for small lots and not very far ahead of actual requirements. Orders from other sources are light. Not much interest yet is observed in third quarter tonnages. Prices are unchanged.

Bolts, Nuts and Rivets.—Makers are open for third quarter contracts at unchanged prices. Current demands are moderate, and there is not much urge to sign contracts for the next quarter.

Hot-Rolled Flats.—The market appears fairly steady on the very narrow widths and full quotations are reported on small-lot business. Generally, makers are

*According to size.

Wire Products

(To jobbers in car lots, f.o.b. Pittsburgh and Cleveland)

	Base Per Keg
Wire nails	$2.55 to $2.65
Galvanized nails	4.55 to 4.65
Galvanized staples	3.25 to 3.35
Polished staples	3.00 to 3.10
Cement coated nails	2.55 to 2.65

	Base Per 100 *Lb.*
Bright plain wire, No. 9 gage	$2.50
Annealed fence wire	2.65
Spring wire	3.50
Galv'd wire, No. 9	3.10
Barbed wire, galv'd	3.35
Barbed wire, painted	3.10

Chicago district mill and delivered Chicago prices are $1 per ton above the foregoing. Birmingham mill prices $3 a ton higher; Worcester, Mass., (wire) mill $3 a ton higher on production of that plant; Duluth, Minn., mill $2 a ton higher; Anderson, Ind., $1 higher.

Woven Wire Fence

	Base to Retailers Per Net Ton
F.o.b. Pittsburgh	$65.00
F.o.b. Cleveland	65.00
F.o.b. Anderson, Ind	66.00
F.o.b. Chicago district mills	67.00
F.o.b. Duluth	68.00
F.o.b. Birmingham	68.00

Sheets

6100	Chromium Vanadium Spring Steel	0.95	3.60
9250	Silicon Manganese Spring Steel	0.25	2.90
	Chromium Nickel Vanadium	1.50	4.15
	Carbon Vanadium	0.95	3.60

Above prices are for hot-rolled steel bars, forging quality. The ordinary differential for cold-drawn bars is 1c. per lb. higher. For billets 4 x 4 to 10 x 10 in., the price for a gross ton is the net price for bars of the same analysis. For billets under 4 x 4 down to and including 2½ in. squares, the price is $5 a gross ton above the 4 x 4 billet price.

Slabs with sectional area of 16 in. or over carry the billet price; slabs with sectional area of 12 in. to 16 in. carry a $5 extra above the billet price and slabs with a sectional area under 12 in. carry the bar price.

Band sizes are 40c. per 100 lb. higher.

Rails

	Per Gross Ton
Standard, f.o.b. mill	$43.00
Light (from billets), f.o.b. mill	36.00
Light (from rail steel), f.o.b. mill	34.00
Light (from billets), f.o.b. Ch'go mill	36.00

Track Equipment

	Base Per 100 *Lb.*
Spikes, 9/16 in. and larger	$2.80
Spikes, ½ in. and smaller	2.80
Spikes, boat and barge	3.00
Tie plates, steel	2.15
Angle bars	2.75
Track bolts, to steam railroads	$3.80 to 4.00
Track bolts, to jobbers, all sizes, per 100 count	70 per cent off list

Welded Pipe

Base Discounts, f.o.b. Pittsburgh District and Lorain, Ohio, Mills

Butt Weld

Steel			*Iron*		
Inches	Black	Galv.	Inches	Black	Galv.
⅛	45	19½	¼ to ⅜	+11	+39
¼ to ⅜	51	25½	½	22	2
½	56	42½	¾	28	11

1 to 3	62	50½			

Lap Weld

2	55	43½	2	23	7
2½ to 6	59	47½	2½	26	11
7 and 8	56	43½	3 to 6	28	13
9 and 10	54	41½	7 to 12	26	11
11 and 12	53	40½			

Butt Weld, extra strong, plain ends

⅛	41	24½	¼ to ⅜	+19	+54
¼ to ⅜	47	30½	½	21	17
½	53	42½	¾	28	12
¾	58	47⅛	1 to 1½	30	14
1 to 1½	60	49½			
2 to 3	61	50½			

Lap Weld, extra strong, plain ends

2	53	42½	2	23	9
2½ to 4	57	46½	2½ to 4	29	15
4½ to 6	56	45½	4½ to 6	28	14
7 to 8	52	39½	7 to 8	21	7
9 and 10	45	32½	9 to 12	16	2
11 and 12	44	31½			

On carloads the above discounts on steel pipe are increased on black by one point, with supplementary discount of 5%, and on galvanized by 1½ points, with supplementary discount of 5%. On iron pipe, both black and galvanized, the above discounts are increased to jobbers by one point with supplementary discounts of 5 and 2½%.

Note.—Chicago district mills have a base two points less than the above discounts. Chicago delivered base is 2½ points less. Freight is figured from Pittsburgh, Lorain, Ohio, and Chicago district mills, the billing being from the point producing the lowest price to destination.

Boiler Tubes

Base Discounts, f.o.b. Pittsburgh

Lap Welded Steel		*Charcoal Iron*	
2 to 2¼ in.	27	1½ in.	+18
2½ to 2¾ in.	37	1¾ to 1⅞ in.	+ 8
3 in.	40	2 to 2¼ in.	— 2
3¼ to 3¾ in.	42½	2½ to 3 in.	— 7
4 to 13 in.	46	3¼ to 4½ in.	— 9

Beyond the above discounts, 7 fives extra are given on lap welded steel tubes and 2 tens to 2 tens and 1 five on charcoal iron tubes.

Standard Commercial Seamless Boiler Tubes

Cold Drawn

1 in.	60	3 in.	45
1¼ to 1½ in.	52	3¼ to 3½ in.	47
1¾ in.	36	4 in.	50
2 to 2¼ in.	31	4½, 5 and 6 in.	45
2½ to 2¾ in.	39		

Hot Rolled

2 and 2¼ in.	37	3¼ and 3½ in.	53
2½ and 2¾ in.	45	4 in.	56
3 in.	51	4½, 5 and 6 in.	51

Less carloads, 4 points less. Add $8 per net ton for more than four gages heavier than standard. No extra for lengths up to and including 24 ft. Sizes smaller than 1 in. and lighter than standard gage to be held at mechanical tubes list and discount. Intermediate sizes and gages not listed take price of next larger outside diameter and heavier gage.

Seamless Mechanical Tubing

	Per Cent Off List
Carbon, 0.10% to 0.30%, base	55
Carbon, 0.30% to 0.40%, base	50

Plus differentials for lengths over 18 ft. and for commercial exact lengths. Warehouse discounts on small lots are less than the above.

not being called upon to quote on much new business, and most of the shipments are against contracts placed some time ago. Not much third quarter inquiry has developed. On contract business, large consumers enjoyed a preferential of as much as $3 a ton from what are regarded as the open market prices but which apply principally on small lots. Business, as measured by shipments, still is fairly active.

Old Material.—Prices are holding substantially where they were a week ago. Consumer interest in the market is low, but present prices are not conducive to the collection and sale of scrap and offerings are rather light. Dealers still are able to pick up small lots of heavy melting steel at $14.25 for shipment to one point, but generally $14.50 is the ruling minimum, while a quotation of $15 is supported by the fact that most of the steel in the Pennsylvania Railroad June list went at that price. The general tone of the market is weak on account of the limited demand, owing to decreasing steel works operations, but the lighter grades show more tendency to work down than the heavy grades.

Prices per gross ton delivered consumers' yards in Pittsburgh and points taking the Pittsburgh district freight rate:

Basic Open-Hearth Furnace Grades:		
Heavy melting steel	$14.25 to	$15.00
Scrap rails	14.00 to	14.50
Compressed sheet steel		14.50
Bundled sheets, sides and ends		13.50
Cast iron carwheels	14.00 to	14.50
Sheet bar crops, ordinary	15.00 to	15.50
Heavy breakable cast	12.00 to	12.50
No. 2 railroad wrought	14.50 to	15.00
Heavy steel axle turnings	13.00 to	13.50
Machine shop turnings	9.00 to	9.50
Acid Open-Hearth Furnace Grades:		
Railroad knuckles and couplers	15.50 to	16.00
Railroad coil and leaf springs	15.50 to	16.00
Rolled steel wheels	15.50 to	16.00
Low phosphorus billet and bloom ends	19.00 to	19.50
Low phosphorus, mill plate	17.50 to	18.00
Low phosphorus, light grade	16.50 to	17.00
Low phosphorus sheet bar crops	17.50 to	18.00
Heavy steel axle turnings	13.00 to	13.50
Electric Furnace Grades:		
Low phosphorus punchings	16.50 to	17.00
Heavy steel axle turnings	13.00 to	13.50
Blast Furnace Grades:		
Short shoveling steel turnings	10.50 to	10.75
Short mixed borings and turnings	10.50 to	10.75
Cast iron borings	10.50 to	10.75
No. 2 busheling	9.00 to	9.50
Rolling Mill Grades:		
Steel car axles	18.00 to	18.50
No. 1 railroad wrought	11.00 to	11.50
Sheet bar crops	16.50 to	17.00
Cupola Grades:		
No. 1 cast	14.25 to	14.75
Rails 3 ft. and under	15.50 to	16.00
Malleable Grades:		
Railroad	14.25 to	15.00
Industrial	13.75 to	14.50
Agricultural	13.25 to	14.00

Cold-Rolled Strips.—Specifications are beginning to show a noticeable decrease. Current requirements are being supplied largely by shipments against old orders, and new business for either prompt or third quarter shipment is light. There is some uncertainty in prices owing to the fact that the hot-rolled strip market is not very well defined at the moment.

Warehouse Prices, f.o.b. Pittsburgh

	Base per Lb.
Plates	3.00c.
Structural shapes	3.00c.
Soft steel bars and small shapes	2.90c.
Reinforcing steel bars	2.75c.
Cold-finished and screw stock—	
Rounds and hexagons	3.60c.
Squares and flats	4.10c.
Bands	3.60c.
Hoops	4.00c. to 4.50c.
Black sheets (No. 24 gage), 25 or more bundles	3.65c.
Galvanized sheets (No. 24 gage), 25 or more bundles	4.50c.
Blue annealed sheets (No. 10 gage), 25 or more sheets	3.10c.
Galvanized corrugated sheets (No. 28 gage), per square	$4.39
Spikes, large	3.40c.
Small	3.80c. to 5.25c.
Boat	3.80c.
Track bolts, all sizes, per 100 count,	60 per cent off list
Machine bolts, per 100 count	60 per cent off list
Carriage bolts, per 100 count	60 per cent off list
Nuts, all styles, per 100 count	60 per cent off list
Large rivets, base per 100 lb.	$3.50
Wire, black soft annealed, base per 100 lb.	$3.00 to 3.10
Wire galvanized soft, base per 100 lb.	3.00 to 3.10
Common wire nails, per keg	3.00
Cement coated nails, per keg	3.05

Coke and Coal.—The market is dull and featureless. Beehive oven coke production has been scaled closely to contract requirements and spot offerings are moderate, but they are ample, and prices still are favorable to buyers. With a settlement of the Lake cargo coal freight rate, it is expected the demand for coal will pick up materially. Some development of this sort is necessary to give the coke market strength, since coal will go into coke in the absence of a broad outlet in its raw state. The market on both coke and coal is quotable at the prices of a week ago.

Detroit Scrap Market Reflects Weakness on Some Grades

DETROIT, June 12.—The market on old material has developed further weakness, with the result that borings, short turnings and long turnings registered a decline of 25c. per ton. Considerable tonnage is now being sold direct to the mills by the largest producers, so that very little waste material is being stocked. Indications are that producers will have less scrap to offer this month than for any similar period this year.

Dealers' buying prices per gross ton f.o.b. cars, Detroit:

Heavy melting and shoveling steel	$11.00 to	$11.50
Borings and short turnings	7.00 to	7.50
Long turnings	6.50 to	7.00
No. 1 machinery cast	14.00 to	15.00
Automobile cast	19.00 to	20.50
Hydraulic compressed sheets	9.75 to	10.25
Stove plate	11.00 to	12.00
No. 1 busheling	8.50 to	9.00
Sheet clippings	6.00 to	7.00
Flashings	9.25 to	9.75

Revise Conditions of Samuel Wylie Miller Welding Award

Revision of the conditions governing the award has been made by the board of trustees of the Samuel Wylie Miller Medal, which was established in 1927 by Mr. Miller, consulting engineer Union Carbon & Carbide Research Laboratories, Long Island City, N. Y., and past president of the American Welding Society. The revised conditions are as follows:

> The medal may be awarded annually for any meritorious achievement which, in the judgment of the board of trustees, has contributed conspicuously to the advancement of the art of gas fusion welding and cutting or the art of electric arc fusion welding and cutting.
>
> The award for any calendar year shall be announced and the medal, together with a suitable certificate, presented at an annual meeting or a fall meeting of the American Welding Society, as the board of trustees may elect.

The medal can now be granted for an achievement of any character which has contributed conspicuously to the advancement of either of the two branches of the welding art. The award may be made for a meritorious paper or an invention or a conspicuous application of welding in industry which has advanced the art either on account of unique technical features or important economic advantages. The award may even be made for conspicuous service of a non-technical character which distinctly advances the welding art.

Steel Mill Issue Features Many Articles

Steel mill service forms the major portion of the June number of *General Electric Review.* Articles and illustrations devoted to these topics cover the greater portion of the paper. Among the principal items so published are the following:

Electric Drive for the Iron and Steel Industry
Electric Drive for the Bethlehem Wide-Flange Structural Mill at Lackawanna
New 84-in. Tandem Plate Mill of the Lukens Steel Co.
Service Records of Auxiliary Motors in Steel Mills
Application of Synchronous Motor-Generator Sets to Steel Mill Reversing Drives
Cold-Rolled Strip Steel Reel for Central Alloy Steel Corporation
A Study in Welded Plate Girders

Semi-Finished Steel, Raw Materials, Bolts and Rivets

Mill Prices of Semi-Finished Steel

F.o.b. Pittsburgh or Youngstown

Billets and Blooms

	Per Gross Ton
Rerolling, 4-in. and over	$32.00 to $33.00

Wire Rods

	Per Gross Ton
*Common soft, base	$42.00 to $44.00
Screw stock	$5.00 per ton over base

---

*Chicago mill base is $45. Cleveland mill base, $44.

Prices of Raw Material

Ores

Lake Superior Ores, Delivered Lower Lake Ports

	Per Gross Ton
Old range Bessemer, 51.50% iron	$4.55
Old range non-Bessemer, 51.50% iron	4.40
Mesabi Bessemer, 51.50% iron	4.40
Mesabi non-Bessemer, 51.50% iron	4.25
High phosphorus, 51.50% iron	4.15

Foreign Ore, c.i.f. Philadelphia or Baltimore

	Per Unit
Iron ore, low phos., copper free, 55 to 58% iron in dry Spanish or Algeria	10.00c.
Iron ore, Swedish, average 66% iron,	9.25c. to 9.50c.
Manganese ore, washed, 52% manganese, from the Caucasus	39c.
Manganese ore, Brazilian, African or Indian, basis 50%	38c. to 39c.
Tungsten ore, high grade, per unit, in 60% concentrates	$11.00 to $11.25
	Per Gross Ton
Chrome ore, 45 to 50% Cr_2O_3, crude, c.i.f. Atlantic seaboard	$22.00 to $24.00
	Per Lb.
Molybdenum ore, 85% concentrates of MoS_2, delivered	50c. to 55c.

Coke

	Per Net Ton
Furnace, f.o.b. Connellsville prompt	$2.60 to $2.75
Foundry, f.o.b. Connellsville prompt	3.50 to 4.25
Foundry, by-product, Ch'go ovens	9.00
Foundry, by-product, New England, del'd	11.00
Foundry, by-product, Newark or Jersey City, delivered	9.00 to 9.40
Foundry, Birmingham	5.00
Foundry, by-product, St. Louis	9.75

Coal

	Per Net Ton
Mine run steam coal, f.o.b. W. Pa. mines	$1.40 to $1.80
Mine run coking coal, f.o.b. W. Pa. mines	1.50 to 1.75
Gas coal, ¾-in., f.o.b. Pa. mines	2.00 to 2.10
Mine run gas coal, f.o.b. Pa. mines	1.75 to 1.90
Steam slack, f.o.b. W. Pa. mines	1.00 to 1.05
Gas slack, f.o.b. W. Pa. mines	1.10 to 1.15

Ferromanganese

	Per Gross Ton
Domestic, 80%, furnace or seab'd	$105.00
Foreign, 80%, Atlantic or Gulf port, duty paid	105.00

Spiegeleisen

	Per Gross Ton Furnace
Domestic, 19 to 21%	$31.00 to $32.00
Domestic, 16 to 19%	29.00

Electric Ferrosilicon

Upset hex. cap screws, S.A.E. thread	85 and 5
Upset set screws	80, 10 and 10
Milled studs	70 and 5

Chicago

Ingot Output Declines to 87 Per Cent—Rollings of Rails, Plates and Shapes Off

CHICAGO, June 12.—No. 4 furnace at South works, Illinois Steel Co., was blown out June 9, leaving 19 stacks in blast at the plants of the leading producer. Other steel works account for eight active furnaces, making a total in blast of 27 out of 36 in this district. The lessened rate of steel works pig iron output is a reflection of the gradual slowing up in the Chicago iron and steel market. Rail mill operations have been cut closer, and there is a less insistent demand for plates and shapes, so that ingot output can be conservatively estimated at 87 per cent of capacity.

The downward trend in consumption is widespread, affecting practically all classes of users, with the possible exception of manufacturers of farm implements and tractors. Current specifications are in smaller volume, but with the adjustment in operations they still cling close to the rate of production. Sales, except in spot lots, are light.

For the most part, producers have withheld formal announcement of third quarter prices, though in some instances books are now open. Prices for finished steel are not clearly defined, owing primarily to concessions made to fabricators on specific jobs. It is reported that unusually low prices have been named to fabricators for the 3600 tons needed for the Denver, Colo., court house.

The railroad equipment market is quiet. The Southern Pacific is building 540 cars in its own shops and the Chicago, Milwaukee, St. Paul & Pacific, the Chicago & North Western and the Burlington have similar projects under way.

Pig Iron.—With two Iroquois, one Federal and the Duluth furnace in blast, shipments of Northern pig iron continue to exceed production, and stocks at furnaces, which are large, are steadily being reduced. New business is sluggish. Melters are showing less interest in third quarter and last half requirements, and it is believed that spot purchasing will assume large proportions during the next few months at the expense of the volume of business on contract for delivery in that period. Southern and charcoal iron are moving in carload lots. The silvery market is quiet, sales being confined to carloads, on which prices are not always held at the full schedule. A melter in western Michigan has closed for 6000 tons of malleable iron. Part of the business came to Chicago producers, who met competition from Lake Erie furnaces.

Prices per gross ton at Chicago:

Northern No. 2 foundry, sil. 1.75 to 2.25	$18.00
N'th'n No. 1 fdy., sil. 2.25 to 2.75	18.50
Malleable, not over 2.25 sil.	18.00
High phosphorus	18.00
Lake Superior charcoal averaging sil. 1.50	27.04
Southern No. 2 fdy. (all rail)	22.01
Southern No. 2 (barge and rail)	21.51
Low phos., sil. 1 to 2 per cent, copper free	$28.50 to 29.00
Silvery, sil. 8 per cent	29.79
Bessemer ferrosilicon, 14 to 15 per cent	46.79

Prices are delivered consumers' yards except on Northern foundry, high phosphorus and malleable, which are f.o.b. local furnace, not including an average switching charge of 61c. per gross ton.

Ferroalloys.—This market is quiet. Sales of spiegeleisen are confined to carloads at $32, Hazard, Pa., for the 19 to 21 per cent grade. Specifications for ferrosilicon are lighter, following recessions in steel mill operations. Several additional last half ferromanganese contracts have been closed.

Prices delivered Chicago: 80 per cent ferromanganese, $112.56; 50 per cent ferrosilicon, $83.50 to $87.50; spiegeleisen, 19 to 21 per cent, $37.76 to $39.76.

Plates.—After two rather dull weeks in specifications for steel from car shops, there has been released a fair tonnage for early shipment. In the absence of recent car orders of size, it is generally acknowledged that specifications from that source in June and the early part of July will be light. Steel producers have compiled figures to show that for the country as a whole there were ordered in the first five months of last year 33,942 freight cars and 1352 passenger cars, while in the corresponding period of this year the totals were 19,085 freight cars and 1058 passenger units. Of the total cars placed, Chicago district shops have taken their proportionate share. Notwithstanding the smaller requirements of steel for this purpose, local plate mills have been well engaged through the first half of the year, thus showing the increasing use made of this commodity by the general trade. Tank construction and boiler work have taken up part of the slack caused by a low rate of railroad car building, and, in addition, more manufacturers are working plates for various purposes than ever before. Backlogs are being reduced at a rapid rate and deliveries have improved markedly in the last 10 days, the range being three to five weeks in contrast with four to six weeks at the turn of the month. One producer has opened books for the third quarter at 2c. per lb., Chicago. Several of the larger sellers will announce their price policies before the end of the week. Although producers look forward to a 2c. market, their hopes are not without some misgivings for the reason that 1.95c. has prevailed at some points in the district.

Mill prices on plates, per lb.: 2.00c., base Chicago.

Structural Material.—The structural market has become quieter in the week. Pending lists are large, but there is a sluggishness in placing contracts that is causing some concern to the trade. Local shops are busy and will in all probability continue so for five or six weeks. To the west and northwest, shops are well supplied with work and are faring better in the matter of new business than is the case in and near Chicago. An apartment building requiring 1200 tons and 1600 tons for an office building, Chicago, are among the projects that may be closed this month. Prices for structural material remain at 2c., Chicago, to the general trade and for stocks at structural shops, but this level is shaded to fabricators who ask for prices on specific jobs.

Mill prices on plain material per lb.: 2.00c., base, Chicago.

Bolts, Nuts and Rivets.—Specifications for these commodities, while a shade lighter, do not show the sharp tendency downward as was the case a week ago. Sellers are now submitting contracts to the trade at prices which have held during the second quarter. Large rivets are quoted at $3, base, per 100 lb., Chicago.

Reinforcing Bars.—The lack of awards this week is giving little concern to the trade, which is busily engaged in following up a goodly number of live projects. Shops, though operating 10 per cent below their rate of a year ago, are well engaged and prospects appear promising for a well sustained rate of output. Of special interest are the two projects sponsored by the Marshall Field Estate. An apartment development, which will come at a later date, calls for 1600 tons, and the Mercantile Mart, on which plans have been completed, will require 6000 tons. Prices for both hard and soft steel reinforcing bars are steady. Real tests are lacking on large tonnages, but on small orders quotations are holding firmly.

Bars.—Specifications for mild steel bars still run close to shipments, though the volume is not sufficiently large to prevent a slow but steady improvement in deliveries, which now range three to five weeks. New buying is quiet, though proportionately heavier than in other finished steel products. Most of the current shipments are going to the automobile trade. Miscellaneous users continue to take their requirements at practically an undiminished rate, but they show no interest in their needs beyond three to five weeks. Prices for soft steel bars are moderately steady at 2c. per lb., Chicago. Some mills have signified their willingness to accept third quarter business on the 2c. basis, but the larger producers have not yet announced their course in the matter of prices. There is a steady demand for alloy steel bars, but advance buying is of small proportions, it being the aim of most purchasers to take only immediate requirements. Prices and extras are unchanged. The local iron bar market is dull. Prices are steady at 2c., Chicago. Rail steel bar producers have opened third quarter books at 1.90c. per lb., Chicago Heights, an advance of $1 a ton. Specifications are fully equal to shipments, which have remained steady for several weeks. Forward contracting is slow. Spot orders are up to expectations of producers for this time of year.

Mill prices per lb.: Soft steel bars, 2.00c., base, Chicago; common bar iron, 2.00c., base, Chicago; rail steel bars, 1.90c., base, Chicago Heights mill.

Wire Products.—Producers have opened third quarter books and Chicago delivered prices are set at 2.55c. per lb. for plain wire and $2.75, base, per 100 lb. keg for common nails. These levels show that second quarter prices for wire are to remain effective in the third quarter and that sellers will try to bring nail prices up to where they stood early in the year. Forward contracting is slow in getting under way, though some interest is being shown by the jobbing trade. Specifications from the manufacturing trade are steady. Mill stocks are well balanced in practically all lines except reinforcing mesh, which is now in heavy demand. Output for the district as a whole is close to 65 per cent of mill capacity. Well scattered rains throughout most of the agricultural sections of the country have improved the crop outlook, though the season is still somewhat backward because of cold weather.

Rails and Track Supplies.—Rail mill operations are not above 80 per cent of local mill capacity and the tendency is to reduce production still further. Taken as a whole, track accessory departments are producing at an unchanged rate, though there has been readjustment which has brought some departments to peak output for the year. Local mills have added close to 10,000 tons of standard-section rails to their books, the bulk of this tonnage coming from three Western railroads. The Pennsylvania inquiry for about 12,000 tons of track supplies has not been closed. Steel tie plates are steady at $43 a ton. The light rail market is without feature.

Prices f.o.b. mill, per gross ton: Standard-section open-hearth and Bessemer rails, $43; light rails, rolled from billets, $36. *Per lb.:* Standard railroad spikes, 2.80c.; track bolts with square nuts, 3.80c.; steel tie plates, 2.25c.; angle bars, 2.75c.

Cast Iron Pipe.—The United States Cast Iron Pipe & Foundry Co. is low bidder at Chicago on 3300 tons of 6 and 8-in. class B pipe, at $40, Chicago, or $31.80 a ton, Birmingham. Miscellaneous orders of attractive size have brought $32, Birmingham, and smaller lots are selling at as high at $34. Placing of orders for 2500 tons by Roseville, Mich., has been deferred. Bids have been rejected by St. Paul, Minn., on 1100 tons, but this latter business will come up again, according to present plans. The Seig Construction Co., Waterloo, Iowa, has taken the general contract for laying 350 tons of 4, 6 and 8-in. pipe at Fox River Grove, Ill. Waukesha and Fond du Lac, Wis., will each take prices on 100-ton lots of pipe. The immediate Chicago territory is quiet from the viewpoint of municipal lettings. On the other hand, contractors are active and have ordered not less than 5000 tons in the week.

Prices per net ton, delivered Chicago: Water pipe, 6-in. and over, $40.20 to $41.20; 4-in., $44.20 to $45.20; Class A and gas pipe, $4 extra.

Cold-Finished Steel Bars.—Prices are steady at 2.20c., Chicago. Producers have not opened third quarter books.

Warehouse Prices, f.o.b. Chicago

	Base per Lb.
Plates and structural shapes	3.10c.
Soft steel bars	3.00c.
Reinforcing bars, billet steel	2.30c. to 3.00c.
Reinforcing bars, hard steel	2.00c. to 2.70c.
Cold-finished steel bars and shafting—	
Rounds and hexagons	3.60c.
Flats and squares	4.10c.
Bands	3.65c.
Hoops	4.15c.
Black sheets (No. 24)	3.95c.
Galvanized sheets (No. 24)	4.80c.
Blue annealed sheets (No. 10)	3.50c.
Spikes, standard railroad	3.55c.
Track bolts	4.55c.
Rivets, structural	3.60c.
Rivets, boiler	3.60c.
	Per Cent Off List
Machine bolts	60
Carriage bolts	60
Coach or lag screws	60
Hot-pressed nuts, squares, tapped or blank	60
Hot-pressed nuts, hexagons, tapped or blank	60
No. 8 black annealed wire, per 100 lb.	$3.30
Common wire nails, base per keg	3.10
Cement coated nails, base per keg	3.10

Billets.—Prices for forging billets are $38 to $39 a gross ton in a quiet market.

Sheets.—Buyers continue to stay out of the market. Producers have not announced third quarter contract prices. Quotations vary over a wide range, and as low as 2.75c. for black, 3.70c. for galvanized, and 2.15c. for blue annealed sheets, all delivered Chicago, have been noted. Deliveries are prompt and schedules are at close range and uncertain.

Base prices per lb., delivered from mill in Chicago: No. 24 black, 2.85c. to 2.90c.; No. 24 galvanized, 3.75c. to 3.80c.; No. 10 blue annealed, 2.20c. to 2.30c. Delivered prices at other Western points are equal to the freight from Gary plus the mill prices, which are 5c. per 100 lb. lower than the Chicago delivered prices.

Coke.—Shipments of by-product foundry coke are steady and prices are unchanged at $9, f.o.b. local ovens, and $9.50, delivered in the Chicago switching district.

Old Material.—A local steel mill has taken 15,000 tons of heavy melting steel at $13.25 a gross ton, delivered. The purchase tended at first to lend some support to a declining market, but late in the week prices for specialties again started to sag. Following a steel mill purchase last week of 1000 tons of hydraulic compressed bundles at $12 a gross ton, there has been an easing off in prices paid by dealers, it being not uncommon now to find broker transactions at $11 a gross ton. Over 5000 tons of rerolling rails have been purchased by a user at $15.25 a gross ton, delivered. This is a reduction of 25c. Available supplies of practically all grades are more plentiful and consumer demand is lighter than a week ago.

Prices delivered consumers' yards, Chicago:

Per Gross Ton	
Basic Open-Hearth Grades:	
Heavy melting steel	$12.75 to $13.25
Shoveling steel	12.75 to 13.25
Frogs, switches and guards, cut apart, and miscellaneous rails	13.50 to 14.00
Hydraulic compressed sheets	11.50 to 12.00
Drop forge flashings	9.50 to 10.00
Forged, cast and rolled steel carwheels	15.75 to 16.25
Railroad tires, charging box size	16.00 to 16.50
Railroad leaf springs, cut apart	16.00 to 16.50
Acid Open-Hearth Grades:	
Steel couplers and knuckles	14.50 to 15.00
Coil springs	16.50 to 17.00
Electric Furnace Grades:	
Axle turnings	13.00 to 13.50
Low phosphorus punchings	14.25 to 14.75
Low phosphorus plate, 12 in. and under	14.00 to 14.50
Blast Furnace Grades:	
Axle turnings	10.00 to 10.50
Cast iron borings	9.00 to 9.50
Short shoveling turnings	9.00 to 9.50
Machine shop turnings	7.25 to 7.75
Rolling Mill Grades:	
Iron rails	14.00 to 14.50
Rerolling rails	14.75 to 15.25
Cupola Grades:	
Steel rails less than 3 ft.	15.50 to 16.00
Angle bars, steel	14.50 to 15.00
Cast iron carwheels	13.00 to 13.50
Malleable Grades:	
Railroad	12.75 to 13.25
Agricultural	12.00 to 12.50
Miscellaneous:	
*Relaying rails, 56 to 60 lb.	23.00 to 25.00
*Relaying rails, 65 lb. and heavier	26.00 to 31.00
Per Net Ton	
Rolling Mill Grades:	
Iron angles and splice bars	14.25 to 14.75
Iron arch bars and transoms	19.50 to 20.00
Iron car axles	23.00 to 23.50
Steel car axles	15.50 to 16.00
No. 1 railroad wrought	11.50 to 12.00
No. 2 railroad wrought	11.25 to 11.75
No. 1 busheling	9.75 to 10.25
No. 2 busheling	5.75 to 6.25
Locomotive tires, smooth	12.00 to 12.50
Pipes and flues	8.00 to 8.50
Cupola Grades:	
No. 1 machinery cast	14.00 to 14.50
No. 1 railroad cast	13.00 to 13.50
No. 1 agricultural cast	12.50 to 13.00
Stove plate	11.25 to 11.75
Grate bars	11.25 to 11.75
Brake shoes	11.00 to 11.50

---

*Relaying rails, including angle bars to match, are quoted f.o.b. dealers' yards.

Philadelphia

Pig Iron Demand Improved—Steel Market Unchanged

PHILADELPHIA, June 12.—Pig iron demand developed a slight impetus in the past week, but as yet there is only irregular and small tonnage inquiry for third quarter delivery. Prices of plates, shapes and bars are unchanged. Eastern Pennsylvania plate mills have in most cases adopted 2.05c. per lb., base Coatesville, for third quarter contracts. Consumers, however, show no inclination to enter into contracts and sellers are not pressing for new commitments in the present condition of the market. Shapes continue at 2c., Pencoyd, or 2.06c., Philadelphia, and 2c., Bethlehem, or 2.13c., Philadelphia. Operating rates of eastern Pennsylvania mills show no substantial change, as there is a fairly good volume of tonnage coming out on current contracts.

Bids will be opened June 15 by the Pennsylvania Railroad on 1,800,000 lb. of track spikes and 330,000 tie plates.

Pig Iron.—Inquiry improved slightly during the past week. Consumers in this district are beginning to show some interest in third quarter contracts, but only for small tonnages. Foundry iron is firm at $20 per ton, base. Sellers here believe there would be considerably more activity if it were not for the downward trend of prices in the Pittsburgh district. Local consumers are taking larger shipments on their contracts and apparently have only small stocks in reserve. The American Engineering Co., Philadelphia, which recently closed on two 100-ton lots of foundry grade, is in the market now for 300 tons of No. 3 and 200 tons of No. 1X foundry iron. The Consolidated Machine Tool Corporation is inquiring for 600 tons of foundry iron for its Hilles & Jones plant at Wilmington, Del. Two railroads are in the market for small tonnages, the Norfolk & Western for 350 tons of No. 2X and No. 1X and 300 tons of Bessemer iron for delivery over the remainder of the year, and the New York Central for 400 tons of foundry iron for third quarter delivery to Elkhart, Ind., and Frankfort, N. Y. Inquiry for low phosphorus is limited to small lots, with prices unchanged.

Prices per gross ton at Philadelphia:

East. Pa. No. 2 plain, 1.75 to 2.25 sil.	$20.76
East. Pa. No. 2X, 2.25 to 2.75 sil.	21.26
East. Pa. No. 1X	21.76
Basic (delivered eastern Pa.)	$19.00 to 19.50
Gray forge	19.75 to 20.25
Malleable	21.00 to 21.50
Standard low phos. (f.o.b. New York State furnace)	22.00 to 23.00
Copper bearing low phos. (f.o.b. furnace)	23.50 to 24.00
Virginia No. 2 plain, 1.75 to 2.25 sil.	24.54
Virginia No. 2X, 2.25 to 2.75 sil.	25.04

Prices, except as specified otherwise, are delivered Philadelphia. Freight rates: 76c. to $1.64 from eastern Pennsylvania furnaces; $4.54 from Virginia furnaces.

Ferromanganese.—Large inquiries for third quarter and second half have not yet appeared, but smaller consumers are buying 100 to 300 tons for delivery in the second half. The price is firm at $105 per ton, seaboard.

Bars.—Shipments against contracts continue in fair volume, but new business is limited and consumers show no interest in contracting for third quarter. Mills are prepared to quote 1.90c. per lb., Pittsburgh, on new contracts, but are not pressing consumers to enter into commitments. Current orders are at 1.85c. to 1.90c., Pittsburgh, or 2.17c. to 2.22c., Philadelphia.

Shapes.—Prices still show an undertone of weakness and eastern Pennsylvania mills have shown no intention of attempting to obtain contracts at an advance for third quarter delivery. Current sales are being made at from 2.06c. to 2.13c. per lb., delivered Philadelphia, and even the minimum price is shaded occasionally on desirable tonnage. Local fabricators have some good business in prospect, including the Reading Railroad terminal at Broad Street and some apartment buildings.

Plates.—Prices are being maintained at 2c. to 2.05c. per lb., Coatesville, for current delivery and mills are prepared to quote 2.05c., Coatesville, for third quarter contracts. As there may be some extension of uncompleted second quarter commitments, mills are not pressing for new contracts. Shipbuilders are reported to have some good business in prospect.

Old Material.—No important purchasing of scrap has been done in the past week. Although No. 1 heavy melting steel is still quoted at $13.50 to $14 per ton, delivered, no contracts have been made lately except by the leading independent consumer, which has not paid in excess of $13.50 per ton. Consumers of machine shop turnings have been able to buy all that they require for $10.50 per ton, delivered, and this is apparently the maximum of the present market. Stove plate is quotable at $11 on the basis of recent small purchases at that price. Eastern Pennsylvania consumers of yard grade of heavy melting steel have been able to buy recently at $11 per ton, delivered.

Prices per gross ton delivered consumers' yards, Philadelphia district:

No. 1 heavy melting steel	$13.50 to $14.00
Scrap T rails	13.00 to 13.50
No. 2 heavy melting steel	11.00
No. 1 railroad wrought	13.50 to 14.50
Bundled sheets (for steel works)	10.50
Machine shop turnings (for steel works)	10.50
Heavy axle turnings (or equivalent)	12.00 to 12.50
Cast borings (for steel works and rolling mill)	10.50
Heavy breakable cast (for steel works)	15.50 to 15.75
Railroad grate bars	11.00
Stove plate (for steel works)	11.00
No. 1 low phos., heavy, 0.04 per cent and under	17.50 to 18.00
Couplers and knuckles	15.00 to 15.50
Rolled steel wheels	15.00
No. 1 blast furnace scrap	10.00 to 10.50
Machine shop turnings (for rolling mill)	11.00 to 11.25
Wrought iron and soft steel pipes and tubes (new specifications)	12.00 to 12.50
Shafting	17.50 to 18.00
Steel axles	19.00 to 20.00
No. 1 forge fire	11.00 to 11.50
Cast iron carwheels	15.50 to 16.00
No. 1 cast	16.00 to 16.50
Cast borings (for chemical plant)	14.50 to 15.00
Steel rails for rolling	14.50 to 15.00

Sheets.—Blue annealed sheets are still quoted at 2.10c., Pittsburgh, or 2.42c., delivered Philadelphia, by eastern Pennsylvania mills. Competition is keen, however, and transactions are made at 2c. and 2.05c., Pittsburgh, or 2.32c. and 2.37c., delivered Philadelphia. Continuous mill sheets range from 1.90c. to 2c., Pittsburgh. Black sheets are quiet and the price is substantially unchanged at 2.60c. per lb., Pittsburgh, or 2.92c., delivered Philadelphia. Galvanized sheets continue to show a downward trend and 3.50c., Pittsburgh, or 3.82c., Philadelphia, is commonly quoted. Local automobile body builders are fairly well occupied with business, but are covered for the present on their sheet requirements.

Warehouse Business.—In an effort to bring jobbers' prices more in line with the mill quotation, local warehouses have announced $2 a ton advance, effective June

Warehouse Prices, f.o.b. Philadelphia

	Base per Lb.
Plates, ¼-in. and heavier	2.50c. to 2.60c.
Plates, $\frac{3}{16}$-in.	2.80c. to 3.00c.
Structural shapes	2.40c. to 2.60c.
Soft steel bars, small shapes and iron bars (except bands)	2.60c.
Round-edge iron	3.50c.
Round-edge steel, iron finished 1½ x 1½ in.	3.50c.
Round-edge steel, planished	4.30c.
Reinforcing steel bars, square, twisted and deformed	2.50c. to 3.00c.
Cold-finished steel, rounds and hexagons	3.35c.
Cold-finished steel, squares and flats	3.85c.
Steel hoops	3.50c.
Steel bands, No. 12 gage to $\frac{3}{16}$-in., inclusive	3.25c.
Spring steel	5.00c.
*Black sheets (No. 24)	4.00c.
†Galvanized sheets (No. 24)	4.75c.
Blue annealed sheets (No. 10)	3.15c.
Diamond pattern floor plates—	
¼-in.	5.30c.
$\frac{3}{16}$-in.	5.50c.
Rails	3.20c.
Swedish iron bars	6.60c.

*For 50 bundles or more; 10 to 49 bundles, 4.25c. base; 1 to 9 bundles, 4.50c. base.

†For 50 bundles or more; 10 to 49 bundles, 5.10c. base; 1 to 9 bundles, 5.45c. base.

11, on mild steel bars, which brings the current price to 2.60c. per lb. A fair tonnage of steel products is moving from stock, but individual orders are small.

Imports.—In the week ended June 9, arrivals of ore at this port totaled 21,113 gross tons, divided as follows: 13,750 tons of Algerian and 253 tons of Spanish iron ore; 2000 tons of Portuguese African chrome ore; 5010 tons of British West African and 100 tons of United Kingdom manganese ore. Only 197 tons of pig iron arrived, all from Sweden. Steel imports were 1135 tons of skelp and 12 tons of steel bands from Germany, 113 tons of structural shapes, 30 tons of steel bars and 34 tons of steel bands from France and 249 tons of skelp from Belgium.

New York

Pig Iron Sales 14,000 Tons—Few Steel Contracts Made

NEW YORK, June 12.—Pig iron sales by local selling agents totaled 14,000 tons for the week, including 5000 tons for delivery to a plant outside this district. A large proportion of current business is made up of small orders, indicating that buyers are not committing themselves heavily. Melters' stocks are low as a rule, and furnaces find that shipping instructions are keeping up at the rate of recent weeks. There is no change of importance in the price situation, although there continues to be an effort to obtain a minimum of $16.50, base furnace, for Buffalo foundry iron. In many cases, however, pig iron is being shipped by water and the base price at furnace is uncertain in view of the variability of barge rates. The Richmond Radiator Co. has bought 5000 tons of foundry iron for shipment to Uniontown, Pa., during the next quarter. The General Electric Co. has placed some orders against its inquiries for Bayway, N. J., and its New England plants. There are few outstanding tonnages pending. The New York Central has entered the market for 400 tons of foundry iron for third quarter delivery at Frankfort, N. Y., or Elkhart, Ind. The New York Air Brake Co., Watertown, N. Y., is inquiring for 100 tons of low phosphorus iron, 50 tons of silvery and 25 tons of spiegeleisen.

Prices per gross ton, delivered New York district:

Buffalo No. 2 fdy., sil. 1.75 to 2.25	$20.91 to $21.91
East. Pa. No. 2 fdy., sil. 1.75 to 2.25	20.39 to 22.52
East. Pa. No. 2X fdy., sil. 2.25 to 2.75	20.89 to 23.02
East. Pa. No. 1X fdy., sil. 2.75 to 3.25	21.39 to 23.52

Freight rates: $4.91 from Buffalo, $1.39 to $2.52 from eastern Pennsylvania.

Finished Steel.—Third quarter contracting for plates, shapes and bars has so far been of minor importance, but a few have been written at no advance in prices and also some at $1 a ton advance, a situation which reflects the lack of unanimity among the mills as to the possibility of getting a higher level. Nearly all large users have sufficient tonnage still unspecified to carry them well through July, at least, if they exercise their options before the end of this month, and this factor will defer a real test of the 1.90c. price. Eastern mills are selling plates and shapes on the bases of 2c., Coatesville, for plates and 2c., Bethlehem, for shapes, and, while they would quote 2.05c. on third quarter contracts, it has not yet been demonstrated that they can induce much contracting at that figure in view of the downward trend of demand. Sheet mills are not anxious to make third quarter contracts at the present low level of prices, so it is likely that sheet buying will remain largely on a spot basis. Second quarter sheet contracts have repeatedly been written down to conform to the decline in spot prices. Some cold-rolled strip makers are willing to take third quarter commitments at 2.75c., Pittsburgh or Cleveland, for lots of more than 3 tons and 3c. for smaller lots. Structural steel lettings in the week have been light. For May, the Structural Steel Board of Trade of New York reports a total of 46,002 tons booked by its members in the New York district, exclusive of bridges, subways, etc. April bookings were 28,200 tons and those in May, 1927, totaled 33,550 tons.

Mill prices per lb., delivered New York: Soft steel bars, 2.19c. to 2.24c.; plates, 2.12½c. to 2.22½c.; structural shapes, 2.14½c. to 2.19½c.; bar iron, 2.14c.

Warehouse Business.—Following a protracted period of shading of prices of black and galvanized sheets, jobbers generally have reduced prices on sales in the metropolitan district by 20c. per 100 lb. to 3.80c. per lb., base, on black and 4.50c. per lb., base, on galvanized. In the local New Jersey market prices are still maintained at 4c. for black and 4.70c. for galvanized. Occasional shading on blue annealed sheets is reported, especially when competition from imported sheets is encountered, but no general reduction has appeared as yet. Most jobbers report a slight decline in business, so that June promises to be a rather quiet month.

Warehouse Prices, f.o.b. New York

	Base per Lb.
Plates and structural shapes	3.30c.
Soft steel bars and small shapes	3.25c.
Iron bars	3.24c.
Iron bars, Swedish charcoal	7.00c. to 7.25c.
Cold-finished shafting and screw stock—	
Rounds and hexagons	3.40c.
Flats and squares	3.90c.
Cold-rolled strip, soft and quarter hard,	5.15c. to 5.40c.
Hoops	4.50c.
Bands	4.00c.
Blue annealed sheets (No. 10 gage)	3.85c. to 3.90c.
Long terne sheets (No. 24)	5.60c. to 5.80c.
Standard tool steel	12.00c.
Wire, black annealed	4.50c.
Wire, galvanized annealed	5.15c.
Tire steel, 1½ x ½ in. and larger	3.30c.
Smooth finish, 1 to 2½ x ¼ in. and larger	3.65c.
Open-hearth spring steel, bases	4.50c. to 7.00c.
Machine bolts, cut thread:	Per Cent Off List

No. 24	4.50c. to 4.70c.
No. 26	4.75c. to 4.95c.
No. 28*	5.00c. to 5.20c.
No. 30	5.40c. to 5.60c.

No. 28 and lighter, 36 in. wide, 20c. higher per 100 lb.

Ferroalloys.—A large domestic producer of spiegeleisen has advanced its quotation $1 per ton to $33, f.o.b. furnace, for the 19 to 21 per cent grade, effective at once. Very little buying of ferromanganese is reported and the market for other ferroalloys is quiet.

Cast Iron Pipe.—Most of the inquiries in the market are for small tonnages. Prices continue unchanged, with Northern makers still maintaining $37.60 to $38.60 per net ton, delivered New York, and Southern foundries quoting $32 to $33 per ton, base Birmingham. Hamburg, Pa., opened bids June 5 on 360 tons of 12-in. classes A and B water pipe. Pen Argyl, Pa., has taken bids on 1500 tons of 8 and 12-in. pipe. Waynesboro, Pa., has opened bids on about 150 tons of 14-in. pipe. Water pipe in the contract at Raritan Township, N. J., reported last week to have been awarded to W. G. Fritz, West Orange, N. J., is understood to have been purchased from R. D. Wood & Co.

Prices per net ton, delivered New York: Water pipe 6-in. and larger, $37.60 to $38.60; 4-in. and 5-in., $42.60 to $43.60; 3-in., $52.60 to $53.60; Class A and gas pipe, $4 to $5 extra.

Coke.—Prices are unchanged and buying is confined to small lots for prompt shipment. Standard furnace coke continues at about $2.75 per net ton, Connellsville. Special brands of foundry coke are $4.85 per net ton at the ovens and delivered prices are: To northern New Jersey, Jersey City and Newark, $8.56 per net ton; to New York and Brooklyn, $9.44 per net ton. By-product foundry coke ranges from $9 to $9.40 per net ton, Newark or Jersey City, and from $10.06 to $10.29 per net ton, New York or Brooklyn.

Old Material. — Dealers' buying prices of most grades of scrap show a slight decline. No. 1 heavy melting steel is being purchased at $13 per ton, delivered eastern Pennsylvania, and yard grade at $10.50 per ton, delivered. Stove plate for steel mill consumers is being bought by brokers at $10.50 per ton, delivered on a $3.52 per ton freight rate, and only $9.50 to $10 per ton, delivered, is offered for machine shop turnings and blast furnace scrap. No. 1 railroad wrought is off about $1 a ton on the basis of a recent sale to an eastern Pennsylvania consumer at $13.50 per ton. Plenty of scrap of all grades is apparently available. Eastern Pennsylvania users are not large buyers at present.

Dealers' buying prices per gross ton f.o.b. New York:

No. 1 heavy melting steel	$9.75 to $10.35
Heavy melting steel (yard)	6.50 to 7.00
No. 1 heavy breakable cast	11.25 to 12.00
Stove plate (steel works)	7.00 to 7.25
Locomotive grate bars	7.50 to 8.00
Machine shop turnings	6.00 to 6.50
Short shoveling turnings	6.00 to 6.50
Cast borings (blast furnace or steel works)	6.25 to 6.75
Mixed borings and turnings	6.00 to 6.75
Steel car axles	15.00 to 15.50
Iron car axles	23.75 to 24.75
Iron and steel pipe (1 in. dia., not under 2 ft. long)	8.25
Forge fire	6.50 to 6.75
No. 1 railroad wrought	9.50 to 10.00
No. 1 yard wrought, long	8.00 to 8.50
Rails for rolling	10.00 to 10.50
Cast iron carwheels	11.00 to 11.50
Stove plate (foundry)	8.50 to 9.00
Malleable cast (railroad)	10.00
Cast borings (chemical)	10.75 to 11.25

Prices per gross ton, delivered local foundries:

No. 1 machinery cast	$14.00 to $15.00
No. 1 heavy cast (columns, building materials, etc.), cupola size	12.00 to 13.00
No. 2 cast (radiators, cast boilers, etc.)	11.50 to 12.50

Warehouse Prices, f.o.b. Cleveland

	Base per Lb.
Plates and structural shapes	3.00c.
Soft steel bars	3.00c.
Reinforcing steel bars	2.25c. to 2.75c.
Cold-finished rounds and hexagons	3.65c.
Cold-finished flats and squares	4.15c.
Hoops and bands	3.65c.
Cold-finished strip	*5.95c.
Black sheets (No. 24)	3.75c.
Galvanized sheets (No. 24)	4.40c. to 4.50c.
Blue annealed sheets (No. 10)	3.25c.
No. 9 annealed wire, per 100 lb	$2.85
No. 9 galvanized wire, per 100 lb	3.30
Common wire nails, base per keg	2.85

*Net base, including boxing and cutting to length.

Cleveland

Consumers Uninterested in Third Quarter Steel—Automobile Takings Still Large

CLEVELAND, June 12.—Consumers are as yet showing no interest in third quarter contracts. So that the recent advance of $1 a ton to 1.90c. on steel bars, plates and structural material is untested. A Cleveland mill, which is using a 1.85c. Cleveland base for steel bars, has not yet announced its price for the third quarter.

While orders are fair, the present advance has not had the effect of driving in specifications on contracts expiring this month, and orders for the most part are for small lots for early requirements. Bookings so far in June are a little below those during the corresponding period of May. The demand for plates shows quite a decline. A favorable feature of the market is that mills are not getting cancellations or suspensions.

Specifications for steel bars, sheets and strip steel from the automotive industry are not as heavy as last month, but they are holding up well and predictions are made that there will be no decided slump in this industry before August. However, motor car manufacturers are not carrying large inventories and as yet have placed very little business for delivery after July 1.

While there is little inquiry from the building field for round lots of structural steel, there is a good demand for small lots. Fabricating prices are weak. The Mahoning Valley Sanitary District has an inquiry out for 300 tons of sheet steel piling for a dam at Mineral Ridge, Ohio.

Pig Iron.—There is a fair amount of activity in foundry and malleable iron for the third quarter. Producers generally are declining to quote for more extended deliveries, although one round-lot sale made recently was for the entire last half. Sales by Cleveland furnaces during the week amounted to 8000 tons and the total amount of business taken by Cleveland interests was 29,000 tons. Prices are holding closely to recent levels. The Lake furnace price ranges from $16.25, for shipment to highly competitive points, to $17, which Cleveland furnaces are able to get in some cases for delivery to nearby non-competitive points. For Cleveland delivery, furnaces continue to hold to $18, although there is considerable pressure on the part of some buyers for concessions. In Michigan, $17.50 has become the common price, although $18 still prevails for shipments to some points. There is no activity in low phosphorus iron. Shipping orders from the automotive industry, while not as heavy as last month, are holding up well and June shipments are not expected to fall much below those of May.

Prices per gross ton at Cleveland:

N'th'n No. 2 fdy., sil. 1.75 to 2.25	$18.50
Southern fdy., sil. 1.75 to 2.25	22.00
Malleable	18.50
Ohio silvery, 8 per cent	28.00
Basic Valley furnace	$15.35 to 15.50
Standard low phos., Valley furn'ce	26.50

Prices, except on basic and low phosphorus, are delivered Cleveland. Freight rates: 50c. from local furnaces; $3 from Jackson, Ohio; $6 from Birmingham.

Iron Ore.—Lake Superior ore on Lake Erie docks June 1 amounted to 4,934,564 tons, compared with 4,756,173 tons on the same date a year ago. Receipts at these docks this season until June 1 were 2,848,088 tons, compared with 5,701,987 tons during the same period last year. Shipments from Lake Erie docks until June 1 were 2,804,848 tons, against 5,105,722 tons during the same period a year ago.

Bolts, Nuts and Rivets.—Present discounts have been reestablished on bolts and nuts for the third quarter. Present rivet prices have also been reestablished for the third quarter, these being $2.90 per keg, Cleveland and Pittsburgh, for large rivets and 70 and 10 per cent off list for small rivets. Bolts and nuts continue in fair demand, orders being more plentiful than in June last year. The demand for rivets shows a slight improvement.

Coke.—There is very little new demand for foundry coke, but specifications against contracts are fair. Some contracts are being closed for the last half. Prices are unchanged at $3.50 to $4.85 for Connellsville foundry coke and at $7.75, Painesville, for Ohio by-product foundry coke.

Alloy Steel.—Specifications from the automotive industry show some falling off, compared with last month. Some activity has developed in third quarter contracts at the quoted prices, which are the same as prevailed during the present quarter except on the one grade recently advanced.

Semi-Finished Steel.—One producer is quoting its present prices of $34, Pittsburgh, for sheet bars, $33 for large billets and slabs and $38 for forging billets for the third quarter. A Cleveland maker has not yet named prices for that delivery. Wire rods have been reestablished for the next quarter at $44, Cleveland, at which some business has been taken.

Strip Steel.—Specifications for hot and cold-rolled strip steel are not as heavy as last month. The hot-rolled strip market continues weak, with 1.75c., Pittsburgh, a common quotation for wide material. Mills are able to get 2.10c. for light hoops. Cold-rolled strip is steady at 2.75c., Cleveland, for 3 tons and over. Some mills are quoting current prices for the third quarter, but have booked very little business for that delivery.

Reinforcing Bars.—New inquiry is rather light, except for small lots, which are moving well. Rail steel bars are unchanged at 1.75c., mill.

Warehouse Business.—Orders show a gain over those of May, which was a slow month. With the exception of some irregularity on sheets, prices are well maintained. Jobbers are now making a concession of $3 a ton on sheet orders for 25 bundles or over.

Old Material.—Activity in steel-making scrap developed in the Valley district during the week. One consumer purchased a round tonnage, paying $15 for No. 1 heavy melting steel and $14.25 for compressed sheet steel. Another purchased several thousand tons of heavy melting steel, covering a month's requirements, at $14.60. Dealers are buying against these orders. Locally, the market is inactive and prices show little change. Dealers are buying steel-making grades against outstanding orders from Cleveland mills at quoted prices. Although some blast furnace scrap recently sold at as low as $9.15, the market seems now established at a minimum of $9.25.

Prices per gross ton, delivered consumers' yards:

Basic Open-Hearth Grades	
No. 1 heavy melting steel	$13.00 to $13.25
No. 2 heavy melting steel	12.50 to 12.75
Compressed sheet steel	12.50 to 13.00
Light bundled sheet stampings	11.50 to 11.75
Drop forge flashings	11.50 to 11.75
Machine shop turnings	7.00 to 7.50
No. 1 railroad wrought	11.50 to 12.00
No. 2 railroad wrought	13.50 to 13.75
No. 1 busheling	11.00 to 11.25
Pipes and flues	9.00 to 9.50
Steel axle turnings	12.50 to 13.00
Acid Open-Hearth Grades	
Low phosphorus forging crops	16.50 to 17.00
Low phosphorus, billet, bloom and slab crops	17.00 to 17.50
Low phosphorus sheet bar crops	16.50 to 17.00
Low phosphorus plate scrap	16.00 to 16.50
Blast Furnace Grades	
Cast iron borings	9.25 to 9.50
Mixed borings and short turnings	9.25 to 9.50
No. 2 busheling	9.25 to 9.50
Cupola Grades	
No. 1 cast	16.25 to 16.75
Railroad grate bars	11.00 to 12.00
Stove plate	12.00 to 12.50
Rails under 3 ft	16.75 to 17.25
Miscellaneous	
Railroad malleable	15.00 to 15.50
Rails for rolling	16.25 to 16.50

Cold-Finished Steel.—Several makers have opened their books for the third quarter at the present price of 2.20c., Pittsburgh, and 2.25c., Cleveland, but consumers are not yet making commitments. Specifications are very good, considerable demand coming from makers of screw machine parts that are doing work for the Ford Motor Co.

Sheets.— Although there has been some slowing down in the demand from the automotive industry, orders from that source are still good. Not much business is coming from other consumers. Most producers would take third quarter contracts, but consumers are as yet showing no inclination to buy for that delivery. Prices continue weak, and with the declining demand makers do not see much hope of getting prices on a firmer basis during the coming quarter. Blue annealed sheets range from 1.90c. to 2.10c., Pittsburgh, but mills are able to get the higher price only for small lots. Black sheets range from 2.65c. to 2.75c., Pittsburgh. Galvanized sheets are available at 3.50c., Valley mill.

Standards Yearbook, 1928

Activities of the United States Bureau of Standards during 1927 are covered in a 400-page book entitled "Standards Yearbook, 1928," which is the second issue of this work. This volume contains not only the outlines of the activities and accomplishments of the Bureau of Standards and of other agencies of the Federal Government and the States, counties and municipalities, but also standardizing activities of technical societies and trade associations. It lays special emphasis on their accomplishments during 1927 and on their programs for future work. A feature is made also of the results and current activities of various foreign, national and international standardizing agencies. There is a bibliography contributed by William A. Slade, chief of the division of bibliography, Library of Congress.

The closing paragraph of the introductory section reads: "The scope of standardization is clearly enlarging, and its key position in industrial and scientific progress entitles it to the fullest possible cooperation of all concerned. Standardization is more than the act of bringing the user and the maker together in a clear understanding on the quality of service. Its aim is also to satisfy the users' needs with increasing efficiency and economy. It conserves all gains achieved, while serving as the vehicle for further advance."

Fuel Engineering Courses Continued

A year ago Prof. Robert H. Fernald, director mechanical engineering department of the Towne Scientific School, instituted a post-graduate course in fuel engineering at the University of Pennsylvania, Philadelphia.

The success of the first year has been sufficient to warrant its continuance. For the academic year commencing next fall, the collaboration of a notable list of 41 men, prominent in the various industries engaged in the production of fuel and power, has been secured for special lectures. The entire course of study is knit together by six members of the faculty of the University of Pennsylvania.

Prospective students should be engaged in some work allied to fuel engineering, and should have a college degree. Upon completion of a year's work and a satisfactory thesis the degree "Master of Science in Fuel Engineering" will be conferred. Tuition and fees total $450.

Poland Threatens Competition in Cast Iron Pipe

LONDON, ENGLAND, May 26.—European cast iron pipe manufacturers—especially those of France, Germany and Poland—are anticipating keen competition from each other in the near future. The Polish works are forming an export association, with the support of their government, and are now granting 180 days' credit to foreign buyers. They have reduced their prices to less than before the war, when Russia consumed about 75 per cent of the output, against only about 10 per cent at present, and are now making a bid for both the North and South American trade.

Harry Benjamin Equipment Co., St. Louis, dealer in new and old material, whose president and founder, Harry Benjamin, died on Jan. 10 last, has been reorganized with Ed. Elson as president and general manager and Fred Fuld as secretary and treasurer. Mr. Elson was vice-president of Walter A. Zelnicker Supply Co. for 25 years, and for the last two years was in the rail business on his own account. Mr. Fuld has been connected with the Benjamin company for the last 12 years. The company has a yard at Carondelet, Mo., and offices at 710 Buder Building, St. Louis.

San Francisco

Southern Pacific Buys 3100 Tons of Steel for Equipment

SAN FRANCISCO, June 9 (*By Air Mail*).—A further recession in demand for iron and steel products on the Pacific Coast is noticeable. Few large awards are reported. While prices in some lines are weak, cast iron pipe quotations have advanced about $2 a ton. Among the week's lettings was 578 tons of structural steel for the Queets River bridge at Olympia, Wash., booked by the Virginia Bridge & Iron Co. The Southern Pacific Equipment Co., San Francisco, has placed with various Eastern mills approximately 3100 tons of plates and shapes for locomotives, tenders, gondola and caboose cars to be built in its Sacramento yards.

Pig Iron.—Sales of foundry pig iron were limited to small lots. Inquiries specified unimportant tonnages for prompt shipment. Foundry operations continue on a limited scale among the jobbing class. Prices are unchanged.

Prices per gross ton at San Francisco:

*Utah basic	$25.00 to $26.00
*Utah foundry, sil. 2.75 to 3.25	25.00 to 26.00
**Indian foundry, sil. 2.75 to 3.25	24.00 to 25.00
**German foundry, sil. 2.75 to 3.25	24.25

---

*Delivered San Francisco.
**Duty paid, f.o.b. cars San Francisco.

Bars.—Low out-of-stock prices continue to prevail in the San Francisco district, and while 2c., base, is the usual price, as low as 1.80c. has been quoted on desirable business. Awards included 155 tons for a garage in San Francisco and 102 tons for a dam at Vale, Ore., both placed with unnamed interests. Bids were opened this week on 525 tons for a dam, penstock and power house at Eugene, Ore. Bids will be called for shortly on 2300 tons for Drainage Improvement District No. 26 at Los Angeles.

Plates.—The largest plate award in over two months was placed this week by the Southern Pacific Equipment Co., San Francisco. This company has purchased material for eight locomotives, 18 tenders and 50 caboose and 50 gondola cars to be constructed at its Sacramento yards. Approximately 625 tons is involved in the locomotives and tenders and 500 tons in the cars. It is also reported that the company plans to build 500 flat cars. Only two projects are before the trade for figures. These involve 700 tons each for two car floats, one for the Santa Fe and the other for the Western Pacific. Prices are not firm, and while 2.30c. applies on the usual run of orders, 2.25c. and 2.20c., c.i.f., have been quoted on large lots.

Shapes.—Demand for structural material fell off this week and awards totaled less than 3500 tons. The largest letting was 2000 tons for locomotives, tenders and caboose and gondola cars for the Southern Pacific Equipment Co. at San Francisco. This material was placed with Eastern producers. New business is slow in coming forth for figures, although there is a considerable tonnage on architects' boards. Bids are now being taken on 800 tons for an apartment building in Oakland and on several hundred tons for the addition to the Robert Dollar Building in San Francisco. Prices continue firm at 2.35c., c.i.f.

Cast Iron Pipe.—Movement of cast iron pipe is not heavy. The Holdener Construction Co., Sacramento, Cal., took 887 tons of 10 to 14-in. class 150 pipe for Lovelock, Nev. The United Concrete Pipe & Construction Co., Los Angeles, took 600 tons of 4 to 12-in. class B pipe for the improvement of Stewart Street, Oceanside, Cal. An unnamed interest was awarded 113 tons of 18-in. class B pipe for a dredging project in San Diego Bay. Bids will be opened on June 25 for 102 tons of 4 and 6-in. class B pipe for the improvement of Market Street, San Diego. The American Cast Iron Pipe Co. was low bidder on 1044 tons of 8 to 24-in. class C pipe for Tacoma, Wash. Prices have been advanced about $2 a ton, and $37 to $38 a ton, delivered, are now being quoted on 6-in. and larger pipe.

Coke.—Sales and inquiries are confined to small lots. About 4500 tons of English beehive and by-product coke is scheduled to arrive on the Coast early next month.

Warehouse Prices, f.o.b. San Francisco

	Base per Lb.
Plates and structural shapes	3.15c.
Soft steel bars	3.15c.
Small angles, $\frac{3}{16}$-in. and over	3.15c.
Small angles, under $\frac{3}{16}$-in	3.55c.
Small channels and tees, ¾-in. to 2¾-in.	3.75c.
Spring steel, ¼-in. and thicker	5.00c.
Black sheets (No. 24)	4.95c.
Blue annealed sheets (No. 10)	3.90c.
Galvanized sheets (No. 24)	5.50c.
Structural rivets, ½-in. and larger	5.65c.
Common wire nails, base per keg	$3.40
Cement coated nails, 100-lb. keg	3.40

Cincinnati

Pig Iron Buyers Hesitant on Third Quarter—Sheet Rollings Still Heavy

CINCINNATI, June 12.—Despite the fact that the opening of the third quarter is close at hand, pig iron buyers are hesitant about placing orders covering future requirements. This conservative policy is said to be dictated by the desire to find out what course business is likely to take before assuming further obligations, while the lack of strength in prices is another restraining factor. Sales in the past week include 750 tons of malleable for a Richmond, Ind., company and 2000 tons of foundry for an Ohio melter. The Norfolk & Western is inquiring for 800 tons of foundry iron and the Ford Motor Co. is in the market for 700 tons of 14 to 16 per cent ferrosilicon. Lake Erie furnaces are reported to be selling iron at a minimum of $16.25, base furnace. Tennessee and Alabama makers are holding to $16, base Birmingham, and southern Ohio foundry remains nominally at $19, base Ironton.

Prices per gross ton, delivered Cincinnati:

So. Ohio fdy., sil. 1.75 to 2.25	$20.89
So. Ohio malleable	$20.14 to 20.89
Alabama fdy., sil. 1.75 to 2.25	19.69
Alabama fdy., sil. 2.25 to 2.75	20.19
Tennessee fdy., sil. 1.75 to 2.25	19.69
Southern Ohio silvery 8 per cent	26.89

Freight rates, $1.89 from Ironton and Jackson, Ohio; $3.69 from Birmingham.

Finished Steel.—Further improvement is noted in specifications and orders for steel sheets, an important district mill reporting that its unfilled tonnage is the largest in its history. The betterment, however, is not confined to sheets alone, for sales of bars and of structural steel have reflected a healthier demand from users. Prices show considerable variation. In bars, structural shapes and plates an attempt will be made to put third quarter contracts on a basis of 1.90c., base Pittsburgh, an advance of $1 a ton, while quotations for immediate delivery are firm at 1.85c. In the sheet market the situation is far less favorable. Although extremely low prices prevailing in other districts have not appeared in this section, schedules show a rather wide range, which is indicative of weakness. For the general run of miscellaneous orders, blue annealed is bringing 2c., base Pittsburgh, black 2.70c. to 2.80c. and galvanized 3.65c., but on large requirements quotations are shaded from $1 to $2 a ton. One of the most

Warehouse Prices, f.o.b. Cincinnati

	Base per Lb.
Plates and structural shapes	3.40c.
Bars, soft steel or iron	3.30c.
New billet reinforcing bars	3.15c.
Rail steel reinforcing bars	3.00c.
Hoops	4.00c. to 4.25c.
Bands	3.95c.
Cold-finished rounds and hexagons	3.85c.
Squares	4.35c.
Black sheets (No. 24)	4.05c.
Galvanized sheets (No. 24)	4.90c.
Blue annealed sheets (No. 10)	3.60c.
Structural rivets	3.85c.
Small rivets	65 per cent off list
No. 9 annealed wire, per 100 lb.	$3.00
Common wire nails, base per keg	2.95
Cement coated nails, base 100 lb. keg	2.95
Chain, per 100 lb.	7.55
	Net per 100 Ft.
Lap-welded steel boiler tubes, 2-in	$18.00
4-in.	38.00
Seamless steel boiler tubes, 2-in	19.00
4-in.	39.00

encouraging signs is the well diversified demand from consuming industries. Electrical manufacturers are taking liberal tonnages of sheets, while automobile makers also continue a large factor. In addition, jobbing interests are steady buyers. Operations of district sheet mills are at about 90 per cent of capacity, and no change is expected for several weeks. Common wire nails are selling at $2.50 per keg, base Ironton, with low barge freight rates to Ohio River points. Plain wire is unchanged at $2.40 per 100 lb., base Ironton. Activities in structural steel still are quiet, although a pickup is expected in the next two weeks.

Reinforcing Bars.—The market has an undertone of strength, and manufacturers are predicting an advance of $1 a ton for third quarter. Current orders are being booked at 1.85c., base Pittsburgh, for new billet bars, and 1.80c., base mill, for rail steel stock.

Warehouse Business.—Orders continue in fair volume, but several jobbers declare that the total tonnage booked recently is somewhat disappointing for this time of the year. Reinforcing bars have been especially active. Prices are steady and unchanged.

Coke.—The largest sale of the past week was 3000 tons of beehive foundry coke to a melter in this district. Specifications and orders for by-product foundry coke have been only fair and shipments this month are likely to be slightly less than those in May. Prices of beehive foundry and furnace coke from the New River and Wise County fields are unchanged.

Foundry coke prices per net ton delivered Cincinnati: By-product coke, $9.02; Wise County coke, $7.09 to $7.59; New River coke, $9.09 to $9.59. Freight rates, $2.14 from Ashland, Ky.; $2.59 from Wise County and New River ovens.

Old Material.—While the market is tending toward softness, prices have not changed. Steel mills in this district are accepting normal tonnages on current contracts, but are not buying for forward deliveries. Considerable scrap is being offered by railroads this week, the Chesapeake & Ohio list totaling approximately 10,000 tons, the Louisville & Nashville, 13,000, and Southern, 9000.

Dealers' buying prices per gross ton f.o.b. cars, Cincinnati:

Heavy melting steel	$10.75 to	$11.25
Scrap rails for melting	11.25 to	11.75
Loose sheet clippings	8.25 to	8.75
Bundled sheets	9.25 to	9.75
Cast iron borings	7.75 to	8.25
Machine shop turnings	7.25 to	7.75
No. 1 busheling	10.00 to	10.50
No. 2 busheling	7.00 to	7.50
Rails for rolling	12.50 to	13.00
No. 1 locomotive tires	12.75 to	13.25
No. 1 railroad wrought	10.00 to	10.50
Short rails	15.75 to	16.25
Cast iron carwheels	12.25 to	12.75
No. 1 machinery cast	15.25 to	15.75
No. 1 railroad cast	12.75 to	13.25
Burnt cast	7.50 to	8.00
Stove plate	8.25 to	8.75
Brake shoes	9.50 to	10.25
Railroad malleable	11.50 to	12.00
Agricultural malleable	11.00 to	11.50

Youngstown

Steel Orders Fall Below Shipments—Ingot Output Above 70 Per Cent

YOUNGSTOWN, June 12.—Incoming orders for finished steel products are not equaling the shipments of producers in this district, and the recent rate of ingot production is maintained with difficulty. While the average production rate can still be stated as between 70 and 75 per cent of capacity, independent capacity is not that fully engaged, and it is because the Carnegie Steel Co. has 13 of its 15 Ohio works open-hearth furnaces in production that it is possible to put the general average above 70 per cent.

Hot-rolled strips still are doing well for makers in this area in point of specifications and shipments, but in the other products of the district demand is considerably lighter than it was a few weeks ago. In pipe, more satisfaction is derived from the price situation than from the volume of orders. The higher prices established on butt-welded pipe early in April, through the withdrawal of an extra 5 per cent which previously had been allowed jobbers, are now regarded as fully established. Drill and drive pipe and casing are not moving with any considerable freedom, but the reasons are understood and there are no ideas that the cutting of prices would induce ordering.

In sheets, the situation is the reverse of that in pipe. While orders are as large as they ever are at this time of the year, the prices that have to be made to secure them, particularly in the districts of large consumption, are very low on the common finishes. Mills here have made sales of black sheets at 2.70c., base Pittsburgh, and of galvanized at 3.60c., base Pittsburgh, in the Pittsburgh district, but such prices are not readily obtainable in other markets to which they ship.

The effort to establish merchant bars at 1.90c., base Pittsburgh, on third quarter business is meeting with rather indifferent success. Much second quarter tonnage carrying 1.85c., base, remains to be shipped, and just now more attention is being given to securing shipping instructions on these old commitments than in trying to get third quarter contracts. Moreover, buyers are not yet keenly interested in supplies beyond their known needs, and are said to regard the higher asking prices as a move by manufacturers to hold the market at its present level.

The scrap market in this area has been helped sentimentally by the fact that shipments again are going to the Warren works, Republic Iron & Steel Co., after a period of limited takings incident to the passing of control of the Trumbull Steel Co. to the Republic company. Steel makers here are demanding better heavy melting steel and showing some inclination to reduce the use of the lighter grades of scrap. Low prices at Pittsburgh for machine shop turnings are believed to be partly due to the fact that they are no longer much wanted at Youngstown and eastern Ohio steel works.

In spite of the fact that a local steel company sold basic iron at $15.37, furnace, other producers say they would not go below $16, furnace, on that grade and are quoting Bessemer iron up to $17.50 and foundry malleable at $17. The Edgewater Steel Co. is in the market for 1000 tons of basic iron.

St. Louis

Basic Iron Sales of 16,000 Tons—Some Grades of Scrap Off 25c.

ST. LOUIS, June 11.—Basic iron, which has been dragging for some time, showed renewed activity this week, with the sale of 15,000 tons to one district melter for third quarter shipment, and 1000 tons for immediate shipment to another. Both melters cater to railroad trade. Both sales were made by the St. Louis Gas & Coke Corporation, which also sold about 1500 tons of foundry grades in lots up to 200 tons. A Southern interest sold about five carloads.

Prices per gross ton at St. Louis:

No. 2 fdy., sil. 1.75 to 2.25, f.o.b. Granite City, Ill.		$19.00
Northern No. 2 fdy., delivered St. Louis		20.16
Southern No. 2 fdy., delivered	$19.92 to	20.42
Northern malleable, delivered		20.16
Northern basic, delivered		20.16

Freight rates: 81c. from Granite City to St. Louis; $2.16 from Chicago; $4.42 from Birmingham.

Warehouse Prices, f.o.b. St. Louis

	Base per Lb.
Plates and structural shapes	3.25c.
Bars, soft steel or iron	3.15c.
Cold-finished rounds, shafting and screw stock	3.75c.
Black sheets (No. 24)	4.45c.
Galvanized sheets (No. 24)	5.25c.
Blue annealed sheets (No. 10)	3.60c.
Black corrugated sheets (No. 24)	4.50c.
Galvanized corrugated sheets	5.30c.
Structural rivets	3.75c.
Boiler rivets	3.75c.
	Per Cent Off List
Tank rivets, $\frac{7}{16}$-in. and smaller, 100 lb. or more	70
Less than 100 lb.	65
Machine bolts	60
Carriage bolts	60
Lag screws	60
Hot-pressed nuts, squares, blank or tapped, 200 lb. or more	60
Less than 200 lb.	50
Hot-pressed nuts, hexagons, blank or tapped, 200 lb. or more	60
Less than 200 lb.	50

Coke.—Buying of domestic grades of coke by dealers is on a more liberal basis than prevailed at this time last year, by-product interests report. Foundry coke is in light demand, and consumers are reported to be behind their contract schedules.

Finished Iron and Steel.—A slight improvement in the volume of business in galvanized sheets is reported by the Granite City Steel Co. Specifications received were slightly heavier than the preceding week, and, in addition, buyers seemed to be showing real interest in third quarter requirements. A continued improvement is looked for especially from the South and Southwest. Orders for blue annealed and black sheets are reaching the company in satisfactory volume, and the tonnage in tin plate is satisfactory. Buying of plates is lighter, with prices unchanged. May warehouse business was about 5 per cent over April's. Structural steel demand is light. The contract for the J. C. Penney Co. warehouse, which will require approximately 2500 tons, is the principal reinforcing project pending.

Old Material.—The market for old material is easier, with miscellaneous standard-section rails, bundled sheets, cast iron carwheels and stove plate 25c. lower. Lack of buying by consumers and the fact that dealers are pretty well covered on existing contracts has caused the easier feeling. Relaying rails are in good demand, with buying mostly of 40-lb. and 70 to 90-lb. weights. Railroad lists: Pennsylvania Railroad, 45,630 tons; Louisville & Nashville, 12,781 tons; Wabash Railroad, 2663 tons; Kansas City Southern Railroad, 352 tons; New Orleans Great Northern, 125 tons; Ann Arbor, 72 tons; Great Northern, 99 carloads; Nickel Plate, 21 carloads; Chicago & Western Indiana, 14 carloads; Chicago & Eastern Illinois, 14 carloads; Frisco, 13 carloads; Pullman Co., 10 carloads; Nickel Plate Railroad (rail), 5 carloads.

Dealers' buying prices, per gross ton. f.o.b. St. Louis district:

Heavy melting steel	$11.00 to	$11.50
No. 1 locomotive tires	12.00 to	12.50
Heavy shoveling steel	11.00 to	11.50
Miscellaneous standard-section rails, including frogs, switches and guards, cut apart	12.25 to	12.75
Railroad springs	13.50 to	14.00
Bundled sheets	8.50 to	9.00
No. 2 railroad wrought	11.25 to	11.75
No. 1 busheling	9.75 to	10.25
Cast iron borings	9.00 to	9.50
Iron rails	13.00 to	13.50
Rails for rolling	13.00 to	13.50
Machine shop turnings	7.00 to	7.50
Steel car axles	17.50 to	18.00
Iron car axles	23.50 to	24.00
Wrought iron bars and transoms	21.00 to	21.50
No. 1 railroad wrought	10.00 to	10.50
Steel rails, less than 3 ft.	15.00 to	15.50
Steel angle bars	12.00 to	12.50
Cast iron carwheels	13.25 to	13.75
No. 1 machinery cast	13.00 to	13.50
Railroad malleable	11.50 to	12.00
No. 1 railroad cast	13.00 to	13.50
Stove plate	11.25 to	11.75
Agricultural malleable	12.00 to	12.50
Relaying rails, 60 lb. and under	20.50 to	23.50
Relaying rails, 70 lb. and over	26.50 to	29.00

Birmingham

Bars, Shapes and Plates Reduced $1—Open-Hearth Activity Lower

BIRMINGHAM, June 12.—Considering the nearness of the third quarter, pig iron buying has been dull and few signs of awakening interest have appeared. Small-lot selling continues. Some of the melters are running short on second quarter iron and a little fill-in tonnage is expected to develop within the next few days. The base price of $16 is being maintained on foundry iron. Shipping orders against contracts are holding up fairly well. Furnace operations have been the same during the past two weeks, 18 being in blast. Of this number, 10 are on foundry, six on basic, one on recarburizing iron and one on ferromanganese.

Prices per gross ton, f.o.b. Birmingham district furnaces:

No. 2 foundry, 1.75 to 2.25 sil.	$16.00
No. 1 foundry, 2.25 to 2.75 sil.	16.50
Basic	15.00

Finished Steel.—Quotations on bars, plates and shapes have been reduced $1 per ton and are now 2c. to 2.15c., f.o.b. Birmingham. Prices as a whole are unsteady. However, the market continues active and mills are being kept busy. Light business in railroad accessories has been compensated for by increase in some of the other important lines. Sheet stocks have been increased awaiting a buying movement expected to develop shortly. Some improvement is noted in the demand for fabricated structural steel. The Ingalls Iron Works Co. will furnish 425 tons for a bridge at Miami, Fla. The Virginia Bridge & Iron Co. has an order for 130 tons for a coal-handling plant for the Woodward Iron Co. The Tennessee company has reduced its active open-hearth furnaces at Ensley from eight to six. Five are still in operation at Fairfield and the Gulf States Steel Co. continues with four at Alabama City.

Cast Iron Pipe.—The unfilled tonnage of the pressure pipe makers has been fairly well supported during the past week by small orders ranging from a carload to 300 tons. No large orders were placed in the district. A fair amount of new business is to be up for bids within the next week. Moderate tonnages for Memphis, Tenn., and Pensacola, Fla., are included. Prices are gradually acquiring a firmer tone, with quotations continuing at $32 to $33. Shipments have been close to production for several weeks. Business is below normal for this time of the year.

Coke.—A moderate amount of activity is noted in forward buying, with some consumers covering their foundry coke requirements for the second half. Most of the buyers covered for the third quarter some time ago. Spot coke buying is almost at a standstill. Quotations of $5 for both spot and contract coke are being maintained.

Old Material.—Indifference continues to characterize the market. Demand is spotty and below normal. Prices are unchanged, but the tone is easy.

Prices per gross ton delivered Birmingham district consumers' yards:

Heavy melting steel	$8.50 to	$9.00
Scrap steel rails	11.00 to	11.50
Short shoveling turnings	7.50 to	8.00
Cast iron borings		8.00
Stove plate		13.50
Steel axles	19.00 to	20.00
Iron axles	20.00 to	21.00
No. 1 railroad wrought	10.00 to	10.50
Rails for rolling		13.00
No. 1 cast		14.25
Tramcar wheels	12.50 to	13.50
Cast iron carwheels	12.00 to	13.00
Cast iron borings, chemical	13.50 to	14.00

Canada

Steel for Detroit-Windsor Tunnel Awarded—Pig Iron Shipments Larger

TORONTO, ONT., June 12.—Shipments of pig iron range from 10 to 15 per cent larger than those of a year ago. Pig iron business continues at a good level and orders ranging from 50 to 200 tons are appearing. Interest is almost entirely in foundry and malleable iron for immediate needs of melters, and little booking has been done for third quarter. The blowing in of the Victoria stack at Port Colborne, Ont., will augment the production of foundry iron in Canada by about 5000 tons per month, and should bring total output somewhat above record figures of the past two or three years. With strong outside competition, and the lower prices at which United States and British iron is offered in the Canadian market, there is little prospect of an early strengthening in local prices.

Prices per gross ton:

Delivered Toronto		
No. 1 foundry, sil. 2.25 to 2.75	$23.10 to	$23.60
No. 2 foundry, sil. 1.75 to 2.25	23.10 to	23.60
Malleable	23.10 to	23.60
Delivered Montreal		
No. 1 foundry, sil. 2.25 to 2.75	24.50 to	25.00
No. 2 foundry, sil. 1.75 to 2.25	24.50 to	25.00
Malleable	24.50 to	25.00
Basic		24.00
Imported Iron at Montreal Warehouse		
Sumerlee		33.50
Carron		33.00

Structural Steel.—The strike of structural steel workers which became effective about a month ago has depressed sales in this market. Negotiations for a settlement have been under way, but no agreement has been reached, with the result that operations are at a standstill on most of the larger structures in Ontario and Quebec. The strike has not only curtailed sales, but is holding up deliveries on old contracts. Building programs, however, continue to be announced, and at the present time there is prospective structural steel business in Toronto and Montreal districts alone involving between 35,000 and 50,000 tons. John W. Seems, president Canadian Bridge Co., Walkerville, Ont., announces that his firm has the contract to supply steel for the under-river work for the Windsor-Detroit tunnel, construction of which has just been started. The contract is said to total $2,000,000, and will keep the Walkerville plant running day and night for the next 15 months. Orders pending include 2000 tons structural steel and 1000 tons of reinforcing bars for new office building at Montreal for the Terminal Building Corporation; 1000 tons of structural steel and 400 tons of reinforcing bars for Regent Knitting Mills at St. Jerome, Que.; 5000 tons structural steel for factory at Windsor, Ont., for T. Eaton Co., Toronto; 1000 tons of structural steel and 500 tons of reinforcing bars for garage at Hamilton, Ont.; 6000 tons structural steel for 16-story building at Bay and Adelaide Streets, Toronto, for the Canada Permanent Mortgage Corporation; also a number of smaller contracts involving from 200 tons to 1000 tons of shapes and like tonnages of reinforcing bars for other proposed buildings and bridges throughout Ontario.

Old Material.—The demand for iron and steel scrap shows very little change. Sales are at a fairly good level. Prices are unchanged.

Dealers' buying prices:

Per Gross Ton	Toronto	Montreal
Heavy melting steel	$9.00	$8.00
Rails, scrap	10.00	10.00
No. 1 wrought	9.00	11.00
Machine shop turnings	7.00	6.00
Boiler plate	7.00	7.00
Heavy axle turnings	7.50	7.50
Cast borings	7.50	6.00
Steel turnings	7.00	6.50
Wrought pipe	5.00	6.00
Steel axles	14.00	19.00
Axles wrought iron	16.00	21.00
No. 1 machinery cast	....	16.00
Stove plate	....	12.00
Standard carwheels	....	14.50
Malleable	....	13.00
Per Net Ton		
No. 1 machinery cast	15.00	....
Stove plate	9.00	....
Standard carwheels	13.00	....
Malleable scrap	13.00	....

Buffalo

Third Quarter Steel Prices Held in Abeyance—Pig Iron Dull

BUFFALO, June 12.—The week has been one of inactivity in pig iron. No sizable inquiries have been presented, and it is doubtful if there is any large outstanding except the General Electric Co. tonnage. Buffalo furnaces continue to maintain quotations at $17 for No. 2 plain foundry and $17.50 for malleable in this district, and it is reported that prices for shipment eastward are assuming a firmer tone.

Prices per gross ton, f.o.b. furnace:

No. 2 plain fdy., sil. 1.75 to 2.25	$17.00
No. 2 foundry, sil. 2.25 to 2.75	17.50
No. 1X foundry, sil. 2.75 to 3.25	18.50
Malleable, sil. up to 2.25	17.50
Basic	$16.50 to 17.00
Lake Superior charcoal	27.28

Finished Iron and Steel.—Prices for bars, shapes and plates for third quarter have not been announced by the leading interest in this district, but it is likely that they will be quoted at 2c., Lackawanna. Sheet demand is off slightly. There has been no announcement here on third quarter prices. Sheet bar buying has been in good quantity, but the billet demand has been light. Sheet piling demand is fair. The new Riverside High School, Buffalo, will require 1000 tons and School No. 61 600 tons of structural steel.

Warehouse Prices, f.o.b. Buffalo

	Base per Lb.
Plates and structural shapes	3.40c.
Soft steel bars	3.30c.
Reinforcing bars	2.75c.
Cold-finishing flats, squares and hexagons	4.45c.
Rounds	3.95c.
Cold-rolled strip steel	5.85c.
Black sheets (No. 24)	4.30c.
Galvanized sheets (No. 24)	5.15c.
Blue annealed sheets (No. 10)	3.80c.
Common wire nails, base per keg	$3.65
Black wire, base per 100 lb	3.90

Old Material.—No new large selling has taken place and shipments against current orders are being restricted. Scrap from Detroit continues to flow to one of the largest consuming plants. Some activity has taken place in stove plate, with a few small sales at about $13.25. Heavy steel axle turnings have softened to $12 to $12.50.

Prices per gross ton, f.o.b. Buffalo consumers' plants:

Basic Open-Hearth Grades	
No. 1 heavy melting steel	$14.50 to $14.75
No. 2 heavy melting steel	12.50 to 13.00
Scrap rails	13.50 to 14.00
Hydraulic compressed sheets	12.50 to 13.00
Hand bundled sheets	8.50 to 9.00
Drop forge flashings	12.00 to 12.50
No. 1 busheling	13.00 to 13.50
Heavy steel axle turnings	12.50 to 13.00
Machine shop turnings	8.00 to 8.50
Acid Open-Hearth Grades	
Railroad knuckles and couplers	15.50
Railroad coil and leaf springs	15.50 to 16.00
Rolled steel wheels	15.00 to 15.50
Low phosphorus billet and bloom ends	16.50 to 17.00
Electric Furnace Grades	
Heavy steel axle turnings	12.75 to 13.25
Short shoveling steel turnings	10.75 to 11.25
Blast Furnace Grades	
Short shoveling steel turnings	10.50 to 11.00
Short mixed borings and turnings	9.50 to 10.00
Cast iron borings	9.25 to 9.75
No. 2 busheling	9.00 to 9.25
Rolling Mill Grades	
Steel car axles	16.00 to 16.50
Iron axles	21.00 to 22.00
No. 1 railroad wrought	12.00 to 12.50
Cupola Grades	
No. 1 machinery cast	14.50 to 15.00
Stove plate	13.00 to 13.25
Locomotive grate bars	11.50 to 12.00
Steel rails, 3 ft. and under	16.50
Cast iron carwheels	12.50 to 13.00
Malleable Grades	
Railroad	15.00
Agricultural	15.00
Industrial	15.00

Boston

Pig Iron Prices Still Low—Scrap Market Dull

BOSTON, June 12.—The General Electric Co. this week will purchase 1100 tons of No. 2 plain and No. 1X iron for its New England plants. Business has dropped noticeably; sales made by Buffalo and other New York State furnaces and the Mystic Iron Works

Warehouse Prices, f.o.b. Boston

	Base per Lb.
Plates	3.365c.
Structural shapes—	
Angles and beams	3.365c.
Tees	3.365c.
Zees	3.465c.
Soft steel bars and small shapes	3.265c.
Flats, hot-rolled	4.15c.
Reinforcing bars	3.265c. to 3.54c.
Iron bars—	
Refined	3.265c.
Best refined	4.60c.
Norway, round	6.60c.
Norway, squares and flats	7.10c.
Spring steel—	
Open-hearth	5.00c. to 10.00c.
Crucible	12.00c.
Tire steel	4.50c. to 4.75c.
Bands	4.015c. to 5.00c.
Hoop steel	5.50c. to 6.00c.
Cold rolled steel—	
Rounds and hexagons	*3.45c. to 5.45c.
Squares and flats	*3.95c. to 6.95c.
Toe calk steel	6.00c.
Rivets, structural or boiler	4.50c.
	Per Cent Off List
Machine bolts	50 and 5
Carriage bolts	50 and 5
Lag screws	50 and 5
Hot-pressed nuts	50 and 5
Cold-punched nuts	50 and 5
Stove bolts	70 and 10

*Including quantity differentials.

in the past week were smaller than for some time. Competition between these three groups of stacks remains keen. Large tonnages have recently been sold on a delivered base equivalent to less than $16 a ton, Buffalo furnace, for No. 2X. Quite a little western Pennsylvania iron and some Alabama iron has been sold for mixture purposes at prices considerably above those prevailing for other irons. No open inquiry of importance is reported, but quite a few foundries are quietly negotiating with furnaces for lots ranging in size from 100 tons to 1000 tons, third quarter delivery generally, and some fourth quarter. There is no indication, however, when these tonnages will be purchased.

Prices of foundry iron per gross ton delivered to most New England points:

Buffalo, sil. 1.75 to 2.25	$20.91 to $21.91
Buffalo, sil. 2.25 to 2.75	21.41 to 22.41
East. Penn., sil. 1.75 to 2.25	23.15 to 23.65
East Penn., sil. 2.25 to 2.75	23.65 to 24.15
Virginia, sil. 1.75 to 2.25	25.71
Virginia, sil. 2.25 to 2.75	26.21
Alabama, sil. 1.75 to 2.25	22.91 to 24.77
Alabama, sil. 2.25 to 2.75	23.41 to 25.27

Freight rates: $4.91 from Buffalo, $3.65 from eastern Pennsylvania, $5.21 all rail from Virginia, $6.91 to $8.77 from Alabama.

Coke.—No increase in the movement of by-product foundry coke from ovens to foundries is reported, which indicates that the New England melt of iron is no larger. Compared with a month ago, coke consumption is somewhat greater, but it is about on a par with a year ago. The price remains at $11 a ton, delivered within a $3.10 freight rate zone. Domestic coke is moving freely, and indications are that this year will see a new high record for sales by ovens.

Cast Iron Pipe.—The Boston Consolidated Gas Co. is reported to have purchased 1700 tons of 6-in. and 300 tons of 16-in. pipe, but the name of the maker is not mentioned. Maynard, Mass., has awarded 150 tons of 6 to 16-in. pipe to the Warren Foundry & Pipe Co., Beverly, Mass., opened bids today (June 12) on 150 tons of 12-in. pipe. Quite a little pipe business has been placed privately. Those foundries supplying this territory with pipe have backlogs sufficient to keep plants running at present capacity during the next three months. Prices on 6 to 16-in. pipe are firm at $40.50 to $42.50 a ton, delivered common Boston freight rate points. Concessions are still obtainable on larger pipe, but they are less than were possible a month ago.

Structural Fabrication.—While most of the current activity in the steel fabricating market is confined to small jobs, the outlook is more encouraging. A local engineer is expected to let 3000 tons of steel shortly; figures will soon be asked on 1500 tons for a Massachusetts industrial plant; a utility company is to put up a sizable addition, and several jobs involving 300 and 400 tons or larger amounts of steel give indication of becoming active before July 1. Competition for work among fabricators is still keen. There has been a turn in the labor situation, and it now looks as if this week will see fabricators granting iron workers $1.37½ per hour, compared with $1.25, the present wage.

Shapes and Plates.—Mills report improved third quarter buying. While 1.90c. per lb., base Pittsburgh, is asked for small tonnages of standard shapes, 1.85c. can be done on sizable lots. Prices for plates are the same.

Cold-Rolled Strip.—Third quarter buying is developing slowly. Consumers still have ample supplies in stock for needs running into July. The American Steel & Wire Co. quotes 3.30c. per lb., base Worcester, for 1 to 3-ton lots, while other rollers ask 3c. to 3.15c. per lb., base Pittsburgh.

Bars.—Steel bars are in fair demand for third quarter delivery, most mills asking 1.90c. per lb., base Pittsburgh. Mills are holding firmly to 1.90c., base Pittsburgh, for reinforcing bars, but local distributers still make no pretense of adhering to the list price of 2.90c. per lb., base, from stock. Domestic mills are still meeting active competition from imported steel, which accounts for the softness of domestic stock prices. Road mesh is generally bringing $75 a ton.

Warehouse Business.—Weekly warehouse sales are running larger than recently. Individual orders are small, however. An advance of $1 a ton on wire nails will soon be put into effect.

Old Material.—Aside from continued buying of No. 1 steel and yard steel for export, there is very little activity in old materials. Exporters are now paying $9.25 a ton, delivered at dock here, for No. 1 steel, and $8.75 a ton for yard steel. Rhode Island and Worcester, Mass., foundries are taking tonnages of malleable iron, prices for which have a wide range, $13.50 to $14 a ton delivered generally, with one lot going at $15.10. New England gray iron foundries show little interest in machinery cast. Prices for material suitable for steel mill use are generally easier. Chemical borings and rails for rerolling have dropped 50c. a ton.

Buying prices per gross ton, f.o.b. Boston rate shipping points:

No. 1 heavy melting steel	$8.60 to $9.00
Scrap T rails	8.00 to 8.50
Scrap girder rails	7.50 to 8.00
No. 1 railroad wrought	9.00 to 9.50
No. 1 yard wrought	7.00 to 7.50
Machine shop turnings	5.50 to 5.75
Cast iron borings (steel works and rolling mill)	5.50 to 5.75
Bundled skeleton, long	5.50 to 7.00
Forge flashings	6.00 to 7.00
Blast furnace borings and turnings	5.50 to 5.75
Forge scrap	6.00 to 6.25
Shafting	13.50 to 14.00
Steel car axles	14.50 to 15.00
Wrought pipe 1 in. in diameter (over 2 ft. long)	7.00 to 7.50
Rails for rolling	9.50 to 10.00
Cost iron borings, chemical	9.50 to 10.00

Prices per gross ton delivered consumers' yards:

Textile cast	$13.25 to $13.50
No. 1 machinery cast	14.00 to 14.50
No. 2 machinery cast	12.50 to 13.50
Stove plate	10.00 to 10.50
Railroad malleable	13.50 to 14.50

Refractories Manufacturers Charged With Suppressing Competition

WASHINGTON, June 12.—The Federal Trade Commission has issued a complaint against 55 manufacturers of refractories, representing the bulk of production of the United States, as well as four men associated with the industry, charging them with concerted action in fixing prices of base bricks and preparing classifications. It is charged that their action is in violation of the Federal Trade Commission Act, which prohibits unfair methods of competition.

The men named specifically include J. J. Brooks, Jr., assistant to the president of the Harbison-Walker Refractories Co.; Frederick W. Donahoe, as secretary of the Refractories Manufacturers' Association; H. H. Hopwood, secretary of the groups listed, and J. M. McKinley, vice-president and general manager of the Crescent Refractories Co. Mr. McKinley is designated as chairman of the classification committee of the manufacturers and as classification engineer is alleged to have originated, prepared and assisted in securing the adoption of the classification of fire clay refractories.

It is charged that the action of the respondents restricted, restrained and suppressed competition for the purpose of unduly enhancing prices. The charge is also made that the respondents, through concerted action, determined upon uniform methods of computing the sizes of the various refractories and the base brick equivalents and upon uniform terms and methods of sale. The complaint alleges that they hold meetings at which prices for base bricks are discussed; that there is an exchange of information as to what the prices from each of them are to be in the future and that the respondents notify each other of any changes to be made in the prices of the base bricks and when such changes are to become effective. The result, it is charged, has been to unduly enhance prices and to make them substantially uniform.

The commission has fixed July 23 as the date for a hearing, to be held in Washington.

Keystone Steel & Wire Co., Peoria, Ill., reports gross earnings of $1,149,410 for the first 10 months of its fiscal year, compared with $1,015,590 in the entire previous year. Earnings for April were $160,000, compared with $149,000 in the previous year.

NON-FERROUS METAL MARKETS

The Week's Prices

Cents per Pound for Early Delivery

Zinc, St. Louis	6.15	6.15	6.15	6.15	6.15	6.15

*Refinery quotation; delivered price ¼c. higher.

NEW YORK, June 12.—Strength in copper continues, with foreign buying the feature. The tin market has been active at substantially unchanged prices. Demand for lead is fairly large, with prices firm. Conditions in the zinc market are a little stronger.

Copper.—Buying by foreign consumers continues to be the feature thus far this month, total sales being estimated at over 20,000 tons. Today was one of the largest recently, with over 3500 tons the total for the first half of the day. England, Germany and France are the principal buyers, and the sales involve June, July and part of August delivery. Domestic consumers are by no means active. The anxiety aroused recently as to a possible scarcity has been allayed and apparently the large users are assured of being taken care of. Electrolytic copper is still quoted firm at 14.75c., delivered in the Connecticut Valley. Little is heard now of possible premiums for spot or other positions, but producers are having difficulty in meeting consumers' demands for metal. The quotation for Copper Exporters, Inc., is unchanged at 15c., c.i.f. European ports. Statistics for May, probably available tomorrow, are expected to show a decrease in stocks of refined metal and heavy shipments into consumption. Lake copper is quiet and firm at 14.87½c., delivered.

Tin.—Sales for the week ended June 9 were about 1700 tons. The most active day was June 6, when 700 tons changed hands. This total is large when it is considered that most of it was taken by dealers. Consumers participated only slightly and are holding back. They are expected, however, to have to buy July-August-September metal, and this fact may sustain the market against heavy selling in the Far East. The feature of the week has been the heavy sales in Singapore, which on June 7 were 600 tons, followed by 350 tons on June 8, 225 tons on June 9, 125 tons on June 11 and 350 tons today. Sales of 350 tons of Banca tin in Batavia were also made on June 7. These sales have tended to keep consumers out of the market and are considered a reflection of increased production in Singapore. Quotations in London today were £222 5s. for spot standard, £220 10s. for future standard, and £223 10s. per ton for spot Straits. The Singapore market today was £223 15s. In New York today the market was quiet, with spot Straits tin quoted at 48.62½c. Arrivals thus far this month have been 2520 tons, with 5405 tons reported afloat.

Lead.—Sales have been fairly large, particularly in the West. The leading interest continues to quote 6.30c., New York, as its contract price, but values in the West are a little lower at 6.15c., St. Louis. Inquiry recently is mostly for early shipment.

Zinc.—A firmer tone is in evidence and prime Western zinc can not be bought below 6.15c., St. Louis, or 6.50c., New York. This is owing partly to the continued strength of ore at Joplin, which last week sold at $40 and $41 per ton, with total sales again exceeding production and with stocks further reduced. The statistics for May, out today, were decidedly favorable, showing an increase in stocks of less than 500 tons, which is smaller than expected. Total shipments into consumption were over 53,000 tons, which also exceeded estimates in the trade. Another favorable feature was the reduction in the number of retorts operating on May 31 of about 2000 from the month before. Inquiry is not heavy, but a fair business is reported each day.

Nickel.—Ingot nickel in wholesale lots is quoted un-

Metals from New York Warehouse

Delivered Prices Per Lb.

Tin, Straits pig	51.50c. to 52.50c.
Tin, bar	53.50c. to 54.50c.
Copper, Lake	15.75c.
Copper, electrolytic	15.50c.

changed at 35c., with shot nickel at 36c. and electrolytic nickel at 37c. per lb.

Antimony.—Chinese metal is lower at 9.75c., New York, duty paid, for all positions.

Aluminum.—Virgin metal, 98 to 99 per cent pure, is available at 23.90c. per lb., delivered.

Non-Ferrous Metals at Chicago

CHICAGO, June 12.—Business is dull throughout this territory. Prices for copper are steady, while quotations on tin and lead are lower. Sales in old metals are tapering, but prices are holding.

Prices, per lb., in carload lots: Lake copper, 14.62½c.; tin, 51c.; lead, 6.25c.; zinc, 6.30c.; in less-than-carload lots, antimony, 12.75c. On old metals we quote copper wire, crucible shapes and copper clips, 10.75c.; copper bottoms, 9.75c.; red brass, 9.50c.; yellow brass, 7.25c.; lead pipe, 4.75c.; zinc, 3.50c.; pewter, No. 1, 30c.; tin foil, 36.25c.; block tin, 45.25c.; aluminum, 12c.; all being dealers' prices for less-than-carload lots.

REINFORCING STEEL

Brooklyn Sewer Award of 1600 Tons—St. Louis Warehouse Calls for 2500 Tons

REINFORCING steel awards in the week were close to 3700 tons, but 1600 tons of this was in one job, a Brooklyn sewer contract. In a total of about 4300 tons of new work up for bids is 2500 tons for a warehouse in St. Louis. Awards follow:

STATE OF CONNECTICUT, 350 tons, road mesh; 250 tons to Concrete Steel Co., 100 tons to American Steel & Wire Co.

QUINCY, MASS., 125 tons, bank building, to E. A. Tucker & Co.

LYNN, MASS., 100 tons, building for Lynn Gas & Electric Co., to McClintic-Marshall Co.

BROOKLYN, 1600 tons, sewers; Carozza Construction Co., general contractor, to Concrete Steel Co.

JAMAICA, N. Y., 125 tons, Krug Bakery Co. building, to Truscon Steel Co.

VALLEY STREAM, N. Y., 100 tons, high school, to Carroll-McCreary Co.

GREENWICH, CONN., 250 tons, printing building for Condé Nast Publications, Inc., to Concrete Steel Co.

STATE OF NEW JERSEY, 200 tons, State road work, to Concrete Steel Co.

BUFFALO, 160 tons, school No. 81, to a local maker.

URBANA, ILL., 300 tons, two buildings for University of Illinois, to Truscon Steel Co.

ST. LOUIS, 100 tons, piling for warehouse foundation for J. C. Penney Co., to Laclede Steel Co.

SAN FRANCISCO, 155 tons, garage on Sacramento Street, to J. Pasqualetti.

VALE, ORE., 102 tons, dam for United States Bureau of Reclamation, to an unnamed interest.

Reinforcing Bars Pending

Inquiries for reinforcing steel bars include the following:

LONG ISLAND CITY, N. Y., 275 tons, postoffice; general contract awarded to Merch Brothers, St. Louis.

NEW YORK, 200 tons, Pier No. 3, North River; general contract awarded to Allen Spooner & Son, Inc.

PHILADELPHIA, 125 tons, Walnut Lane apartments.

PHILADELPHIA, 325 tons, public school at Twenty-fourth and Christian Streets.

BUFFALO, 100 tons, Cleveland & Buffalo Transit Co. dock wall; bids taken this week.

PONTIAC, MICH., 200 tons, M. D. Hubbard commercial building and garage.

CLEVELAND, 100 tons, building for Northern Ohio Food Co.

CHICAGO, 260 tons, office building for Dearborn Lake Building Corporation.

CHICAGO, 100 tons, additions to three public schools.

HARVEY, ILL., 145 tons, building for Public Service Co. of Northern Illinois.

ST. LOUIS, 2500 tons, warehouse for J. C. Penney Co.

Old Metals, Per Lb., New York

The buying prices represent what the large dealers are paying for miscellaneous lots from the smaller accumulators and the selling prices are those charged consumers after the metal has been properly prepared for their uses.

	Dealers' Buying Prices	Dealers' Selling Prices
Copper, heavy crucible	12.625c.	14.00c.
Copper, heavy and wire	12.50c.	13.50c.
Copper, light and bottoms	10.75c.	12.00c.
Brass, heavy	7.25c.	8.50c.
Brass, light	6.25c.	7.75c.
Heavy machine composition	9.75c.	11.00c.
No. 1 yellow brass turnings	8.50c.	9.375c.
No. 1 red brass or composition turnings	9.00c.	10.00c.

Cast aluminum	12.50c.	14.00c.

RAILROAD EQUIPMENT

Seaboard Air Line Issues Inquiry for 1000 Box Cars

THE chief item of interest in the railroad equipment market is an inquiry from the Seaboard Air Line for 1000 box cars. Details of the week's business follow:

Seaboard Air Line has issued an inquiry for 1000 box cars.

Southern Pacific will build in its own shops 500 flat cars, 50 gondola cars and 50 caboose cars.

Cambria & Indiana has ordered 625 hopper cars from Pressed Steel Car Co.

Missouri Pacific has ordered five locomotives from American Locomotive Co. This railroad will build 200 automobile cars in its own shops.

Forged Y-Alloy Pistons on Fastest Airplane

Some details of the Napier Lion engine of the airplane which won the Schneider trophy at Venice, Italy, last year were given recently by Capt. G. S. Wilkinson, the chief designer, before the (British) Royal Aeronautical Society. Compared with an engine speed of 2000 r.p.m. and a 5.3 to 1 compression ratio used for the aerial derby in 1919, the present engine has a speed of 3300, a 10 to 1 compression ratio, develops 875 hp. and weighs dry 930 lb., or 1.06 lb. per horsepower. This is a 12-cylinder engine, with three blocks of four cylinders each, one block vertical and the others on either side at about 60 deg. All piping, magnetos and other auxiliaries are placed within the engine fairings to give best streamline effects. Fuel is a 25 per cent benzol, 75 per cent gasoline mixture doped with tetra-ethyl lead; consumption is 50 gal. per hour and 3 gal. of oil.

On such a high-speed engine the reciprocating parts must be of lightest weight. Consequently pistons are of forged Y alloy, instead of aluminum castings. The oil sump is a very light magnesium alloy, since the main block and lower bearings are so designed that the sump carries none of the thrust from the propeller or cylinders. Inlet valves are a nickel-chromium steel, and the exhaust valves are a special heat and erosion-resisting steel of unstated composition.

The main crankshaft of the engine is geared to the propeller shaft (both on the same axis) through a jack shaft placed directly above, and forged-en-block gears with reduction ratio of 1 to 0.765. Bearings are interesting. Main bearings on the crankshaft are roller bearings; the lower half of the bearing housings are stiff enough to act as tie rods across the engine frame. The jack shaft also runs on roller bearings, as does also the rear bearing on the propeller shaft, while the front bearing is a duplex roller and ball bearing. The rear end of this shaft extends over the protruding end of the crankshaft: a plain white metal bearing is used here. White metal bearings are also on auxiliary shafting for water and oil pumps and valve cams.

FABRICATED STRUCTURAL STEEL

Detroit-Windsor Tunnel Award of 13,000 Tons —Total for Week 28,300 Tons

THE Detroit-Windsor vehicular tunnel, for which 13,000 tons of structural steel will be fabricated by the Canadian Bridge Co., accounts for about half of the 28,300 tons of fabricated work awarded during the week. Most of the other awards were small. Included in 14,000 tons of new work on which bids have been invited is 6000 tons for an athletic arena in Chicago. Awards follow:

State of Vermont, 200 tons, highway bridges, to Berlin Construction Co.

Cambridge, 585 tons, Langdell Hall, Harvard University, to New England Structural Co.

Boston, 155 tons, mercantile building on North Street, to New England Structural Co.

Boston, 100 tons, Diocesan House, 1 Joy Street, to Lehigh Structural Steel Co.

Andover, Mass., tonnage unstated, school library and hall, to New England Structural Co.

Stockbridge, Mass., 100 tons, bridge, to Boston Bridge Works, Inc., previously reported to Palmer Steel Co.

Stamford, Conn., 400 tons, building for Southern New England Telephone Co., to Bethlehem Fabricators, Inc.

New York, 16,000 tons, Lincoln Building on East Forty-second Street, to McClintic-Marshall Co.; reported last week as awarded to an unnamed fabricator.

Philadelphia, 325 tons, alterations to North Philadelphia bridges of Reading Railroad Co., to Shoemaker Bridge Co.

Philadelphia, 890 tons, apartment building, Fifteenth and Spruce Streets, to Easton Structural Steel Co.

Philadelphia, 110 tons, Cottman Avenue bridge, to Bethlehem Steel Co.

Allentown, Pa., 175 tons, steel arch centers for bridge, to Bethlehem Steel Co.

Baltimore, 800 tons, Russell Street bridge, to Jones & Laughlin Steel Corporation through Maryland Steel Products Co.

Baltimore, 500 tons, building for St. Mary's Seminary, to Dietrich Brothers.

Arlington, Va., 400 tons, coal storage building, to unnamed Richmond fabricator.

Weirton, W. Va., 2000 tons, Weirton Steel Co., open-hearth extension and smaller buildings, to McClintic-Marshall Co.

Creighton, Pa., 1000 tons, factory, to McClintic-Marshall Co.

Pittsburgh, 538 tons, building for American Metals Co., to McClintic-Marshall Co.

Polk, Pa., 230 tons, State School dormitory, to American Bridge Co.

Miami, Fla., 425 tons, Northwest Seventeenth Street bridge, to Ingalls Iron Works Co., Birmingham.

Birmingham, 130 tons, Woodward Iron Co. coal handling plant, to Virginia Bridge & Iron Co.

Shreveport, La., 300 tons, overpass for Kansas City Southern and Houston & Shreveport Railroads, to Orange Car & Steel Co.

Freeport, Tex., 465 tons, highway bridge over Brazos River diversion channel, to Orange Car & Steel Co., Orange, Tex.

State of Texas, 150 tons, highway bridges over Spring Creek and Neches River, to Orange Car & Steel Co.

Houston, Tex., 230 tons, underpass on Navigation Boulevard, to Orange Car & Steel Co.

Detroit, 930 tons, building for Argonaut Realty Co., to Whitehead & Kales Co.

Detroit, 13,000 tons, under-river construction of Detroit-Windsor vehicular tunnel, to Canadian Bridge Co., Walkerville, Ont.

Mansfield, Ohio, 400 tons, bank building for Farmers Savings & Trust Co., to Forest City Structural Steel Co.

Malinta, Ohio, 1550 tons, Detroit & Ironton bridge over Maumee River, to American Bridge Co.

Chicago, 100 tons, store and apartment building at Austin Boulevard and Twenty-second Street, to Midland Structural Steel Co.

Chicago, 200 tons, pumping station, to McClintic-Marshall Co.

Elgin, Ill., 140 tons, bank and office building, to McClintic-Marshall Co.

Joliet, Ill., 450 tons, store and office building, to Mississippi Valley Structural Co.

Olympia, Wash., 578 tons, Queets River bridge, to Virginia Bridge & Iron Co.

Scottsburg, Ore., 470 tons, Umpqua River bridge, to Clackamas Construction Co., Portland.

Oakland, Cal., 250 tons, school, Foothill Boulevard, to Herrick Iron Works.

Structural Projects Pending

Inquiries for fabricated steel work include the following:

State of Vermont, 1000 tons, 11 State bridges.

State of New York, 400 tons, highway bridges.

New York, 1500 tons, office building, New Amsterdam Casualty Co., on John Street.

Reading Co., 800 tons, Broad Street station at Philadelphia, 500 tons, general contract to Irwin & Leighton; station platforms and tunnels, 300 tons, general contract to Hughes, Foulkrod Co.

Durham, N. C., 500 tons, building for Duke University.

Buffalo, 1000 tons, Riverside high school.

Buffalo, 600 tons, school No. 81.

Chicago, 1300 tons, apartment community development by Marshall Field Estate.

Chicago, 6000 tons, Harmon's sport arena.

Oakland, Cal., 800 tons, apartment building, Bellevue and Staten Avenues; bids being taken.

San Francisco, 125 tons, apartment building, Ninth Avenue and Judah Street; bids being taken.

Endurance and Other Properties of Rail Steel Investigated

The United States Bureau of Standards has just published the results of a cooperative investigation with the manufacturers rail steel committee, and the joint committee on stresses in track of the American Railway Engineering Association and the American Society of Civil Engineers in the study of rail failures with particular reference to transverse fissure failures. Transverse fissure failures in rails are known to the progressive, or fatigue failures, developing under repeated track stresses and starting from definite nuclei, the origin of which is not yet known. A knowledge of the endurance properties of rail steels, it was believed, should throw some light on this problem.

The quantitative endurance properties of rail steel before and after service have not heretofore been determined. Specimens from new 100-lb. rails made by standard methods and also from rails rolled from sink-head ingots have been tested in the usual rotary beam fatigue test. Specimens cut from the head of 100-lb. rails which passed the specification requirements of the American Railway Engineering Association gave endurance limits from about 41,000 to 59,000 lb. per sq. in. "Overstressing" was found to reduce the endurance limit and "understressing" to raise it. An endurance limit of 65,000 lb. per sq. in. was obtained by "understressing." The rail steels from sink-head ingots showed in general greater fatigue strength than specimens cut from the rails rolled from standard ingots.

It should be emphasized that the values for endurance limits given are for the steel in the rail only and do not necessarily apply to the rail in track. A greater knowledge of the stresses in track must be known before these laboratory tests and service data can be correlated.

Plans have been made to redetermine the endurance limits of specimens of rail steel from these same heats, now under observation in service, after they have been removed from track. It may be possible from these tests to determine whether the rail in service is being "understressed" or "overstressed."

Bar Iron Wage Scale Unchanged

The bar iron scale for year beginning July 1 will be unchanged from the previous 12 months as result of the annual wage conference at Atlantic City. Agreement was reached Saturday, June 9, after almost a week's conference. With a payroll of nearly $7,000,000, May established a high monthly record for this year.

PERSONAL

E. H. Weitzel, vice-president Colorado Fuel & Iron Co., has resigned, effective July 1, after nearly 21 years of service with the company. His advice will still be available to the company, although he will not be engaged on active duty. Mr. Weitzel joined the Colorado company in August, 1907, as chief engineer of the fuel department, in charge of the coal mines. On May 1, 1908, he became manager of that department, in which capacity he continued until March, 1922, when he was made general manager of the company. Later that year he was promoted to the position he now is relinquishing. In May, 1927, he took over also the control of the subsidiary companies, including the Colorado Supply Co., the Rocky Mountain Coal & Iron Co., the Colorado Realty Holding Co., and the Arkansas Valley Conduit Co. The latter unit supplies water to the steel plant. The duties which Mr. Weitzel has performed in these various capacities will be distributed in the different departments, without the appointment of a new vice-president to succeed him.

A. J. Wager, for nine years superintendent of power sales for the Milwaukee Electric Railway & Light Co., Milwaukee, has resigned, effective July 1, to establish himself in the practice of electrical heating engineering in Milwaukee. Mr. Wagner went to the Milwaukee utility from the Commonwealth Edison Co., Chicago. His new work will relate to the use of electricity for heating in industry, such as melting and heat-treating steels. The use of current for such purposes in Milwaukee is said to be great.

Charles B. Harter, general superintendent of the Fordson plant of the Ford Motor Co., has resigned. Mr. Harter started with the Ford Motor Co. in 1904 as a mechanic. At the age of 20 years he was a foreman at the Piquette Avenue Ford plant. When the Highland Park plant was completed he was made superintendent, which position he held until two years ago, when he was transferred to the Fordson plant.

Alfred V. Bodine, vice-president of the Dictaphone Corporation, Bridgeport, Conn., has resigned to become assistant to the president of the Raybestos Co. During the war Mr. Bodine was superintendent of production at the Winchester Repeating Arms Co.

Ludwig Kemper, formerly vice-president Otis Steel Co., Cleveland, has acquired a controlling interest in the Cincinnati Balcrank Co., Cincinnati, manufacturer of automotive lubricating joints and specialty tools, and will become president of the company. He will succeed Clifford Greene, who will become chairman of the board of directors.

Henry Dreses, president Dreses Machine Tool Co., Cincinnati, has left for a four-month tour of European countries.

Richard G. Jones, secretary and treasurer of Briggs & Turivas, Inc., Chicago, iron and steel merchants, has been elected a vice-president of the Foreman National Bank, Chicago. Mr. Jones was formerly connected with the Continental National Bank & Trust Co.

George E. Randles, president Foote-Burt Co., Cleveland, machine tool manufacturer, sailed a few days ago for Europe, where he will spend two months in France, Germany and England, largely on business.

A. G. Brown has been appointed district sales manager in San Francisco for the Republic Iron & Steel Co., Youngstown, with office in the Rialto Building.

Dr. R. P. Heuer, recently appointed director of research for the General Refractories Co., will make his headquarters at the general offices of the company in Philadelphia.

James B. Beyer has been appointed district sales manager in St. Louis for the Republic Iron & Steel Co. The office in St. Louis will be moved July 1 from the present quarters in the Federal Commercial Trust Building to the Shell Building.

George A. G. Wood, vice-president New England Fuel & Transportation Co., Boston, sailed from Boston June 10 for Europe, where he will spend a several-weeks' vacation.

T. M. Galbreath, manager of the Cleveland office of the Sharon Steel Hoop Co., Sharon, Pa., has been appointed assistant general manager of sales, with headquarters at Sharon. E. R. Garlick, special representative of the Sharon general office, will succeed him as Cleveland manager of sales, effective June 15.

N. H. Orr has been appointed contracting engineer junior beam division, steel construction department, Jones & Laughlin Steel Corporation, Pittsburgh.

J. F. Bauer, formerly connected with E. Arthur Tutein, Inc., has become associated with Hickman, Williams & Co., Inc., ferroalloys, coal, coke, etc., at its New York office.

Martin E. McKee has been appointed district sales manager in Cincinnati for the Republic Iron & Steel Co., Youngstown. His office will be in the First National Bank Building. Warner A. Peck becomes assistant district sales manager.

Charles F. Scherer, machine shop superintendent of the Davenport Machine & Foundry Co., Davenport, Iowa, and for 18 years an employee of the company, has been advanced to general manager of the plant. Dr. Henry Braunlich is president and Miss M. B. McGugin, secretary-treasurer.

Alvan Macauley, president Packard Motor Car Co., Detroit, has been elected president of the National Automobile Chamber of Commerce, succeeding Roy D. Chapin, chairman of the Hudson Motor Car Co., Detroit.

Jay C. McLauchlan, member of Pickands, Mather & Co., Cleveland, will sail June 22 for a two-month trip to Europe.

Charles Hart, president Delaware River Steel Co., Chester, Pa., has become active in an advisory capacity in the management of the Lebanon Iron Co., Lebanon, Pa.

Seventh Alvan T. Simonds Economics Contest

Prizes totaling $1,500 will be awarded in the seventh Alvan T. Simonds economics contest for essays on the subject, "Reducing the Costs of Distribution." The awards include a prize of $1,000 for the best essay by a business executive, and another of $500 for the best essay by a senior in college, a graduate student or an instructor of less than assistant professor grade. Papers must be in the hands of the managing director of the American Management Association, 20 Vesey Street, New York, on Dec. 31, 1928.

The awards were established by Alvan T. Simonds, president Simonds Saw & Steel Co., Fitchburg, Mass., for the following purposes:

1. To arouse a more genial interest in the subject of economics as related to individual and general welfare.
2. To increase the general understanding of the application of economic principles to business.

Average weekly earnings in representative New York State factories in April were $28.79, a sharp reduction from the $29.64 reported for March. Except for last November, the current figure is the lowest since May, 1926. With the further exception of February, 1926, it is the lowest since November, 1925.

OBITUARY

Frederick L. Jewett, former vice-president of the Paige-Detroit Motor Co., died at New London, Conn., on June 8. He was born in Elmira, N. Y., in 1868, and was educated at Notre Dame University. For several years he was connected with the Consumer's Ice Co., Chicago. About 15 years ago he became associated with the Paige-Detroit Motor Co., of which he was vice-president, until 1927, when the company was taken over by the Graham-Paige Motors Corporation.

Edmund D. Garfield died of pneumonia in St. Paul on June 5. For many years Mr. Garfield had been connected with Manning, Maxwell & Moore, Inc. He entered their service in 1904 and for a considerable period was manager of the office in Milwaukee, where he developed a wide acquaintance among the industrial and railroad interests in the Northwest. Since the Milwaukee office was consolidated with the Chicago office of the company, Mr. Garfield has been acting as special railroad representative, with headquarters in Chicago. He was born in Keesville, Essex County, New York, and was 54 years old.

R. R. Cuthbertson, formerly manager of the Chicago office of Manning, Maxwell & Moore, Inc., and later with Stocker, Rumely, Wachs Co., Chicago machine tool dealers, died May 31.

John T. Collins, inventor and chemist and for years associated with the Merrill Machine Mfg. Co., Hartford, Conn., died June 6 at his home in Sandwich, Mass., where he had resided the past eight years. He was in his sixty-sixth year.

Charles C. Ely, president and treasurer of the Trimont Mfg. Co., Boston, died June 7 at the Hotel Sheraton, Boston, where he resided. He was born in Owego, N. Y., 81 years ago. Upon the death of his brother in 1902, Mr. Ely went to Boston to assume the management of the Trimont Mfg. Co., maker of pipe cutters, chain, wrenches, etc.

Philip C. Smith, for over 20 years foundry superintendent for Ingersoll-Rand Co., Easton, Pa., died in that city on May 22 at the age of 75 years. He was born in Manchester, N. H., served his time in the foundry of the Amoskeag Mfg. Co., Manchester. His experience included work in several foundries on the Pacific Coast. He was for seven years superintendent of foundries for the Camden Iron Works, Camden, N. J., and later was general superintendent for a pipe foundry at Radford, Va., before going to Easton. He retired from active business in 1920.

Henry M. Garlick, 80, banker and industrial leader of Youngstown, Ohio, and a heavy stockholder in the Youngstown Sheet & Tube Co. and in the United Engineering & Foundry Co., Pittsburgh, died suddenly June 9 at Waverly, N. Y., while en route to his summer home at Alder Creek, N. Y. He was chairman of the board of directors of the First National Bank, Youngstown, and a director and former president of the Standard Textile Products Co. A son, Richard Garlick, is a director and member of the executive committee of the Sheet & Tube company. Henry Garlick established the Community Corporation at Youngstown. He was the first president of the First National Bank.

Samuel Higham, for many years president of the Fuller & Johnson Mfg. Co., Madison, Wis., manufacturer of gasoline engines, pumps, etc., died June 1 at the age of 80 years. He retired several years ago. Mr. Higham was born in Geneva, N. Y., Sept. 23, 1847, and joined the Fuller & Johnson company in 1881, later becoming vice-president and then president.

Theodore Disch, formerly superintendent of the Prescott Iron Works, Menominee, Mich., died June 3 at the age of 78. For the past eight years he had devoted his time to instructing in the vocational school at Marinette, Wis.

C. C. Eagle, Jr., Philadelphia district manager for the Bristol Co., Waterbury, Conn., died suddenly June 5 of heart disease on a train while bound for Wilmington, Del. Mr. Eagle was 44 years of age. He was a graduate in electrical engineering of the University of Wisconsin, and a member of the Phi Kappa Sigma fraternity. He entered the employ of the Bristol Co. in 1918 in the company's Chicago office. Previously he had been purchasing agent for the Western Electric Co. He was a native of Union Center, Wis. Mr. Eagle lived at 1226 Atwood Road, Overbrook, a suburb of Philadelphia, with his wife and four children. His body was taken to Chicago for interment.

Harold S. Brown, president National Pipe Bending Co., New Haven, Conn., died June 6 at his home in that city. A native of Brooklyn, he went to New Haven ten years ago to be general manager of the company and later was elected president.

Dwight Wheeler, for 45 years president of the Acme Shear Co., Bridgeport, Conn., died in that city June 6, at the age of 86.

Record Output of Portland Cement

Production of Portland cement in May is reported by the United States Bureau of Mines at 17,280,000 bbl., a seasonal gain from the 13,468,000 bbl. of April, and the largest total since last September. It represents the fourth greatest month's output in the history of the industry, having been exceeded only by July, August and September, 1927. For the first five months production has aggregated 59,536,000 bbl., making a new high record, displacing that of last year, which stood at 57,834,000 bbl. Last month was the highest May on record, exceeding May, 1927, by 3½ per cent.

Shipments in May, at 18,986,000 bbl., were the largest ever reported for that month. They compare with 16,865,000 bbl. last year, the previous high for May. Only June, August and September, 1927, and June, 1926, surpassed in total shipments the amount sent out last month. The total for five months was 55,532,000 bbl., exceeding the previous record (1927, with 55,014,000 bbl.) by about 1 per cent.

Higher Production of Trackwork

Shipments of trackwork for T-rails of 60 lb. and heavier are reported for May by the American Iron and Steel Institute at 14,141 net tons, a gain of nearly 5 per cent over the 13,511 tons of April, but about as far below the March output of 15,058 tons. Last year May provided 16,768 tons. Except for March, the May total was the highest since June, 1927.

For the first five months the shipments have aggregated 63,413 tons, against 79,712 tons last year and 89,904 tons in 1926.

Further Reduction in Standard Sizes of Woven Wire Fencing

The division of simplified practice, Department of Commerce, Washington, has sent to manufacturers, distributers and users of woven wire fencing a report of the changes made in recommendations for the elimination of sizes and stocks, and has asked them to indicate if they approve the revision. The latest meeting was in Chicago on May 2, when it was resolved to eliminate No. 14 gage wire, to avoid the necessity of carrying both 14 and 14½-gage stock.

The elimination made by the revision meeting effected further reduction in the stock varieties of woven wire fencing and packages as follows:

	Before Simplification	Simplified Practice Recommendation		Final Per Cent Reduction
		Original (July, 1923)	Revised (May, 1928)	
Woven wire fencing	552	69	62	89
Woven wire fence packages	2,072	138	117	94

Says Steel Producers Have Not Yet Learned to Advertise

W. W. Galbreath, President Youngstown Pressed Steel Co., Tells National Industrial Advertisers' Association, How Publicity Has Developed His Company's Business

THAT steel producers have not yet learned to advertise, largely because they do not yet believe in it, was substantially the charge made by W. W. Galbreath, president Youngstown Pressed Steel Co., Warren, Ohio, in an address before the National Industrial Advertisers' Association, now holding its seventh annual conference at St. Louis. Coming from the chief executive of a manufacturing company, what he had to say was accepted without discount, such as might follow the utterances of the advertising official of a company.

Without detailing how the company came into its separate existence, it may be mentioned that it went into a new plant early in the disastrous year 1921. The new works had five times the capacity of the old and bookings did not exceed 50 per cent of the old, so the first year's operations were at a 9 per cent rate. "You could imagine," said he, "the amount of red ink we used."

He dwelt at length on the company's success in broadening markets by discovering new applications for pressed metal and how advertising had been a prime element in the program. Yet with a $20,000 appropriation for advertising starting July 1, 1921, it was seven months before the first order was taken. Direct inquiries were rarely received, but by following up the few it was proved that customers had been made to think they had independently conceived what pressed metal might do for their own cases. Best results were obtained from papers going to administrative executives, particularly those responsible for profits.

The company is now beginning to get pay for engineering services and this, Mr. Galbreath asserted, is wholly the result of advertising efforts. It took the company two years to get out of red ink and two more to get on a thoroughly profitable basis.

To Increase Trade Expansion Work

(*Concluded from page* 1685)

from $14 to $20 a ton in the price of finished sheets. Mr. Hadly was of the opinion that the marketing of flat-rolled steel should be placed on a more intelligent basis and that lowering of prices is the greatest menace to the industry. He further stated that the lack of proper distribution is a reproach to the entire industry and urged all flat-rolled steel manufacturers to lend their full support to the association in its efforts to better conditions.

F. C. Gifford, vice-president Acme Steel Co., Chicago, brought out the fact that none of the flat-rolled steel companies has yet learned to turn down orders and not to let buyers of steel run its business.

Must Adjust Production to Market Conditions

Manufacturers of flat-rolled steel must produce judiciously or lose all prosperity and all profits, said George H. Charls, president National Association of Flat-Rolled Steel Manufacturers. He predicted that demand for steel during the third quarter would show a recession from that in the first and second quarters and wondered how many companies would be willing to adjust their production schedules to conform to market conditions. He especially urged flat-rolled steel makers to diversify their markets instead of allowing themselves to get into the undesirable position of being dependent upon one or two industries for their business.

The failure of flat-rolled steel manufacturers in selling and distributing their products is in sharp contrast with their success in meeting production problems and in solving them economically, stated Severn P. Ker, president Sharon Steel Hoop Co., Sharon, Pa.

Objects and purposes of the association were discussed at the closing session by Charles R. Hook, vice-president and general manager American Rolling Mill Co., Middletown, Ohio, who presented plans for the consideration of the members.

The activities and budget of the association were presented by E. Theodore Sproull, vice-president, secretary and treasurer National Association of Flat-Rolled Steel Manufacturers.

Mr. Hadly, Mr. Ker and Harry T. Gilbert, vice-president Republic Iron & Steel Co., Youngstown, Ohio, presided at the business sessions.

In addition to the general meetings, group meetings of the sheet steel, hot-rolled strip and cold-rolled strip divisions were held.

Oil Supply Distributers Merge; Jones & Laughlin Acquire Control

The Frick-Reid Supply Co. and the Frick & Lindsay Co., associated Pittsburgh companies, have been merged and control has been acquired by the Jones & Laughlin Steel Corporation from the John A. Roebling's Sons Co. The Frick-Reid Co. has long been a distributer of oil country pipe made by the Jones & Laughlin Steel Corporation and maintains 48 stores in the oil producing districts of the country. It also is engaged in the distribution of oil well supplies. All of the larger producers of pipe are interested in or control such companies as the Frick-Reid company, through which direct contact with the oil and gas industry is assured. The Frick & Lindsay Co. is engaged in the mill and mine supply business.

Lake Ore Shipments in May Very Small This Year

Lake Superior iron ore shipments in May at 5,362,815 tons were 2,389,656 tons or 30.82 per cent less than the 7,752,471 tons in May, 1927. Total shipments for the season to June 1, this year, were 5,368,761 tons or 42.35 per cent less than the 9,312,557 tons for the same period a year ago. Shipments by ports and for the season in 1928 and 1927 have been as follows in gross tons:

Port	May, 1928	May, 1927	To June 1	
			1928	1927
Escanaba	630,630	785,706	636,576	933,828
Marquette	317,036	411,482	317,036	471,313
Ashland	633,756	1,067,991	633,756	1,196,035
Superior	1,529,803	1,978,414	1,529,803	2,496,469
Duluth	1,669,888	2,628,920	1,669,888	3,175,426
Two Harbors	581,702	879,958	581,702	1,039,486
Total	5,362,815	7,752,471	5,368,761	9,312.557
Decrease	2,389,656	....	....	....
Decrease	....	....	3,943,796	....

Of the season's shipments this year Great Northern's proportion was 25.08 per cent against 23.62 per cent a year ago. Duluth's percentage this year was 31.10 per cent as compared with 34.10 per cent last year.

CARNEGIE LIBRARY OF AT

Another Large Decrease in Unfilled Orders of Steel Corporation

Another sharp decline in the unfilled orders of the United States Steel Corporation took place in May. The total on May 31 was 3,416,822 tons, compared with 3,872,133 tons on April 30—a decline of 455,311 tons or about 11.8 per cent. This is the lowest total since Oct. 31, last year, and compares with 3,050,941 on May 31, a year ago. The table gives the reported figures for the past 29 months.

	1928	1927	1926
Jan. 31........	4,275,947	3,800,177	4,882,739
Feb. 28........	4,398,189	3,597,119	4,616,822
Mar. 31........	4,335,206	3,553,140	4,379,935
April 30........	3,872,133	3,456,132	3,867,976
May 31........	3,416,822	3,050,941	3,649,250
June 30........	....	3,053,246	3,478,642
July 31........	....	3,142,014	3,602,522
Aug. 31........	....	3,196,037	3,542,335
Sept. 30........	....	3,148,113	3,593,509
Oct. 31........	....	3,341,040	3,683,661
Nov. 30........	....	3,454,444	3,807,447
Dec. 31........	....	3,972,874	3,960,969

At the end of April, 1917, the highest total in unfilled orders of the Steel Corporation ever attained was reported at 12,183,193 tons. The lowest figure ever reported was 2,754,757 tons, Dec. 31, 1910.

Airplane Motor Order Totals $1,000,000

The Pratt & Whitney Aircraft Co., Hartford, Conn., has received an order for 105 500-hp. Hornet engines and 10 400-hp. Wasp engines, to cost $1,000,000, from the Boeing Air Transport Co., Chicago, San Francisco, Los Angeles and Seattle. This order is said to be the largest ever placed for commercial aviation engines.

Largest Monthly Construction Record Ever Reported

Building construction in May made the largest total ever reported, according to figures of F. W. Dodge Corporation. In the 37 States east of the Rocky Mountains the total was $668,097,000. This is nearly 4 per cent above the previous high record, which was that of the preceding month. The gain over May, 1927, was 21 per cent. Resulting from the succession of record-breaking months, the figure for the first five months of the year, at $2,796,301,000, is 9 per cent ahead of the corresponding period of last year and 7 per cent ahead of 1926.

Residential buildings continue to head the list, with 43 per cent of all construction in May. The amount was $288,826,000. Public works and utilities accounted for $150,223,000, commercial buildings for $91,200,000 and educational projects for $47,851,000.

May provided the largest monthly total ever reported from the New England States. It was the largest May ever reported for New York State and northern New Jersey, the largest May for the Middle Atlantic States and the highest for the Central West. Other districts did not report new high records last month.

Skilled and Common Laborers About One-Third of Total Immigrants

WASHINGTON, June 12.—Of the 30,709 immigrants admitted to the United States in April, 17,561 were males and 13,148 females, according to the Bureau of Immigration. Over three-fourths of the total were in the middle-age group, as 24,078, or 78.4 per cent, ranged in age from 16 to 44 years. Of the 4515 emigrant aliens leaving the United States in April, 3109 were males and 1406 females, and 3071 were from 21 to 44 years of age.

Mexico, with 6451 in April, led in the number of immigrants, while Canada sent 5205, nearly two-fifths of the total for the month coming from these two countries. From overseas, Germany continued to contribute the largest number of immigrants, 5207 coming from that country, while the Irish Free State sent 3586. Great Britain sent 2302; Scandinavian countries, 2086; Italy, 1354; Poland, 570; France, 406; and Czechoslovakia, 349. Of the April immigrants, 5889 were classed as skilled, and 3972 as common laborers, these two groups constituting 32 per cent of the total number admitted.

Reduction in Available Railroad Equipment

That there has been a decline in carrying capacity of freight cars and number and hauling power of locomotives in service on American railroads is stated by *Railway Age*. Locomotives on Class I roads at the end of 1924 numbered 65,358. Since then the number retired from service has far exceeded the number of new units installed. As a result the present number is about 61,000. Until May 1, 1927, the total tractive power of locomotives owned had increased, due to the high power of the new units. During the past year, however, in spite of high individual power, the total has gone lower than the maximum then reached, which was more than 2,616,000,000 lb.

At the end of 1925 the Class I railroads owned 2,357,234 freight cars. This number has declined by about 40,000 within the elapsed 30 months. New cars installed have been of greater capacity than those withdrawn, but the withdrawals have been so rapid of late that the present total capacity is about 1 per cent under the maximum of 106,000,000 tons, reached last October.

Small Number of Locomotives Shipped by Manufacturers

Railroad locomotives to the number of 41 were shipped by manufacturers in May, against 46 in April, according to the Department of Commerce. Of the May shipments, 39 locomotives were for domestic use, 29 being steam and 10 electric units. The two locomotives for foreign use were of the steam type. Unfilled orders at the end of May totaled 220 locomotives, against 188 at the end of April. Shipments for the first five months of the present year totaled 263 locomotives, against 481 for the corresponding period of last year.

Shipments in May were the lowest for any month in more than five years. The total compares with 109 in May, 1927, with 140 in May, 1926, and with 101 in May, 1925.

Sharp Reduction in Shipments of Sheet-Metal Ware

April shipments of enameled sheet-metal ware reported by 18 manufacturers to the Department of Commerce aggregated 350,544 dozens, valued at $1,326,165. This compares with 442,689 dozens in March, valued at $1,665,470, and with 337,181 dozens in April, 1927, valued at $1,192,808. For the first four months there has been a gain over last year, values reported having been $5,544,152 against $5,197,992 a year ago.

Shipments of galvanized sheet-metal ware amounted in May to 237,571 dozens, valued at $875,442, as reported by 15 concerns. This compares with 220,677 dozens in March, valued at $824,143, and with 232,496 dozens in April, 1927, valued at $841,902. For the first four months, the shipments this year have aggregated $3,118,190, a moderate gain over last year's total of $3,044,919.

Coal Production Increasing

Production of both bituminous and anthracite coal in May showed substantial gains over April, according to preliminary figures of the United States Bureau of Mines. The output of bituminous coal is given as 36,542,000 net tons, or 1,384,000 tons for each working day. This compares with 32,188,000 tons in April, or 1,303,000 tons for each of the smaller number of working days. Anthracite production in May was 8,117,000 tons, or 312,000 tons a day, against 6,909,000 tons in April, or 288,000 tons a day.

Estimates of the National Coal Association place the output of bituminous coal for the week ended June 2 at about 7,200,000 net tons.

Machinery Markets and News of the Works

BUYING IS SLOWER

Machine Tool Trade This Month Is Less Active

Prospective Purchases of General Electric Co. and Wright Aeronautical Corporation Will Run Large

JUNE trade in machine tools is unmistakably at a slower pace, compared with last month or April. Orders for single tools are in fair number and are coming from a good many different industries, but the total for the month, according to present indications, will be less than the general average for May. Railroad buying is conspicuously lacking and automobile companies are taking only a few machines for replacements.

The General Electric Co. has again added to its list of needs for the electric refrigeration department at Schenectady, N. Y., and orders are expected soon. The Wright Aeronautical Corporation, Paterson, N. J., is building a large addition to its machine shop and has another wing under contemplation. A list of machine tools required for these additions is now being prepared. The Wright company has bought a building at Paterson formerly occupied by the American Locomotive Co. and will utilize it for an aluminum foundry.

The bulk of the machine tool buying of Deere & Co. for its agricultural machinery plant at Moline, Ill., has been completed, but purchases are to be made soon for the Waterloo, Iowa, shops. Tractor manufacturers are among the most active buyers in the Chicago district.

Centerless grinding machines have been advanced in price about 10 per cent.

New York

NEW YORK, June 12.

WHILE purchases of machine tools so far this month do not make a very favorable comparison with sales records of recent months, outlook for the summer is considerably improved by the known requirements of two of the large buyers in this district, the General Electric Co. and the Wright Aeronautical Corporation. The General Electric Co. has sent out additional inquiries in the last week and now has an extensive list of tools before the trade. As most of this equipment is needed for the growing refrigeration department of the General Electric Co., early action on the list is expected. The Wright Aeronautical Corporation is buying single tools from day to day, but the trade's expectations of larger purchases are based on the fact that the company is completing an addition to its machine shop and another wing is in contemplation. An appropriation for a list of machine-tool requirements will probably soon be provided. The Wright Aeronautical Corporation has bought a building at Paterson, N. J., from the American Locomotive Co. and will utilize it for an aluminum foundry.

Nichols Copper Co., Laurel Hill, L. I., has acquired about 575 acres on North Loop Road, El Paso, Tex., as site for new electrolytic copper refinery. It will have capacity of close to 100,000 tons per annum and is reported to cost more than $3,000,000. Company recently disposed of bond issue to provide funds for project. C. Walter Nichols is president.

Ovens, power equipment, conveying and other machinery will be installed in three-story baking plant, 90 x 105 ft., to be constructed at Long Island City, for which plans are being drawn by G. R. Fennema, 114 Liberty Street, New York, consulting engineer, estimated to cost $120,000.

Moore & Landsiedel, Third Avenue and 148th Street, New York, architects, are preparing plans for a one-story automobile service, repair and garage building, 100 x 236 ft., to cost about $100,000 with equipment.

Fire, June 7, destroyed a portion of building No. 10, United States Navy Yard, Brooklyn, used for manufacture of acetylene torches, hydrogen and oxygen gas tanks, etc., with loss reported at $50,000 with equipment. It is planned to rebuild.

Rockland Light & Power Co., Middletown, N. Y., is disposing of bond issue of $4,500,000, a portion of proceeds to be used for extensions and improvements, including transmission line construction.

Consolidated Merchandising Corporation, New York, has been formed with capital of $25,000,000 to take over and consolidate Automatic Merchandising Corporation, an interest of United Cigar Stores Co., 44 West Eighteenth Street; Sanitary Postage Service Corporation, 285 Madison Avenue; and General Vending Corporation, affiliated with Hoff Vending Corporation of America, 200 Hudson Street, all manufacturers and distributers of vending machines and devices. Consolidated company will perfect a new "talking" vending machine to be manufactured by Remington Arms Co., 25 Broadway, which will give over a portion of plant at Ilion, N. Y., to such production. Albert C. Abram, executive vice-president, United Cigar Stores Co., will be an official of new organization; Saunders Norvell, president of Remington company, will be a member of board.

George W. Swiller, 4215 Third Avenue, New York, architect, has plans for a multi-story automobile service, repair and garage building, 75 x 185 ft., to cost about $300,000 with equipment.

Newmont Mining Corporation, 14 Wall Street, New York, has secured an option on all physical properties, plant, etc., of United Verde Extension Mining Co., Jerome, Ariz., and purposes to take over and expand facilities, including additional equipment. United Verde company will continue corporate existence and plans to develop other properties, with installation of mining, refining and other machinery. Sale will include present smelter plant at Clemenceau, Ariz.

E. H. Faile & Co., 441 Lexington Avenue, New York, architects and engineers, are asking bids on general contract for a three-story automobile service, repair and garage building at Larchmont, N. Y., to cost close to $90,000 with equipment.

Wright Aeronautical Corporation, Paterson, N. J., has acquired part of plant of Cooke Works of American Locomotive Co., comprising 15 acres and several one-story buildings aggregating 100,000 sq. ft. floor space. Property adjoins works of purchasing company and will be used for expansion. Wright company recently arranged for increase in capital from 250,000 to 500,000 shares of stock, and will dispose of 50,000 of new shares totaling $5,000,000.

Otis Elevator Co., Harrison, N. J., has begun construction of one-story addition, 200 x 400 ft., to cost in excess of $400,000 with equipment. Headquarters are at Eleventh Avenue and Twenty-sixth Street, New York.

Essex County Board of Vocational Education, 969 Broad Street, Newark, has plans for two-story boys' vocational school at Bloomfield, N. J., to cost about $75,000. Guilbert & Betelle, 24 Branford Place, Newark, are architects.

An isolated power plant will be built by Board of Trustees of Deborah Sanatorium, Lake Hopatcong, N. J., at new institutional buildings. Entire project will cost close to $1,000,000. Frank Grad, 1023 Broad Street, Newark, is architect.

Universal Metal Box & Products Co., 144 Bleecker Street, Newark, has leased former plant of Newark Metal Casting & Litho Co., Irvington, N. J. An addition will be built to provide total of about 20,000 sq. ft. floor space. Leasing company will remove to new location.

Thomas A. Edison, Inc., West Orange, N. J., has formed an affiliation with Splitdorf-Bethlehem Electrical Co., 392 High Street, Newark, for manufacture of electric radio receivers, electric talking machine apparatus and kindred products. Each company will continue plants as in the past, and will arrange for increased output under combined patents of both organizations. Walter Rautenstrauch, president of Splitdorf-Bethlehem Company, will become identified with Edison organization as consulting engineer.

Neolite Corporation of New York, 1819 Broadway, New York, has been incorporated as development organization of National Neolite Corporation, manufacturer of Neolite luminous tube products, for roof signs, airport beacons and airway markers. Directors are F. D. Mitchell, secretary-treasurer American Supply and Machinery Manufacturers' Association; H. D. Chadwick, president National Neolite Corporation, and H. H. Bizallion, formerly president Gotham National Bank.

Union Chandelier Co., Newark, N. J., has been incorporated with capital stock of $25,000 to manufacture lighting fixtures. Present operations will be confined to assembly of parts. Company may be addressed in care of Jacques H. Hecht, 207 Market Street, Newark.

S. A. M. Pump Corporation, 11 West Forty-second Street, New York, has been organized to manufacture pumps. It is ready to negotiate with companies in New York district equipped to manufacture pumps on contract. F. O. Willhofft is president.

Chapman Metal Products Co., 213 East 144th Street, New York, capitalized at $15,000, has been organized to manufacture steel frames, sheet metal work, roofing, etc. Leonard Chapman is president, William Smiley, secretary and treasurer. Incorporators are former employees of M. F. Westergren, Inc., and have bought plant and equipment owned by that company.

Orleans Mfg. & Sales Corporation, Albion, N. Y., has been organized with capital stock of $30,000 to manufacture ball-bearing casters. An output of 800 to 1000 casters per day will be arranged for on contract. Schuyler Hazard is secretary and treasurer.

Philadelphia

PHILADELPHIA, June 11.

GENERAL contract has been awarded by Franklin Motor Service Co., 1919-21 Brandywine Street, Philadelphia, to Conrad Construction Co., Collingswood, N. J., for a two-story addition to service, repair and garage building, to cost more than $85,000 with equipment. Richard B. Neeley, 2301 Spruce Street, is architect.

Philadelphia Gear Works, Inc., Richmond and Tioga Streets, Philadelphia, has taken title to about four acres on G Street, near Erie Avenue, and is said to be planning to use for expansion.

I. W. Levin, 1011 Chestnut Street, Philadelphia, architect, has awarded general contract to H. Alterman, 2731 West Somerset Street, for a two-story automobile service, repair and garage building, 100 x 110 ft., to cost about $90,000 with equipment.

Harry A. Reif, 4519 North Twelfth Street, Philadelphia, and associates have organized H. A. Reif Mfg. Co., with capital of $50,000, to operate a local plant for manufacture of tools, dies, screw machine products and metal stampings. H. Conwell Snoke, 130 East Fishers Avenue, will be an official of new company.

H. H. Kline, 709 Chestnut Street, Philadelphia, architect, will take bids before close of month for three-story and basement automobile service, repair and garage building, 65 x 125 ft., at Upper Darby, Pa., to cost more than $100,000 with equipment.

American Radiator Co., 40 West Fortieth Street, New York, is reported considering enlargements in its recently established plant at Gloucester, N. J., including installation of additional equipment.

In connection with proposed merger of 35 electric light and power companies in different counties of State, Pennsylvania Light & Power Co., Allentown, Pa., proposes to issue bonds in amount of about $100,000,000, a portion of fund to provide for acquisition and for expansion and improvements, including transmission line construction.

Board of Education, Elkland, Pa., is considering installation of manual training equipment in a two-story high school to cost close to $200,000, for which plans will be drawn by Howard L. Smith, Pershing Square Building, New York, architect.

Noe Co., Philadelphia, care of William R. McKinney, 4509 Spruce Street, Philadelphia, recently formed by Mr. McKinney, William M. Noe and associates, with capital of $25,000, plans operation of local works for production of structural and ornamental iron specialties.

Township Committee, Pensauken, N. J., is planning to purchase highway machinery, including street marking machine and spraying machine.

Lehigh Telephone Co., 723 Linden Street, Allentown, Pa., plans installation of service and repair shop, with garage, for company trucks and cars, in connection with new three-story headquarters building to cost about $150,000.

Airport committee of City Council, Carlisle, Pa., is planning establishment of a municipal airport, with hangar, repair shop, oil storage and distributing plant and other buildings. Local Chamber of Commerce is interested in project.

New England

BOSTON, June 11.

MACHINE-TOOL houses say that business in the past week was the dullest experienced in a long time. Inquiries also were scarce. Other New England centers report few orders of importance. The feeling persists, however, that sooner or later much of the pending business will close, and that the last half of 1928 will compare favorably with any similar period in several years.

Government has granted an appropriation of $75,000 for power plant improvements at Portsmouth Navy Yard. Plans are private.

Cape Ann Mfg. Co., Gloucester, Mass., has awarded contract for a three-story plant. Maurice H. Maney, 46 Cornhill, Boston, is architect.

Connecticut Light & Power Co., 66 Curtis Street, New Britain, Conn., has started work on a two-story, 120 x 220 ft. office, garage and shop. U. G. I. Construction Co., Broad and Arch Streets, Philadelphia, has plans.

Morton C. Tuttle Co., 31 St. James Avenue, Boston, general contractor, has started work on 10 plant units to cost $1,500,000 at Mystic Docks, Charlestown district, Boston, for United States Gypsum Co. J. H. Nold, 300 West Adams Street, Chicago, is engineer.

Worcester Taper Pin Co., 47 Lagrange Street, Worcester, Mass., has purchased Christianson Screw Co., Newton, Mass. New manufacturing quarters have been engaged at 10 May Street, Worcester, where business will be concentrated about July 1. Thomas Crabtree is president and treasurer of Worcester company.

New England Coal & Coke Co., subsidiary of Massachusetts Gas Co., is installing a new screening plant, to care for its wholesale coke business, at a cost of $400,000. Directors have just appropriated an additional $100,000 for a screening plant to care for its retail trade.

Steel foundry of General Electric Co., West Lynn, Mass., has been abandoned, and furnaces and equipment have been moved to company's Everett plant. Steel foundry will be used as an assembling plant.

Manley Mfg. Co., York, Pa., manufacturer of garage equipment, has removed its sales offices to plant of American Chain Co., Bridgeport, Conn. Change will not affect operation of sales force or service men and H. M. Smith will continue as sales manager.

Reliance Steel & Machinery Co., New Haven, Conn., has combined its offices and warehouse in new quarters at 106-08 Water Street. Company has also installed new squaring shear, 10 ft. x 3/16 in. capacity, to facilitate cutting sheet and strip steel.

Lenk Mfg. Co., Newton Lower Falls, Mass., is occupying its new factory building and has completed installation of machinery and equipment.

Kenney Mfg. Co., 609 Wellington Avenue, Auburn, R. I., manufacturer of metal curtain rods, etc., has awarded general contract to Bowerman Brothers, 70 Bath Street, for one-story and basement addition, 62 x 123 ft., to cost close to $50,000 with equipment.

Commanding officer, Springfield Armory, Springfield, Mass., will receive bids until June 20, for two 100-hp. return tubular boilers, with removal of present units to provide for installation, circular 87.

Charles Street Garage Co., 252 Cambridge Street, Boston, L. K. Morse, president, is asking bids on general contract for three-story addition, 82 x 100 ft., to cost in excess of $100,000. Lockwood, Greene & Co., 24 Federal Street, are architects and engineers.

Grafton Power Co., Lebanon, N. H., subsidiary of New England Power Associates, Worcester, Mass., has applied for permission for a hydroelectric power project on Connecticut River, near Littleton, N. H. It is proposed to construct power dams at Fifteen-Mile Falls and at Lake Connecticut,

The Crane Market

OVERHEAD crane inquiries in the market are in most cases for one or two small capacity cranes. Prospective buyers in the New York territory are rather inactive, but some good business is reported pending in the New England district. The General Electric Co. is about to close on six low headroom cranes for installation at Schenectady. In locomotive cranes no immediate action is expected on the four electrically driven cranes of about 65 tons capacity, inquired for by the Amtorg Trading Co. for export to Russia. The capacities are so large that it is generally doubted that builders here would be interested in executing the order.

Among recent purchases are:

Stevens & Wood, 120 Broadway, New York, 25-ton, 60-ft. boom locomotive crane for Deep Water, near Penns Grove, N. J., from Industrial Brownhoist Corporation.

New York New Haven & Hartford Railroad, 25-ton locomotive crane from American Hoist & Derrick Co.

British-American Metals Co., Plainfield, N. J., four 5-ton, 100-ft. span overhead cranes, reported purchased from an Eastern builder.

La Compagnie de Sable, Quebec, used 15-ton, 8-wheel Browning locomotive crane from A. R. Gelinas, Montreal.

Canada Sugar Refining Co., Ltd., Montreal, used McMyler Interstate Co. crawl-tread locomotive crane from A. R. Gelinas, Montreal.

Century Coal Co., Ltd., Toronto, two new 25-ton American locomotive cranes from A. R. Gelinas.

Dominion Bridge Co., Ltd., Lachine, Que., 40-ton Industrial locomotive crane from A. R. Gelinas.

E. I. dePont de Nemours & Co., Wilmington, Del., 22-ton, 8-wheel railroad type crane from Orton Crane & Shovel Co.

---

150 and 100 ft. high, respectively, with corresponding power plants. Transmission system will be built. Entire project is estimated to cost $40,000,000. Output will be distributed by parent organization.

Royal Typewriter Co., New Park Avenue, Hartford, Conn., has asked bids on general contract for two five-story and basement additions, 68 x 190 ft., and 68 x 70 ft., to cost in excess of $200,000 with equipment. Greenwood & Noerr, 847 Main Street, are architects and engineers. Headquarters are at 316 Broadway, New York.

Rockville-Willimantic Lighting Co., Rockville, Conn., is arranging for increase in capital, comprising $100,000 in preferred stock, and 11,996 shares of common stock, no par value, a portion of proceeds to be used for extensions and improvements, including transmission line construction. Company is under direction of Eastern Gas & Electric Securities Corporation, Pine Orchard, Conn.

Board of Trustees, Masonic Home, Charlton, Mass., will ask bids at once for a three-story power plant, 38 x 140 ft., to cost more than $90,000. Walter T. Arnold, Meriden, Conn., is architect.

Hartz-Mason Rubber Mfg. Co., 270 Pleasant Street, Watertown, Mass., has awarded general contract to P. T. McMahon, 1081 Washington Street, West Newton, Mass., for a one-story plant unit, 78 x 150 ft., to cost upward of $80,000 with equipment.

Pratt & Whitney Aircraft Corporation, Capitol Avenue, Hartford, Conn., has taken over additional space at rear of present works and will carry out expansion program. Company has secured order from Boeing Airplane Co., Seattle, for 105 500-hp. Hornet airplane motors, and 10 400-hp. Wasp airplane engines, with contract said to total close to $1,000,000.

Greenwich Water & Gas Co., Greenwich, Conn., operating plants and systems in Connecticut, Vermont and New York, is disposing of bond issue of $750,000, a portion of fund to be used for expansion and improvements.

Buffalo

BUFFALO, June 11.

OFFICIALS of J. P. Devine Co., 1372 Clinton Street, Buffalo, manufacturer of vacuum drying apparatus, boilers, etc., have formed J. P. Devine Mfg. Co., Inc., with capital of $500,000, to take over and expand present plant and business. Clarence W. Reynolds is one of heads of new organization.

Continental Can Co., Syracuse, N. Y., and 100 East Forty-second Street, New York, has awarded general contract to Wells Brothers, 53 West Jackson Boulevard, Chicago, for new five-story plant, 192 x 200 ft., at Chicago, to cost about $400,000 with machinery. Francisco & Jacobus, 360 North Michigan Avenue, Chicago, are architects.

Board of Education, Malone, N. Y., plans installation of manual training equipment in two-story high school to cost $550,000, for which bids are being asked on general contract until June 18. Fuller & Robinson, 95 State Street, Albany, N. Y., are architects.

William E. Biggers, 388 Delaware Avenue, Buffalo, and associates have organized W. E. Biggers, Inc., capital 1000 shares of stock, no par value, to operate a local plant for manufacture of gasoline engines and kindred equipment. John D. Biggers and William D. Biggers, 1323 Book Building, Detroit, will be officials of new company.

George L. Barnard, Leavenworth Apartments, Syracuse, N. Y., and associates are planning construction of automobile service, repair and garage building, to cost approximately $150,000 with equipment.

State Department of Education, Albany, N. Y., is having plans prepared for three-story industrial and agricultural school at Industry, N. Y., to cost about $200,000 with equipment. William E. Haugaard, 353 Broadway, Albany, is State architect.

South Atlantic States

BALTIMORE, June 11.

PLANS have been filed by Bethlehem Shipbuilding Corporation, Baltimore, for two new units in connection with expansion program now in progress, comprising two-story steel fabricating shop and machine shop, 163 x 600 ft. and 80 x 100 ft., respectively, to cost $400,000 with equipment.

Carroll Independent Coal Co., Twenty-fifth Street and Hartford Avenue, Baltimore, has plans for extensions in storage and distributing plant to double present capacity, to cost $90,000 including mechanical conveying and handling equipment. William S. Austin, Maryland Trust Building, is consulting engineer.

Board of Awards, office of City Register, City Hall, Baltimore, will receive bids until June 27 for fully equipped two-story merchandise warehouse and distributing plant in connection with McComas Street terminal improvements, to be 90 ft. wide and 510 ft. long, with 10-ft. platform on west side, including elevators, spiral freight chutes, motor-truck scale, etc. Plans at office of J. E. Greiner Co., Lexington Building, consulting engineer. Work will be carried out under direction of Port Development Commission, James H. Preston, chairman.

G. N. Ray, 1219 Connecticut Avenue, N. W., Washington, architect, has completed plans for a three-story automobile service, repair and garage building, to cost close to $90,000 with equipment.

Quartermaster, Marine Corps, Washington, will receive bids until June 25 for three boilers, equipped with fuel-oil burners, smoke flue connections, etc., one water-heater, equipped with fuel-oil burner, one storage water tank, and one steel stack, schedule 697.

Great Northern Utilities Co., 3933 Drexel Boulevard, Chicago, A. J. Smith, head, is planning construction of artificial gas plant in vicinity of Gaffney, S. C., with pipe line system to serve about 45 communities in this district. Entire project will cost more than $3,000,000. Foundation Co., 120 Liberty Street, New York, is said to be interested in project.

Southern Loom & Reed Works, Inc., Campobello, S. C., manufacturer of textile equipment, plans rebuilding portion of plant destroyed by fire June 6, with loss reported at more than $80,000 including machinery.

International Harvester Co., 606 South Michigan Avenue, Chicago, has acquired property on Twenty-fifth Street, Baltimore, as site for service, repair and sales building for motor truck division, to cost close to $90,000 with equipment. William Price, company headquarters, superintendent of construction, will prepare plans.

Baker County Power Co., Newton, Ga., will proceed with construction of steam-operated electric power plant as an auxiliary to hydroelectric generating station. Contract has been let for Diesel engine of 675-hp. rating, as first unit, and orders will soon be placed for accessory equipment; other units will be installed later. Company is under direction of W. B. Foshay Co., 826 Second Avenue, South, Minneapolis, Minn.

Industrial Rayon Co., West Ninety-eighth Street and Walford Avenue, Cleveland, plans installation of power house and machine shop at new mill at Covington, Va. A housing development will be carried out for operatives. Entire project is reported to cost more than $4,000,000.

Lexington Water Power Co., Lexington, S. C., has contracted with Westinghouse Electric & Mfg. Co., East Pittsburgh, for four 40,825-kva. vertical water-wheel generators for its new hydroelectric power development on Saluda River, near Columbia, S. C., and will place orders soon for auxiliary equipment. A transmission line will be built. Entire project is reported to cost in excess of $1,000,000.

Casey & Faut, North Main Street, Anderson, S. C., architects, will take bids soon for two-story automobile service, repair and garage building, 55 x 140 ft., to cost close to $80,000 with equipment.

Virginia-Carolina Power Co., operated by Virginia Electric & Power Co., Electric Building, Richmond, Va., has applied for permission to construct and operate hydroelectric power plant on Roanoke River, Brunswick County, Va., with initial installation of 50,000 hp., to cost close to $1,000,000 with transmission system.

Cincinnati

CINCINNATI, June 11.

MACHINE-TOOL sales are not holding up to the level maintained during May but, nevertheless, local builders are booking a fair amount of business. Most of the orders consist of one or two tools for companies in the general industrial field, automobile manufacturers having purchased only a few machines for replacement purposes. Railroad buying has been practically at a standstill. Inquiries before the trade indicate that bookings the remainder of this month will be of moderate proportions.

Directors of Casey-Hedges Co. and Walsh & Weidner Boiler Co., both of Chattanooga, Tenn., manufacturers of boilers, cast iron pipe, mechanical draft appliances and plumbers' supplies, have approved a consolidation through organization of a holding company. If approved by stockholders, new corporation will be capitalized at approximately $3,500,000.

Plans are being considered by Lambert Art Metal Co., 182 Lorain Avenue, Columbus, Ohio, for a new one-story unit to cost more than $25,000 with equipment.

Broadway Garage Co., 519 Main Street, Cincinnati, has filed plans for a seven-story service, repair and garage building, to cost $375,000 with equipment. Rendigs, Panzer & Martin, Cincinnati, are architects.

Air Corps, Material Division, Wright Field, Dayton, Ohio, will receive bids until June 19 for one steel brake, one sheet metal cutter, one floor type grinder, four engine lathes and four cases hardening pots, circular 344; until June 20 for 18 engine gage assemblies, 168 engine gage assemblies, 87 engine gage units and four supercharge gage units, circular 20.

Stimpson Computing Scale Co., Louisville, has work under way on new plant, to cost approximately $100,000 with equipment.

Plough Chemical Co., Memphis, Tenn., has plans for multi-story addition to factory at 121 South Second Street, to cost in excess of $750,000 with machinery. Hanker & Caires, 123 South Court Street, are architects.

E. T. Hutchins, 416 South Fifth Street, Louisville, architect, has plans for three-story and basement automobile service, repair and garage building, 160 x 210 ft., to cost in excess of $225,000 with equipment.

Nashville, Chattanooga & St. Louis Railway Co., Nashville, Tenn., has plans for extensions in local engine house and shops to cost more than $50,000 with equipment.

Cincinnati Motor Coach Association, 1204 Exeter Place, Cincinnati, is planning a new bus terminal with service, repair and garage facilities, to cost more than $1,500,000 with equipment. G. W. Drach and C. H. Ferber, Union Trust Building, are associated architects.

City Council, Chattanooga, Tenn., is planning establishment of municipal airport, with hangars, repair shops, oil storage and distributing buildings, and other structures. Entire project is estimated to cost $250,000. Bond issue will be arranged.

Alabama Oolitic Stone Co., Fourth and First National Bank Building, Nashville, Tenn., W. F. Creighton, head, recently formed with capital of $25,000, has acquired about 150 acres, near Rockwood, Ala., and plans development, including installation of quarrying equipment, conveying machinery and other equipment.

Shuler Axle Co., N and Jones Street, Louisville, has work under way on an addition to cost about $21,000 with equipment.

Detroit

DETROIT, June 11.

ARRANGEMENTS are being made by Durant Motors, Inc., Lansing, Mich., for early installation of equipment in new unit now under way. Machinery will be removed from other points and purchased to total value of more than $400,000. Entire project will cost about $700,000. Headquarters are at 250 West Fifty-seventh Street, New York.

Bohn Aluminum & Brass Corporation, 2512 East Grand Boulevard, Detroit, has purchased plant and business of Michigan Smelting & Refining Co., 7885 Joseph Campeau Avenue, and will take over property in about a month. Acquired plant will be continued as branch works. Bohn company is arranging for sale of preferred stock to total $2,155,700, a portion of fund to be used for purchase and expansion.

Novi Stovecab Corporation, Novi, near Detroit, recently organized, has completed erection of new plant, 80 x 120 ft., and will begin production of patented domestic gas stove cabinets.

Sparks-Withington Co., Jackson, Mich., manufacturer of automobile appliances, radio equipment, etc., has acquired local plant of Jackson Motors Co. for expansion. Structure will be remodeled and placed in service in about 90 days.

Board of Education, Owosso, Mich., plans installation of manual training equipment in new high school to cost $400,000, for which bids will soon be asked on general contract. William B. Ittner, 911 Locust Street, St. Louis, is architect.

Continental Motors Corporation, 12801 East Jefferson Street, Detroit, has concluded agreement with Hydro Check Corporation, Monroe, Mich., for manufacture of hydraulic shock absorbers, heretofore carried out on limited scale in a local plant. Continental company will devote portions of both Detroit and Muskegon plants to new product, developing an output of about 6000 sets per day.

Ovens, power equipment, conveying and other machinery will be installed in new three-story baking and distributing plant, 110 x 225 ft., to be erected at Grand Rapids, Mich., by Kroeger Grocery & Baking Co., 817 Main Street, Cincinnati, to cost about $325,000 with equipment.

McCord Radiator Mfg. Co., 2587 East Grand Boulevard, Detroit, manufacturer of automobile radiators, is completing new branch plant at Walkerville, Ont., to have initial production of about 10,000 radiator units per month.

Board of Education, Hazel Park, Mich., contemplates installation of manual training equipment in new two-story high school to cost $450,000, for which plans will be drawn by Frank Eurich, Jr., 415 Brainard Street, Detroit, architect.

Owosso Foundry Co., Owosso, Mich., recently organized, has leased local plant formerly occupied by Standard Machine Co., and will remodel for production of gray iron castings, primarily for automotive service. Equipment to cost more than $40,000 will be installed.

Penberthy Injector Co., 1242 Holden Avenue, Detroit, manufacturer of injectors, ejectors and other power plant equipment, is reported planning an addition, to cost more than $100,000 with machinery.

Hill-Curtis Co., Kalamazoo, Mich., maker of polishing and grinding machinery, is erecting new factory building at Douglas Avenue and Michigan Central Railroad.

Cleveland

CLEVELAND, June 11.

MACHINE-TOOL sales in this territory are rather slow, but the volume of business is holding up well with last month. Buying is scattered among various industries. Heavy machines are inactive. Turret lathes continue in good demand, although few orders are for more than single machines. The Globe Machine & Stamping Co., Cleveland, during the week purchased a 3½-in. radial drill and a 6-in. vertical shaper. A local turret lathe manufacturer took an order for two large machines for the Seattle-Astoria Iron Works, Seattle, Wash., and another from a Michigan plant for three small machines. Little inquiry is coming from the railroads. Dealers are still working on the recent inquiry from the Erie Railroad.

Plans are said to be under way for extensions and improvements in refinery of Sun Oil Co., Toledo, Ohio, on 65-acre tract adjoining, recently acquired. Entire project will cost in excess of $800,000 with equipment. Headquarters are at South Penn Square, Philadelphia.

Steubenville Pressed Steel Co., Steubenville, Ohio, recently organized by E. M. Mentzer, Steubenville, and associates, is reported planning early purchase of equipment for local steel and iron fabricating plant.

City Council, Urbana, Ohio, is considering installation of a municipal electric light and power plant to cost more than $350,000 with equipment, replacing present service from other source. C. C. Craig, mayor, is at head of project.

Linde Air Products Co., 30 East Forty-second Street, New York, has awarded general contract to H. B. Walker, Canton, Ohio, for one-story branch plant at Canton, to cost close to $50,000 with equipment.

Hickok Oil Corporation, Toledo, Ohio, operating a local oil blending plant and oil properties in Texas, has arranged for bond issue of $1,500,000, a portion of proceeds to be used for expansion and betterments.

Small & Powley, Terminal Tower Building, Cleveland, architects, are preparing plans for a new service, repair and garage building for Shaker Garage Co., Marshall Building, for which bids will be asked soon on general contract, to cost upward of $90,000 with equipment.

Following recent discontinuance of its foundry division, Gogan Machine & Foundry Co., 1440 East Fifty-fifth Street, Cleveland, has changed its name to Gogan Machine Co. It will continue to specialize in production of heat-treating equipment.

Board of Education, Akron, Ohio, contemplates installation of manual training equipment in a new two-story high school to cost about $230,000, for which bids have been asked until June 16 on general contract. M. M. Konarski, Central High School Building, is architect.

Directors of Mahoning Valley Sanitary District, which is creating a sanitary water supply for Youngstown and Niles, Ohio, are beginning to award contracts for construction of a dam to hold back the waters of Meander Creek, six miles west of Youngstown. Project will involve an outlay of $9,000,000, and all preliminary engineering work has been completed. J. D. Waddell, a vice-president of Empire Steel Corporation, Mansfield, Ohio, is one of two directors of water project, representing Trumbull County interests. Directors have sold about $2,500,000 bonds and are ready to proceed with the work.

Pittsburgh

PITTSBURGH, June 11.

JUNE, so far, has not sustained the promise of May in machine-tool business. Inquiries still are fairly numerous, but sales are fewer than last week or the week previous.

Plans have been filed by West Penn Power Co., West Penn Building, Pittsburgh, for a one-story equipment storage and distributing plant, 85 x 150 ft., with service, repair and garage unit, to cost $90,000. Sanderson & Porter, 52 William Street, New York, are engineers.

Board of Education, Lewistown, Pa., contemplates installation of manual training equipment in two-story junior high school to cost $160,000, for which plans will be drawn by Hersh & Shollar, Commerce Building, Altoona, Pa., architects.

Officials of Aluminum Co. of America, Oliver Building, Pittsburgh, have organized Aluminum, Ltd., to take over and operate its properties in Canada and foreign lands. New organization has disposed of bond issue of $20,000,000, proceeds to be used for purchase of property from parent company, and for expansion. Arthur V. Davis is chairman of board of parent organization and head of subsidiary. Edward K. Davis has resigned as vice-president of parent concern to become president of Aluminum, Ltd.

Heppenstall Forge & Knife Co., 4620 Hatfield Street, Pittsburgh, has awarded general contract to Rust Engineering Co., American State Bank Building, for a one-story addition, 100 x 190 ft., to cost approximately $60,000 with equipment.

Universal Glass Products Co., Parkersburg, W. Va., manufacturer of machine-made milk bottles, etc., has approved plans for an addition, to cost about $160,000 with equipment.

Synchrophone Corporation, Pittsburgh, manufacturer of talking motion pictures and equipment, has leased property of Lincoln Motion Picture Co., Ridgefield, N. J., on site, 200 x 400 ft., for new Eastern branch plant.

Frick-Reid Supply Co., Pittsburgh, has been organized to take over and consolidate company of same name, with local works at Sandusky and Robinson Streets, devoted to equipment and supplies for oil and gas wells, pipe lines, refineries, etc., and Frick & Lindsay Co., with works at same location, devoted to similar apparatus. Consolidated company will operate group of 48 storage and distributing plants in different parts of country. A bond issue of $3,000,000 is being sold, a portion of fund to be used for expansion. W. E. Frick is president.

Borough Council, Sharpsburg, Pa., will receive bids until June 25 for new municipal boiler plant. Hudson & Myron, Wabash Building, Pittsburgh, are engineers.

Lally-McKelvy, Inc., Union Trust Building, Pittsburgh, has been appointed representative in Pittsburgh district for Chicago Nipple Mfg. Co.

Fitzsimmons & Cole Machinery Co., 1208 House Building, Pittsburgh, has changed its name to West Penn Machinery Co.

Pittsburgh Lamp & Art Craft, Inc., Monongahela, Pa., has been organized with capital of $25,000 to manufacture electric lamps, art metal furniture and metal specialties. Company will make its own patterns, molds, dies, etc., in a three-story building it has acquired and which is almost fully equipped.

Chicago

CHICAGO, June 11.

MACHINE-TOOL sales so far this month have been sluggish, with business confined almost wholly to individual items from widely scattered sources. Indications are that orders from tractor manufacturers in June will total large. Deere & Co. have closed for their Moline plant requirements, but still must buy for the Waterloo, Iowa, shops. The Caterpillar Tractor Co., Peoria, Ill., also has some items pending and the J. I. Case Threshing Machine Co., Racine, Wis., has a list against which it will buy. Railroad business is dull and the immediate future appears to hold nothing of interest from that source.

Centerless grinders have been advanced 10 per cent.

Contract has been let by Northwestern Barb Wire Co., Sterling, Ill., to Komman Co., 506 West Fourth Street, for rebuilding portion of plant recently destroyed by fire, to cost more than $200,000 with equipment.

Southern Malleable Iron Co., Twenty-first Street, East St. Louis, Ill., has awarded general contract to St. Louis Structural Steel Co., Syndicate Trust Building, for new one-story foundry, 85 x 280 ft., to cost in excess of $100,000 with equipment.

Board of Education, Decatur, Ill., plans installation of manual training equipment in new three-story junior high school to cost $325,000, for which bids will soon be asked on general contract. Brooks, Bramhall & Dague, National Bank Building, are architects.

Container Corporation of America, Inc., 111 West Washington Street, Chicago, manufacturer of corrugated boxes and containers, boxboard products, etc., is disposing of bond issue of $6,000,000, a portion of proceeds to be used for expansion and improvements. Company recently acquired local mill of Chicago Coated Board Co., making 13th plant. Walter P. Paepcke is president.

Davis D. Meredith, 222 West Adams Street, Chicago, architect, has filed plans for a multi-story automobile service, repair and garage building, to cost more than $500,000 with equipment.

Board of Education, Minot, N. D., contemplates installation of manual training equipment in three-story addition to junior high school to cost about $200,000, for which bids will be asked in general contract before close of month. Bugenhagen & Molander, Union National Bank Annex, are architects.

International Harvester Co., 606 South Michigan Avenue, Chicago, will soon take bids on general contract for two-story factory branch and distributing plant at St. Cloud, Minn., to cost about $150,000 with equipment. W. D. Price is superintendent of construction, Chicago headquarters.

Hart-Carter Co., Minneapolis, Minn., recently formed under Delaware laws, will take over and consolidate Carter-Mayhew Mfg. Co., manufacturer of agricultural disk separators, etc.; Twin City Separator Co., manufacturer of agricultural machinery, both of Minneapolis; and Hart Grain Weigher Co., Peoria, Ill. It is purposed to continue present plants in service, carrying out increased production. A new disk separator for use on combines and threshing machines is being perfected. Consolidated company is disposing of a preferred stock issue of about $4,480,000, a portion of proceeds to be used for expansion. A. J. Hartley is president.

Northern Utilities Co., Casper, Wyo., operating natural gas properties, has arranged for bond issue of $3,250,000, a portion of proceeds to be used for expansion, including pipeline construction.

Shaw-Enoch Tractor Co., Minneapolis, Minn., manufacturer of road-grading machinery, tractors, etc., will rebuild portion of plant destroyed by fire June 2, with loss reported more than $100,000 including equipment.

Common Council, Indianola, Iowa, is having plans drawn for rebuilding municipal electric light and power plant to cost about $27,000. Additional equipment will be installed. Dougher, Rich & Woodburn, Valley National Bank Building, Des Moines, Iowa, are architects.

Standard Calorimeter Co., East Moline, Ill., has been reorganized as Burgess-Parr Co., following acquisition of large block of its stock by C. F. Burgess, president Burgess Battery Co. and Burgess Laboratories, Madison, Wis. Increased capital will permit expansion of factory and new lines are to be added to calorimeters and special alloys made there.

McHugh Brothers, 222 Mill Street, Rockford, Ill., are erecting a new machine shop, 50 x 125 ft., at a cost of $25,000. It is expected to be ready for occupancy about Sept. 1.

Acme Oxy-Acetylene Co., East Chicago, Ind., will soon begin erection of an addition.

Gulf States

BIRMINGHAM, June 11.

OFFICIALS of Smith Brothers Properties, Inc., San Antonio, Tex., are organizing a company to construct and operate a cement mill on 700-acre tract about 10 miles from city, recently acquired. Initial unit is reported to cost in excess of $1,000,000, and will include power house, machine shop and other structures. J. H. Smith and J. W. Young, president and vice-president, respectively, of Smith company, will head new organization.

Goodall Semi-Metallic Hose Mfg. Co., Birmingham, has awarded general contract to Harrison Richardson, 2028 North First Avenue, for one-story plant, 50 x 120 ft. A portion of structure will be used for storage and distribution.

Commodore Point Terminal Co., 1949 East Adams Street, Jacksonville, Fla., has plans for a new cold storage and refrigerating plant, to cost about $100,000 with equipment.

Houston Cooperage & Tub Co., 3100 Canal Street, Houston, Tex., plans establishment of branch plant at San Antonio, Tex., for manufacture of tubs, kegs and kindred products, to cost close to $40,000 with equipment. Jacob Noodleman is president.

Western Power, Light & Telephone Co., Dallas, Tex., operating electric light and power properties, ice-manufacturing plants and other utilities, is disposing of a preferred stock issue to total about $1,000,000, a portion of proceeds to be used for extensions and improvements, including transmission line construction.

Texas-Mexican Oil & Refining Co., Laredo, Tex., is planning extensions and improvements in refinery to cost more than $80,000 with equipment. Company has recently increased its capital from $150,000 to $250,000. M. T. Cogley is president.

City Council, Waco, Tex., plans installation of pumping machinery and power equipment in connection with new municipal waterworks, using Lake Bosque as source of supply. A bond issue of $3,500,000 has been approved for work. Floyd & Lockridge, Dallas, Tex., are engineers.

American Desk Mfg. Co., Temple, Tex., recently formed with capital of $75,000, will take over and operate local mill of W. C. Jackson for manufacture of desks and other school equipment. Expansion program will be carried out, including additional equipment.

Board of Regents, West Texas State Teachers' College, Canyon, Tex., is planning a manual training department at institution to cost about $30,000. An addition will also be constructed to power plant. A fund of $200,000 is proposed for a new science building.

E-Z Opener Bag Co., Decatur, Ill., has awarded general contract to C. A. D. Bayley & Co., New Orleans, for initial units for paper mill and bag-manufacturing plant at Tuscaloosa, Ala., consisting of three three-story units to cost more than $2,500,000 with machinery. Mill will be devoted to kraft paper production and first building is scheduled to be ready for machinery installation in the fall. A machine shop will be built. William E. Spink, New Orleans, is engineer.

Holly Hill Fruit Products, Inc., Davenport, Fla., Frank W. Crisp, head, plans construction of a cold storage and refrigerating plant in connection with new packing house. An ice-manufacturing plant is under consideration, as well as power plant. Entire project is reported to cost more than $165,000 with machinery.

Alabama By-Products Corporation, Birmingham, operating gas and by-product coke plants, is disposing of a bond issue of $987,000, a portion of proceeds to be used for expansion and improvements.

Board of Education, Cuero, Tex., plans installation of manual training equipment in new high school, for which plans have been approved, to cost $125,000. T. J. Galbraith, Slaughter Building, Dallas, Tex., is architect.

Southern Natural Gas Corporation, Dallas, Tex., organized to take over and expand Southeastern Gas Co., same city, is planning construction of pipe line in Louisiana, Alabama, Mississippi and adjacent States, totaling more than 750 miles, to cost in excess of $2,000,000. Company is affiliated with Oklahoma Natural Gas Co., Tulsa, Okla., and R. C. Sharp, general manager last noted company, will be in charge of project.

H. C. Minor Estate, Houma, La., has approved plans for a new cane sugar refinery, reported to cost more than $1,000,000 with machinery. A power house will be installed. Company will also make improvements in sugar mills at Billeaud and Laurel Grove, La., and install additional equipment.

Best Electric Co., Inc., 1001 Magazine Street, New Orleans, operating an electrical repair works, is planning erection of one-story addition, 30 x 50 ft., and will install considerable equipment, including coil and armature winding machinery, coil taping machines, under-cutting machines, portable electric blowers, soldering equipment, fuse testers, etc.

Indiana

INDIANAPOLIS, June 11.

PLANS are being drawn by United States Slicing Machine Co., 333 Carson Street, La Porte, Ind., for a one-story addition, to cost close to $50,000 with equipment. Frank D. Chase, Inc., 720 North Michigan Avenue, Chicago, is architect and engineer.

Perfect Circle Co., Hagerstown, Md., manufacturer of oil-regulating piston and compression rings, has acquired plant and property of General Piston Ring Co., Tipton, Ind., and will continue operations as branch works. Purchasing company has arranged for increase in capital to $4,875,000, a portion of proceeds to provide for new acquisition and for expansion in output at all three plants, third unit being located at Newcastle, Ind.

Wayne Pump Co., Fort Wayne, formed under Maryland laws to take over and succeed to Wayne Co., with local plant for manufacture of gasoline dispensing pumps, air compressors, etc., is disposing of bond issue of $2,000,000, a portion of proceeds to be used for expansion and betterments.

Hartford City Paper Co., Hartford City, Ind., will soon take bids for an addition to cost in excess of $50,000. Lockwood, Greene & Co., 400 North Michigan Avenue, Chicago, are architects and engineers.

Atlas Plywood Corporation, 31 St. James Avenue, Boston, is establishing a new branch plant at Bloomington, Ind., to be used primarily for assembling, to cost in excess of $25,000.

Plans are being completed for merger of Central Indiana Power Co., Indianapolis, and Terre Haute, Indianapolis & Eastern Traction Co., Terre Haute, Ind., to be known as Indiana Electric Corporation. Consolidated organization plans expansion and betterment program, including transmission line construction.

Van Camp Hardware & Iron Co., 401 West Maryland Street, Indianapolis, has filed plans for one-story storage and distributing plant, to cost about $30,000 with equipment.

St. Louis

ST. LOUIS, June 11.

BIDS will soon be asked by Universal Cutter Co., 4567 Scott Avenue, St. Louis, for new two-story plant, to cost about $55,000 with equipment. A. H. Norris, 11 Dartford Place, Clayton, Mo., is architect.

Yukon Mill & Elevator Co., Yukon, Okla., is planning construction of new power house with Diesel engine units, to cost close to $100,000 with transmission lines.

City Council, Ponca City, Okla., G. E. Norton, city clerk, will discontinue municipal electric light and power plant and will dispose of complete equipment, including generators, Corliss engines, watertube boilers, etc., at public sale on June 28.

Carter & Carter, Commerce Building, Kansas City, Mo., have awarded general contract to Jewell Building Co., Kansas City, for two-story automobile service, repair and garage building, 100 x 150 ft., to cost close to $90,000 with equipment.

Gulf Refining Co., Griffin, Ark., will rebuild portion of storage and distributing plant destroyed by fire June 1, with loss reported at close to $50,000 including equipment.

Eldorado Refining Co., Eldorado, Kan., has begun work on a new local refinery, to cost close to $125,000 with equipment. I. A. Helling is general manager.

New State Ice Co., 2 West Third Street, Oklahoma City, Okla., has plans for a one-story ice-manufacturing and refrigerating plant at Guthrie, Okla., to cost about $65,000 with machinery.

City Council, Lincoln, Neb., is considering installation of municipal airport, including hangars, repair shops, oil storage and distributing plant, and other buildings, to cost close to $100,000. D. R. Erickson, City Hall, is city engineer.

Porter Oil Refining Co., 1434 Wittenburg Avenue, St. Louis, is planning an addition to storage and distributing plant, 26 x 110 ft., to cost more than $45,000 with equipment.

Quaker Oats Co., 80 East Jackson Boulevard, Chicago, will soon begin an addition to plant of its subsidiary, Aunt Jemima Mills, Inc., at St. Joseph, Mo., to cost more than $1,000,000 with machinery.

Union Pacific Railroad Co., Omaha, Neb., will make extensions and improvements in shops at Gering, Neb., including additions to engine house, machine shop, boiler plant and other buildings, to cost more than $125,000 including equipment.

Satanta Terminal Elevator Co., Satanta, Kan., has plans for a new grain elevator with capacity of about 125,000 bu., to cost approximately $100,000 with conveying, elevating and other equipment.

Board of Education, Stillwater, Okla., has awarded general contract to Tankersley Construction Co., Tradesmen's National Bank Building, Oklahoma City, Okla., for one-story manual training school, to cost about $75,000 with equipment. Philip Wilber, Stillwater, is architect.

Beehler Steel Products Co., manufacturer of steel, brass and aluminum stampings, is occupying a new building at 1500 Kingsland Avenue, St. Louis.

Pacific Coast

SAN FRANCISCO, June 6.

BIDS have been asked on general contract by Illinois-Pacific Glass Corporation, Fifteenth and Folsom Streets, San Francisco, for new plant units at Vernon, near Los Angeles, to cost approximately $400,000 with machinery. Engineering department of company, P. D. Burtt, chief engineer, is in charge.

Valley Body & Radiator Works, Fresno, Cal., manufacturer of automobile bodies, radiators, etc., will rebuild portion of plant destroyed by fire June 2, with loss reported at $55,000 including equipment.

Wenden Copper Mining Co., Wenden, Ariz., operating properties in Cunningham Pass district, about nine miles from city, has plans under way for a new mill and reduction plant, work to begin early in fall, to cost close to $100,000 with machinery.

Willys-Overland Co., Toledo, Ohio, has awarded general contract to J. V. McNeil Co., 5860 Avalon Boulevard, Los Angeles, for assembling plant in Laguna-Maywood industrial district. Main unit will be one story, 340 x 600 ft. A power plant, 50 x 100 ft., will be built. Entire project will cost in excess of $1,000,000 with equipment. Curlett & Beelman, Union Bank Building, are consulting architects in charge.

Webber Machine Works, Vancouver, Wash., has plans for a one-story addition to machine shop at 408 Columbia Street, to cost about $25,000.

Kenneth MacDonald, Spring Arcade Building, Los Angeles, architect, is completing plans for new multi-story automobile service, repair and garage building, 120 x 140 ft., to cost close to $500,000 with equipment.

Pacific Lumber Co., Scotia, Cal., has secured permission to use waters from Eel River, Humboldt County, for power and other service. Company contemplates a new pulp and paper mill in this section, using waste material from lumber mill. Entire project will cost in excess of $2,000,000 and is scheduled for completion within 12 months.

Western Oil & Refining Co., Los Angeles, operating an oil refinery in harbor district, is disposing of a preferred stock issue to total close to $5,000,000, a portion of proceeds to be used for expansion and improvements.

Alameda Airport, Inc., 550 Howard Street, San Francisco, C. Thompson, president, is considering plans for new airport at Oakland, Cal., including two hangars, repair shops, oil storage and distributing buildings, and other units. E. G. Burr, address noted, is company engineer.

People's Hydro-Electric Corporation, Alturas, Cal., is planning construction of new hydroelectric generating plant on Pine Creek, near city, to supplant present station. Extensions will be made in transmission lines. Entire project will cost about $125,000.

Ovens, power equipment, conveying and other machinery will be installed in two-story and basement plant to be erected by International Baking Co., San Francisco, to cost $160,000. MacDonald & Kahn, Financial Center Building, are architects.

Buffalo Foundry & Machine Co., manufacturer of dryers, evaporators and chemical plant equipment, has opened an office at San Francisco in charge of Charles O. Lavett.

Milwaukee

MILWAUKEE, June 11.

DEMAND for machine tools shows little change, although the trend is gradually becoming more favorable to companies whose volume showed some recession during May, as compared with April. Business is coming from widely diversified sources, with orders usually for one or two items. Most of the demand from automotive industries is for replacement, but inquiry is improving and the outlook for a larger volume from this group is regarded as promising.

Northern Conveyor & Mfg. Co., Janesville, Wis., manufacturer of material conveyors, hoists and other industrial and contractors' equipment, expects to undertake in the fall an enlargement program which last fall was indefinitely postponed. Plans have been completed for a new main shop, 150 x 190 ft., which will cost about $100,000, including equipment.

Northwestern Refrigerator Co., Baraboo, Wis., has plans for a shop addition, 30 x 150 ft., and a stencil cutting building, 20 x 40 ft. Work is to start late in June.

Cloverland Oil Co., Manistique, Mich., is taking bids through D. E. Anderson, architect, Marquette, Mich., for construction of an oil storage plant, 32 x 175 ft., part two stories and basement.

Bergstrom Paper Co., 225 West Wisconsin Avenue, Neenah, Wis., has placed general contract with C. R. Meyer & Sons Co., 50 State Street, Oshkosh, Wis., for construction of a new steam generating plant, 50 ft. sq., and a new boiler house, 50 x 110 ft. Engineers are Orbison & Orbison, 110 West College Avenue, Appleton, Wis.

Rundle Mfg. Co., Twenty-seventh and Cleveland Avenues, Milwaukee, manufacturer of plumbing goods, fixtures, materials, etc., is about to let contracts for construction of a factory addition, 25 x 100 ft., and a mezzanine floor addition to pattern shop, 20 x 120 ft. Project is in charge of Charles Cahill & Sons, consulting engineers, 214 Mason Street, Milwaukee.

Alwin Mfg. Co., Green Bay, Wis., has been incorporated with capital stock of $25,000 to manufacture machinery, mechanical devices, metal articles, etc. Incorporators are A. G. Krueger, 1015 Crooks Street; Erwin Prust, and G. W. Hay, 415 South Clay Street. A plant is being established.

Bucyrus-Erie Co., South Milwaukee, Wis., manufacturer of steam shovels, dredges, mining machinery, etc., has accepted bid of Paul Riesen's Sons, 1018 Humboldt Avenue, Milwaukee, for construction of a two-story pattern shop addition and storage vault, 65 x 180 ft. Project is in charge of Frank D. Chase, Inc., consulting engineer, 720 North Michigan Avenue, Chicago.

Foreign

OPPORTUNITY of increasing sales of road-making machinery in Western Australia is particularly promising because of urgent need for better roads in vast agricultural areas which are just being exploited, according to a report received by Industrial Machinery Division, Department of Commerce, Washington, from Trade Commissioner Charles F. Baldwin, Sydney. A considerable amount of money has been appropriated to support a road program which contemplates construction and improvement of roads in country districts, especially in wheat growing areas. The possibilities of this trade are attracting attention of British manufacturers of road-building machinery and at least one company, it is reported, is about to enter Western Australian market with a line of British equipment.

Plans are being considered by Inveresk Paper Co., Ltd., London, England, for new pulp mills for raw material supply for kraft paper production, to cost close to $10,000,000. Site has been selected tentatively on east coast of Scotland and negotiations are under way for lams to protect new industry.

Tokyo Electric Light Co., Ltd., Tokyo, Japan, is disposing of a bond issue of $70,000,000 in United States, a portion of proceeds to be used for expansion and improvements, including addition to one of steam-operated generating plants, power substations, transmission lines, etc. Shohachi Wakao is president.

Ministry of Communications, Kovno, Lithuania, is planning to ask bids soon for construction of Telsiu-Kretinga railroad, including rolling stock, shop facilities, etc., for which estimates of cost are being made. American Consulate, Kovno, Paul J. Reveley, vice-consul, has information regarding project.

Central Paper Trust, Petrograd, Russia, has work under way on new mill on Volga River, near Balakhna, Nijni-Novgorod district, scheduled for completion in 1929 or 1930.

Entire project is estimated to cost close to $16,000,000. Amtorg Trading Corporation, 165 Broadway, New York, official buying agency for Soviet Russian Government, has information regarding project.

Brandenburg Electric Power Co., Brandenburg, Germany, is disposing of bond issue of $5,000,000 in United States, a portion of fund to be used for expansion and improvements in power plants and transmission lines. George Warrelmann and Herman Henney are managing directors.

A company at Ngoenost, East Java, is planning construction of a new cane sugar refinery in that district and will arrange equipment requirements, etc., in near future. Information at office of Bureau of Foreign and Domestic Commerce, Washington, reference Java No. 66741; also at American Consulate, Batavia, Java; Thomas C. Barringer, trade commissioner.

Isotta Fraschini (Fabbrica Automobili Isotta Fraschini), Milan, Italy, manufacturer of automobiles, airplane motors, etc., is arranging for sale of common stock, of which 300,000 shares are available, a portion of fund to be used for expansion and improvements.

K. Sakai & Co., 6-Chome Itachibori, Osaka, Japan, inform THE IRON AGE that they are in the market for machines for manufacturing wood screws, also welding machine for tubes. The firm plans an initial output of 2,000,000 wood screws annually in sizes ranging from ¼ in. to 3 in. long. Buttwelded tubes from ¼ to 2 in. inner diameter will also be produced at the rate of about 500 tons a month.

Canada

TORONTO, June 11.

BUILDERS and dealers report a steady flow of new orders. Manufacturers are said to have a good volume of business ahead and most of them are operating at close to capacity. Demand for iron and steel working tools has been at a good level since the first of the year, and sales of woodworking tools have shown improvement. Taken as a whole, selling interests report business for the first five months of this year about 10 to 15 per cent better than that for the corresponding period of 1927.

Expansion of pulp and paper industry of New Brunswick involving an expenditure of between $30,000,000 and $40,000,000 is expected within a few years, according to Hon. J. B. M. Baxter, Premier of New Brunswick. Program includes two new mills to be erected by Canadian International Paper Co., and a 100-ton sulphite pulp plant to be erected next year on Miramichi River. These two projects will require an expenditure of at least $20,000,000. At Athol, on Restigouche River, near Campbellton, N. B., Fraser Co., Ltd., will build a sulphite pulp mill to cost $4,500,000, and at Millbank, it will erect either a 100-ton pulp mill or extend its present plant at a cost of approximately $2,500,000. Extensions under way at Edmundston will increase total production there from 40,000 tons to 117,000 tons a year. Bathurst Co., Bathurst, N. B., has under construction an addition to its mill which will double present capacity. These projects, with money necessary for development of Grand Falls for hydroelectric power, will bring expenditure for the industry in this Province up to $30,000,000 or $40,000,000.

Contract for an addition to Three Rivers, Que., plant of St. Lawrence Paper Mills, Ltd., Canada Cement Building, Montreal, has been awarded to Foundation Co. of Canada, Ltd., 746 Sherbrooke Street W., at a cost of approximately $3,000,000. H. S. Taylor, 1111 Beaver Hall Hill, is consulting engineer.

Negotiations for merger of Wettlaufer Brothers Machinery Co., Toronto, and L. & P. Mfg. Co., Ltd., Niagara Falls, Ont., have been completed, and a new company has been formed under name of Canadian General Machineries Co., with head office and factory at Hamilton, Ont., where future manufacturing operations will be carried on. Wettlaufer Brothers are manufacturers of concrete machinery, block and tile machines, etc., and the L. & P. company makes garage equipment, etc. New company will have a capital stock of $1,000,000. Provisional directors are: President, W. J. Southam, Hamilton; vice-president and general manager, W. LaBombard, Niagara Falls; treasurer, C. S. Watson; directors include J. L. and E. L. Wettlaufer, F. Leslie, Niagara Falls, and C. M. Doolittle, Hamilton.

Tenders are being received by J. W. Pugsley, secretary, Department of Railways and Canals, Federal Government, Ottawa, Ont., until June 26, for operating machinery and electrical equipment for lock-gates, taintor valves, regulating weirs and gate yard for Welland Ship Canal.

General Motors Corporation of Canada, Oshawa, Ont., is having plans prepared for an addition to its plant at Walkerville, Ont.

Victoriaville Furniture Co., Victoriaville, Que., has let contract to H. Levasseur, for a three-story factory, 60 x 130 ft., to cost $50,000; also an annex 40 x 90 ft.

Norton Co., Chippawa, Ont., manufacturer of abrasives, etc., has let contract to Smith Brothers Construction Co., Ltd., 1740 Ellen Avenue, Niagara Falls, Ont., for a two-story addition to its plant, 60 x 80 ft.

Henderson & Barwick, 5 Olier Street, Montreal, manufacturers of coal chutes, elevator buckets, etc., have awarded contract to James Shearer Co., Ltd., 225 St. Patrick Street, for erection of a factory, 80 x 188 ft., to cost $50,000. Architect is F. Robb, 1111 Beaver Hall Hill, Montreal.

Canada Metal Co., Ltd., Toronto, has acquired waterfront property formerly occupied by Dominion Shipbuilding Co., and will erect a plant which will be operated in connection with its other local works.

Randolph & Baker, Ltd., Randolph Street, St. John, N. B., contemplates erection of a lime plant to cost $100,000.

Canadian General Electric Co., Toronto, has under consideration an expansion program involving expenditure of $1,500,000 for buildings and equipment by 1930. This year two structures will be erected, one 100 x 328 ft., and another 90 x 100 ft., with total floor space of 41,800 sq. ft. Buildings will cost $300,000 and equipment $500,000.

Plans are under way by Sarnia Elevator Co., Sarnia, Ont., for a 1,000,000 bu. addition to its elevator. Construction work will be started immediately and it is expected that plant will be ready for operation next fall.

Western Canada

General Motors Corporation of Canada, Oshawa, Ont., is having plans prepared by Hutton & Souter, 6 James Street South, Hamilton, Ont., for erection of an assembly plant at Regina, Sask., to cost $1,000,000.

British Columbia Electric Co., Vancouver, B. C., will build a steam plant for generation of electric power on Burrard Inlet, Vancouver Island, to cost $2,500,000. Plant will be ready for operation by Sept. 1, 1932.

NEW TRADE PUBLICATIONS

Electric Meters.—Sangamo Electric Co., Springfield, Ill. Bulletin 75 of 8 pages illustrates and describes a maximum-demand register and a watthour meter, and tells the principle of operation.

Balanced Float Controllers.—Hagan Corporation, Pittsburgh. Bulletin 102 of 12 pages deals with a type of controller built for low-pressure control of combustion by means of the system known as compensated draft. It is illustrated with line cuts and halftones.

High-Alumina Brick.—General Refractories Co., 106 South Sixteenth Street, Philadelphia. Folder devoted to Arcofrax high-alumina brick and recording some of the results obtained from linings in cement plants. They are recommended for drier and boiler furnaces and other fire brick construction.

Chicago. Bulletin 408 of 24 pages illustrates and describes a line of double-suction pumps driven by motor or turbine and designed for a variety of service. Many of the illustrations are from installations. Clearance and dimension diagrams are given, together with capacity tables for pumps from 30 to 3000 gal. a minute, under heads from 20 to 200 ft.

Hand-Power Crane.—Whiting Corporation, Harvey, Ill. Bulletin 185 of four pages illustrates and describes, with clearance dimensions, an overhead traveling crane operated by hand power from the floor. Ease of operation is facilitated by the use of roller bearings.

Gasoline Locomotive.—George T. Whitcomb Co., Rochelle, Ill. Bulletin 2824 of 20 pages illustrates and describes gasoline locomotives of 10 to 30 tons designed for narrow-gage plant operation. They have short wheel base and low center of gravity. All are of the four-wheel type.

Porcelain Pump Plungers.—Aldrich Pump Co., Allentown, Pa. Bulletin 57 of four pages describes an acid-resisting plunger for pumps, designed for use in a variety of liquids. They range from 1¾ to 14 in. in diameter and from 8 to 48 in. long.

Protection for Electric Motors.—Reliance Electric & Engineering Co., 1053 Ivanhoe Road, Cleveland. Bulletin 1087 of four pages stresses the value of protection in the shape of inclosures on electric motors. Numerous types are shown, for operation in plants where dust and dirt are largely in evidence.

Compound Air Compressor.—Sullivan Machinery Co., 122 South Michigan Avenue, Chicago. Bulletin 83-K of eight pages illustrates and describes angle compound air compressors of 8-in. stroke, designed for pressures of 50 to 1000 lb. to the square inch.

Direct-Current Motors.—Century Electric Co., 1806 Pine Street, St. Louis. Bulletin of four pages devoted to a recent addition to the Century line of motors. It is built in standard sizes from 1/6 to 1/2 hp., for direct-current use.

Special Control Valves and Governors.—Hagan Corporation, Pittsburgh. Bulletin 103 of 20 pages illustrates and describes a variety of equipment including the roto-reciprocating valve, the stoker governor, the venturi butterfly valve, the dual butterfly valve, the master pilot valve and hydraulic and chemical control valves.

Compressors and Vacuum Pumps.—Ingersoll-Rand Co., 11 Broadway, New York. Bulletin 3150 of 44 pages, well illustrated, covers compressors and vacuum pumps for handling either air or gas. The compressors are of the straight-line type, built single, two or three-stage. The discharge pressures vary from 50 to 160 lb. single-stage, running up to 1750 lb. with three stages.

Central Heating Plant.—Vapor Heating Co., York, Pa. Bulletin B-140 of 4 pages deals with a heating plant for domestic use and refers particularly to oil or gas as a fuel.

Counting Devices.—Bristol Co., Waterbury, Conn. Folder of 6 pages, illustrating and briefly describing a number of types of counters for industrial and other uses.

Mechanical Stokers.—Combustion Engineering Corporation, 200 Madison Avenue, New York. Two 8-page publications devoted respectively to the design and application of traveling grate stokers and the design and application of forced draft chain grates. Both are in the form of technical papers and both were reprinted from recent issues of *Power*.

Multi-Stage Unit Pulverizers.—Grindle Fuel Equipment Co., Harvey, Ill. Bulletin 9 of 8 pages describes a unit pulverizer for coal, designed for feeding the fuel directly into the furnace or other point of application. Both halftones and line cuts give a good idea of the equipment and its characteristics. One illustration is from the plant of the Eastern Malleable Iron Co., Naugatuck, Conn., description of which was published in THE IRON AGE of March 1 last.

Foundry Equipment.—Whiting Corporation, Harvey, Ill. Bulletin 186 of 8 pages devoted to cupola charging and bulletin 187 of 4 pages describing helical-worm-geared ladles. The latter are built up to 35 tons capacity, all gears operating in an oil bath and with ball bearings in the rotating parts. The cupola charging system, known as the "Wish-Bone" system, includes equipment for running the charging bucket directly into the cupola shell and dropping its load.

Foundry Lighting and Ventilation.—David Lupton's Sons Co., Philadelphia. Bulletin of 4 pages illustrating and describing the Pond roof design with continuous windows for providing natural light and ventilation.

THE LAST WORD

(Contributed by the Reader Service Department of The Iron Age Publishing Co.)

WE will pay ten cents a line for a fifty-word story from C. S. Bell, Hillsboro, Ohio, telling how he happened to get into his present line of business. When he first felt the urge to make something, he might have embarked on the manufacture of belt buckles, bulldozers, bedsteads, bean bags, bridges or benzopurpurine. But he didn't. He makes bells.

The firm name is the C. S. Bell Mfg. Co., and so the word "bell" in the firm name serves two purposes. It might have been called the C. S. Bell Bell Mfg. Co. Which reminds us of *Judge's* recent joke about the little girl who asked her mother the meaning of the word cocoon. "Say colored man," answered her mother, "and don't stutter."

SPEAKING of bells, they seem to be out of place on the motor truck the neighborhood junk collector now uses as a successor to his horse and wagon. True, the string of bells is more closely associated with the profession than with the vehicle. But bells and motor trucks don't mix. In the old days, when you heard the jingle of the bells, you still had time to run down to the cellar, get the bag of assorted junk, and still be out in front before the wagon had passed.

The junk dealer, a solemn man who took his business seriously, would weigh our hoard on a scale which would justly collapse with fright at the approach of a sealer of weights and measures. With the air of a king conferring an earldom, Joe (all junk collectors are named Joe, or used to be) would painfully pull out of his pocket a dark, greasy cloth bag, from which he would carefully select for us a dime and two pennies.

Of course, we always complained about Joe's price. But Joe was no haggler. He named a price and that was all there was to it. Take it or leave it. He had no competition in that immediate neighborhood, so the price he named was the price he paid. Joe was the original one-bidder.

He was something of a metallurgist, too. If you rubbed the ends of insulated steel wire with bluestone, to make it look like copper, which commanded fabulous prices in those days, Joe always detected it through some uncanny sixth sense, and punished you by rejecting your entire collection. He knew, of course, he would get it on his next trip.

Now Joe rides in glory on a motor truck. The anemic, always tired nag is gone. But motor trucks move fast, and our fear is that by the time the small boy has dived into the cellar for his bag of junk and hauled it out into the street, Joe is out of hearing distance. Perhaps the answer is bigger and better bells, jangled automatically by direct connection with the drive shaft. Here is a problem for the best minds of the motor truck industry to solve.

"YOUR story about chaplets," writes L. C., "reminds me of an advertising salesman of my acquaintance who endeavored for almost a year to sell space in a trade catalog to a manufacturer of chaplets. One day he came into my office, wearing a smile of victory. "Well, I landed him," he said exultantly. "But, what a time I had with him! I've worked on him at least once a month for a whole year. I brought up every conceivable argument I could think of. Finally I convinced him I was right. But, say, Louis, what the h—[1]—[2]—l are chaplets anyway?"

VOL. 121, No. 25

Welding Ford Rear Axles

Electrical Resistance or Flash Welding Utilized to Make Light, Strong Axle Housing of Steel Sheet, Structural Channel and a Forging

BY FAY LEONE FAUROTE*

A NEW method of assembly has been introduced by the Ford Motor Co. in the manufacture of the Model A—a process of mechanical integration which will go far as soon as its value is recognized by other automobile manufacturers. This is electric welding, not for minor jobs and for petty parts, but for major operations on the motor car. Welding has, indeed, caused the advent of a new day in motor fabrication, a new and surer way of assembly, a method of building up several parts into a unified whole; no later loosening can possibly occur—the assembly is all one piece. A press produces a perfect stamping, the drop forge a perfect forging. There is an initial adjustment or two in a welding machine, pressure, a throw of the switch, a flash, an upset and a weld and lo! the job is done—a permanent combination of metal of finer form and greater strength and at a greater rate of production.

There are 1339 welding operations on the new Model A; 845 of them are spot welding, the rest are electrical resistance flash welds, arc welds and seam welds, with electric resistance flash welding leading in importance and speed. There are on the wheels 61 welds each, brakes 32 welds each, tire carrier two welds, bumper two welds, rear axle housing eight welds, differential housing two welds, radius rod four welds, torque tube two welds, muffler 37 welds, steering wheel four welds, battery support eight welds, equalizer rod one weld, foot pedals two welds, accelerator one weld, starter shaft one weld, breather pipe four welds, fan pulley 22 welds, radiator rod four welds, tie rod two welds, oil pan 23 welds, oil pump one arc weld, gas tank 28 welds, equalizer shaft four welds, body 16 welds. The several examples just given show the wide distribution of the process throughout the chassis, body and accessories.

Electric welding has been adopted only after much experimentation. Welding is the cheapest method of assembly known when using current at any reasonable cost. There is a half million horsepower available at Fordson. This power is being produced under ideal conditions and at a low price. The wide uses of electric welding and electric furnaces, therefore, are natural concomitants of this condition.

Electric resistance flash welding, as used quite widely by the Ford Motor Co., gives a joint which is clean, strong and mechanically well suited for the assembling of those parts which, under use, must maintain their physical integrity. This is merely a special type

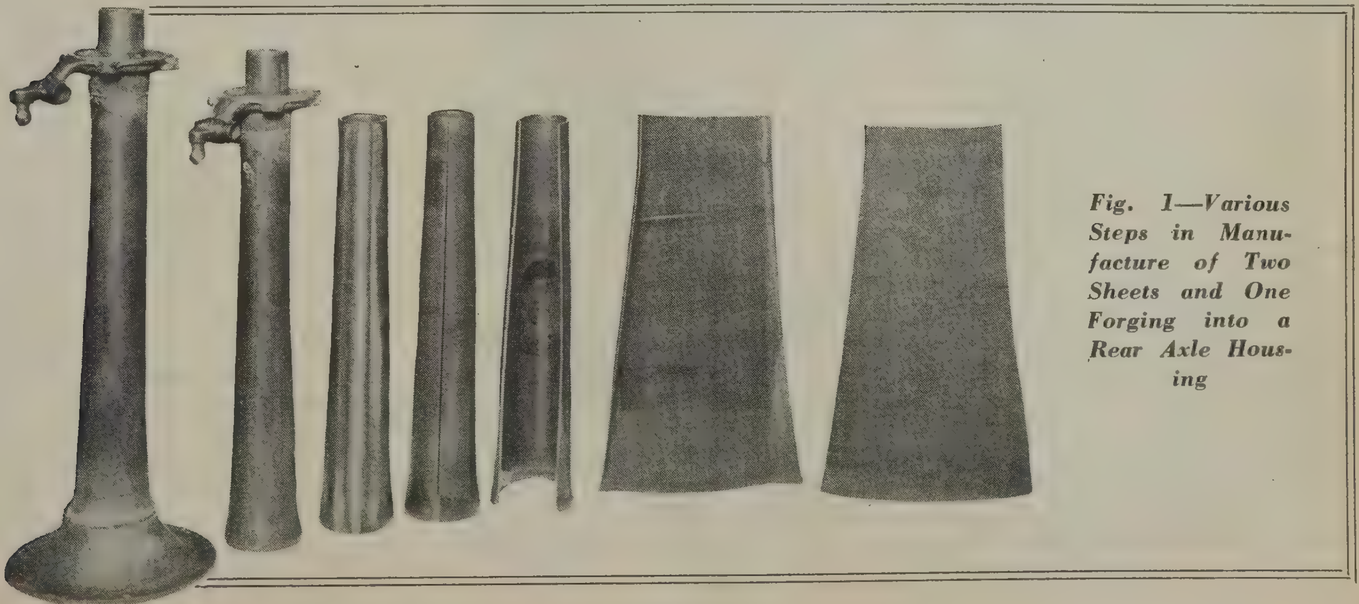

Fig. 1—Various Steps in Manufacture of Two Sheets and One Forging into a Rear Axle Housing

of resistance butt welding, wherein the parts to be welded are gripped in vises or fixtures and complete the secondary coil of an electric transformer. A current of low voltage but high amperage flows across the joint, heating it rapidly to the plastic condition. At this instant, suitably applied pressure forces the two parts together, the burned metal is pushed aside in a fin or flash and a true weld, comparable with that obtained from forge welding, results. The correct welding heat for a flash weld is from 100 to 200 deg. Fahr. less than the melting point of the steel. Under test the fracture occurs not at the weld but somewhere else in the metal of which the part is composed.

---

*Mechanical engineer, New York.

Radical changes have been made in many of the Ford welding machines to make the process successful. Speaking generally, the resistance welders take their power from a 440-volt line. A comparatively high secondary voltage is used, the electrodes are unusually husky, the pressure is applied more quickly and many times automatically, there is provision for upsetting sufficient to squeeze out impure or oxidized metal and at the same time prevent further deep-seated oxidation. An upsetting pressure of 5 tons per square inch is used. On many jobs a self-indexing fixture is added. In some machines two welds are made at one time.

Welded Rear Axle Is Unique

Perhaps the rear axle housing is one of the most interesting and outstanding jobs assembled by welding. It is made up of three main parts: (a) the bell, a spun forging, (b) a sheet metal tube, rolled and seam welded, and (c) a combination brake and axle support, a welded forging. These three main units are combined so as to make a single piece of metal of varying physical characteristics suited to their needs, but nevertheless one piece. Then two of these axle housings are attached to the differential housing, in itself a welded part consisting of a bent channel and a forging.

Fig. 1 shows the various steps in the manufacture of the axle housing. A piece of sheet is cut the right shape, the edges are curled, then it is bent to a U shape, and next the U is closed into a tube. All these are press operations. Next the longitudinal joint is welded, then the wheel hub is butt-welded to the small end of the tube, and the bell butt-welded to the larger end. The latter two operations are done in a battery of flash welding machines, illustrated in Fig. 2, which utilize the electric resistance principle already described. (The bell end is an interesting piece, being spun from a hot disk of metal in the machine shown in Fig. 3.)

The differential housing bell weighs 9 lb.; the tube weighs 7 lb.; and the wheel hub weighs 4 lb. The finished job, completely welded with flash ground off, weighs 18½ lb.

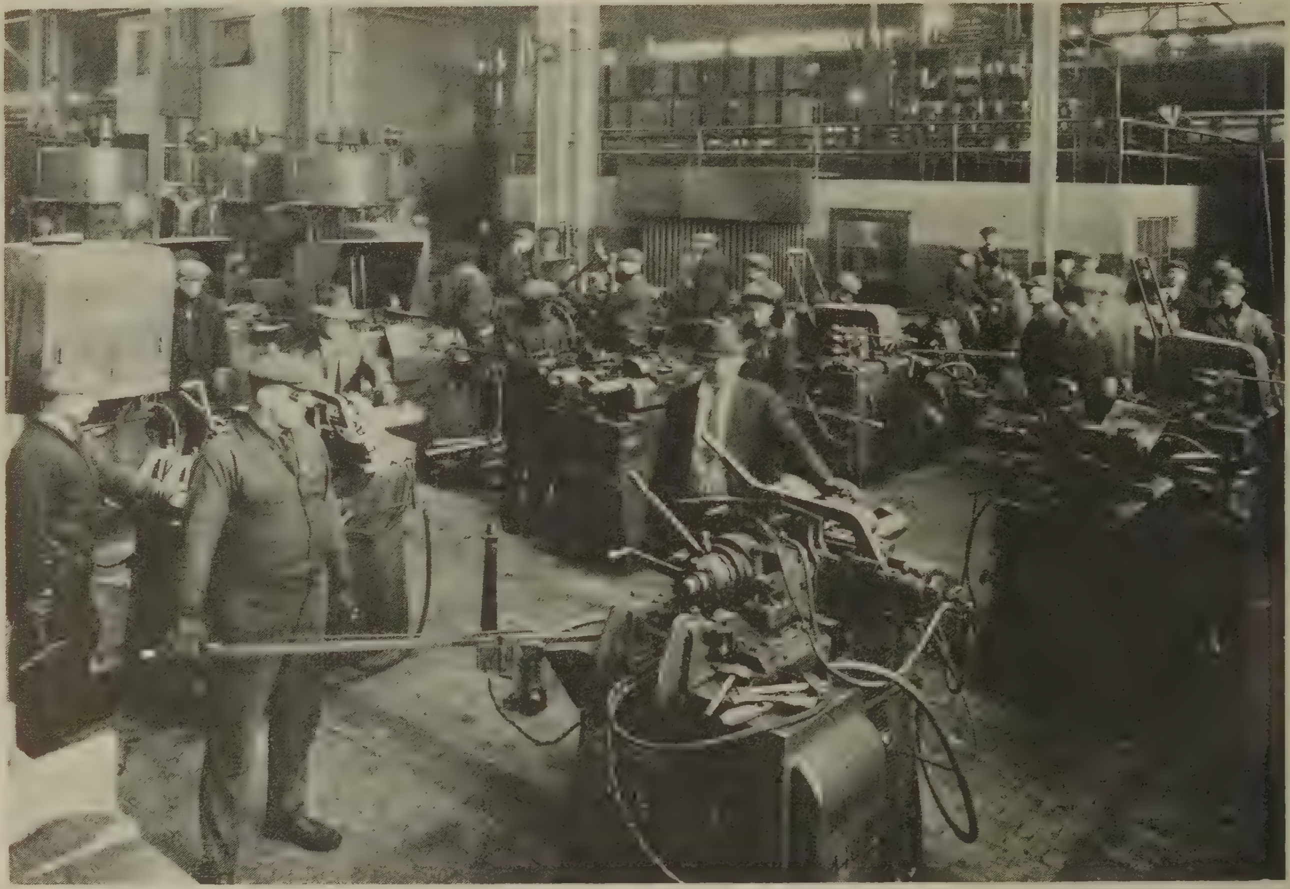

Fig. 2—Battery of Butt Welders for Joining Tapered Tube to Bell Flange and Hub Forging. Note guards attached to machines at rear to protect operators from flying sparks

Differential Housing Also a Fabricated Piece

As stated above, in the car assembly the differential housing is bolted between a right and left hand axle housing. As shown in Fig. 4, this is made of a bent structural shape and a forging. The small channel section is rolled in the Ford 14-in. merchant mill. Fig. 5 shows stock at the left. It passes first through an electrically driven shear and punch (not clearly shown, at the rear center) which blanks to size and pierces two holes in the web. The first die operation (shown at the left in Fig. 5) gives it a wave-like shape; the next machine, with die shown in detail in Fig. 6, curls it into an incomplete circle. Next, the holes previously punched in the web are heated by placing them upon a horizontal pipe and pushing them past a series of burners which heat seven rings at a time. This anneals the metal at those spots so the holes may be flanged inward in the press, shown in the center of Fig. 5, fitted with a punch and die. As shown in the illustration, the completed parts are carried forward to the next operation by hooking on an overhead endless chain conveyor.

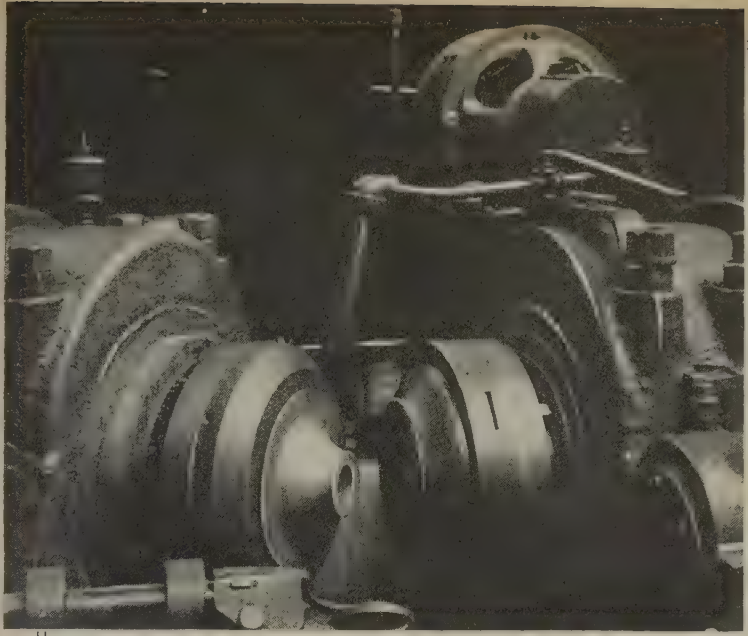

Fig. 3—Hot Spinning Machine for Making Bell End from a Flat Disk (at Left)

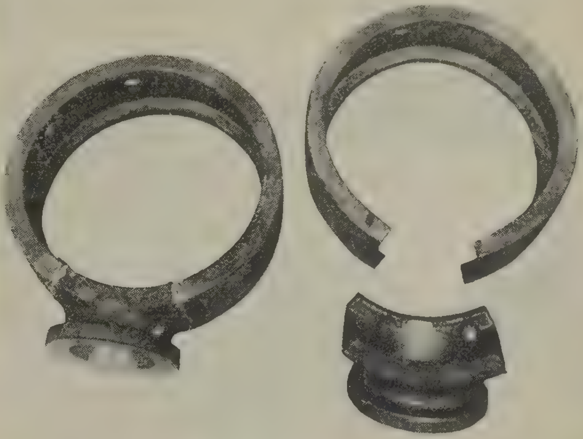

Fig. 4—Bent Channel and Drilled Forging Assembled by Butt Welding into Differential Housing (Below)

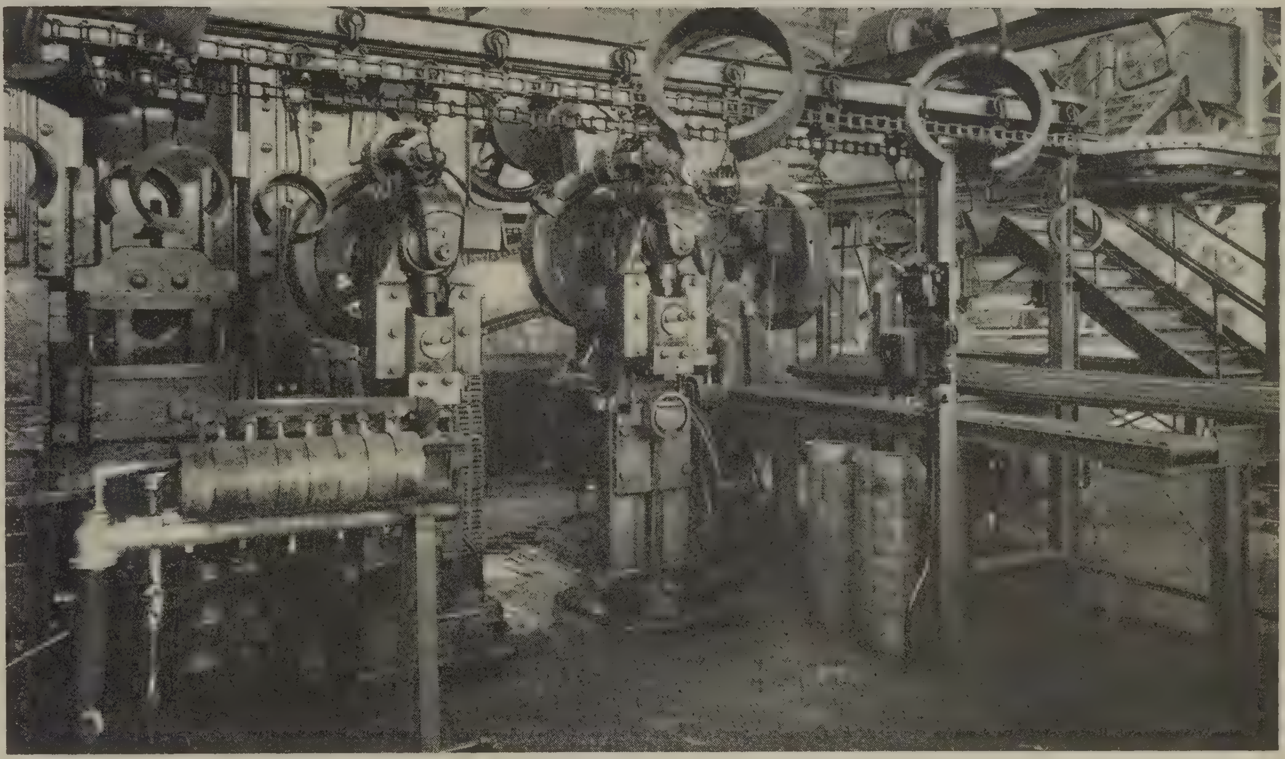

Fig. 5—Fabrication of Channel Rings. Flat stock at right, punch and cut off at rear center (not shown), wavy form pressed at left, curled to ring in press at left center, holes in web annealed in group of gas flames in foreground, flanged inward in punch at center, and completed rings transported on overhead conveyor (Above)

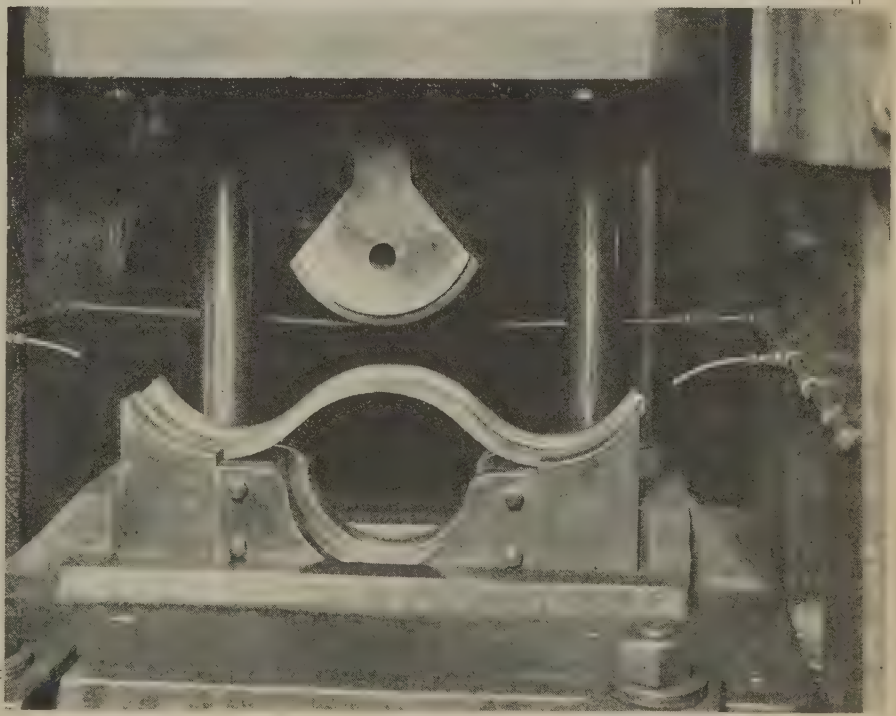
Fig. 6—Press for Curling Channel into Open Ring (at Right)



Differential neck and ring are assembled in a welder (Fig. 7) of Ford design and construction, built in the main tool room at Fordson. The view shows the guard open, ready for loading. The three-quarter circle of channel is placed between the jaws of the welding machine, and the forging is placed above them (just opposite the position of Fig. 4). Turning an air valve clamps the two rigidly in correct position. The door is closed and the handle at the side of the guard thrown down. This closes the transformer circuit; in 5 or 6 sec. the current has brought the pieces to a welding temperature, the machine automatically throws the correct pressure on the top piston, and the upset takes place, forcing out the impure metal and causing the two sections to be joined in the form and manner desired. During the first quarter of the upset the current is cut off. The welding cycle goes automatically to completion, opening the air valve at the end and releasing the clamps. The workman then opens the door, removes the completed part, and reloads the machine.

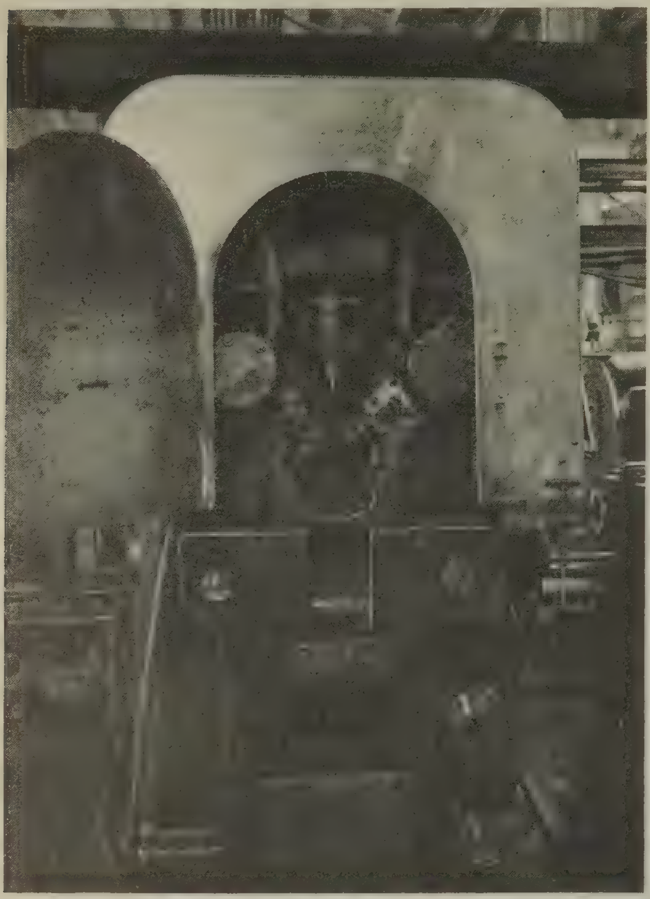


Fig. 7—Clamps on Resistance Welder for Making Two Welds Simultaneously on Differential Housing (above)

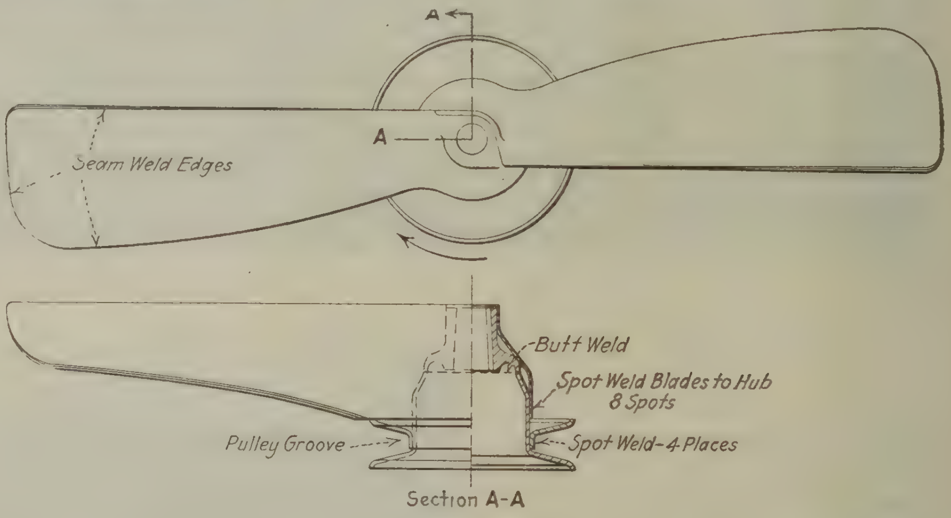

Fig. 8—Assembly Diagram of Fan. One forging and four sheet metal pieces (at Right)

Improvements in this automatic machine over a former type are:

1. Two men are eliminated—one operator runs the machine.
2. One hundred per cent increase in production—two welds made simultaneously on 50 to 60 pieces per hour.
3. Less floor space occupied per unit—75 per cent of the original machine.
4. Welding more uniform—the human element has been removed from the actual welding cycle.

This housing weighs 8 lb. 12 oz.; the area of weld is 2 1/16 sq. in., which is the largest weld in production on Model A at this time.

Muffler Made by Composite Method

An interesting example of composite construction is found on the muffler. In production the outer shell, made of 0.037-in. sheet, is blanked, formed into a tapered tube 30 in. long with a crimped flat side seam. A baffle plate at mid length is held with three rivets. At the large end a bell, which has meanwhile been formed on a punch press, is flash welded to the outer shell, and a small bell end is made and fixed on the other end in a similar manner. An inner perforated tube, 34½ in. long and 2 in. in diameter, is then inserted in a close sliding fit through the central hole in the small bell, central baffle and large end, and spot welded to the small end of the big bell, the other end of the inner shell being left free to expand as temperature rises with the exhaust gases. This inner tube has two interior baffles, properly placed and held in by crimping the tube and spot welding at four places. The inlet and outlet pipes are then flash welded to the bell ends and the muffler is complete. The total weight is 12 lb. 7 oz., and the entire job is done in a remarkably short time. Incidentally, because the muffler is welded into one piece, there is a complete absence of sympathetic vibration or ringing.

Precision Work on Fan

A fine piece of engineering, welded also, is the fan, designed on the principle of an aeroplane propeller, whose pitch, lead, balance and weight are so accurately figured that a precision job of unusual character for such large production is the result. The run-out allowed is only 0.005 in. The hub flange, the pulley body and the belt groove, as well as the two parts of the fan itself, are assembled by spot or seam welding. The fan blade is made of a double layer of 3⅛-in. cold-rolled strip, 16⅜ in. long and 0.0375 in. thick, with minimum elastic limit of 45,000 lb. per sq. in. Each strip is twisted over at its center; one end is formed with the correct curve for the face of one blade, and the other end into the back of the opposite blade. Two of these, assembled and seam welded along the edges, give blades of aerofoil section, with angles of incidence properly modified as the tip is approached. Assembly is as shown in Fig. 8. Seam welding the ends of the blades was illustrated in THE IRON AGE, April 19, page 1082.

Experience with resistance welding would seem to indicate that many of the old forms of assembly will soon be abandoned, and, instead of building up units and bolting them together, they will be designed for union by flash welding. Instead of starting with a large block of metal and cutting off the excess, the reverse is likely to occur. Lighter parts will be made possible, yet having greater strength. Of course, there is much room for further progress. Special welders will be constantly undergoing reconstruction as the development work progresses. But, with the coming of self-indexing automatic welders, the production welder takes an important place among the automatic machine tools of the modern factory.

Fatigue Resistance of Rail Steel

Endurance Ranges from 46,000 to 59,000 Lb. per Square Inch—Rail Steel Responds to Understressing and to Overstressing Like Mild Steel

BY JOHN R. FREEMAN, JR.*

ARRANGEMENTS were made in May, 1926, by the Gathmann Engineering Co., Baltimore, for the appointment of a research associate at the United States Bureau of Standards to study the comparative properties of rails made from rising steel in the standard big-end-down ingot molds and rails from fully piping (killed) steel made in the big-end-up sink-head ingot molds. A total of 21 heats made by the Carnegie and Algoma steel companies were studied. They were made to meet the specification requirements of the Baltimore & Ohio Railroad and the Canadian Pacific Railway respectively, which are substantially the same as the 1925 A.R.E.A. specification. Nine of the 21 heats were standard; the other 12 were killed with aluminum and cast in Gathmann molds.

In addition to the usual tests, which included drop tests, nick and break tests, tensile properties, hardness, impact, "M and O" analyses, macro- and microscopic studies, an extensive series of endurance or fatigue tests was made. All test sections were taken at the hot saw.

The comparative test data from the more usual tests confirmed previous investigations, and indicated that rail steel killed with aluminum can be poured free from pipe and excessive segregation in sink-head molds of the Gathmann type and that the distribution of carbon, phosphorus, sulphur and silicon occurs in the same manner in such ingots as in sink-head ingots of other types. The tensile properties of rails rolled from both types of ingots were found to be essentially the same, but were appreciably more uniform in rails rolled from Gathmann ingots, especially in the A rails. Details of these findings are given in Technologic Paper No. 363 of the Bureau of Standards, entitled "Endurance and Other

Properties of Rail Steel," by R. L. Dowdell, William J. Berry and the present author.

Nature of Transverse Fissures

All students of transverse fissure failure agree that it is a special case of fatigue failure in which the crack starts from a nucleus inside the head of the rail and progresses from the inside to the outside, instead of from the outside to the inside, as is typical of most fatigue failures. Controvery centers about the existence of, nature of, and the causes for the nucleus of the fissure and not about the method of propagation of the failure. It was felt that some light would be thrown on this perplexing problem if the endurance properties of commercial rails were investigated—something which has not yet been done, so far as the writer is aware.

Endurance tests were therefore made on specimens from A and B rails representing 11 of the 21 comparative heats. Four of the 11 heats were poured according to standard practice; the other seven were killed with aluminum and poured in the sink-head molds of the Gathmann type. The rotating beam type of endurance test was used, and all tests were made on a 25,000,000-cycle basis.

Table I—Endurance Limit of Steel from B Rails

Heat No.	Endurance Limit B Rail, Lb. per Sq. In.	Rockwell Hardness B Scale	Tensile Strength Average A and C Rail, Lb. per Sq. In.	Endurance Ratio
8 S (a) ..	52,700	98.3	125,750	0.41
9 S	52,200	98.4	113,550	0.46
10 S	47,800	97.9	125,650	0.38
21 S	53,800	98.7	121,500	0.44
1 G (b) ..	50,400	98.5	119,900	0.42
2 G	57,600	99.4	133,200	0.43
3 G	54,200	99.7	131,880	0.41
17 G	49,600	95.5	120,250 (c)	0.40

(a)—S signifies standard ingot.
(b)—G signifies sink-head ingot.
(c)—Test on B rail.

The nature of endurance testing requires several independent specimens to determine the endurance curve. Since there was not sufficient material to take them contiguously along the length of the rail, two contiguous specimens were taken from each position indicated in Fig. 1, giving 12 specimens from each rail.

The specimen marked Y nearly corresponds to the "M" position, where drillings for analysis are taken. It might be expected to contain a greater concentration of inclusions and consequently have inferior fatigue-resistant properties, as it is a well known fact that inclusions may exert a profound influence on the behavior of metals when subjected to reversed cycles of stress. To determine the validity of this hypothesis the endurance curves were determined from the specimens other than the Y specimens. The latter were then run at stresses at or very near the endurance limit. Failure in a relatively low number of cycles indicated a relatively low fatigue resistance. This was more particularly true in specimens from sink-head ingots.

Figs. 2 and 3 are typical results. The maximum fiber stress is plotted as ordinate and the number of cycles for failure as abscissa, the latter to a logarithmetic scale for convenience. The original endurance curve is that designated in the figure by the open circles and full lines. Endurance limits of the rail steel studied, determined from similar curves, are given in Table I and II.

It has been established by many investigators that the endurance limit of steel is more closely correlated with the tensile strength than with any other physical property ordinarily determined. The ratio of the endurance limit to the tensile strength is commonly called the "endurance ratio." These values together with the values for tensile strength and Rockwell-B hardness are also given in Tables I and II for the B and A rails. respectively.

When all tests from both A and B rails rolled from standard ingots are plotted on one sheet, the relatively wide "scatter" of the individual test results indicates an apparently wide variation in endurance properties of rail steels made to meet the same specification requirements. In both standard and Gathmann ingots the minimum endurance values were found in A rails. The minimum value obtained on rails rolled from standard ingots is slightly less than for rails rolled from sink-head ingots. This minimum value of approximately 46,000 lb. per sq. in. represents the endurance limit of steel from 100-lb. section rail rolled from standard ingots. It is the maximum value of repeated stress to which the steel in the head of any A or B rail of the section and composition tested in this investigation may be subjected without danger of failure by fatigue. The maximum value of approximately 53,800 lb. per sq. in. shown by similar rail steel indicates what might be obtained under optimum conditions.

The rail steels tested that were rolled from sink-head ingots could not with safety be subjected to higher repeated stresses in service than the rail steels from standard ingots, because of a low endurance limit shown by one of the rails. It is evident, however, that the maximum value of approximately 59,000 lb. per sq. in. shown by these rail steels is considerably higher than was obtained on the steels from the standard ingot rails. This indicates that under optimum conditions of manufacture killed rail steel cast in sink-head ingots might have higher endurance properties than present-day standard rails made to the same specification requirements.

Effect of "Overstress"

It has been shown by several investigators that if a steel specimen is subjected to a number of reversals of stress *above* its endurance limit, but not sufficient to cause failure, the specimen will then fail in fatigue at a stress considerably below its true endurance limit. The ability of the material to withstand repeated stress has been decreased; its endurance limit has been lowered.

A test was made to determine if this were true for rail steel and the result is given in Fig. 3. Two specimens were first subjected to 25,000 cycles of stress at a stress value of approximately 62,000 lb. per sq. in.—which it was known would eventually cause failure at about 60,000 cycles. The specimens were then subjected to cycles of stress at stresses below the endurance limit, which stress, it was known, would never cause failure were the material in its original condition. But both specimens failed, proving that the repeated overstress had caused incipient damage sufficient to cause a distinct lowering of the fatigue resistance.

Table II—Endurance Limit of Steel from A and AB Rails (a)

Heat No.	Endurance Limit, Lb. per Sq. In.	Rockwell Hardness B Scale	Tensile Strength, Lb. per Sq. In.	Endurance Ratio
8 S (a) ..	(c)	101.4	......	...
10 S	46,200	98.6	132,400	0.35
1 G (b) ..	47,800	99.2	120,400	0.40
3 G	55,000	101.1	129,750	0.42
18 G	57,400	98.9	......	...
19 G	59,200	98.4	134,750	0.44
20 G	53,600	100.3	115,750	0.46

(a)—In view of the relatively large crop from sink-head ingots, one of the manufacturers designated the first rail the B rail instead of A rail. These rails have been called AB rails and classed as A rails.
(a)—S signifies heat poured in standard ingots.
(b)—G signifies heat poured in sink-head ingots.
(c)—Less than 50,000 lb. per sq. in. Insufficient material to complete the test.

Effect of Understress

It is also well known that, if a specimen is subjected to a relatively large number of reversals of stress at a value below its endurance limit, the ability of that material to resist fatigue stresses has been increased—its endurance limit is raised. This effect also holds for rail steels, as illustrated by the dotted curve in Fig. 2.

In determining the original endurance limit five of the test specimens did not fail in 25,000,000 cycles. These five specimens were then considered as a "new" material, and the endurance limit was redetermined. It was found to be approximately 4300 lb. per sq. in. greater than before. The "understressing" had increased the fatigue resistance about 8 per cent.

Relation to Service Stresses

These effects of overstressing and understressing may offer a possible method of determining whether rails in service are being subjected to stresses greater or less than their endurance limit, by determining their endurance limits before and after service. If the endurance limit has decreased, it would indicate that the material has been "overstressed" and, conversely, if it has increased, it would indicate that the material has been "understressed."

There are, of course, certain limitations to this theory, such as the effect of the total number of repetitions of stress in service, the magnitude of the stresses, and their direction, whether in tension or compression.

In cooperation with the Baltimore & Ohio Railroad and the Canadian Pacific Railway endurance tests are now running on specimens from rails that have been in service, made from heats whose edurance properties have been previously determined.

It should be remembered that these endurance limits are based on tests of practically random specimens of steel from certain rails and are not necessarily a representation of the endurance of the rail as a whole. In an endurance specimen of the rotating-beam type, the volume of material that is subjected to the maximum stress is extremely small; in a rail in track, comparatively large. The neutral axis of the test specimen might contain a serious flaw which would not affect the endurance of the small specimen (which fails from stresses at the surface), but, if existing in the rail in track, might seriously reduce its life.

Internal stresses in a rail will affect, also, its endurance properties. When small specimens are cut from a rail and machined, internal stresses present may be relieved or redistributed so that the endurance range of the steel in the specimen may not be the same as it would have been in the rail. Nevertheless, it is reasonable to begin the study of the endurance properties of rails by first determining the endurance properties of the steel in the rails, using the most common type of endurance test so that comparison may be made with available data on other types of steels. It may be desirable eventually to determine the endurance properties of rails, making the tests on the full section of the rail. Before such tests are made, a more complete knowledge should be had of the magnitude and distribution of stresses in rails under all conditions.

Economic Value of Safety Work

How It Pays in Direct Savings and Indirect Advantages—Morale an Important Factor

BY L. H. BURNETT*

TWENTY years ago Judge Gary, chairman of the United States Steel Corporation, called together the casualty managers of the larger subsidiary companies of that organization. These casualty managers were in daily contact with all the loss, suffering and sorrow caused by industrial accidents. They were thoroughly familiar not only with the direct results of industrial accidents but also the indirect results—loss of life and limb, loss of earning power of the bread winner, widows and children left without adequate support. The only thought at that meeting was that too many men were being hurt and killed in industry and that means must be found for preventing, or at least decreasing, the number of accidents.

It was well understood that such a campaign would be costly and expensive. But, whatever the cost, it was determined that such accidents should be prevented in so far as possible. And this has been the spirit of the safety campaign from its inception. It has been firmly based upon the humanitarian motive. There was no thought of economic gain or advantage until long after safety had been sold to thoughtful employers and employees. If our plea for safety had been based upon economic grounds it might have fallen upon deaf ears —it might not have received the hearty support of the press. But, based upon humanitarian and sentimental reasons, it naturally attracted the attention and support of the public.

It is difficult, if not impossible, completely to separate the humanitarian from the economic side of safety work. The two go hand in hand. The underlying motive has been and always will be the humanitarian side. But experience has taught us that many economic advantages inevitably flow from intensive safety work.

Considered solely from an economic standpoint, the advantages of safety work or accident prevention in industry are both direct and indirect. The direct advantages are obvious and the savings can be measured in dollars and cents.

Every accident prevented means a saving of just so much in compensation and necessary medical care and attention. Whether an employer carries compensation insurance, State insurance, or assumes his own risk, the benefits derived from prevention of accidents are substantial and immediate. The experience of a large foundry company with an average working force of 500 men affords an excellent example of money savings due entirely to intensive safety work.

Time lost due to accidents in 1925 was 62½ days for each 100 tons of castings shipped. The cost of accidents was 66c. out of every $100 of payroll. In 1926 the lost time was 30 days per 100 tons of castings shipped; the accident cost being 19c. per $100 of payroll.

In 1927 an intensive safety campaign was conducted. As a result the time lost was ½ day per 100 tons of castings shipped; costing 1c. per $100 of payroll. Actual reduction in total costs, due to accident prevention, is indicated by the following figures:

1925—cost of accidents was	$7,033.03
1926—cost of accidents was	3,132.88
1927—cost of accidents was	121.50

A public utility employing an average force of 1500 men, by reducing accidents, cut its compensation costs from 30c. per $100 of payroll in 1926 to 6½c. in 1927. A large steel works employing 5000 men cut compensation costs from $24,378.89 in 1926 to $10,407.45 in 1927, showing a saving of $13,971.44. These figures do not include savings due to decrease of medical and hospital service.

One of our largest car and foundry companies spent $1,000,000 for accident prevention in 14 years and saved $2,700,000 in losses and other costs. It is said that the United States Steel Corporation spent $9,763,063 in safety work in 10 years and showed an actual saving of $14,609,920.

In view of these records there can be no doubt that accident prevention work does pay from a purely economic standpoint. And let us not forget that these figures show only the direct savings in compensation. They do not reflect the many indirect benefits, not only to the employees but to the public at large.

Safety Work an Aid to Production

When intensive safety work was first begun there was a general feeling among industrial leaders that it would seriously interfere with and hamper production. Only after many years were safety engineers able to demonstrate that accident prevention work, far from being a hindrance to full production, was and is an aid. For the safety campaign has long since graduated from mere safeguarding of dangerous machinery to the position of an ever increasing and active educational force in industry. It demands the thought and attention of every man in the organization.

---

*Vice-President, Carnegie Steel Co., Pittsburgh. This is abstract of an address before the Pennsylvania Safety Congress, at Philadelphia, on March 21.

A safe plant must be a clean and orderly plant, and cleanliness and orderliness have been found necessary for good production. A safe plant must be well lighted and have dark and dangerous places eliminated. It has been demonstrated time after time that good lighting is an actual aid—in fact, absolutely essential—to good production.

Absence of workers due to injuries causes changes in personnel requiring the hiring and training of new men. The bare cost of hiring a new man will run from $30 to $80. Such accidents disrupt the morale of an organization. Accident prevention conserves the time, energy and physical fitness of employees. It produces a more stable and contented working force, and "a stable, contented and highly efficient working force is the fondest dream of every manager, every department head and every foreman."

A recent survey of 14,000 industries employing 2,500,000 workers, comparing results of 1922 with 1925, shows 12 per cent increase in production and 18 per cent decrease in accidents. Blast furnaces show an increase in production of 60 per cent in the last 10 years and a 50 per cent decrease in accidents.

Today accident prevention is just as much a business proposition as production. No plant can truthfully be said to be on a sound business basis until safety is as much a matter of daily consideration and practice as quantity and quality of production. And the average mill worker today can buy life insurance at the same rate of premium as the office worker or other preferred risk. Before we had accident prevention, he was compelled to pay a much higher rate.

In fact, it is undoubtedly true today that, whether we look at accident prevention from the humanitarian standpoint or from the economic side, we can safely say that it pays; that it is worth while, and that it is worth much more than the effort and energy expended or the dollars and cents invested.

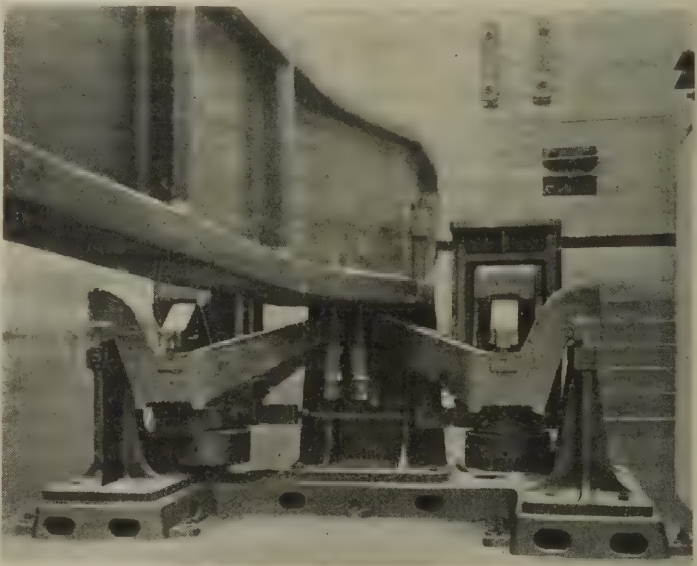
WEIGHING MOLTEN IRON

Heavy Track Scale for Hot-Metal Cars of Large Size

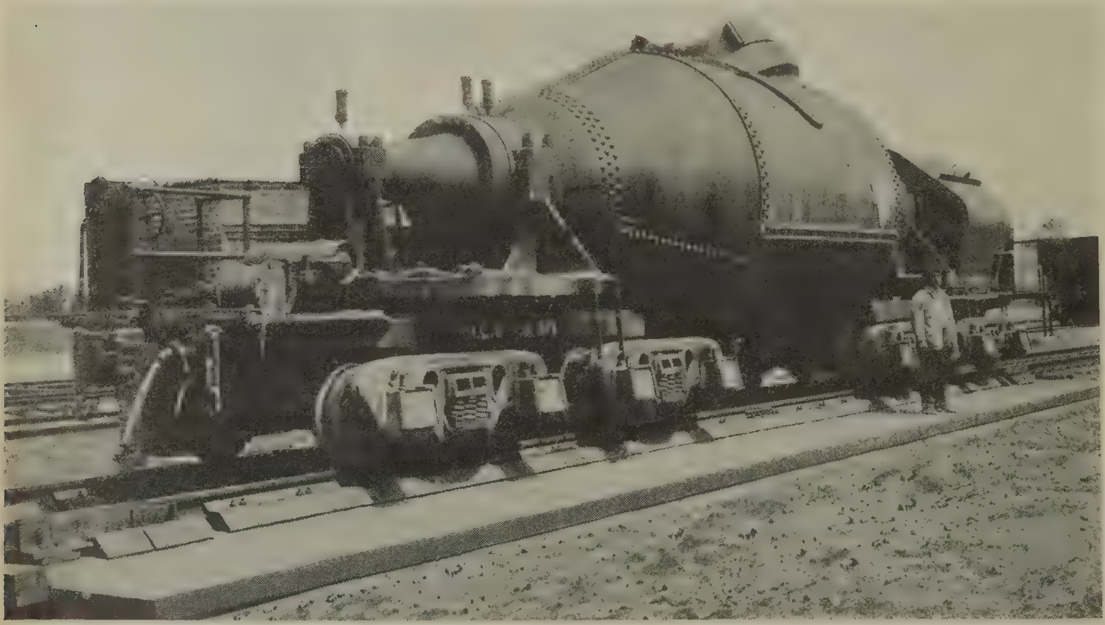
INSTALLATION of an 800,000-lb. beam capacity, two-section, knife-edge scale for weighing molten-iron cars has recently been completed at the plant of the Hamilton Coke & Iron Co., Hamilton, Ohio. Standard-gage track is used and the scale, which has a weigh rail 56 ft. long, is built in two sections. The rail stands are supported by steel cross ties. The deck of ⅜-in. steel plate is covered with firebrick and a special type of storm guard protects the openings made by the rail stand housings.

Four primary or main levers transmit the load to a transverse extension lever, which is connected to the weigh beam. The beam is type registering and double slides have been provided by the builder, Fairbanks, Morse & Co., St. Johnsbury, Vt., so that weights can be taken to an accuracy of 20 lb., if required.

Although this scale was built primarily to weigh molten iron, it will be used also for general service on inbound and outbound freight. Pugh-type hot-metal cars are used to transport molten iron a distance of 12 miles to open-hearth furnaces at Middletown, Ohio. Each car has a capacity of 150 tons and the weight of a car and its full load is 343 tons. This load is carried on a wheelbase of 45 ft. 6 in., with a maximum axle load of 85,600 lb. Each car is built with two eight-wheel trucks. In addition to providing transportation for hot metal, these cars also furnish hot-metal storage capacity.



Lever Construction (Above) Is Unusually Heavy. This scale is of the two-section, suspension bearing, knife-edge type



The Deck of This Scale (Left) Is Overlaid with Firebrick. The molten-metal car with full load weighs 343 tons

Ways to Improve Gray Iron Castings

High Strength of Super-Heat or "High-Test" Irons Points to Recapture of Lost Markets—High Malleability Attainable Also

BY DR. RICHARD MOLDENKE*

RECENT achievements in the improvement of cast iron, brought out more particularly by German metallurgists, at least partially explain why marked increases in strength are obtained without serious reductions in the carbon content of cast irons. The explanation is based upon the influence of temperature on the physical condition of the graphite precipitated during the change in the iron from the molten to the solid phase. It must be patent that the slower the cooling—or the interval of time between the liquid and the solid state—the larger the crystals formed in a solution of a given material sufficiently concentrated to contain nuclei of that material as starting points of such crystals. And, per contra, the faster the cooling rate, or the shorter the interval of time in setting, the smaller the crystals of the resulting solidified mass. Graphite forms no exception to the rule, for, under ordinary conditions of melting, with slow cooling of the molten carbon-iron solution when poured into dried or even heated molds of a low heat-conducting power—such as of sand—the crystals formed will be very coarse; whereas, the same iron poured into molds of high heat-conducting power—such as metal—will not contain any precipitated graphite as fine crystals.

Superheating Destroys Graphite Nuclei

Naturally, to obtain any graphite crystals at all, there must be present, or formed, graphite nuclei or starting points for crystals in the liquid metal either before or during the period of setting. The size of the crystals will depend upon how much time elapses between the commencement of crystal growth, out of the nuclei of graphite, and solidification. The importance of the recent research developments lies in there having been located in gray cast iron, melted under ordinary conditions of melting and superheating, an abundance of microscopically small graphite nuclei—nuclei which serve as the starting points of coarse crystal growth when the metal freezes and give a weak cast iron. Further, by superheating the molten metal to extremely high temperatures the graphite nuclei disappear completely by solution in the iron, and in the subsequent cooling the growth of large graphite crystals cannot take place with no nuclei present.

Only when considerably cooled—in fact, actually supercooled below normal freezing ranges—will graphite nuclei form again that could serve for the growth of large crystals, were there time to allow this before the metal is solid. As a matter of fact, when the graphite nuclei do form in such a super-cooled molten iron, the temperature will have dropped so close to the freezing point that there is time only for the formation of very fine crystals, and a strong metal results. Hence an iron melted under conditions of superheat, far beyond the ranges of ordinary practice, may give castings perhaps twice as strong as the same iron melted with the ordinary degree of superheat.

The above statement may be proved by melting a charge of gray cast iron in a crucible or in a resistance electric furnace. When just liquid, a test piece is poured with one end against a chill. Photomicrographs made of the hard and the soft ends of the casting will show the graphite nuclei in the white portion of the metal, and the large graphite crystals in the gray. If, now, the remainder of the charge is successively heated up a hundred or more degrees Fahrenheit, cooled down to the first pouring temperature, and corresponding test pieces and photomicrographs are made, the graphite nuclei in the chilled portions will be found gradually to disappear as the high temperature ranges are reached, whereas in the soft portions, similarly, the crystals of graphite will have become smaller and smaller. If enough metal is used to permit the making of tensile test specimens in sand molds in each case, the strengths will be found to go up as the degree of superheat rises.

There is doubtless an additional explanation for the strength increase incident to melting under conditions which give high superheat. At temperatures equal to those of molten steel, an iron containing over 2.50 per cent total carbon and possibly as much silicon, with manganese up to 1 per cent, can hardly tolerate the presence of dissolved iron oxide. This will certainly be reduced, just as when adding ferromanganese to a "blow" of Bessemer steel to deoxidize it; and a thoroughly deoxidized cast iron will gain correspondingly in quality. Even in ordinary foundry practice, it is known that melting very hot means less sulphur picked up from fuel, less chances for blow-holes and generally better castings. In fact, the rule is to pour as hot as the sand will stand it. Again, foundrymen know that the hotter the metal, the deeper the chill—especially when running low-silicon irons. Doubtless the disappearance of the graphite nuclei under conditions of extremely hot melting helps to retard the formation of large graphite crystals, and therefore the metal can chill deeper. It is gratifying to have at last an explanation of the phenomenon of higher combined carbon results from hotter iron, not only in the case of chilling irons, but in general foundry practice.

Hold Superheated Metal Before Pouring

It does not follow, however, that in cupola melting, when operating under low degrees of superheat, soft iron will result because of the ready growth of large crystals of graphite from the nuclei present in the molten metal. Melting cold may result from an unduly low fuel bed, and this causes an oxidation of the iron. This, in turn, results in a higher freezing point, reducing the normal interval of time for crystalline graphite growth before the metal solidifies. Hence hard iron. In the case of furnace melting, however, cold molten iron does mean softer metal, for in malleable castings practice, with air furnace melting, an iron with about 0.75 per cent silicon can give white cast iron when dipped from the hot surface of the bath, and gray iron when tapped out from the colder bottom. This occurs if the samples are taken just before the entire bath is hot enough for tapping out, and if the test pieces are of large enough cross-section.

A further point of practical importance is learned from the researches under consideration. Melting under conditions of extreme superheat on the part of the metal produced necessitates that it be held, before pouring into the molds, until it can cool to the desired pouring temperature. If the metal were poured into the molds at once, allowing the sand body to absorb and dissipate the surplus heat, not only would the sand surfaces suffer, but the added heat to be cared for by the sand would so retard the freezing of the iron that large crystals could grow from the nuclei finally formed during the cooling, even if the entire graphite of the mixture—that is, including the residual graphite nuclei—had been dissolved in the high-temperature melting. Hence this intensely superheated molten iron should be allowed to dissipate into the air all heat above regular pouring temperatures before being poured off into molds.

---

*Watchung, N. J. Abstract of a paper presented at the European Foundrymen's Congress, Barcelona, Spain, in April.

In ordinary foundry practice, the molder, when he receives molten iron and he thinks it too hot to use, instead of holding it to cool, often adds a piece of scrap or some of the gates or sprues. This saves him time. Be it noted, however, that if the theory of crystal growth from graphite nuclei is correct, the molder, besides cooling his metal, will have a goodly quantity of graphite nuclei from the cold gray iron scrap added, which his now colder iron is not able to dissolve. The result will be that he has reduced the quality of his dearly won extremely superheated iron to that of an ordinary melt.

Composition of High-Test Irons

The foundryman, hearing of the wonderful strengths and other qualities in cast iron obtained as the result of the recent researches, naturally wishes to approach, if not actually duplicate, them in his own establishment. He first looks up the compositions of these high-test cast irons and finds them high in silicon, at the upper ordinary manganese limit, low in sulphur and phosphorus but with the total carbon quite low so far as ordinary means of obtaining this is concerned, 2.80 per cent total carbon for cast iron not being easily obtained from the cupola. It can just be done in the air furnace, using the maximum percentage of soft steel scrap—about 35 per cent. The open-hearth and the electric furnace can handle the situation readily.

Most foundrymen, however, have only the cupola to melt with, and when it is recalled that steel melted in the cupola absorbs about 2.75 per cent carbon from the fuel, to get the desired 2.80 per cent total carbon in the castings would mean a practically 100 per cent steel mixture. Since, however, with the aid of ferroalloys, particularly in the cement briquetted form—there are also other ways to protect the descending ferroalloys, such as mixing with clay and vitrifying, or mixing with cast borings and inclosing in steel containers—there is no reason why every foundryman should not at least improve his work by using high steel scrap mixtures, or by using steel altogether for his very special castings. With high steel percentages, it is necessary to have enough silicon and manganese available while melting, as, under the very high temperatures involved, there is a chance of oxidation from the carbon dioxide of the cupola gases and, without the deoxidizing action of the two elements in question, a sorry metal would come out over the spout.

To get somewhat closer to the melting details, the first question to consider is how to obtain from the cupola the very high temperatures desired for the molten metal. This involves a sacrifice in fuel, and perhaps the best example of actual operation is to be found in making large radiators, for which the molten iron required must be snow-white, to avoid heavy losses through "cold-shuts" in so thin a class of pressure castings. Here, melting has to be done with a moderate blast volume—say that giving about three-quarters of the normal hourly tonnage capacity. The fuel bed must be high enough to allow a time interval of 10 to 12 min. between putting on the blast and observing the molten metal running from the open tap-hole over the spout and into the receiving ladle or forehearth. Furthermore, even with the best of coke, the ratio of metal to fuel between charges should not be more than 8 to 1 and, with high ash cokes which are rather friable, this may have to drop to 6 to 1. The metal charges must be small enough to hold the intermediate coke charges down to a layer about 4 in. thick, and charging must be done carefully to get level layers. If, after the cupola has been fully filled, this can be let stand for an hour or more, to warm up well, the first iron will be hot enough to use, and, very shortly after starting, the molten metal will come out extremely hot.

Results of Alloy Additions

Until the recent developments in "high-test" cast iron, the only apparent avenue of betterment of gray iron castings seemed to lie in the addition of such metals as nickel, chromium, vanadium, etc., or the production of alloy cast irons. These could be produced either by direct addition to the ladle or cupola, or preferably as component elements of the pig irons charged. The quality of the castings was thus unquestionably improved either for strength or wearing qualities. However, the amount and condition of the graphite in cast iron will always have the most powerful effect upon its physical qualities, and giving this more weight when judging erratic alloy addition results will explain them more satisfactorily.

Some of the actual figures involved will be of interest. For very "high-test" cast iron, tensile strengths hovering around 60,000 lb. per sq. in. have been regularly attained. Transverse strengths almost double the normal, with more than double the deflection, are common. The addition of nickel, chromium, etc., has added another notch to these values, 65,000 lb. and even more being reputably reported. It would appear, then, that, with our present knowledge, cast iron can be made strong enough to recapture much of the market lost to the steel and the malleable casting, and the producer of iron castings should lose no time in doing so.

A Development Which Has Promise

But there is still another development in cast iron which should prove valuable to the foundryman. A considerable reduction in the silicon and manganese content of cast irons, leaving the total carbon, sulphur and phosphorus as given in the previous typical iron, together with the extremely high degrees of superheat given in melting, when poured into castings, gives a class of cast iron not quite so strong as those previously mentioned, but peculiarly amenable to an annealing process which converts the comparatively higher combined carbon contained to the temper-carbon variety without special interference by the finely crystalline graphite present. Thus, a fine-grained gray cast iron can be sent partly on the way of the malleable casting, and light castings with around 1.50 per cent silicon, over half their carbon as fine graphite and with low manganese can be readily twisted. In other words, the material has malleability and can be elongated. Large and heavy castings practically anneal themselves, since only a few hours at 1550 deg. Fahr. are required to accomplish the combined carbon conversion. Thus is another avenue opened to the gray iron founder to retrieve his losses.

Advances Summarized

Reviewing the achievements in the scientific control of cast iron for the last three decades, for they fall within practically that period, it would almost seem that the most important advances have been made only recently, and by scientists rather than men in active operation of foundries. The search for a cast iron which will not "grow" under alternating heat applications, and other problems of a similar nature, gave the necessary impetus which brought the highly important developments. This is an argument for more extended and, at the same time, cooperative research on cast iron in its various branches, and the several movements going on at the present time in a number of highly industrial countries should be encouraged and financed. At the same time, some method of information exchange should be arranged for which would limit duplication of effort and extend the usefulness of the discoveries that are certain to be made.

Safe Loads for Steels Working at High Temperatures

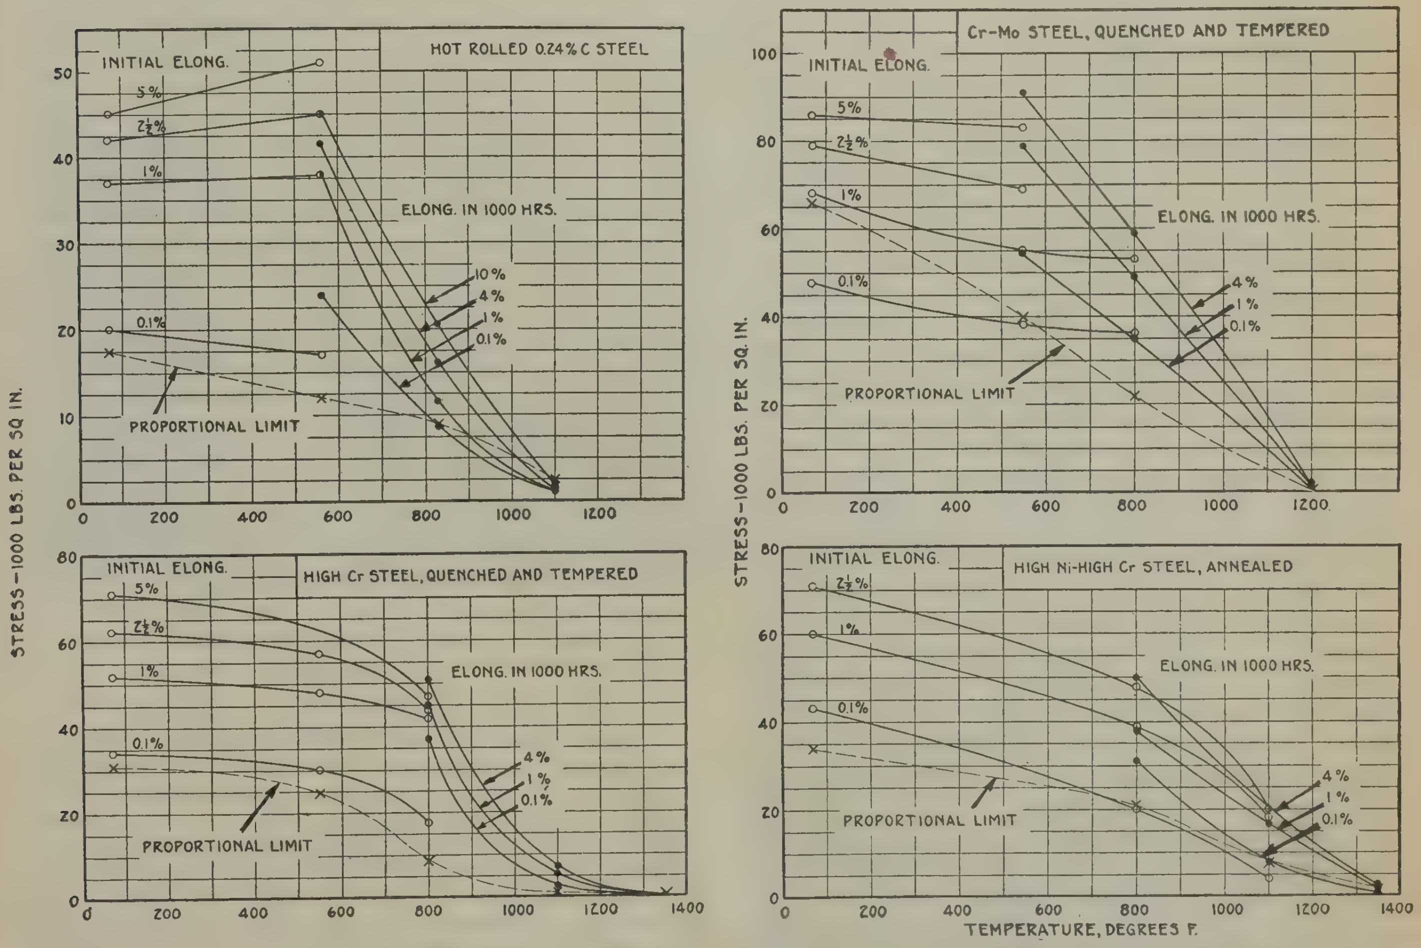
Bureau of Standards Publication Gives Data Whereby Superheated Steam or Chemical Equipment May Be Designed

It is generally understood that the tensile strength of steels as determined in the ordinary way at room temperature gives little information as to the ability of the metal to withstand stress at elevated temperatures. There has consequently been much study given to the tensile properties from 600 to 1400 deg. Fahr., in view of the decided trend in the power and chemical industries toward higher working pressures and temperatures. Two general types of tests have been performed. In one, the load is applied step by step as rapidly as the corresponding extension can be measured on the hot specimen; in the other, a quiescent load is left indefinitely, and observations are made at daily intervals to see whether gradual extension or "creep" is occurring.

Much work, done principally on the former plan, is reported by H. J. French, H. C. Cross and A. A. Peterson of the United States Bureau of Standards in Technologic Paper No. 362. Their equipment (described in Technologic Paper No. 296) was capable of maintaining the tension specimen at a uniform and stationary temperature to within plus or minus 5 deg. Fahr., and extensions were read to four millionths of an inch. Extreme accuracy is necessary for this work, because a variation of ½ deg. Fahr. will cause measureable changes over a 1-in. gage length. Furthermore, since the elastic limit is low at high temperatures (on the order of 1000 lb. per square inch), the total deformation over a 2-in. gage length is only 0.00002 in. The limit of proportionality between the observed stress at such a low strain can be determined only when the limit of error in each determination is very small.

Five steels were studied: a 0.24 per cent carbon boiler plate, a quenched and tempered chromium-molybdenum steel, an annealed low-tungsten high-speed steel, a quenched and tempered 20 per cent chromium steel and an annealed austenitic nickel-chromium steel. Results for four of these are shown in the diagrams.

It will be observed that each diagram has curves of two different families, one showing performance at relatively low temperatures (where the cold work done on the bar by stretching it past the elastic limit strain-hardens the steel and automatically raises its strength sufficiently to carry the imposed load indefinitely) and the other indicating the relationship between time and the loads which cause continuing creep. For instance, the proportional limit of boiler plate is about 12,500 lb. per square inch at 500 deg. Fahr. Any load below that will be carried indefinitely at that temperature and will not cause permanent set. If a boiler steel under a heat of 500 deg. is stressed at 17,500 lb. per sq. in., the curves show it will acquire a permanent set of 0.1 per cent, but it is still a stable structure. At 800 deg. Fahr., however, this steel must be stressed considerably below 10,000 lb. per square inch if it is to remain in service indefinitely; if it carries a load of 22,500 lb. per



Loads Required to Cause Either Permanent Sets or Continuing Creep in Steels at Elevated Temperature square inch at that temperature, it will stretch 10 per cent in 1000 hr.

The authors recommend that ample margins of safety be used for figures taken from these curves because the experimental work underlying them is none too extensive, and the high-temperature portions are based on the unproved assumption that creep as determined at relatively short time intervals continues indefinitely at the same rate. But the values are conservative when compared with results of other investigators. J. L. Cox, of the Midvale Steel Co., has recommended that 80 per cent of these figures be used for design values to allow for unavoidable variations in quality of metal and accuracy of machine work. He also thinks that a container which exhibits creep should be replaced when it acquires a permanent extension of 8 per cent. (See THE IRON AGE, Dec. 15, 1927, page 1662.)

Railroads Spent $432,604,000 for Iron and Steel

Nearly One-Fourth of It Went for Rails in 1927—Locomotives and Cars Cost $30,000,000 in First Quarter

WASHINGTON, June 16.—Class I railroads of the United States in 1927 directly expended $432,604,000 for iron and steel products, according to an annual statement issued by the Bureau of Railway Economics. This outlay was 31 per cent of total expenditures of these railroads last year for materials and supplies of all kinds. Only in the case of fuel were expenditures for iron and steel exceeded, the total for coal and fuel oil being $438,821,000, or 31.4 per cent of the total outlay of $1,395,928,000. The fuel purchased consisted of 130,190,000 net tons of bituminous coal, 3,199,000 net tons of anthracite and 2,765,259,000 gal. of fuel oil.

Expenditures for iron and steel last year, however, as in the case of other lines, were not so great as they were in 1926, when, out of a total of $1.559,032,000, purchases of iron and steel amounted to $507,302,000. In 1925, iron and steel purchases aggregated $419,255,000; in 1924, they were $365,610,000; in 1923, they amounted to $464,955,000. Detailed railroad expenditures for iron and steel in 1927 were as follows:

		Per Cent of all purchases
Steel rails (new and second-hand, except scrap)	$101,567,000	7.28
Wheels, axles and tires	47,435,000	3.40
Frogs, switches, crossings, track fastenings and bolts, spikes, tie plates, rail anchors, etc	72,032,000	5.16
Iron bridges, turntables, structural steel, bar iron and steel, forgings, fabricated and unfabricated shapes and pressed steel parts	51,267,000	3.67
Flues and tubes for locomotives and stationary boilers	8,191,000	0.59
Telegraph and telephone, interlocking and signal material	25,300,000	1.81
Bolts, nuts, washers, rivets, springs, etc.	19,064,000	1.37
Locomotive and car castings, beams, couplers, frames and car roofs	62,294,000	4.46
Machinery, boilers, repair parts and all other iron and steel products	45,454,000	3.25
Total iron and steel products	$432,604,000	30.99

The bureau quoted the estimate of THE IRON AGE (Jan. 5 issue) that the railroads in 1927 absorbed 6,125,000 tons of steel, amounting to 19 per cent of the total. Rail purchases by the carriers in 1927, the Bureau statement said, amounted to 2,278.000 gross tons, or 86.7 per cent of this class of distribution. With the exception of 1926, the 1927 rail purchases were greater than in any recent year, and were nearly 41 per cent of the steel tonnage bought by the railroads.

Growth in Heavier Rails

After quoting THE IRON AGE, showing percentages taken by the railroads in 1927 of each form of steel distributed, the bureau statement pointed out that during recent years heavier steel rails have been coming more and more into use to meet conditions improved by heavier and denser traffic. Rails of 100-lb. section and over rolled in 1927, the statement explained, were 68.8 per cent of the year's production. In 1926 the corresponding proportion was 61.12 per cent; in 1925, 58.76 per cent; in 1923, 50.47 per cent.

Recognizing the growing importance of extra heavy rail sections, it was pointed out, the American Iron and Steel Institute has made a separate grouping of rails weighing 120 lb. or over. The total for 1927 is given as 617,524 tons, or 22.01 per cent of all rails produced last year. This action, it is added, "recalls that of 13 years ago, when for the first time the 100-lb. rail was segregated from the 85-lb. and over classification, previously the heaviest reported."

Gross capital expenditure by the railroads during the first quarter of 1928, for new equipment and for additions and improvements to property, amounted to $128,428,000, a decrease of $26,594,000 from the corresponding quarter of 1927, and $37,327,000 less than that for the corresponding period of 1926. Of the capital expenditure during the first quarter of this year equipment made up $33,016,000, divided as follows: Locomotives, $10,493,000; freight train cars, $13,601,000; passenger train cars, $5,785,000; other equipment, $3,137,000. Expenditures for roadway and structures totaled $95,412,000, divided as follows: Additional track, $24,744,000; heavier rail, $9,621,000; additional ballast, $1,922,000; shops and engine houses, $7,964,000; all other improvements, $51,161,000.

For the various non-ferrous metal products needed in railroad operation, such as brass, copper, zinc, lead, etc., the railroads spent $55,668,000 in 1927, or 8.8 per cent less than in 1926.

Laboratory Tests of Railroad Bearing Bronzes Inadequate

No one of the selected laboratory tests, consisting of wear, tension, impact and pounding, can by itself be expected to yield information which is adequate for general comparisons of the various railroad bearing bronzes now in use. This is revealed by a study made by the Bureau of Standards, Department of Commerce. According to H. J. French, who was in charge of the work, the bronzes fall into certain general classes, as regards their wearing and mechanical properties, and each group shows superiority for certain types of service.

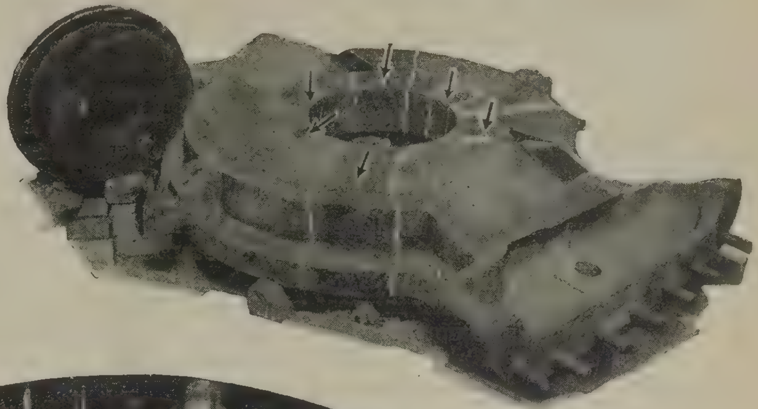
This work was undertaken by the bureau in an effort to secure data which would be necessary if any attempt were made to simplify these specifications, and also because it appeared highly desirable to study the properties of the various railroad bearing bronzes now in use. The study covered wear and mechanical properties at various temperatures.

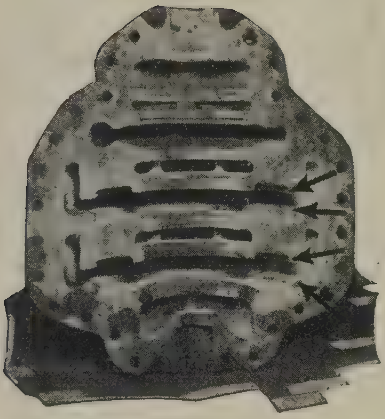
There are almost as many specifications for railroad bearing bronzes as there are railroads. So far as can be judged from laboratory tests, existing specifications can be simplified, Mr. French states.

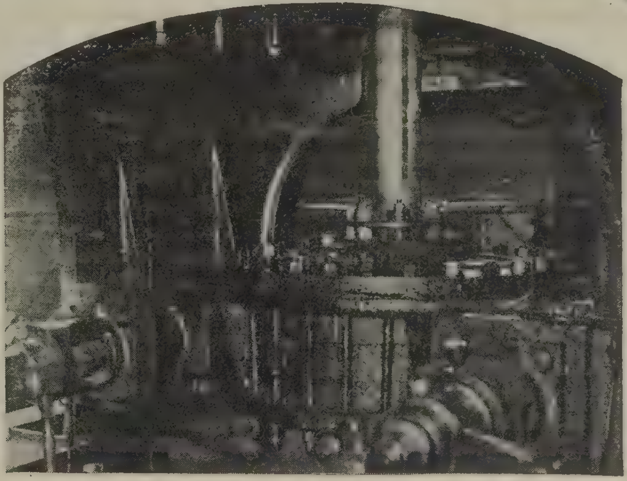
Standard specifications for lap-welded and seamless steel and lap-welded iron boiler tubes, as adopted by the American Society for Testing Materials, have been put out in a Spanish-English edition by the United States Bureau of Foreign and Domestic Commerce. The pamphlet, under the heading "Industrial Standards No. 63," may be obtained at 5c. from the superintendent of documents, Government Printing Office, Washington. It contains 18 pages, with the English text on left-hand pages and Spanish on right-hand.

Oxwelding Heavy Mill Engines

CONTINUOUS operation is the goal of steel mill operators; to reach it they install the most rugged equipment. But even this wears and breaks. Accidents which mean serious shutdowns become minor delays in those plants where first-aid from oxy-acetylene welding and cutting equipment is completely utilized.

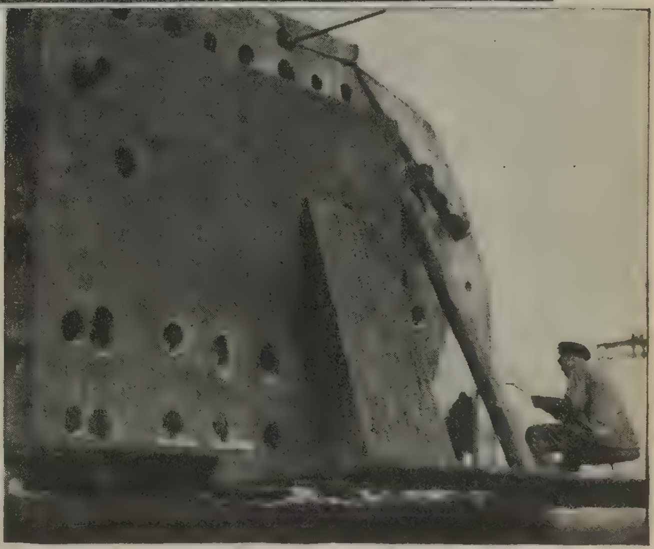






TWO Ways of Making Major Repairs by Oxy-Acetylene Welding: Above, a cylinder head so badly shattered that 600 lb. of cast iron welding rod was used in the cracks. At center is a scoured blowing engine cylinder rebuilt with bronze welding rod. Either type of weld is readily machined

Water Is Also Necessary to a Steel Plant. At left is a centrifugal pump casing, so badly scoured as to be worthless, but easily renewed with bronze welding rod



A Cutting Blowpipe Finds No Difficulty in Biting a Piece Out of an 18-in. Steel Counterweight to Improve the Balance of This Blooming Mill Engine

A Break in a 48-Ton Bed Plate Was Bronze-Welded Without Preheating During Removal of Rolling Mill Engine to New Site

EARLY-STRENGTH CEMENT

Made from Slag from Experimental Blast Furnace at Minneapolis

A THREE-WEEKS' campaign was recently run on the 6-ton blast furnace at the Minneapolis station of the Bureau of Mines, using a burden consisting of scrap iron, iron ore, iron-bearing bauxite, limestone and coke. About 70 tons of aluminous slag was obtained, suitable for grinding into "high early-strength" cement, and a somewhat smaller quantity of low-sulphur, low-silicon pig iron.

It is well known that normal blast furnace slag is used as a raw material for the production of standard Portland cement. The high early-strength cements which are attracting so much interest now (and which in France are made in amount equal to one-eighth of the Portland cement produced) are of the following composition:

SiO_2	9 to 12 per cent
Al_2O_3	40 to 48 per cent
CaO	35 to 40 per cent
S	less than 1 per cent

Such a material has a low fusion temperature, approximately 1350 deg. C. When smelting the above-mentioned burden a slag of the following composition was made:

SiO_2	8.5 per cent
Al_2O_3	47.2 per cent
FeO	1.4 per cent
CaO	39.6 per cent
TiO_2	2.1 per cent
S	0.7 per cent

According to a report by T. L. Joseph, supervising engineer for the Bureau of Mines, blast pressure was uniformly low, and an average blast temperature of 885 deg. Fahr. was carried. In his opinion it will be entirely feasible to smelt a bauxite charge in a large blast furnace, and produce a slag which needs only fine grinding to be marketed as a cement, and a pig iron suitable for open-hearth steel making. E. C. Eckel has obtained three patents on a process of making iron and cement in the blast furnace, and the Minneapolis experiment definitely proves that iron oxide in the charge can be reduced to metal. For this reason, a much less pure bauxite can be used than when making high early-strength cement in the rotary kiln or electric furnace, where a mixture of suitable raw materials is merely clinkered or melted.

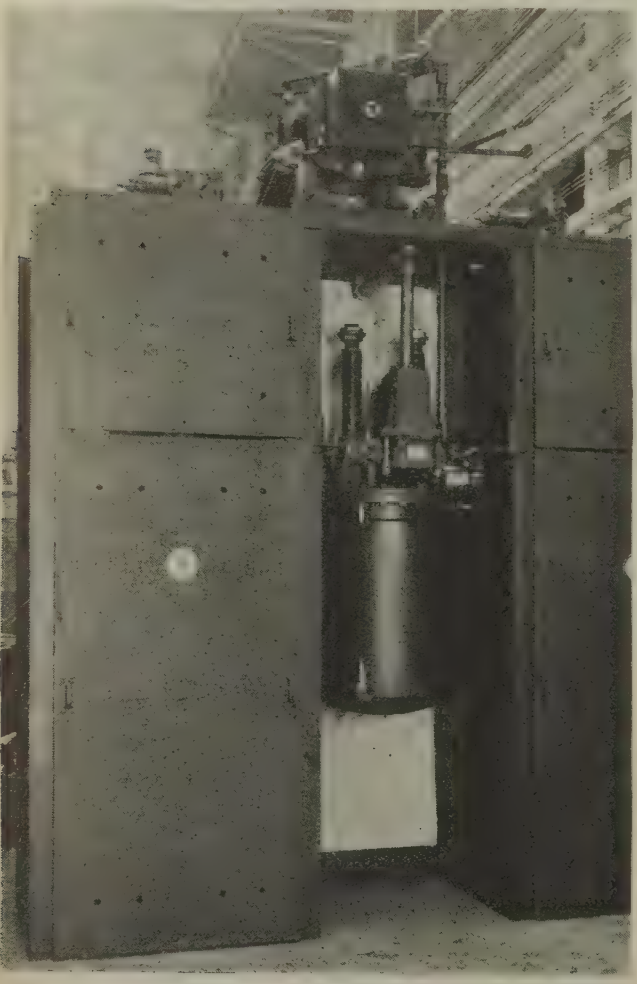
In view of the small amount of silica entering the furnace and the low formation temperature of the slag, little silicon is reduced in the shaft. In order to make pig iron with 0.8 to 1.0 per cent silicon it would be necessary to charge a certain amount of gray cast iron borings or scrap into the furnace. Mr. Joseph's calculations of the economics of such an ore-scrap burden are:

Material	Pounds per Ton of Iron	Tons per Ton of Iron	Cost per Ton	Material Cost per Ton of Iron
Bauxite	2,175	0.97	$6.00	$5.80
Limestone	1,865	0.83	1.50	1.25
Borings	1,245	0.56	11.00	6.15
Ore	1,245	0.56	6.00	3.35
Coke	2,240	1.12	6.00	6.70
Cost of smelting				2.90
				$26.15
Value of Products:				
Alumina cement (not pulverized), 1.1 tons @ $30				$33.00
Pig iron, 1 ton				20.00
				$53.00

This gives an apparent margin of 100 per cent to cover grinding the cement, sale of the products, overhead and profit, even allowing no credit for surplus gas.

Fabricated Steel Structure for Mounting Circuit Breaker

A circuit breaker mounted in a fabricated steel structure designed to replace concrete has been brought out by Westinghouse Electric & Mfg. Co., East Pittsburgh. As the circuit breaker is built complete at the factory, the time and expense of installation are materially reduced by using the steel structure. As the apparatus is shipped as a unit, the time of preparing it for service is much less. It is only necessary to put the breaker in place, bolt it down, remove the blocking, check the adjustments, connect it to the control circuits and the bus, put in the oil, and it is ready for service.



Compactness Features This Fabricated Structure

As the operation of the breaker imposes shocks on the supports, the steel structure is better suited for this service. Steel, by its elastic characteristics, absorbs the shocks easily with no damage to itself. Although the structure shown exactly replaces a concrete structure, it is possible to reduce the space occupied by taking advantage of the greater strength of the steel. As the steel frame is lighter than the concrete structure, an indirect saving may be had in that the floors and building can be lightened for the decreased load.

In the structure shown the circuit breaker only is supported. The use of steel can be extended to support the disconnecting switches and further yet to support the bus.

Packard Company Grants Vacations to 2500

Plant and offices of the Packard Motor Car Co., Detroit, are shut down all of this week and next for the annual inventory period, and to allow vacations to such of the employees as are entitled to vacations according to the rules of the company, numbering upward of 2500. The company is taking advantage of this idle period to install new machinery and additional equipment which will enable it to resume operations July 2 at a higher rate of production than ever before.

Colorado Fuel & Iron Co. rail mills, which were scheduled for a seasonal shutdown about June 1, have continued in operation an additional two weeks as a result of a receipt of an order from the Texas & Pacific Railway for 10,000 tons. The rail department shutdown will take place about 30 days earlier than last year.

Poppet Valves Made in One Piece

Chrome-Silicon Alloy Rods Put Through Heading, Coining and Other Operations—Only ½-Oz. Variation in Weight Between Blank and Finished Valve

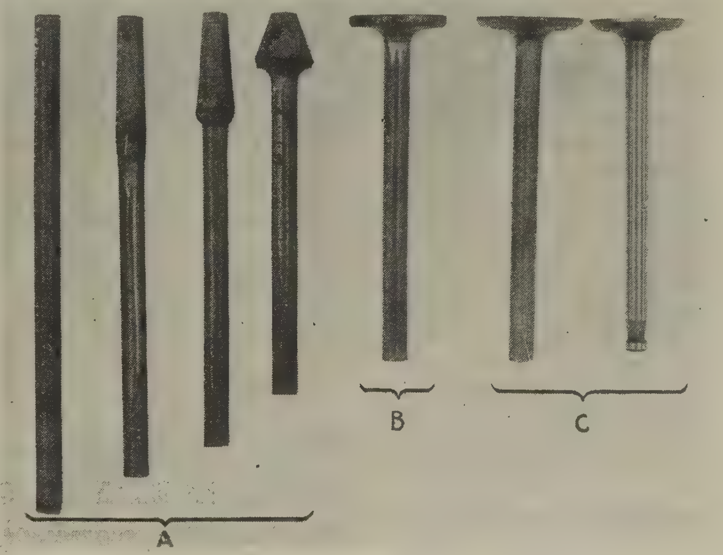
BY C. A. MC GRODER

HEADING machines and large coining presses are now employed by Dodge Brothers, Inc., Detroit, in producing a complete poppet valve from a single blank sheared from a drawn rod of chrome-silicon steel. Formerly the valve was made by electrically welding a stem of special alloy steel to a flat cast iron disk, which was also of special composition to resist the great heat to which the valves of internal combustion engines are subjected.

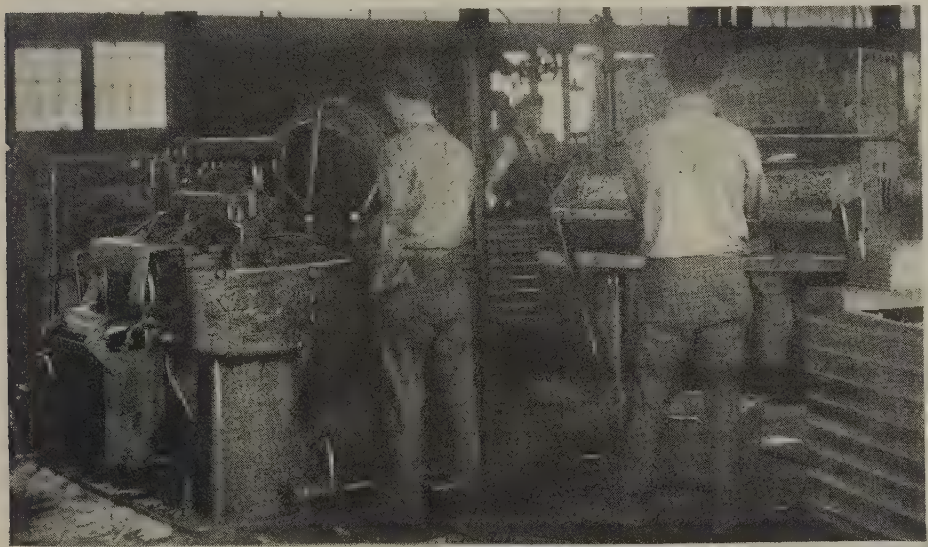
Now, the more recently developed chrome - silicon steel, known to the trade as "Silcrome," is used, the stem and the head being of the same heat-resisting material, and in one piece. Manufacture of the valves begins with heating the blanks at one end in a gas furnace and then feeding them, singly, by tongs, into a National heading machine which is equipped with four sets of dies and strikes four blows. The first three blows upset the stock which is to form the head, and prepare it for the final, flattening blow which completes the shape of the rough and slightly oversize valve.

It might be practical to machine or grind these rough blanks all over to the finished size of the valve were it not for the fact that chrome-silicon alloy is difficult to machine, even after annealing. It is in circumventing this difficulty that the new method effects its greatest economy in the next operation.

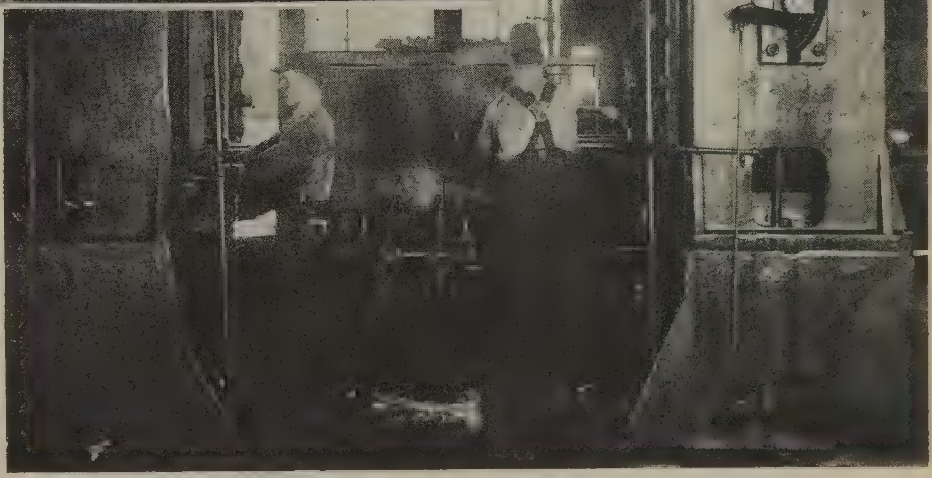
After being allowed to cool, the rough blanks are reheated in a gas furnace of the chain conveyor type which allows only the head of the valve to extend upward into the heated interior of the furnace. Coming out of this furnace at the correct temperature—somewhat lower than the 2300 deg. Fahr. required at the heading machines — the valve is dropped perpendicularly, with the head up, into the lower die of a



SEVEN Stages in the Manufacture of One-Piece Poppet Valves at the Plant of the Dodge Brothers, Inc. The sheared blank, at the extreme left in group A, is put through three upsetting operations, as indicated by the three pieces at the right of the sheared blank. The valve is then rough formed, as at B, by a fourth blow of the heading machine, the next operation being finish forming of the head of the valve in a coining press, the result of which is shown at the left in the group C. The finished valve, machined and ready for assembly, is at the extreme right, group C



IN Heading Machines, of the Type Shown at the Left, the Sheared Blanks Are Roughly Formed by Four Successive Blows, Preparatory to the Coining Press Operation Which Completes the Shaping of the Valves



TWO Large Coining Presses Compress the One-Piece Poppet Valve Almost to Size, the Beveled Under-Side of the Valve Being Formed in This Operation Also. Furnaces of chain conveyor type are used to heat the heads of the valves for the press operation large Hamilton coining press. The head of the valve, including the beveled lower edge of the head, which must fit against the seat in the cylinder block, is then completely formed by the action of the press. The production from each coining press is 5000 valves in a 9-hr. day, and a heading machine can turn out approximately 4300 rough blanks in the same time.

From the coining press the valves are carried by electric trucks to the heat-treating department, where they are subjected to two heat treatments, in which electric furnaces are used. Placed in alloy steel trays, which measure about 18 x 50 in., the valves proceed through the first furnace and, after attaining a temperature of 1650 deg. Fahr., are cooled in air. This is an annealing treatment which relieves the metal of forging strains, effects structural changes and accomplishes a refining action.

After they have cooled, the valves are given a drawing treatment in the second furnace, where a temperature of 1220 deg. Fahr. is maintained. Emerging from this furnace, they are immediately quenched in oil, having had very little contact with the outside air. This sudden quenching, because of the peculiar qualities of the chrome-silicon steel, has the effect of leaving practically no scale on the metal to interfere with subsequent machining processes. The temperatures of both furnaces are controlled automatically by thermostats to within 10 deg., plus or minus, of the proper figure. Recording pyrometers keep a permanent record of the furnace temperatures, which are checked regularly by the metallurgical department.

Straightening the stem of the valve by rolling it between a moving and a stationary plate is the first operation in the machining department. The next step is to rough-grind the stem and trim the head and, later, to semi-finish grind the stem. The end of the stem is then hardened. To accomplish this the valves are placed head down in a tank of water with the stems extending about ½ in. above the surface. While in this position, the end of each stem is heated with an oxy-acetylene torch and allowed to cool by conduction of the heat through the stem into the water. This treatment gives a hardness of 55 to 60 on the Shore scleroscope.

A centerless grinder is used to finish the stem to size, within limits of plus 0.0000 and minus 0.0005 in., after which the stem is rolled under high pressure between hardened steel surfaces to produce a high finish. The last operation is grinding the beveled valve face. Final inspection is made with dial gages set to a piece of hardened and ground stock of correct diameter as master.

Notwithstanding all this machining, and the unavoidable loss of material in the forging operations, there is found to be a variation of only 0.03 lb. between the weight of the sheared blank of bar stock entering the first furnace at the heading machine and the completely finished valve.

SOURCES OF PIG IRON

Imports in 1927 Came from Nine Countries and Through 21 Ports of Entry

DETAILS of imports of pig iron into the United States in 1927 by countries of origin and individual ports of entry are covered in a table of the Iron and Steel Division, Department of Commerce. In THE IRON AGE of April 5 (page 953) appeared a similar table, except that ports of entry were shown by grand divisions, including the Atlantic, Gulf, Pacific and "other" ports. Of the total pig iron importations of 133,068 gross tons in 1927, India supplied one-half, or 66,627 tons. Philadelphia led by far as the greatest receiving port, taking a total of 63,810 tons.

From the table showing, by months, the tonnages entered at the various ports from the several supplying countries it appears that, in many instances, at least as between a given source and a given port, the inflow was spasmodic. Thus, Germany sent 700 tons into Massachusetts in January and 300 tons in November, making the total of 1000 tons. In cases where there was a fairly steady flow throughout the year that fact is indicated in our table, which is made up from the table prepared in the Department of Commerce; (a) indicates that some material was received during each of at least 11 of the 12 months; (b) in at least six different months.

Heavy Increase in Farm Machinery

That there is a growing displacement of manual labor by farm equipment is indicated by a statement showing the increase in production of such equipment during the past two years. The Department of Commerce reports a 1927 output of tractors at 200,504, compared with 181,995 in 1926 and 167,553 in 1925. A much greater increase was shown in the number of harvester-thresher combination machines, which advanced from 5131 in 1925 to 11,760 in 1926 and to 18,307 in 1927. Among other items, the manufacture of which in 1927 showed increases over 1926, were various types of plows, including tractor plows, soil pulverizers and packers, grain drills, lime spreaders, potato-digging machines, hay rakes, hay loaders, ensilage cutters and silo fillers, corn shellers, lawn mowers and spray pumps.

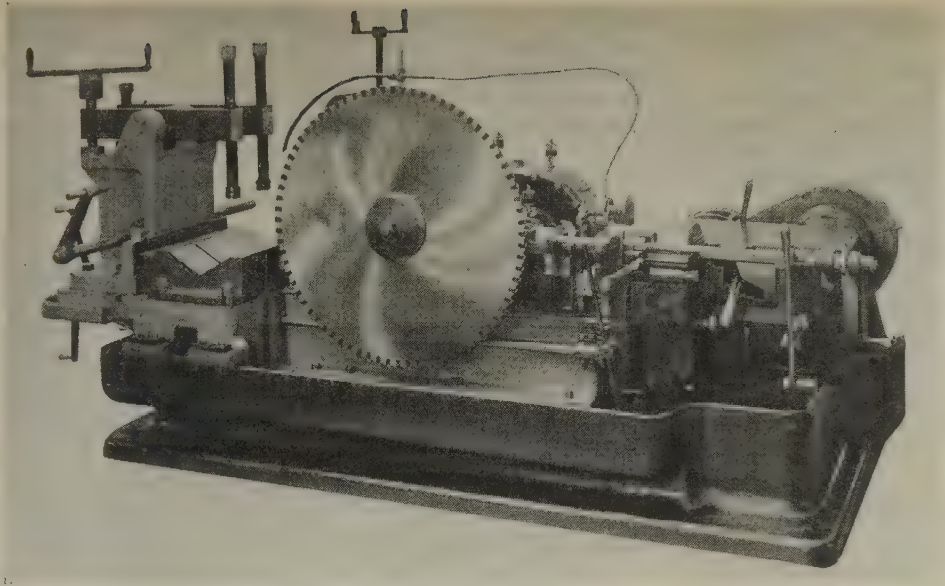
(b) Material received in at least six of the 12 months.

CARNEGIE LIBRARY OF ATLANTA



With a 42-In. Blade, 5/16-In. Kerf, 15-In. Low Carbon Steel Bars Were Cut in 10 Min. Twelve feed changes, ranging from ¾ to 3¾ in., and three speeds are obtainable. Either a 42 or 48-in. blade may be used

Sawing Machine Cuts 18-In. and Smaller Bars Without Turning

ACCURATE and economical cutting of bars up to 18 in. in diameter is claimed for a new metal sawing machine, which is being placed on the market by the Cochrane-Bly Co., Rochester, N. Y. The machine is designed to use either a 42-in. or a 48-in. blade; the former saw blade will cut through a 15-in. bar and the latter an 18-in. bar, without turning.

The arrangement of the machine, which is built to modern machine tool standards, may be noted from the accompanying illustration. The saw arbor is 6 in. in diameter, is hardened and ground and is fitted with adjustable taper gibs to compensate for wear. The bed of the machine is scraped to surface plates. The feed screw is mounted above the ways, in line with the center of the saw arbor and close up to the saw blade, to eliminate vibration due to cant or side pull.

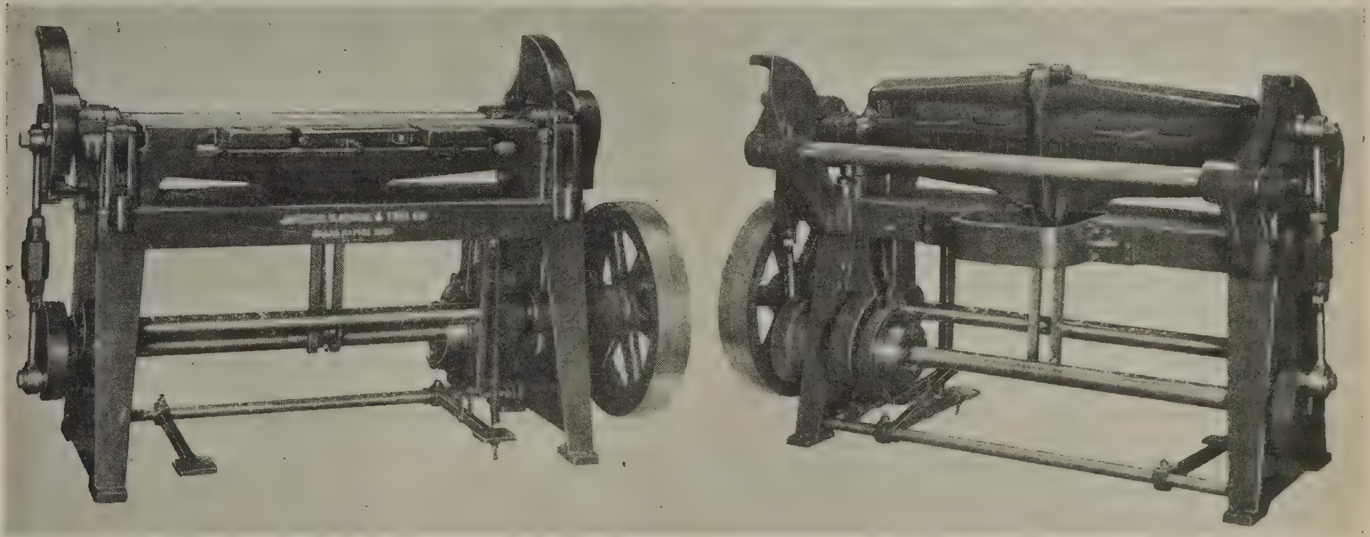
Feeds are geared and positive, and 12 changes of feed, ranging from ¾ to 3¾ in. per min., are obtainable. The machine is driven through a hardened nickel steel arbor gear and pinion having herringbone teeth and running in oil. The worm is of hardened steel and the worm wheel of phosphor bronze. Sliding gear transmission, using steel gears which run in oil, give speed changes of 45, 60 and 75 ft. per min. The initial drive of the machine is by a 25-hp. constant-speed motor through a friction clutch. The clutch is controlled by levers located both at the front and rear of the machine, adjacent to the levers and cranks for start, stop and reverse of feeds and adjustment of the carriage to and from the work. The friction clutch permits quick stopping of the saw blade without stopping the motor, and eliminates the chance of damaging the blade by moving a loose bar in the blade while the blade is in motion. Adjustable collars are provided to stop and reverse the feed automatically, giving quick return of the carriage to a point where the blade clears the bar being cut. The floor space required by the belt-driven machine is 69 x 141 in. and of the motor-driven machine, 84 x 141 in.

It is claimed that in recent tests of the machine 15-in. bars of low-carbon steel were cut in 10 min., 10-in. bars in 4½ min. and 6-in. bars in 1¾ min. The saw blade used was 42 in. in diameter with 5/16-in. kerf.

New Sheet Metal Folding Machine

A NEW power folder, designed for folding sheet metal up to No. 16 gage over the entire length of the machine, has been brought out by the Jarecki Machine & Tool Co., Grand Rapids, Mich.

A feature is the provision of a center bearing to take up spring of the machine, which is said to hit just as hard in the center of the sheet as it will on the ends close to the bearing. The machine is connected at both ends of the shaft so that an even distribution of power is obtained and twisting action while folding is eliminated. Material up to 42 in. in length can be folded on the standard machine, but machines for longer material can be furnished. In the larger machines a number of hinge bearings can be incorporated to offset springing of the machine. Either belt or motor drive arrangement can be furnished. The flywheel is 24 in. in diameter, weighs 250 lb. and runs at 100 r.p.m. The ratio of gearing is 3 to 1. The floor space occupied is 30 x 72 in. and the height of the machine is 42 in. The weight is approximately 2400 lb.



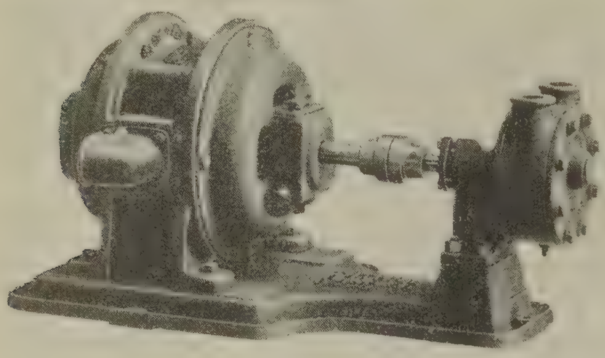
No. 16 Gage Sheets Up to 42 In. Long Can Be Folded on the Standard Machine. Provision is made to eliminate twisting action while folding

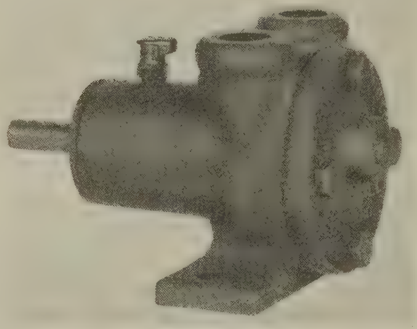
Small Pumps for Machine Tool Lubrication

A recent development in machine tool equipment is a small, high-pressure, packingless pump built by the Tuthill Pump Co., 131 West Sixty-third Street, Chicago. It is designed for pressure lubrication of machinery and for hydraulic feeds. Like all other Tuthill pumps, it operates on the internal gear principle. However, the new pump (Model B) includes a two-zone packingless feature, employing a new patented metallic seal which is said to insure freedom from leakage at pressures as high as 500 lb. per sq. in. and 28 in. of vacuum on lubricating oil.

Two sizes of Model B are available, 30 gal. capacity an hour, and 90 gal. at 1800 r.p.m. Either size may be obtained with either the foot mounting (illustrated) or the flange mounting. The flange mounting is convenient when the pump is built into the machine, and it also offers the possibility of a neat motor-drive unit. The body is about 4 in. long.

Another Tuthill model recently put into production, is the Model C pump. This is for pressures up to 200 lb. on lubricating oil and was designed to cover the demand for a reasonably priced high-pressure pump. Pumps of this model can be furnished for belt drive or direct motor drive in capacities of 1½ to 45½ gal. per minute.





Model B Pump (at Right) Is Exceptionally Compact, for Machine-Tool Lubrication. Above is shown Model C, a larger pump for high pressure

Welding Blowpipe Changed to Cutting Torch by Simply Turning Tip

A further simplification of oxyacetylene equipment has been made by the Alexander Milburn Co., 1416 West Baltimore Street, Baltimore, Md. Not long ago it was necessary to have two complete torches with separate kits of copper tips, one for welding, the other for cutting. A step in advance was an attachment whereby the welding blowpipe could be used for cutting, as occasion warranted.

The new Milburn combination cutting and welding torch, type TI, is still another step forward. To change this blowpipe from cutting to welding it is not even necessary to change the tip. A convertible feature of the tip changes it from a cutting to a welding tip or vice versa by a mere turn of the tip. In one position the gases are automatically conveyed through the preheating gas passages while the high pressure oxygen is carried through the central hole for cutting. In the next position, made by a quarter turn of the tip, the cutting oxygen is cut off and the welding gases are conveyed through the central passage of the cutting tip, making a correct welding flame.

Torch heads, valves, bases and other parts are bronze forgings. The seamless high-pressure tube is specially drawn with triple thick walls and is of nickeled silver, which has double the strength of brass tubing. As with all Milburn torches, flashback does not occur even though the tip should be inserted in molten metal.

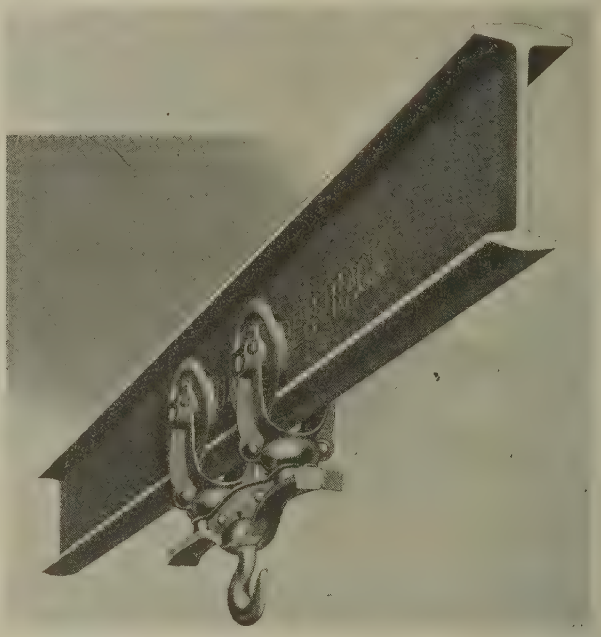
New Flux for Bronze Welding Steel and Cast Iron

A new combination of fluxes for bronze welding has been devised by Simplex Flux & Solder Co., 1965 East Sixty-sixth Street, Cleveland. By this method the joint in steel or cast iron is first heated with an oxyacetylene blowpipe to just above a black heat, and some "Lotan Powder" is sprinkled over the hot spot. Moderate heating is continued until this powder sparkles and adheres firmly to the hot surface. After the joint has been prepared in this manner, a bronze weld is made in the usual way, using "Lotan A. B. Flux," namely, by first tinning a portion of the surface and then puddling in molten metal from the rod until the joint is built up the required amount. This method is said to give a superior union between the iron or steel and the added bronze at the joint.

Overhead Track for Industrial Use

With a carrying capacity of 3000 lb., a new overhead trolley track of special section has been brought out by the Louden Machinery Co., Fairfield, Iowa. This is for use on monorail systems and is designated the Louden super-track. The section is about 6 in. deep, with a 3-in. flange at top and a 2-in. flange at bottom, as illustrated. Special features distinguish the new two-way, three-way, cross-track and turntable switches designed for use with this system.

It is emphasized that the track is not of ordinary I-beam, but is specially rolled from steel billets of 0.50 to 0.60 per cent carbon, and is unusually tough. The upper flange provides a gripping surface for supporting hangers, while the lower flange constitutes the track for twin trolley wheels.



Special Section Rolled for Monorail Track of Unusual Toughness

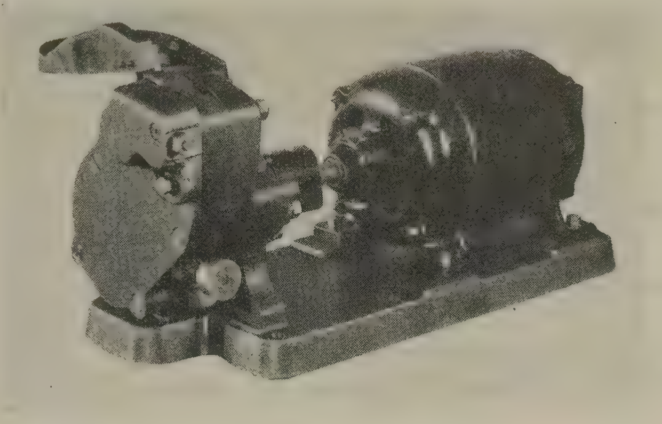
It is said that the form of the section eliminates in large measure the necessity for a supporting superstructure. The stiffness of the section permits the hangers to be spaced widely apart. There is sufficient space between hanger and trolley wheels to provide ample clearance on swinging loads.

Construction costs are estimated by the Associated General Contractors of America at about 96 per cent above the 1913 average. There has been no change through three months and only one change since the drop to 99 per cent was made in November.

Bench Machine for Shearing 10 Gage and Lighter Cold Rolled Sheets

A new shearing machine for straight, circular and irregular cutting of cold rolled steel up to No. 10 gage, 9/64 in., and softer materials in proportion, has been added to the line of the Unishear Co., 270 Lafayette Street, New York.

In principles of design the new machine, which is designated as the Model A-10 and is illustrated herewith, is the same as the company's former machines, previously described. On cold rolled steel, cutting speeds up to 10 ft. per min. are obtainable and it is claimed that the cutting is without burr or distortion, so that time lost in filing or trimming down the work is eliminated. Notches and angles may be cut conveniently.

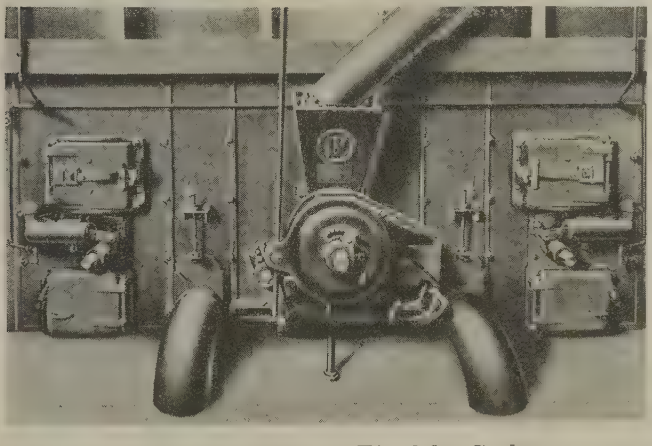


The Cutting of No. 10 Gage Material Is at the Rate of 10 Ft. Per Min.

A ¾-hp. motor, either direct or alternating current as required, is employed, and suitable starters are available. The motor and shear unit are mounted on a baseplate, for bench mounting, and direct-connected by flexible coupling, as shown. A sheet stabilizing device, located adjacent to the shear blade, is regular equipment. Cutters are of special alloy steel and have straight edges, which facilitates sharpening. The net weight of the machine is 165 lb.

Underfeed Stoker for Annealing and Other Industrial Furnaces

A new single-retort underfeed stoker for industrial furnaces, developed by the Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa., has the flexible grate motion in combination with power-operated dumps which features its stokers for furnaces of wide dimensions. The illustration shows such an application to the side of an annealing furnace. The firebox extends practically the whole furnace length, thus insuring uniform heat distribution.



Annealing Furnace Fired by Stoker

An adjustable ratchet screw feed delivers coal to a center retort. An eccentric on the screw shaft imparts motion through a slotted sector lever and cross-connecting link to the grate rocker shafts located on each side of and adjacent to the retort. The motion on either side is independently regulated to any desired degree from minimum to maximum. The ratchet wheel and eccentric run in an oil bath in a dust-proof case.

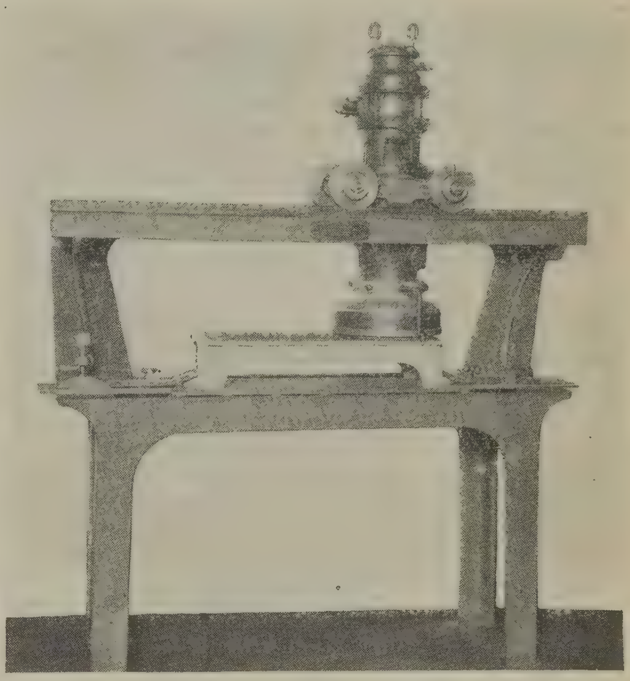
Furnaces for the heat-treating of steel essentially require a thick fuel bed. The flexibility of the grate motion of this stoker effectively handles a heavy fuel mass from the retort to the dump. The dumps are actuated by single-acting plungers operated by steam or air pressure. A weighted lever automatically unlocks the dump lever arm and, upon releasing the pressure, the dump is lowered. Disengaging the weight from the lever and again applying pressure raises the dump and automatically locks it in normal position.

Complete flexibility of coal feed and distribution, combined with an easy and expeditious means of dumping the refuse, enables the operator to maintain uniform temperature under the desired conditions of furnace atmosphere throughout the heating cycle.

Standard Machine for Grinding Cores

Equipment designed specifically for grinding cores, brought out recently by the Stoney Foundry Engineering & Equipment Co., 5101 Lakeside Avenue, Cleveland, is shown in the accompanying illustration.

The machine is of simple construction and resembles, in general appearance, a vertical surface grinder. It consists of a rigid cast iron bed to which is bolted an overhead member that has V-ways upon which the wheels of the grinding-head carriage ride. The grinding-head is equipped with a ½-hp. 900-r.p.m. motor which is connected by a shaft of special design, and with special bearings, to a 12-in. diameter cup-type grinding wheel. The cores are held in fixtures on the table of the machine, the fixtures being clamped by the strips shown at each side of the fixture. The clamping is by hand by means of the hand knobs shown. For the heavier classes of cores the fixtures are held by bolts in T-slots machined in the table.



With the Cores Loaded in the Fixture, Grinding Is Accomplished by Hand Traversing the Grinding-Head

With the fixture loaded the cores are ground by hand traversing of the grinding-head. The maximum length of travel of the grinding wheel head is 3 ft., within which distance at the left-hand end of the machine is located the device for dressing the grinding wheel. The minimum height from the table at which the cores may be ground is 4 in. and the maximum height is 6 in., but the latter may be increased to 10 in. by placing filler plates between the table and the brackets carrying the overhead ways.

Vertical adjustment of the head in increments of 0.005 in. is provided. The height of the table from the floor is 34 in. The carriage is mounted on roller bearings and is lubricated by means of Alemite fittings. Means are provided for convenient removal and mounting of grinding wheels.

Business Analysis and Forecast

BY DR. LEWIS H. HANEY

DIRECTOR, NEW YORK UNIVERSITY BUREAU OF BUSINESS RESEARCH

Current Statistical Data, Considered Independently of Trade Opinion, Indicate That:

Steel ingot output is likely, during June, to show more than the normal 6 per cent drop from May.

Unfilled orders showed in May a continuation of the heavy decrease registered in April and, except for last year, made the poorest May 31 showing in many years.

Pig iron production is in close adjustment with ingot output; prices are decidedly low.

Finished steel prices are in considerable maladjustment with semi-finished products; in common with the general level of commodity prices, no early improvement is indicated.

CHARACTER of demand continues to be the outstanding fact concerning the iron and steel industry. Production, though declining, is large and above normal. Consumption, thanks to heavy automobile and farm machinery activity and to a fair demand from building, is large, also, so that the quantity produced and the quantity consumed are apparently in rather close adjustment.

But prices are weak. The conclusion suggested is that the *intensity* of demand—the price which buyers are able and willing to pay for their requirements—has declined and is relatively low. In general, it seems that industrial activity is high compared with demand for products, resulting in severe competition and narrow margins of profit. This condition has been intensified recently by a downward trend in commodity price averages. It is not one that favors expansion and, while a well-sustained level of industrial activity, including steel production, is a possibility, a period of moderate but distinct recession is the probability.

June Ingot Decline May Be More Than Normal

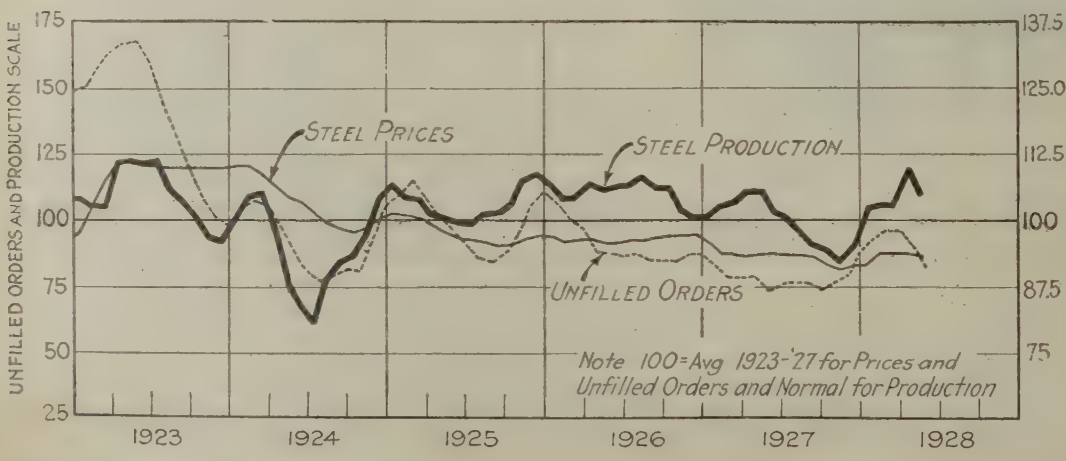
IN May the average daily ingot production fell off more than usual for the month. Consequently our adjusted index shows what may be called a sharp reversal of trend, the decline being so pronounced that, with production still above normal, a continuation of the trend toward curtailment is indicated. Anyhow, such movements have a certain momentum. A decline of about 6 per cent in the average daily output would be normal for June, and the reduction during the current month should be somewhat greater than that, bringing the average daily figure to some such rate (allowing for seasonal conditions) as obtained through the first quarter.

Aside from the general business uncertainty which now prevails, the foregoing conclusion is strengthened by the declining trend of our P-V line, and by the slackening in the volume of new business as reflected in the large decline in the unfilled orders of the Steel Corporation.

Steel production in May, according to our estimates, was about 10 per cent above the normal requirements of the country, the adjusted index being 110.3. Of course, the actual requirements may be above normal and such has been the case during the first half of 1928, owing to the considerable expansion in the output of automobiles and farm equipment and in building activity. Steel production, therefore, while 10 per cent above normal, has not been 10 per cent excessive. But our composite demand line, published last week, shows the existence of some over-production and the action of the unfilled orders and prices is conclusive to that effect.

Unfilled orders of the Steel Corporation, at 3,417,000 tons, were the lowest since last October and, except for a year ago (when the figure was 3,051,000 tons), were the lowest for the end of May in many years. It is the declining trend of the unfilled orders, however, that is most significant. The total decline of over 900,000 tons in April and May has been the sharpest since the same months in 1924.

Such declines indicate a recession in the volume of new business and usually bring curtailed production and weakness in prices. The situation today lacks some of the elements of weakness found in 1924: prices are not so high, the activity (and presumably the requirements) of the chief consuming industries has held up



Note 100=Avg 1923-'27 for Prices and Unfilled Orders and Normal for Production

Fig. 1—Steel Production in May Was 10 Per Cent Above Normal Requirements. Prices have been sagging. Unfilled orders are much lower, showing declining demand

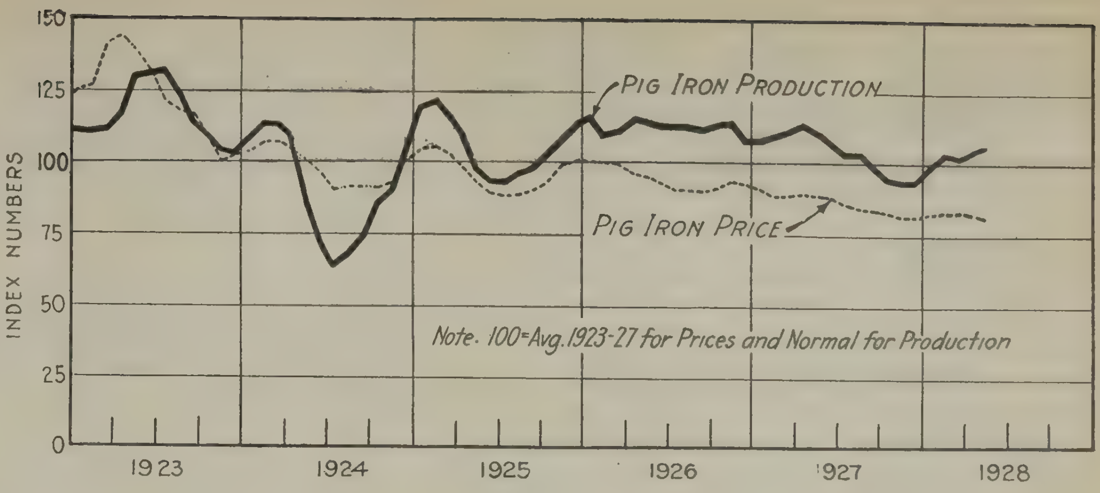


Fig. 2—Firmness in Pig Iron Prices Would Be Logical, with Pig Iron Output Relatively Below Steel. But pig iron is decidedly cheap and there is no indication of immediate improvement

better, and pig iron production is in better adjustment with steel production. But the existing situation, nevertheless, has the earmarks of a recession and already production and prices have declined.

During May the average price of finished steel was 2.350c., which compares with 2.359c. in April and 2.360c. a year ago. The May average is only 93 per cent of the average for the years 1923-1927. At this writing, THE IRON AGE composite price is 2.341c. and seems likely to go a little lower.

Broad Decline Continues in Pig Iron Prices

IT is notable that the trend of a 12-month moving average of pig iron prices continues steadily downward, showing no sustained interruption of the broad decline which has gone on during recent years. Each successive recovery has been less vigorous than its predecessor and has been followed by a new low point. At this writing THE IRON AGE composite average has fallen to $17.23, against a May average of $17.45. A year ago the May figure was $19.09.

At the same time, the annual rate of increase in pig iron production has become smaller; that is, the pig iron output has increased at a less rapid rate than formerly. In revising our trend line at the beginning of the year we noted this, and the reader will observe that the successive rises in production above the estimated normal line have been less marked of late. Evidently a broad change in the industry is reflected, less pig iron being used in proportion to the steel made, and this development may have something to do with the downward trend of pig iron prices.

In May, the average daily output of pig iron was 105,900 tons, against 106,200 tons in April. This small decrease was less than usually occurs between the two months and our adjusted index rose to 106.8 per cent of normal, against 105.2 per cent in April. A year ago the index was 111. Thus pig iron production is less than 7 per cent above normal, in comparison with a steel production which is over 10 per cent above normal. This means a low ratio of pig iron output to steel production and would ordinarily bring a stronger price for the former. There is no indication, however, of such a development in the near future.

For one thing, pig iron production increased in May and gained on steel production. The ratio of the average daily pig iron output to the average daily steel output was the highest since last December—too high, *considering the level of steel prices.* Pig iron is and has been rather cheap in comparison with finished steel prices, but judged by the standards of recent years its price is only about right in comparison with steel scrap. And in view of the decline in steel prices, and the weakness in scrap, no ground for strength in pig iron prices is to be found here.

Maladjustment Among Iron and Steel Prices

THE price structure in the iron and steel industry has recently been seriously out of adjustment. Not only billets but bars are too high, in comparison either with such items of finished steel as sheets and nails, or with such raw materials as coke and pig iron. Theoretically it would seem that either billets and bars must be marked down in price, or that both (1) sheets and nails and (2) coal and coke must be marked up.

Of course, technical conditions may have changed sufficiently in the last year or two to affect the normal spreads among these items, but insofar as we know the situation, advances in price do not seem probable either in finished steel or in the raw materials. Coal and

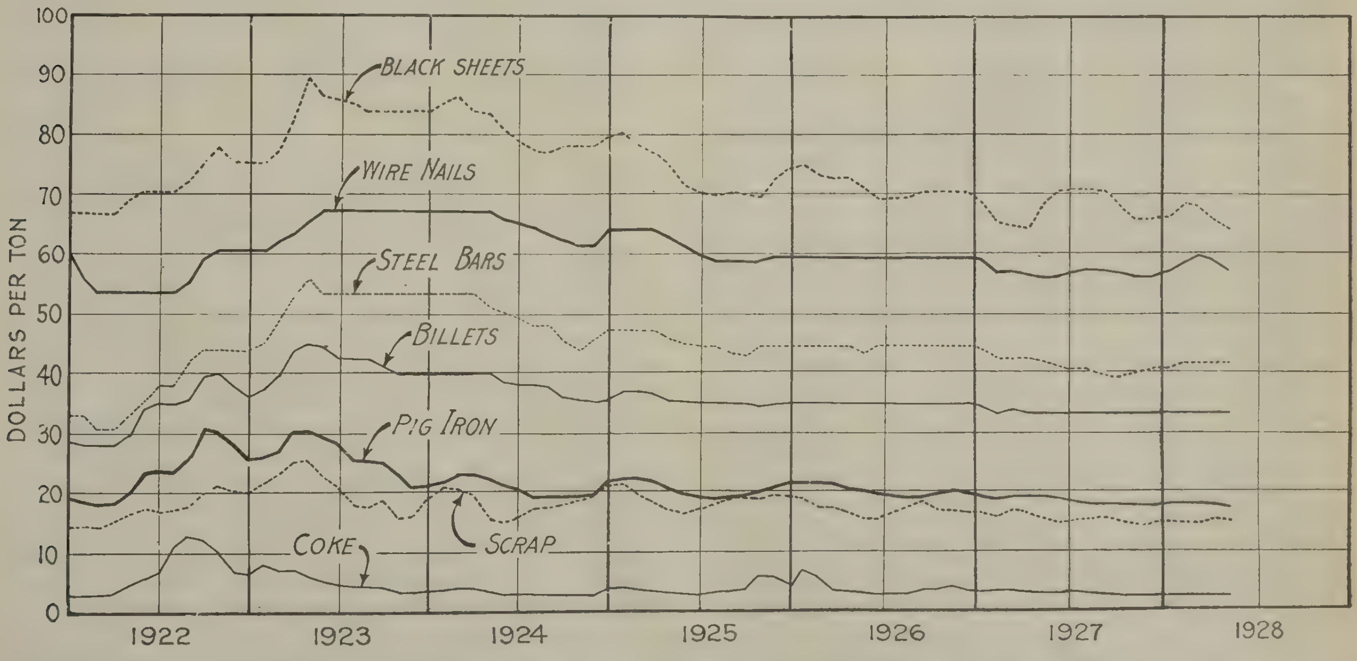

Fig. 3—Finished Steel Prices (in Particular, Sheets and Nails) Are Relatively Low, Compared with Semi-Finished and Raw Materials. But supplies are more abundant than demand and sustained improvement is not indicated

coke, it is true, are practically at bed rock figures, and so is pig iron. Any further decline must be very small.

But what reason is there to expect advances during the present quarter? We can see none. Supplies are abundant while demand is sagging. The general trend of commodity prices is downward. Much the same can be said of sheets and nails. The spread between the prices of pig iron and coke, on the one hand, and sheets, on the other, is about as small as can be expected, while nails can go little lower. But there appears to be no reason for an advance in these items of finished steel before September, at least. Thus a reduction in semi-finished steel appears to be in order.

It is pertinent to observe that rarely do sheets and nails decline, as they did in April and May, without a reduction in the prices of both bars and billets.

IRON AND STEEL INTO CUBA

American Supremacy Continues, Though Europe Is Making Gains on Price Basis

WHILE the United States is credited with supplying from 75 to 90 per cent of the importations of iron and steel products into Cuba, the United Kingdom, Germany, and Belgium in particular, are steadily increasing their proportionate share, according to a report transmitted by Charles F. Payne, vice-consul, Havana. The statement shows importations into the Havana district by metric tons for the calendar years 1924-1927, inclusive, and affords a good index of the total importations, because of the outstanding importance of this district and port in Cuban trade and industry.

Of the total Cuban importations of iron and steel in 1926, amounting to 118,342 tons, 88,558 tons or 74.8 per cent entered the Havana district, while in 1925 75 per cent went through the Havana district. The total importations for 1927 have not yet been received, but the movement through the Havana district was 90,836 tons, or 2 per cent ahead of 1926.

At one time, it is pointed out, all iron and steel imported into Cuba came from the United States. But the past three years have indicated an increasing tendency on the part of local consumers to import greater quantities from the principal European makers. The price of sugar is the barometer of the Cuban iron and steel trade, as well as for almost every other industry of the island. When this price is depressed, as it has been for some time past, the preferences of the local importers tend more and more to be determined by the price, while the advantage of prompt and accurately timed delivery, rapid shipment and sales service are waived in corresponding degree. At the moment the prices quoted in the Cuban market on European steel are reported to be, in several instances, as much as 25 per cent under American steel prices.

Imports of Iron and Steel Products into the Havana Consular District

(In Metric Tons)

Products	1927*	1926	1925	1924
Pig iron	1,352	1,326	478	354
Iron bars, beams, etc. (cast)	4,492	6,502	6,498	5,544
Other manufactures of iron (cast)	3,760	3,817	6,236	5,719
Iron and steel bars and rods	29,200	39,631	37,867	37,296
Plates and sheets	11,894	7,575	8,843	7,973
Wire and cable	3,154	3,233	3,112	2,426
Iron and steel (in pieces)	4,721	1,757	1,547	1,291
Galvanized sheets	4,684	2,755	5,803	5,460
Manufactures of galvanized iron	634	462	604	1,034
Metal screen	213	92	59	320
Pipe and fittings	7,699	5,940	6,896	4,329
Rails	5,686	2,500	3,484	5,989
Other manufacturers	13,347	12,968	16,381	17,239
Total	90,836	88,558	97,808	94,974
Total Cuban imports	....	118,342	130,195	176,395
Percentage through Havana	....	74.8	75.0	53.8

*Preliminary and subject to revision. Statistics for trade of all Cuban ports not yet available.

The Cuban tariff, which became effective Oct. 25, 1927, seems designed to protect and encourage home industries. Cuba, it is stated, already has important and rather well developed iron and steel working shops and foundries, and the local manufacture of a variety of products is increasing. The new tariff, while not expected materially to affect the trade in many lines, will probably strengthen the position of the existing industry at the expense of some products now imported.

In addition to affording protection to the local industry, the new tariff encourages the importation of a number of products, such as wrought pipe, bars and beams, by reducing the duties borne by them. This reduction, although affecting the importation from all sources, seems to favor products of the European steel industry to some extent, it is declared, although it still requires that goods imported from the Continent pay a higher duty than those received from the United States.

The report states that the Cuban market for cast iron pipe has been invaded by a type of pipe of Italian manufacture—consisting principally of cement and asbestos—which, it is held, enjoys the dual advantage of lower price than its competitor together with, it is claimed, a much longer life. Several installations of this pipe are said to have been made already.

Iron and steel bars and rods constitute the largest items of importation into Cuba, with plates and sheets in second position. These two made up about 45 per cent of the 1927 entry, against 53 per cent in 1926.

SHEET STEEL SALES

May Off 12 Per Cent from April and Unfilled Orders 15 Per Cent

SHIPMENTS of sheet steel during May held up close to the April rate, being 326,324 tons for the month as compared with 327,674 tons for April, according to the monthly report of the Sheet Division of the National Association of Flat Rolled Steel Manufacturers, 511 Terminal Tower Building, Cleveland. However, shipments exceeded sales by 76,008 tons. Sales for the month were 250,316 tons, a loss of 33,754 tons as compared with April, the decline evidently reflecting a slackening in the demand from the automotive industry. While sales fell off, production increased 21,458 tons and exceeded shipments by 23,043 tons. Unfilled orders on June 1 were 527,477 tons, a decrease of 44,284 tons from May 1. The May report and comparisons follow:

	May	April	March
Total number of mills	721	721	721
Capacity per month	506,000	464,422	492,150
Percentage reporting	72.2	72.2	72.3
Sales	250,316	284,070	399,441
Production	349,367	327,909	366,127
Shipments	326,324	327,674	359,532
Unfilled orders	527,477	571,761	675,196
Unshipped orders	112,664	109,200	110,702
Unsold stocks	54,047	53,853	53,144
Percentages of Capacity			
Sales	68.5	84.7	112.4
Production	95.6	97.8	103.0
Shipments	89.3	97.7	101.1
Unfilled orders	170.4	170.4	189.9
Unshipped orders	30.8	32.6	31.1
Unsold stocks	14.8	16.0	15.0

Fabricated Structural Orders in May Exceeded Only Once

WASHINGTON, June 19.—Orders for fabricated structural steel in May totaled 246,963 tons, according to reports received by the Department of Commerce from 196 firms with a monthly capacity of 294,435 tons, making operation at the rate of 84 per cent. This was a sharp increase over April, when reported orders were 189,873 tons, or 63 per cent of the 302,175-ton capacity of the 218 reporting firms. Computed bookings in May were 315,000 tons, against 236,250 tons in April. May shipments were computed at 266,250 tons, or 71 per cent of capacity, compared with 240,000 tons, or 64 per cent of capacity, during the preceding month.

May orders (computed) were the largest since last July; with that exception, they were the greatest ever reported. Shipments in May, however, were exceeded by those of August and September, 1927, and those of June, 1926, and were closely approached by the 265,350 tons of October, 1925.

Continental Prices Continue Strong

Consumers Cautious in Buying for Forward Delivery—Welsh Tin Plate Mills Operating Full—British Iron Dull

(*By Cable*)

LONDON, ENGLAND, June 18.

CLEVELAND pig iron business is at a low ebb, but makers' order books are well filled and prices are being maintained. Scottish output is to be reduced by blowing out more furnaces.

Hematite continues dull. The Consett Iron Co. has blown out one furnace and prices are sagging as a result of extensive stocks. Foreign ore is quiet but the price of Bilbao Rubio is well maintained through continuance of the Swedish strike and an advance appears likely.

Finished iron and steel is generally quiet with but little export demand of a substantial nature. Nasmyth, Wilson & Co., however, have secured a contract for 18 locomotives for India. New shipbuilding contracts are scarce, but constructors of dwellings and engineering plants are moderately active. Baldwins, Ltd., has announced a financial reconstruction plan, involving writing off nearly £4,000,000 of capital. This reorganization is believed to be the forerunner of other similar developments.

Tin plate continues active and with prices advancing many makers are refusing to sell for forward delivery at less than 18s. 6d. ($4.51) per base box, f.o.b. works port and 18s. 9d. ($4.58) per base box is being paid for prompt shipment. Demand is well distributed and works are operating at practically full capacity.

Galvanized sheets are quiet. Far Eastern demand for black sheets has slackened, but works are well sold ahead.

Demand in Continental iron and steel market is light and some prices are weakening slightly, but makers' order books are generally well filled for three to four months and consumers are cautious in making forward commitments. There is a heavy demand for Welsh tin plate bars and official prices are unchanged, but some sellers are asking up to £6 5s. ($30.44) per ton delivered and foreign bars are quoted at £5 12s. 6d. ($27.40), but deliveries are extended.

British Pig Iron Firm but Steel Market Is Depressed

LONDON, ENGLAND, June 8.—The iron and steel market has continued dull, and, with the exception of tin plate, which continues active, the volume of business is only meager. Business was curtailed by the Whitsun holiday and, since then, depression, particularly in pig iron, has become more acute. Production of pig iron is declining steadily, and the output on the Northeast coast in April was only 168,000 tons, with steel production at 142,800 tons, while exports from the Tees in May were 16,300 tons of pig iron and 55,000 tons of steel.

The producers of Cleveland pig iron are perhaps in a better position than their competitors, as their books are moderately well filled and their output is restricted, while competition from Continental makers is less severe, as European prices have been advanced. Nevertheless, purchasing by domestic foundries is small and demand for hematite iron by steel makers is at a minimum. Hematite stocks are large, one maker alone having 50,000 tons in his yards, so that there is not much stability to prices, but Cleveland producers of foundry and forge iron are able to hold their own.

In semi-finished material there has been some improvement, as the margin between the prices of British and foreign material has been reduced by increased Continental costs. Makers of Welsh tin plate bars, following the revival in the tin plate market, have booked a large tonnage, but, because of the dullness in the heavy steel trade, there is an acute shortage of scrap. This has made the tin plate bar market very strong, and, as a result, tin plate is firm, with prices likely to advance.

The volume of new shipbuilding contracts being placed is smaller than the amount of work being executed, and plate mills are feeling the depression. No

---

British and Continental European prices per gross ton, except where otherwise stated, f.o.b. makers' works, with American equivalent figured at $4.87 per £ as follows:

Durham coke, del'd.	£0 17½s.	to £0 17¾s.	$4.27	to $4.33
Bilbao Rubio ore*	1 2½		5.48

(a) Nominal.

improvement is evident in the export markets. Although it is thought that a reduction in prices might induce more buying, mills decline to grant any further concessions. There is continued discussion of central selling as a remedy for the small volume of export trade, but makers seem to be unable to agree on such a plan.

INDIA BUYS MACHINERY

United States Proportion Growing Slowly, But Great Britain Dominates Market

Imports of industrial machinery into India, excluding railroad locomotives, electrical equipment, agricultural machinery, sewing and knitting machinery and typewriters, during the fiscal year ended with March, 1927, amounted to $36,656,146, of which $3,325,616, or 9.06 per cent, represented shipments from the United States and Canada, according to a statement prepared by R. G. Matthews of the Department of Commerce, Washington. It is estimated that less than one-third of 1 per cent of the latter amount came from Canada, while the portion from that country for the fiscal year 1925-1926 was less than one-half of 1 per cent. The value of imports from the United States and Canada in 1925-1926 was $3,651,164, or 8.63 per cent of the total value of $42,316,438.

Imports from the United Kingdom during 1926-1927 were valued at $29,106,588, or 79.44 per cent of the total, against $34,136,025, or 80.67 per cent, for the preceding year. Imports from Germany and Austria were valued at $2,551,252, or 6.95 per cent, in 1926-1927, against $2,420,183, or 5.72 per cent, during the preceding year.

In the classification of "prime movers," including oil engines, steam engines, gas engines and other forms of engines, exclusive of locomotives and their parts, the United State increased its total volume of business approximately $47,138 in 1926-1927 as compared with the preceding year. This came about through increases in the amount of steam engines and parts purchased, and in gas engines and parts. The United Kingdom lost about $362,000 in shipments of oil engines and parts to India, while Germany's gain was insignificant.

There was a decrease of $979,020 in imports of mining machinery, American shipments declining $507,640 and British shipments by practically the same amount. German equipment more than doubled, gaining approximately $271,770. Imports of refrigerating machinery made a gain of about $126,910, the United Kingdom more than doubling its contributions, which were increased $101,528, but American shipments increased only $616. Germany showed a slight gain.

The United States was able to increase its entry of metal-working machinery by $6,526, while the United Kingdom's amount dropped almost $181,300 and that from Germany decreased about $45,325. Imports of sawmill and wood-working machinery from the United States more than doubled, increasing by $29,153. The United Kingdom received practically five times as much business as the United States, but showed a decrease of $25,382, while German shipments dropped $18,855. Miscellaneous industrial machinery showed the greatest increase of imports from the United States—in all, approximately $249,468, while the United Kingdom had an increase of $38,073 and Germany, $67,071. This classification includes construction machinery, dredging machinery, excavators, etc.

DUTY ON SMALL SHAPES RAISED

Bar-Size Angles, Channels and Tees Reclassified as Subject to Bar Instead of Structural Rate

NEW YORK, June 19.—A decision of the United States Treasury Department, approved June 2, classifies bar-size angles, channels and tees under paragraph 304 of the tariff act, which covers bars, instead of under paragraph 312, relating to structural material. As a result, the duty is advanced from the former rate of 20c. per 100 lb. to the bar duty of 30c. per 100 lb.

It appears as the result of an investigation, says the decision, that angles, channels and tees in sizes less than 3-in. are distinguished in the trade from the larger sizes of the said articles and that the smaller sizes are known as angle bars or angles, bar size; as channel bars or channels, bar size; and as tee bars or tees, bar size. The decision, which is in the form of a letter to the Collector of Customs, continues: "The appraiser further states that the smaller sizes referred to are produced on a bar mill and are chiefly used as metal lath to support plastering and in other finishing and fireproof work and are in no way associated with structural sizes or employed in structural uses.

"In forwarding the letter from the appraiser you state that there were submitted, from several domestic firms, letters which support the view that steel angles, channels and tees in sizes less than 3 in. are bought and sold on a bar basis and not on the basis of structural shapes, and that an inspection of the price lists of the firms referred to shows a distinction is made therein between angles, channels and tees, structural, and angles, channels, and tees, bar sizes.

"In view of the appraiser's report and a perusal of the price lists submitted, the department is of the opinion that the articles under consideration, when in sizes less than 3 in., are not known as structural shapes as that term is used commercially, and in view of the well established principle that the commercial designation of an article ordinarily governs its tariff classification the department concurs in the opinion expressed by you that all of the articles enumerated, when less than 3 in. in size, are excluded from classification under paragraph 312 and are properly dutiable under paragraph 304 of the said act. However, as the rate of duty under paragraph 304 is higher than that under paragraph 312, the higher rate should not be imposed except upon merchandise entered for consumption or withdrawn from warehouse for consumption after 30 days after the date when this letter appears in the weekly Treasury Decisions."

While the decision makes no reference to the decision on reinforcing bars rendered early in February by Justice I. F. Fischer of the United States Customs Court, Second Division, it is perhaps noteworthy that in both cases the intended use of the materials in question is stressed. Justice Fischer said: "We are of the opinion that within all the prevailing decisions on the subject these deformed bars are structural shapes, since that is their chief, if not exclusive, use. Certain it is that they are *ejusdem generis* with the beams, girders, joists, angles, channels and other structural shapes enumerated in paragraph 312. We therefore sustain the claim alleged in the protest under the latter paragraph and reverse the decision of the collector in each instance as to this merchandise."

The decision on deformed steel bars, which classifies them as construction material under paragraph 312 with a duty of 0.2c. per lb., instead of paragraph 304

IMPORTS OF INDUSTRIAL MACHINERY INTO INDIA FROM THE PRINCIPAL SUPPLYING COUNTRIES

Country of Origin	1924-25		1925-26		1926-27	
	Per Cent of Total	Value of Imports *	Per Cent of Total	Value of Imports *	Per Cent of Total	Value of Imports *
United States and Canada	8	$3,131,932	8.63	$3,651,164	9.06	$3,325,616
United Kingdom	84	32,885,283	80.67	34,136,025	79.44	29,106,588
Germany and Austria	4	1,565,966	5.72	2,420,183	6.95	2,551,252
Japan	0.5	195,746	0.24	102,617	0.18	68,240
Other countries	3.5	1,370,220	4.74	2,006,449	4.37	1,604,450
	100	$39,149,147	100	$42,316,438	100	$36,656,146

---

*American dollars.

with a duty of 0.3c. per lb., has been appealed by the Government and is expected to come before the Customs Court of Appeals on the fall calendar.

Importers of European steel may appeal from the decision of the Treasury Department on bar-sized angles, channels and tees, but no definite action has been taken as yet. In the first four months of this year a total of 58,395 gross tons of structural shapes and building forms were imported into the United States, with a value of $1,812,050. As the statistics of the Department of Commerce do not classify the smaller, bar-size shapes, separately, there is no method of determining how much of this total consisted of material that will be affected by the Treasury Department decision increasing the duty.

Poldi Steel Works Not Member of Steel Cartel

A report received by the Department of Commerce, which was published in THE IRON AGE, May 3, stated that the Skoda Steel Works and Poldi Steel Works had refused to pay a share of the International Steel Cartel fine on Czechoslovakian works for overproduction.

According to the Poldi Steel Corporation of America, 245 West Eighteenth Street, New York, this report was in error, as the Poldi Steel Works is not and never was a member of the steel cartel. Consequently, it is pointed out, the Poldi Steel Works was not bound to make any payments and, in fact, no overproduction fines whatever were assessed against it.

"The report," says the Poldi Steel Corporation, "is due to an error caused by the fact that, on the occasion of the allotments being assigned, the Czechoslovakian Iron Works arranged for the production of the Poldi Steel Works to be included in the Czechoslovakian steel production. The Czechoslovakian Iron Works did so upon its own risk and actually took charge of all obligations and payments resulting from this action.

"Some time ago the Czechoslovakian Iron Works requested the Steel Cartel to agree to the production of the Poldi Steel Works being exempt from the amount on the basis of which the quota was assigned. The Poldi Steel Works, however, had nothing to do with this matter."

To Concentrate Manufacturing at Two Plants in Place of Seven

Established by Oliver Ames in 1774, the Ames Shovel & Tool Co. for 154 years has been a leader in the shovel industry of the United States. Its present plant in North Easton, Mass., was built for the most part between 1850 and 1875. Its building and machinery cannot, in any sense, be considered modern. The company has for several years been making a comprehensive survey to determine the necessary steps to modernize the business.

At present the company has seven plants—four blade factories and three handle factories—located in North Easton, Mass., Cheltenham, Pa., St. Louis, Anderson, Ind., Cumberland, Me., New Albany, Ind., and Paris, Tex. After careful analysis the executives concluded to concentrate manufacturing at two points —the Eastern plant at North Easton, Mass., and one Western plant. This means that a complete new shovel plant will be built at North Easton and, by concentration of production at that point, output will be greatly increased.

No change in the policies of the company will be made and it is hoped that the quality of the Ames shovel can be improved by the new facilities. It is an interesting fact, in passing, that Ames shovels have been carried by soldiers of the Revolutionary War, the Civil War and the World War and have played a major rôle in the building of American railroads.

In connection with the expansion program at North Easton, new lines of manufacture, as feasible, will be added to shovel manufacturing. The company has as associates in building the new plant certain executives of Stone & Webster, Inc. The headquarters is being moved from Boston to North Easton, and all Eastern executives of the company will take up residence at North Easton.

EXPORT BUSINESS SMALL

Higher European Prices Help American Mills—Duty on Furring Channels Increased

NEW YORK, June 19.—A moderate volume of export business continues to be done with South America, which has been a rather consistent buyer of European material until recently, when Continental prices began to advance. The orders are small and generally for prompt shipment, mainly covering galvanized sheets, wire and wire products.

Exports to China show no improvement as yet and business with Japan is still limited. The Tokio subways have been inquiring for 370 tons of 100-lb. rails, Pennsylvania sections, and 160 tons of 90-lb. rails, A. R. A. Type E, with accessories, and about 50 tons of tie plates. Bids opened June 15.

New York importers of European steel report continued inactivity, with foreign prices at a high level. There have been no further advances by Continental mills, and on some small sizes they are evidently willing to accept orders for fairly early delivery. Plain steel bars cost importers about 1.79c. per lb., duty paid, New York, and sales are reported to have been made to consumers in the metropolitan district at 1.92c. per lb., ex-dock. Structural shapes cost importers about 1.70c. per lb., duty paid, and sell at 1.80c. to 1.85c. per lb. from the dock.

The recent decision of the Treasury Department classifying bar-size channels, angles and tees under the bar paragraph of the tariff act, instead of as structural material, will increase the cost to importers by $2 a ton. While imports in recent weeks have not been large, for a number of months there has been a fairly active business in furring channels from Continental mills and the new rate of duty may considerably curtail this trade, unless importers are able to absorb the increased duty and still have a profit.

Researches for British Navy Rapidly Expanding

Governmental research in Great Britain has had a marked growth over pre-war years. *Engineering*, June 8, analyzes appropriations for naval research which indicate this growth clearly. A bill providing for "scientific services" for the coming year includes scientific research, and appropriates £503,894, compared with £99,648 in 1914-15. Personnel is now 1207, compared with 128. In the former year the bulk of the money went for the Greenwich and Cape of Good Hope observatories, for the nautical almanac and for chronometers for the navy. The following important items have no counterpart in pre-war appropriations:

Experiments on ship propulsion	16 persons	£4,728
Staff subject to special assignments	177 persons	£89,057
Researches at National Physical Laboratory	75 persons	£14,941
Oil engine research	57 persons	£14,385
Electrical machinery research	27 persons	£6,709
Chemical warfare in the navy	58 persons	£16,131
Cordite investigation	8 persons	£4,187
Grants to other laboratories		£126,752
Mines and anti-submarine investigations	197 persons	£34,141
Wireless and signalling	179 persons	£29,883

The numbers include naval officers whose pay is carried in other accounts. Other appropriation bills have carried amounts for specific investigation as follows:

Armor and gun mounts	£79,000
Torpedoes, mines and explosives	£142,000
Extensions to laboratory equipment	£47,000

Excluding certain routine activities, and including money from other sources, our British contemporary estimates that during the next year at least 1000 persons will be engaged strictly in research work for the British navy, and will expend more than £625,000. Similar work in 1914 came to no more than £20,000. The sum was then about 1 per cent of the money spent on new ships; it now amounts to about 7 per cent, and is equivalent to the cost of two destroyers or submarines.

Little Change Shown in Productive Activity

Measurement of productive activity, based upon consumption of electric energy in about 3000 manufacturing plants, as collected by *Electrical World*, shows in May a fractional decline from April. With the index of 100 representing the average monthly activity of 1923-1925, the May index is 119 against 119.3 for April. For the first five months of the year the average index has been 120.5, against 117.3 for the first five months last year.

Taking the metal industries as a whole, May showed a slight gain over April, standing at 123.6 against 123.2 a month earlier, and comparing with 116.7 in May, 1927. For the first five months the metal industries index was 124.6 against 117.3 a year ago. The rolling mill and steel plant group, included within the metal industry, showed 125 for May against 125.4 for April. In the first five months it was 128 against 123.8 a year ago. Metal-working plants, both ferrous and non-ferrous, and excluding the rolling mill and steel plant group, made a gain in May, showing 122.7 against 121.7 in April, and both comparing with 109 in May, 1927. For the first five months the record was 121.4 against 110.4 a year ago.

Gain in British Iron and Steel Output in May

LONDON, ENGLAND, June 18 (*By Cable*).—Production of pig iron in May was 591,500 gross tons, and that of steel, including castings, was 752,700 tons.

A comparison of the May output with that of the four months of the year and with the monthly rate for previous years is as follows, in gross tons:

	Pig Iron, Tons.	Steel Ingots and Castings, Tons
1913—Average monthly......	855,000	638,600
1920—Average monthly......	669,500	755,600
1922—Average monthly......	408,500	490,100
1923—Average monthly......	620,000	706,800
1924—Average monthly......	609,900	685,100
1925—Average monthly......	519,700	616,400
1926—Average monthly......	203,500	296,700
1927—Average monthly......	607,800	758,200
1928—January	560,600	626,200
1928—February	550,800	764,400
1928—March	592,600	793,300
1928—April	555,000	644,100
1928—May	591,500	752,700

Portland Cement Production in 1927

Production of Portland cement in 1927 is given by the United States Department of Commerce at 173,206,513 bbl., the largest total in the history of the industry. It represents a growth of more than 5 per cent above the previous record of 164,530,170 bbl., made in 1926. Shipments were slightly below production in both years, the value of shipments in 1927 having been $278,854,647, at an average factory price of $1.62 a barrel, compared with $1.71 in 1926. Stocks on hand at the end of the year increased from 20,740,187 to 22,081,922 bbl. These are the final annual figures for the industry.

Increase in Mechanical Stokers Sold

Mechanical stokers sold in May numbered 130, of 38,705 hp., according to the Department of Commerce. This is a substantial gain over the 88 units of 31,043 hp. in April, but is otherwise the smallest since January. It compares with 97 units and 43,601 hp. in May, 1927, and with 129 units and 48,482 hp. in May, 1926. Total for the first five months aggregate 183,388 hp., compared with 201,411 hp. last year.

Shipments of enameled sanitary ware in April showed a seasonal increase, according to figures of the Department of Commerce. The total number of pieces shipped aggregated 407,705, compared with 381,395 in March and with 374,614 a year ago. Shipments of bath tubs were 105,718 in April, this being the largest number since last August.

Farm Machinery Production Remains High

Total production of farm equipment in the United States in 1927 was valued at $459,574,443, compared with $461,399,528 in 1926 and $391,812,436 in 1925, according to data collected by the Bureau of Census at the annual canvass of manufacturers. Tractors furnished more than 34 per cent of the total in 1927, with harvesting machinery, far lower, in second place at 12 per cent. Machines for preparing harvested crops, plows and listers, and planting and fertilizing machinery followed, in that order, each with between 5 and 8 per cent of the total.

British Exports Gain and Imports Decline

WASHINGTON, June 19.—Exports of iron and steel products from the United Kingdom in May totaled 359,017 gross tons, compared with 344,333 tons in April, an increase of 14,684 tons, or 4.1 per cent, while imports amounted to 236,852 tons, compared with 252,677 tons, a decrease of 15,825 tons, or 6.3 per cent, according to cablegrams received by the Department of Commerce from London.

The May export movement was the greatest of the current year except in March, when outgoing shipments aggregated 409,297 tons. Of the 22 classes, however, only 10 reflected gains in May compared with April. The principal increases were in pig iron, which gained 13,273 tons, mounting to 45,084 tons; tin plate, which increased by 9123 tons to 47,358 tons; plates and sheets, gaining 7715 tons to a total of 47,431 tons; wrought tubes, increasing by 6291 tons to 24,923 tons, and cast tubes, increasing by 3981 tons to 12,097 tons. Exports of rails declined sharply, falling 21,892 tons to a total of 22,206 tons.

The reduction in imports was confined to only seven of the 19 classes, the remaining 12 showing gains. The sharpest drop was in steel ingots and in semi-finished steel, which declined 24,361 tons to 95,590 tons.

The generally improved tone of export trade was reflected in the production of pig iron and steel. Blast furnace production of iron in May totaled 590,500 tons, compared with 555,000 tons in April and the monthly maximum of 592,000 tons in March. Ingot production was 752,700 tons, compared with 644,100 tons in April. At the end of May there was one less furnace in blast than in April, the total being 148. There was an increase of two open-hearth furnaces in operation, bringing the total to 261.

Wholesale Prices Advance Again

Wholesale prices in May, as reported by the United States Bureau of Labor Statistics, showed a substantial advance over April, standing at 98.6 per cent of the 1926 average, compared with 97.4 in the earlier month. Both were considerably above the 93.7 reported for May, 1927. The increases were participated in by most of the major subdivisions of the 550 prices comprised within the index. Some of these increases, however, were fractional. The largest was that in farm products, which advanced from 107.6 in April to 109.8 in May. Metals and metal products went up from 98.4 to 98.6, iron and steel showing a fractional decline, while non-ferrous metals and automobiles advanced slightly.

Finished products showed an advance from 95.9 to 97.1, compared with a gain from 97.9 to 98.6 for semi-manufactured articles and one of 100.1 to 101.4 for raw materials. The advance for non-agricultural commodities was from 94.7 in April to 95.6 in May. All of the groups mentioned in this paragraph were considerably higher in May, 1928, than they were a year earlier.

Total apparent consumption of babbitt metal in May, based on reports received by the Department of Commerce from 31 firms, was 4,606,899 lb., compared with 4,842,656 lb. in April and 4,945,705 lb. in May, 1927.

Organize to Secure Delegates to Engineering Congress in Tokio

A movement to marshal a large delegation of engineers from the United States to attend the first World Congress of Engineers to be held in Tokio, in October, 1929, has been organized under the chairmanship of George W. Fuller, 170 Broadway, New York. Elmer A. Sperry, Manhattan Bridge Plaza, Brooklyn, will lead the American delegation; Herbert Hoover is honorary chairman of the committee.

A special committee will organize local cooperative committees throughout the United States (which would include the local sections of the national engineering societies as well as independent engineering clubs and societies) to inform engineers generally of the aims and objectives of the World Congress.

Engineering colleges plan to raise by subscription among the alumni a testimonial fund to send members of their faculties whom the alumni would wish to honor for notable services to their institutions.

Baron K. Furuichi is president of the congress; the permanent address is Nihon Kogyo Club, Tokio, Japan. According to preliminary announcements from Japan, sectional meetings will be organized to cover all branches of engineering, applied science and engineering administration, and technical papers and topical discussions will be heard. Papers will be in either English or Japanese, limited to 8000 words, and must be submitted before April 1, 1929. General meetings will also be held, as well as an attractive group of social gatherings and excursions throughout Japan and Manchuria.

Detailed information may be had from Maurice Holland, 29 West Thirty-ninth Street, New York.

Conference on Human Relations in Industry

The eleventh annual conference on human relations in industry will be held at Silver Bay on Lake George, N. Y., Aug. 29 to Sept. 2, under the auspices of the industrial department of the National Council of the Young Men's Christian Associations. Among the speakers will be Howard Coonley, president Walworth Co., Boston; Bryce Stewart, Industrial Relations Counselors, Inc., New York; Prof. Michael Pupin, Columbia University, New York, and C. J. Hicks, assistant to president Standard Oil Co. of New Jersey, New York.

Edward D. Dee, Western Electric Co., New York, will be chairman of a sectional conference at which the topic for discussion will be "The Foreman as a Personnel Developer." Frank Whiting, general claims attorney New York Central Railroad, will lead a conference on "Pensions and Retirement Plans," and J. W. Dietz, Western Electric Co., Kearny, N. J., will preside over sessions on "Personal Service to Operating Departments." Other sessions will be devoted to "Economic Incentives," "The Scientific Approach to Industrial Relations" and "Personal Problems and Work Efficiency."

Arthur H. Young, Industrial Relations Counselors, Inc., New York, is chairman of the committee in charge of the Silver Bay conference.

Blast Furnace and Coke Oven Association Elects Officers

Continuing the policy of rotation in office, B. W. Winship, superintendent of coke works Bethlehem Steel Co., Steelton, Pa., who has been vice-president Eastern States Blast Furnace and Coke Oven Association, was elected president of the association at the annual meeting held at the Edgewood Country Club, Edgewood, Pa., June 12. W. A. Haven, superintendent northern furnace Republic Iron & Steel Co., Youngstown, Ohio, who has served the past year as secretary-treasurer, was elevated to the vice-presidency, and James E. Lose, assistant general superintendent Homestead works Carnegie Steel Co., was elected secretary-treasurer.

This meeting brought together approximately 150 men interested in the operation of blast furnaces and coke plants in the eastern half of the country. B. F. Fairless, president and general manager Central Alloy Steel Corporation, who was to have been the principal speaker following the banquet, was unable to be present, and in his stead Edward A. Portz, general superintendent of that corporation, made a plea for cooperation on the part of the coke oven and blast furnace men with the steel producers in the solution of the ever-growing problem of manufacturing steel of a quality which would meet the exacting demands now imposed by almost all consumers.

Mr. Portz's subject was "Importance of Coke and Pig Iron in the Production of Quality Steel." He stressed the importance of proper testing of coke as prerequisite in making good pig iron, stating that coke is the most important single factor in the production of iron. Uniformity in pig iron quality calls for uniformity in blast furnace operation, he said, and proper grading and testing of coke would be a big help in attaining that end.

John W. Hacker, superintendent of coke works Central Alloy Steel Corporation, chairman of the coke committee of the association, in his report suggested that members study and report on the relation between coke in the tumblers and in the furnace. He referred to a recent article in *Stahl und Eisen*, in which the author described a test in which the pressure in the furnace is duplicated. F. W. Sperr, Jr., Koppers Co., Pittsburgh, chairman of the committee on phenol determination and disposal, reviewed briefly the work of that committee and indicated that a printed report would be available for members later.

Mechanical Engineers to Hold Aeronautical Meeting

The American Society of Mechanical Engineers will hold its annual aeronautical session concurrently with the Air Olympics at Detroit next week. From 500 to 1000 aeronautical engineers are expected to attend. The convention opens June 28 and closes with the Air Olympics "field day" at Ford Airport on June 30. In addition to six technical sessions, at which papers will be read on transport, power plant, design, airways and airships, there will be a joint session with boy builders of airplane models, at which Prof. A. Klemin of New York University will demonstrate a 20,000-photographs-a-second motion picture film of the Japanese Aeronautical Institute.

Five major aeronautical events will feature the Air Olympics at Ford Airport, June 30. The National Air Tour, in which more than 25 ships will compete for the Edsel B. Ford trophy, will start from the airport at 10 a.m. in a 6000-mile reliability contest in which at least 30 cities will be visited, including San Antonio, Tex., Los Angeles, Cal., and Seattle, Wash. In the afternoon the seventeenth Gordon Bennett International Balloon Race, in which eight countries will be represented, will start from the same field.

Some 500 boys from all parts of the country are expected to attend the Air Olympics to exhibit their model airplanes in the Boys' Model Airplane Contest at the airport, sponsored by the Airplane Model League, an organization in which 150,000 boys are enrolled. Another feature of the Air Olympics program will be an exhibition of glider flying by the German champion glider team now in this country.

Second Canadian Steel and Power Show

Canada's second Steel and Power Show will be held at the University of Toronto Arena, Toronto, Ont., Sept. 4 to 7. Campbell Bradshaw, 24 Front Street, West, Toronto, is executive director of the exhibition.

Establishment of the Holland Institute of Thermology, to conduct researches into various phases of the relation of humidity, temperature and circulation of air to public welfare has been announced by A. H. Landwehr, president of the Holland Furnace Co., Holland, Mich. It will attempt to solve some of the heating and ventilating problems of the construction industry, study the effect of humidity upon various industrial products used in homes, and investigate problems connected with industrial housing and the efficiency and working conditions of workers in shops and offices.

TO LINK PLANES AND SHIPS

Combined Service at High Speed Insures Development of Our Merchant Marine

IT is inevitable that ships of the air and ships of the sea will work together. The Jones-White bill which President Coolidge signed recently makes it possible for American shipbuilders and operators to develop profitably American shipping which will coordinate air and ocean traffic. So writes Laurence R. Wilder, general manager of the Transoceanic Corporation of the United States, in the *American Mutual Magazine*, published by the American Mutual Liability Insurance Co., Boston.

Ships of new and distinctly American type, he states, will result from the enactment of the Jones-White law. The very fact that we have not built a single ship for foreign service in America in the past seven years, and that we have built only two important deep-water ships for coastwise service, becomes suddenly and unexpectedly an advantage. Our foreign competitors are committed by 8,000,000 tons of shipping to the present type of ship. We are not committed at all in any way.

For more than 15 years airplanes have been recognized as reliable, Mr. Wilder said, but ships have not yet been designed, for commercial service, to include aircraft in their operation. But the country which built the giant navy airplane carrier Saratoga will build commercial Saratogas to carry passengers, mail and express freight across the North Atlantic, and to accommodate airplanes. As on the Saratoga, the masts and funnels and the bridge of these new ships will be set to one side; the whole top deck will be clear to receive and send off airplanes.

By use of airplanes, today's mail will catch yesterday's ship out at sea, and tomorrow's mail, by flying ahead of the ship, will be delivered today.

Not only in the type of ship have the foreign nations been lagging. They have been offering bigger and more luxurious vessels, but they have not been increasing speed. The Mauretania, 21 years old, is still the fastest. Three-quarters of all those who travel across the North Atlantic are Americans. If they are given faster ships with greater comfort, they will ride on these ships. The Transoceanic Corporation is formed to supply that need. Its ships have been designed to maintain a speed of 33 knots at sea. Similar speeds have been attained by naval craft and the corporation proposes to do for peaceful commerce only what has already been done in preparation for war.

Bar Iron Wage Scale to Be Based on a 1.90c. Minimum Price

The agreement reached in the bar iron wage scale conference in Atlantic City, mentioned in THE IRON AGE of June 14, calls for a continuance of the 1927-28 rates for another year, but with the understanding that the minimum base will be on a 1.90c. card rate. As the last bi-monthly examination of sales records disclosed an average price of 1.85c. per lb. for bar iron, puddlers have been getting $11.05 per gross ton for boiling. They now are assured of $11.30, even if the next examination of the sales records does not show an increase in the average sales price. There is a corresponding adjustment in the wages of other men employed in bar iron plants.

One Means to Enhance Profits

In the June 15 issue of the "Monthly News Bulletin" of the commercial standards group of the Department of Commerce appeared the following case for adoption of standards in manufacturing:

"A well-known manufacturer of parts supplied a score or more of automobile companies. Each one bought from 10,000 to 500,000 parts a year, but each wanted some minor variation in the pattern. The constant change in machine set-up necessitated by these varying demands kept the parts manufacturer's plant in confusion. He was practically operating on a job-shop basis, although his total output was large enough to warrant quantity production economies.

"Careful figuring showed him that he could cut his price in half, improve his delivery service and yet make more money himself, if he could induce all his customers to accept the same pattern. He laid the facts before them. They accepted the proposal. One of them saved $4,000,000 a year, or $20 a part on 200,000 parts. This is what simplification means when business cuts off some of its unessential frills."

The transportation division, Department of Commerce, Washington, has undertaken a survey to ascertain the amount and kind of cargo available in every city and town along the Ohio and Mississippi Rivers between Pittsburgh and New Orleans. Similar surveys were recently completed by the transportation along the Mississippi, Warrior and Missouri Rivers. The present investigation is being made to determine the advisability of establishing contract barge transportation service along the route mentioned, catering to companies able to offer cargoes in 125, 250 and 500-ton lots.

To Conduct Course for Plant Conference Leaders

ROCHESTER, June 16.—Under arrangements made by the Industrial Management Council of the Chamber of Commerce, a course of instruction for plant conference leaders will be conducted for two weeks beginning June 18 in the Chamber building by A. L. Mann, supervisor of industrial education for the State Department of Education and formerly of the Eastman Kodak Co. of this city.

The course will include discussion of the various methods of foreman training and related subjects. Similar courses have been conducted by Mr. Mann in other cities.

Testing Stainless Steel on Ships

In order to test the action of sea water and sea air on steel, a plate made of a special stainless steel has been placed on the promenade deck of the Blue Star Liner Arandora, which recently left London for Buenos Aires. During the Arandora's 13,000-mile journey to South America and back the plate will not be cleaned or touched in any way. A day-by-day observance will be kept, and it is hoped to obtain valuable data on the use of stainless steel for ships' fittings.

Civil Service Examinations

The United States Civil Service Commission announces the following open competitive examinations: Chief engineering draftsman (ship), entrance salary, $2,600 a year; principal engineering draftsman (ship), $2,300; senior engineering draftsman (ship), $2,000; engineering draftsman (ship), $1,800. Applications must be on file with the Civil Service Commission, Washington, not later than July 18. The examinations are to fill vacancies in the Coast Guard, Treasury Department, Washington, and in positions requiring similar qualifications. Full information may be obtained from the Civil Service Commission, Washington, or the secretary of the civil service board of examiners at any post office or custom house.

Simplified practice Recommendation No. 57, for wrought iron and wrought steel pipe, has been reaffirmed, without change, for the year beginning June 1, according to the division of simplified practice of the Department of Commerce. A survey conducted prior to the revision conference indicated that the average degree of adherence to the recommendation was 95 per cent. This recommendation reduced the variety in sizes of valves and pipe fittings from over 20,000 to 19,238, and sizes of pipe from 62 to 49.

CARNEGIE LIBRARY OF ATLANTA

STEEL REINFORCING BARS

Standard Adopted Last Year Now Withdrawn, Due to Lack of Support

WASHINGTON, June 19.—Through George K. Burgess, director, the Bureau of Standards has formally announced withdrawal of its pamphlet entitled "Commercial Standard No. 1, New Billet Steel Concrete Reinforcement Bars." Doing away with this simplified practice recommendation, which adopted as standard the intermediate grade of new billet steel concrete reinforcement bars according to specifications of the American Society for Testing Materials, was attributed to lack of support from producers.

Conferences on the subject were called originally at the request of the Truscon Steel Co., made to the National Committee on Metals Utilization under date of Oct. 8, 1925. Strong support was given to the movement by distributers and their association, known as the Concrete Reinforcing Steel Institute, highway engineers, architects and others representing consumer interest. Following a survey of current practice and two general conferences held Jan. 26, 1926, and March 19, 1927, the program adopting the intermediate grade as the standard, and eliminating the hard and structural grades, was determined upon.

On Dec. 21, 1927, however, one of the largest producers withdrew its acceptance. An intensive campaign for obtaining producer acceptances was instigated by the Concrete Reinforcing Steel Institute, resulting in final action of the Association of American Steel Manufacturers which, at a meeting, went on record as neither approving nor disapproving the recommendation. The meeting held that the use of a particular grade of concrete reinforcement bars for various types of construction involves questions of engineering, safety and economy, which necessarily must be decided by the designing engineers or the users.

Since the procedure for the establishment of commercial standards requires written acceptances representing 65 per cent of producers by volume, and ample support from distributers and consumers, and because it is difficult to estimate accurately the percentage of consumption represented by distributer and consumer acceptances, the bureau considered that it was not desirable to modify the rules of procedure, or to continue its support for the project, without the definite approval of the producers. Doctor Burgess explained that the program is still actively supported by the Concrete Reinforcing Steel Institute, as well as many architects and highway engineers, and that, in the event the demand for the intermediate grade continues to grow and producers are disposed to lend their formal approval, the bureau will then cooperate and support the program upon request by the issuance of the pamphlet.

Withdrawal of the recommendation concerning the grade, however, in no way affects the recommendation, in effect, which reduced the sizes of reinforcing bars from 44 to 11. This reduction in sizes, according to O. W. Irwin, manager of reinforcing steel sales, Truscon Steel Co., Youngstown, Ohio, in a letter to Secretary of Commerce Hoover under date of April 24, 1925, means a saving in capital investment of about $4,500,000 for the industry.

Steel Must Advertise

Under the caption "Steel Must Advertise," *Printers' Ink* in its issue of June 7 commented on editorials in THE IRON AGE of April 19 and May 24, in part as follows:

"Premier Baldwin, speaking in London recently, said, 'It does look as though business and industry are groping toward a position in which businesses making the same kinds of goods will have to combine, at least for the purpose of pushing and advertising those goods and bringing new orders home. They are trying to do it in the coal trade. They will doubtless have a try at it in the steel trade.'

"THE IRON AGE, to which we are indebted for the quotation, recently published an editorial pointing out the need for consistent, logical advertising on the part of the steel industry. In this editorial was the following passage:

> Certain sections of the steel industry have attempted recently to place their products in a favorable light in the public prints. But the statement holds true that the industry generally—and its various units large and small—is the loser because for thirteen years it has postponed the use of well-considered publicity; such publicity as on the one hand would reach the ordinary citizen and tell him about steel and on the other hand would show the manufacturing consumer of steel why he would do well to use more of it.

"*Printers' Ink* has long maintained that the basic industries have as much or more reason and necessity for advertising as the so-called converting industries. The present century has seen great changes in the markets for basic commodities with the consequent shifting of volume from one industry to another. Only the fact that the country's capacity to consume has grown by leaps and bounds has made this shifting less noticeable and less pinching to certain industries than would have been the case if consumption had increased less rapidly of its own accord.

"Today the steel industry is faced by competition from the producers of copper and substitute products and only the fact that manufacturers outside of the industry have constantly been discovering new uses for steel has made it possible for the steel manufacturers to continue on their way blind to their lost opportunities.

"It is encouraging to note that leaders in the steel industry both at home and abroad are realizing the necessity for some kind of cooperative effort to increase the sale of steel. It is even more encouraging to *Printers' Ink* to note that they almost automatically consider advertising one of the means to increased sales."

Unusual Employment Guarantee

A steadily increasing program of employment at the plant of the Canadian Steel Corporation, Ojibway, Ont., for the next 10 years has been revealed in negotiations between the corporation and a special committee of the County Council, negotiating on the question of fixed assessment for the steel plant. Under tentative arrangements drawn up for assessment of the property upon which the steel plant stands, the corporation agrees that a minimum of 500 men shall be employed at the plant by the end of 1931. At the conclusion of the ensuing three years a minimum of 800 is guaranteed and for the following four years employment is guaranteed for 1000 men.

These guarantees are of particular significance, apart from the figures quoted, as displaying the intention of the steel company to increase its activities at Ojibway. At present slightly less than 200 men are employed at the plant. Details of the fixed assessment have not yet been worked out by the county committee. Warden A. A. Marentette stated, however, that it is probable an agreement would be reached which would be satisfactory to the county and to the steel company.

Great Increase of River Shipments

PITTSBURGH, June 19.—Shipments of iron and steel products from the Pittsburgh district plants on the Ohio River, which are a gage of the efforts of manufacturers to escape the high railroad freight rates and the incident localization of distribution, keep on mounting.

In May, the movement amounted to 112,818 net tons, the United States Engineers' Corps, Pittsburgh office, reports. This is a new high record mark and compares with 110,356 tons in April and 50,130 tons in May last year.

In the five months ended May 31, Ohio River shipments have amounted to 458,504 tons, compared with 181,516 tons in the same period last year.

This Issue in Brief

Welding will supersede many old forms of assembly, engineer says. Instead of building up units and bolting them together, they will be designed for union by flash welding, he believes.—Page 1743.

Endurance limit of rail steel is increased if the rail is subjected to reversals of stress at a value below its endurance limit. If the reversals of stress are *above* the endurance limit, the rail will fail in fatigue at a stress considerably below its true endurance limit.—Page 1744.

Pig iron prices' downward trend may be due to less pig iron being used in proportion to steel made, says Doctor Haney. Evidently a broad change in the industry is reflected, as the annual rate of increase in pig iron production has become smaller. —Page 1759.

Forms poppet valves from a single piece of steel by upsetting process. Valve heads are then reheated and formed in a coining press.—Page 1754.

Wholesale prices continue to rise. May index figure covering 550 commodities was 98.6, as compared with 97.4 in April, and 93.7 in May, 1927. (Note: 1926 average equals 100.). —Page 1764.

Profits are increased by accident prevention work. Safety campaigns more than pay for themselves on a purely pecuniary basis, and, in addition, they keep down labor turnover and increase productivity of employees.—Page 1745.

Cuts assembly costs by flash welding. Automobile manufacturer secures a clean, strong joint, at low cost, for parts which, under use, must maintain their physical integrity. Tests reveal that fractures occur, not at the joint, but elsewhere in the part.—Page 1739.

Boiler plate will withstand a stress of 12,500 lb. per sq. in., at 500 deg. Fahr., without permanent deformation. But at 800 deg. the stress must not exceed 10,000 lb. per sq. in., if the boiler is to remain in service indefinitely.—Page 1749.

Doubles production by using new type of resistance welder. Labor cost in assembling differential neck and ring is cut 67 per cent by automatic welder designed and built by Ford. Air-operated clamps hold the pieces; current is turned on and off, pressure is applied and released, and clamps are separated, all automatically.—Page 1742.

Phenomenon of hotter iron and higher combined carbon is explained by Doctor Moldenke. The disappearance of graphite nuclei under conditions of extremely hot melting helps to retard the formation of large graphite crystals.—Page 1747.

New high record in steel ingot output for first half-year reveals that trade is not dull. Previous record will be passed by about 3 per cent. To equal 1927 output a producing rate of only 67 per cent will be required for the remainder of the year.—Page 1770.

Cast iron can recapture lost markets, says Doctor Moldenke. "High-test" iron (2.80 per cent total carbon), made from high steel scrap mixtures, can be produced in the ordinary cupola. —Page 1748.

Iron and steel prices are seriously out of adjustment, Doctor Haney declares. Finished steel, such as sheets and nails, and raw materials, such as coke and pig iron, are too low in comparison with billets and bars.—Page 1759.

Rail steel, killed with aluminum, can be poured free from pipe and excessive segregation, in sink-head molds of the Gathmann type. The distribution of carbon phosphorus, sulphur and silicon occurs in the same manner in such ingots as in sink-head ingots of other types. —Page 1743.

Best month on record, with one exception, for fabricated structural steel industry. May orders equalled 84 per cent of capacity, a sharp gain over April, and second only to July, 1927.—Page 1760.

Best way to control absenteeism is through good supervision, correspondent believes. The worker should be made to understand that punctuality and regular attendance are taken into consideration in raising salaries and making promotions.—Page 1772.

Almost one-third of railroads' total expenditures for materials and supplies is for iron and steel products. Class 1 roads bought $432,604,000 worth of goods from the metal-working industries in 1927.—Page 1750.

An Active Presidential Year

HALF of this year is virtually ended, and it has made a very fair showing, yet a little disposition is still seen to discuss whether or not presidential years are naturally "poor" years in trade. That the transaction of business might be impeded somewhat during the heat of the campaign is possible, but that is another matter, involving only a fraction of the calendar year. The tail end of the year, moreover, affords opportunity for recovery as to the calendar year totals. That is irrespective of the election outcome, for trade is in no danger from either candidate, and while as much cannot be said for some Congressional nominees, 1928 promises to be no healthier year for radicals than was 1924.

While a few days are lacking to complete half of the year by the calendar, more than half of a year's business is ordinarily transacted by this date. In the last three years the first-half steel ingot production has exceeded the second-half production by approximately 10 per cent, and this half-year is making a new first-half record by about 3 per cent. Portland cement shipments to June 1 made a new record by 1 per cent, though preceding years broke records by larger margins. Comparison of freight car loadings should exclude coal, as stocks were being accumulated early last year while this year stocks have been diminishing. Making that exclusion, other freight car loadings are off thus far this year by less than 1 per cent. Building contracts let in the year to date have made a new high record and the work involved must continue for months.

If political affairs should seriously injure trade, which is not to be expected, the results would be seen in the statistics of next year rather than this year. The year is half over and a large momentum exists, both as to the current pace and as to activity under contract. As to men being seriously minded during the relatively brief campaign, from the broader standpoint that should be to the advantage of trade in the long run. One cannot but feel that less interest is taken in governmental affairs than should be. Discussion should lead to enlightenment and that must conduce to progress in good government, which is to the advantage of trade.

As to the comparisons that are always being made between "now and a year ago," this year will henceforth be in luck, so to speak, for last year did not witness, in steel for instance, the revival in activity that usually comes after July. For the remainder of this year steel will have an easier pace to outdo. As a matter of statistical fact, it will require only a 67 per cent steel ingot producing rate, computed according to the accepted method, for the tonnage in the second half of this year to equal that for the second half of last year. Appearances that trade is dull must be carefully weighed, for the correct comparisons are likely to be favorable.

Brakes on in Stocks

LIQUIDATION and decline have come to the stock market, as the prophets foretold. When investment stocks had been bid up to prices on which their dividends figured only 5 per cent, while the interest rate on money was rising to 6 per cent, it was clear that stocks were being overpriced. When call money rose to 7 per cent the pools that were booming speculative issues and the public that was buying them like gambling chips both found that the handicap was becoming too heavy. Consequently readjustment was in order.

In the process a good many speculators have been converted into involuntary investors. They will have to wait patiently to see if in the course of time airships and radios and other new fancies will pay the dividends that would be the only justification for the prices lately quoted for the stocks.

The Federal Reserve Board discouraged the gambling that was becoming rampant. Probably this was unnecessary and probably it was uninfluential. The readjustment would have come anyway, as the economists had been forecasting for many months. Surely the amount of money that was being loaned on stock market collateral was no frightening factor or any sound reason for agrarian discontent. Call money does not deprive manufacturers, merchants and farmers of what they need, but is loaned on stocks owing to their not needing it, and is subject to instant return for their needs, no other form of loans being so liquid.

It is probable that after a good house-cleaning the stock market will again be bullish though more conservatively than in recent months, and that there will continue to be public participation. It is not discounting an economic depression, but is correcting itself. In such a process good stocks are bound to suffer along with the rest. Indeed it seems to be a curiosity of human nature that overextended speculators will sacrifice their good things in order to nurse their bad ones.

However, when a readjustment of this kind is completed it is the good securities that recover, while the bad ones do not. The true science of speculative investment is the discernment of conditions that are going to increase the earnings in certain industries and particularly of certain concerns engaged in them. Besides such discernment there must be imagination. Thus, the many persons who invested in the porphyry coppers 20 years ago and held them made great fortunes. Likewise did those who later went into automobiles and artificial silk. Without entering upon a long recital of such things, we may properly mention that those who early had faith in the United States Steel Corporation did well for themselves.

As our national economy progresses such opportunities recur more and more. The desire to take advantage of them is natural and praiseworthy. Even if this be overdone there is no widespread economic harm, if the enterprise itself be meritorious, although there may be individual misadventures and disasters. The deplorable speculation is when the surplus earnings of some people pass into the hands of others who consume them; or into the uses of labor and materials that become unproductive and perhaps eventually vanish.

Good Publicity Helps Public Relations

TO many minds publicity means advertising. In its present-day developments it means far more. A publicity director for a big organization or an organized industry finds that display space in newspapers and periodicals takes up a relatively small proportion of his time. Nevertheless, advertising pure and simple is an important factor in any campaign to educate the public on the advantages of a given material—steel, for example.

A publicity campaign for steel would involve much of such advertising; yet in the past only a few of the medium-sized producers have done anything in this line. Notable instances have been the campaigns for Armco products and for various special steels. Further good results cannot help flowing from the organized effort of the American Institute of Steel Construction.

Other industries certainly are not backward in this respect. Almost any issue of a metropolitan newspaper will clinch this point. Here, today, in the New York *World*, is a quarter-page advertisement by Westinghouse showing a welder at work on a building frame. It says, "Electrical Building Is Silent Buiding." Yet one might guess that the sales of welding equipment are an exceedingly small percentage of the entire Westinghouse business. Here's another quarter-page on pure copper screen cloth. Copper men generally agree that their joint publicity effort has done much to revive sales to the present high point. And a half-page by the New York Telephone Co.—a monopoly, with fixed rates! What have they to profit from advertising? A casual reader might think that this was money thrown away, even if he did not cynically and mistakenly refer it to an attempt to buy a paper's good will. Yet it is only part of a very astute policy for improving the public relations of this great and growing telephone industry.

It is time for the steel industry likewise to take thought of its public relations. As a group it complains that it cannot make a fair return on the money invested, but is not agreed on what to do about it. Whenever the Telephone company can prove it is not making a good return on its capital —and a good enough return to attract the vast amounts of additional money constantly needed for extensions—it presents its facts to the Public Service Commission and receives permission to raise the rates.

Not that the steel industry should invite governmental control. We only cite the Telephone company as an example of what a good publicity or public relations policy can do toward converting a natural antipathy to a monopoly into a friendly public feeling, even when the pocketbook is touched.

Steel could start without that handicap, for it is traditional that steel is a reliable material. "True as steel" grows out of centuries of satisfactory service. Such an asset could be easily expanded.

Brighter Prospects for Gray Iron

SIGNIFICANT changes in the gray iron industry are in the making. Along with the formation of the Gray Iron Institute has come a technical development of importance in the growing belief that improvement in the quality of cast iron lies in part at least in the perfection of methods of getting high temperatures. In recent months iron foundrymen have fully realized that the industry is facing a crisis. At the great convention in Philadelphia last month there was open discussion of the inroads of substitutes for gray iron and the grave necessity for improving the quality of the cupola product.

For the first time research on a large scale is to be applied to the industry. This will be part of the work of the new institute, which will also seek means of combatting substitutes and promulgating the advantages of gray iron castings. None too early is such organized research coming to the help of the iron foundry.

In his comprehensive paper of two months ago before the meeting of European foundrymen in Spain, published in part on other pages, Dr. Richard Moldenke ably reviews the situation and discusses in detail the benefits of superheating. This new development is the work of a leading German metallurgist whose thesis is that high temperatures destroy graphite nuclei so that the resulting metal on cooling has a finer structure and greater strength. In making the process commercial recourse naturally was had to new equipment for the cupola by which higher temperatures can be obtained. One of the most recent types, the powdered coal cupola, was described in THE IRON AGE of June 7, and others designed to secure hotter blast appeared in earlier issues.

Manufactures Gain in Foreign Trade

THAT American manufactures are holding their own in world markets is made apparent from returns of the first quarter of 1928. Exports of finished manufactures, semi-finished manufactures and manufactured foodstuffs all increased, while exports of crude materials and of crude foodstuffs decreased. The manufactured or partly manufactured products constituted 70.6 per cent of the total value of exports in 1928, against 66.3 per cent in 1927. At the same time, the manufactured groups rated almost precisely the same proportion of the import total in the two years, having been 47.7 per cent in 1928 and 47.5 per cent in 1927.

In studying the balance between exports and imports for these quarters, and averaging them, it is seen that exports of finished manufactures exceeded imports by about $300,000,000. This was partly offset by excess of imports of crude materials, $100,000,000, and of crude foodstuffs averaging $85,000,000, in the two quarters. There was a slight export excess of manufactured foodstuffs and a slight import excess of semi-finished manufactures, leaving a total export surplus of some $110,000,000.

Steel Capacity and Competition

RATHER invidious comparisons are sometimes made, usually by steel producers themselves, between the degree of competition in the sale of steel products and the "rate at which the steel industry is operating." We quote the words with a view to pointing out the fallacy of the conception they express when the connection refers to the sale of finished steel products.

The operating rate so often cited is a percentage obtained by dividing steel ingot production by assumed steel ingot making capacity. The American Iron and Steel Institute statistics showed operations at 91.29 per cent for April and at 82.58 per cent for last month.

But the steel mills do not sell their ingots. They finish the steel into various forms, or sell semi-finished steel to detached finishing mills. Only the two largest producers make all the important finished products. In some lines, particularly sheets, tin plate and strips, a large tonnage is produced by mills which make only the one product, or very few products.

Each finished steel product makes its own market, and that is where the competition is. A steel producer may find competition in one given finished product which he feels bound to meet, quite irrespective of whether his ingot production is at one percentage rate or another.

The fact which these references to general operating rates ignore, and improperly ignore, is that the finishing capacity of the steel industry materially exceeds its steel ingot producing capacity. Estimates of the excess commonly made are 20 to 30 per cent, there being no attempt at anything like a precise statistical statement.

If the steel industry were operating "full," as the term would go, i. e., producing all the ingot tonnage possible, the whole group of finishing departments could not be running full. As a corollary, if it were possible to determine accurately the total finishing capacity in each product, and divide that into the actual tonnage being produced, the weighted averages of these percentages would fall quite short of the percentage rate of ingot production. If there is an ingot producing rate of 83 per cent there is, presumably, a 20 per cent excess of capacity, but in such a circumstance some finishing departments would have more than a 20 per cent excess. Market history illustrates the matter. In the old days "steel," which meant ingots, sometimes became scarce, and all prices tended to rise. If there were a heavy demand for plates and a light demand for shapes, the latter would rise because the management would allocate ingots to the plate department rather than the shape department.

CORRESPONDENCE

Dropping Absentees from the Payroll

To the Editor: I would like to add a few thoughts on the above subject to those so well expressed in the editorial in THE IRON AGE of May 31. There is nothing more prejudicial to discipline and more disturbing to routine than repeated absences, and of the work factors it is one of the most difficult to control. The suggestion in the editorial that the worker's name be removed from the payroll after two weeks absence, for any cause whatsoever, is a good one, providing justice is shown the employee by having an investigation made to see whether he is under too much of a physical strain either in his work or at home.

Employers who have accomplished most in combating absenteeism put much faith in prompt investigation of cases. A nurse sent to the homes of absent employees to offer assistance to any who are ill also brings back a full report of each case.

The instance cited, of dropping the worker's name from the payroll, after two weeks absence, will not jeopardize the man's chance at his job if his services have been satisfactory. When he is ready to reenter he will be taken back. Absentees should be required upon their return to go through a physical examination at the employment office and make application as if they were new employees. This method will prove measurably effective and particularly beneficial in reducing absenteeism and bettering the attendance records.

Absenteeism takes on an added importance because of its more definite effect upon production and the efficiency of the organization as a whole. A high frequency of absence is merely a prelude to leaving.

Every effort should be made to alter home or working conditions that prevent a worker from being regular at his work, even if it is necessary to give him a short vacation out of season. Working on this same system, some companies reward regular attendance either by a small bonus or by an addition to the vacation period. Investigation will prove that the better type of workman is not voluntarily absent. An employee who is "soldiering" on his job should not be retained on the payroll.

Some companies resent the use of a bonus system as an incentive to regularity in attendance because it seems inconsistent. They feel that to engage a person for a position and then have to offer additional incentives to have him regular in his attendance is wrong in principle.

In my opinion, the better way to control absenteeism is through good supervision which understands its obligation to the management. Make the worker understand that punctuality and regular attendance reflect dependability, which is taken into consideration in raising salaries and making promotions. If the workman's record is unsatisfactory and he is content to let it remain so, the best solution ever found is removal from the payroll. H. K.

Philadelphia, June 4.

Need of Laboratories of Research on Marketing Problems

To the Editor: For the last year or two—or at any rate since the making of profits has become more difficult than the making of sales—the thoughtful men in the steel and allied industries have been pointing out the need for new methods of solving our commercial problems. E. G. Grace, president of Bethlehem Steel Co., some time ago advocated "better merchandising" for the steel industry. O. H. Cheney, banker, in a recent address to the Flat-Rolled Steel Executives said that "the two weapons in winning new markets are research and education." Charles F. Abbott, executive director of the American Institute of Steel Construction, has been talking to steel men and others all over the country on the need for viewing our commercial problems in a new light. In the June 14 issue of THE IRON AGE he was quoted as saying that "the problems of production and financing industry have been largely solved," but that the new conditions we are facing in business, owing to increased competition, call for "a radical readjustment of merchandising policies."

Business leaders are not worried as to the ability of the country to produce cheaply per unit of output, but they are worried—or should be—as to how they are going to market all that they can make and sell it at a profit. Individual companies, for the most part, have not found the way to solve their commercial problems as they have solved their production problems. There are some splendid examples of laboratory research as applied to commercial problems in such organizations as the General Motors Corporation, General Electric Co. and others, but the rank and file of American manufacturers, either individually or in groups, have done little on the commercial side of their business comparable with the research or experimental laboratory for the production department. One of the greatest weaknesses of American business today is its slowness to grapple with new problems and new conditions that have to do with merchandising.

Commercial problems require the same thorough analysis as those of production. A fundamental necessity in their solution is a laboratory of commercial research. Some of these problems usually command attention at sales or executive conferences, but conferences fall short of the ideal in that sales and other executives are usually too busy with the everyday affairs of getting and shipping orders to devote the time to a thorough study—research, if you like—of the matter at issue.

The work of a commercial research department should be constructive research into all the consumption and selling problems that affect the corporation's earning power and profits. The personnel should consist of men having a thorough understanding of business and economic laws, keen powers of analysis, the imagination to visualize consumption possibilities and an appreciation of all that is involved in the creation of profits. Such specalists should be free from duties of an executive or selling character, and should be in a position to give unbiased judgment, after thorough investigation, to the executive and sales departments.

A laboratory of commercial research, in addition to its own distinctive work, should act as a clearing house for information gathered by the various executive departments and should be able to sift and coordinate such information so that it will better assist the executives in separating essential profit-making factors from the non-essential.

Sales activities are too largely confined to current needs. It is a great mistake not to study concurrently market tendencies and to create a background for future earning power. Among the subjects to which a laboratory of commercial research should apply itself are these:

Determining the actual and potential demands for product within local and adjacent territories.

Remedy for failure to get orders or inquiries and to obtain volume of business desired.

Remedy for failure to appraise trends of business.

Remedy for failure to obtain price for product that will insure adequate return to stockholders.

Elimination of useless and unfair competition within the industry.

New methods of marketing.

New uses for products manufactured.

Developing consumer understanding of the merits of the product.

Forecasting and preparing data for future policies.

Many of these functions, it may be said, are now taken care of by one department or another. If research is handled by the department in which a problem originates, it may lack the right perspective and only represent the thoughts and traditional viewpoints of the head of the department. It would also divert the time of the head of the department from customary duties; or the work might be slighted and given only intermittent attention. The department is likely also to touch lightly on its own weak spots. Its objective may be to confirm the pre-determined opinions of the head of the department, when the aim should be to arrive at an independent analysis.

Leading Interests Combine for Steel Exports

United States and Bethlehem Steel Subsidiaries Become Members of Steel Export Association of America

WASHINGTON, June 19.—With the United States Steel Products Co. and the Bethlehem Steel Export Corporation as member companies, the Steel Export Association of America has filed papers with the Federal Trade Commission under the Webb-Pomerene act for exporting iron and steel products. Announcement was made today of the fact by the Commission.

The new association became automatically organized on the filing of the papers. It will have headquarters at 25 Broadway, New York. There will be four managers and a secretary and assistant secretary, according to the papers as filed. The managers are S. M. Bash and W. H. Stewart of the Bethlehem organization and G. C. Scott and Frank Adams of the Steel Corporation subsidiary. William J. Brown, who is assistant treasurer and assistant secretary of the Bethlehem Steel Corporation, is named as secretary, and Arthur C. Mundle, of the Steel Corporation, as assistant secretary.

The combined exports of rolled steel of the two members of the association account for 75 to 80 per cent of the total outgo from the country. No statements could be obtained from the two companies beyond unofficial observations that the move is experimental.

United States Patent No. 1,668,705 was issued May 8 to Thomas S. Wheelwright, Richmond, Va., for a method of rolling hollow steel bars from ingots or fagots. The patent has been assigned to the Old Dominion Iron & Steel Works, Richmond.

Seek Economies in Marketing

Two Leading Steel Producers Unite for Exports—Pig Iron Makers and Mills Make Greater Use of Inland Waterways—Steel Output Retains Lead Over 1927

THE week has brought out new evidences of the attention producers of iron and steel are giving to economies in marketing. To cultivate foreign trade more effectively the Steel Corporation and the Bethlehem company have formed a common export organization, thereby providing a single outlet for 75 to 80 per cent of the rolled steel shipped out of this country. In domestic business, makers of both pig iron and steel are using waterways more extensively in an effort to expand market zones fixed by railroad rate barriers.

The largest structural steel contract in weeks, 38,000 tons, for the Mercantile Mart, Chicago, was placed with the Bethlehem Steel Co. for fabrication at Buffalo and delivery by Lake vessel. Ohio River shipments of iron and steel from Pittsburgh district plants were the largest on record in May, and in the first five months of this year totaled 458,500 tons, or two and a half times the movement in the corresponding period last year.

In the East, water shipments of merchant pig iron are in increasing volume, and the Buffalo producers have acquired storage space at New Jersey ports to extend the advantages of barge rates through the winter months.

Steel production, although receding, is holding its lead over output last year. At Chicago, operations have declined to 83 per cent of capacity, against 80 per cent in the same week of 1927, and in the Greater Pittsburgh district a rate of 70 per cent compares with 65 per cent 12 months ago.

With output still on a relatively high plane, a good volume of bookings is indicated. The bulk of current business, however, is made up of releases against past commitments. Both specifications and new orders are growing individually smaller, at the same time calling for prompter shipment.

Consumers are showing little interest in third quarter requirements and, since current buying is limited principally to small fill-in tonnages, mill prices remain largely untested. Makers of plates, shapes and bars continue to take early shipment business at 1.85c., Pittsburgh, and are more concerned about getting specifications against existing contracts than forcing the issue on their recent advance of $1 a ton on third quarter business. In the Chicago district, where the sheet market has been particularly quiet, prices are off $1 and $2 a ton respectively on the black and galvanized finishes.

Producers of wire nails are finding it increasingly difficult to establish a price of $2.65 per keg, Pittsburgh or Cleveland, and $2.55 is more commonly quoted.

Makers of welded boiler tubes have announced a revision of supplementary discounts, advancing net prices on steel tubes about 5 per cent and on charcoal iron tubes nearly 2½ per cent.

Increased inquiry for pig iron in the Pittsburgh district, no doubt stimulated by the recent drop in the price of Valley basic, has been followed by stronger efforts by producers to stiffen prices, with the issue somewhat in doubt.

Scrap is weak, and at Pittsburgh and Chicago prices on heavy melting steel have declined 25c. a ton.

The placing of 50,000 tons of line pipe by the Empire Gas & Fuel Co. has enlivened a dull situation in tubular goods. A number of other large line-pipe projects still await financing, but early action is looked for on 12,000 tons of steel water pipe for the city of Denver.

Large individual projects feature the structural steel market. For one of them, the Mercantile Mart at Chicago, 38,000 tons was placed during the week, and two others in that city will call for a total of 150,000 tons more. Railroad grade elimination work at Cleveland will require 15,000 tons, and a store building at Philadelphia will take 10,000 tons.

Steel specifications from several of the automobile companies in the Detroit district are lighter, but forge shops and other makers of automotive parts in northern Ohio have made no curtailment in production. Chicago reports no recession in the operations of farm equipment makers, indicating that several did not interrupt production to take inventory. Road machinery builders are also very busy.

Orders for fabricated structural steel in May, at 315,000 net tons (computed), made the second highest monthly total ever reported, exceeded only by the 345,000 tons of last July. Computed shipments ran 49,000 tons behind orders, but made the fourth highest month's total.

At 46⅝c. a lb., New York, spot Straits tin sold today at the lowest level since Sept. 24, 1924. Large sales in the Far East and absence of consumer buying here and in London are given as prime causes.

Both of THE IRON AGE composite prices remain at the levels of the past two weeks. That for finished steel is at 2.341c. a lb., about 1 per cent lower than a year ago. That for pig iron, at $17.23 a ton, is 9 per cent below the $18.96 of last June.

A Comparison of Prices

Advances Over the Previous Week in Heavy Type, Declines in Italics

On export business there are frequent variations from the above prices. Also, in domestic business, there is at times a range of prices on various products, as shown in our market reports on other pages.

Pittsburgh

Pipe Orders for 50,000 Tons—Steel Business Sustains 70 Per Cent Operations

PITTSBURGH, June 19.—Steel manufacturers in this district still report a good aggregate business, although also noting that demand shows the downward tendency common to this time of the year, and that only through sustained sales effort are orders kept flowing in. Buyers are not yet showing much interest in third-quarter requirements and the bookings are made up of a large number of small and miscellaneous tonnages, almost all of which carry prompt shipping instructions. Lack of interest in supplies beyond the end of the quarter probably is explained by the fact that important consumers are generally covered to the end of this month and have until that time to specify shipments that will meet their July needs. Steel ingot production is right around 70 per cent of capacity.

Distribution of orders among the different products is uneven. Common finishes of sheets appear to be doing a little better in point of releases on contracts than they did recently, and some makers of wire products note a gain in orders over the past week. Quotation of $2.55, base, per keg, Pittsburgh, on nails has become a little more common and probably has been accompanied by larger sales, and in sheets, buyers appear to believe that prices cannot go very much lower than they are now.

Not much structural steel business is coming out, but this is a natural condition at this time when work placed in the spring is well under way and it is early for much demand inspired by a desire to have the structure under cover before winter. The pipe market has been enlivened by an order for 50,000 tons of line pipe. Steel bars are doing fairly well and business is called good in reinforcing bars. There is no noticeable letdown in the specifications for tin plate.

The recent break in the price of basic pig iron has somewhat intensified interest in third-quarter requirements of that grade and stimulated the inquiry for other grades. Actual business, however, is limited by the fact that producers have stronger price ideas than buyers expected to pay in the face of a price around $15.25, furnace, for basic grade.

Scrap prices show a tendency to ease off on account of a lack of consumer interest. Except for some renewing of existing supply arrangements in coke, the fuel situation remains dull and uninteresting.

Pig Iron.—Melters are beginning to evince some interest in their requirements for third quarter, and in view of the recent break in prices the inquiries are for larger individual tonnages than usual. Not much actual business has been done because buyers are trying to do as well on basic iron as was done recently by two Pittsburgh district steel makers, but find not only the steel companies but the merchant producers resisting. Efforts to buy other grades at prices more in line with the market on basic iron also encounter opposition by producers, but at the same time attempts to stiffen the market have not succeeded. One company, which has bought 6000 tons of basic iron since a week ago, was able to buy at less than $16, which several makers quoted; this company is known to have rejected a bid of

$15.75, Valley furnace, and, while the exact price has not become known, it is commonly accepted that it was not far from basis of the last previous sales. Follansbee Brothers Co. has entered the market for 10,000 tons of basic iron for third-quarter delivery, and the Colonial Steel Co. is taking prices on 2500 tons. Difference of ideas on prices between buyers and sellers is keeping down foundry sales. A Uniontown, Pa., melter recently closed on approximately 6000 tons of foundry iron, dividing the business among Johnstown, Pa., Valley and Cleveland furnaces. The delivery price was about $18.75, or $17.11, Johnstown, $16.48, Valley, and $15.85, Cleveland. Several producers still want $17, Valley furnace, for No. 2 foundry, but find it necessary to shade that price, since a good deal of iron held by middle interests is being offered for less.

Prices per gross ton, f.o.b. Valley furnace:

Basic	$15.35 to $15.50
Bessemer	17.00
Gray forge	16.25 to 16.50
No. 2 foundry	16.75 to 17.00
No. 3 foundry	16.25 to 16.50
Malleable	17.00 to 17.25
Low phosphorus, copper free	26.50

Freight rate to the Pittsburgh or Cleveland district, $1.76.

Ferroalloys.—With the approach of July 1, larger consumers of ferromanganese, who have been slow to sign second-half contracts, are swinging into line, and it is said that only one or two now remain uncovered for that period. At the same time, an effort to extend the former price as long as possible is seen in specifications against first-half contracts that are well in excess of current consumption. Makers of alloy steel are taking out spiegeleisen a little less freely, but the general movement of that alloy still is good. Ferrosilicon specifications are rather slow. Prices are unchanged.

Semi-Finished Steel.—Buyers of billets, slabs and sheet bars are exerting considerable pressure against prices and are meeting with some success, since sheet and strip prices still are weak and producers of semi-finished steel for the market appear to need business. Generally, $32, f.o.b. Pittsburgh, for large billets and slabs and $33 for sheet bars measures the limit of the price that has to be paid. Some producers with rather sizable yard stocks of billets have gone well under $32 to move or reduce them. There is a possibility that sheet bars will pass from the list of quotable steel products before a great while. Owners of the continuous mills are said to recognize that the market is not broad enough to take all the finished strips that could be produced and are figuring on selling a considerable tonnage of what may be designated as strip mill breakdowns (strips that have passed through the roughing rolls) to the makers of sheets and tin plate now rolling from sheet bars. Such a step would cheapen the cost of rolling sheets and black plate and incidentally delay obsolescence of present sheet and tin mills. Wire rods still are quoted at $44, base Pittsburgh, but are commonly selling at $2 a ton less.

Bars, Plates and Shapes.—An order for 50,000 tons of 10 in. and 20 in. line pipe, which has been placed with two local makers means an order for a like amount of plates and skelp. This will be a help to one of the market's quietest products, for while a fair tonnage is moving into river craft, the lack of railroad rolling stock orders has been felt. Structural steel lettings are showing the usual decrease common to this season and bar business is considerably lighter now than it was as recently as a month ago. While a good total tonnage of reinforcing bars is being booked in small lots, demands from bolt and nut makers and from makers of cold-finished bars are moderate. Buyers are having no difficulty in placing early shipment business in bars, plates and shapes at 1.85c., base Pittsburgh, and some shading of that price on plates is reported, probably to meeting strip competition. Mills still are more concerned about getting specifications against existing contracts than in forcing the issue with respect to third quarter contracts, on which most makers have announced a price of 1.90c.

Rails and Track Supplies.—Rail business continues to lag, but there is a fair amount of ordering of the track supplies. Prices are unchanged.

Wire Products.—So little success has attended the effort to establish nails at $2.65, base, per keg, Pittsburgh, that makers are getting a little more anxious for orders and $2.55 is becoming a more commonly quoted price. The products that move in price with nails likewise are seeking the minimum levels. But on plain wire, while there is some resistance to $2.50, base, per 100 lb., that price is ruling on a majority of the sales. Some producers report some improvement in business in the past week, but this is not the rule.

Tubular Goods.—The Empire Gas & Fuel Co. has divided between the National Tube Co. and Spang, Chalfant & Co. an order for 132 miles of 20 in. pipe and 14 miles of 16-in. welded pipe for a gas line and 362 miles of 10¾-in. seamless pipe for an oil line. The tonnage is estimated at 50,000 tons and constitutes the largest piece of business placed in several months. The Amarillo-Kansas City gas line for the Industrial Gas Co., Kansas City, is again being discussed; there are reports that the A. O. Smith Corporation, Milwaukee, has the order subject to financing, but another story is that a new company is under organization to make electrically welded pipe and is to get this line as its first order. Fair demand is reported for butt-welded pipe, but lapwelded goods still are dull.

Makers of welded steel and iron boiler tubes have announced a revision of the supplementary discounts in place of 7 fives beyond the card on steel tubes and 2 tens to 2 tens and five on charcoal iron tubes without much regard to the size of the order. The maximum supplementary discounts now entail purchases of at least 21,000 lb. For lots of 12,000 to 20,999 lb., the new supplementary discounts are 6 fives on steel tubes and 2 tens and two and one-half on iron tubes. On lots of 5000 to 11,999 lb., they are 5 fives and 2 tens, respectively, and for lots of less than 5000 lb., 4 fives and 1 ten, respectively.

Sheets.—While actual business leaves little to complain of as to volume, the price situation still is unfavorable from the manufacturers' viewpoint. On black sheets, 2.70c., base, is the limit on small lots and in this area, where prices seem to have held a little better than

Chromium Nickel Vanadium		1.50	4.15
Carbon Vanadium		0.95	3.60

Above prices are for hot-rolled steel bars, forging quality. The ordinary differential for cold-drawn bars is 1c. per lb. higher. For billets 4 x 4 to 10 x 10 in., the price for a gross ton is the net price for bars of the same analysis. For billets under 4 x 4 down to and including 2½ in. squares, the price is $5 a gross ton above the 4 x 4 billet price.

Slabs with sectional area of 16 in. or over carry the billet price; slabs with sectional area of 12 in. to 16 in. carry a $5 extra above the billet price and slabs with a sectional area under 12 in. carry the bar price.

Band sizes are 40c. per 100 lb. higher.

Rails

	Per Gross Ton
Standard, f.o.b. mill	$43.00
Light (from billets), f.o.b. mill	36.00
Light (from rail steel), f.o.b. mill	34.00
Light (from billets), f.o.b. Ch'go mill	36.00

Track Equipment

	Base Per 100 *Lb.*
Spikes, 9/16 in. and larger	$2.80
Spikes, ½ in. and smaller	2.80
Spikes, boat and barge	3.00
Tie plates, steel	2.15
Angle bars	2.75
Track bolts, to steam railroads	$3.80 to 4.00
Track bolts, to jobbers, all sizes, per 100 count	70 per cent off list

Welded Pipe

Base Discounts, f.o.b. Pittsburgh District and Lorain, Ohio, Mills

Butt Weld

Steel Inches	Black	Galv.	*Iron* Inches	Black	Galv.
⅛	45	19½	¼ to ⅜	+11	+39
¼ to ⅜	51	25½	½	22	2
½	56	42½	¾	28	11
¾	60	48½	1 to 1½	30	13
1 to 3	62	50½			

Lap Weld

2	55	43½	2	23	7
2½ to 6	59	47½	2½	26	11
7 and 8	56	43½	3 to 6	28	13
9 and 10	54	41½	7 to 12	26	11
11 and 12	53	40½			

Butt Weld, extra strong, plain ends

⅛	41	24½	¼ to ⅜	+19	+54
¼ to ⅜	47	30½	½	21	17
½	53	42½	¾	28	12
¾	58	47⅛	1 to 1½	30	14
1 to 1½	60	49½			
2 to 3	61	50½

2	53	42½	2	23	9
2½ to 4	57	46½	2½ to 4	29	15
4½ to 6	56	45½	4½ to 6	28	14
7 to 8	52	39½	7 to 8	21	7
9 and 10	45	32½	9 to 12	16	2
11 and 12	44	31½			

On carloads the above discounts on steel pipe are increased on black by one point, with supplementary discount of 5%, and on galvanized by 1½ points, with supplementary discount of 5%. On iron pipe, both black and galvanized, the above discounts are increased to jobbers by one point with supplementary discounts of 5 and 2½%.

Note.—Chicago district mills have a base two points less than the above discounts. Chicago delivered base is 2½ points less. Freight is figured from Pittsburgh, Lorain, Ohio, and Chicago district mills, the billing being from the point producing the lowest price to destination.

Boiler Tubes

Base Discounts, f.o.b. Pittsburgh

Lap Welded Steel		*Charcoal Iron*	
2 to 2¼ in.	27	1½ in.	+18
2½ to 2¾ in.	37	1¾ to 1⅞ in.	+ 8
3 in.	40	2 to 2¼ in.	— 2
3¼ to 3¾ in.	42½	2½ to 3 in.	— 7
4 to 13 in.	46	3¼ to 4½ in.	— 9

Beyond the above discounts, 6 fives extra are given on lap welded steel tubes and 2 tens and 2½ on charcoal iron tubes on lots of 12,000 lb. and more.

Standard Commercial Seamless Boiler Tubes
Cold Drawn

1 in.	60	3 in.	45
1¼ to 1½ in.	52	3¼ to 3½ in.	47
1¾ in.	36	4 in.	50
2 to 2¼ in.	31	4½, 5 and 6 in.	45
2½ to 2¾ in.	39		

Hot Rolled

2 and 2¼ in.	37	3¼ and 3½ in.	53
2½ and 2¾ in.	45	4 in.	56
3 in.	51	4½, 5 and 6 in.	51

Less carloads, 4 points less. Add $8 per net ton for more than four gages heavier than standard. No extra for lengths up to and including 24 ft. Sizes smaller than 1 in. and lighter than standard gage to be held at mechanical tubes list and discount. Intermediate sizes and gages not listed take price of next larger outside diameter and heavier gage.

Seamless Mechanical Tubing

	Per Cent Off List
Carbon, 0.10% to 0.30%, base	55
Carbon, 0.30% to 0.40%, base	50

Plus differentials for lengths over 18 ft. and for commercial exact lengths. Warehouse discounts on small lots are less than the above.

in other districts, 2.65c. now is the ruling price. On galvanized sheets, 3.50c., base, now is being quoted by several producers who hitherto have refrained from going under 3.60c., on the score that 3.50c. referred chiefly to sheets for roofing and siding, in which there was more or less "cheating" as to gages. Orders as a whole are numerous enough, but they usually are for small lots and in all cases are for quick rolling and shipment. Mill operations are off about five points and now are placed at 70 to 75 per cent of capacity.

Tin Plate.—The fact that the packing crops are two to three weeks late takes some of the urgency out of the demand for tin plate, but the expectations still are strong that the pack will be large and container manufacturers are taking shipments on contracts very steadily. Shipments of tin plate for all uses so far this year are sufficiently ahead of those for the same period last year to sustain early estimates that the year would run in shipments about half way between 1927 and 1926.

Cold-Finished Steel Bars and Shafting.—Demand still is more remarkable for its steadiness than its size. Viewed from the potential productive capacity, business is only fairly active, but the demand for several years has been below rather than abreast of full capacity. There are few deviations from 2.20c., base Pittsburgh.

Bolts, Nuts and Rivets.—Current demands are only moderately large, but are spread out well enough to maintain a steady flow of orders. Prices are well maintained.

Hot-Rolled Flats.—Producers in this district find that business so far this month is little, if any, behind that of the same period last month, and are well satisfied. There is little real change in prices. Those for third quarter will be largely the same as those that have ruled in this quarter. To the small tonnage buyers, they are 1.90c., base, for widths 6 to 12 in., 2.10c. for 3 to 6 in., and 2.20c. for widths under 3 in. Large tonnage buyers in the past quarter have had concessions of $2 to $3 a ton from these prices and there is no evidence in the business done so far that they will get any greater concessions in the coming quarter.

Cold-Rolled Strips.—Business is holding up fairly well with local producers and prices are quite steady.

Warehouse Business.—Prices have been cut $2 a ton on black and galvanized sheets in keeping with the recent decline in mill prices. The regular schedule on other products is being well observed by warehouses, but mill supply houses continue to do some shading. Business is fairly good as a whole.

Coke and Coal.—Foundries have been contracting for third-quarter and last-half requirements and most of them using beehive oven coke are now under cover for those periods. In the choice brands, the business has been at $4.50 to $4.85 per net ton at ovens. Blast furnaces also are understood to be renewing agreements with present sources of supply and continuing the present price of about $2.75 per net ton at ovens. Spot business does not amount to much and prices are unchanged. The coal market has not yet felt the stimulation of an increased large cargo demand that was expected to result from the confirmation by the Interstate Commerce Commission of the reduction of 20c. a ton made by Northern railroads. Lake shippers evidently are waiting to see whether the last word yet has been spoken in connection with rates before buying. There is now a differential of 45c. a ton between Northern and Southern rates and there is a possibility that Southern roads may take another step in reducing that spread in an effort to help the Southern mines.

Warehouse Prices, f.o.b. Pittsburgh

	Base per Lb.
Plates	3.00c.
Structural shapes	3.00c.
Soft steel bars and small shapes	2.90c.
Reinforcing steel bars	2.75c.
Cold-finished and screw stock—	
Rounds and hexagons	3.60c.
Squares and flats	4.10c.
Bands	3.60c.
Hoops	4.00c. to 4.50c.
Black sheets (No. 24 gage), 25 or more bundles	3.55c.
Galvanized sheets (No. 24 gage), 25 or more bundles	4.40c.
Blue annealed sheets (No. 10 gage), 25 or more sheets	3.10c.

Large rivets, base per 100 lb.	$3.50
Wire, black soft annealed, base per 100 lb.	$3.00 to 3.10
Wire, galvanized soft, base per 100 lb.	3.00 to 3.10
Common wire nails, per keg	3.00
Cement coated nails, per keg	3.05

Old Material.—Prices continue soft in this market, but as a rule this condition is due more to consumer indifference than to heavy offerings. The weakest grade is machine shop turnings, which the principal local user continues to buy at $9 and dealers with short contracts to cover are able to get at $9.25, although sales in the Detroit district are reported at $5.60, which would mean $9.60 if they were delivered into this district. There is a suspicion that sales are being made at a low price here to affect contract settlements based upon the price at Pittsburgh. On heavy melting steel $14.75 appears to be as high as can be done and some melters have turned it down at that price. Dealers are picking up small lots of ordinary heavy melting steel down to $14 for shipment to one point in the district, but purchases cannot be made that low for other deliveries.

Prices per gross ton delivered consumers' yards in Pittsburgh and points taking the Pittsburgh district freight rate:

Basic Open-Hearth Furnace Grades:	
Heavy melting steel	$14.25 to $14.75
Scrap rails	14.00 to 14.50
Compressed sheet steel	14.00 to 14.50
Bundled sheets, sides and ends	13.00 to 13.50
Cast iron carwheels	14.00 to 14.50
Sheet bar crops, ordinary	15.00
Heavy breakable cast	12.00 to 12.50
No. 2 railroad wrought	14.50 to 14.75
Heavy steel axle turnings	12.50 to 13.00
Machine shop turnings	9.00 to 9.25
Acid Open-Hearth Furnace Grades:	
Railroad knuckles and couplers	15.50 to 16.00
Railroad coil and leaf springs	15.50 to 16.00
Rolled steel wheels	15.50 to 16.00
Low phosphorus billet and bloom ends	19.00 to 19.50
Low phosphorus, mill plate	17.50 to 18.00
Low phosphorus, light grade	16.50 to 17.00
Low phosphorus sheet bar crops	17.50 to 18.00
Heavy steel axle turnings	12.50 to 13.00
Electric Furnace Grades:	
Low phosphorus punchings	16.50 to 17.00
Heavy steel axle turnings	12.50 to 13.00
Blast Furnace Grades:	
Short shoveling steel turnings	10.50 to 10.75
Short mixed borings and turnings	10.50 to 10.75
Cast iron borings	10.50 to 10.75
No. 2 busheling	9.00 to 9.50
Rolling Mill Grades:	
Steel car axles	18.00 to 18.50
No. 1 railroad wrought	10.50 to 11.00
Sheet bar crops	16.50 to 17.00
Cupola Grades:	
No. 1 cast	14.25 to 14.50
Rails 3 ft. and under	15.50 to 16.00
Malleable Grades:	
Railroad	14.25 to 14.50
Industrial	13.75 to 14.00
Agricultural	13.25 to 13.50

Portable Testing Instruments

A new line of portable alternating current instruments designated as type PY5, applicable for general testing and laboratory work where high accuracy is required, is announced by the Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa. The line includes voltmeters and single-phase wattmeters of the electrodynamometer type, and ammeters of the moving iron type, using vanes of non-residual metal. All instruments are shielded and are equipped with an improved design of air damper, making possible accurate measurements on fluctuating loads.

Production of bituminous coal in the week ended June 9 is reported by the United States Bureau of Mines at 8,412,000 net tons, making a total of 209,112,000 tons for the elapsed portion of the calendar year. The figures compare with 8,524,000 tons in the corresponding week of 1927 and 251,666,000 tons for the year to that date.

Semi-Finished Steel, Raw Materials, Bolts and Rivets

Mill Prices of Semi-Finished Steel

F.o.b. Pittsburgh or Youngstown

Billets and Blooms

	Per Gross Ton
Rerolling, 4-in. and over	$32.00 to $33.00
Rerolling, under 4-in. to and including 1¾-in.	33.00 to 34.00
Forging, ordinary	38.00
Forging, guaranteed	43.00

Sheet Bars

	Per Gross Ton
Open-hearth or Bessemer	$33.00 to $34.00

Slabs

	Per Gross Ton
8 in. x 2 in. and larger	$32.00 to $33.00
Smaller than 8 in. x 2 in.	33.00 to 34.00

Skelp

	Per Lb.
Grooved	1.85c. to 1.90c.
Sheared	1.85c. to 1.90c.
Universal	1.85c. to 1.90c.

Wire Rods

	Per Gross Ton
*Common soft, base	$42.00 to $44.00
Screw stock	$5.00 per ton over base

---

*Chicago mill base is $45. Cleveland mill base, $44.

Prices of Raw Material

Ores

Lake Superior Ores, Delivered Lower Lake Ports

	Per Gross Ton
Old range Bessemer, 51.50% iron	$4.55
Old range non-Bessemer, 51.50% iron	4.40
Mesabi Bessemer, 51.50% iron	4.40
Mesabi non-Bessemer, 51.50% iron	4.25
High phosphorus, 51.50% iron	4.15

Foreign Ore, c.i.f. Philadelphia or Baltimore

	Per Unit
Iron ore, low phos., copper free, 55 to 58% iron in dry Spanish or Algeria	10.00c.
Iron ore, Swedish, average 66% iron	9.25c. to 9.50c.
Manganese ore, washed, 52% manganese, from the Caucasus	39c.
Manganese ore, Brazilian, African or Indian, basis 50%	38c. to 39c.
Tungsten ore, high grade, per unit, in 60% concentrates	$11.00 to $11.25

	Per Gross Ton
Chrome ore, 45 to 50% Cr_2O_3, crude, c.i.f. Atlantic seaboard	$22.00 to $24.00

	Per Lb.
Molybdenum ore, 85% concentrates of MoS_2, delivered	50c. to 55c.

Coke

	Per Net Ton
Furnace, f.o.b. Connellsville prompt	$2.60 to $2.75
Foundry, f.o.b. Connellsville prompt	3.50 to 4.25
Foundry, by-product, Ch'go ovens	8.00
Foundry, by-product, New England, del'd	11.00
Foundry, by-product, Newark or Jersey City, delivered	9.00 to 9.40
Foundry, Birmingham	5.00
Foundry, by-product, St. Louis	9.75

Coal

	Per Net Ton
Mine run steam coal, f.o.b. W. Pa. mines	$1.40 to $1.80
Mine run coking coal, f.o.b. W. Pa. mines	1.50 to 1.75
Gas coal, ¾-in., f.o.b. Pa. mines	2.00 to 2.10
Mine run gas coal, f.o.b. Pa. mines	1.75 to 1.90
Steam slack, f.o.b. W. Pa. mines	1.00 to 1.05
Gas slack, f.o.b. W. Pa. mines	1.10 to 1.15

Ferromanganese

	Per Gross Ton
Domestic, 80%, furnace or seab'd	$105.00
Foreign, 80%, Atlantic or Gulf port, duty paid	105.00

Spiegeleisen

	Per Gross Ton Furnace
Domestic, 19 to 21%	$31.00 to $32.00
Domestic, 16 to 19%	29.00

Electric Ferrosilicon

Other Ferroalloys

Ferrotungsten, per lb. contained metal, del'd	95c.
Ferrochromium, 4 to 6% carbon and up, 65 to 70% Cr., per lb. contained Cr. delivered, in carloads	11.00c.
Ferrovanadium, per lb. contained vanadium, f.o.b. furnace	$3.15 to $3.65
Ferrocarbontitanium, 15 to 18%, per net ton, f.o.b. furnace, in carloads	$200.00
Ferrophosphorus, electric or blast furnace material, in carloads, 18%, Rockdale, Tenn., base, per gross ton	$91.00
Ferrophosphorus, electric, 24%, f.o.b. Anniston, Ala., per gross ton	$122.50

Fluxes and Refractories

Fluorspar

	Per Net Ton
Domestic, 85% and over calcium fluoride, not over 5% silica, gravel, f.o.b. Illinois and Kentucky mines	$16.00
No. 2 lump, Illinois and Kentucky mines	$20.00
Foreign, 85% calcium fluoride, not over 5% silica, c.i.f. Atlantic port, duty paid	$16.00
Domestic, No. 1 ground bulk, 95 to 98% calcium fluoride, not over 2½% silica, f.o.b. Illinois and Kentucky mines	$32.50

Fire Clay

Per 1000 *f.o.b. Works*

	First Quality	Second Quality
Pennsylvania	$43.00 to $46.00	$35.00 to $38.00
Maryland	43.00 to 46.00	35.00 to 38.00
New Jersey	50.00 to 65.00	——
Ohio	43.00 to 46.00	35.00 to 38.00
Kentucky	43.00 to 46.00	35.00 to 38.00
Missouri	43.00 to 46.00	35.00 to 38.00
Illinois	43.00 to 46.00	35.00 to 38.00
Ground fire clay, per ton	7.00	

Silica Brick

	Per 1000 *f.o.b. Works*
Pennsylvania	$43.00
Chicago	52.00
Birmingham	50.00
Silica clay, per ton	$8.50 to 10.00

Magnesite Brick

	Per Net Ton
Standard sizes, f.o.b. Baltimore and Chester, Pa.	$65.00
Grain magnesite, f.o.b. Baltimore and Chester, Pa.	40.00

Chrome Brick

	Per Net Ton
Standard size	$45.00

Mill Prices of Bolts, Nuts, Rivets and Set Screws

Bolts and Nuts

Per 100 Pieces

(F.o.b. Pittsburgh, Cleveland, Birmingham or Chicago)

	Per Cent Off List
†Machine bolts	70
†Carriage bolts	70
Lag bolts	70
Plow bolts, Nos. 1, 2, 3 and 7 heads	70

Milled standard set screws, case hardened	80 and 10
Milled headless set screws, cut thread	80
Upset hex. head cap screws, U.S.S. thread	85 and 5
Upset hex. cap screws, S.A.E. thread	85 and 5
Upset set screws	80, 10 and 10
Milled studs	70 and 5

Chicago

Large Structural Jobs—Third Quarter Prices Not Yet a Fact—Operations at 83 Per Cent

CHICAGO, June 19.—Of outstanding interest in this market is the placing of 38,000 tons of fabricated steel with the Bethlehem Steel Co. for fabrication at Buffalo and delivery by water to the site of erection of the Mercantile Mart in Chicago. It is also now learned that the Starrett Building Co. has been awarded the general contract for the Apparel Mart, Chicago, which will contain 4,650,000 sq. ft. of floor space, covering two city blocks and extending upward 75 stories.

No. 11 blast furnace at Gary was blown out last Saturday, thus reducing to 18 the number of active stacks in blast at plants of the leading producer. The count for the district now stands 26 active and 10 out of service. At St. Louis the "A" furnace has been taken out of service, reducing by half the output of merchant iron in that district.

Sales of steel mill products in the week now closing show a decided improvement over the average for the early part of June, but individual orders are small and there is a general lack of interest in forward contracting. Producers recognizing this fact plus the uncertainty of trends in other territories are hesitating to name third quarter prices. Specifications are heavier, but when averaged with the two previous weeks show a total volume which warrants not more than 83 per cent of ingot capacity being used. The Omaha lines of the Chicago & North Western has placed an order for 250 stock cars.

Pig Iron.—Melt in this district is smaller by a small margin, and with lighter shipments and a general lack of interest in forward buying, the local trade has come to the opinion that hand-to-mouth buying and a quiet summer are in prospect. A 3000-ton inquiry is open in western Michigan and a 500-ton lot will be purchased by a northern Illinois user. Although there is a quiet tone to this market, nevertheless shipments so far this month compare favorably with June a year ago. Furnace stocks of Northern iron are steadily being reduced but can still be considered large for this time of the year and the general condition of the market.

Prices per gross ton at Chicago:

Northern No. 2 foundry, sil. 1.75 to 2.25	$18.00
N'th'n No. 1 fdy., sil. 2.25 to 2.75	18.50
Malleable, not over 2.25 sil.	18.00
High phosphorus	18.00
Lake Superior charcoal averaging sil. 1.50	27.04
Southern No. 2 fdy. (all rail)	22.01
Southern No. 2 (barge and rail)	21.51
Low phos., sil. 1 to 2 per cent, copper free	$28.50 to 29.00
Silvery, sil. 8 per cent	29.79
Bessemer ferrosilicon, 14 to 15 per cent	46.79

Prices are delivered consumers' yards except on Northern foundry, high phosphorus and malleable, which are f.o.b. local furnace, not including an average switching charge of 61c. per gross ton.

Fluorspar.—Several carload inquiries are before the local trade. Asking prices are $16 a net ton, f.o.b. Illinois and Kentucky mines.

Ferroalloys.—Announcement is made by producers that third quarter prices on the 19 to 21 per cent grade of spiegeleisen will be $33, Hazard, Pa. The local market is quiet except for the resale of a carload at $32.

Prices delivered Chicago: 80 per cent ferromanganese, $112.56; 50 per cent ferrosilicon, $83.50 to $87.50; spiegeleisen, 19 to 21 per cent, $37.76 to $39.76.

Plates.—The local plate market is quiet, largely as a result of the dullness in railroad equipment and oil storage tank buying. Specifications from the manufacturing trade are steady, and fabricators, whose shops are well filled, continue to take liberal quantities. Cheyenne, Wyo., has decided to buy cast iron water pipe and has withdrawn an inquiry for steel pipe which would have taken 6000 tons of plates. After some delay the way now appears to be clear for action on 12,000 tons of steel water pipe needed by the city of Denver. Western car shops are engaged on the last of the large equipment orders and at this moment there is no new business in sight that will sustain operations to mid-summer. The Missouri Pacific plans to build 200 automobile cars in its own shops. The Ohio Collieries Co. has ordered 250 mine cars from the American Car & Foundry Co. Western steel mills expect to participate in the steel required for 600 cars that will be built in the Southern Pacific shops, but they have little else to look forward to except 250 cars for the Omaha lines of the Chicago & North Western and a like number of gondola bodies for the Rock Island. Plate deliveries range three to six weeks. Local producers still hesitate to announce first third quarter prices and in the meantime the general market is quotable at 2c., Chicago.

Mill prices on plates, per lb.: 2.00c., base Chicago.

Structural Material.—The real support of this market, that is, jobs of average size, is being forgotten for the moment in the concern over three larger projects, which will require well toward 200,000 tons of steel. The mercantile mart, taking close to 45,000 tons of structural steel and 6000 tons of reinforcing bars, is active and it is entirely probable that contracts will be placed before the end of the week. Indications are that Eastern mills and fabricators are interested in tonnages of this size and that Western shops are not having clear sailing, merely because the building is to be located in Chicago. Some headway is being made with the plans for the agricultural mart. The third large project and the newest one of the three is a 75-story structure, housing a thousand room hotel, for which the promoters have obtained air rights over the river terminal of the Illinois Central Railroad. This building is to be known as the Apparel Mart. The Mississippi Valley Structural Steel Co. has taken 900 tons for two buildings for the University of Illinois, and the Hyde Park State Bank Building, Chicago, requiring 500 tons, has been awarded to the Union Foundry, a local shop. Fabricators in this district are comfortably booked and projects are quite numerous. Structural material prices are 2c., Chicago, to the general trade and to fabricators for stock, but the bulk of the tonnage going into steel frame buildings commands lower prices.

Mill prices on plain material per lb.: 2.00c., base, Chicago.

Bolts, Nuts and Rivets.—Third-quarter contracting is progressing with little opposition to prices asked. Some improvement in specifications from the railroads is noted.

Reinforcing Bars.—The recession in reinforcing bar sales noted several weeks ago is still in evidence, though in the last few days an increased number of small orders has been taken by local dealers. Purchases are disproportionately small in comparison with the pending list. The scarcity of business results more from the slowness with which general contracts are placed than from delay by contractors in making purchases. Plans for the Palmolive-Peet Building, Chicago, are being revised to include a 20-story tower, which will add about 100 tons to the reinforcing bars required. Prices on concrete bars in and near Chicago are steady at the full schedule, but in central Illinois keen competition is bringing out low quotations. New orders and fresh projects are shown on page 1792.

Bars.—Although other heavy tonnage finished steel products are receding in demand, shipments for soft steel bars are going forward at an undiminished rate. As far as local producers can tell there is no letup in either the manufacture of automobiles or in accessories. Road machinery builders are busy and farm implement manufacturers are operating plants at capacity. It is said that several farm equipment builders did not take inventory, at least of such character as would necessitate curtailment of production. Reports from tractor builders indicate that orders continue to pile up. Prices in and near Chicago remain at 2c. on mild steel bars, but in outlying territory producers from other districts do not maintain this level. Railroads are taking larger quantities of iron bars and prices are steady at 2c., Chicago. Specifications for alloy steel bars afford output at mills' capacity. Prices are unchanged and third quarter books are open. Current purchases for the most part are for immediate requirements. The advance to 1.90c., Chicago Heights, on rail steel bars has failed and future business is being taken at the old quotation of 1.85c. Local mills are operating at capacity and are not able to make deliveries in less than three weeks except when orders match with rolling schedules. Demand for fence posts is brisk and shipments already made this month, plus specifications that are now in, foretell that deliveries in June will be the largest for any month so far this year.

Mill prices per lb.: Soft steel bars, 2.00c., base, Chicago; common bar iron, 2.00c., base, Chicago; rail steel bars, 1.85c., base, Chicago Heights mill.

Wire Products.—The jobbing trade is moving rather slowly and somewhat spotty except in woven wire fence. Rains throughout the Middle West have benefited crops, though in some sections of the Missouri River Valley hail storms have destroyed much wheat. New purchases by the manufacturing trade are in small volume, but specifications are steady and shipments to that class of buyers in the last two weeks average well above the last 14 days in May. Wire mill operations remain remarkably steady, close to 65 per cent of capacity still being engaged. Stocks in the hands of users are not oversized, while at mills readjustment of output is keeping stocks well balanced. Prices for wire and wire products are shown on page 1777.

Rails and Track Supplies.—Chicago district rail mill output has been cut to 80 per cent of capacity. Miscellaneous orders for track fastenings total 5000 tons, and inquiry, including the 12,000 tons required by the Pennsylvania Railroad, reaches to not less than 16,000 tons. The iron tie plate market is quiet, though several railroads are shaping inquiries for this commodity. Light rail business is confined to scattered carlot orders.

Prices f.o.b. mill, per gross ton: Standard-section open-hearth and Bessemer rails, $43; light rails, rolled from billets, $36. *Per lb.:* Standard railroad spikes, 2.80c.; track bolts with square nuts, 3.80c.; steel tie plates, 2.25c.; angle bars, 2.75c.

Hot-Rolled Strip.—Price cutting in the Detroit district is in evidence and as low as 2.15c., base, per lb., Chicago, has been named in this market for widths of less than 6 in.

Cast Iron Pipe.—This market is showing added life and prices are steady at $32 to $33, Birmingham, for 6-in. and larger diameters. The Lynchburg Foundry Co. has taken 350 tons of 6 and 8-in. pipe for Fond du Lac, Wis., at $42.45, delivered, or $31.95, Birmingham. The United States Cast Iron Pipe & Foundry Co. has taken 350 tons for Fox River Grove, Ill., and the McWane Cast Iron Pipe Co. has closed for 200 tons for Cynthiana, Ind. Fresh inquiry includes 1000 tons of 6 to 24-in. pipe for West Allis, Wis., 400 tons of 6 and 8-in. pipe for Winfield, Ill., 500 tons for Columbia, Ill., and 115 tons for Chillicothe, Ohio. Pending business at St. Paul, Chicago and at Roseville, Mich., is still open. The last named job may be closed in a day or two.

Prices per net ton, delivered Chicago: Water pipe, 6-in. and over, $40.20 to $41.20; 4-in., $44.20 to $45.20; Class A and gas pipe, $4 extra.

Sheets.—Prices for this commodity have given ground and even at the new low levels there is lack of strength. Chicago prices now are 2.80c. for black, 3.65c. for galvanized and 2.15c. for the blue annealed product. These prices are being used almost wholly for current business, which is of small proportions, and for contract tonnages when the buyer will make out a shipping schedule at the time of purchase. Local producers have not announced price policies for the third quarter. Hot mill output is at the low point of the year and schedules are difficult to maintain. Deliveries are prompt on all grades, except blue annealed sheets, which at this moment are in the best demand.

Base prices per lb., delivered from mill in Chicago: No. 24 black, 2.80c.; No. 24 galvanized, 3.65c.; No. 10 blue annealed, 2.15c. Delivered prices at other Western points are equal to the freight from Gary plus the mill prices, which are 5c. per 100 lb. lower than the Chicago delivered prices.

Warehouse Prices, f.o.b. Chicago

	Base per Lb.
Plates and structural shapes	3.10c.
Soft steel bars	3.00c.
Reinforcing bars, billet steel	2.30c. to 3.00c.
Reinforcing bars, hard steel	2.00c. to 2.70c.
Cold-finished steel bars and shafting—	
Rounds and hexagons	3.60c.
Flats and squares	4.10c.
Bands	3.65c.
Hoops	4.15c.
Black sheets (No. 24)	3.95c.
Galvanized sheets (No. 24)	4.80c.
Blue annealed sheets (No. 10)	3.50c.
Spikes, standard railroad	3.55c.
Track bolts	4.55c.
Rivets, structural	3.60c.
Rivets, boiler	3.60c.
	Per Cent Off List
Machine bolts	60
Carriage bolts	60
Coach or lag screws	60
Hot-pressed nuts, squares, tapped or blank	60
Hot-pressed nuts, hexagons, tapped or blank	60
No. 8 black annealed wire, per 100 lb.	$3.30
Common wire nails, base per keg	3.10
Cement coated nails, base per keg	3.10

Coke.—Producers of by-product foundry coke have announced second half prices at $8, f.o.b. local ovens, and $8.75, delivered in the Chicago switching district. Shipments in June are running behind those in May and forward contracting is only moderately active.

Old Material.—A steel mill has closed for 16,000 tons of heavy melting steel at $13 a gross ton, delivered, a cut of 25c. below the last large purchase of several weeks ago. Several thousand tons of hydraulic bundles have also been purchased at new low price levels. The entire structure of the scrap market is weak. Railroad shipments are heavy and the supply in all grades is ample for immediate requirements. Following the lower pace in some industries, there is a slackening in the rate of scrap shipments from that source. Buyers of specialties are moving cautiously, taking only small lots for immediate shipment and avoiding piling scrap against future use.

Prices delivered consumers' yards, Chicago:

Per Gross Ton	
Basic Open-Hearth Grades:	
Heavy melting steel	$12.50 to $13.00
Shoveling steel	12.50 to 13.00
Frogs, switches and guards, cut apart, and miscellaneous rails	13.50 to 14.00
Hydraulic compressed sheets	11.25 to 11.75
Drop forge flashings	9.50 to 10.00
Forged, cast and rolled steel carwheels	15.50 to 16.00
Railroad tires, charging box size	15.75 to 16.25
Railroad leaf springs, cut apart	15.75 to 16.25
Acid Open-Hearth Grades:	
Steel couplers and knuckles	14.00 to 14.50
Coil springs	16.00 to 16.50
Electric Furnace Grades:	
Axle turnings	12.50 to 13.00
Low phosphorus punchings	14.00 to 14.50
Low phosphorus plate, 12 in. and under	14.00 to 14.50
Blast Furnace Grades:	
Axle turnings	9.50 to 10.00
Cast iron borings	9.00 to 9.50
Short shoveling turnings	9.00 to 9.50
Machine shop turnings	6.75 to 7.25
Rolling Mill Grades:	
Iron rails	14.00 to 14.50
Rerolling rails	14.75 to 15.25
Cupola Grades:	
Steel rails less than 3 ft.	15.50 to 16.00
Angle bars, steel	14.25 to 14.75
Cast iron carwheels	13.00 to 13.50
Malleable Grades:	
Railroad	12.50 to 13.00
Agricultural	11.50 to 12.00
Miscellaneous:	
*Relaying rails, 56 to 60 lb.	23.00 to 25.00
*Relaying rails, 65 lb. and heavier	26.00 to 31.00
Per Net Ton	
Rolling Mill Grades:	
Iron angles and splice bars	14.00 to 14.50
Iron arch bars and transoms	19.50 to 20.00
Iron car axles	23.00 to 23.50
Steel car axles	15.50 to 16.00
No. 1 railroad wrought	11.25 to 11.75
No. 2 railroad wrought	11.00 to 11.50
No. 1 busheling	9.75 to 10.25
No. 2 busheling	5.75 to 6.25
Locomotive tires, smooth	12.00 to 12.50
Pipes and flues	8.00 to 8.50
Cupola Grades:	
No. 1 machinery cast	14.00 to 14.50
No. 1 railroad cast	13.00 to 13.50
No. 1 agricultural cast	12.50 to 13.00
Stove plate	11.00 to 11.50
Grate bars	11.25 to 11.75
Brake shoes	11.00 to 11.50

---

*Relaying rails, including angle bars to match, are quoted f.o.b. dealers' yards.

Philadelphia

Few Third Quarter Pig Iron or Steel Contracts—Plate Market Active

PHILADELPHIA, June 19.—Specifications against steel contracts are in fair volume, but consumers still show but little interest in third quarter commitments. Mills are not seeking contracts, apparently believing that 1.90c., Pittsburgh, on bars, 2.05c., Coatesville, on plates, and 2.05c., Bethlehem, on shapes, might meet with opposition from buyers. At the same time there is no desire to seek business at the present contract level of $1 a ton less, as buyers might ask for further concessions on new contracts.

Eastern Pennsylvania mills are maintaining a fair rate of operation with an average of 60 to 65 per cent of capacity. Producers of shapes report irregular business and the market continues to show a considerable range of prices. Sheet prices are unstable, sizable tonnages bringing out concessions. Galvanized sheets are generally quoted at 3.55c., Pittsburgh, but 3.50c., Pittsburgh, has become quite common on all but the smallest orders.

Foundry consumers of pig iron are accepting regular shipments against contracts, but evidently intend to cover their future requirements as they arise. Iron and steel scrap prices show further weakness and several grades are off about 50c. a ton.

Pig Iron.—Most of the current buying of foundry iron is limited to 100 and 200 ton lots for shipment early in the coming quarter. The J. L. Mott Iron Works, Trenton, N. J., is asking for 100 tons of foundry grade. The American Engineering Co., Philadelphia, in the market for 500 tons of foundry, has not yet closed. Furnaces are maintaining $20, base, eastern Pennsylvania, except in the case of the usual equalization of freight rates, and there is no evident inclination to recede from this level. Steel foundries are rather inactive and low phosphorus sales in this district seldom total more than a carload. No basic has been closed, but some small buying seems to be expected soon.

Prices per gross ton at Philadelphia:

East. Pa. No. 2 plain, 1.75 to 2.25 sil.		$20.76
East. Pa. No. 2X, 2.25 to 2.75 sil.		21.26
East. Pa. No. 1X		21.76
Basic (delivered eastern Pa.)	$19.00 to	19.50
Gray forge	19.75 to	20.25
Malleable	21.00 to	21.50
Standard low phos. (f.o.b. New York State furnace)	22.00 to	23.00
Copper bearing low phos. (f.o.b. furnace)	23.50 to	24.00
Virginia No. 2 plain, 1.75 to 2.25 sil.		24.54
Virginia No. 2X, 2.25 to 2.75 sil.		25.04

Prices, except as specified otherwise, are delivered Philadelphia. Freight rates: 76c. to $1.64 from eastern Pennsylvania furnaces; $4.54 from Virginia furnaces.

Ferromanganese.—Small consumers are still seeking 100 and 200 ton lots for third quarter delivery at $105, seaboard, but the larger users evidently have sizable stocks bought at $100, seaboard, and are in no haste to enter into contracts.

Bars.—Specifications against contracts are good and there is a moderate volume of new business. Some consumers who have been rather steady users of foreign material have returned to the domestic product recently, as imported steel no longer represents much of a saving. Current prices range from 1.85c. to 1.90c., Pittsburgh, or 2.17c. to 2.22c., delivered Philadelphia. No third quarter contracting is reported as yet.

Plates.—Eastern Pennsylvania mills report a sizable tonnage of small orders for immediate requirements and on much of this business 2.05c., Coatesville, or 2.15c., Philadelphia, is the prevailing price. Shipments against second quarter contracts continue satisfactory, but consumers have shown no interest in contracting for the coming quarter. The Pusey & Jones Co., Wilmington, is fairly well occupied with shipbuilding contracts, principally on private yachts. The American Brown Boveri Electric Corporation is reported negotiating for the sale of its shipbuilding business at Camden, N. J. The Baldwin Locomotive Works has booked some new locomotive orders, but is only operating at 15 to 20 per cent of capacity. The Pennsylvania Railroad recently closed on a few hundred tons of plates with a Pittsburgh district mill, part of its third quarter requirements.

Shapes.—The price situation is unchanged, quotations ranging from 2c., Pencoyd, or 2.06c., Philadelphia, to 2c., Bethlehem, or 2.13c., Philadelphia. Fabricated projects are still being placed at low prices and the market shows no tendency toward improvement. About 2700 tons of steel for an apartment building at Rittenhouse Square has been awarded by the United Engineering Co. to the Shoemaker Bridge Co. An outstanding project in this district is the new store for Strawbridge & Clothier, estimated as requiring close to 10,000 tons of steel. The Pennsylvania Railroad has placed a small tonnage of shapes with a Pittsburgh mill, part of its third quarter requirements.

Track Material.—Third quarter requirements of the Pennsylvania Railroad, which included 342,000 track bolts, 1,800,000 lb. of spikes and 330,000 tie plates brought out the following bids on June 15: Standard spikes, 2.80c.; copper bearing, 2.95c.; standard tie plates, $43 per ton, and heavy duty, $51; track bolts, $4.05, all f.o.b. mill. Bids of all of the 12 bidders were uniform except in the case of the Wheeling Steel Corporation, which bid 2.84½c., f.o.b. Portsmouth, Ohio, with 19c. freight allowance on the spikes and $44 per ton, f.o.b. Portsmouth, with $3.80 freight allowance on the tie plates.

Sheets.—Blue annealed are still being maintained at 2.10c., Pittsburgh, for small lots, but 2c., Pittsburgh, or 2.32c., Philadelphia, is rather general. Black sheets are generally quoted at 2.65c., Pittsburgh, or 2.97c., Philadelphia, but concessions of $1 a ton are not uncommon. Galvanized sheets range from 3.50c. to 3.55c., Pittsburgh, or 3.82c. to 3.87c., Philadelphia, and the lower quotations are becoming more common. Sheet consumers are apparently well covered on present requirements and not interested in future contracts.

Warehouse Business.—Orders are small, but in fair volume, and prices are firm, except for a reduction of 15c. per 100 lb. in the prices of black and galvanized sheets, a revision which brings them more in line with the present mill schedule. The quantity bases on black and galvanized sheets continue effective.

Imports.—In the week ended June 16, imports included 6900 tons of Algerian iron ore and a total of 994 tons of pig iron. The pig iron arrivals consisted of 849 tons of Indian, 103 tons of Dutch and 42 tons of Swedish iron. Steel arrivals at this port were as follows: Belgium, 386 tons of structural shapes and 225 tons of steel bars; France, 172 tons of structural shapes and 64 tons of steel blooms; Germany, 313 tons of skelp and 29 tons of steel scrap; Sweden, 69 tons of steel bars, 4 tons of iron bars and 3 tons of steel blooms.

Old Material.—Prices of some grades have again receded and the market as a whole shows no firmness.

Warehouse Prices, f.o.b. Philadelphia

	Base per Lb.
Plates, ¼-in. and heavier	2.50c. to 2.60c.
Plates, 3/16-in.	2.80c. to 3.00c.
Structural shapes	2.40c. to 2.60c.
Soft steel bars, small shapes and iron bars (except bands)	2.60c.
Round-edge iron	3.50c.
Round-edge steel, iron finished 1½ x 1½ in.	3.50c.
Round-edge steel, planished	4.30c.
Reinforcing steel bars, square, twisted and deformed	2.50c. to 3.00c.
Cold-finished steel, rounds and hexagons	3.35c.
Cold-finished steel, squares and flats	3.85c.
Steel hoops	3.50c.
Steel bands, No. 12 gage to 3/16-in., inclusive	3.25c.
Spring steel	5.00c.
*Black sheets (No. 24)	3.85c.
†Galvanized sheets (No. 24)	4.60c.
Blue annealed sheets (No. 10)	3.15c.
Diamond pattern floor plates—	
¼-in.	5.30c.
3/16-in.	5.50c.
Rails	3.20c.
Swedish iron bars	6.60c.

---

*For 50 bundles or more; 10 to 49 bundles, 4.10c. base; 1 to 9 bundles, 4.35c. base.

†For 50 bundles or more; 10 to 49 bundles, 4.95c. base; 1 to 9 bundles, 5.30c. base.

No. 1 heavy melting steel has not been bought lately by an eastern Pennsylvania mill, but $13.50 per ton seems to be the price idea of both buyers and sellers. Heavy breakable cast is off about 50c. a ton, based on a recent sale of about 3000 tons to a Coatesville consumer at $15 per ton and a smaller tonnage to a Harrisburg consumer at the same price. Yard grade of heavy melting steel has been sold to a Pottsville, Pa., company at $10.50 per ton.

Prices per gross ton delivered consumers' yards, Philadelphia district:

No. 1 heavy melting steel		$13.50
Scrap T rails	$13.00 to	13.50
No. 2 heavy melting steel	10.50 to	11.00
No. 1 railroad wrought	13.50 to	14.50
Bundled sheets (for steel works)		10.50
Machine shop turnings (for steel works)		10.50
Heavy axle turnings (or equivalent)	12.00 to	12.50
Cast borings (for steel works and rolling mill)		10.50
Heavy breakable cast (for steel works)	15.00 to	15.50
Railroad grate bars		11.00
Stove plate (for steel works)		11.00
No. 1 low phos., heavy, 0.04 per cent and under	17.50 to	18.00
Couplers and knuckles	14.50 to	15.00
Rolled steel wheels		15.00
No. 1 blast furnace scrap	10.00 to	10.50
Machine shop turnings (for rolling mill)	11.00 to	11.25
Wrought iron and soft steel pipes and tubes (new specifications)	12.00 to	12.50
Shafting	17.00 to	17.50
Steel axles	19.00 to	20.00
No. 1 forge fire	11.00 to	11.50
Cast iron carwheels	15.50 to	16.00
No. 1 cast	16.00 to	16.50
Cast borings (for chemical plant)	14.50 to	15.00
Steel rails for rolling	14.50 to	15.00

New York

Pig Iron Buying Subsided—Steel Specifications Hold Up

NEW YORK, June 19.—Pig iron buying has subsided, and sales in this territory totaled 7000 tons for the week. The price situation shows little change, but, with an increasing amount of business being placed for barge or barge-and-rail shipment, base quotations at furnace are more difficult to ascertain. Barge rates vary; the rate on shipments from Buffalo to New York harbor has recently ranged all the way from $1.50 to $2.50 a ton. Buffalo producers are following a consistent policy of shipping by barge and rail to New Jersey points taking a higher all-rail rate than $3.28 a ton. In many cases the all-rail rate to such destinations is $4.91. That pig iron makers propose to take advantage of the saving by the water route for winter deliveries is indicated by the fact that one Buffalo interest has arranged for storage space at Jersey City, N. J., and two others expect to store iron at Elizabethport, N. J. New England pig iron is also reaching New Jersey by water, several barge loads having recently docked at Jersey City. The American Steel & Wire Co. recently barged 3000 tons of steel-making iron from its Cleveland works to Beacon, N. Y., where it was transferred to cars for Worcester, Mass. In the past few years this company has moved 10,000 to 15,000 tons annually by this route. The General Electric Co. has closed against its inquiry for 2200 tons for Bayway, N. J., Elmira, N. Y., and its New England plants, and has also bought for Erie, Pa. The New York Central Railroad has bought 400 tons of foundry for Frankfort, N. Y., and Elkhart, Ind. The New York Air Brake Co. has placed 200 tons of low phosphorus, a carload of silvery and a tonnage of malleable for its Watertown, N. Y., plant. Silvery iron, in the 10 to 11 per cent grade, is reported to have been sold recently at $29 per ton, Buffalo.

Prices per gross ton, delivered New York district:

Buffalo No. 2 fdy., sil. 1.75 to 2.25	$20.91 to	$21.91
East. Pa. No. 2 fdy., sil. 1.75 to 2.25	20.39 to	22.52
East. Pa. No. 2X fdy., sil. 2.25 to 2.75	20.89 to	23.02
East. Pa. No. 1X fdy., sil. 2.75 to 3.25	21.39 to	23.52

Freight rates: $4.91 from Buffalo, $1.39 to $2.52 from eastern Pennsylvania.

Finished Steel.—Specifications for rolled steel, while no greater in total volume than obtained in early June, are a source of surprise considering general conditions. There is substantially no change from the situation a week ago. Chief promise at the moment in structural steel lies in further large buying for subway work.

Mill prices per lb., delivered New York: Soft steel bars, 2.19c. to 2.24c.; plates, 2.12½c. to 2.22½c.; structural shapes, 2.14½c. to 2.19½c.; bar iron, 2.14c.

Cast Iron Pipe.—Buying is rather well distributed among privately and publicly owned utilities and prices are unchanged. Southern foundries are quoting $32 to $33 per ton, base, Birmingham. Northern makers continue to quote $37.60 to $38.60 per net ton, delivered New York. The Department of Purchase, New York, will open bids June 29 on a tonnage of water pipe,

Warehouse Prices, f.o.b. New York

	Base per Lb.
Plates and structural shapes	3.30c.
Soft steel bars and small shapes	3.25c.
Iron bars	3.24c.
Iron bars, Swedish charcoal	7.00c. to 7.25c.
Cold-finished shafting and screw stock—	
Rounds and hexagons	3.40c.
Flats and squares	3.90c.
Cold-rolled strip, soft and quarter hard,	5.15c. to 5.40c.
Hoops	4.50c.
Bands	4.00c.
Blue annealed sheets (No. 10 gage),	3.85c. to 3.90c.
Long terne sheets (No. 24)	5.60c. to 5.80c.
Standard tool steel	12.00c.
Wire, black annealed	4.50c.
Wire, galvanized annealed	5.15c.
Tire steel, 1½ x ½ in. and larger	3.30c.
Smooth finish, 1 to 2½ x ¼ in. and larger	3.65c.
Open-hearth spring steel, bases	4.50c. to 7.00c.

Machine bolts, cut thread:	Per Cent Off List
¾ x 6 in. and smaller	55 to 60
1 x 30 in. and smaller	50 to 50 and 10
Carriage bolts, cut thread:	
½ x 6 in. and smaller	55 to 60
¾ x 20 in. and smaller	50 to 50 and 10
Coach screws:	
½ x 6 in. and smaller	55 to 60
1 x 16 in. and smaller	50 to 50 and 10

Boiler Tubes—	Per 100 Ft.
Lap welded, 2-in	$17.33

No. 24	3.80c. to 4.00c.
No. 26	3.90c. to 4.10c.
No. 28*	4.05c. to 4.25c.
No. 30	4.30c. to 4.50c.

Sheets, Galvanized

	Per Lb.
No. 14	4.15c. to 4.35c.
No. 16	4.00c. to 4.20c.
No. 18	4.15c. to 4.35c.
No. 20	4.30c. to 4.50c.
No. 22	4.35c. to 4.55c.
No. 24	4.50c. to 4.70c.
No. 26	4.75c. to 4.95c.
No. 28*	5.00c. to 5.20c.
No. 30	5.40c. to 5.60c.

---

*No. 28 and lighter, 36 in. wide, 20c. higher per 100 lb.

fittings, valves and hydrants. The Power & Light Corporation, Albany, N. Y., has closed on 60,000 ft. of 4 to 16-in. gas pipe. Wethersfield, Conn., has awarded 320 tons of 10-in. water pipe to the American Cast Iron Pipe Co. An inquiry in the market for export calls for 500 tons of water pipe for Hayti.

Prices per net ton, delivered New York: Water pipe 6-in. and larger, $37.60 to $38.60; 4-in. and 5-in., $42.60 to $43.60; 3-in., $52.60 to $53.60; Class A and gas pipe, $4 to $5 extra.

Coke.—Although buying of foundry coke is for the most part of carload lots, the total of such business is fairly large. Standard Connellsville foundry coke is quoted at about $3.75 per ton at the ovens and standard foundry at $2.50 to $2.75 per ton, Connellsville. Special brands of foundry grade are at $4.85 per net ton, ovens. By-product coke prices continue unchanged for foundry grade. Delivered prices of special brands of foundry coke are: To northern New Jersey, Jersey City and Newark, $8.56 per net ton; to New York and Brooklyn, $9.44 per net ton. By-product foundry coke contracts are being made for third quarter and second half and no change in price has been announced. Quotations continue at $9 to $9.40 per net ton, Newark or Jersey City, and from $10.06 to $10.29 per net ton, New York or Brooklyn.

Warehouse Business.—Most jobbers in this district report a slight improvement in the number of orders, but purchases are still small. There is a moderate demand for small lots of structural material and galvanized sheets are quite active at 4.50c. to 4.70c. per lb., base. Only small lots of black sheets are being sold at 3.80c. to 4c. per lb., base.

Old Material.—Buying prices of some grades of scrap are off slightly, and others show a tendency to decline. No. 1 heavy melting steel is unchanged at $13 per ton, delivered eastern Pennsylvania. Yard grade has been sold at $10.50 per ton to a consumer at Pottsville, Pa., and some brokers are seeking to buy at $10 per ton, delivered, while others with old contracts are still offering $10.50 per ton. Yard grade is still being shipped to Weirton, W. Va., at $14 per ton, delivered on a $5.30 freight rate. As this is delivered on a No. 1 heavy melting steel contract it is subject to a reduction of $1 to $2 per ton, but still nets the seller as much or more than he would receive on shipment to eastern Pennsylvania. Heavy breakable cast is quoted at $14.50 per ton delivered to Coatesville or Harrisburg, Pa., both consumers having recently bought at $15 per ton.

Dealers' buying prices per gross ton f.o.b. New York:

No. 1 heavy melting steel	$9.50 to $10.35
Heavy melting steel (yard)	6.50 to 7.00
No. 1 heavy breakable cast	11.00 to 12.00
Stove plate (steel works)	7.00 to 7.25
Locomotive grate bars	7.00 to 7.50
Machine shop turnings	6.00 to 6.50
Short shoveling turnings	6.00 to 6.50
Cast borings (blast furnace or steel works)	6.25 to 6.75
Mixed borings and turnings	6.00 to 6.75
Steel car axles	14.50 to 15.00
Iron car axles	23.75 to 24.75
Iron and steel pipe (1 in. dia., not under 2 ft. long)	8.25
Forge fire	6.50 to 6.75
No. 1 railroad wrought	9.50 to 10.00
No. 1 yard wrought, long	8.00 to 8.50
Rails for rolling	10.00 to 10.50
Cast iron carwheels	11.00 to 11.50
Stove plate (foundry)	8.50 to 9.00
Malleable cast (railroad)	10.00
Cast borings (chemical)	10.75 to 11.25

Prices per gross ton, delivered local foundries:

No. 1 machinery cast	$14.00 to $15.00
No. 1 heavy cast (columns, building materials, etc.), cupola size	12.00 to 13.00
No. 2 cast (radiators, cast boilers, etc.)	11.50 to 12.50

An addition of 15 ovens to the by-product coke plant of the Central Alloy Steel Corporation, Massillon, Ohio, will be built by the Koppers Construction Co., Pittsburgh. With the completion of the new ovens the plant will comprise 63 Koppers-Becker ovens.

E. Arthur Tutein, Inc., Boston and New York, broker in pig iron and coke, has closed its Philadelphia office.

Cleveland

Steel Specifications Lighter—Sheets Remain Notably Weak

CLEVELAND, June 19.—The demand for structural steel has slowed down somewhat but is holding up well for June. Specifications are lighter from several of the automobile companies in the Detroit territory, which are curtailing production. This retrenchment accounts in most part for the decreased demand as consuming industries in this territory are keeping up to recent fairly good operations. Forge shops and other makers of automobile parts in this territory have made no curtailment in production. Consumers are still refraining from taking interest in third-quarter contracts. Consequently the price advance to 1.90c., Pittsburgh, on steel bars, plate and structural material remains untested and buyers lack confidence that the advance will hold. Meanwhile Cleveland mills have taken some steel bar business for the third quarter at their current price of 1.85c., Cleveland, although they are not making this an open market quotation. Some business in sheets and strip steel for July shipment was placed by automobile companies in the Detroit territory during the week. These are adhering to the policy they have rather generally followed this year by buying only for a month's requirements. Orders against contracts from consumers in other fields are for small lots. Consumers are taking only what they need and the price advance has not yet had the effect of driving in specifications. Structural inquiry is fair. The Cleveland Union Terminals Co. interests today issued an inquiry for New York Central and Nickel Plate railroad bridge and grade crossing elimination work in Cleveland. This, it is estimated, will require 15,000 to 20,000 tons of structural steel.

Pig Iron.—There is a steady volume of sales of foundry and malleable iron for the third quarter, and orders recently taken include lots running up to 3000 to 4000 tons. Cleveland interests sold 23,000 tons during the week. While buying is well scattered, little third quarter business has as yet come from the automotive industry. Following pressure on local furnaces for lower prices and a weakening in the Valley district, Cleveland prices for local delivery have softened to the extent that foundry and malleable grades are now available at $17.50, or a concession of 50c. a ton. Valley iron at $16.75, furnace, costs the Cleveland consumer $18.51, delivered, or virtually the same as local iron bought at $18, furnace. The local market is inactive, and sellers state that they have as yet made no sales at the reduced price. One producer is still asking $18. The Lake furnace price for outside shipment is unchanged at $16.25 to $17, except in Michigan, where $17.50, furnace, is commonly quoted. While basic iron is untested, producers are making an effort to get the market back on a $16 basis. Shipments are holding up well. While one producer reports some falling off this month, shipments by other furnaces are holding up to the May volume. Another cargo of Cleveland iron was shipped by water to Milwaukee during the week. It is stated that this iron was sold before the recent price reduction in Chicago territory.

Prices per gross ton at Cleveland:

N'th'n No. 2 fdy., sil. 1.75 to 2.25	$18.00 to $18.50
Southern fdy., sil. 1.75 to 2.25	22.00
Malleable	18.00 to 18.50
Ohio silvery, 8 per cent	28.00
Basic Valley furnace	$15.35 to 15.50
Standard low phos., Valley furn'ce	26.50

Prices, except on basic and low phosphorus, are delivered Cleveland. Freight rates: 50c. from local furnaces; $3 from Jackson, Ohio; $6 from Birmingham.

Semi-Finished Steel.—Specifications show a decline, particularly for sheet bars. A local maker is not yet naming prices for the third quarter. The open market quotation for sheet bars, billets and slabs is $33, Cleveland, but some concessions are being made in quoting delivered prices and absorbing freight charges.

Sheets.—There has been a moderate slowing down in the demand for sheets from the automotive industry. While a few contracts for blue annealed sheets have been taken for the third quarter at 2c., Pittsburgh, most consumers who are buying for future delivery are restricting their purchases to July requirements. The market in this territory is very dull. Prices continue weak but are no worse than they have been except possibly on galvanized sheets, which have been offered at as low as 3.45c., Valley mill. Jobbers are still asking 3.60c., mill, for car lots but are finding it increasingly difficult to get that price. Blue annealed sheets are rather commonly offered at 1.90c., Pittsburgh, although some producers will not shade 2c. Black sheets are holding rather steady at 2.65c., Pittsburgh. Auto body sheets continue to move well and are firm.

Strip Steel.—Some of the mills have arranged with larger consumers to take care of their requirements for the third quarter at the prices that prevailed during the first and present quarters, thus establishing the market at around 1.75c., Pittsburgh, for wide strip. The demand has slackened considerably and quite a number of consumers have enough strip coming on contracts to carry them well into the third quarter. The demand for cold rolled strip has declined. Users are willing to take third-quarter contracts at 2.75c., Cleveland, but consumers are as yet showing no interest in contracts.

Old Material.—The supply of scrap is more plentiful at the quoted prices than recently, and to that extent the market has a weaker tone. No new demand came from the mills during the week, and there is very little buying by dealers. Dealers who recently paid $15.75 for high-grade heavy melting steel for delivery to a Cleveland mill are now able to buy the same grade at $15.50 to $15.60. For other Cleveland mills they are paying $13.25. Blast furnace scrap seems plentiful at $9.25 to $9.35. No. 1 cast scrap on cars is not bringing above $16.50. With no local demand, machine shop turnings have shown a further decline of 50c. a ton.

Prices per gross ton, delivered consumers' yards:

Basic Open-Hearth Grades		
No. 1 heavy melting steel	$13.00 to	$13.25
No. 2 heavy melting steel	12.50 to	12.75
Compressed sheet steel	12.50 to	13.00
Light bundled sheet stampings	11.50 to	11.75
Drop forge flashings	11.50 to	11.75
Machine shop turnings	6.50 to	7.00
No. 1 railroad wrought	11.50 to	12.00
No. 2 railroad wrought	13.50 to	13.75
No. 1 busheling	11.00 to	11.25
Pipes and flues	9.00 to	9.50
Steel axle turnings	12.50 to	13.00
Acid Open-Hearth Grades		
Low phosphorus forging crops	16.50 to	17.00
Low phosphorus, billet, bloom and slab crops	17.00 to	17.50
Low phosphorus sheet bar crops	16.50 to	17.00
Low phosphorus plate scrap	16.00 to	16.50
Blast Furnace Grades		
Cast iron borings	9.25 to	9.50
Mixed borings and short turnings	9.25 to	9.50
No. 2 busheling	9.25 to	9.50
Cupola Grades		
No. 1 cast	16.25 to	16.75
Railroad grate bars	11.00 to	12.00
Stove plate	12.00 to	12.50
Rails under 3 ft.	16.75 to	17.25
Miscellaneous		
Railroad malleable	15.00 to	15.50
Rails for rolling	16.25 to	16.50

Reinforcing Bars.—Contracts for 1700 tons for the Cleveland Union Terminal Co. work, for which the Aronberg Fried Co., New York, has the general contract, was awarded during the week. It is understood that this business as well as some other lots placed recently have been taken at quite a concession from the 1.85c., Cleveland, price. Rail steel bars are unchanged at 1.75c., mill.

Warehouse Prices, f.o.b. Cleveland

	Base per Lb.
Plates and structural shapes	3.00c.
Soft steel bars	3.00c.
Reinforcing steel bars	2.25c. to 2.75c.
Cold-finished rounds and hexagons	3.65c.
Cold-finished flats and squares	4.15c.
Hoops and bands	3.65c.
Cold-finished strip	*5.95c.
Black sheets (No. 24)	3.75c.
Galvanized sheets (No. 24)	4.40c. to 4.50c.
Blue annealed sheets (No. 10)	3.25c.
No. 9 annealed wire, per 100 lb.	$2.85
No. 9 galvanized wire, per 100 lb.	3.30
Common wire nails, base per keg	2.85

*Net base, including boxing and cutting to length.

Alloy Steel Bars.—With the slowing down of the automotive industry, specifications have declined this month. Most consumers in this territory have placed contracts for the third quarter at the present prices, to which there seems to be very little objection.

Bolts, Nuts and Rivets.—Demand for bolts and nuts continues fair. Rivets are moving somewhat better than last month. Many buyers have placed contracts for the third quarter at the present price, which has been reestablished for that delivery.

Coke.—The foundry coke market is dull, new demand being confined to small lots. Prices are unchanged at $3.50 to $4.85, ovens, for Connellsville foundry coke. Ohio by-product coke is quoted at $7.75, Painesville, for June shipment.

Light-Weight Oil-Electric Locomotive in Service

Recently the Long Island Railroad put into service the first light-weight oil-electric switcher locomotive built in the United States. It is capable of producing 600 hp., weighs only 85 tons and burns the cheapest grades of fuel oil. It is said that what a steam engine will do on a ton of coal this new engine will do on 10 gal. of oil.

It has been recognized for some time that the oil engine can produce a given amount of power at a much lower cost than any other type of engine. This locomotive has not only that feature, but it is lighter and speedier than the oil-burning engines which have been in use previously. It operates at 800 r.p.m. maximum, and the weight per brake horsepower is 283½ lb.

The locomotive consists of two cabs normally coupled and operated as a single unit, but capable of individual service if desired. The combined unit, 47 ft. long, is geared for a maximum speed of 34 miles an hour, though speeds of more than 80 miles an hour can be secured with this type of motive power in passenger locomotives.

Each cab contains a 300-hp., six-cylinder oil engine, and each engine drives a 210-kw. electric generator, which furnishes power to two traction motors. The generator supplies direct current at 750 volts when operated at normal high speed. It not only supplies power for the traction motors, but also starts the oil engine, receiving 64-volt power from a storage battery, and charges the battery while idling.

The locomotive also solves one of the most difficult problems of oil-electric design, that of stalling when the demands upon the engine are too sudden. The use of a variable-speed governor and development of what is known as automatic torque-governor control permit all the power developed by the engine to be applied at all times, even when starting or pulling heavy loads at slow speeds. The engine and electric equipment were built by the Westinghouse Electric & Mfg. Co. and the mechanical parts were supplied by the Baldwin Locomotive Co.

C. O. Bartlett & Snow Co., Cleveland, manufacturer of conveying equipment, has opened a branch office at 505 First National Bank Building, Chicago, in charge of S. G. Artingstall, Jr., formerly chief engineer J. C. Buckbee Co., Chicago; vice-president and chief engineer United Engineering Co., and later district manager for the Stearns Conveyor Co., Cleveland.

Employment in May showed a 2 per cent gain over April, according to the Monthly Labor Barometer of the National Metal Trades Association, Chicago. This was in contrast with a drop of 3 per cent between April and May, 1927. Employees reported for May are given as 646,202, against 591,353 from the same establishments a year ago.

San Francisco

Heavy Awards of Cast Pipe—1144 Tons of Line Pipe Placed in East

SAN FRANCISCO, June 16 (*By Air Mail*).—Hand-to-mouth buying continues to prevail in the iron and steel markets on the Pacific Coast, and bookings this week were by no means heavy. Outstanding among the developments of the week were the placing of a carfloat by the Western Pacific Railroad in San Francisco, requiring 525 tons of plates and 275 tons of shapes, with the Moore Drydock Co. and the booking by the United States Cast Iron Pipe & Foundry Co. of 1800 tons of cast iron pipe for a sewer project in Los Angeles and 1044 tons for the city of Tacoma, Wash.

Building operations in the Los Angeles district continue on a par with activity last year. Up to and including June 6, permits issued numbered 688 with an estimated valuation of $2,747,245, compared with 664 permits and a valuation of $1,932,298 for the corresponding period in June, 1927. Total permits issued so far this year are approximately $5,000,000 behind the corresponding total last year, the total this year being $45,559,381, compared with $50,770,100 for 1927.

Pig Iron.—Little improvement is noted in the rate of foundry operations, and sales and inquiries are confined to small tonnages. No change in quotations has occurred.

Prices per gross ton at San Francisco:

*Utah basic	$25.00 to $26.00
*Utah foundry, sil. 2.75 to 3.25	25.00 to 26.00
**Indian foundry, sil. 2.75 to 3.25	24.00 to 25.00
**German foundry, sil. 2.75 to 3.25	24.25

*Delivered San Francisco.
**Duty paid, f.o.b. cars San Francisco.

Bars.—Most reinforcing steel bar awards continue to consist of lots ranging from 20 to 40 and 50 tons. Larger awards include 150 tons for a cement plant at Seattle, Wash., taken by the Pacific Coast Steel Co., and 147 tons for a viaduct at Mount Vernon, Wash., booked by the Northwest Steel Rolling Mills. Bids were opened this week on 120 tons for the Cahe Creek bridge at Sacramento, Cal., and bids will be opened on July 5 for 400 tons for paving in Ventura County, California. Out-of-stock prices in the bay district have not improved and 1.80c. to 2c. is still the range. Demand for merchant bar material is not heavy, and most orders coming to hand call for carload lots comprising numerous sizes.

Plates.—Only one project of importance was reported this week. This was a carfloat for the Western Pacific Railroad, requiring 525 tons. Bids have been opened on a carfloat for the Santa Fe Railroad at San Francisco, calling for 525 tons of plates and 275 tons of shapes, the Moore Drydock Co. being low bidder. Demand for oil storage tanks and riveted-plate pipe lines is nil, and little contemplated tonnage is in sight. Quotations cannot be considered firm and range from 2.20c. to 2.30c., depending upon the desirability of the specification.

Shapes.—Structural shape awards fell off from the total of the previous week, less than 2600 tons being reported placed. Included among the lettings was 900 tons for a headframe for a mine in Nevada, booked by the Kansas City Structural Steel Co. New inquiries include 1500 tons for the Medico-Dental Building, Spokane, Wash. Plain material remains firm at 2.35c., c.i.f. Coast ports.

Cast Iron Pipe.—Pipe awards were the heaviest in over eight weeks and aggregated 2956 tons. An unnamed interest took 113 tons of 4 to 8-in. Class B pipe for Vancouver, B. C. The United States Cast Iron Pipe & Foundry Co. secured 1799 tons of 30 and 36-in. Class B pipe for the Venice outfall sewer at Los Angeles and 1044 tons of 8 to 24-in. Class C pipe for Tacoma, Wash. Pending business is of limited proportions, less than 800 tons being up for figures. The only new inquiry of the week is 300 tons of 4 to 10-in. Class B pipe for Burbank, Cal.

Warehouse Prices, f.o.b. San Francisco

	Base per Lb.
Plates and structural shapes	3.15c.
Soft steel bars	3.15c.
Small angles, $\frac{3}{16}$-in. and over	3.15c.
Small angles, under $\frac{3}{16}$-in.	3.55c.
Small channels and tees, ¾-in. to 2¾-in.	3.75c.
Spring steel, ¼-in. and thicker	5.00c.
Black sheets (No. 24)	4.95c.
Blue annealed sheets (No. 10)	3.90c.
Galvanized sheets (No. 24)	5.50c.
Structural rivets, ½-in. and larger	5.65c.
Common wire nails, base per keg	$3.40
Cement coated nails, 100-lb. keg	3.40

Steel Pipe.—Movement of standard tubular products and oil country goods during the past two or three months has been limited, and the market is quieter than it has been in years. The Smith-Booth-Usher Co. took 193 tons of ½ to 4-in. standard pipe for the city of Los Angeles. The Southern California Gas Co. has placed 1144 tons of 12-in. line pipe with an unnamed Eastern mill, the contract for the installation of the pipe going to the Virginia Pipe Line Contracting Co.

Coke.—Demand for foundry coke is limited and reflects the quiet condition noted in the pig iron market. A shipment of 4500 tons of English beehive and by-product coke is due to arrive early next month.

St. Louis

Pig Iron Buying Conservative—Plate Mill Running Full

ST. LOUIS, June 19.—Melters seem to lack confidence in the pig iron market and are buying in the smallest possible quantities. Carload orders were the rule during the last week. Of 1200 tons of foundry grades sold by the St. Louis Coke & Gas Corporation, the largest order was 500 tons. One company that ordinarily buys 1000 tons at a time placed an order for a carload. There is much pig iron to be purchased for third quarter consumption, and it is expected that demand will be more active soon. The Granite City company has blown out the older of its two furnaces for relining.

Prices per gross ton at St. Louis:

No. 2 fdy., sil. 1.75 to 2.25, f.o.b. Granite City, Ill.	$19.00
Northern No. 2 fdy., delivered St. Louis	20.16
Southern No. 2 fdy., delivered	$19.92 to 20.42
Northern malleable, delivered	20.16
Northern basic, delivered	20.16

Freight rates: 81c. from Granite City to St. Louis; $2.16 from Chicago; $4.42 from Birmingham.

Coke.—Domestic grades are fairly active among dealers. Buying of foundry coke is light, following a lessening of the melt in the district.

Finished Steel.—Following the establishment of lower prices on sheets, the Granite City Steel Co. reports an improvement in demand, especially for galvanized sheets, and has found it necessary to put on another galvanizing pot. This mill continues to experience a fair demand for black sheets and blue annealed sheets, and business in plates is sufficient to permit 100 per cent operations in its plate department. Railroad buying is light. A building for the American Railway Express Co., St. Louis, requiring 1000 tons, is the only structural project of note pending.

Warehouse Prices, f.o.b. St. Louis

	Base per Lb.
Plates and structural shapes	3.25c.
Bars, soft steel or iron	3.15c.
Cold-finished rounds, shafting and screw stock	3.75c.
Black sheets (No. 24)	4.45c.
Galvanized sheets (No. 24)	5.25c.
Blue annealed sheets (No. 10)	3.60c.
Black corrugated sheets (No. 24)	4.50c.
Galvanized corrugated sheets	5.30c.
Structural rivets	3.75c.
Boiler rivets	3.75c.
	Per Cent Off List
Tank rivets, $\frac{7}{16}$-in. and smaller, 100 lb. or more	70
Less than 100 lb.	65
Machine bolts	60
Carriage bolts	60
Lag screws	60
Hot-pressed nuts, squares, blank or tapped, 200 lb. or more	60
Less than 200 lb.	50
Hot-pressed nuts, hexagons, blank or tapped, 200 lb. or more	60
Less than 200 lb.	50

Old Material.—What little life there was in the market during the past week was accounted for by purchases of miscellaneous rails by a district mill at $13 per ton. The orders, estimated as totaling 3000 tons, were distributed among several dealers, and call for delivery through the next 60 days. Iron car axles, which are scarce, have advanced, now ranging from $25 to $25.50. Stove plate has declined 25c. Railroad lists include Rock Island, 5500 tons; Chicago, Milwaukee, St. Paul & Pacific, 2550 tons; Gulf Coast Lines, 1450 tons; Texas & Pacific, 1000 tons; Missouri-Kansas-Texas, 500 tons of 60-lb. relaying rails.

Dealers' buying prices, per gross ton, f.o.b. St. Louis district:

Heavy melting steel	$11.00 to	$11.50
No. 1 locomotive tires	12.00 to	12.50
Heavy shoveling steel	11.00 to	11.50
Miscellaneous standard-section rails, including frogs, switches and guards, cut apart	12.25 to	12.75
Railroad springs	13.50 to	14.00
Bundled sheets	8.50 to	9.00
No. 2 railroad wrought	11.25 to	11.75
No. 1 busheling	9.75 to	10.25
Cast iron borings	9.00 to	9.50
Iron rails	13.00 to	13.50
Rails for rolling	13.00 to	13.50
Machine shop turnings	7.00 to	7.50
Steel car axles	17.50 to	18.00
Iron car axles	25.00 to	25.50
Wrought iron bars and transoms	21.00 to	21.50
No. 1 railroad wrought	10.00 to	10.50
Steel rails, less than 3 ft.	15.00 to	15.50
Steel angle bars	12.00 to	12.50
Cast iron carwheels	13.25 to	13.75
No. 1 machinery cast	13.00 to	13.50
Railroad malleable	11.50 to	12.00
No. 1 railroad cast	13.00 to	13.50
Stove plate	11.00 to	11.50
Agricultural malleable	12.00 to	12.50
Relaying rails, 60 lb. and under	20.50 to	23.50
Relaying rails, 70 lb. and over	26.50 to	29.00

Birmingham

Seasonal Drop in Steel Demand Smaller Than Usual—Stack to Be Lighted

BIRMINGHAM, June 19.—Producers of pig iron have not yet opened their books for third quarter. Some consumers are extending present arrangements to fill out the quarter, all orders being in small lots. Only a small part of present bookings will extend into July. Shipments continue active and ahead of output. Quotations on No. 2 foundry remain on a $16 base. The Tennessee company plans to blow in one of its two new furnaces at Fairfield, Ala., this week. The other is to be blown in a little later. Each has a daily capacity of 600 tons. At present, furnace operations in the district are the same as for the past three weeks. Eighteen stacks are in blast, which includes 10 on foundry, six on basic, one on recarburizing iron and one on ferromanganese.

Prices per gross ton f.o.b. Birmingham district furnaces:

No. 2 foundry, 1.75 to 2.25 sil.		$16.00
No. 1 foundry, 2.25 to 2.75 sil.		16.50
Basic	15.00 to	16.00

Finished Steel.—New business continues to develop at an even rate. The recession toward a dull July is less pronounced than for several years. Forward bookings are in good volume. It is understood that one of the larger companies has placed a portion of its plant on double time. Quotations are unchanged, and some concessions are still being made from time to time. Demand for structural steel is below normal, and new business is light. Bar manufacturers are doing a fair amount of current business in small-lot orders of 15 to 75 tons. The Tennessee company is now operating seven open-hearth furnaces at Ensley, Ala., instead of six. Five are being worked at Fairfield, and the Gulf States Steel Co. continues to run four at Alabama City, Ala.

Cast Iron Pipe.—Demand has dropped slightly from the level of the past few weeks. There is little municipal business and no new projects of consequence have developed lately. The market is receiving its support from private lettings in small lots and, as a whole, is duller than at this time last year. Prices remain at $32 to $33 per net ton, Birmingham, for 6-in. and larger. Shipments have been large for several weeks, and unfilled tonnage is being reduced steadily.

Coke.—Foundry coke demand has declined. Foundries are reducing inventories for the end of the fiscal year. Shipments on contracts are off a little. Prices are unchanged, the quotations being $5 per net ton, Birmingham, for both spot and contract business.

Old Material.—Outside of a few inquiries for No. 1 cast and No. 1 railroad wrought, there is no interest in the market. Sales are the smallest in the past year or so. Quotations are unchanged, the market being too weak to afford any test of prices.

Prices per gross ton delivered Birmingham district consumers' yards:

Heavy melting steel	$8.50 to	$9.00
Scrap steel rails	11.00 to	11.50
Short shoveling turnings	7.50 to	8.00
Cast iron borings		8.00
Stove plate		13.50
Steel axles	19.00 to	20.00
Iron axles	20.00 to	21.00
No. 1 railroad wrought	10.00 to	10.50
Rails for rolling		13.00
No. 1 cast		14.25
Tramcar wheels	12.50 to	13.50
Cast iron carwheels	12.00 to	13.00
Cast iron borings, chemical	13.50 to	14.00

Canada

Steel Business 10 Per Cent Ahead of Last Year—Scrap Prices Weaker

TORONTO, ONT., June 19.—Improvement in output and in business continues to feature activities in the iron and steel industry of this country. The betterment so far this year is slightly more than 10 per cent, compared with a year ago.

The value of iron and steel and their products manufactured in Canada during 1927 was $515,971,445, an increase of $10,782,596 over the previous year, at $505,188,849, according to a recent statement by the Dominion Bureau of Statistics. The value for 1927 was the highest since 1920.

Pig Iron.—Increased interest in this market is gradually making itself felt, especially with regard to the placing of advance delivery contracts. With only a few days to go before the beginning of third quarter, melters are inquiring for foundry and malleable iron to take care of needs for that period. Among contracts already closed are several for 1000 tons and a few of 500 tons for delivery during the second quarter. In a normal year the consumption of foundry and malleable pig iron in this country is distributed as follows: Ontario, 175,000 tons; Quebec, 50,000 tons; Nova Scotia, 10,000 tons; New Brunswick, 4000 tons; the other five Provinces, 5000 tons collectively. Except for the introduction of a spread of 50c. a ton on basic iron, prices are unchanged for the week.

Prices per gross ton:

Delivered Toronto		
No. 1 foundry, sil. 2.25 to 2.75	$23.10 to	$23.60
No. 2 foundry, sil. 1.75 to 2.25	23.10 to	23.60
Malleable	23.10 to	23.60
Delivered Montreal		
No. 1 foundry, sil. 2.25 to 2.75	24.50 to	25.00
No. 2 foundry, sil. 1.75 to 2.25	24.50 to	25.00
Malleable	24.50 to	25.00
Basic	23.50 to	24.00
Imported Iron at Montreal Warehouse		
Summerlee		33.50
Carron		33.00

Structural Steel.—The strike among structural steel workers in the Toronto and Montreal districts continues to retard building operations, but at the moment it appears that a settlement will shortly be brought about. The strike has not only affected sales for the past month but has also held up deliveries on a number of large structures. Building programs continue to be announced and those in prospect now involve approximately 25,000 tons of steel. Approximately 3000 tons of reinforcing bars will be required for a proposed 12-story structure in Toronto for Wellington Buildings, Ltd.; 3000 tons of structural steel and 1000 tons reinforcing bars are called for in a storage warehouse at Montreal, for which Perrault & Gadbois, Themis Building, are preparing plans; 1000 tons of structural steel will be required for a rink and exhibition building at Moncton, N. B., for the Moncton Exhibition Co.; 4000 tons of reinforcing bars are specified in a medicinal and dental block for Baker, Stevens & Co. at Vancouver, B. C.

Old Material.—Improvement in demand features the market. While some inquiry for third quarter is coming out, no large contracts have yet been placed, and the greater part of current business is for spot delivery. Montreal dealers have made a general revision in prices. Wrought iron and steel axles are being purchased at $1 a ton higher, and standard carwheels have advanced $1.50 per ton. With these exceptions, the Montreal market is weaker. Heavy melting steel, formerly purchased by dealers at $8, is down to $7; turnings have been reduced from $6 to $5, and other grades have declined $1 to $1.50 per gross ton. While Toronto prices remain unchanged, a spread of 50c. a ton has been introduced by local dealers in their purchases, the change being 50c. per ton under previous quotations on all grades.

Dealers' buying prices:

Per Gross Ton	Toronto	Montreal
Heavy melting steel	$9.00	$7.00
Rails, scrap	10.00	9.00
No. 1 wrought	9.00	11.00
Machine shop turnings	7.00	5.00
Boiler plate	7.00	6.00
Heavy axle turnings	7.50	6.50
Cast borings	7.50	5.00
Steel turnings	7.00	5.50
Wrought pipe	5.00	5.00
Steel axles	14.00	20.00
Axles wrought iron	16.00	22.00
No. 1 machinery cast	....	16.00

Stove plate	9.00	....
Standard carwheels	13.00	....
Malleable scrap	13.00	....

Boston

Pig Iron Sales Lighter Than in May—Foundry Melt Receding

BOSTON, June 19.—Pig iron sales in New England in the first half of this month fell considerably short of those for the corresponding half of May. Those for the past week approximated 4500 tons, practically all for third quarter and largely for delivery from Buffalo, eastern New York and New England furnaces, with the major portion of the business going to the Mystic company. Included in the transactions was a small tonnage of Indian No. 2X iron at $21.75 a ton on dock here, duty paid, or $23.75 a ton, delivered, and odd lots of western Pennsylvania and Alabama irons at premiums over New York and New England brands. An unconfirmed report is that a Buffalo stack recently offered No. 2X iron at less than $16 a ton, furnace, to meet competition from Eastern producers. The Springfield Foundry Co., Springfield, Mass., is in the market for 100 tons of No. 1X iron for July delivery—the only new open inquiry. Several foundries, however, are privately negotiating for 500 tons to 600 tons for third and fourth quarter delivery, but give no intimation when purchases will be made.

Prices of foundry iron per gross ton delivered to most New England points:

Buffalo, sil. 1.75 to 2.25	$20.91 to $21.91
Buffalo, sil. 2.25 to 2.75	21.41 to 22.41
East. Penn., sil. 1.75 to 2.25	23.15 to 23.65
East. Penn., sil. 2.25 to 2.75	23.65 to 24.15
Virginia, sil. 1.75 to 2.25	25.71
Virginia, sil. 2.25 to 2.75	26.21
Alabama, sil. 1.75 to 2.25	22.91 to 24.77
Alabama, sil. 2.25 to 2.75	23.41 to 25.27

Freight rates: $4.91 from Buffalo, $3.65 from eastern Pennsylvania, $5.21 all rail from Virginia, $6.91 to $8.77 from Alabama.

Warehouse Prices, f.o.b. Boston

Coke.—The outstanding feature of the situation in by-product foundry coke is continued activity in domestic sizes. Dealers are buying more heavily, and there is every indication 1928 will be a record-breaking year. Unquestionably, there is increasing public interest in coke and a decreasing use of anthracite coal. Specifications against foundry coke contracts are easing off, due to a seasonal letdown in the foundry melt of iron. Shipments are still being made at $11 a ton, delivered, within a $3.10 freight rate zone.

Shapes and Plates.—Some recession in contracting for third quarter is reported by mill representatives. Most mills are protecting preferred customers on tonnages, and the 1.90c. per lb., base Pittsburgh, is not obtained as often as 1.85c.

Bars.—Domestic steel bars continue in fairly good demand for third quarter, and there is a fair volume of spot business from small users. The general asking price is 1.90c. per lb., base Pittsburgh, but it is being shaded when competition is keen. Price stability is lacking on reinforcing bars, so far as local distributers are concerned, owing to offerings of imported stock at materially lower prices. An order at 2.40c. per lb., base, from stock is rare.

Fabricating Work.—As anticipated, most of the closed shops during the past week signed up with iron workers for $1.37½ per hour, contrasted with $1.25, heretofore. Now that the labor situation is clearer, steel fabricating jobs that were held back are beginning to come out. The first to appear have been small, yet numerous. Round tonnages are expected shortly, although common opinion is that big work is over temporarily for Greater Boston, at least. Despite the advance in wages, competition among fabricators is keen and low prices were quoted in the past week. In this connection, it should be noted that practically all of the bridge fabricators and many of the large ones specializing on other work are operated on the open shop basis.

Warehouse Business. — Business holds up rather well, but without an increase in the average size of orders. Foreign material is still a factor in this market, although less so than in January or February; yet, when prices are cut, it usually is on imported stock. The steadiness of domestic mill prices tends to stabilize stock prices; yet here and there a shading of list prices is reported by warehouses, when the tonnage is attractive or payment is prompt. Talk of an advance in wire nails appears to have disappeared.

Old Material.—The market is quiet, with the tendency of prices downward. Exports from Boston have been held up temporarily, owing to a lack of steamer space, and there is an accumulation of material on dock. Additional purchases of No. 1 steel are being made at $9 and $9.25 a ton, on dock, however, and of yard steel at $8.50 to $8.75, these prices being a shade easier. The market for yard steel for Pennsylvania delivery is decidedly soft, prices being 50c. to $1 a ton lower than a fortnight ago. This grade is selling at $5.50 to $5.85 a ton, on cars, shipping point. No. 2 steel, commonly shipped as yard steel, is around $7.30. The top price on heavy melting steel is $8.50 a ton on cars, shipping point, a decline of 50c. from last week. A Worcester, Mass., consumer is buying skeleton at $9 to $9.50 a ton, delivered, for which dealers are paying around $7 to $7.25, on cars, shipping point. In contrast with the general market, chemical borings are more active, owing to freer shipments to New Jersey.

Buying prices per gross ton, f.o.b. Boston rate shipping points:

No. 1 heavy melting steel	$8.00 to $8.50
Scrap T rails	8.00 to 8.50
Scrap girder rails	7.50 to 8.00
No. 1 railroad wrought	9.00 to 9.50
No. 1 yard wrought	7.00 to 7.50
Machine shop turnings	5.50 to 5.75
Cast iron borings (steel works and rolling mill)	5.50 to 5.75
Bundled skeleton, long	7.00 to 7.25
Forge flashings	6.50 to 7.00
Blast furnace borings and turnings	5.50 to 5.75
Forge scrap	6.00 to 6.25
Shafting	13.50 to 14.00
Steel car axles	14.50 to 15.00
Wrought pipe 1 in. in diameter (over 2 ft. long)	7.00 to 7.50
Rails for rolling	9.50 to 10.00
Cast iron borings, chemical	10.00 to 10.25

Prices per gross ton delivered consumers' yards:

Textile cast	$13.25 to $13.50
No. 1 machinery cast	14.00 to 14.50
No. 2 machinery cast	12.50 to 13.50
Stove plate	10.00 to 10.50
Railroad malleable	13.50 to 14.50

Detroit

Impressive Gain in Automobile Output—Record Volume of Building Contracts

DETROIT, June 19.—On the basis of figures of June 2, which covered only five of the automobile companies in this territory, it was shown that May production exceeded that for April by approximately 5 per cent. At that time it was expected that when all the figures were available a gain of at least 5 per cent would be shown for the entire group. This proved to have been quite conservative.

With figures now available for 12 motor car builders, including the Cadillac, Chevrolet, Dodge, Ford, Graham-Paige, Hudson-Essex, Hupp, Oakland-Pontiac, Olds, Packard, Reo and Studebaker companies, total production for May is shown to have been 325,055 units, against 298,283 for April, a gain of 26,772 units, or 9 per cent.

Eliminating those companies which did not show representative figures in 1927, May output this year made a gain of 43,595 units, or 23 per cent, over that of May, 1927.

The Cadillac and LaSalle units turned out in May, 1928, totaled 3772. This, incidentally, was the largest May production in the history of the Cadillac Motor Car Co., and, while retail deliveries for last month are not completely reported as yet, they are expected to run between 4500 and 4800—also a new record.

The Chevrolet Motor Co. set a new record for May, with production of 140,700 units, compared with 135,832 in April and 115,600 in May of last year. Output for the first five months of this year totaled 651,000 units, against 513,000 in 1927.

Production by Dodge Brothers, Inc., for the first five months of this year was 102,560 units—that for the same period of 1927, 83,781 units.

Output by the Ford Motor Co. in May was approximately 50,000 units, or 20,000 ahead of the month previous. Local plants of the Ford Motor Co. added 893 employees in the past week, bringing the total to 116,324, which sets a new high record and may be compared with 110,000 employees at peak production of Model T cars in 1926 and with 52,000 employees at the low point in the summer of 1927.

The Graham Paige Motors Corporation shipped its 30,000th car June 1, following a production of 8509 units in May. Output so far this year has been 2.8 times the total for the same period of last year and 8035 units in excess of the entire 1927 production.

The Oakland Motor Car Co., Pontiac, Mich., turned out 25,674 units last month, an increase of 265 over May of 1927, but a decrease of 1387 units from April of this year. The Oakland-Pontiac plant is one of the three organizations that showed a decline in May from the production of April, the other two being the Dodge and Studebaker companies. The Olds Motor Works, Lansing, Mich., produced 11,716 units in May, compared with 3485 for the same month in 1927 and 11,089 units in April of the current year. The Studebaker Corporation, South Bend, Ind., produced only 13,253 units in May, against 14,500 during the previous month and 11,902 units in May, 1927. May output of the Willys-Overland Co., Toledo, Ohio, was 44,559 units, compared with 27,564 for the same month in 1927.

The report of the Employers Association of Detroit shows still another increase in Detroit employment—a gain of 3138—bringing the total to 263,470. These figures cover the payrolls of companies whose employees constitute about two-thirds of the city's working population. The corresponding figure of 1927 was 204,966 persons, or 58,504 less than the present time.

May building contracts in Detroit amounted to $15,639,000, the highest May figure ever recorded. This is 20 per cent above the figure for April of this year and 24 per cent above that for May of 1927.

In the steel market, mill prices on automobile body sheets remain at 4c., Pittsburgh, and on blue annealed sheets at 2c., Pittsburgh. Cold-finished bars are bringing 2.20c., Pittsburgh. Hot-rolled strips, 3 in. and narrower, range from 2.20c. to 2.30c., Pittsburgh; hot-rolled strips, 3 to 6 in. wide, from 1.85c. to 2.10c., Pittsburgh, and 6 in. and wider strip, 1.75c. to 1.90c., Pittsburgh. Structural bars, plates and shapes remain at 1.85c. to 1.90c., Pittsburgh.

Prices on some grades of old material in this district registered further declines during the week, notably long turnings, which recorded a drop of 75c. per ton and flashings 25c. per ton. The market generally shows no sign of strength. The few sales recorded are made near the low of the range.

Dealers' buying prices per gross ton f.o.b. cars, Detroit:

Heavy melting and shoveling steel	$11.00 to $11.50
Borings and short turnings	7.00 to 7.50
Long turnings	5.75 to 6.25
No. 1 machinery cast	14.00 to 15.00
Automobile cast	19.00 to 20.50
Hydraulic compressed sheets	9.75 to 10.25
Stove plate	11.00 to 12.00
No. 1 busheling	8.50 to 9.00
Sheet clippings	6.00 to 6.50
Flashings	9.00 to 9.50

Cincinnati

Southern Ohio Pig Iron Sells $1 Off—Little Forward Steel Buying

CINCINNATI, June 19.—Dullness continues in pig iron and indications are that the market will be quiet during the remainder of the month. The largest sale in the past week was 300 tons of malleable for a Chattanooga foundry. With the exception of an inquiry for 474 tons of foundry iron for the Louisville & Nashville, pending business consists of lots ranging from single carloads up to 200 tons. Prices reflect the unsatisfactory situation in which producers have been placed. Northern Ohio interests are reported to be booking orders at as low as $16.25, base furnace, whereas Southern makers are moving little iron into the territory north of the Ohio River at $16, base Birmingham. At least one furnace at Ironton is understood to be liquidating the stock on its yards by accepting $1 a ton less than the nominal schedule of $19, base furnace, which has prevailed in recent weeks. There has been no

Warehouse Prices, f.o.b. Cincinnati

	Base per Lb.
Plates and structural shapes	3.40c.
Bars, soft steel or iron	3.30c.
New billet reinforcing bars	3.15c.
Rail steel reinforcing bars	3.00c.
Hoops	4.00c. to 4.25c.
Bands	3.95c.
Cold-finished rounds and hexagons	3.85c.
Squares	4.35c.
Black sheets (No. 24)	4.05c.
Galvanized sheets (No. 24)	4.90c.
Blue annealed sheets (No. 10)	3.60c.
Structural rivets	3.85c.
Small rivets	65 per cent off list
No. 9 annealed wire, per 100 lb.	$3.00
Common wire nails, base per keg	2.95
Cement coated nails, base 100 lb. keg	2.95
Chain, per 100	7.55
	Net per 100 Ft.
Lap-welded steel boiler tubes, 2-in.	$18.00
4-in.	38.00
Seamless steel boiler tubes, 2-in.	19.00
4-in.	39.00

change in Jackson County silvery iron, which is steady at $25, base Jackson, for 8 per cent.

Prices per gross ton, delivered Cincinnati:

So. Ohio fdy., sil. 1.75 to 2.25	$19.89 to	$20.89
So. Ohio malleable	$20.14 to	20.89
Alabama fdy., sil. 1.75 to 2.25		19.69
Alabama fdy., sil. 2.25 to 2.75		20.19
Tennessee fdy., sil. 1.75 to 2.25		19.69
Southern Ohio silvery 8 per cent		26.89

Freight rates, $1.89 from Ironton and Jackson, Ohio; $3.69 from Birmingham.

Reinforcing Bars.—New billet bars continue to bring 1.85c., base Pittsburgh, and rail steel stock 1.80c., base mill.

Warehouse Business.—Shipments out of local warehouses have increased in the past week, and sales in the first half of June showed an improvement of 5 to 10 per cent over the same period in May. Cold-rolled steel bars and strip steel have been especially active, while the demand for wire products has been fair. Structural steel and reinforcing bars are moving in moderate volume. Prices are firm and unchanged.

Coke.—Shipments of by-product foundry coke are running about 10 per cent behind those in May, but domestic grades, on the other hand, are in slightly better demand. An order for 1000 tons of beehive foundry coke for a nearby consumer was the largest transaction of the week. By-product foundry coke at Detroit is reported to have been cut 50c. to $1 a ton, effective June 11, and the market at that point is very soft because of the determination of sellers to secure current business by making substantial concessions to buyers.

Foundry coke prices per net ton delivered Cincinnati: By-product coke, $9.02; Wise County coke, $7.09 to $7.59; New River coke, $9.09 to $9.59. Freight rates, $2.14 from Ashland, Ky.; $2.59 from Wise County and New River ovens.

Old Material.—Consumers are showing slight interest. Steel plants are not contracting for future requirements, while foundries are making only small miscellaneous purchases. A company in this district bought 1000 tons of No. 2 busheling the past week. Despite the apparent indifference on the part of users, dealers paid approximately the same prices for scrap offered by railroads this month as in May. With the exception of No. 2 busheling, which is off $1 a ton, quotations are unchanged.

Dealers' buying prices per gross ton f.o.b. cars, Cincinnati:

Heavy melting steel	$10.75 to	$11.25
Scrap rails for melting	11.25 to	11.75
Loose sheet clippings	8.25 to	8.75
Bundled sheets	9.25 to	9.75
Cast iron borings	7.75 to	8.25
Machine shop turnings	7.25 to	7.75
No. 1 busheling	10.00 to	10.50
No. 2 busheling	6.00 to	6.50
Rails for rolling	12.50 to	13.00
No. 1 locomotive tires	12.75 to	13.25
No. 1 railroad wrought	10.00 to	10.50
Short rails	15.75 to	16.25
Cast iron carwheels	12.25 to	12.75
No. 1 machinery cast	15.25 to	15.75
No. 1 railroad cast	12.75 to	13.25
Burnt cast	7.50 to	8.00
Stove plate	8.25 to	8.75
Brake shoes	9.50 to	10.25
Railroad malleable	11.50 to	12.00
Agricultural malleable	11.00 to	11.50

Finished Material.—A fair volume of steel has been ordered by buyers in the past week, although considerable hesitancy in making forward purchases is discernible among large consumers. The advance of $1 a ton in bars, structural shapes and plates has not had the desired effect of forcing in specifications against current contracts, and many users are not yet convinced that the new price of 1.90c., base Pittsburgh, will be sustained under a real test. There has been a slight upward turn in structural steel demand, but major projects are still scarce and fabricators are obliged to take numerous small jobs to keep their shops busy. Gas holder builders are operating their plants at about a normal rate, although work ahead must be augmented soon in order to insure the maintenance of present production levels. Conditions in the sheet market continue to reflect the flexibility of prices. For blue annealed stock the average quotation is 2c., base Pittsburgh, while galvanized sheets range from 3.50c. to 3.60c. Black sheets are selling at 2.65c. to 2.80c. District mills declare that the cold weather in the past month has retarded the usual buying movement in light-gage galvanized sheets for roofing purposes, particularly in the South. Unless there are unexpected developments, however, this business will be placed during the remainder of June and in July. Demand for common wire nails and for plain wire is sagging somewhat, with the former bringing $2.50 per keg, base Ironton, and the latter $2.40 per 100 lb., base Ironton. An exception is made in the case of spring wire, which is moving briskly. Cold-rolled bars and strip steel are more active than a few weeks ago.

Buffalo

Some Activity in Pig Iron—Black Sheets and Scrap Softer

BUFFALO, June 19.—Business has been good, with quite a bit of inquiry and considerable placing. The General Electric Co. has purchased, it is reported, about 6000 tons in all for its various plants, with considerable of this iron business coming to Buffalo. Two inquiries for foundry and malleable of 2000 tons apiece came out and one of these has been placed with a Buffalo furnace. Another inquiry in the East was for 1000 tons of foundry. The International Harvester Co. is seeking to buy foundry and malleable for its Auburn plant, with probable requirements of 500 to 1000 tons. The New York Central is reported to have placed 450 tons of foundry for the third quarter, and a Fitchburg, Mass., melter bought 100 tons. Another lot of 200 to 300 tons was placed in New England. An Erie, Pa., inquiry is for 500 tons of foundry. The Lackawanna Railroad will purchase for Scranton, Pa. A considerable volume of iron has been sold in small lots. The price in the district is holding firmly to $17, Buffalo, for No. 2 plain and $17.50 for malleable. Canal shipment iron for the East has figured back generally to about $16.50, Buffalo.

Prices per gross ton, f.o.b. furnace:

No. 2 plain fdy., sil. 1.75 to 2.25		$17.00
No. 2 foundry, sil. 2.25 to 2.75		17.50
No. 1X foundry, sil. 2.75 to 3.25		18.50
Malleable, sil. up to 2.25		17.50
Basic	$16.50 to	17.00
Lake Superior charcoal		27.28

Finished Iron and Steel.—Demand is fair. A local structural fabricator took 1000 tons for the new Riverside high school, and the New York Central has placed 600 tons of reinforcing steel for its track canopy and foundations at the new Buffalo terminal. Mill operations are being maintained, with prices of bars, shapes and plates unchanged. The black sheet price is reported softer.

Old Material.—Buying conditions have been very quiet though shipments to consumers have been heavy. An occasional sale of No. 1 machinery cast scrap and malleable at prices quoted is noted.

Prices per gross ton, f.o.b. Buffalo consumers' plants:

Basic Open-Hearth Grades		
No. 1 heavy melting steel	$14.25 to	$14.50
No. 2 heavy melting steel	12.50 to	13.00
Scrap rails	13.50 to	14.00
Hydraulic compressed sheets	12.50 to	13.00
Hand bundled sheets	8.50 to	9.00
Drop forge flashings	12.00 to	12.50
No. 1 busheling	12.50 to	13.00
Heavy steel axle turnings	12.00 to	12.50
Machine shop turnings	7.75 to	8.25
Acid Open-Hearth Grades		
Railroad knuckles and couplers		15.00
Railroad coil and leaf springs	15.50 to	16.00
Rolled steel wheels		15.00
Low phosphorus billet and bloom ends	16.00 to	16.50
Electric Furnace Grades		
Heavy steel axle turnings	12.00 to	12.50
Short shoveling steel turnings	10.00 to	10.50
Blast Furnace Grades		
Short shoveling steel turnings	10.00 to	10.50
Short mixed borings and turnings	9.50 to	10.00
Cast iron borings	9.50 to	10.00
No. 2 busheling	9.00 to	9.25
Rolling Mill Grades		
Steel car axles	15.50 to	16.00
Iron axles	20.00 to	20.50
No. 1 railroad wrought	12.00 to	12.50
Cupola Grades		
No. 1 machinery cast	14.50 to	15.00
Stove plate	13.00 to	13.25
Locomotive grate bars	11.50 to	12.00
Steel rails, 3 ft. and under		16.50
Cast iron carwheels	12.00 to	12.50

*Refinery quotation; delivered price ¼c. higher.

NEW YORK, June 19.—Quotations for the major metals are all very firm except that for tin, which has sunk to new low levels of nearly four years. All the markets are only moderately active, buying of tin being possibly the heaviest.

Copper.—Statistics for May, which appeared early last week, are considered favorable by producers. They show a decrease of about 6000 tons in refined stocks and an increase of about the same amount in blister copper, one offsetting the other. Output at the mines showed an increase, which is considered favorable because more metal is needed in the near future. Very little change is noted in the general market. Demand from foreign countries continues the feature, total sales thus far this month being estimated at around 45,000 net tons. This is nearly on a par with the buying in May, which was of record proportions. Germany easily leads, her total purchases being about double those of either England or France. Prices are unchanged, the quotation for Copper Exporters, Inc., being 15c., c.i.f. European ports. Demand from domestic consumers is light, most of them being well covered for July and a large part of August. Small lots of July electrolytic copper have sold at a slight premium and there has been some buying of September metal. Lake copper is quiet but very firm at 14.87½c., delivered.

Tin.—Sales for the week ended Saturday, June 16, were about 1100 to 1200 tons, taken mostly by dealers. Consumers have not been active in many weeks and this holding back, combined with liberal sales of the metal in the Far East, has caused market values to fall away to new low levels in the last two or three weeks. Spot Straits tin today was quoted at 46.62½c., New York, which is the lowest price since Sept. 24, 1924, when it was 47c. London prices have also taken a sharp downward turn in the week of nearly £10 per ton. Spot standard today was quoted at £213 10s., future standard at £210 15s. and spot Straits at £214 10s. per ton. The Singapore price today was £215 5s. Sentiment in New York and London was very blue today and bulls in London have become disheartened and are throwing over the metal. European consumers are also holding back, thus increasing the backlogs of possible demand later. Arrivals thus far this month have been 3945 tons, with 5375 tons reported afloat.

Lead.—The market is without feature and practically unchanged, the quotation of the leading interest still standing at 6.30c., New York, with the outside market firm at 6.15c., St. Louis. These quotations apply to spot and June, but a small premium is asked for deliveries beyond June. The market is not active, sales being confined to carload and small lots.

Zinc.—The chief interest is in the ore situation, which has changed but little. Sales at Joplin on Saturday were about 9000 tons at $40 to $41. The production of ore was about 11,000 tons. Quotations for prime Western are strong at 6.15c., East St. Louis, or 6.50c., New York, with practically no metal for sale at lower levels. Buying is not heavy, but is of fair proportions and is confined to nearby delivery. Very little July metal is being sold, quotations in most cases being 6.20c., East St. Louis.

Nickel.—Wholesale lots of ingot nickel are quoted unchanged at 35c., shot nickel at 36c. and electrolytic nickel at 37c. per lb.

Antimony.—Chinese metal is available for all positions at 9.50c. to 9.75c., New York, duty paid.

Aluminum.—Virgin metal, 98 to 99 per cent pure, is quoted at 23.90c. per lb., delivered.

Non-Ferrous Metals at Chicago

CHICAGO, June 19.—This market is quiet with lower prices for tin and zinc. Quotations for copper are higher, though sales show no more activity. The old metal market is without feature.

Prices, per lb., in carload lots: Lake copper, 14.75c.; tin, 50.50c.; lead, 6.25c.; zinc, 6.25c.; in less-than-carload lots, antimony, 12.75c. On old metals we quote copper wire, crucible shapes and copper clips, 10.75c.; copper bottoms, 9.75c.; red brass, 9.50c.; yellow brass, 7.25c.; lead pipe, 4.75c.; zinc, 3.50c.; pewter, No. 1, 30c.; tin foil, 36.25c.; block tin, 45.25c.; aluminum, 12c.; all being dealers' prices for less-than-carload lots.

RAILROAD EQUIPMENT

Ohio Colleries Co. has ordered 250 mine cars from American Car & Foundry Co.

Chicago, St. Paul, Minneapolis & Omaha has ordered 250 stock cars from an unnamed bidder.

Central Vermont will buy 10 2-10-4 type locomotives.

Sanitary District, Chicago, will purchase two 0-6-0 and two 0-4-0 type locomotives.

Celebrates Ninety-second Year

Something of the history, service facilities and products of the Shaw-Crane Putnam Machine Co., of the Manning, Maxwell & Moore, Inc., 100 East Forty-second Street, New York, is given in an attractive booklet recently issued under the title of "To Help You See Us as We See Ourselves." Exterior and interior views of the Shaw and Putnam plants are shown, as well as illustrations of the products of those companies, both for railroad and industrial use. The booklet, which is attractively arranged, is dedicated to Salmon W. Putnam, John Putnam and A. J. Shaw, founders of two of the subsidiary companies and commemorates the ninety-second anniversary (1836 to 1928) of the Putnam works of the company. The Shaw Electrice Crane Co. was founded in 1891 with a plant at Muskegon, Mich.

Steel boilers ordered in May are reported by the Department of Commerce at 1572 units with 1,453,672 sq. ft. of heating surface. This is the largest monthly total in some time. It compares with 1325 boilers and 1,295,170 sq. ft. in April. For the first five months the sales have been 6172 units and 6,122,741 sq. ft., against 6502 and 6,906,471 last year.

A gain in factory employment in Chicago, and an upward trend in eight out of 13 other leading Illinois cities in May, is reported in the monthly review of the bureau of labor statistics of the Illinois Department of Labor. Chicago showed an increase of 1.1 per cent, due principally to improvement in the metal, meat packing and printing industries.

The Pittsburgh Foundrymen's Association will hold its annual field day and outing at The Pines, on Perry Highway, near Keown, Pa., on Saturday, June 30.

Old Metals, Per Lb., New York

The buying prices represent what the large dealers are paying for miscellaneous lots from the smaller accumulators and the selling prices are those charged consumers after the metal has been properly prepared for their uses.

	Dealers' Buying Prices	Dealers' Selling Prices
Copper, heavy crucible	12.625c.	14.00c.
Copper, heavy and wire	12.50c.	13.50c.
Copper, light and bottoms	10.75c.	12.00c.
Brass, heavy	7.25c.	8.50c.
Brass, light	6.25c.	7.75c.
Heavy machine composition	9.75c.	11.00c.
No. 1 yellow brass turnings	8.50c.	9.375c.
No. 1 red brass or composition turnings	9.00c.	10.00c.
Lead, heavy	5.00c.	5.50c.
Lead, tea	4.00c.	4.50c.
Zinc	3.00c.	3.50c.
Sheet aluminum	12.75c.	14.50c.
Cast aluminum	12.50c.	14.00c.

REINFORCING STEEL

Awards Total About 3800 Tons—New Projects Include 8000 Tons In Canada

AWARDS of about 3800 tons of reinforcing bars were practically on a par with those of a week ago. Included were 600 tons for the New York Central terminal at Buffalo and 600 tons for a Buffalo public school. There were about 5000 tons of new projects in the United States; three Canadian inquiries call for a total of 8000 tons.

BOSTON, 300 tons, Noyes-Buick Co. plant, to Truscon Steel Co.

CAMBRIDGE, 275 tons, Harvard Law School addition, to Concrete Steel Co.

BROOKLYN, 130 tons, Brooklyn Union Gas Co., plant building, to McClintic-Marshall Co.

NEW YORK, 200 tons, Pier No. 3, North River, to Faitoute Iron & Steel Co., Newark.

STATE OF NEW JERSEY, 350 tons, State road from Deans to Cranbury Turnpike, to Igoe Brothers.

STATE OF NEW JERSEY, 250 tons, road work from Linden to Union, to Igoe Brothers.

ELIZABETH, N. J., 200 tons, storage warehouse, to Joseph T. Ryerson & Son, Inc.

PATERSON, N. J., 100 tons, bakery, to Igoe Brothers.

BUFFALO, 600 tons, canopy and track foundations, New York Central Terminal, to a local maker.

BUFFALO, 600 tons, school No. 81, to a local maker.

CLEVELAND, 1700 tons, Cleveland Union Terminal buildings, to Bourne-Fuller Co.

ST. LOUIS, 300 tons, first district, S. W., joint sewer, to Missouri Rolling Mills Corporation.

SEATTLE, 250 tons, small jobs to Northwest Steel Rolling Mills.

SEATTLE, 150 tons, foundations for Pacific Coast Cement Co., plant, to Pacific Coast Steel Co.

MOUNT VERNON, WASH., 147 tons, viaduct, to Northwest Steel Rolling Mills.

Reinforcing Bars Pending

Inquiries for reinforcing steel bars include the following:

MONTREAL, 1000 tons, warehouse; Perrault & Gadbois, Themis Building, architects.

TORONTO, 3000 tons, for Wellington Buildings, Ltd.

PROVIDENCE, R. I., 1665 tons, Washington bridge.

PORT CHESTER, N. Y., 175 tons, road work, general contract awarded to Peter Luciano & Sons, White Plains, N. Y.

LARCHMONT, N. Y., 125 tons, road work, contract let to Patterson Rissi Co., Torrington, Conn.

BROOKLYN, 2500 tons, building for New York Dock Co., general contract placed with White Construction Co.

CHICAGO, tonnage not stated, Chicago Women's Club; Holabird & Root, architects.

CHICAGO, 200 tons, including a tower on Palmolive-Peet Building.

CLEVELAND, 150 tons, building for Great Lakes Cement Co.

ST. LOUIS, 250 tons, packing house for Swift & Co.; previously reported as a structural steel project.

VANCOUVER, B. C., 4000 tons, medicinal and dental block for Baker, Stevens & Co.

SACRAMENTO, CAL., 120 tons, Cache Creek Bridge, bids opened.

Reporting net earnings for six months $546,563 less than last year, the Crucible Steel Co. of America has cut its dividend rate from 6 per cent annually to 5 per cent. The balance sheet shows a reduction of $1,000,000 in inventories and of $1,423,000 in total current assets, about equaled by the drop of $1,364,000 in total current liabilities. Half a million dollars has been cut from "property" account.

FABRICATED STRUCTURAL STEEL

Awards of 60,000 Tons Include 38,000 Tons for Chicago Project—15,000 Tons for Grade Crossing Elimination

With 38,000 tons required for a Chicago Mercantile Mart, awards the past week totaled over 60,000 tons, the largest in several weeks. New projects, totaling 37,000 tons, include 15,000 tons for grade crossing elimination at Cleveland.

Burlington, Vt., 750 tons, Rutland Railroad bridge, to McClintic-Marshall Co.

Lunenberg, Vt., 450 tons, Maine Central Railroad bridge, to American Bridge Co.

State of Vermont, 150 tons, State bridges, to Palmer Steel Co.

State of Vermont, 400 tons, highway bridges, to American Bridge Co.

Exeter, N. H., 200 tons, baseball cage, to Boston Bridge Works, Inc.

Boston, 100 tons, Meisel Press addition, to New England Structural Co.

Boston, 250 tons, continuation school, to New England Structural Co.

Andover, Mass., 150 tons, building for Phillips Academy, to New England Structural Co.

New York, 1300 tons, three buildings for Tudor City, to Harris Structural Steel Co.

New York, 2500 to 3000 tons, loft building, to Levering & Garrigues.

New York, 400 tons, Union Indemnity Co., Maiden Lane, to Heddon Iron Construction Co.

Jersey City, N. J., 225 tons, addition to St. Francis Hospital, to Fagen Iron Works.

Wilkes-Barre, Pa., 1000 tons, for Wilkes-Barre Savings Bank, to local fabricators.

Philadelphia, 2700 tons, Rittenhouse Square apartment building, to Shoemaker Bridge Co.

Philadelphia, 2250 tons, Chateau Crillon apartments, to Bethlehem Fabricators, Inc.

Philadelphia, 125 tons, building for William Steel & Sons, to American Fabricated Steel Co.

Richmond, Va., 2500 tons, rayon mill for E. I. du Pont de Nemours & Co., to McClintic-Marshall Co.

Pennsylvania Railroad, 400 tons, bridges, to Shoemaker Bridge Co.

Reading Railroad, 100 tons, bridges, to McClintic-Marshall Co.

Washington, 270 tons, arches for the Arlington Memorial bridge, to McClintic-Marshall Co.

Buffalo, 1000 tons, Riverside High School, to Buffalo Structural Steel Co.

Oil City, Pa., 300 tons, theater, to Jones & Laughlin Steel Corporation.

Birmingham, 250 tons, towboat for Tennessee Coal, Iron & Railroad Co., to American Bridge Co.

Chicago, 38,000 tons, Mercantile Mart, to Bethlehem Steel Co.

Chicago, 400 tons, Hyde Park State Bank building, to Union Foundry, local.

Chicago, 155 tons, Catholic school, to Hansell Elcock Co., local.

Urbana, Ill., 900 tons, buildings at University of Illinois, to Mississippi Valley Structural Steel Co.

Long Beach, Cal., 300 tons, office building at Pine and Ocean Avenues, to Llewellyn Iron Works.

San Francisco, 275 tons of shapes and 525 tons of plates, carfloat for Western Pacific Railroad Co., to Moore Dry Dock Co.

San Francisco, 175 tons, apartment building, Franklin Street, near Washington, to McClintic-Marshall Co.

San Francisco, 160 tons, apartment building, Van Ness Avenue, near Lombard Street, to McClintic-Marshall Co.

Los Angeles, 118 tons, Union High School, to McClintic-Marshall Co.

State of Nevada, 900 tons, headframe and bins for a mine, to Kansas City Structural Steel Co.

Longview, Wash., 100 tons, telephone building, to Isaacson Iron Works.

Kettle Falls, Wash., 1100 tons, highway bridge, to American Bridge Co.

Structural Projects Pending

Inquiries for fabricated steel work include the following:

Moncton, N. B., 1000 tons, rink and exhibition building for Moncton Exhibition Co.

Montreal, 3000 tons, warehouse; Perrault & Gadbois, Themis Building, architects.

New York, 500 tons, court house at 151st Street.

Atlantic City, N. J., 1500 tons, hotel for Providence Corporation.

Lehigh Valley Railroad, 500 tons, bridges.

Philadelphia, 500 tons, five cottages for Girard College; bids on general contract June 20.

Philadelphia, 10,000 tons, department store for Strawbridge & Clothier; general contract to Turner Construction Co.

Lockport, N. Y., 400 to 700 tons, Bewley Building; plans in preparation.

Cleveland, 450 tons, building for Ohio Bell Telephone Co.

Ashtabula, Ohio, 160 tons, Pennsylvania Railroad bridge.

Cleveland, 15,000 to 20,000 tons, New York Central and Nickel Plate railroad grade crossing elimination.

Cincinnati, 400 tons, theater.

Cincinnati, 250 tons, power house for Christ Hospital.

Big Four Railroad, 190 tons, two 110-ft. turntables.

Piqua, Ohio, 100 tons, bank building.

South Bend, Ind., 1000 tons, depot for New York Central Railroad; Walsh Construction Co., Davenport, Iowa, general contractor.

Chicago & North Western, 900 tons, bridge reinforcement.

Chicago, 1000 tons, bridges for sanitary district.

State of Illinois, 250 tons, highway bridges; Vincennes Bridge Co., Vincennes, Ind., low bidder.

State of Illinois, 500 tons, State highway bridges; Wickes Engineering Co., Des Moines, Iowa, low bidder.

St. Louis, 1000 tons, building for American Railway Express Co. at Union Station.

St. Louis, 500 tons, Marquette Building.

Kansas City, Mo., 130 tons, building No. 60 for Corn Products Refining Co.

Spokane, Wash., 1500 tons, Medico-Dental Building; bids being taken.

San Francisco, 250 tons, warehouse for A. M. Castle Co.; bids being taken.

Conference and Exhibit of Industrial Advertisers

Too often advertising is depended on to correct mistakes of the sales plans, said George D. Crain, Jr., publisher of *Class and Industrial Marketing*, Chicago, in an address on "Advertising as a Spur to Industrial Marketing" before the seventh annual conference of the National Industrial Advertisers Association, at St. Louis, June 11. The sales plan, he emphasized, should be so good that successful results could be realized even without advertising. It is unfortunate for a company to go into advertising merely because it hears of successful advertising, particularly if it is not prepared in all other details.

In connection with the conference there was an exhibition of industrial advertisements and the awards included the following:

For the best exhibit, to Frederick Heitcamp, Cincinnati Milling Machine Co., with honorable mention to the Kearney & Trecker Corporation, Milwaukee.

For the best exhibit of a campaign in publications, Bakelite Corporation, with honorable mention to the Sivyer Steel Casting Co., Milwaukee.

For the best institutional advertising, to the Dodge Mfg. Co., Mishawaka, Ind.

For the best use of color in industrial advertising, to the Warner & Swasey Co., Cleveland.

For the best series of not less than 12 pieces of industrial advertising featuring news, to J. R. Hopkins, Chicago Belting Co.

For the best series featuring performance, prize given by The Iron Age, to the Vacuum Oil Co.

Officers Elected

Officers of the National Industrial Advertisers Association for the ensuing year were elected as follows:

President, Nelson S. Greensfelder, Hercules Powder Co., Wilmington, Del.

First vice-president, George H. Corey, Cleveland Twist Drill Co., Cleveland.

Second vice-president, Allan Brown, Bakelite Corporation, New York.

Third vice-president, H. von P. Thomas, Bussman Mfg. Co., St. Louis.

Secretary-treasurer, B. H. Miller, Permutit Co., New York.

PERSONAL

James Cleary has been appointed general sales manager of Combustion Engineering Corporation, 200 Madison Avenue, New York. He has been associated with this company since 1921, at first as district manager of the Philadelphia and Detroit offices and for the past two years as assistant general sales manager. His early business experience was as erecting and operating engineer for Westinghouse-Church-Kerr Co. In this connection he was sent to England as erecting and operating engineer on the Metropolitan Railway Co., London, the Mersey Railway Co., Liverpool, and the Clyde Valley Electric Power Co., Glasgow. Returning to this country, Mr. Cleary entered the employ of the Westinghouse Machine Co. In the Spanish-American War he served as chief machinist and warrant officer in the United States Navy. During the World War he was in charge of the steam equipment of the "Old Hickory" Government plant.

JAMES CLEARY

A. B. Benson, formerly secretary and treasurer Conveyors Corporation of America, has been appointed general manager Joseph Harrington Co., subsidiary of Whiting Corporation, Harvey, Ill. The Harrington company is engaged in making an automatic stoker for heating and small power plant boilers. Mr. Benson's experience has been largely in the power plant field. His appointment will relieve Joseph Harrington, president, of much detailed administrative work and permit him to devote more of his time to the engineering features of the business.

J. Wohlfeld, production engineer, 10228 Woodward Avenue, Detroit, has been appointed sales representative in Detroit of the Siewek Tool & Die Co., manufacturer of "rapid safety" drill jigs. He has also been appointed exclusive distributer in Detroit for products of the Universal Standard Co. He was most recently associated with Copeland products, representing various automotive and other tools. He is an active member of the Detroit Engineering Society and of the engineering division of the Detroit Industrial Safety Council. He is now operating under the title J. Wohlfeld Tool Design & Sales Co.

William J. Myers, president Union Stove Works, New York, who has completed 50 years of uninterrupted service with the company, was the guest of honor at a dinner given June 8 at the Hotel Astor, New York, by employees. Mr. Myers started with the Union Stove Works in 1878 as an assistant bookkeeper and by various promotions reached the presidency. Other officers of the company and employees presented Mr. Myers with a gold watch.

Glenn Coley, who has been chief metallurgist of the Titusville Forge Co., Titusville, Pa., for several years, has resigned to accept a position in the power sales department of the Detroit Edison Co., Detroit.

Norman F. Robertson has been elected president of the John Robertson Co., Inc., 133 Water Street, Brooklyn, succeeding his father, the late Norman A. Robertson, who died on May 24. Mr. Robertson has been secretary of the company since 1924. Allan R. Hardie, treasurer, has now been made secretary and treasurer.

John D. Hurley, president Independent Pneumatic Tool Co., Chicago, will sail for Europe on July 12. While on the Continent Mr. Hurley will make a business tour of the company's foreign branches, returning to the United States the latter part of September.

Allen A. Johnson, formerly secretary and treasurer and general manager of sales Eagan-Johnson Steel & Iron Co., Crum Lynne, Pa., has become New York district sales agent for the Lebanon Steel Foundry Co., Labanon, Pa., with office at 55 West Forty-second Street. Mr. Johnson is a son of Gilbert H. Johnson, Sr., treasurer and general manager Isaac G. Johnson & Co., Spuyten Duyvil, New York, and received his early training in the foundry of that firm.

Thomas B. Frank, treasurer of the Cincinnati Planer Co., Cincinnati, has been elected a director of the National Association of Cost Accountants.

C. E. Lex, Jr., has become associated with the Cincinnati Shaper Co., Cincinnati, as sales engineer.

Dr. Samuel W. Stratton, president Massachusetts Institute of Technology, will be the speaker at the first meeting of the Worcester, Mass., Engineering Society. This will be a dinner-meeting on Friday, June 22, and will be held in the Sanford Riley Dormitory of the Worcester Institute of Technology.

Charles H. Upson, for the past 23 years district manager for the Dodge Manufacturing Co., has joined the sales organization of the Chain Belt Co., Milwaukee. With headquarters at Cincinnati, he will represent the company's complete line of Rex chain and transmission machinery. He will devote practically all of his time to the interests and advancement of Rex chain.

CHARLES H. UPSON

H. B. Hanley, metallurgist Whitehead Brothers, Rochester, N. Y., delivered an address before the New England Foundrymen's Association on Wednesday evening, June 13. His subject was "Molding Sand, Its Products and Uses."

Warner A. Peck, who, as announced in The Iron Age last week, has been appointed assistant manager of sales for the Cincinnati office of the Republic Iron & Steel Co., has been Cleveland district sales manager of the Trumbull Steel Co. for the past nine years. He has been connected with the Trumbull company for 15 years, two years of which he spent in the New York sales office.

Brice M. Mace, Jr., Lebanon, Tenn., has been appointed as trade commissioner at London. Until recently Mr. Mace was manager of the Kansas City office of the Department of Commerce.

Joseph Lang, who has represented the du Pont Co. in the New York City territory for 43 years, is to be relieved of such duties as he may desire to relinquish. Effective June 15, R. H. Nicol has been transferred to the New York territory for this purpose. Mr. Nicol has been in the organization for 25 years.

Willeby T. Corbett and Carroll O. Holmes have both been elevated to be vice-presidents of the United States Steel Products Co., New York. F. R. Sites, formerly attached to the office of chairman of the United States Steel Corporation, has been made assistant to the president of the Steel Products company.

OBITUARY

Norman A. Robertson, president John Robertson Co., 133 Water Street, Brooklyn, hydraulic press manufacturer, died May 24 at his summer home at Spring Lake, N. J., after a short illness. Mr. Robertson was born in Brooklyn in 1870, the son of the late John Robertson, who founded the company bearing his name, and known also as the Tubal Cain Iron Works. He was graduated from the Brooklyn Polytechnic Institute and at once entered the employ of the company, with which he was associated for 40 years. He was well known in the electrical cable, rubber hose, blue lead and metal-working industries, for which he developed and built much special machinery. He was a member of the Engineers' Club and the Machinery Club, New York. His son, Norman F. Robertson, succeeds him in the presidency of the company.

Charles T. Strawbridge, vice-president Bass Foundry & Machine Co., Fort Wayne, Ind., died at his home in that city on June 10 after an illness of several months. He was one of the pioneers in the industrial development of Fort Wayne, having been connected with the Bass company for 49 years, most of this time in an executive capacity. Mr. Strawbridge was born in Blooming Grove, Morrow County, Ohio, and received his early education in Bucyrus, Ohio. He was employed as a telegraph operator by the Pennsylvania Railroad from 1874 until 1879, in which year he entered the employ of the Bass company. He was elected secretary of the company in 1900 and a few years later was advanced to the position which he held at the time of his death. He served also as vice-president of the Rock Run Iron Co., Rock Run, Ala., and the Fort Wayne Foundry & Machine Co., both of which are interests of the Bass estate.

George Herbert Leaf, president and treasurer E. B. Leaf & Co., dealer in iron and steel scrap, Real Estate Trust Building, Philadelphia, died June 12 at his home in that city.

John A. Sherman, Worcester, Mass., manufacturer and inventor, long identified with the oil burner industry, died on June 13 at his home in that city, at the age of 56 years. He was president of the Sherman Oil Burning System.

William S. Goldsmith, formerly superintendent Central Works, American Steel & Wire Co., Worcester, Mass., but for the past 15 years superintendent of the Townsend Co., New Brighton, Pa., died at the home of his son, William F. Goldsmith, Worcester, on June 12.

Harvey D. Goulder, long prominently identified with the shipping industry on the Great Lakes, died June 14, at the age of 75 years. For many years up to 1925 he was counsel for the Lake Carriers' Association. At the time of his death he was a director of the Wilson Transit Co. and of the Cleveland & Buffalo Transit Co., and general counsel for the Great Lakes Protective Association.

John H. Grace, head of the railroad equipment company in Chicago which bore his name, died June 14, at Oak Park, Ill. Mr. Grace, who was 59 years old, was for 26 years assistant general appraisal agent for the Chicago & Northwestern Railroad.

William H. Bowman, Worcester, Mass., treasurer of the Warren Belting Co. of that city since 1919, and previously with the Graton & Knight Mfg. Co., died June 17, at the age of 61 years. He was a native of Elmira, N. Y.

Frederick H. Parke, Pittsburgh district general engineer, Westinghouse Air Brake Co., died at his home in Wilmerding, Pa., June 16. He was born in Oshkosh, Wis., and was graduated from Cornell University in the class of 1892. For the next six years he was with the Westinghouse Machine Co., and then joined the Air Brake company. Soon afterward he went to Russia and assisted in the construction of an air brake plant in St. Petersburg, and in the organization of the mechanical and engineering department.

David C. Hitchner, retired president of the H. B. Underwood Corporation, engineer and machinist, Philadelphia, died June 16 at his home in Elkins Park. He began more than 30 years ago at the Underwood plant as a machinist and worked his way to the presidency.

Paul R. Chubbuck, who died in Streator, Ill., May 29, was practically bankrupt 15 years ago when the old Halladay Automobile Co., Streator, failed. But he left an estate of nearly $500,000 when he died, his will revealed when filed for probate. He was founder of the Streator Metal Stampings Co. and his estate consisted chiefly of stocks and bonds in that company.

Arc-Welded Railroad Bridge

At the regular monthly meeting of the Pittsburgh chapter American Welding Society, at the William Penn Hotel, Pittsburgh, Wednesday evening, June 13, Gilbert D. Fish, consulting engineer Westinghouse Electric & Mfg. Co., described in detail the arc-welded railroad truss bridge erected at Chicopee Falls, Mass., for the Boston & Maine Railroad. In his talk, which was illustrated by a large number of lantern slides depicting the structure and its details, he recounted the design, details and execution of the work and pointed out its unconventional features.

Construction Institute Offers Services in Government Building Program

Charles F. Abbott, executive director, and Lee H. Miller, chief engineer, American Institute of Steel Construction, Inc., called at the White House June 13 to pay their respects to President Coolidge, and later appeared before James A. Wetmore, acting supervising architect, and his staff to explain the merits of steel-frame construction in connection with a $250,000,000 public building program just authorized. It was suggested that considerable savings on this work can be effected through adoption of the institute's standard specifications and code of practice.

In commenting on the conference, Mr. Abbott quoted William Gompert, superintendent of school buildings of New York, as stating that the city would have saved $540,000 in first costs if the institute's specifications had been applied to 50 school buildings contracted for in 1924. Mr. Abbott also called attention to the fact that the institute recently prepared standard specifications for fireproofing structural steel, which will make it possible to design as effectively against the fire hazard as against the stress of live and dead loads.

Russia Exports Scrap to France

Paris, France, June 15.—The official agency of the Russian Government in France has announced that there are immense supplies of metal scrap in Russia, which need reassembling and classification. While the larger part of these supplies will be utilized in Russia by local metallurgical works, a few lots which could not be consumed locally, but which were of sufficient value to warrant export sale, have been sold abroad. During the first half of this year Russia has shipped 180 tons of non-ferrous metal scrap to France, valued at 870,000 fr. ($34,191).

Flinn & Dreffein Co., Chicago, has obtained a contract to build a continuous billet-heating furnace, producer-gas fired, for the Acme Steel Co., Chicago. This furnace will be the third such unit at the Riverdale, Ill., plant of this steel company.

Machinery Markets and News of the Works

PURCHASES AT FAIR RATE

Equipment for Replacement Still the Major Source of Business

Harvester Company Contemplates Plant Addition—Boston Schools to Take Several Lathes

MACHINE tool orders booked so far this month compare favorably with those of the latter part of May. In the Chicago district, business taken by dealers may even exceed that of the last half of May, the increase being attributed to the placing of the bulk of the list for the Waterloo, Iowa, plant of Deere & Co. In some districts the steady flow of inquiry is taken to indicate that mid-summer buying may be at a better rate than usual.

The present status of equipment demand is accounted for in the monthly review of the National Machine Tool Builders' Association as follows: "The prevalence of low rates on borrowed capital is making it possible for all sound industries to borrow as much as they need for revamping their plants. Progressive companies seem to be doing this very thing. This would account in considerable measure for the present level of demand for various classes of equipment, including machine tools." In the index of machine tool orders for May, issued by the same association, the following comment is made: "Volume of orders for May slipped down somewhat from the point reached in April, but not enough to turn the three-months trend line downward. However, a seasonal falling off is usual over the summer months and it is likely that the trend line has reached its peak for a few months at least."

Railroad business has been quiet during the past week. The New York Central has placed a few tools, and the Santa Fe is reported to have closed for all of its requirements except some large special lathes. The Burlington railroad is expected to take action soon on a number of machine tools, previously inquired for, and there are indications that the New England railroads will come into the market within the next 10 days.

Automotive buying has been comparatively light and, for the most part, is for replacement purposes. One exception was the purchase of 12 automatic lathes by a Michigan company.

Contemplated additions to the tractor manufacturing facilities of the International Harvester Co. are expected to involve a number of new machine tools.

Bids on 15 lathes for the Hyde Park district high school have been requested by the city of Boston, which, within the next two weeks, will again make inquiries on the same number of lathes and later will get prices on a number of items of miscellaneous equipment.

Small tool sales have been at a moderately good rate.

New York

NEW YORK, June 19.

MACHINE-TOOL buying in this district continues at a moderately good rate, and it now seems likely that June sales may equal those of last month. Purchases have been mainly single tools. The New York Central has bought two or three tools, but otherwise railroad business has amounted to little. A fairly steady flow of inquiries seems to indicate that mid-summer buying may be at a better rate than usual.

Among sales of the week were 15 lathes by the Niles-Bement-Pond Co. to various companies. Some of them were sold in the West. This company also sold two used Niles 50-in. vertical drilling machines, a used Leblond No. 4 universal milling machine, an 8-in. rotary surface grinder, three 3-ft. radial drills, five Ransom grinders, a 30-in. x 28-ft. Time-Saver lathe, a used 42 x 42-in. x 10-ft. Pond planer. The Pratt & Whitney Division sold three 14-in. vertical surface grinders, three 13 x 30-in. lathes, two 16 x 36-in. lathes, three automatic lathes, three universal die sinkers, two jig borers and four Sigourney drilling machines and a number of single tools.

Plans are under way by Gulf Refining Co., 21 State Street, New York, for new refinery, storage and distributing plant at Mariners Harbor, Staten Island, comprising nine units, with power house, machine shop and other departments. Facilities will be provided for handling crude oil from seagoing tankers, including pumping machinery, etc. Entire project is estimated to cost in excess of $15,000,000. Headquarters of company are in Frick Annex, Pittsburgh; William M. Braybrooks is general manager.

Columbia Metal Box Co., 228 East 144th Street, New York, is having plans drawn for two-story addition, to cost close to $100,000 with equipment. George A. Bagge & Sons, 157 East Forty-fourth Street, are architects.

Excello Spring & Mfg. Co., 176 Grand Street, New York, has leased space in building at 161-63 Grant Street for expansion and will remove to new location.

Harry Silverstein, 26 Court Street, Brooklyn, architect, has plans for a two-story automobile service, repair and garage building, 120 x 150 ft., to cost close to $150,000 with equipment.

Northern Westchester Lighting Co., Ossining, N. Y., has approved plans for new automatic power substation to cost about $85,000 with equipment. Thomas E. Murray, Inc., 52 Duane Street, New York, is architect and engineer.

Board of Education, Yonkers, N. Y., is considering installation of manual training equipment in new three-story high school, to cost more than $650,000 with equipment. G. H. Chamberlain, 18 South Broadway, architect, is revising plans and will soon take bids on general contract. Clark, McMullen & Riley, 101 Park Avenue, New York, are mechanical engineers.

John Hoffman, Jr., 527 Hunts Point Avenue, New York, manufacturer of hod elevators, contractors' hoists, etc., has filed plans for one-story addition, 100 x 100 ft., to cost about $32,000. S. F. Oppenheim, Inc., 156 East Forty-second Street, is architect.

Albany Packing Co., Inc., Exchange Street, Albany, N. Y., plans installation of mechanical handling and conveying equipment, refrigerating machinery, etc., in three-story addition to cost in excess of $300,000, for which plans are being drawn by Henschien & McLaren, 1637 Prairie Avenue, Chicago, architects and engineers.

Manifold Supplies Co., 188 Third Avenue, Brooklyn, manufacturer of paper products, has plans for a three-story factory, including improvements in present plant, to cost about $50,000 with equipment.

Utility Oil Corporation, Bridge Plaza North, Long Island City, has leased property at Anable Avenue and Honeywell Street, totaling about 26,000 sq. ft. floor space, for a new service, repair and garage unit, with oil storage and distributing facilities.

Melrose Motor Co., 598 Bergen Avenue, New York, will soon ask bids on general contract for new two-story service, repair and garage building, to cost about $145,000 with equipment. George A. Bagge & Sons, 157 East Forty-fourth Street, are architects.

Smith-Hamburg-Scott Welding Co., Marion Place, Long Island City, has acquired adjoining property, 100 x 102 ft., and plans erection of new plant to occupy entire site. Present works are on leased site and it is understood that production will be concentrated in new unit.

Public Service Electric & Gas Co., Public Service Terminal, Newark, has acquired property on Staten Island Sound, extending from Sewaren to Port Reading, N. J., as site for new electric generating plant, to cost more than $750,000 with transmission lines. No time has as yet been scheduled when work will begin. Company has also secured right-of-way for construction of new transmission line in Essex, Union and Middlesex Counties. Plans have been completed for two-story power substation at 271 Sip Avenue, Jersey City, to cost more than $85,000 with equipment.

Ovens, power equipment, conveying and other machinery will be installed in a new three-story plant, 100 x 200 ft., to be erected by H. F. Runkel Bakery, 1141 East Grand Street, Elizabeth, N. J., to cost in excess of $350,000. Herman F. Runkel is head.

Board of Education, Oradel, N. J., is considering installation of manual training equipment in a new three-story junior high school to cost $350,000, for which plans are being drawn by Coffin & Coffin, 522 Fifth Avenue, New York, architect.

American Copper Products Corporation, Bayway, Elizabeth, N. J., manufacturer of copper and brass wire specialties, has awarded general contract to Wigton-Abbott Corporation, 552 West Twenty-third Street, New York, for a one-story addition, 105 x 475 ft., to cost about $80,000 with equipment.

Middlesex County Vocational School Board, New Brunswick, N. J., is considering an addition to local County vocational school No. 1, to cost more than $250,000 with equipment.

Radio Tube Corporation, 88 Eighth Avenue, Newark, has plans for a new three-story plant, to cost close to $65,000 with equipment. Siegler & Greenberg, 164 Market Street, are architects.

Following recent termination of receivership and reorganization, DeForest Radio Co., 139 Franklin Street, Jersey City, N. J., will carry out an expansion and improvement program at plant, including installation of equipment to replace old machinery for production of radio sets, tubes, etc. Company will be affiliated with Sonora Phonograph Co., 16 East Fortieth Street, New York, in production of products noted as well as talking machines and parts. James W. Garside is president, and Robert Buchanan, secretary and treasurer.

Betz Brothers, Inc., manufacturer of hollow metal doors and trim, is occupying its new factory building at Clifton, N. J., added facilities including 70,000 sq. ft. of floor space.

Key City Bolt & Spike Works, Bayonne, N. J., recently incorporated with a capital stock of $100,000 to manufacture bolts, nuts, etc., is erecting a plant at Hudson Boulevard and Morris Canal. Officers of company are: C. H. Carpenter, president and treasurer, S. C. Gartley, vice-president and general manager, and E. Zehner, secretary.

Norris Brush Works, River Edge, N. J., which has been engaged in manufacture of toilet brushes for several years, has been incorporated in anticipation of enlargement of business. Walter Randall is president, Howard E. Norris is treasurer.

Philadelphia

PHILADELPHIA, June 18.

PROPERTY at 1639-41 Hunting Park Avenue, Philadelphia, has been purchased by Philadelphia Indian Motorcycle Co., 4153 Germantown Avenue, as site for new service, repair and sales building to cost more than $50,000, for which plans will soon be drawn.

Proctor & Schwartz, Inc., Seventh Street and Tabor Road, Philadelphia, manufacturer of mechanical drying equipment, air conditioning machinery, etc., has awarded general contract to Austin Co. for two-story and basement addition, 50 x 146 ft., to cost upward of $65,000 with equipment. Day & Zimmermann, Inc., 1600 Walnut Street, is engineer.

Klein Stove Co., Trenton Avenue and Tioga Street, Philadelphia, has plans for a one-story addition.

Hess Iron Works, Philadelphia, recently formed by J. F. Hess, 2507 East Westmoreland Street, and associates, with capital of $25,000, is arranging for operation of local plant for manufacture of iron and metal products.

Ero Mfg. Co., 2234 Ogden Avenue, Chicago, manufacturer of automobile equipment and supplies, has leased space in building at Hope and Palmer Streets, Philadelphia, for new factory branch and distributing plant.

William Steele & Sons Co., 219 North Broad Street, Philadelphia, engineer and contractor, has plans for a four-story automobile service, repair and garage building to cost $450,000 with equipment.

Laurence R. Wilder and other officials of American Brown Boveri Electric Corporation, 420 Lexington Avenue, New York, have formed Transoceanic Corporation to purchase and operate shipbuilding branch of first-noted company at Camden, N. J. American Brown organization will retain portion of land and buildings for continuance of manufacture of heavy electrical machinery, including generators, etc. Purchasing company plans to expand shipyard operations for building electrically-propelled vessels. Moloney Electric Co., Seventh and Hickory Streets, St. Louis, manufacturer of transformers, a subsidiary of American Brown company, will also be sold. W. M. Flock, chairman of executive committee of parent organization, will be identified with new Transoceanic Corporation.

Borough Council, Beach Haven, N. J., has approved plans for extensions in municipal electric power plant, including installation of additional equipment, to cost $50,000, and has authorized appropriation in amount noted. W. H. Boardman is borough engineer, in charge.

Empire Tool Works, Gloucester, N. J., has taken over former local plant of Rogers Drill Works, and will begin operations for manufacture of tools and kindred products.

Samuel Winterbottom Sons, Liverpool Avenue and line of Philadelphia & Reading Railway, Egg Harbor City, N. J., manufacturer of knife handles, etc., plans rebuilding portion of plant destroyed by fire June 11, with loss reported at more than $30,000 with equipment.

Atlantic Refining Corporation, 260 South Broad Street, Philadelphia, is said to be planning construction of new oil storage and distributing plant at Jacksonville, Fla., where 6-acre tract has been secured adjoining property of Seaboard Oil Co. Project is reported to cost in excess of $100,000; all equipment will be electrically operated.

Cheming Telephone Co., 123 Lockhart Street, Sayre, Pa., will soon ask bids on general contract for two-story equipment storage and distributing plant, with repair facilities, etc., to cost more than $35,000. H. C. Child, 501 South Keystone Avenue, is architect.

City Council, Reading, Pa., has passed ordinance for establishment of municipal machine shop, and will arrange appropriation at early date.

Hinaman Aircraft Corporation, Williamsport, Pa., recently chartered, is completing plans for operation of a local plant. R. W. Howard, Williamsport, is head.

National Supply Co. of Delaware, Inc., Toledo, Ohio, will take over plant and property of Superior-Otto Engine Works, Thirty-third and Walnut Streets, Philadelphia, and Superior Gas Engine Co., Springfield, Ohio, an affiliated organization, and will consolidate. It is understood that both plants will be continued as heretofore. An expansion program for increased output is under consideration.

George K. Hale Mfg. Co., Third and Cumberland Streets, Philadelphia, manufacturer of buttons, etc., has acquired property at Mount Airy, N. C., and is reported planning establishment of new works to cost in excess of $50,000.

Following recent purchase of tube mill of Superior Pipe Co., Columbia, Pa., by Tyler Tube Co., Washington, Pa., new owner is planning removal of equipment to main plant at last noted place, where production will be concentrated and expansion carried out. Superior works have been idle for several years.

Overbrook Steam Heat Co., Woodbine and Upland Avenues, Philadelphia, has plans for addition to power house, and installation of boilers and auxiliary equipment.

Ford & Kendig Co., 1428 Callowhill Street, Philadelphia, jobber of steam, plumbing, mill, mine, railroad and contractors' supplies, has elected Leighton M. Ford, president to succeed his father, late Albert E. Ford, founder of company. Other new officers are: T. J. Williams, vice-president; T. B. Reeves, second vice-president, and H. K. Strickler, secretary-treasurer.

Buffalo

BUFFALO, June 18.

PLANS are being arranged by New York Central Railroad Co., Buffalo, for a new one and two-story car repair shop at local East Yards, to cost more than $85,000 with equipment. A two-story Pullman car shop is also planned at same location. F. B. Freeman, company headquarters, 466 Lexington Avenue, New York, is chief engineer, in charge.

Consolidated Aircraft Corporation, 2050 Elmwood Avenue, Buffalo, has taken over portion of neighboring building occupied by enameling works of American Radiator Co., and will equip for experimental work and manufacture of new type of naval bombing and patrol, all-metal, twin-motored monoplanes for Government, for which special contract recently has been secured. Extension will be known as Engineering Unit No. 2.

Buffalo, Niagara & Eastern Power Corporation, Buffalo, is disposing of a preferred stock issue to total $34,475,000, a portion of proceeds to be used for expansion and improvements and for consolidation of group of local utilities, including Buffalo General Electric Co., Niagara Falls Power Co., Tonawanda Power Co., and others. Company has work under way on new steam-operated electric generating station, designed for ultimate output of 100,000 hp. Extensions will be made in transmission lines.

American Radiator Co., Elmwood Avenue, Buffalo, has purchased Locke Pattern Works, Inc., 3224 East Jefferson Street, Detroit, and Ypsilanti Motor Casting Co., Ypsilanti, Mich., and will consolidate with its organization. Both companies have been producing castings for purchasing organization and plants will be continued in service as heretofore.

George A. and Edwin G. Guenther, 1281-85 Jefferson Avenue, Buffalo, operating a plumbing and heating works, and hardware business, respectively, have organized Guenther Mfg. Co., with capital of $150,000, to consolidate present works and develop a plant for manufacture of gas-burning equipment, radiators, etc.

Fairbanks Valve Co., Glenwood Avenue and Main Street, Binghamton, N. Y., has awarded general contract to A. W. Bowie, Inc., Press Building, for rebuilding portion of plant destroyed by fire recently to cost in excess of $125,000 with equipment. Headquarters are at Lafayette and Broome Streets, New York.

Syracuse Lighting Co., Syracuse, N. Y., will take over and consolidate Seneca River Power Co., Baldwinsville, N. Y., and vicinity. New owner plans expansion in that vicinity, including transmission line construction.

Percy H. Smith, 57 East Fourth Street, Dunkirk, N. Y., and associates have formed Thrasher Mfg. Co., with capital of $50,000 and headquarters at Perrysburg, N. Y., where it is planned to operate a plant for manufacture of tools, instruments and kindred products. James E. Bixby, Gowanda, N. Y., is also interested in new company.

J. P. Devine Mfg. Co. has been organized and has succeeded to business of J. P. Devine Co., Buffalo, manufacturer of vacuum dryers, evaporators, and chemical apparatus. Reorganization was brought about by purchase of a large interest in business of Mount Vernon Car Mfg. Co., Mount Vernon, Ill. Walter C. Arthurs, president Mount Vernon Car Mfg. Co., becomes chairman of board of J. P. Devine Mfg. Co. Other officers are: Joseph P. Devine, president; H. H. Cust and C. P. Devine, vice-presidents; C. W. Reynolds, secretary; D. P. Settlemire, treasurer; Graham Devine, assistant to president and plant manager. Company plans enlargement of its present works at 1372 Clinton Street, Buffalo, and will also expand its various technical and research departments. A part of this expansion is under way.

Gears & Forgings, Inc., Cleveland, manufacturer of gears, forgings, speed reducers and special machinery, has appointed Potter & Dugan, Inc., Erie County Bank Building, Buffalo, district sales representative for Buffalo and vicinity.

South Atlantic States

BALTIMORE, June 18.

A TRACT of 46 acres at Fairfield, Baltimore, with 1500 ft. water frontage on Patapsco River, has been purchased by Asiatic Petroleum Co., Ltd., 65 Broadway, New York, as site for new oil refinery, storage and distributing works, with asphalt division, to cost close to $1,000,000 with equipment.

Dixie Aircraft Corporation, care of I. L. Paisley, Frederick, Md., recently formed by Mr. Paisley and associates, has acquired 160 acres near Amherst Highway, Lynchburg, Va., as site for new aircraft assembling plant, to specialize largely in production of all-metal monoplanes. Initial works are reported to cost in excess of $50,000, with equipment.

Georgia Vineyard Co., American Railway Exchange Building, Savannah, Ga., is reported planning construction of packing, storage and distributing plants, including conveying, elevating and other mechanical equipment, warehouse trucks, etc., to cost in excess of $100,000.

General purchasing officer, Panama Canal, Washington, is asking bids until June 27 for one electrically-operated engine lathe; two power hack saws; one electrically-operated shaper; 12 pneumatic chipping hammers; pipe machine, and other mechanical and electrical equipment, Panama schedule 1882; until July 2 for pipe and fittings, railing fittings, foundry brushes, warehouse trucks, ladders, etc., Panama schedule 1883.

Wilson-Smith Veneer Co., Dillon, S. C., plans early purchase of tools and equipment in connection with mill expansion and improvement, including power-operated veneer clipper, double cut-off saw, glueing machinery, etc.

Board of Forsyth County Commissioners, Winston-Salem, N. C., is planning an expansion program at Miller municipal airport, including construction of hangars, repair shops and other units.

C. H. Braun & Sons, Willow Street, Mount Winans, Baltimore, manufacturers of fertilizers, etc., have acquired grinding division of plant of J. H. Cottman & Co., Weaver Street, manufacturers of chemicals, and will use in connection with expansion program.

United States Shipping Board, Washington, will receive bids until July 6 for fire brick refractories and fire clay for six months' period beginning Aug. 1, proposal 141.

Swift & Co., Chicago, meat packers, are said to be concluding negotiations for purchase of plant of Georgia Cotton Oil Co., Waterville Road, Macon, Ga., and will operate as branch factory. Company is also arranging for purchase of mill of Alabama Cotton Oil Co., Montgomery, Ala.

Lanier Furniture Co., Statesville, N. C., recently formed with capital of $150,000, has acquired local plant of Iredell Upholstered Furniture Co., and will remodel and install additional machinery. L. L. Lanier is head.

Thomas J. Blackburn, 500 West Trade Street, Charlotte, N. C., operating radio station WBT, plans early purchase of two 200-ft. steel radio towers, self-supporting type, hot galvanized, with and without insulated bases on each leg.

Capital Granite Co., Oxford, N. C., Robert G. Lassiter, president, plans installation of granite crushing mill in connection with granite quarry near Blairs, S. C., including electrically-operated crushers, hoisting and conveying machinery, etc.

Board of City Commissioners, Asheville, N. C., is considering construction of pipe line from South Mills River to West Asheville, in connection with extensions in municipal waterworks, to include pumping machinery and auxiliary equipment. Entire project is reported to cost in excess of $1,000,000. Howerton Engineering Co., Medical Building, is engineer.

J. E. Beaman, Lawyers' Building, Raleigh, N. C., contractor, has filed plans for two-story automobile service, repair and garage building, to cost close to $90,000 with equipment, to be operated by Perin W. Cower, Raleigh, and associates.

New England

BOSTON, June 18.

WITH the majority of New England machine-tool dealers business is almost at a standstill. Some dealers, however, have closed enough business, and have assurances that additional orders are within grasp, to give the general market a brighter aspect. One company reports the sale of a 16-in. lathe to a Massachusetts shop, a similar machine to a Rhode Island plant, a radial drill to a middle Massachusetts manufacturer and a 13-in. lathe to another Massachusetts plant, in addition to a 30-ton crane. The Pneumatic Drop Hammer Co., Boston, has sold three 600-lb. hammers in Indiana, one of the same size in North Attleboro, Mass., and a smaller one to a Detroit manufacturer, and expects an order from a New England plant for a battery of hammers varying in size. Another company has sold two new cutter grinders. A new gear cutter has been placed, together with a moderate amount of low-priced used equipment.

The city of Boston is asking bids on 15 lathes for its Hyde Park district high school, and within a week or two it will inquire for 15 additional lathes, and later for a quantity of miscellaneous equipment. New England railroads and several industrial plants are expected to close on inquiries within the next 10 days.

Based on industrial plant activity in New England, there seems to be little prospect of any sizable activity in the machine-tool market in the near future. Shops, collectively, are growing less rather than more active. An increase in unemployed skilled mechanics is reported this week. With shops, business is spotty, and the same is true of machine-tool builders. A Connecticut tool maker has just received a large order for 13-in. lathes, necessitating the calling in of exhibition tools on the floors of outlying representatives. This builder is operating 100 per cent of capacity. Small tool sales have tapered off, but in the weekly aggregate a good comparative showing is made.

A $40,000,000 electric power development on the Connecticut river at Dalton, N. H., and Lunenburg, Vt., including

The Crane Market

INQUIRIES for single installations of overhead equipment continue in fair volume, but only a small number of locomotive crane inquiries are in the market. In the past fortnight, one Eastern crane builder has booked orders for 15 cranes. Among current inquiries is a list of high speed, long lift electric hoists for Canada, inquired for by Fox Brothers & Co., 12 East Forty-fourth Street, New York. The inquiry calls for one electric hoist capable of lifting 10,000 lb. at 250 ft. per min., with 1000 ft. of cable on the drum and four electric hoists of 2500 lb. lifting capacity at the same rate.

Among recent purchases are:

Panama Canal Commission, Washington, 30-ton locomotive crane from Ohio Locomotive Crane Co.

Textile Machinery Corporation, Reading, Pa., seven 5-ton electric traveling cranes from Niles Crane Corporation.

Pennsylvania Railroad, Philadelphia, 20-ton, overhead crane for Wilmington shops, from Niles Crane Corporation.

New York Central Railroad, New York, 10-ton, 67-ft. 3¼-in. span. overhead crane with 3-ton auxiliary for West Albany from Niles Crane Corporation.

New York, New Haven & Hartford Railroad, New Haven, 30-ton, 47-ft. 2¾-in. span overhead crane for Van Ness shops from Niles Crane Corporation.

Westcott & Mapes, New Haven, Conn., 25-ton locomotive crane for United Illuminating Co., New Haven, from American Hoist & Derrick Co.

American Electrical Works, Providence, R. I., nine ½-ton electric hoists from an unnamed builder.

American Printing Co., Fall River, Mass., five ¼-ton chain blocks from an unnamed builder.

Aluminum Co. of America, Pittsburgh, two 100-ton overhead cranes with 15-ton auxiliaries for Calderwood, Tenn., power plant from Whiting Corporation.

Weirton Steel Co., Weirton, West Va., 10-ton bucket crane, 7½-ton charging machine and one 200-ton stripper crane from Morgan Engineering Co. and 10-ton dock crane from Alliance Machine Co.

University of Illinois, Urbana, Ill., overhead electric crane for the material testing laboratory from Cleveland Crane & Engineering Co.

Deere & Co., Waterloo, Iowa, a coal handling crane from Milwaukee Electric Crane & Mfg. Corporation, a power house crane from Whiting Corporation, and a sand handling and a foundry crane from Cleveland Crane & Engineering Co.

Harrison Engineering & Construction Co., Kansas City, Mo., 18-ton, 8-wheel gasoline-type crane from Orton Crane & Shovel Co.

---

several power houses and a machine shop is contemplated. Details will be announced shortly.

Equipment of Standard Valve Mfg. Co., 81 Wareham Street, Boston, including a fairly large assortment of metal-working tools was sold June 13 at public auction at reasonable prices. Company is in process of liquidation.

New England High Carbon Steel Co., Millbury, Mass., has plans for a power house, 60 x 100 ft. Carl T. Lund, president Millbury Steel Foundry Co.; William Brierily, president A. D. Windle Co. and Richard French Iron Works, are interested in company.

Martin Trailer Co., Easthampton, Mass., is moving its business and machinery to plant formerly occupied by Planet Co., Westfield, Mass. Officers are Howard Swift, president; John R. King, vice-president, and Charles E. Harris, secretary and treasurer.

Plans are being arranged by American Writing Paper Co., Holyoke, Mass., for extensions and improvements, including new mill units and additional machinery, to cost close to $500,000.

Lynn Ornamental Iron Works, 966 Broad Street, Lynn, Mass., has asked bids on general contract for a one-story addition, to cost about $20,000 with equipment. Sanborn & Weed, Item Building, are architects.

Underwood-Elliott Fisher Co., 30 Vesey Street, New York, recently formed by merger of Underwood Typewriter Co., address noted and Hartford, Conn., and Elliott Fisher Co., Harrisburg, Pa., has arranged for purchase of Underwood Computing Machine Co., Hartford, heretofore owned by interests connected with Underwood Typewriter Co., and will consolidate with its organization. Purchasing company has engaged Lockwood, Greene & Co., 24 Federal Street, Boston, to prepare plans for new power house on Capitol Avenue, Hartford, to cost about $250,000 with equipment. Completion is scheduled by close of year.

Board of Selectmen, Hanover, N. H., has plans for two-story municipal automobile service, repair and garage building, 50 x 92 ft., to cost close to $65,000 with equipment. Wells & Hudson, Hanover, are architects.

Farrel Foundry & Machine Co., Waterbury, Conn., has plans for a three-story addition, 85 x 200 ft., to cost in excess of $100,000 with equipment. Fred A. Webster, Waterbury, is architect.

Providence Produce Warehouse Co., Providence, R. I., recently formed as a subsidiary of New York, New Haven & Hartford Railroad Co., Providence, plans construction of new terminal storage and distributing plant at Kinsley and Harris Avenues, with mechanical handling equipment, refrigerating apparatus, etc., to cost $750,000. Engineering department of railroad is in charge.

Hedstrom Union Co., Gardner, Mass., manufacturer of infant and juvenile vehicles, parts, etc., has asked bids on general contract for a three and four-story addition, 60 x 132 ft., and 40 x 60 ft., to cost close to $135,000 with equipment. G. A. Johnson, 16 Norwich Street, Worcester, Mass., is architect.

Haverhill Gas Light Co., Haverhill, Mass., will carry out an expansion and improvement program at artificial gas plant to cost about $270,000, including new gas holder with capacity of 3,000,000 cu. ft., and installation of equipment in plant. The sale of 9828 shares of stock is planned, a portion of proceeds to be used for work.

Package Machinery Co., Springfield, Mass., has purchased Ferguson & Haas, Inc., 515 Greenwich Street, New York, manufacturer of wrapping machinery and will consolidate with organization. Production will be concentrated at Springfield and equipment of acquired company removed to that location.

Public Electric Light Co., St. Albans, Vt., has applied for permission to issue additional stock to total about $45,000, practically entire proceeds to be used for expansion and improvements, including transmission line construction. Headquarters are at 161 Devonshire Street, Boston.

Chicago

CHICAGO, June 18.

WITH orders in the mail for the bulk of the large tool list for the Waterloo, Iowa, plant of Deere & Co., dealers in this district are counting on a two weeks' business that will better the last half of May. Miscellaneous orders are more numerous and new business in sight gives promise that June will be one of the best months so far this year. The Santa Fe has closed for all its requirements except several large special lathes, and it is probable that the Burlington Railroad will soon take action on a number of machine tools, inquiries for which have been issued over the last several months. The International Harvester Co. is contemplating additions to its tractor manufacturing facilities and will need a number of machine tools. The General Electric Co. has not taken action on the tools it needs at Chicago.

The Lapham-Hickey Co., Chicago, iron and steel warehouse, has contracted for 28,000 sq. ft. of land at Forty-seventh Place and South Turner Avenue, for erection of a one-story building.

Phillip Gollner Plumbing Supply Co., Chicago, suffered a loss of $200,000 when its plant recently was destroyed by fire.

Pheoll Mfg. Co., Chicago, manufacturer of screws, will build a one-story addition, 100 x 300 ft. Alfred S. Alschuler, 28 East Jackson Boulevard, is architect.

Hawkeye Tin Shop, 96 Second Avenue, Cedar Rapids, Iowa, manufacturer of furnaces, spouting and other sheet metal work, has been incorporated, but contemplates no other changes in its business. E. H. Gundling is proprietor.

Belmont Sheet Metal Works, 2341 Belmont Avenue, Chicago, will soon begin superstructure for new one-story and basement plant to cost about $30,000 with equipment. Olsen & Urbain, 228 North La Salle Street, are architects.

W. F. Meyers Co., Bedford, Ind., operating a local machine shop, has leased a two-story building at 2830-32 West Lake Street, Chicago, and will remove to that location where capacity will be increased.

State Mfg. Co., 4041 South Kedzie Avenue, Chicago, manufacturer of polishers' equipment and supplies, has awarded general contract to H. N. Samuel, 53 West Jackson Boulevard, for new one-story plant, 60 x 100 ft., to cost about $32,000 with equipment. A. Epstein, 2001 West Pershing Boulevard, is architect.

Adams Co., 111 West Sixth Street, Dubuque, Iowa, manufacturer of milling machines and other machine tools, has awarded general contract to W. L. Yokom, 730 Main Street, for one-story addition, 80 x 220 ft., to be used for foundry and machine shop to cost about $65,000 with equipment.

Marshalltown Trowel Co., Marshalltown, Iowa, manufacturer of hardware products, is planning an addition to cost close to $100,000 with equipment.

Duro Metal Products Co., 2649 North Kildare Avenue, Chicago, is beginning superstructure for a one-story and basement addition, to cost about $50,000 with equipment.

American Gas Co., Newton, Iowa, D. C. Tenney, president, is completing plans for early construction of new artificial gas plant and system at Willmar, Minn., to cost about $200,000.

Iowa Foundry Co., West Second and Cook Streets, Sioux City, Iowa, has taken out permit for a one-story machine shop, 50 x 63 ft.

Municipal Utilities Co., Des Moines, Iowa, is negotiating with City Council, Missouri Valley, Iowa, for franchise for new steam-operated electric power plant and system, reported to cost $225,000 with equipment.

Brook Electrical Supply Co., Chicago, recently organized, has leased one-story and basement building, 50 x 116 ft., at 213-17 South Peoria Street, and will establish new plant for manufacture of electrical equipment; portion of works will be used for assembling.

City Council, Ottumwa, Iowa, is considering construction of power dam and hydroelectric power plant on Des Moines River, for municipal service, to cost in excess of $500,000. A transmission line will be built. Brown & Cook, 1008 North Market Street, are consulting engineers; J. T. Brady is city engineer.

Chicago & North Western Railway Co., Casper, Wyo., has plans for one-story repair shop, 50 x 148 ft., for tank car repair service, to cost close to $40,000 with equipment. General offices are at 148 South Clark Street, Chicago.

Cleveland

CLEVELAND, June 18.

WHILE the machine-tool market is spotty sales are holding up to the May volume. Recently demand was largely from the automotive industry, but now that field is inactive and business is mostly from other sources. Inquiry shows a little improvement, several new inquiries having come out for lots of three to six machines. The New York Central Railroad during the week purchased a turret lathe from a Cleveland dealer for one of its Indiana shops. A local manufacturer of turret lathes reports that its single tool orders are holding up well and that its deliveries on some types of machines have been extended into late July or August.

Lake City Malleable Co. is name of a new foundry company recently organized in Cleveland to operate foundry department of Chisholm-Moore Mfg. Co. When this company's chain block, electric hoist and crane division was taken over recently by Columbus-McKinnon Chain Co. and a subsidiary was formed under name of the Chisholm-Moore Hoist Corporation, a separate company was formed to operate foundry under name of Chisholm-Moore Malleable Iron Co. This name has now been changed to Lake City Malleable Co.

Construction of initial unit of a plant at Preston, Canada, to cost $150,000, has been authorized by directors of General Fireproofing Co., Youngstown, Ohio, company to be known as General Fireproofing Co. of Canada. Board of directors and officers of subsidiary will be Canadians. Products will be similar to those at Youngstown plant.

Interests in Standard Slag Co., Youngstown, have purchased buildings and equipment of plant formerly used by Youngstown Boiler & Tank Co., which is now occupying property on Oak Street purchased from United Engineering & Foundry Co., Pittsburgh.

Plans are being prepared by Eaton Axle & Spring Co., East 140th Street and New York Central Railroad, Cleveland, for one-story forge shop addition, 43 x 190 ft., to cost close to $50,000 with equipment. G. S. Rider Co., Century Building, is engineer.

Fisher Brass Co., Bellefontaine, Ohio, with branch plants at Marysville and Delaware, Ohio, is disposing of a stock issue to total $397,000, a portion of proceeds to be used for expansion. Company specializes in manufacture of plumbers' brass goods and has recently arranged for new factory branch and distributing plant on West Forty-ninth Street, New York.

Ohio Electric Power Co., Ravenna, Ohio, has plans for a new automatic power substation at its Mill Road plant, to cost close to $60,000 with equipment.

Hertner Electric Co., 1905 West 114th Street, Cleveland, manufacturer of electrical products, is having plans drawn for a new one-story plant, 100 x 240 ft., to cost about $70,000 with equipment. Paul S. Schmidt, 4500 Euclid Avenue, is engineer.

Osgood Co., Marion, Ohio, manufacturer of steam shovels, mining dredges, etc., has arranged for merger with Commercial Steel Castings Co., operating a local foundry, under first noted name. Consolidated company has capital of 125,000 shares of stock, no par value, and has arranged for bond issue of $1,400,000, a portion of proceeds to be used for expansion in plant facilities.

Officials of Darlington Fireproofing Co., Lisbon, Ohio, manufacturer of hollow tile and kindred building products, are reported interested in project for construction of new plant between Youngstown, Ohio, and Smiths Ferry, Pa., including power house, machine shop and other buildings, to cost $350,000.

Kelley Mfg. Co., Bucyrus, Ohio, manufacturer of caskets, vaults, etc., has begun superstructure for two-story addition, 75 x 150 ft., to cost about $60,000 with equipment.

American Aircraft Corporation, Massillon, Ohio, has been organized to manufacture airplanes. Plans are being made for building a plant and company will be in market for materials and equipment. Paul R. Stewart is general manager.

Cincinnati

CINCINNATI, June 18.

BUSINESS booked by machine-tool builders in the first half of June compares rather favorably with that during the last two weeks of May, although there has been a slight decline in volume of orders. Manufacturers are anticipating a falling off in buying as the summer season draws near and therefore have been fairly well satisfied with the rate at which users have been making purchases. Automobile companies have confined their participation in the market principally to miscellaneous tools for replacement, the only exception having been a sale to a Michigan maker of 12 automatic and special production lathes. Aside from an order from the Boston & Albany for one or two machines, railroad buying has been inactive. The Midvale Steel Co., Philadelphia, has contracted for a 30-in. x 28-ft. heavy-duty engine lathe. Sizable purchases of used tools by large industrial companies are causing comment locally.

Following recent merger of Chrysler Corporation and Dodge Brothers, Inc., Detroit, plans are said to be under consideration for new automobile assembling plant for both interests at Cincinnati, to cost more than $1,000,000 with equipment. Mason Towle is local representative for Dodge automobiles.

Board of Education, Cincinnati, is asking bids on general contract until June 25 for new two-story automotive trade school, to cost in excess of $100,000 with equipment. B. L. Baldwin, Second National Bank Building, is architect.

Department of Public Welfare, Ninth and Oak Streets, Columbus, Ohio, has plans under way for one-story power house, 100 x 105 ft., to cost close to $75,000 with equipment. It is also proposed to build an addition to brick-manufacturing plant at Roseville State prison, to cost more than $50,000 with machinery, for which plans will be prepared under direction of engineering department, Ohio State University, Columbus. J. E. Harper is director of department.

Dard Hunter's Paper Mill, Chillicothe, Ohio, has purchased former iron foundry of Barnum & Richardson Co., Lime Rock, Conn., and will remodel for new branch mill for manufacture of fine papers. Entire project is reported to cost more than $100,000. Dard Hunter is head.

Mid-Continent Petroleum Corporation, Hazel and Dumesnil Streets, Louisville, will rebuild portion of oil storage and distributing plant, including pumping station, destroyed by fire June 8, with loss reported in excess of $80,000 including equipment.

Kentucky Utilities Co., Starks Building, Louisville, has concluded negotiations for purchase of electric light and power properties of General Power & Light Co., Chicago, at Calhoun, Rumsey, Sebree, Ky., and vicinity, and plans extensions, including transmission line construction.

Knoxville Gas Co., Knoxville, Tenn., plans extensions and betterments in artificial gas works, including installation of purifiers, sulphur extractors and other equipment, to cost close to $40,000.

Ohio Fuel Gas Co., 99 North Front Street, Columbus, Ohio, is said to be planning a new two-story equipment storage and distributing plant, with service, repair and garage unit for company motor trucks and cars, to cost about $125,000 with equipment.

Brandeis Machinery & Supply Co., 325 West Main Street, Louisville, is planning a new one-story storage and distributing plant, to cost about $35,000 with equipment.

State Highway Department, Frankfort, Ky., is said to have concluded an arrangement with F. B. Drew, McAlester, Okla., and associates, for construction of a new cement mill in Kentucky, site soon to be selected, to cost $1,500,000 with equipment. Plant will have initial daily output of 4000 bbl. and State guarantees to use 75 per cent of production for a term of years. Robert W. Hunt, Robert W. Hunt Co., 175 West Jackson Boulevard, Chicago, engineer, is said to be interested in project. Kentucky Progress Commission, Frankfort, C. Frank Dunn, secretary, has information regarding enterprise.

Pittsburgh

PITTSBURGH, June 18.

THE first half of the month has been marked by only moderate activity in machinery and tools. A fairly good sprinkling of orders against inquiries which originated some time ago is reported by some houses, but more commonly the report is that both sales and inquiries are few.

Youngstown Sheet & Tube Corporation, Youngstown, Ohio, has plans under way for a new coal-washing plant, with mining and distributing facilities at its properties at Nemacolin, Pa., to cost in excess of $750,000. Allen & Garcia, 322 South Michigan Avenue, Chicago, are consulting engineers.

American Zinc & Chemical Co., Clark Building, Pittsburgh, has awarded general contract to Rust Engineering Co., American State Bank Building, for one and two-story and basement addition to mill at Langeloth, Pa., to cost more than $300,000 with equipment.

Swissvale School Board, Swissvale, Pa., is asking bids until July 2 for woven wire fence for Newmyer school property, Hampton Avenue and St. Lawrence Street. Ida E. Wallace, secretary.

Allegheny County Steam Heating Co., 435 Sixth Avenue, Pittsburgh, is said to be planning establishment of new power operating unit, to cost in excess of $350,000 with equipment.

G. P. Fryling, St. Mary's, Pa., and G. G. Herrick, Erie, Pa., have organized Erie Resistor Corporation, with capital of $25,000, to operate plant at Erie for manufacture of electrical products for resistance service, including copper, brass, carbon and other specialties. G. Richard Fryling, St. Mary's, is also interested in new company.

A. L. Confer, Oil City, Pa., an official of Empire Oil Works, Inc., Oil City, and associates have purchased controlling interest in Tidioute Refining Co., Tidioute, Pa., and will assume active management of oil properties and refinery. Plans are under way for expansion.

Homestead Valve Mfg. Co., Sixth Avenue, Homestead, Pa., plans early call for bids on general contract for one-story addition to foundry, including improvements in present plant, to cost in excess of $40,000 with equipment.

Septic Tank Engineering Co., 1224 Seventh Avenue, Beaver Falls, Pa., has been incorporated with capital stock of $25,000 to manufacture "Black Ball" septic tanks made of Copperoid steel. Most of work will be done on contract. G. A. P. Bowman is president.

Detroit

DETROIT, June 18.

PLANS have been authorized by Fisher Body Corporation, General Motors Building, Detroit, for a one-story addition to plant at Saginaw, Mich., 400 x 460 ft., to cost in excess of $1,500,000 with equipment.

Officials of Ottawa Furniture Co., Holland, Mich., have organized as Chippewa Cabinet Co., a subsidiary, to take over local plant of American Cabinet Co., under lease. New company will specialize in production of radio cabinets and kindred products.

Packard Motor Car Co., 1580 East Grand Boulevard, Detroit, has plans for new one-story foundry, to cost in excess of $100,000 with equipment. Albert Kahn, Inc., Marquette Building, is architect and engineer.

Universal Products Co., Inc., Kingsley Avenue, Detroit, manufacturer of universal joints for automobiles, etc., is disposing of a stock issue to total $1,170,000, a portion of fund to be used for expansion and improvements.

Leadingbrand, Inc., Lansing, Mich., recently organized by S. E. Liedabrand, Lansing, and associates, has leased local factory space and plans early operation for manufacture of new types of pumps, water softeners, and kindred products.

Board of Education, Pontiac, Mich., is planning early call for bids on general contract for three-story industrial arts school on Central High School campus, to cost $120,000, for which plans are being drawn by Childs & Smith, 720 North Michigan Avenue, Chicago, architects.

Briggs Mfg. Co., 11631 Mack Avenue, Detroit, manufacturer of automobile bodies, has acquired property on East Warren Avenue, as site for five-story addition for metal body stampings, to cost in excess of $500,000 with equipment.

Fruehoff Trailer Co., Harper Avenue, Detroit, has asked bids on general contract for one-story addition, 100 x 150 ft., to cost more than $65,000 including equipment. It will be used largely for assembling automobile truck trailers. H. P. Stihler, 2931 Gray Avenue, is architect.

Victor Body Co., Lansing, Mich, is moving equipment from plants at Grand Rapids and Iona, Mich., to its local factory and plans early production of bodies for Reo Motor Car Co. Initial output will be given over primarily to commercial bodies, with intentions of developing manufacture of passenger car bodies later.

Central States Utilities Co., Monroe, Mich., has arranged an expansion and improvement program for artificial gas plants, including additional equipment for increased generating and storage capacities, to cost more than $85,000.

Hercules Forging Co., recently organized, has purchased plant and equipment of Cadillac Forged Products Co., 2962 Hart Avenue, Detroit, and will continue business with little or no change in office or shop personnel. J. J. Callahan, president and treasurer of new company, is also president and treasurer of General Tool & Engineering Co., Detroit. Transfer was made possible by settling of estate of late Louis J. Kraus, head of Cadillac Forged Products Co., who died May 3.

Keeler Brass Co., Grand Rapids, Mich., has succeeded to business of Pleasant Valley Brass Co. Officers of Keeler company are Miner S. Keeler, president; Isaac S. Keeler, vice-president; C. Norman Webb, secretary, and George E. Keeler, treasurer.

St. Louis

ST. LOUIS, June 18.

WORK will soon be started by St. Louis Smelting & Refining Co., International Life Building, St. Louis, on new mill at Quapaw, Okla., to cost close to $200,000 with machinery. Company is operating on Ballard lease, near Quapaw.

Polar Wave Ice & Fuel Co., 3638 Olive Street, Kansas City, Mo., has plans for new ice-manufacturing plant to cost more than $55,000 with equipment.

Samples Mining Co., McAlester, Okla., operating coal mines on property of Oklahoma State Penitentiary, plans rebuilding portion of tipple destroyed by fire June 11, with loss close to $25,000.

Linde Air Products Co., 30 East Forty-second Street, New York, has acquired property at Oklahoma City, Okla., and contemplates new branch plant to cost close to $45,000 with equipment.

Consolidated Gas Utilities Co., Blackwell, Okla., recently formed to take over and consolidate Blackwell Pipe Line Co., Midwest Gas Co., Oklahoma Northern Gas Co., and other natural gas properties, is disposing of stock issue to total $3,534,000, a portion of proceeds to be used for expansion and improvements, including pipe line construction.

Board of Managers, Missouri School for Deaf, Fulton, Mo., Herbert E. Day, superintendent, has asked bids on general contract for new manual training building, to cost in excess of $75,000 with equipment. Charles A. Smith, Finance Building, Kansas City, Mo., is architect.

Gilman Granite Co., 1302 Elmwood Avenue, Kansas City, Mo., will make extensions and betterments in plant at Fairfax Industrial District, to include new power house, 20 x 24 ft., and crane runway, 50 x 110 ft., to cost about $45,000 with equipment.

H. L. Skettler, South Arch Street, Tulsa, Okla., contractor, will soon begin work on one-story automobile service, repair and garage building, 87 x 200 ft., to cost close to $90,000 with equipment.

Citizens' Electric Co., Hot Springs National Park, Ark., has plans for extensions and improvements in local power house, to cost in excess of $75,000 with equipment. Boilers, pumping machinery, oil-burners, feed regulators and accessory equipment will be installed. S. E. Dillon is general manager.

Hillyard Chemical Co., 801 South Ninth Street, St. Joseph, Mo., has revised plans for new three-story plant, to cost close to $100,000 with equipment. Eugene Meier, Lincoln Building, is architect.

Scullin Steel Co., which has been located at 6700 Manchester Avenue, St. Louis, has changed its address to Security Building, Fourth and Locust Streets, St. Louis.

Stiles-Herman Mfg. Co., 1710 Russell Boulevard, St. Louis, has been incorporated to manufacture fender rollers for taking dents out of automobile fenders. Manufacturing will be done on contract. J. C. Stiles is president.

Indiana

INDIANAPOLIS, June 18.

GENERAL contract has been let by Perfection Windshield Co., 1340 North Capitol Avenue, Indianapolis, manufacturer of automobile windshields, to John R. Curry Construction Co., Empire Life Building, for new one-story and basement plant, 50 x 150 ft., to cost about $23,000 with equipment.

Ontario Mfg. Co., Muncie, manufacturer of cutlery, plated flat ware, etc., is disposing of a preferred stock issue of $600,000, a portion of fund to be used for expansion and improvements.

Connersville Cabinet Co., Connersville, Ind., recently organized, will take over portion of former local factory of Connersville Furniture Co., and will remodel for new plant to manufacture cabinets, cedar chests and kindred products, J. E. Meyer, Richmond, Ind., is one of heads of company.

Perry Township School Board, Southport, Ind., is said to be planning installation of manual training equipment in new two-story high school to cost $180,000, for which plans will be drawn by McGuire & Shook, 941 North Meridian Street, Indianapolis, architects.

City Council, Lebanon, is considering early establishment of municipal airport, with construction of hangars, repair shops, oil storage and distributing building, etc.

Board of Education, Kokomo, is considering installation of manual training equipment in new high school to cost $170,000, for which bids will soon be asked on general contract. H. B. Bartlett, 1050 North Delaware Avenue, Indianapolis, is architect.

Electric Shovel Coal Corporation, Clinton, has purchased properties of Ayershire Coal Co., Winslow, Ind., and will convert from shaft mining to stripping operations. Electric shovels and other machinery will be installed and steel tipple built. Company recently disposed of stock issue of $2,900,000, a portion of fund to be used for expansion.

Milwaukee

MILWAUKEE, June 18.

MODERATE activity prevails in the machine-tool market, with new business being booked relatively satisfactory. Employment reports state that the heaviest demand for labor comes from the metal and building trades. Several large shops manufacturing automotive units, parts and equipment are maintaining three 8-hour shifts.

Following consolidation of the Northwestern Malleable Iron Co., 756 Park Street, Milwaukee, with Rockford Malleable Iron Co., Rockford, Ill., as Rockford Northwestern Malleable Iron Co., Milwaukee foundry and its 8-acre site have been sold to International Harvester Co., the two sites being adjacent. No definite plans have been made for use of the property. International company has recently started work on a new steam generating plant costing about $500,000 and contemplates erection of a large unit for tractor division and later an addition to cream separator division. Equipment of Northwestern plant is being transferred to Rockford.

Beloit Pattern Works, Beloit, Wis., is establishing a branch plant at 1350 Burnham Street, Milwaukee, where a building with 12,000 sq. ft. has been acquired. H. W. Price will be manager.

Briggs & Stratton Corporation, 1047 Thirteenth Street, Milwaukee, manufacturer of electrical units, parts and accessories for automotive industries, has purchased controlling interest in Evinrude Motor Co., Twenty-seventh Street and Capitol Drive, Milwaukee. It is stated that two plants will be kept in operation under present managements. Stephen F. Briggs is president of Briggs & Stratton company, and August J. Petrie, president of Evinrude company. Briggs & Stratton company is adding a tenth story to its present building, 60 x 120 ft., to enlarge its own operation.

Milwaukee Department of Public Works, R. E. Stoelting, commissioner, is asking bids until June 29 for construction of a fire department repair shop for manufacture of motor fire apparatus and its maintenance. Investment in building and equipment will be about $250,000. Bids on tools and other machinery will be requested later.

Highway Trailer Co., Edgerton, Wis., manufacturer of trailers, dump bodies, etc., has increased its capital stock to $1,000,000, following consolidation with its subsidiary, Continental Axle Co., Edgerton. Entire output of axle company is absorbed by Highway company. Enlargement of both plants, which adjoin, has been going on for past year and equipment purchases are being made from time to time. James W. Menhall is president.

W. H. Martin, 5430 State Street, Milwaukee, will build a general machine and repair shop, 54 x 60 ft., at 5426-5428 State Street.

Invincible Metal Furniture Co., Twenty-sixth and Franklin Streets, Manitowoc, Wis., is establishing an aircraft division and will invest about $200,000 in building and equipment. Contracts have been placed for erection of a one-story brick and steel factory, 86 x 335 ft., adjacent to present plant. Architect is William J. Raeuber, local. J. A. Schuette is president.

Racine Screw Works, 1501 Clark Street, Racine, Wis., will proceed with construction and equipment of a new plant to replace shop wrecked by fire on Feb. 25. J. P. Welling & Co., 737 Elaine Boulevard, local, have contract to erect building, 120 ft. sq., one-story and part basement. New automatic screw machine equipment is being purchased.

Board of Public Works, Waukesha, Wis., has extended from June 11 to June 27 time of closing bids for construction and equipment of a municipal sewage disposal plant and pumping station to cost $190,000. A. R. Schuh is city engineer.

Atlas Engineering Co., Milwaukee, has completed removal of its plant and equipment to Clintonville, Wis., where it is occupying enlarged factory of Topp-Stewart Tractor Co., with which it recently was consolidated. Atlas company manufacture concrete mixers, wagon loaders, conveyors, etc., and will continue manufacture of the Topp-Stewart tractor, which is of quadruple drive type. C. W. Zimmerman is vice-president and manager.

Unit Corporation of America, Milwaukee, which has been operating its gear division 24 hr. a day for several weeks, is preparing to place its forging division, formerly known as the Obenberger Forge Co., on a similar schedule. Fuller transmission works, Kalamazoo, Mich., another division, is to start operating day and night on July 1 for at least one month and possibly several months, according to W. H. Schmidt, president and general manager.

Blair Foundry Co., 364 North Broadway, Waukesha, Wis., has been succeeded by Pioneer Foundry Co., which will continue manufacture of same line of products.

Gulf States

BIRMINGHAM, June 18.

ARRANGEMENTS have been completed by International Paper Co., 100 East Forty-second Street, New York, for purchase of plant and property of Southern Paper Co., Moss Point, Miss., comprising a recently completed pulp and kraft paper mill, for about $4,200,000. New owner will continue operations as branch mill and plans to carry out expansion program later. Purchasing company will make improvements in its mills at Camden, Ark., including installation of lime sludge disposal plant to cost close to $80,000.

Reed Roller Bit Co., Mack Street and Avenue Q, Houston, Tex., has awarded general contract to Houston Structural Steel Co., 3910 Washington Street, for one-story machine shop, 75 x 100 ft., sawtooth roof type, to cost about $24,000 with equipment.

J. A. Taylor, 2332 Indiana Street, Houston, Tex., engineer, has plans for two-story cold storage and refrigerating plant at Brownsville, Tex., 100 x 240 ft., to cost in excess of $200,000 with machinery. It will be increased to three stories later.

Southeastern Power & Light Co., Birmingham, operating Alabama Power Co., Georgia Railway & Power Co., Mississippi Power Co., and other utilities, has arranged for increase in capital from 7,000,000 to 8,000,000 shares of stock, a portion of proceeds to be used for expansion and improvements, including transmission line construction, totaling about 100 miles in different parts of State. Company has acquired plant and property of Mill Port Gin, Ice & Power Co., Mill Port, Tex., and plans expansion in that district.

Fisk Rubber Co., Chicopee Falls, Mass., manufacturer of automobile tires, has leased a two-story building to be erected on North Carrollton Avenue, New Orleans, for a new factory branch, storage and distributing plant, for Louisiana, Texas, Mississippi and Arkansas, to cost in excess of $125,000 with equipment.

City Council, Alabama City, Ala., has authorized plans for a new pumping plant for municipal waterworks, to cost $70,000 with equipment. A bond issue is being arranged.

United Producers Pipe Line Co., a subsidiary of Transcontinental Oil Co., Tulsa, Okla., and Fort Worth, Tex., is planning early construction of 10-in. pipe line from Cushing, Okla., to McCamey, Tex., in west Texas oilfields, 433 miles, to cost more than $2,000,000 with compressor stations, etc.

Louisville & Nashville Railroad Co., Louisville, has plans for new locomotive and car shops at Mobile, Ala., comprising engine house, machine shop, forge and blacksmith shop, boiler house and other units. Company will also construct new 12-track terminal yard at same place, with turntable, coaling station and other facilities. Entire project is reported to cost more than $400,000 with equipment. W. H. Courtenay is chief engineer.

Phillips Petroleum Co., Bartlesville, Okla., has plans for extensions and improvements in gasoline refinery at Pampa, Tex., to cost close to $100,000 with equipment. It is also planning construction of new gasoline refinery in Rock Creek district, Hutchinson County, Tex., to cost approximately $130,000 with machinery.

Southern Cities Supply Corporation, Bankers' Bond Building, Birmingham, has acquired property adjoining its brick-manufacturing plants at Fox Station, about 30 miles from city, and plans expansion and installation of additional equipment for clay mining, conveying, brick manufacture, etc., to cost in excess of $90,000. Company has acquired barge fleet now operating on Warrior River, and will operate in conjunction with brick plant. Arrangements have been made for sale of 300,000 shares of stock, considerable portion of fund to be used for expansion.

South Coast Co., 645 North Michigan Boulevard, Chicago, has approved plans for construction of new cane sugar refinery at Oaklawn plantation, St. Mary Parish, La., to cost in excess of $750,000 with machinery. Contracts for portion of machinery have been let and other awards will soon be placed. A 20-ton traveling crane will be installed.

Atchison, Topeka & Santa Fe Railway Co., Fort Worth, Tex., plans construction of locomotive shops in connection with new switching yards at Saginaw, near Fort Worth. Yards will have capacity for handling 2000 cars and will cost close to $1,000,000 with shop facilities. Main locomotive repair shops for this district will be continued at Cleburne, Tex., where an expansion and improvement program is now in progress, to cost more than $1,500,000 for new buildings and machinery.

Warren, Knight & Davis, Empire Building, Birmingham, architects, have plans for one-story automobile service, repair and garage building, 75 x 145 ft., to cost more than $75,000 with equipment.

Moran Corporation, Slattery Building, Shreveport, La., is planning construction of several artificial gas plants and will be in market soon for equipment, including boiler and power facilities.

San Antonio Portland Cement Co., San Antonio, Tex., plans early construction of addition to power house at Lakeview. Other structures will be built, including raw mill unit, 65 x 150 ft. Entire project will cost in excess of $100,000. W. E. Simpson, National Bank of Commerce Building, is engineer.

Pacific Coast

San Francisco, June 13.

PLANS are under way for one-story addition to plant of Lockheed Aircraft Co., Burbank, Cal., 50 x 200 ft., to cost close to $50,000 with equipment.

Union High School District, Tustin, Cal., has plans for one-story manual training shop addition at local high school to cost about $25,000. Mott M. Marston, Douglas Building, Los Angeles, is architect.

William Fox Film Co., 1401 North Western Avenue, Los Angeles, has plans for a one-story machine shop at motion picture plant, 62 x 75 ft., in conjunction with new laboratory unit, 75 x 145 ft., to cost about $85,000 with equipment. William Darling is company architect.

Elbridge Smith, secretary, West Stanislaus Irrigation District, Westley, Cal., is asking bids until July 14 for 17 electrically-operated pumping units, 11 discharge pipes and valves for future pumps, 18 transformers and six electric switching stations, outdoor type. W. F. Woolley, Patterson, Cal., is chief engineer for district.

Astoria Box & Paper Co., Astoria, Ore., has acquired property from city, adjoining present mill, and is reported planning construction of new pulp mill unit, to cost in excess of $250,000 with machinery.

K. Lane Johnson, Holtzinger Building, Yakima, Wash., and associates have plans for a new two-story and basement cold storage and refrigerating plant, 80 x 135 ft., at Prosser, Wash., to cost about $45,000 with equipment.

City Council, Ellensburg, Wash., has authorized bond issue for $35,000 for extensions and improvements in municipal electric light and power plant, including installation of additional equipment.

Seattle Pulp & Paper Mills, Inc., Seattle, care of Tom G. Taylor & Co., Dexter-Horton Building, recently organized by officials of last noted company and associates, has plans for new pulp and paper mill on 20-acre tract on Duwamish River, near Seattle, to include power house, machine shop and auxiliary structures, to cost in excess of $1,000,000 with machinery. Joseph Irving, head of Crescent Logging Co., Everett, Wash., is president; Allen B. Engle of Taylor company, noted, is secretary.

Pacific Gas & Electric Co., 245 Market Street, San Francisco, has authorized a new automatic power substation at San Jose, Cal., to cost $278,000, and has appropriated funds in that amount. J. D. Kuster is division manager at San Jose.

J. C. Palumbo Fruit Co., Payette, Idaho, has plans for a four-story and basement cold storage and refrigerating plant, to cost upward of $60,000 with equipment. Tourtellotte & Hummel, Boise, Idaho, are architects.

Great Western Power Co., 530 Bush Street, San Francisco, will soon break ground for new steam-operated electric power house on San Francisco Bay, South San Francisco, to cost more than $3,000,000 with transmission system. Additional units will be added later. Company is subsidiary of North American Co., Cleveland.

Foreign

A FUND of about 170,391,000 yen ($85,195,500) will be expended by Japanese Government Railways, Tokyo, during present year for expansion and improvement of operating facilities, including additional repair and reconditioning shops, replacing of light rails with heavier sections, electrification on several lines, rolling stock, etc. An appropriation of 51,560,000 yen ($25,780,000) will be used during this same period for construction of new railroad lines. American Consulate, Tokyo, J. H. Ehlers, assistant commercial attaché, has information regarding work.

Piedmont Hydro-Electric Co. (Societa Idroelettrica Piemonte), Turin, Italy, is disposing of a note issue in United States totaling $4,000,000, a portion of proceeds to be used for expansion and betterments, including construction and acquisition of new hydroelectric generating plants, power substations and transmission lines, etc.

International Petroleum Corporation, Ltd., 120 Broadway, New York, a subsidiary of Standard Oil Co. of New Jersey, 26 Broadway, is concluding arrangements with Government of Republic of Colombia, where company operates concessions, for authority to arrange for loan of about $200,000,000, a considerable portion of fund to be used for development of oil properties, storage and distributing facilities, etc., in Colombia fields. Operations are carried out in name of Tropical Oil Co., an affiliated organization.

Plans are under way for a consolidation of tire and rubber manufacturers in Germany, including Continental Rubber Co., Hanover; German Dunlop Co., Hanau; Excelsior Rubber Works, Ltd., Hanover; Peters Union Rubber Works, Frankfort; and Harzburger Rubber Factory, Phoenix. Amalgamated company plans to carry out expansion and improvement program, with increased production facilities.

Gesellschaft fur elektrische Unternehmungen, known as "Gesfurel" (Corporation for Electrical Enterprises), Berlin, Germany, is disposing of a bond issue of $5,000,000 in United States, a portion of fund to be used for extensions and improvements in electric generating and transmission line properties in Germany and other European countries.

American Smelting & Refining Co., 120 Broadway, New York, is said to be arranging for work on new refinery

at Monterrey, Mexico, in connection with present lead smelting works at that point, for which authorization recently was granted by Mexican Government; smelter has a capacity of 10,000 tons per month and new refinery will have equipment to handle this output. It is reported to cost more than $1,000,000.

Canada

TORONTO, June 18.

BUSINESS the past week has consisted mostly of scattered orders for one or two tools. The automotive industry is buying for replacement needs, and two or three companies have lists in preparation for new works proposed or under construction. A large part of the orders recently closed were from the mining district of northern Ontario.

It is reported that Richardson Terminal Elevator & Grain Co., Port Arthur, Ont., is planning erection of elevator to have a capacity of 20,000,000 bu.

H. A. Brown, vice-president and general manager of General Motors of Canada, Ltd., Oshawa, Ont., has announced plans for an addition to company's plant at Windsor, Ont., for production of cab and car bodies.

E. G. M. Cape Co., 10 Cathcart Street, Montreal, has let a number of sub-trades in connection with an addition to plant of Simmons, Ltd., 400 St. Ambroise Street, Montreal, to cost $250,000. Architects are Ross & MacDonald, 1 Belmont Street.

N. O. Hipel, Ltd., Guelph Street, Preston, Ont., is making arrangements for the erection of a manufacturing plant there.

Bulk tenders are being received by J. R. W. Ambrose, chief engineer, Toronto Terminal Railways, New Union Station, Toronto, until June 26, for construction of a central power plant, 65 x 200 ft., to be erected by Canadian National and Canadian Pacific railroads, at a cost of $1,000,000.

Western Canada

General Motors of Canada, Ltd., Oshawa, Ont., will start work at once on erection of a $1,000,000 manufacturing and assembly plant at Regina, Sask. Hutton & Souter, Hamilton, Ont., are architects. Main building will be 400 x 800 ft.; office building, three-stories, 50 x 200 ft.; and power house 80 x 80 ft. It is expected to have plant ready for operation not later than Dec. 1.

Crow's Nest Pass Coal Co., Ltd., Fernie, B. C., has awarded Vancouver Machinery Depot, Ltd., Vancouver, B. C., contract for three Belliss & Morcom compound vertical-type, high-speed air compressors, with three 600-hp. Canadian General Electric synchronous motors. Canadian Ingersoll-Rand Co., Sherbrooke, Que., was awarded contract for one 1200-cu. ft. horizontal type, high-pressure machine.

New Trade Publications

Gasoline-Operated Locomotive Crane.—Orton Crane & Shovel Co., 608 South Dearborn Street, Chicago. Bulletin 56 of 16 pages and a 4-page folder illustrate and describe a line of locomotive cranes running up to 40-ton capacity. Turn tables give full swing around a circle. The folder is devoted to such cranes operated by one man, and rating up to 25 tons.

Installing Oil Heat.—Oil Heating Institute, 420 Madison Avenue, New York. Booklet of 36 pages detailing methods of installing heating equipment from the point of view of the architect. Nearly 20 types are illustrated in detail, in addition to 6 pages of general information regarding the equipment and its use. While the pamphlet is devoted primarily to residence units, practically all of these units are made in sizes suitable for industrial use.

Master Regulators.—Hagan Corporation, Pittsburgh. Bulletin 101 of 16 pages deals with apparatus developed for combustion control in steam boilers. It is illustrated with both halftones and line cuts, showing details of the equipment and installations.

Two-Cycle Diesel Engine.—Busch-Sulzer Brothers-Diesel Engine Co., St. Louis. Catalog of 16 pages featuring the type-E Diesel engine of high speed, light weight and compact design. These engines have been used in United States Navy submarines and for other marine equipment, and are used also for power plant purposes, particularly as stand-bys. They range from three to eight cylinders. The commercial type weighs about 100 lb. to the horsepower, compared with 55 lb. for the submarine type.

THE LAST WORD

(Contributed by the Reader Service Department of The Iron Age Publishing Co.)

This here younger generation! Tck! Tck!

"I was being given a sales talk on the merits of a certain brand of penetrating oil," writes de la Haye from Philadelphia, and was told that it was especially effective in promoting the "*osculation* of the wrist pins."

And we didn't even know he was sick

From the New York *Sun*, June 3, 1928:

> *Grave of Iron Age Chief Is Discovered*
>
> ROENNE, Island of Borholm (A. P.)—The elaborately furnished grave of a Burgundian chieftain of the iron age was discovered on the island and identified by the National Museum of Copenhagen as a relic of the third century.
>
> In the grave were two earthen vessels containing food for the long journey into the beyond.

"GRANDPA, what did you do in the great war and why didn't you have sense enough to get into the aircraft industry when it was in its infancy?" they will be asking us accusingly, forty years hence.

We shall be able to tell how we bravely stood guard over the wine vats in the Bordeaux section, but the aircraft part of the question will be harder to handle. We have a hunch it will be something like this:

"Children, back in the late 'twenties I can recall that there were as many as 113 aircraft builders. How many are there now? Less than 30, and that huge General Aircraft Co., with the slogan, 'a plane for every purse,' is getting most of the business. Instead of blaming your grandpop for lack of foresight, you ought to be grateful I kept my money in the old automobile business, for there were more that lost than won in the pioneer days of the airplane industry." Out of 190 makes of automobiles, there are now only about 50 left.

AN open letter to Messrs. Fairbairn, Wingfield & Wykes, chartered accountants, tel. address "Thriftily," 67 Watling Street, London, attention Mr. A. Dodds Fairbairn:

> Dear Dodds:
>
> Thanks for notifying us that the crash of our former subscriber, Williams & Norgate, Ltd., does not leave us entirely bereft, and that we have a certain sum coming to us on the unpaid subscription.
>
> To obtain this sum we must call at your office on Watling Street any day between the hours of 10 and 1 (except Saturday). We are booked solid with luncheon engagements for the next three weeks, and so can not get around your way. Besides, we dislike that Watling Street traffic.
>
> Therefore, we commission you to take the "blank pounds, blank shillings, and eight pence" due us and buy us a Dunhill pipe, which we understand can be purchased at reduced rates in your neighborhood. Thanks, Dodds. You can give me the pipe the next time you are over. Best regards to Doug Wykes and Ernie Wingfield.

"Have you had your copper today?" physicians are now asking, for it is reported that copper in the diet cures rickets, anemia and fallen arches. But if you have any of these ailments and find that swallowing pennies does not effect a cure, don't complain to us. For we have a suspicion that it is only some more propaganda put out by the copper interests, with the intention of crowding iron to the background.

Will this attempt to displace iron from its rightful position in medicine extend also to metaphor? Maybe our great-grandchildren will read, "He failed because he had too many coppers in the fire," or "He was a man of copper-silicon will." And the beauteous heroine will sob to her obdurate husband, "Why do you copper your heart against me?" A. H. D.

THE IRON AGE

New York, June 28, 1928

ESTABLISHED 1855

VOL. 121, No. 26

The Place of Overhead Conveyors

What Requirements Have to Be Covered to Meet the Dictum That Today's Plant Runs on Wheels

BY ALEX. R. PRIBIL

TWENTY-FIVE per cent for material handling! That's about what American industry spends out of its total payroll. The percentage would be still higher if the automotive industry alone did not already have $200,000,000 invested in material handling and conveying equipment.

Until five years ago, the principal object of efficiency and plant engineers was to lay out the plant and place the machinery according to the operations and allow each operator plenty of space for storing material on the floors. This method occasioned more or less delay in production and difficulties were encountered in the handling of material. Finally progressive production managers realized the necessity of using every available bit of floor space for manufacturing operations and began to utilize the ceiling or the overhead conveyor as a storage carrier and thus were able to keep the material moving correspondingly with the speed of production.

Early installations, however, were made in somewhat of a haphazard manner, the main object being to reduce trucking throughout the plant, as floor space for trucking material around a plant had become valuable.

The modern conveyor is laid out to suit a certain line-up of equipment and assembling operations, and the enormous saving which has been effected by its use has placed the overhead conveyor foremost in the modern plant. Buildings are now laid out with a definite routing of materials by conveyors and machines advantageously grouped. Material is not only carried through the building, but it is also carried from one building to another. This arrangement, of course, necessitates that overhead conveyors be built sufficiently high so that men can work underneath them and that

AS president of the Saginaw Stamping & Tool Co., Saginaw, Mich., which is a manufacturer for conveyor builders of conveyor trolleys, chain hoist trolleys, special trucks and industrial truck casters, Alex. R. Pribil approaches the subject of overhead conveyors and equipment for handling material as an expert. He came to this country when 21 years of age from Vienna, Austria, where he was educated as a mechanical engineer. For two years he was with the ordnance department of the Bethlehem Steel Co. and then in the next thirteen years was successively with the Wellman-Seaver-Morgan Co., Cleveland; Brown Hoisting Machinery Co., Cleveland; the Cambria Steel Co. as chief draftsman, the Ford Motor Co., Detroit, as chief designer and checker, the Penberthy Injector Co., Detroit, as general superintendent, the Bowen Products Co., Detroit, Auburn and Cleveland, as consulting engineer and with the Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa., as general supervisor of tools. In 1915 he became general manager of the Carde Stamping & Tool Co., Saginaw, and since 1917 has been president and general manager of the Saginaw company. He admits to having issued to him over 150 patents covering machinery, tools and special equipment. He holds that overhead conveyors and special trucks save 10 to 25 per cent of labor costs for material handling.

ALEX. R. PRIBIL

only occasional dips be made in the conveyor line for loading or unloading material.

Considerable engineering thought has been given not only to the general layout for overhead tracks, but to their strength and permanency in order to make the conveyor free from vibration and give absolute safety to the worker underneath.

A conveyor is an endless chain supported by a single I-beam track, driven at one point at a speed ranging from 10 to 60 ft. per min. It is important that heavy parts carried on the conveyor be properly attached so they can be easily and quickly loaded and unloaded. An overhead conveyor is composed of four units:

A, Overhead track supported by structural work

B, Conveyor equipment, including trolleys and roller turns

C, Chain and drive sprocket wheel

D, Electric motor and speed reducer.

Only one sprocket should be used for the drive and roller turns used on every corner or bend, to allow for the necessary take-up in the chain. The driving mechanism should be designed to give a continuous and steady pull, which may be accomplished by so-called speed reducers, which should be amply proportioned. The opposite end of the drive-end of the conveyor is called the tail-end and is generally made adjustable to take up the slack in the chain. The bearings of the shaft should be mounted on a sliding guide, operated manually with a screw so that the tension of the chain can be adjusted to take up the slack in the chain.

This, of course, is accomplished by several means, almost all of which relate more to extremely accurate field work than to design, and among these are such items as having the straight runs of the I-beam absolutely straight and at the roller turns having the center line of the web of the beam exactly vertical with the center line of the chain.

In fabricating and erecting steel work for these overhead conveyors, the most successful contractors work to limits which are totally unknown to the structural iron shop and are, in fact, plus or minus 1/64 in. Every bit of this care is for the purpose of reducing chain reaction and undue wear of the various parts. One reason why the No. 458 rivetless chain manufactured by a number of chain manufacturers is so popular is that it has the property of telescoping somewhat on the driven side of the power plant.

In all cases, the conveyor should be driven by electric motors, and these electric motors should be controlled by push button switches. There should be as many push button switches as practical to stop the conveyor at an instant's notice and the conveyor should be started again only after a signal that everything is clear.

The conveyor should be properly guarded and must be properly installed to insure absolute confidence. All floor openings into the drive must be properly protected and, of course, the unloading of material from the conveyor must be carefully studied.

While the overhead conveyor is an absolute necessity for production at minimum cost, nevertheless there are a great many places where conveyors must be supplemented with trucks, as the "modern plant of today runs on wheels," in order to make the moving of material as flexible as possible.

All Iron and Steel Pipe Seriously Corroded by Some Soils

In 1922 the Bureau of Standards began an investigation of the corrosion of piping in soils wherein no stray electric currents existed. In cooperation with various manufacturers and public utilities, some 14,000 6-in. lengths of pipe were buried in soils at 46 locations selected by the Department of Agriculture's bureau of soils as typifying situations of existing pipe networks. Specimens were cut from stock material and, after identification, weighing and examination, were buried in a pipe trench in an approved manner, each trench containing five groups.

One group of specimens was removed from all locations in 1924; a second set in 1926; and the work will be continued at two-year intervals until 1932. Studies of the pipe after two and four years' burial are described in Technologic Paper No. 368 of the Bureau of Standards, by K. H. Logan, S. P. Ewing and C. D. Yeomans. This booklet also contains a full description of the nature of the covering soils.

When any one of the test locations is considered, welded iron and steel pipe of various manufacture differ little in loss of weight or extent of pitting after burial for four years. Wide differences do occur when corresponding specimens from the various localities are compared, ranging from practically no corrosion in a gravelly, sandy loam near Seattle, Wash., to a worm-eaten, deeply grooved appearanace in a sandy loam at Denver. It is evident that no one of the commonly used pipe materials is superior under all soil conditions and, further, that serious corrosion may occur in soil free from foreign matter and stray currents. Attempts have been made to correlate the amount of measured corrosion with various physical or chemical characteristics of the soil, such as the hydrogen ion concentration, soluble salt content, soluble salts in the ground water, and soil resistivity, but without success.

In certain of the soils, cast iron is seriously affected by pitting, developing the phenomenon of "graphitic corrosion," no different from the observed effects of electrolysis, even though it is certain that no electric currents existed in the soils in which the pieces have been buried.

Preliminary results have also been secured on the soil corrosion of iron and steel protected by various metallic and organic coatings, and of several non-ferrous metals.

Great Improvement in Safety at Bethlehem Plants

Safety education of employees of the Bethlehem Steel Corporation has helped to reduce lost-time accidents at Bethlehem plants 54 per cent in the last 10 years. This improvement was announced in connection with the company's fourteenth annual "First Aid and Mine Rescue Meet," held June 23, at Sparrows Point, Md.

Employees from all the Bethlehem steel plants and mines entered into competition in a contest of efficiency in first aid and mine rescue work. Cash prizes awarded by Eugene G. Grace, president of the company, totaled about $2,000.

Bethlehem now trains about 1000 men in safety and first aid every year. More than 8000 employees have received an intensive course of instruction in this work during the last 12 years.

Marked improvement in accident prevention was effected by the employees during the first quarter of 1928. The company as a whole improved its best previous record by 17.8 per cent. The steel plants alone bettered their safety record by 44 per cent.

Electrical Steel-Mill Developments

Large Number of Main-Roll Drives Installed—Some Units of Particular Interest Because of Methods of Control

BY W. H. BURR*

IN 1920, the electrical development committee reported 44 motors driving reversing mills and 113 mills of various types on which electric motors had been installed, making a total of 157 motors on main-roll drives at that time. In January, 1928, there were reported over 1500 main-roll drive motors in the United States and Canada.

During 1927 there were purchased 122 main-roll drive motors ranging in size from 300 hp. to 7000 hp. Of this number 63 were d.c. motors, 40 were 60-cycle, 17 were 25-cycle, and two were 50-cycle motors. More than half of the motors were d.c. motors, a condition quite different from that existing a few years ago. Eighty of these motors were used in connection with gear drives, which is evidence that the modern reduction gear has proved its reliability to the satisfaction of the steel mill industry.

Recent Main-Roll Drives

During the past year the American Sheet & Tin Plate Co. has placed in operation one of the heaviest power tandem hot-strip mills in the country. This mill is located in the Chicago district. The six finishing stands are driven by individual 2500-hp. 600-volt, adjustable-speed d.c. motors, running at 160 to 320 r.p.m. Power for these motors is supplied from three 3000-kw., three-unit synchronous motor-generator sets operating in parallel. One 3000-kw. set is used to start the six 2500-hp. motors by means of variable voltage control.

There is now under construction for the American Rolling Mill Co., in the Cincinnati district, a hot-strip mill which will be equipped with motors somewhat larger than those mentioned above, making it the largest capacity mill of this type in this country. The total main-roll drive power is 21,800 hp., which includes both a.c. and d.c. main-roll drive motors.

The roughing stands are driven by two 800-hp., one 1000-hp. and one 1200-hp. wound-rotor motors. The motors have been designed so that mechanically their individual parts are interchangeable. This arrangement necessitates only one spare rotor with shaft and one spare stator, due to the fact that these parts can be placed on any of the bases and bearings.

The three intermediate stands are driven by individual 2000-hp., 600-volt, direct current, adjustable-speed motors, operating at 300 to 500 r.p.m. Each of the four finishing stands is driven by a 3000-hp., 600-volt, d.c., adjustable-speed motor, running at 180 to 360 r.p.m.

The main-roll drive motors are supplied from three 4000-kw. three unit, synchronous motor-generator sets operating in parallel. The auxiliary motors are supplied from two 750-kw. synchronous motor-generator sets and the excitation for all main-roll drive d.c. motors and generators is supplied from a 300-kw. synchronous motor-generator set.

Close Control of Speeds

Two mills recently purchased for the Cleveland district include 11 main-roll-drive motors, ranging from 400 to 1200 hp. and a total of 6050 hp., continuous capacity for both mills. Due to the high delivery speeds, close center distance stands and wide speed range of the motors, it was necessary to incorporate special design features in both motors and control, to maintain the correct speed relation between adjacent stands, so that stretching and buckling of the metal between stands will be eliminated.

There have been purchased for the Birmingham district main-roll-drive motors for a rod mill installation, which include five 6600-volt, 60-cycle, synchronous motors ranging in size from 1300 to 2750 hp. and totaling 9650 hp. The synchronous motors, with the exception of a 2750-hp. motor, are all designed so that they can be started by applying full voltage to their terminals. To reduce to a satisfactory value the starting kva., taken from the power system, reactors are used in connection with the starting equipment for the 2750-hp. motor.

The finishing stand for the rod mill will be driven by a 1200-hp., 230-volt, d.c. adjustable-speed motor. Power for this motor is supplied from a 1000-kw. generator driven by a 2100-hp. motor, which also drives a portion of the mill stands. The combination generator and mill drive represents a new feature for this class of service. The synchronous motors purchased for this installation represent the first large synchronous motors to be applied on a mill of this class.

Replacing Steam with Electricity

There has been purchased by the Illinois Steel Co. a 6500-hp. single-unit reversing-mill motor for the electrification of an existing steam engine-driven mill. A new pinion housing and the motor will be installed on the opposite end of the mill from the present drive. This will reduce the shut-down period of the mill during the change-over to the minimum, due to the fact that the entire equipment can be installed with the mill in service.

One recent improvement in the mechanical features for electrical equipment has been incorporated in this equipment. The individual bedplates for both the reversing motor and the flywheel motor-generator set are of "built up" welded steel construction.

A 4600-hp. 700-volt, single-unit reversing-mill motor for driving a 35-in. roughing mill has been purchased for installation in India (Jamshedpur). The motor will be supplied by a flywheel motor-generator set which includes two 1900-kw., 490 r.p.m., d.c. generators. These generators indicate that continued progress is being made in developing larger generator capacity at higher speeds for reversing-mill service.

There has recently been placed in service by the Carnegie Steel Co., in the Youngstown district, a 4000-hp., 450 r.p.m. synchronous motor for driving a 24-in. continuous billet mill. The motor represents the latest design in synchronous motors for this class of service, in that the motor has a completely fabricated welded frame and bedplate.

New Strip Mills Electrically Driven

A cold-roll strip mill for production of wide material was placed in operation by the American Rolling Mill Co. during the last year. The mill is driven by five 600-hp., 230-volt, d.c., adjustable-speed motors, operating at 400 to 800 r.p.m. For use in connection with this installation there was developed and perfected a special screw-down drive, so that each screw can be motor driven independently of the other screw. If it is desired to operate both screws at the same time a magnetic clutch is energized, which causes both screws to turn at the same rate. An inching arrangement is provided which allows the screws to travel one revolution and then stop automatically.

---

*Electrical superintendent, Lukens Steel Co., Coatesville, Pa., and chairman electrical development committee, Association of Iron and Steel Electrical Engineers. This is abstract of the committee's report presented at the association's Chicago meeting, June 25 to 28.

About the middle of last year the Trumbull Steel Co. completed remodeling its 16-in. hot strip mill, which was first placed in operation during 1918. The mill is now laid out for continuous rolling and will produce strip up to 36-in. wide. The driving power applied to the mill was increased by one new 5000-hp. adjustable-speed Scherbius-controlled induction motor, so that the total capacity of driving motors is now 13,000 hp. With the exception of one 300-hp. and two 100-hp. edger motors, which are adjustable-speed d.c. machines, all the driving motors are of the slip-ring induction type, with speed adjustment obtained by the Scherbius system. The four horizontal roughing stands are driven by a 1500-hp. motor, and each of the last three stands is driven by a 2000-hp. motor. The speed of each motor can be adjusted between 270 and 450 r.p.m.

The Scherbius speed-regulating set used with the 5000-hp. motor is of especial interest, as it is the first application using two a.c. commutator-type machines in series. This design permits the use of smaller and higher speed units, and the higher regulating voltage obtainable permits designing the induction motor with a lower secondary current.

Another large strip mill recently placed in operation is that of the Weirton Steel Co., at Weirton, W. Va. This mill will produce strip up to 48 in. wide. There are 11 driving motors, totaling 16,600 hp. The three motors on the roughing stands are 1500-hp., 6600-volt a.c. machines, one of which operates at 200 r.p.m. and the remaining two at 450 r.p.m. There are three edger motors, each 200 hp., 400 to 800 r.p.m. direct current.

The five finishing stands are individually driven by two 2000-hp., 200 to 400 r.p.m. and three 2500-hp., 200 to 400 r.p.m., 600-volt, d.c. motors. Power for the direct-current machines is obtained from two synchronous motor-generators, each consisting of two 1500-kw., 600-volt, d.c. generators driven by one 4200-kva., 6600-volt synchronous motor. The five d.c. motors are started simultaneously by control of the voltage of the four d.c. generators.

Continuous Skelp Mills

Two large mills of the continuous type for rolling skelp have been placed in operation during the past year. One is at the Benwood, W. Va., plant of the Wheeling Steel Corporation. This mill is provided with eight driving motors, all of which are adjustable-speed, d.c. machines. There are four edger motors, three of which are 50 hp. and one 150 hp. These machines are operated from the 230-volt machines, power being supplied to them from a three-unit motor-generator consisting of two 2000-kw., 600-volt generators driven by one 5600-kva., 4000-volt, 60-cycle, synchronous motor. The first two stands are driven by a 500-hp. motor and the remaining eight stands by three 2000-hp. machines.

The other skelp mill referred to is a 27-in.-24-in.-21-in. continuous mill installed by the Bethlehem Steel Co. at the Sparrows Point plant. In addition to producing skelp, this mill is designed to roll sheet bars also. There are four main driving motors. The first is a 4000-hp. 83 r.p.m., 6600-volt, synchronous motor which drives the roughing train. The intermediate train is driven by a second synchronous motor rated 6500 hp. at 187 r.p.m. The third is a 6700-hp. slip-ring induction motor with speed adjustment between 250 and 500 r.p.m., obtained by the Scherbius system. Incidentally, this is the largest Scherbius equipment in the world. The driving motor on the last stand is a 600-volt d.c. machine rated 2600 hp. at 275 to 320 r.p.m.

Rolling H-Beams in High-Power Mill

From the standpoint of total horsepower involved, the new electrically driven beam mill for the production of wide-flange structural shapes at the Lackawanna plant of the Bethlehem Steel Co. is one of the most highly powered mills in this country. The complete equipment consists of three units: a 54-in. reversing blooming mill, a 48-in. intermediate mill, and a 48-in. finishing mill. The finished sections are produced without reheating of the steel from the time the ingot is removed from the soaking pit.

The ingot is first rolled in the blooming mill to an H-shaped bloom with a web from seven to 12 times the thickness of the web of the finished section. This bloom then passes to the intermediate mill, which consists of two separately driven stands of rolls.

One stand, known as the supplementary mill, has two horizontal rolls, and the main stand has two horizontal and two vertical rolls. The H-shaped bloom enters this intermediate mill with the web horizontal. The supplementary rolls act only on the top and bottom edges of the flange. The horizontal rolls of the main mill effect the reduction in cross-section of the web, while the vertical rolls reduce the cross-sections of both flanges. In the main mill the driving power is applied only to the horizontal rolls, the vertical rolls rotating due to their contact with the beam.

After several passes back and forth through the intermediate mill, the beam passes on to the finishing mill, which also consists of two stands, a main and supplementary, where several finishing passes are made. [This is the same action as that illustrated and described on page 1381 of THE IRON AGE of May 17, in connection with the new Carnegie parallel-flange beam mill at the Homestead works. Editor.]

Unusually Large Motors

The motor for driving the 54-in. reversing blooming mill is the largest single-unit d.c. rolling mill motor which the General Electric Co. has ever built. It is rated 7000 hp. continuously, at 40 to 80 r.p.m. This motor is capable of exerting a maximum torque of 2,400,000 lb. at 1-ft. radius. Direct-current power is supplied from a flywheel motor-generator consisting of one 5000-hp., 275 r.p.m., 6600-volt induction motor, one 50-ton flywheel, and two 3000-kw., 750-volt generators which are operated in parallel. This 54-in. blooming mill is one of the two largest reversing blooming mills in this country.

The intermediate mill has two reversing motors, one of which drives the supplementary rolls and the other the main rolls. The main-roll motor is rated 7000 hp. continuously, at 65 to 125 r.p.m. The supplementary mill motor is rated 1500 hp. continuously, at 65 to 225 r.p.m. The flywheel motor-generator which furnishes power to these reversing motors consists of a 5000-hp., 375 r.p.m., 6600-volt induction motor (duplicate of that on the blooming mill set), two 3000-kw. generators for the main motor, one 3000-kw. generator for the supplementary motor, and one 50-ton flywheel.

This set is a duplicate of the blooming mill set, except that it has three generators instead of two. The finishing mill equipment is the same as that for the intermediate mill. The total capacity of the main equipment for the blooming, intermediate, and finishing mills is just about 71,000 hp.

Changing Over the Rail Mill

The Bethlehem Steel Co. placed an order for new electrical equipment for the Lackawanna rail mill. Engine drives will be discarded and the layout of the mill will be changed. It will consist of a 44-in. reversing blooming mill, the driving motor for which will be rated 7000 hp. continuously, at 50 to 120 r.p.m. Blooms from this mill will go direct to a 36-in. reversing roughing mill, which will be driven by a d.c. motor, rated 5000 hp., continuously, 50 to 120 r.p.m.

Power for these two reversing motors will be obtained from a single flywheel motor-generator consisting of one 8000-hp., 375 r.p.m., 6600-volt induction motor, two 3000-kw., 375 r.p.m., 750-volt generators operating in parallel, to supply power to the 7000-hp. blooming mill motor, two 2200-kw., 450-volt generators operating in series, to supply power to the 5000-hp. roughing mill motor, and one 75-ton flywheel.

More Synchronous Motors Being Used

Increasing use of synchronous motors for main roll drives is noteworthy. Seven motors sold by the General Electric Co. during 1927 totaled 12,600 hp. The largest of these is rated 5000 hp., continuously at 100 r.p.m., and 2200 volts, and is used to drive a 19-in.

continuous sheet bar mill at the Kokomo, Ind., plant of the Continental Steel Corporation.

A motor of the same horsepower rating but at 240 r.p.m. is used to drive a 51-in. piercing mill installed by the Standard Seamless Tube Co. at Ambridge, Pa. This is the largest seamless tube mill drive in the world.

The Standard Seamless Tube Co. has placed in operation also a 32-in. reversing bar mill which is driven by a 2150-hp., 43 to 85 r.p.m., 550-volt d.c. motor. Power is derived from a synchronous motor-generator consisting of a 4200-kva., 2200-volt synchronous motor, direct-connected to two 1000-kw., 275-volt, d.c. generators operating in series. This is the first installation of a reversing rolling mill motor deriving its power from a synchronous motor-driven generator.

At the Union plant of the Bourne-Fuller Co., Cleveland, a 10-in. merchant mill has recently been placed in operation which, from the standpoint of the electrical equipment, is of particular interest. The mill has eight driving motors totaling 3400 hp. Five are 500-hp., 267 to 800 r.p.m., 230-volt, d.c. machines and three are 300 hp., with the same range of speed adjustment.

The four stands driven by the three 300-hp. motors and one of the 500-hp. motors are in tandem and placed on very close centers, so that the metal being rolled is in all four stands simultaneously. For this reason, special provision has been made in the control provided for these four motors, to reduce the speed regulation (that is, the change in speed from no load to full load) of each machine to a minimum, and to maintain within close limits the relative speeds of all four machines.

STARTS USING HOT METAL

Improved Hamilton Furnace Now Connected with Armco Middletown Works

INAUGURATION of the movement of hot metal from the blast furnace of the Hamilton Coke & Iron Co., at Hamilton, Ohio, to the open-hearth furnaces of the East Side works of the American Rolling Mill Co., at Middletown, Ohio, was formally celebrated June 25 when a party of officials and guests of the two companies journeyed on special cars from Middletown over the newly-constructed tracks of the Baltimore & Ohio Railroad to Hamilton where they saw molten metal taken from the furnace and sealed in ladle cars. The return trip was made to the East Side works at Middletown, where the party inspected the plant. A luncheon was given by the officials of the American Rolling Mill Co., at which brief addresses were made by Daniel Willard, president Baltimore & Ohio Railroad; H. C. Blackwell, president Union Gas & Electric Co., Cincinnati; and H. B. Rust, president Hamilton Coke & Iron Co.

The plant of the Hamilton Coke & Iron Co., which originally consisted of a blast furnace owned by the Hamilton Furnace Co., has been enlarged and improved. The program of improvements included the remodeling of the blast furnace, hot blast stoves and gas cleaning system, installation of equipment suitable for the delivery of hot metal to Middletown, 12 miles distant, and the construction of a modern by-product coke plant comprising 45 14.8-ton Koppers ovens of the Becker type with a capacity of 1200 tons of coal each day.

The blast furnace with a rated capacity of 550 tons daily is equipped with a McKee revolving distributor. The hearth has been enlarged from 16 to 17 ft. in diameter. The gas cleaning system, after the dust catcher, is entirely new. The gas, after passing through the dust catcher, is cleaned by an A. B. C. vortex collector furnished by H. A. Brassert & Co. The collector removes by dry process a large percentage of the dust remaining in the gas and delivers hot gas of sufficient cleanliness to be suitable for use at the boilers. By centrifugal action the collector separates the dust from the gas, and the dust is collected in a receptacle at the bottom. At intervals of about 12 hr. the dust is dumped into railroad cars. The clean gas passes out at the top of the collector, part of it going to the boilers without further cleaning and the remainder going to a Feld five-stage scrubbing tower, 12 ft. in diameter, where it is wet washed for use at the stoves.

After leaving the Feld scrubber, the gas passes through an A. B. C. vortex eliminator and thence to the stoves. The action of the eliminator is similar to that of the collector, its function being to separate the gas from the entrained moisture and sludge.

Three of the four stoves were relined to provide the necessary increase in regenerative capacity required by the furnace. The stove shells, each of which is 20 ft. in diameter and 92 ft. high, have been left intact, but in the relining are said to represent an innovation in stove design from anything now in operation in this country. The arrangement of the gas passage, together with the center combustion chamber, conforms to the Diehl type stove. The checkers of the Brassert type, consisting of octagonal shapes with cylindrical openings in the center, result in a series of square and round openings from the top to the bottom of the checker work. Insert columns of specially shaped fire brick have been placed in these openings, the size of the inserts being varied to effect a somewhat higher and more uniform gas and blast velocity throughout the checkers than has been employed ordinarily in the past. It is estimated that an increase of 90 per cent in heating surface per stove is obtained with these checkers as compared with the type of stoves previously used at this furnace. Incidentally, the four stoves have been equipped with Steinbart pressure burners for economical and efficient gas burning.

The coke plant will produce furnace coke and also coke for industrial and domestic uses. The surplus gas from the ovens is delivered to a 5,000,000-cu.-ft. waterless gas holder, from which it is taken by the Columbia Gas Supply Co. A Koppers phenol recovery plant and a Bartlett-Hayward centrifugal benzol absorber are features of the by-product plant.

Three specially-designed mixer ladles of the Pugh type, each of 150 tons capacity, will carry the molten metal from the furnace to the open-hearth furnaces at Middletown. The ladles have been double-lined with fire brick and are capable of holding the metal for 48 hr. A view of one of the ladle cars was given on page 1746 of THE IRON AGE of June 21.

Because of the concentrated load of metal, plus the unusually heavy weight of the ladle cars, it was necessary for the Baltimore & Ohio Railroad to design and build a special bridge over the Miami River en route from Hamilton to Middletown. For a ladle car to make the round trip from the furnace to Middletown requires about 2½ hr. and it is estimated that an average of four trips every 24 hr. will be made.

The Hamilton Coke & Iron Co. is the successor to the Hamilton Furnace Co., which first built a blast furnace at Hamilton in 1907 to make foundry pig iron to be sold in the open market. Ten years later the blast furnace was rebuilt, but for a long period previous to its purchase by the Hamilton Coke & Iron Co. was idle. Today, under its new joint ownership by the American Rolling Mill Co. and the Koppers Co., it enables the former to reduce its steel production costs by using the hot metal for its open-hearth furnaces at Middletown instead of securing cold pig iron from the Armco furnaces at Columbus.

Foundry owners of Worcester, Mass., on Monday, June 25, met at the Hotel Bancroft, of that city, to form a foundry council of the chamber of commerce. Roscoe H. Goddard, general secretary of the chamber, presented the plan. Most of the foundrymen present were in favor of it and concrete developments are expected soon.

Magnets Control Welding Arc

Produce "Electronic Tornado" and Stabilize Carbon Arc—Joints Welded at High Speed Have Superior Ductility, Appearance and Strength

BY A. F. DAVIS*

IT has long been known that the electric arc is normally a difficult phenomenon for the welder to control. It creates its own magnetic field and the passage of the welding current through the parts being welded creates other magnetic fields of variable direction. The arc, therefore, tends to wander around seeking the path of least resistance. When studying this characteristic in an effort to stabilize the arc, research investigators in the Lincoln Electric Co.'s laboratory many months ago found that, after superimposing a strong magnetic field on the arc flame, the arc travels through variable fields without disturbance. This magnetic control appears to give the arc a gyratory motion and the controlled arc has been properly called an "electronic tornado."

At the time it was thought to be merely an interesting scientific phenomenon of no particular commercial value, but experimentation was continued. In December of last year a series of welds were produced of such extreme ductility and smoothness that more persistent efforts to apply it to commercial machines were justified.

To illustrate the kind of metal remaining after melting under a carbon arc controlled by a strong, induced magnetic field (the electronic tornado), some welds were made in ½-in. plate. In appearance these welds have a series of ripples shaped like fish mouths, characteristic of the highest uniformity in the joint. This is partly due to the higher speed of welding and, in part, is inherent in the process.

The welded joints were then sawed out in the form of long bars. Some of these resultant bars were twisted through 1080 deg., or three complete revolutions, without showing any indication of failure (Fig. 1). Other bars cut from welds were twisted cold and tied into knots without any sign of fracture. Welds on heavier plates were given bending and twisting tests which could not even be approached by welds made by ordinary methods. In a series of welded bars tested in tension there was not a single failure in or alongside the weld. It was quite apparent that there is no impairment of the strength of the parent metal by the new process.

The three microphotographs show common steel plate, metallic arc weld and electronic tornado carbon arc weld, respectively, all at the same magnification and etching. They show in the clearest possible manner the pronounced difference between the common arc weld and the new process. It will be observed that the grain size in the new process is exceedingly fine and uniform, whereas in the metallic arc weld it is irregular and coarse. The crystal structure of the electronic tornado weld is almost identical with that of original mild steel; the only discernible difference is in the refined size of the crystals themselves.

The structure of metal melted by this new process is very similar to that of a highly refined low-carbon steel brought about by rolling or forging and a suitable heat treatment.

Such success has been had in commercializing this invention that it is now being applied to the manufacture of pipe, tanks and the welding of structural steel. To illustrate the adaptations, an automatic machine for welding a special piece of oil field equipment is shown, with some of the work delivered.

These are corner clamps for oil well derricks, made of ordinary pipe instead of timber. Each clamp is made of three pieces; two of them are alike, a square plate with central portion bent into a 125-deg. arc and two

wings back in radial direction. The third piece is a 90-deg. portion of the cylinder with short wings, resting on the two others in the assembly shown in Fig. 5.

The clamps thus assembled are fed into the welder and are carried under the arc in a continuous line by a chain drive on which there are dogs set at intervals. These devices are concealed by sheet-metal guards.

It will be noted that there are two of the new type welding heads with their electrode holders crossing each other at a sharp angle. This construction is of peculiar interest, for, with an uncontrolled arc, it would be impossible to operate two flames in such close proximity. One would continually blow the other out. With the electronic tornado welding head, however, they work smoothly and without conflict.

This new machine is placing double welds at the rate of better than 40 ft. an hour for each head, which is an exceptionally high speed. No filler rod is used; the arc from the carbon electrode fuses the wings of the top plate into the metal below.

In general the cost of welding ½-in. plates, including operators' time, electric current and carbon electrodes, will range from 3c. to 7c. per ft., depending principally upon the cost of setting up the work and the amount of it that is to be done. The cost of welding plates of other thicknesses will be in direct proportion.

Maintained Uniformity in Malleable Iron Castings

A notable showing in uniformity in high physical properties of malleable iron castings is disclosed by the record of the Fort Pitt Malleable Iron Co., Pittsburgh, covering a period of 15 months to and including March of this year. This record, part of the exhibit of the company at the last annual convention of the American Foundrymen's Association in Philadelphia, shows that in 1104 heats made during this period there was only one month in which the average of the tensile strength dipped under 58,000 lb. per sq. in.; that in all but three months the average yield point was above 38,000 lb. per sq. in., and only in two months did the percentage of elongation fall below 25 per cent. The machinability of the iron was, it is emphasized, in no way affected by the high physical properties.

Prizes Announced for Foundrymen's Apprentice Contests

Owing to some unexplained delay in transit, steel castings for the apprentice molding contest conducted by the American Foundrymen's Association at its Philadelphia convention in May did not arrive in time to be considered. This limited this feature of the convention and exhibition to an examination of the patterns and gray iron castings submitted.

All the patterns reflected credit on those who made them and all might be used with perfect propriety in commercial practice. First prize was awarded to No. 61, made by Frank F. Cuzzone, General Electric Co., Schenectady, N. Y. Second place was given No. 2, made by Arnold Behrens, Milwaukee Pattern & Mfg. Co., Milwaukee. Third place was awarded to No. 31, made by John Anderson, John Deere Harvester Co., Moline, Ill. The judges were Joseph Goostray, Hunt-Spiller Mfg. Co., Boston; Pat Dwyer, *Foundry*, Cleveland, and John D. McDonald, Bucyrus-Erie Co., Erie, Pa.

In the gray iron casting contest, first prize was given No. 94, made by Peter G. Bathgate, Brown & Sharpe Mfg. Co., Providence, R. I. Second place was given No. 74, made by George Shuster, Olney Foundry Co., Philadelphia, and third prize was awarded No. 75, made by Antillo Rocchi, Cresson-Morris Co., Philadelphia. The judges in this contest were J. F. Murphy, University of Pennsylvania, Philadelphia; B. D. Fuller, Whitehead Brothers Co., Cleveland, and Pat Dwyer, *Foundry*.

Officers of the Purchasing Agents' Association

At the thirteenth annual convention of the National Association of Purchasing Agents held at Kansas City, officers were elected as follows:

President, A. M. Bowman, general purchasing agent Humble Oil & Refining Co., Houston, Tex.

Vice-presidents: Leonard S. Leavy, purchaser of supplies, San Francisco; C. F. McAuliff, Texas Electric Railway, Dallas; J. R. Whitehead, Fairbanks, Morse & Co., Chicago; C. R. Ramage, Diamond Chain & Mfg. Co., Indianapolis; Christie T. Clark, Rolph-Clark-Stone, Ltd., Toronto; H. R. Cranford, Toledo Edison Co., Toledo, Ohio; W. M. Kerrick, Mengel Co., Louisville; T. W. Harris, Jr., E. I. du Pont de Nemours & Co., Wilmington; Paul R. Brennan, Stafford Co., Readville, Mass., and Lewis A. Jones, New York Power & Light Corporation, Albany, N. Y.

Uniformity in Duplex Steel

Quality Product Obtained by Controlling the Temperature of the Steel Bath and Fluidity of the Slag Just Before Molten Pig Iron Is Charged

BY FOLKE W. SUNDBLAD*

DUPLEXING has been given the least scientific attention of all steel-making processes, probably because the grade of steel that has been made in this way has satisfactorily filled its purpose. Keener competition, with subsequent demands for better quality, has forced steel makers to give the matter greater attention.

The advantage of the duplex process has been frequently mentioned, and is the saving in time, as it requires from 3 to 4 hr. to produce 200 tons of steel from a single furnace which can make only one-fifth as much using a cold charge. A poorer grade of pig iron can also be converted into a higher grade of steel at this rapid rate.

The disadvantages are the double conversion and handling costs; the decrease in yield, due to the increased oxidation and mechanical losses; and the variation in quality of the different heats.

While the duplex process can be worked in different ways, one common American practice is to pour enough full-blown metal into a tilting basic open-hearth furnace to be able to tap out about 200 tons of finished steel and still have 50 or 60 tons left in the furnace. When the required amount of blown metal is poured and enough scale and lime have been charged and melted to make a highly basic and oxidizing slag, a so-called "jigger" of raw basic iron is added from a cupola or mixer. The weight of the jigger depends upon the desired carbon content in the finished steel.

When this iron is introduced, a strong boiling and heat evolution takes place, due to reaction between iron oxide in the scale and carbon in the pig iron. Carbon monoxide is formed and passes up through the metal and slag, causing the charge to boil and foam, and thus forces the slag to overflow through cinder notches. While the bath is violently stirred the phosphorus in the metal is also eliminated and joins with the lime slag, much of which is ejected into the cinder boxes.

After this reaction, a test is generally sent to the laboratory for analysis, and, if the return is satisfactory and the temperature correct, the heat is tapped.

On the surface it seems a very simple matter from a practical standpoint to make a duplex heat. In reality each charge contains unstable conditions which influence the quality of the product. Consequently the manufacture of a duplex heat relatively free from gases is a rather complicated proposition.

The factors which vary for each charge (or "fill-up") are the temperature and the chemical composition of the blown metal. The temperature depends primarily upon the silicon in the converter charge. If the blown metal is too cold, it cannot be helped. If too hot, it can be cooled by judicious addition of scrap into the vessel.

If the temperature of the molten bath in the open-hearth furnace is too high at the time the iron is added, too wild a reaction, an uncontrollable foaming slag and a subsequent carbonless bath will result. While carbon can be added in the ladle, the metal will probably be too high in phosphorus, since phosphorus is eliminated best when carbon is present.

On the other hand, too low a bath temperature will delay the reaction, sometimes 8 to 10 min., but then it suddenly starts, and with such a violent boil that even a thin slag will be whipped into one too thick in a few seconds. This prevents the slag from overflowing, and such a heat is liable to be high both in phosphorus and sulphur.

From these considerations it is seen that the temperature of the bath at the time the jigger is added should be properly controlled.

Variable chemical composition in the blown metal is also important, since the furnace operator must adjust the nature and the fluidity of the slag to take care of the impurities to be eliminated. Fluidity of the slag depends upon the furnace temperature, and its content of basic and oxidizing agents.

Temperature and fluidity are directly proportional to each other; increase the temperature and fluidity also increases.

If the sulphur in the blown metal is above 0.06 per cent, one practice calls for adding manganese to the metal remaining in the furnace after pouring, but before filling up. Otherwise the fastest way to decrease the sulphur is to run the furnace with an extremely basic and oxidizing slag together with a very oxidizing flame. These conditions should prevail throughout the filling-up stage, except during the last few minutes just before the iron is added, when the flame is lowered somewhat, allowing the relatively thin slag to cool a little. This is done to avoid unnecessary foaming of the slag when the iron is introduced, at which time a full flame is again turned on. By producing a succession of reactions of moderate intensity, it is possible to run off quantities of slag rich in sulphur.

The proper way to add iron to a bath of average chemical composition, however, is to give it a sufficient amount to produce a reaction that raises the slag to overflowing without tilting the furnace much. When the bath is settled again, a second amount may be introduced, producing not quite so strong a boil. After this one a final jigger can be added to raise the carbon content of the bath, producing only a mild boil. The metal should then be sufficiently high in carbon so that no additional iron is needed before the preliminary test is reported, and in that way the heat is given proper time to settle.

To insure greater uniformity of the finished product it is necessary to find a point in the operation that can be made stable for all heats. This is possible if we control the temperature of the bath and the nature of the slag. In other words, if we can tell in advance what kind of reaction we are going to have, the problem is solved.

From a practical standpoint it is possible to regulate the operating conditions so that, by the time all the blown metal is poured into the furnace, the slag has a certain fluidity and the bath a certain temperature. It is thus possible to make this stage in the operation a stable point for all heats. In practice this depends a great deal upon the fuel. Tar, oil or producer gas are undoubtedly best. Coke oven gas in combination with any of these would make it much more difficult, if not impossible. Due to its lightness this latter gas has the tendency to raise the flame, and, when used in a duplex furnace with a bath of a big area, the result is too great a difference in the absorption of heat at the incoming and outgoing ends. In order to prevent such a flame from raising toward the roof, more air and steam must be used than otherwise; thus the operator is handicapped if conditions call for a less oxidizing flame.

---

*Woodlawn, Pa

Available literature covering this process, while mentioning the variations encountered in operation, makes no attempt to state a cure. Some operators are satisfied that the working of a duplex heat and the subsequent result are not subject to scientific control but are solely dependent on their practical experience. Valuable results would undoubtedly be gained by some research work aiming to find a working relationship between different slags and the intensity of the reaction. It would then be possible, by taking a slag test immediately before the iron is introduced, to determine from its color and density of structure when the "stable point," as defined above, has been reached and the time is ripe for adding the molten pig iron.

Low-Manganese Plates for Shipbuilding Save 10 Per Cent

Lloyd's Register Approves "D-Quality" High-Tensile Steel Used By British Navy for All Important Hull Members

BY SIR WILLIAM J. BERRY*

THE first ships wholly of steel for the Royal Navy were 18-knot despatch vessels ordered in 1875, of 3730 tons displacement, and were built of steel produced by the open-hearth process. It was found that mild ductile steel of the kind required for shipbuilding purposes was produced with much greater uniformity by the open-hearth than by the other methods, and it was this process which, in the end, eclipsed all its rivals, as far as the shipbuilding supplies were concerned. In 1877 Lloyd's formally sanctioned the use of mild steel for mercantile vessels, and issued the standard tests for steel.

Mild steel has held almost undisputed sway for the last 40 years for shipbuilding purposes, and it is worthy of note that the standards adopted by the Admiralty and Lloyd's for mild steel have remained unaltered for that period. Ever since it became possible to compute with some degree of accuracy the stresses to which ship structures were subjected in service, it has been the aim to keep such stresses within what might be loosely termed the elastic range. The assumption had usually been in design work that an elastic limit of about half the ultimate strength could safely be taken, notwithstanding the fact that the figure was seldom determined. The attached table shows that the true limit of proportionality of mild steel is far less than ordinarily assumed.

Use 1.25 Per Cent Manganese Steel for High Strength

In the case of commercial structural steels as ordinarily produced, the proportional range of elasticity is extremely variable, and might almost be said to be an accidental property of the steel; but this feature is subject to control if, for a specific purpose, a definite proportional limit is desired. This point was investigated with great thoroughness at the time the Admiralty was drawing up the specifications for the steel for some of the recent warships. With the help of some of the foremost steelmakers in the country, a steel has been evolved for Admiralty use (now widely known as D quality), in which a proportional limit of 38,000 to 45,000 lb. per sq. in. is associated with an ultimate strength of 83,000 to 96,000 lb., without sacrificing to any appreciable extent the ability of the steel to withstand ordinary manipulative treatment in a shipyard. The tests actually specified are: (*a*) A minimum proportional limit of 38,000 lb. per sq. in.; (*b*) a minimum elongation of 17 per cent on 8 in.; (*c*) a bend through 180 deg. around a curve whose radius is one and one-half times the thickness of the specimen tested.

All these requirements are regularly exceeded in supplies obtained by the Admiralty under its contracts. To secure such results great care has to be paid in the first place to chemical composition, and in the second place to the choice and control of the finishing temperature at the rolls. As regards chemical composition, advantage is taken of the beneficial effect of increased percentages of manganese, in elevating the proportional range without detracting from ductility. A fairly representative composition would be carbon 0.33 per cent, manganese 1.1 to 1.4, silicon 0.12, sulphur and phosphorus being kept to about 0.03 or 0.04 per cent.

The temperature of finishing the rolling is all-important, as it enables a normalizing effect to be obtained without actually going through the procedure of a separate treatment. For steel of the composition given, a temperature of 830 deg. to 860 deg. C. (or rather above the critical range) is the one to be aimed at.

Rapid Method of Determining Proportional Limit

A word should be added as to the method stipulated for recording the proportional limit of elasticity. To do this with scientific precision would necessitate plotting a curve for each specimen tested, and locating the particular point at which the load-extension curve departed from the straight line. Obviously this is out of the question where thousands of tons of steel are passing under inspection at a rapid rate in the early stages of construction of a ship. After hundreds of specimens had been dealt with under extensometer test in the preliminary investigations mentioned, a simple and expeditious system was evolved which provided all the relevant information. The Ewing extensometer was the instrument and this registered with fair accuracy to 1/50,000th of an inch. To insure absence of slipping of the grips when the lower reading was taken with an ordinary commercial test bar, a load of 4500 lb. per sq. in. was first put on, and a reading taken; the load was then gradually increased to 38,000 lb. per sq. in., and a second reading taken. The load was then reduced to 4500 lb. per sq. in., and a third reading recorded. To meet the specification this final figure was not to exceed the original reading by more than 0.0004 in. This system, which is now in daily use at many of the largest steel works in the country, has given complete satisfaction to both the makers and the purchasers.

In 1925, Lloyd's issued a memorandum on the subject of "Special Quality Steel for Merchant Shipbuilding," sanctioning the use of steels similar in character to that adopted by the Admiralty. Another specification of a similar character is followed by Alfred Holt & Co. In both these cases, the elongation and bend tests are the same as for mild steel. The method of measuring the proportional limit follows in every particular that laid down by the Admiralty for D-quality steel. It is interesting to note that these new types of steel are also being adopted for merchant shipbuilding on the Continent.

D-Quality Steel Fabricated by Ordinary Methods and Equipment

While D-quality steel is of such great value for the pure strength girder in ships, it must not be supposed that the modern warship is wholly of this steel. For minor and partitional bulkheads, for the ends of a vessel where the bending-stresses are small, for unimportant flats and decks and for deck structures, the cheaper mild steel still fills its particular niche. In small vessels also, where longitudinal stresses are of little importance, the initial and subsequent cost of using the higher quality of steel could not be justified. It must also be remembered that steels of the types described suffer to some slight extent from the defects of their special qualities. Ease or difficulty in flanging and bevelling is dependent entirely on the low or high value of the yield point. Under the shearing, punching, and drilling machine, one cannot expect quite the same ease of operation as with mild steel. Owing also to the higher carbon and manganese content, heating and flame cutting, now so common in shipbuilding, have to be carried out with somewhat more circumspection. It is surprising, however, how quickly the building employees adapt themselves to the slightly modified materials and conditions, and, as far as the Admiralty is concerned, it is exceedingly rarely that any case is reported of failure in working.

---

*An "Introductory Note" read before the Institution of Civil Engineers, London, June 6.

Discussion

In the discussion of this paper it was brought out that the first D-steel was normalized, but experience showed that with the proper attention to finishing temperatures the ductility and elastic limits were higher than the specified value. Such high-tensile steel is now used for all important parts of British warships, and no defects have developed in the vessels during service. Holt & Co. have built a commercial ship, 50 per cent of the structure being made of high-tensile steel, with a saving in weight of 10 per cent. A further 4 per cent saving is anticipated in future ships. One speaker was of the opinion that heat treatment would equalize the carbon content and improve transverse and longitudinal uniformity. He also felt that heat-treated mild steel would be less subject to brittleness than the high-carbon steel required. However, in the navy yards no trouble has been experienced with brittleness. Sir William Berry said that no studies of the fatigue properties have been made, because the alternating stresses in ship hulls are very slow, and he has never seen a fatigue failure in service.

Physical Properties of Shipbuilding Steels

Steel	Ultimate Strength lb. per sq. in.	Yield Point, lb. per sq. in.	Limit of Proportionality, lb. per sq. in.
"D"	83,000 to 96,000	56,000	38,000 minimum 45,000 average
"HHT"	83,000 to 96.000	About 50,000	.....
"Lloyds" (new)	74,000 to 85,000	.....	34,000
"HT"	74,000 to 85,000	45,000	.....
"Holts"	65,000 to 76,000	.....	34,000
Mild steel, old Liverpool Register	63,000 to 72,000	Average about 18,000	
Mild steel, old Admiralty	58,000 to 67,000		
Mild steel, old Lloyds Register	63,000 to 72,000		

What to Require in Foundry Coke

Physical Tests Held More Important Than Mere Chemical Qualifications—Foundrymen Discuss Coke Specifications

PRESENTING at the American Foundrymen's Convention at Philadelphia a review of the present status of coke specifications, W. A. Selvig, United States Bureau of Mines, Pittsburgh, and secretary of the committee on coke specifications of the American Society for Testing Materials, mentioned four items which have to be watched carefully. These are: (1) proper sampling; (2) chemical analysis, particularly with regard to sulphur and as to sulphur in the ash; (3) physical tests, with discrimination between what is needed and what is not needed; (4) behavior of the coke in service tests, particularly where it has to be handled several times.

These matters were taken up in the 1906 report of the coke committee of the A. S. T. M. Little has been done to amplify the study since that time, but the 1927 Book of Standards of the society contains sampling standards.

Under present sampling practice about 1 cu. ft. of coke is picked off the surface of each carload or two, by breaking off, from various locations all over the car, pieces about the size of a walnut. As a matter of fact, good sampling would mean much more than 1 cu. ft. and much more than a surface picking. Practical conditions, however, make this arrangement acceptable. Generally speaking, the volatile matter of the coke should not exceed 2 per cent; the fixed carbon should be at least 86 per cent; ash should be 12 per cent or less and sulphur not over 1 per cent.

Several specifications for coke, put together by various organizations for various purposes, differ markedly from the above. The maximum volatile matter varies from 1 to 3 per cent; carbon, from 85.8 to 87 per cent; ash from 10 to 12 per cent; sulphur has a maximum from 0.8 to 1.3 per cent and phosphorus has a maximum from 0.25 to 0.5 per cent. Moisture is variously limited from 0.5 up to 3 per cent.

It was pointed out that the by-product process has rendered available for coke production coals which previously had been considered unsuitable.

Physical tests must be correlated with the properties required under use. Porosity may vary from 40 to 60 per cent, with an average of 50. The apparent specific gravity should never be less than 0.8 and may go up to 1.5. The corresponding true specific gravity will lie between 0.8 and 2.1. As to the shatter test, a 50-lb. sample is dropped four times from a height of 6 ft. on a cast iron plate and the breakage determined. Under this condition from 44 to 77 per cent of the coke may remain on a 2-in. screen. One specification requires that at least 70 per cent stay on the screen. Right here a note of warning was thrown in, as to precise definitions in connection with all of these physical matters.

In the tumbler test, a 25-lb. lot of coke between 2 in. and 3 in. is revolved at 25 r.p.m. for 1400 revolutions in a drum. The breaking-up effect of this treatment is determined by passing the resultant coke over screens of varying mesh. Tests show that from 70.6 to 77.5 per cent will remain on a ¼-in. screen. The speaker believed that this test had no value not already taken care of by the shatter test.

The coke committee of the American Society for Testing Materials takes the view that the present coke standards are old and require modification to bring them up to date.

In the discussion of this report, which was read by James T. MacKenzie, American Cast Iron Pipe Co., Birmingham, one speaker advocated buying coke by brand and leaving its qualities up to the coke manufacturer. He expressed the opinion that this man is as jealous of the reputation of his brand as the foundryman is anxious to secure the coke he wants. He raised the question of fusible ash, which might have a bad effect through cutting the cupola lining.

Practice of Large Users

Combustion tests made by the General Motors Corporation were referred to by Robert H. Wise, metallurgist Semet-Solvay Co., Syracuse, N. Y. This test shows the rate of burning of different cokes in the cupola. Specifications made from it require that 1 gram of a sample burn in 4 min. or less. It is the practice of the coke committee of the United States Steel Corporation to keep the character of the ash uniform at

How to Analyze an Export Market

Careful Survey of Trade Peculiarities Must Precede Sales Campaign in a Foreign Country—Export Associations and Commerce Department Help

BY C. M. PETER*

WHEN the manufacturer considers selling his goods abroad, he must decide, first of all, whether he really desires to do exporting on a permanent basis. "Shall I stay in or shall I stay out?" is the vital, preparatory conclusion that he should arrive at. Spasmodic attempts at anything do not bring results. If a manufacturer has an exportable product, as time goes on he will regret possibly that he did not seize the commercial opportunity that lies beyond our own shores.

When a selection has been made of a market considered likely to be suitable for the sale of your product, an analysis of that market is in order. To the large firm with traveling representatives covering the export field this is comparatively simple. A brief preliminary investigation will determine the advisability of sending a man to the market in question to work a survey and establish distributers.

This procedure is, of course, the ideal way to secure an analysis of the market as regards your particular product. As an example: One of our representatives is just returning from an extended trip through the Far East, analyzing markets and establishing distributers. Another representative is encircling South America on a similar mission. We observe nothing complex in this, we simply determined the markets we felt warranted a personal analysis, prepared our men and sent them out. They have amply fulfilled our expectations.

Fundamental Considerations in Analyzing a Foreign Market

In analyzing a new or untried market, consideration and careful scrutiny should be given the following fundamentals, which will determine the course to be followed in exploiting the market and the possible value to the manufacturer to his particular line:

Size.—An idea of the size of the country in question is an essential. A comparison of the area with a State or number of States of the United States of the same approximate area will give a fixed idea of size which will permit a more intelligent opinion of what can be expected from the country in question.

Language and Currency.—The commercial language used must be determined; also whether or not English is permitted or commonly used in business correspondence. A knowledge of the currency used and its stability is essential.

Population and Purchasing Power.—Population, while unquestionably a factor, will be found in many countries to be overshadowed by the question of the purchasing power of the individual. For instance, a motor car manufacturer in considering the possibilities in Mexico, Russia or China, obviously could not use the usual percentage of expectancy of so many cars per hundred of population. By the same token the purchasing power of the individual for your product must be carefully considered.

Principal Cities and Ports.—A study of the map or atlases of the principal cities and ports will aid in determining the most accessible and suitable points of attack on a new market.

Geographical and Climatic Conditions and Seasons.—A survey of the geographical and climatic conditions is very necessary, as in some countries it will be found that all principal ports on the coast are separated from interior cities by mountain ranges, making very difficult the transportation of heavy or bulky products. In a like manner, it is frequently found that sea level ports and cities have a climate which may provide an excellent market for some articles and be barren ground to others, while the interior or mountainous country will be the reverse. Seasons in foreign markets vary widely from our own and should be studied and considered in order to avoid writing customers complaining of poor business when it is their winter season and our summer.

Industries.—A survey of the principal industries of the country can be readily made, and is, of course, a determining factor as to what business you can expect from that market.

Local Competition.—An investigation should be made as to whether or not a competitive product is manufactured locally and, if so, its quality and price. Consideration should also be given as to quality and price of other American or foreign-made products with which you will have to compete in this market. In considering local or foreign competition, the thought should be kept in mind that American goods are usually high-priced, especially so in foreign markets, but they are also of high quality, and regardless of all things else there is always a market for quality merchandise. This is clearly demonstrated by the quantities of high-priced quality machinery and factory equipment being exported regularly to England, France, Germany and Italy, where in most cases a heavy duty is added, and the competition is with a local product with a much lower list price.

Trade Barriers.—Trade barriers are in effect in some countries and operate adversely to the import of certain American products. This should not be overlooked if your product is one so affected.

Channels of Distribution and Marketing Methods.—Channels of distribution are very important and merit your careful consideration. These practices vary widely in different markets, and it will be found in most instances better to adapt your product to the channels available and the prevailing customs, rather than attempt to require the market to conform to your ideas and practices or to those in vogue in other countries. In many markets you will have for your consideration large well established firms who import only for their own account and will demand exclusive rights to a large territory. You will also find available in most markets large importing firms or manufacturers' agents who will import your products for their own account and distribute them to various wholesale selling organizations.

Shipping Facilities and Interior Transportation.—Investigation should be made to determine the best and quickest method of transportation to the market under consideration. Your interest should not stop when you have determined that you can properly deliver your goods to the port of entry. In many countries inland transportation is by small boat up rivers, navigable only a portion of the year, or by burro pack trains over difficult mountain ranges. Roads and trucking facilities are also becoming more and more a considerable factor. If your product is heavy or bulky, these questions must all be carefully considered.

Marking and Packing Requirements.—The marking and packing requirements of the market should be investigated, as in many countries this regulation is very rigid and may require special preparation of your container or special printing of your wrapper or labels. Violation of these requirements often results in fines or high duties, or in the case of difficult interior transportation a serious delay or the repacking of an entire shipment.

Customs Regulations and Declarations and Duties.—Customs regulations, declarations and duties should be studied with a view of so preparing your product that it will take the lowest duty. Customs declarations should be made accordingly. A study of this regulation will enable you to determine the approximate landed cost of your product and probable selling price.

---

*Export manager, Black & Decker Mfg. Co., Towson, Md. Abstract of address before National Foreign Trade Council at Houston, Tex.

Trademarks and Patents.—Consideration should be given the question of trademarks and patents, particularly so if you are investigating a country given to manufacturing. If, in such a country, trademarks and patents are not or cannot be protected, it will be found difficult to interest desirable distributers, as they will fear that when they have built up a distribution of your product it will be copied by a local manufacturer.

Price Control.—Price control is desirable in any market and can usually be maintained if your original arrangements are made to cover it. Some markets are particularly given to price cutting, which destroys profit and eventually loses the interest of your distributer. Care should be taken to determine this condition when entering a new market.

Advertising.—The subject of advertising should be thoroughly investigated in any market, for sooner or later it is bound to come up. The manufacturer should determine the value of his trade paper advertising in the market; also whether or not local dealers or distributers are accustomed to carry local advertisements, at their own or the manufacturer's expense, whether or not catalogs and literature must be furnished in a language other than English, and whether or not there is an excessive duty on printed and advertising matter. Trade paper advertising is not only essential, but it is helpful in many ways.

Sources of Information for Market Analyses

In considering the sources of information to which you can refer in conducting your market analysis, the following stand out in their respective fields and will yield you valuable information suggestions and assistance: Under export trade associations you have the National Foreign Trade Council, with its services and valuable yearly conventions, where your individual problems can be submitted to authorities on export practices. You will find the American chamber of commerce, located in many foreign countries, in a position to be exceedingly helpful. Membership in such associations as the International Chamber of Commerce, American Manufacturers Export Association and local export managers' clubs will give you contacts and information that will be found very useful. Export credit associations and international banking houses will give you credit and trade information that is very necessary in the handling of export trade.

Export trade papers of today are establishing themselves in a service not to be derived from any other source and invaluable to the exporter who would grow and keep abreast of the times. The use of the exporters' encyclopedias and various atlases will solve many of the everyday intricacies of exporting.

A proper contact with other manufacturers engaged in export, manufacturers' agents, export agents and brokers and forwarding agents, with their long and varied experience will often give you the answer to a most troublesome problem.

Department of Commerce Great Aid in Developing Export Trade

Last, but by no means least, I would call your attention to the various services and functions of the Department of Commerce, Bureau of Foreign and Domestic Commerce, Washington. From our own experience, I would say it is impossible to estimate the value to us of this important department. The Commerce Year Book and the many bulletins and pamphlets published by the department are available to all, and I am sure our export department could not function efficiently without them.

Available to you through the department are the services of approximately 1000 men in Government service in practically every nook and corner of the globe. Many of these men are experts and authorities on promoting American trade. Compiled in the department at Washington are thousands of volumes of trade statistics, and 99 times out of 100 the department will be able to furnish you the information you desire. Branches of the department in charge of competent men are located in many of our principal cities. You will find them most eager to help you, and if you do not care to use their advice you are overlooking the most valuable information you have available.

Rail Extension to Connect Connellsville, Pa., With Pittsburgh District

WASHINGTON, June 26.—The Interstate Commerce Commission last week issued a certificate authorizing the Pittsburgh & West Virginia Railway Co. to construct an extension of its line, to be known as the Connellsville extension, running from a point near Cochran's Mill, Allegheny County, Pa., in a general southeasterly direction through Allegheny, Washington, Westmoreland and Fayette counties to Connellsville, Pa., a distance of about 38 miles. The proposed extension was urged by a number of iron and steel interests in the Pittsburgh district. Its purpose is to secure a substantial additional volume of traffic destined to or originating within the Pittsburgh district for the Pittsburgh & West Virginia. This road extends from Pittsburgh westward about 60 miles to Pittsburgh Junction, Ohio, where it connects with the main line of the Wheeling & Lake Erie Railway, and it also includes the lines of the West Side Belt Railroad in Pittsburgh. Some of the traffic, particularly that to and from eastern destinations, would be furnished by industries along the Monongahela River from Clairton, Pa., to Pittsburgh. It is also proposed to secure a share of the ore traffic from Lake Erie to the Monongahela Valley by way of the Wheeling & Lake Erie, as well as new traffic at points farther south on the Monongahela.

The proposed line will cross the Monongahela at Charleroi about midway between Monessen and Allenport, Pa., where the plants of the Pittsburgh Steel Co. are located. A plant of the American Steel & Wire Co. is located at Donora, Pa., on the west bank of the Monongahela about five miles from Charleroi. About 60,000 carloads of freight are received or forwarded at the Monessen plant during the year and about 11,000 at Allenport. The Donora plant, the commission said, is somewhat smaller than that at Monessen. Representatives of the Pittsburgh Steel Co., in supporting the application, announced the intention of the company to extend the lines of the Monessen Southwestern, its plant railroad, to connect the plants at Monessen and Allenport with the proposed line at or near Charleroi. It is proposed, the decision said, to place the Monessen Southwestern in position to perform as a common carrier a part of the through transportation to and from the industries of the Pittsburgh Steel Co. and to participate in the through rates on the traffic. It is also proposed that the line of the Donora Southern, a plant railroad controlled by the Union Steel Co., Donora, Pa., which connects now only with the Pennsylvania, shall be extended across the Monongahela to connect with the Monessen Southwestern, thus effecting connection with the proposed extension and diverting a portion of the traffic of the Donora plant to the new line. The cost of the new line, according to the application, will be $12,801,619.

The volume of freight traffic handled by the Class I railroads in the first four months of 1928 amounted to 147,296,210,000 net ton miles, according to the Bureau of Railway Economics, Washington. This was a decrease of 8,113,006,000 net ton miles, or 5.2 per cent, compared with the corresponding period last year. Railroads in the Eastern district for the four months period reported a decrease of 10.1 per cent, while the Southern district reported a decrease of 7.7 per cent. The Western district reported an increase of 3.4 per cent.

Refine Chrome Steel at Low Heat

Low Temperature Essential in Basic Open-Hearth Furnace If Chromium-Bearing Scrap Is Used and If High Ballistic Tests Must Be Met

BY NICOLAUS N. MENSHIH*

NEARLY all open-hearth metallurgists with whom the writer has discussed the question believe that chromium steel must be made synthetically (that is, without scrap, pig iron or ore containing chromium), if the highest quality is required. In the writer's opinion the deleterious effect of chromium, when present from the beginning of the heat, may be mitigated considerably if certain properties of the element and its slag-forming oxides are known and provided for.

When the author was employed at the basic open-hearth plant of the Nicopol Marioupol Works in South Russia from 1912 to 1916, the production of Krupp armor was begun. Its preferred analysis was:

	Per Cent
Carbon	0.35
Manganese	0.35
Silicon	0.15 or less
Phosphorus	less than 0.04
Sulphur	less than 0.04
Nickel	3.60
Chromium	1.80

It is obvious that when a heat is made from metal containing no alloying elements it is necessary to add enough ferrochrome before tapping to place the required amount in the ingots, plus enough to allow for the inevitable oxidation and slagging (about 20 per cent). But if the original charge contains chromium, this element is never oxidized and slagged completely during the working of the heat. Theoretically it should then be only necessary to add enough ferrochrome to bring the residual chromium up to the percentage required by specification. It would seem that a considerable quantity of ferroalloy might be saved in this way.

Residual Chromium Depends upon Furnace Practice

Additions must be made after laboratory returns on test ingots, if the analysis of the finished steel is to be held to reasonably close limits. The writer's experience convinces him that the amount of chromium remaining in the refined steel from the scrap is independent of the amount originally contained in the scrap, but depends entirely on the method of melting and the temperature of the bath reached during the refining period.

To prove the first part of this statement data from a long list of heats are available, showing the chromium and carbon in the charge and in the bath just before additions. Many other analyses show intermediate values; it can be seen that the relation between residual chromium and original chromium varies from 70 per cent to 19 per cent, independently of the carbon at the end of the refining period.

Typical Analysis of Cool Heats

Chromium in Charge	Chromium Before Additions	Carbon Before Additions
Per Cent	Per Cent	Per Cent
0.56	0.36	0.11
1.11	0.32	0.11
1.17	0.22	0.09
0.49	0.30	0.09
1.17	0.23	0.07
0.50	0.34	0.07
1.17	0.24	0.06
0.87	0.31	0.06
0.33	0.24	0.20

All the above mentioned heats were made strictly in accordance with instructions from the Krupp Works. They were by no means hot during the refining period. A soft steel bar, 1 in. square, inserted into the bath just before final additions were made, melted in 32 to 35 sec. A typical slag analysis at this same moment was as follows:

SiO_2	Al_2O_3	FeO	MnO	CaO	MgO	Cr_2O_3
22.8%	8.9%	13.1%	3.9%	36.4%	8.0%	5.0%

Heats made in the above manner produced armor all of which passed the Government's test successfully.

After this practice was firmly established, a new superintendent was placed in charge, and he insisted that all steel (alloy as well as plain carbon) be made in much hotter furnaces and at a faster rate. This change was not made in the armor plant at once, as the special open-hearth furnaces built according to Krupp's design did not permit a much higher temperature without endangering the ports. The new superintendent ordered these furnaces to be remodeled.

When this was done, production of chrome-nickel steel was resumed, and the bath temperature was much higher—the inserted rod melted in 25 to 27 (and even 23) sec. It was among my duties to calculate the alloy additions, and I noted immediately that the amount of chromium remaining in these hot heats was strikingly increased.

Typical Analyses of Hot Heats

Chromium in Charge	Chromium Before Additions	Carbon Before Additions
Per Cent	Per Cent	Per Cent
0.60	0.41	0.11
0.73	0.57	0.11
1.07	0.60	0.09
0.68	0.61	0.09
0.70	0.58	0.08
0.70	0.67	0.14
1.05	0.60	0.21
0.82	0.63	0.21

Slags on these heats were more basic, lime being up and iron and chromium down. A typical analysis is:

SiO_2	Al_2O_3	FeO	MnO	CaO	MgO	Cr_2O_3
24.7%	4.8%	9.7%	2.5%	41.9%	9.6%	3.1%

But the most important change was the fact that 32 of the 12-in. plates made from these heats could not pass final tests, and were rejected by the Government's inspectors. It was suspected that the changed steel-making practice was responsible, and consequently two heats were made with high temperatures during the refining period, but considerably lowered for the last 30 min. before making the additions. This change did not lower the amount of residual chromium, nor did it improve the quality of the hardened armor. Analyses of steel and slag at various times during one of these heats (which had 0.88 per cent chromium in the cold charge) were as follows:

	Charge Just Melted	Middle of Refining Period	Just Before Additions
Metal	Per Cent	Per Cent	Per Cent
Chromium	0.39	0.44	0.66
Carbon	0.74	0.57	0.17
Slag			
SiO_2	24.0	20.1	29.7
FeO	9.6	11.3	8.5
MnO	6.9	5.1	5.2
CaO	35.2	39.9	43.3
Cr_2O_3	7.3	6.5	2.3

Because the writer had opposed changing the furnace construction and the higher temperature melting, he was given authority to make several heats to demonstrate the correctness of his views. During these trial runs special attention was given to the temperature of the bath at all times, and the ratio between gas and air during the melting period. Data on the first four heats are assembled in Table I.

---

*Houston Avenue and Ninety-first Street, South Chicago, Ill.

Heat A was quite hot during all the refining period, but not so high as the superintendent would have liked.

In heat B the temperature was kept relatively low until sample 7 was taken, whereupon the heat was increased.

Heat C started off as B, but the temperature was raised after sample 5, although not so much as in B.

In heat D the bath was relatively cool for the entire heat. Slag analyses during D were as follows:

	SiO_2 Per Cent	FeO Per Cent	MnO Per Cent	CaO Per Cent
Sample 1.......	27.7	10.4	6.8	31.6
Sample 3.......	22.9	14.0	6.2	32.2
Sample 8.......	22.4	12.0	6.2	36.4

It is plainly seen that high temperatures in the refining periods are associated with high residual chromium in the metal; further, that a bath with low chromium, melted relatively cold, picked up chromium from the slag as soon as the temperature was raised. Finally that working the entire heat at a low temperature gave a low residual chromium in the metal, unchanged for the most of the refining period, and a finishing slag almost exactly like those produced in the Krupp basic heats previous to the change. The demonstration was so convincing that Krupp's method was restored completely, and the resulting plates passed test successfully.

Soluble Chromium Oxide May Be Responsible

All above mentioned facts indicate that

1. There exists a connection between the amount of residual chromium (left in steel from that contained in scrap) and the temperature reached during the refining period in a basic open-hearth furnace.

2. If this critically high temperature is once reached, any subsequent cooling cannot reduce the amount of chromium in steel.

3. If a high proportion of chromium is left in the steel from that contained in the charge, the quality of steel is affected very seriously.

4. That the amount of chromium in the sample ingot taken before additions are made can serve as a perfect control.

Another interesting detail was noticed by the writer in connection with chromium left in steel from scrap. If the casting of an ingot were interrupted for some seconds, due to some accident with the stopper, a very deep horizontal crack developed, corresponding to this interruption, in steel with high residual chromium, and the ingot would break completely off at this plane when going through the first pass at the blooming mill. Such an interruption was not so dangerous for steel with a low amount of chromium left from the charge, even though the analysis of the finished steel was the same.

Table I—Data from Experimental Heats

Sample	A		B		C		D	
	Cr.	C	Cr.	C	Cr.	C	Cr.	C
Cold charge......	0.90	...	0.81	...	0.90	...	0.81	...
Just after melting	0.30	0.56	0.31	0.55	0.38	0.72	0.41	0.78
No. 2........	0.36	0.43	0.23	0.48	0.25	0.58	0.30	0.73
No. 3........	0.39	0.38	0.21	0.44	0.22	0.39	0.23	0.54
No. 4........	0.39	0.29	0.20	0.40	0.20	0.34	0.19	0.37
No. 5........	0.40	0.24	0.20	0.35	0.22	0.27	0.17	0.27
No. 6........	0.46	0.20	0.20	0.27	0.25	0.24	0.18	0.18
No. 7........	0.44	0.19	0.21	0.18	0.24	0.19	0.19	0.16
Before additions..	0.43	0.13	0.30	0.14	0.28	0.16	0.21	0.11

The only explanation of all these facts that the writer can give is that one of the chromium oxides is easily dissolved in the steel at a relatively high temperature. The amount of chromium found by analysis included this chromium. This oxide once dissolved in steel cannot readily be reduced or converted into another oxide which is practically insoluble in steel but soluble in the slag. Once in the steel this harmful oxide stays there.

Another Diesel-Electric Towboat for Use on the Warrior River

The Tennessee Coal, Iron & Railroad Co. has ordered a second Diesel-electric towboat for use on the Warrior River. The first, ordered last March, will be placed in service some time this summer, and the second is expected to be completed by early fall. Both boats are of the tunnel-stern, twin-screw type. They are being built by the American Bridge Co., and will be outfitted by the Carnegie Steel Co., while the electric equipment will be furnished by the General Electric Co.

The Tennessee company went to the Diesel-electric drive for the new boats to obtain higher efficiency and the better maneuvering qualities necessary on the Warrior River, which is a tortuous one, and has so many sharp bends that the length of tows is limited to seven barges.

With the exception of the galley and the heating facilities, the towboats will be completely electrically equipped. The power plant in each boat consists of two 550-hp. Diesel engines, made by the New London Ship & Engine Co., which are direct-connected to two 335-kw. 250-volt 250 r.p.m., d.c. generators. Each propeller will be driven by a double motor rated 400 hp. at 140 r.p.m., 250 volts, shunt wound.

Power for auxiliaries and lighting, as well as for excitation for the main generators and propelling motors, will be furnished by two 40-kw. 120-volt compound-wound d.c. auxiliary generators. These will be driven by the main engines and will be mounted directly on the shaft extensions of the main generators. Variable voltage control will be used, arranged for operation either from the pilot house or the engine room.

Screw Thread Commission and Gage Committee Visit Rochester

The National Screw Thread Commission and the American Gage Design Committee met in Rochester, N. Y., on June 21 and 22 and visits were made at the plants of the Taylor Instrument Companies, the Bausch & Lomb Optical Co. and the Eastman Kodak Co. The group was headed by Dr. George K. Burgess, director of the Bureau of Standards, Washington.

At a dinner held on June 21, James Ely, vice-president of the Taylor companies, presided and Dean Dexter Kimball of the college of engineering of Cornell University was the principal speaker.

Meeting of the Institute of Metals in Liverpool

The Liverpool, England, meeting of the Institute of Metals, to be held Sept. 4 to 7, is proving attractive. Already over 200 members—including many from overseas—have indicated their intention of taking part in the meeting. The papers to be presented include a series dealing with the die-casting of alloys, as well as the eighth report of the corrosion research committee. A "full-dress" discussion of corrosion problems will be a feature. It is particularly appropriate that this discussion should take place in a maritime center such as Liverpool. On the social side the gathering promises to be a pleasant one; a series of receptions, visits to places of interest and other functions are being arranged by the local reception committee.

Youngstown Seeks River Outlet

Briefs Filed in Application for Construction of Line to Connect Valley District With Ohio River—Trunk Lines Oppose "Duplication of Existing Facilities"

WASHINGTON, June 26.—Briefs were filed yesterday with the Interstate Commerce Commission in connection with the application of the Pittsburgh, Lisbon & Western Railroad to construct an extension which would connect the Youngstown district with the Ohio River and the application of the Montour Railroad to acquire control of the P. L. & W. by purchase of the latter's capital stock. Both lines are controlled by the Pittsburgh Coal Co.

In arguing for the proposed extension the brief of the applicant contended that the new line will be in the public interest and will serve the public convenience and necessity, "especially as it will extend the benefits of the Government's waterway system to important inland territory now unable to utilize that system and suffering severely by reason of that fact." The trunk line carriers, including the Pennsylvania, Pittsburgh & Lake Erie and the Baltimore & Ohio railroads, on the other hand, argued that the line would be a duplication of existing service and is not necessary. The Pittsburgh Coal Co., in its brief, contended that the Pittsburgh district is in need of a new outlet for its coal production and a more competitive basis of rates wherever possible. The inland waterway on the Ohio River system, it was declared, would furnish that outlet.

If construction by the P. L. & W. is authorized, it will consist ultimately of its present east-and-west line between New Galilee, Pa., and Lisbon, Ohio, and a new north-and-south line between the Ohio River on the south and Youngstown and Struthers, Ohio, on the north, by way of Negley and Mill Rock, Ohio, as junctions between the old and new lines. The southern terminus of the new line would be at Smith's Ferry, Pa., on the Ohio River. The bulk of tonnage would consist of coal from western Pennsylvania to the Youngstown district and iron and steel from that district to the Southern and Southwestern markets.

Youngstown Handicapped in Competing with Pittsburgh and Cleveland

The brief of the applicant pointed out that the Youngstown district, as a producer of iron and steel, is in keen competition with manufacturers in the Pittsburgh and Cleveland districts. Pittsburgh, it was declared, enjoys the advantage of river location, while the Cleveland group enjoys the advantage of Lake location. Both, it is pointed out, are in a position to utilize cheap transportation on the Government's inland waterways to a considerable extent, Pittsburgh on its fuel inbound and on a portion of its products outbound and Cleveland on its ore inbound and a portion of its products outbound. Youngstown, however, the brief said, is dependent on rail transportation for all inbound raw materials and all outbound manufactured goods. On inbound raw materials alone, it was stated, Youngstown today is paying $2.07 more per ton of pig iron production and $2.82 to $3.22 more per ton of finished steel production than in 1913. These increases were declared to be much greater than those borne by its Pittsburgh district competitors. A more recent development of river transportation, again to the great detriment of Youngstown, it was maintained, is in the movement of iron and steel articles from the Pittsburgh district down the Ohio and Mississippi rivers, and into the South and Southwest by reshipment. Pittsburgh is thus again enabled to utilize cheap water transportation on products moving, for instance, to the oil fields of the Southwest—products of which Youngstown was for years a prominent source of supply, said the brief. It was declared that Youngstown's inability to utilize the river for this tonnage is a particularly severe handicap just now, due to the fact that rail rates on such Mississippi Valley business were recently considerably increased.

Contend Landlocked Position Has Checked Youngstown's Growth

"It is to conditions such as those just recited that Youngstown attributes its decline as an iron and steel producer—from second to third place in the United States—in recent years," it was urged. "In such a situation the opportunity to utilize the river is vital to Youngstown. It has for years been endeavoring to obtain adjustments of freight rates on inbound raw materials, including the establishment of ex-river rates, that would tend to restore the previous parity with Pittsburgh. It has failed entirely along these lines. It has long sponsored the Lake Erie and Ohio River canal project, but sees no hope of relief in that way for many years to come. But it sees in applicant's proposal herein a measure that promises prompt and substantial relief in the way of lower transportation costs, and accordingly indorses these proposals."

The trunk line carriers have taken the position that they are fully able to transport either all-rail or, if necessary, river-and-rail over river transfer terminals to be located on the Pennsylvania near Beaver, Pa., and on the Pittsburgh & Lake Erie near Monaca, Pa., all coal traffic which the proposed P. L. & W. line expects to handle. The Baltimore & Ohio is not so located as to be enabled to participate in any such river-and-rail routes to Youngstown. The applicant contended that there is no assurance that any such river-and-rail routes would be established by the existing trunk lines and that there would be no greater convenience to the public in such routes than in the river-and-rail route proposed by the P. L. & W. It is pointed out that efforts to get such service for Youngstown have proved futile. The new line, the brief of the applicant said, would divert comparatively little tonnage from existing lines. The argument also was made that Congress by statute has encouraged development of waterways.

Railroads Condemn Move as Indirect Attack on Rate Structure

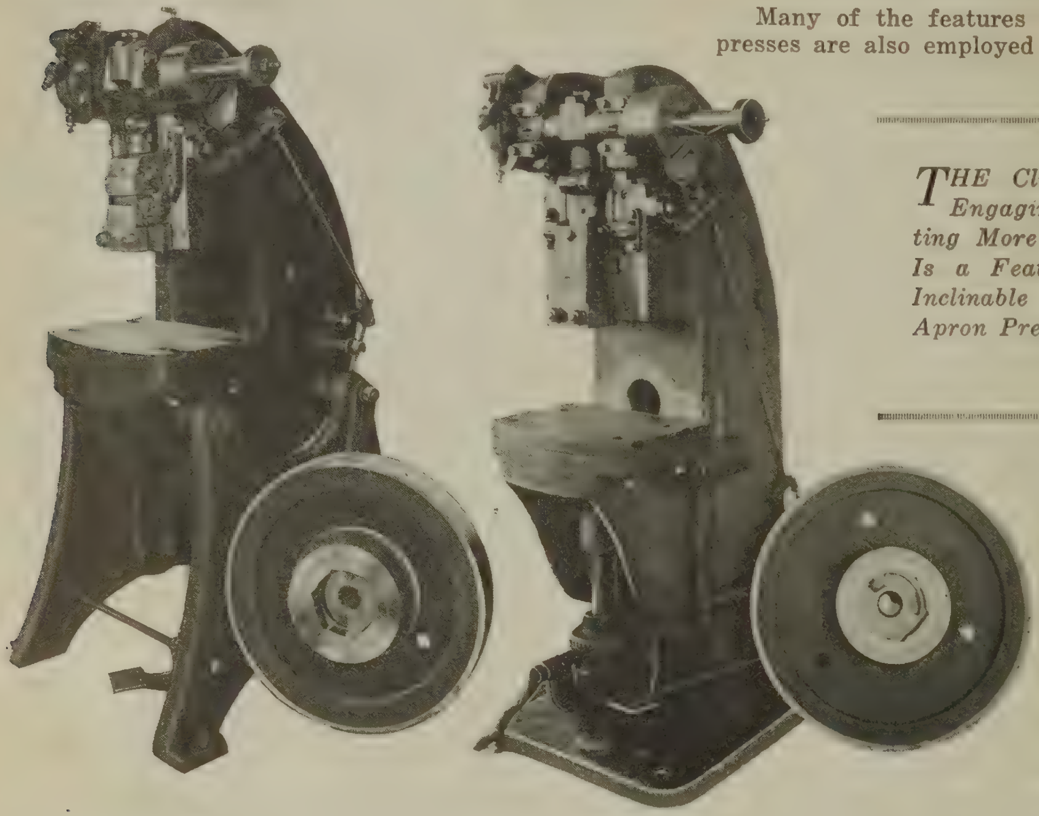
The railroads argued that public interest would not be served by construction of the extension and that it would only be a duplication of existing and adequate transportation facilities and would result in diversion of business by means of excessively low rates "or other artificial devices for the purpose, with the effect of developing one carrier or mode of carriage at the expense and to the detriment of existing carriers or modes of carriages," as stated in the Baltimore & Ohio brief. It was asserted that the Pittsburgh Coal Co. acted not because of a lack of railroad facilities, but because it wants lower rates in the hope that such rates would provide an outlet for its coal. The hope for lower rates is declared to be predicated upon assembling costs which the commission has condemned as a basis for rate making. Knowing that under these circumstances, it was pointed out, the railroads have been unwilling to reduce their rates and that the commission would not order a reduction, the applicant is seeking "by indirection to do what it may not lawfully obtain directly." Even if the existing railroads put in extensions from the Ohio River, it was declared, the new line would be favored by the steel industry in the Youngstown district. In an effort to support this statement the brief referred to testimony of different steel manufacturers. Establishing the new line, it was contended, would disturb the existing rate structure and would increase the burdens of the trunk lines in the execution of any consolidation plan.

NEW LINE OF POWER PRESSES

Open-Back Inclinable, Horn and Apron and Other Types Having Improved Features Made Available by the American Can Co.

OPEN-BACK inclinable, horn and apron, arch, screw and toggle presses, in a range of sizes in each type, have been placed on the market under the trade name of Canco by the Equipment Division of the American Can Co., 120 Broadway, New York. Strength, accuracy and speed, without sacrifice of safety, are general features of the machines, the general arrangement of which may be noted from the accompanying illustrations.

The open-back inclinable presses are available in plain and geared types and in standard and deep-throat styles. The frame of the machine is a semi-steel casting reinforced at vital points, and the crankshaft is of chrome-nickel steel, heat treated. All bearings are scraped in. An outstanding feature is the clutch, which in having six engaging points, permits more rapid operation of the machine, thereby providing increased output. A hardened steel block, actuated by a foot treadle, is arranged to engage one of the six driving surfaces of the clutch. Upon completion of the stroke a positive knock-out functions, but a lock is provided so that continuous operation may be secured when desired. The same mechanism includes a pawl by means of which the press may be turned backward if desired, such as in setting dies. The arrangement is such that when the press is started forward, the pawl, if engaged, is thrown out of engagement automatically. Either of two types of brakes, cam-actuated for presses operated intermittently or treadle release for machines operating continuously, can be provided.



THE Clutch, Having Six Engaging Points, Permitting More Rapid Operation, Is a Feature of Both the Inclinable and Horn and Apron Presses Shown at the Left

Positive knockout, finished surfaces for the application of attachments such as feeds, gages, etc., and the provision of three steps for inclining the frame, as well as inclining attachment, are among other features of the inclinable machines. Gibs and slides are long to assure accurate alinement, and increased die space is provided. Lubrication is by means of the Dot system. An improved punch holder of hardened steel. designed to give better purchase on the punch stem and eliminate marring and scoring, and the use of a webbed flywheel, are other details intended to contribute to the ruggedness, high production and safety of these presses. Tie rods, back gearing and motor drive arrangement are available if required.

Seven sizes of the standard throat flywheel press ranging in weight from 860 to 8413 lb. and six of the standard throat geared press, ranging in weight from 1170 to 9113 lb., complete, are available. The deep-throat plain unit is made in three sizes, from 1855 to 4650 lb. in weight, and the geared press in one size only, weighing 4950 lb. The standard length of stroke for all sizes of both types is 3 in. The maximum length of stroke ranges from 4 to 6 in. for the plain press.

Other specifications for the smallest and largest open-back inclinable press, respectively, with standard throat are as follows: Depth of throat, center of slide to frame, 4 to 11 in.; die space from top of bolster to slide (stroke down, adjustment down) 5¼ to 7½; size of bolster plate, 8 x 13 in. to 23 x 52 in.; and width of opening through the back, 6 to 18 in. Floor space requirements range from 25½ to 23 to 51 x 44 in. and the height from floor to top of flywheel, 66¼ to 100½ in. The flywheel ranges from 22 to 48 in. in diameter, weighs from 200 to 1575 lb. and operates at speeds up to 135 and 80 r.p.m.

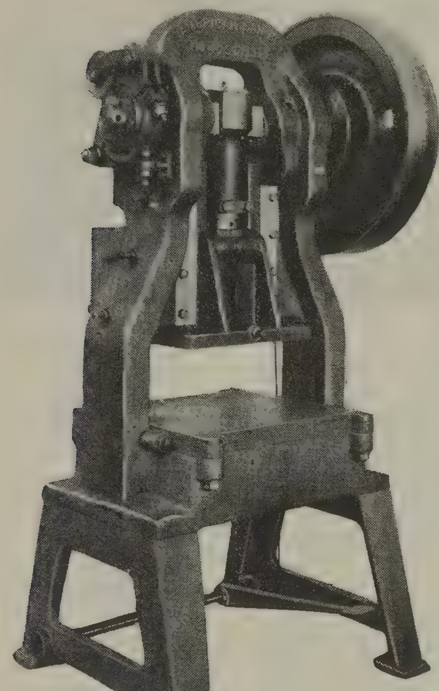
Horn and Apron Press Uses Same Clutch

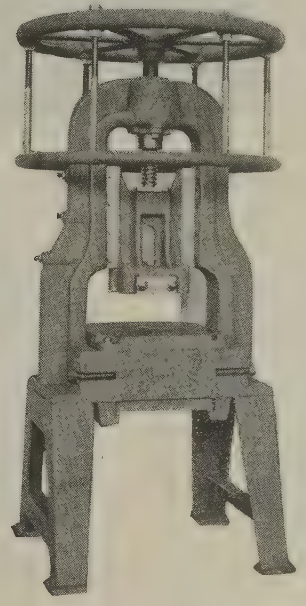
Many of the features of the open-back inclinable presses are also employed in the new horn and apron presses and the arch presses offered by the company.

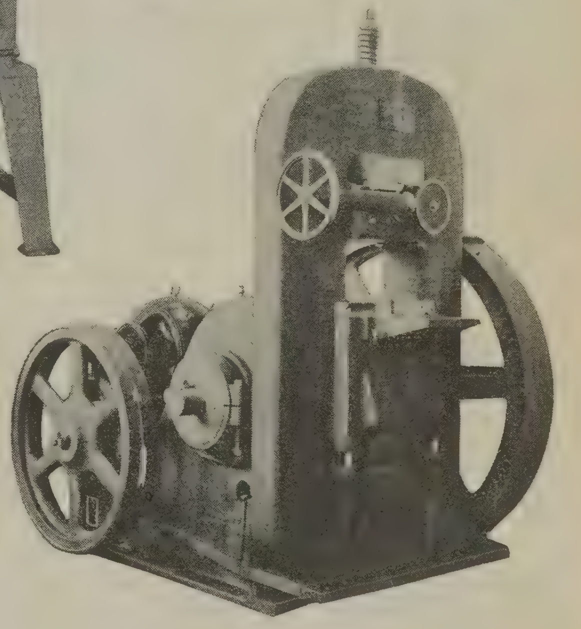
The frame of the horn and apron press is a semi-steel casting, reinforced, and the crankshaft is of chrome-nickel steel, heat treated. The same type of clutch, with six engaging points, is provided and the cam-actuated brake is also offered. The horn hole is large to permit use of horns with sturdy shanks. The punch holder is of hardened steel and is of the same design used on the inclinable machines. The apron is a semi-steel casting, clamped to the column of the press, and is provided with an efficient elevating device. The means of clamping the apron is said to provide a rigid but readily adjustable member. The apron can also be fitted with an anti-friction sliding bolster or table.

Six sizes of the plain style and two of the geared style are available. Specifications of the smallest and largest plain machine are, in part, as follows: Weight, 980 and 3715 lb.; standard length of stroke, 1½ in.; maximum length of stroke, 3½ and 6½ in.; and depth of throat (from center of slide to frame), 4 and 10 in. Horn holes range from 2½ to 5½ in. in diameter. Sizes of bolster at the widest points range from 8 x 13 in. to 18 x 23½ in. Floor space required for the smallest machine is 24 x 20½ in. and for the largest, 40 x 28 in.

The arch presses are intended for large blanking and forming operations. Increased die space is provided and this can be further increased by means of a removable front to the bed, making it adaptable for well type dies, etc. Two sizes of the machine are offered, one of which weighs 4300 lb. and the other 6000 lb. The slide adjustment of both machines is 3 in. Other specifications are: Distance between uprights, 28 and 30 in.; die space from top of bolster plate to face of the slide (stroke down, adjustment up) is 6 and 6⅝ in.; size of bolster plate with removable front, 26 x 27 in. and 28 x 29 in.; and size of bolster plates with solid fronts, 23 x 27 in. and 26 x 29 in. Both the plain and geared presses are available in either straight-leg or inclined-leg types and motor driven. The overall floor space occupied by the presses with straight legs is 40 x 45 in. and 42 x 51½ in. The geared machines, which weigh 4900 and 6700 lb., respectively, occupy floor space of 43 x 59½ and 48 x 70 in.







THE Arch Presses, for Large Blanking and Forming Operations, and the Screw Press, Which Is Adapted for Testing Dies, Also Have Improved Features

The Toggle Press, Below, Is of Compact and Powerful Construction

The screw press, which is adapted for testing dies, is fitted with an auxiliary handwheel as illustrated, which is intended to provide extra weight and also to eliminate the hazard from overhanging bars. Three sizes are available. The maximum stroke of the slide is 7½ and 8 in.; die space 11 and 11½ in. and bolster plate size, 19 x 20 in. to 24 x 27½ in. The distance between uprights is 20 and 28½ in.

Toggle Presses of Compact Design

Compact and sturdy construction is a feature of the company's toggle press, seven sizes of which, capable of exerting pressures from 150 to 1200 tons, have been made available. The main frame of this machine is a solid annealed casting of large section designed to provide rigidity and eliminate spring. The slide of the press is designed with the toggle lever at the bottom and the gearing close to the floor, which construction is emphasized as eliminating top heavy appearance, overcoming vibration and eliminating the necessity of placing the press on a foundation. Having the toggle lever at the bottom, the weight of the slide and the springs in the front of the press are said to take up lost motion so that there is no jar when the die strikes the work. The toggle lever is a steel casting and the toggle seats and pins are of tool steel, hardened and ground, to withstand the heavy pressures exerted by these machines.

Adjustment of the upper platen is obtained conveniently through the medium of a steel wedge regulated by a handwheel on the left-hand side of the press. Dial adjustment for the wedge permits keeping an accurate record of the setting of the dies, assuring uniformity of the work and saving considerable time in die setting. A shear pin, accessibly located to facilitate replacement, can be furnished. The machine can be arranged either for belt or motor drive.

The smallest of the seven sizes of the machine is of plain style and the others are of geared type. The smallest press weights 4460 lb. and the largest 34,000 lb. The stroke of the slide on all machines is 1½ in. Distance between uprights ranges from 11¼ to 20¼ in. and maximum die space ranges from 12½ to 14 in. Floor space occupied by the smallest press is 45 x 47 in. and by the largest, 100 x 105 in. Strokes per minute range from 85 to 35.

Foundry Equipment Orders Much Higher

Orders for foundry equipment as reported by 21 manufacturers of the Foundry Equipment Manufacturers' Association showed a great increase in May. The total was 335.6 per cent of the average monthly shipments in 1922 to 1924. This is much the highest figure for many years. It compares with 107.7 for April and with 134.8 for May, 1927. The largest previous month of the past three years was February, 1927, when the figure was 198, or not much more than half that of last month.

Shipments in May were 104.7, while unfilled orders at the end of the month, due to the great volume of orders received, were 344.5.

Expansion of Oliver Machinery Co.

Business and plant of Butterworth & Lowe, Grand Rapids, Mich., have been purchased, under date of June 15, by the Oliver Machinery Co. of Grand Rapids, manufacturer of woodworking machinery and machine tools. The Butterworth establishment has for years made band saws for cutting logs and saws for use by package manufacturers, veneer mills, etc. The company is manufacturing also a line of machinery for the stone industries, including rock crushers, nippers and crackers. The firm has made a specialty of equipment for gypsum mines, with complete equipment, including elevators, shafting, crushers and kettles. The Oliver company expects to continue all of these lines in addition to its own. No new manufacturing facilities or equipment are contemplated.

New Norton Cylindrical Grinder for Pieces Up to 14-In. in Diameter

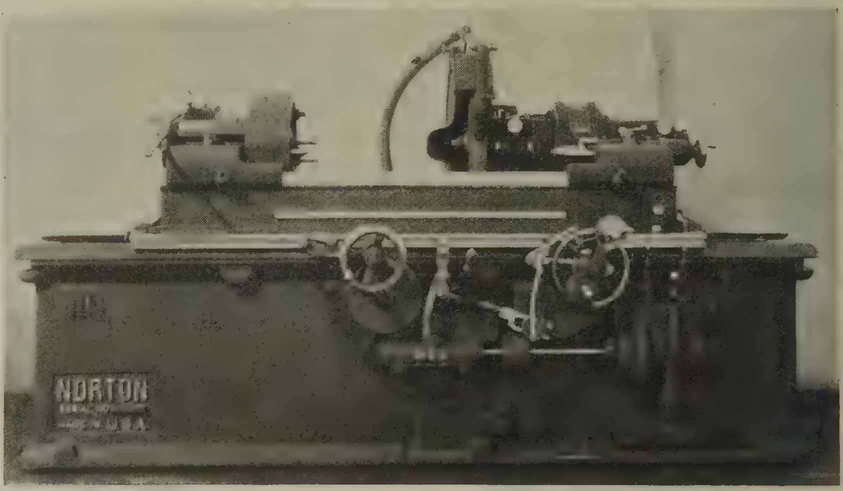
A new model cylindrical grinding machine, designed to swing work 14 in. in diameter and intended primarily to secure high production on car axles, crankshaft bearings and similar pieces, has been brought out by the Norton Co., Worcester, Mass.

The machine is said to have been developed to meet the demand created by experience with the company's type BA 10-in. machine, which has been on the market for a number of years. Ample space has been provided, up to the capacity of the machine, for work with flanges or other projections and when steadyrests are necessary pieces up to 6½ in. can be ground. Two standard sizes of the machine, 14 x 36 in. and 14 x 120 in., with all overhead or motor drive and with either hand or power table traverse, are available. Features common to both the new and the 10-in. machine include improved wheel spindle, ball-bearing wheel feed screw, chain-driven headstock, selective gear speed-change mechanism, and anti-friction countershaft bearings on overhead drive arrangements.

Simplicity of construction characterizes the wheel spindle, which is of heat-treated alloy steel and has large diameters and long bearings. It is adaptable to wide-wheel, straight-in cut as well as traverse grinding. Bearing adjustment may be made while the machine is in operation, the lower bearing being fixed while the upper and outer are adjustable by accessible thumbscrews. Flood lubrication, visible through glasses on the front of the wheel-slide is provided for the spindle.

The wheel-slide is massive and has long and wide ways. The wheel is driven through a downward pull of the belt, which, combined with the weight of the slide itself, prevents lifting under the pressure of a heavy cut. Delicate feed adjustments by means of a micrometric arrangement advance the wheel to the work in increments of one-eighth of a thousandth of an inch. The wheel feed has a large diameter screw, mounted on ball bearings and engaging a long half nut on the wheel-slide.

Convenient speed-changing device on machines with power-table traverse is featured as encouraging the use of proper speeds. Speeds are changed at the front of the machine through a selective gear speed mechanism, without stopping the table, work or wheel. An independent truing device permits truing of the wheel without disturbing the lever for regular table speed changes.



Crankshaft Bearings, Car Axles and Similar Work May Be Ground on a Production Basis. The swing is 14 in.

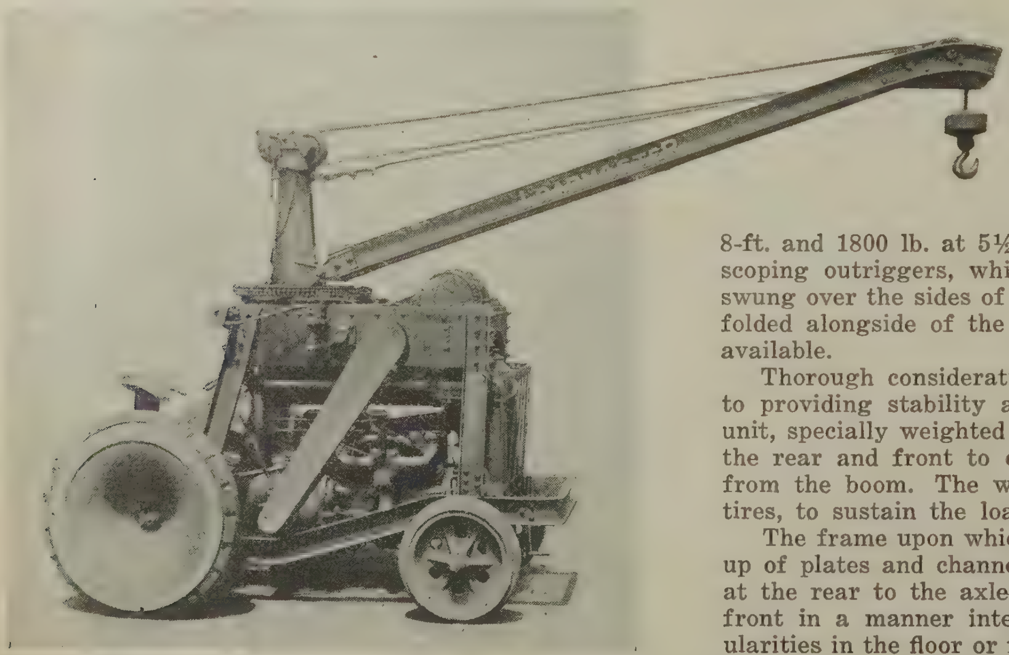
The work table is characteristic of the type A Norton machine and any of the attachments or mechanisms for the 14-in. type A may be used on the new model. Screw or lever types of footstock are ordinarily provided, but for special work air or crank-operated styles are available.

Gasoline-Powered Swing Crane for General Utility Work

A tractor-mounted swing crane which moves from place to place and lifts and swings its load by power derived from the tractor engine is being placed on the market by Frederick H. Poor, Inc., 50 Church Street, New York.

The machine, designated as the Loadmaster, is intended for general utility work in industrial plants, warehouses and storage yards. In addition to lifting, transporting and placing of material, the machine may be used to haul loads or trailers attached to the tractor upon which the crane is mounted.

With the tractor stationary the crane can handle loads over a swing of 240 deg., or 120 deg. either side of the forward position, at a radius of 10 ft. from the mast center. With the boom directly forward loads up to 2400 lb. can be handled at a 10-ft. outreach, and loads up to 3000 lb. at an 8-ft. and 5½-ft. outreach. The height of the load hook from the floor at these outreaches is 6 ft. 3 in., 10 ft. and 12 ft. respectively. With the boom swung at the side of the tractor, the lifting capacity is 1000 lb. at 10-ft. outreach, 1250 lb. at 8-ft. and 1800 lb. at 5½-ft. outreach. Adjustable telescoping outriggers, which permit heavier loads to be swung over the sides of the machine and which may be folded alongside of the machine when not in use, are available.



Traction, Boom Swing, Boom Lift and Other Operations Are by Power from the Tractor Engine

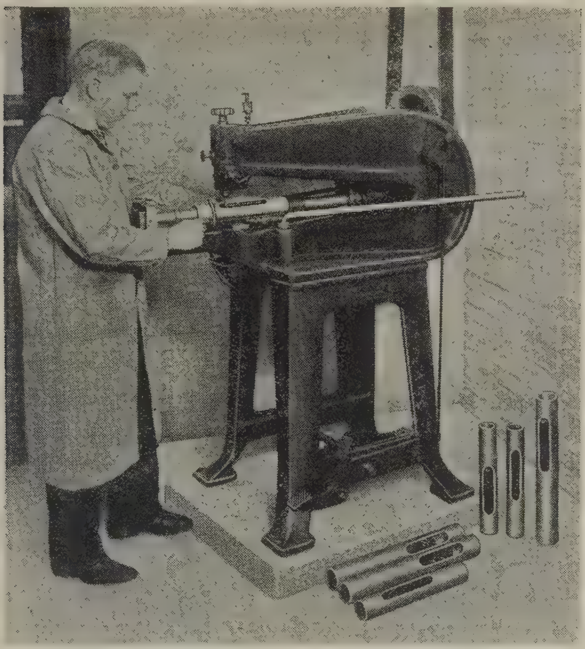
Thorough consideration is said to have been given to providing stability and sturdiness in this movable unit, specially weighted wheels being employed both at the rear and front to counterbalance loads suspended from the boom. The wheels are equipped with broad tires, to sustain the loads without undue tire loading.

The frame upon which the mast is mounted is made up of plates and channels, the structure being secured at the rear to the axle housing and suspended at the front in a manner intended to compensate for irregularities in the floor or roadbed over which the machine travels. The hoisting drum is connected to a self-locking worm gear and is power-operated through a clutch and bevel gears, operation of the drum being controlled by means of a lever within easy reach of the operator. When the drum is not in motion, the load is held in suspension on the boom by the worm gear, without the use of a friction brake. The swinging boom is made up of two steel channels and the bull wheel, by which the boom is swung about the mast, is power-driven through chain and sprocket. The bull wheel is equipped with an expanding brake of such design that the boom may be controlled in its swing, or when not under power may be set in any fixed position.

For conditions requiring higher lifts or long boom outreaches, special equipment can be furnished.

Nibbling Machine for Slotting Tubes

For the slotting of tubes used in the manufacture of oil burners and other products, Andrew C. Campbell, Inc., Bridgeport, Conn., is offering the adaptation of its model No. 1-B nibbling machine here illustrated. It is claimed that in cutting the holes in the sides of the tubes shown in the illustration the operating time was reduced from 16 min., necessary in the method previously employed, to 40 sec.



Means Are Provided for Convenient Mounting and Removal of the Tubes

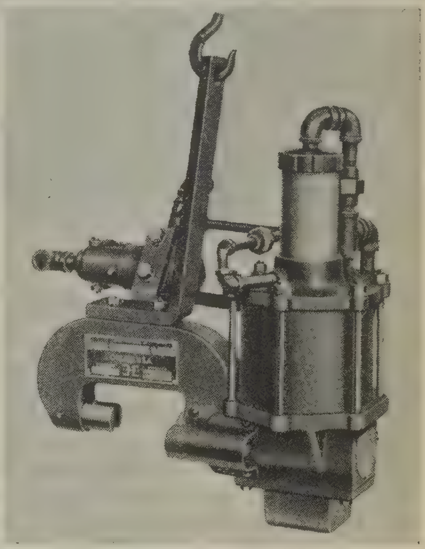
A mandrel, which fits closely the inside diameter of the steel tubing to be cut, is part of the equipment of the machine. The template used is made up of two half tubes hinged with a quick-acting clamp on the other side, which permits it to be attached quickly to the tube to be cut. The outboard bracket has a quick-acting swing clamp on the other side to hold the outboard support for the mandrel, enabling the tubes to be mounted and removed conveniently. The edge left by the slotting operation is said to be practically smooth and no finishing is necessary.

New Resistor and Fuse

A type-H combination potential transformer fuse and wire-wound resistor for 2500 to 25,000-volt service, intended for indoor application, and mountable on any flat surface or upon 1¼-in. pipe, is being made by the Westinghouse Electric & Mfg. Co. The resistors are placed in series with the fuses to limit the current effectively in case of short circuit. This permits the use of potential transformer fuses on any circuit, regardless of its short-circuit amperes, provided the voltage rating of the system is not more than that of the fuses and resistors. The latter are made up of coiled nichrome wire wound in the grooves of a heavy wet-process porcelain tube.

Portable Pneumatic Press for Automotive and Other Operations

A portable pneumatic press which exerts pressure of 8 tons and weighs only 95 lb. has been made available by the Hanna Engineering Works, 1765 Elston Avenue, Chicago. Work for which the machine is adapted includes the pressing of shackle pins into automobile chassis frames as the frames pass along the chassis assembly conveyor line. The tonnage exerted and the short stroke make the machine suitable for shackle pins that are serrated under the head and that have a threaded hole in the head which must not be marred.

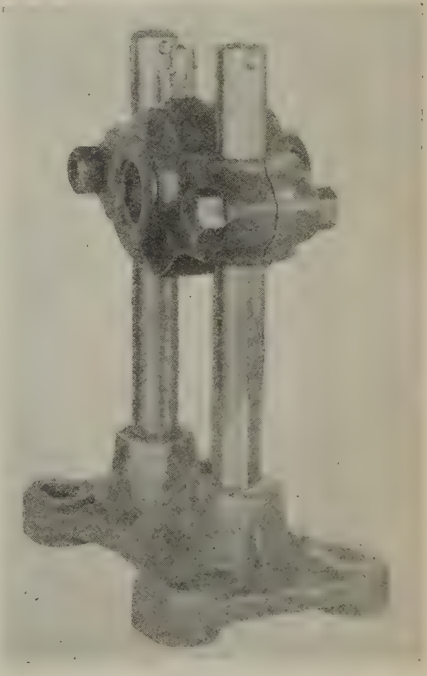


The Weight of the Machine Is Only 95 Lb., and the Pressure Exerted Is 8 Tons

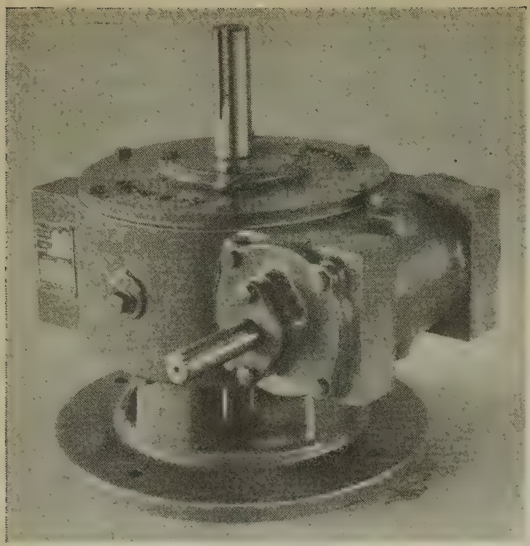
The press illustrated has a depth of throat, or reach, of 2 in., a gap of 6 in. and die stroke of ⅝ in., but several other sizes are available. The mechanism between the air piston and the die is of roller and wedge type, which provides a variable leverage or tonnage in conformity with the requirements of the work to be done. High frictional efficiency of the mechanism and low air consumption are claims for the machine.

Self-Alining Hangers for Use With Speed Reduction Units

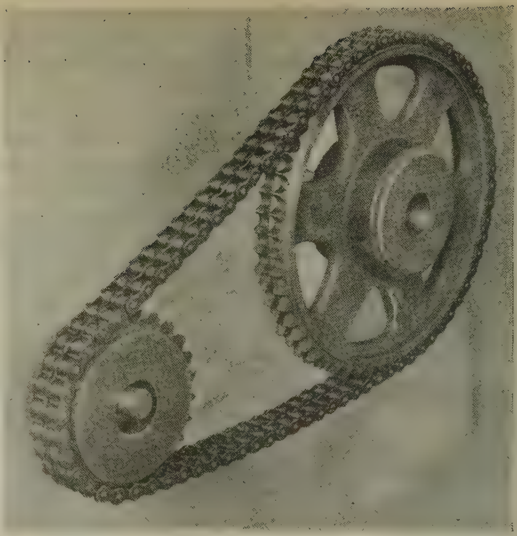
A line of self-alining hangers suitable for use as outboard bearings in connection with the operation of speed reducers and chain drives has been made available by the Boston Gear Works Sales Co., Norfolk Downs, Mass. The device illustrated herewith is arranged for height adjustment and is constructed to remain rigid after adjustments have been made. It can be fastened conveniently to the shaft at any point and is designed to prevent binding and heating of the shaft. The shaft bore is in fractional dimensions. The hanger is designated as the type BF.



The Hanger Is Adjustable for Height and Remains Rigid After the Adjustment Is Made



Tapered Roller Bearings Are Employed in the Vertical Speed Reducer, Which Is Built in a Range of Sizes. The standardized chain drive, at the right, is available for from 1 to 100-hp. drives



Offers New Gear Reduction Unit and Standardized Chain Drives

The Boston Gear Works Sales Co., Norfolk Downs, Mass., has placed on the market a new vertical speed reducer, designated as the type V, for use on mixers, agitators and other equipment requiring a vertical shaft reducing unit. The company is also adding to its line a series of Renold-Boston standardized silent and roller chain drives for industrial purposes.

Compact design and the use of tapered roller bearings throughout are features of the vertical speed reducers. The units may be fastened conveniently to the top of a machine, to a wall or to the floor, and are designed so that the driven shaft can project above or below, or both. Oil-tight construction, eliminating oil leakage, is followed. The worm gears are of phosphor bronze and the worms of hardened steel, with the threads ground and polished. The units are available in ratios from 9¾ to 1 to 50 to 1.

The standardized chain drives, shown in the separate illustration, are available from stock for from 1 to 100-hp. drives. This standardization of driving chains is emphasized by the company as of importance in that by consulting the company's handbook on the Renold-Boston chain drives, the correct size of chain for the particular job may be selected readily.

Mine Stripping with Largest Electric Shovel Ever Built

Stripping operations on a mine in northern Illinois are being carried out with the aid of a type 5480 electric shovel. Made by the Marion Steam Shovel Co., Marion, Ohio, this is said to be the largest shovel ever built. The shovel carries a 12-cu. yd. dipper on a 90-ft. boom and a 60-ft. dipper handle. It is mounted on crawling traction trucks and is operated electrically from power lines of the public utility company. A 750-hp. motor drives the motor-generator set for furnishing power to the various motions, and the working weight with ballast is approximately 850 tons.

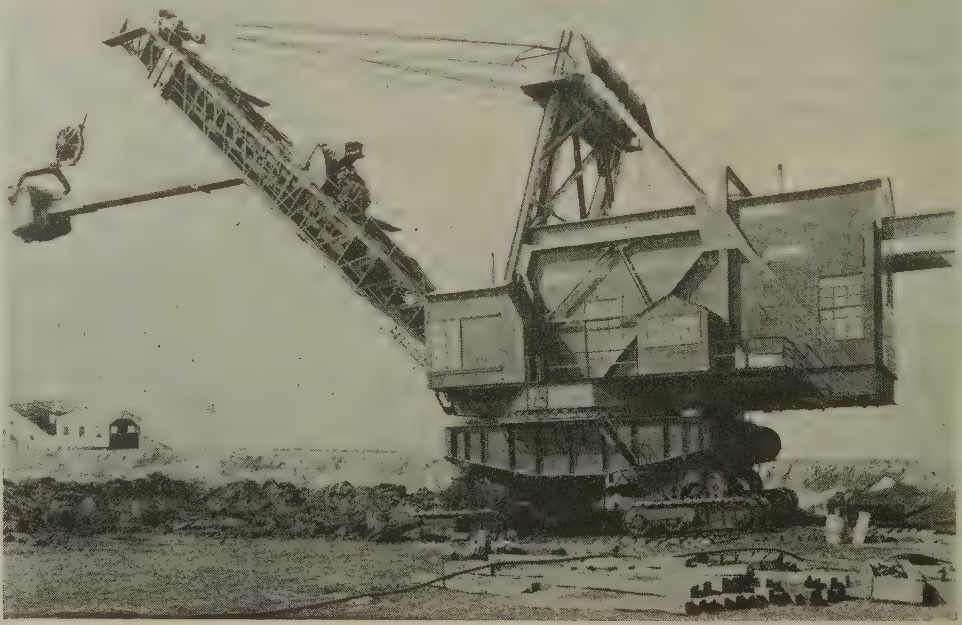
Operating three 8-hr. shifts each day, Sundays excepted, the shovel has, since being placed in operation, handled 15,481 cu. yd. in 24 hr. It is expected that in a calendar year it will handle from 2,000,000 to 3,000,000 cu. yd. of material.

Prior to the erection of the type 5480, the largest coal stripping unit had been the Marion Type 350, which carried an 8-cu. yd. dipper, a 90-ft. boom and a 58-ft. dipper handle. This machine operated effectively and economically in overburden up to 40 ft. in thickness, where the vein of coal averaged 5 ft. in depth.

More Coke Produced in May

By-product coke made in May is reported by the United States Bureau of Mines at 4,083,759 net tons, compared with 3,925,195 tons in April and with 3,788,164 tons in May, 1927. Adding 376,000 tons of beehive coke, the total May production of coke becomes 4,459,759 tons, or 1.358 net tons for each gross ton of pig iron produced. This last figure compares with 1.350 tons in April, and with 1.303 tons in May, 1927.

Exceptionally Large Stripping Shovel Operated by Electricity and Moving on Crawler Trucks. The shovel has a 12-cu. yd. dipper and great hourly capacity



Tape Hook Enables One Man to Measure Accurately

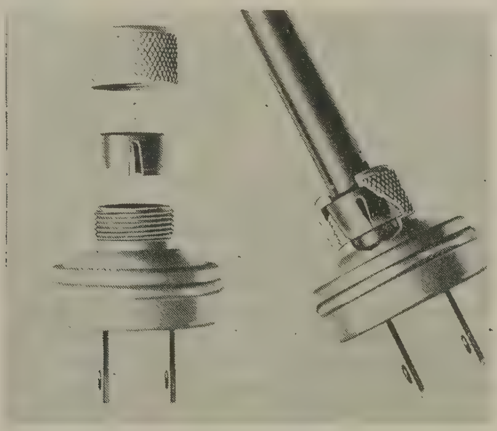
A hook for steel tapes recently brought out by the Lufkin Rule Co., Saginaw, Mich., enables one man unassisted to take long and short measurements accurately. It is easily slipped on and off the tape and yet cannot fall off. The hook has a toothed edge and takes a firm and square grip on the metal or other material as soon as tension is applied to the line, releasing itself when tension is released. It swings with the ring of the tape, thus guarding against breakage of the line and allowing the hook to fold against the case when the line is wound in. The hook is made of composition metal of light weight and is 2 in. long. It is suitable for standard steel tapes ⅜ in. wide.

Hook to Permit One Man to Use a Steel Tape

New Cord-Grip Plug Cap

An attachment plug cap with an improved type of cord grip, brought out by the Cutler-Hammer Mfg. Co., Milwaukee, is reported to be unbreakable. The cord grip acts as a positive strain relief and is designed particularly to lessen short-circuit hazards. Fastening the cord grip is a simple matter and can be done without the use of tools. It is only necessary to screw down on the knurled collar.

The knurled collar wedges a fiber bushing tightly against the cord. The parts are so designed that a natural pressure from the inside prevents loosening of the knurled collar and insures that a firm grip is maintained at all times. The fiber grip bushing serves to insulate the cord from metal parts and results in less damage to the cord, because it prevents contact between cord and metal. This bushing also acts as the clamp and is the only part that actually touches the cord.



Unbreakable Is the Claim Made for This Simple Plug Cap

A rustproof armored shell, made of heavy brass, prevents breakage when dropped on cement floors, etc. Sheet bakelite is used to hold the blades firmly in place. The cord grip cap can be obtained in either bakelite brown or zinc gray finish.

New Recorder Controller

A new recorder and contacting controller, now being offered by the Bristol Co., Waterbury, Conn., combines in one case the features of a rugged recorder and a thermometer controller, which makes a compact outfit. The equipment is a single-pen recording system with controller system and scale mounted directly above it.

Recording pen and moving contact of the controller are actuated by separate pressure elements, which are exactly alike in construction. These elements are connected through one capillary tube to the sensitive bulb. Arranged in this way the record is not impaired by retarding effect of the controller. And the recorder draws a true record both above and below the control point.

This recorder controller is arranged for a contact capacity of 1000 watts by equipping it with self-contained automatic switches. Terminals are supplied for making easy connections to line and control apparatus through conduit. All internal circuits are heavily insulated.

To use, it is only necessary to set the control to the desired temperature by moving an index pointer over a scale to the exact degree to be controlled. This index pointer is so long that it is possible to adjust it accurately and easily. Zero adjusters are provided for both recorder and controller pressure elements.

Boiler Plate Embrittled by Alkaline Feed Water

Prof. Samuel W. Parr and F. G. Straub of the University of Illinois have continued their studies on embrittlement of boiler plate. These extended investigations have been reported several times, as at the 1926 meeting of the American Society for Testing Materials (see THE IRON AGE, July 1, 1926, page 4). Bulletin No. 177 of the Engineering Experiment Station at Urbana, Ill., brings the researches up to date, and includes data on a number of cracked boilers recently examined. These particular failures occur in the rivet seams below water line, start from the outside of the plate, and are evidently intercrystalline corrosion cracks. The authors say the only common factor existing in these failures is an undue accumulation of sodium hydrate in the boiler, either due to hydrolysis of sodium carbonate or to water softening dosage or devices. The remedy is to keep the ratio between sulphates and carbonates in the feed water within specified limits.

Fabricated Steel Plate Orders Drop 16 Per Cent from April

WASHINGTON, June 22.—Orders for fabricated steel plates in May totaled 42,376 net tons, or 53 per cent of the capacity of the 51 firms reporting to the Department of Commerce, comparing with 50,347 tons, or 63 per cent of capacity, in April. May orders made the smallest total since January. Orders in May were distributed as follows: Oil storage tanks, 14,849 tons; refinery materials and equipment, 2012 tons; tank cars, 1909 tons; gas holders, 4636 tons; blast furnaces, 202 tons; stacks and miscellaneous, 18,768 tons.

Orders for the first five months of the current year aggregated 225,170 tons, against 236,134 tons for the corresponding period of last year. May, however, made a better record than last year, when the total was 37,883 tons.

Employment High in Ohio

Employment in the iron and steel industry of Ohio was the same during May as in April, but showed a 3 per cent gain over May, 1927. In Cleveland the number of workers was 4 per cent greater than in April and 26 per cent ahead of May, 1927. The index for May stood at 102, with an average month in 1923 taken as 100. In the machinery group employment during May was the highest of any month since June, 1927. It was 1 per cent greater than April, but 2 per cent less than in May, 1927.

Average employment in the first five months of 1928 was 5 per cent below that in the same period last year. Of the 183 reporting concerns, 83 revealed increases in May over April, 88 decreases and 12 no change. The index of 94 in the automobile and automobile parts group was 8 per cent greater than in April, although it was a drop of 9 per cent from May, 1927. The increase from April was shared by 29 of the 41 reporting companies. In the construction industry May employment was 13 per cent higher than in April and 11 per cent greater than in May, 1927. Reports from 592 concerns in all manufacturing lines showed that the number of wage earners was the highest since May, 1927. These figures are given in the current bulletin on employment issued by the Bureau of Business Research of Ohio State University.

BOOK REVIEWS

Metallurgy of Iron and Steel. By H. M. Boylston, professor of metallurgy, Case School of Applied Science, Cleveland. Pages, 571, 426 illustrations, 6 x 9 in. Published by John Wiley & Sons, Inc., New York. Price, $5.

Even a casual examination of this book reveals one of its notable excellences, namely, a wealth of excellent pictures. It may be a criticism of descriptive metallurgical literature generally that it is inadequately illustrated. Too much dependence is placed on sketches and mechanical drawings, which have meaning to the informed engineer, but which seldom erect a correct picture in the mind's eye of the student. A large proportion of the views in Professor Boylston's new book are halftones, collected from many sources.

Nearly all of the pictures have a "courtesy line," and a needless number of references to original authorities clutter up the text. Before many pages are passed the false impression grows that the author has compiled a series of abstracts, rather than distilling from a wide reading and a ripe experience the essence of his subject for the information of students. For instance, in the chapter on ingots and ingot making a series of 12 figures are "Courtesy Gathmann Engineering Co." If one did not know that the author in his younger days was Carnegie Research Scholar for the British Iron and Steel Institute and studied the relative merits of various agents for the deoxidation of steel, one might believe that his information on ingot quality came from commercial sources, more or less biased.

The preface gives a list of men in practice who have critically examined the chapters covering the respective specialties. So it would be difficult to find misstatements of fact. Lacking errors in detail (and since a book review would be a failure without finding some mistakes), it may not be amiss to point out at least one error in balance: Seventeen pages are used to describe the acid open-hearth process; three are made to suffice for the basic variety, while eight are devoted to Blaw-Knox patents on furnace details. This hardly seems in keeping with the facts, namely, that 40 times as much steel is made in the United States by the basic open-hearth as is made in the acid furnace.

Where the author really strikes his stride, however, is when he leaves behind him the smelting of ore, refining of steel and its mechanical treatment, and describes the inner structure and properties of metal as they are affected by heat treatment. In this latter third of the work a very clear exposition of metallography is given, as nearly up to date as a text book can be. Knowing the author's constant association with Professor Sauveur of Harvard University, and the latter's published views on the hardness of beta iron, the reviewer looked with interest for an exposition of the hardening theory. But alas, the question is neatly parried by referring the interested student to Sauveur's work published in 1920. This hardly seems fair to Professor Boylston's fellow townsmen, Messrs. Jeffries and Archer, who are widely credited with having proposed a very understandable and useful theory of hardening in more recent years. But it may be a justifiable course to pursue in an elementary text book.

E. E. T.

—

The Engineering Index for 1927. Pages, 898, 6½ x 9 in. Published by American Society of Mechanical Engineers, 29 West Thirty-ninth Street, New York. Price, $8.50.

Each year the Engineering Index grows in number of citations and in size of volume, which reflects not only the growing volume of technical literature, but the steadily increasing scope of the field included within the survey. During 1927 over 800 publications were regularly examined, and the present volume contains information about approximately 17,000 articles, each citation giving the title, author, publication, date and page, and a brief statement of the scope of the text. A commendable practice is the avoidance of cryptic abbreviations, which, while understandable to the indexer, are Greek to an engineer user of such a volume as this. While it would be easy to criticize the abstracting of articles, it would be hard to suggest any practicable machinery whereby this work could be improved at reasonable cost, considering the comprehensive field being covered.

Large as the present volume is, it is expected that next year the volume will be still larger. Carlos de Zafra, director of Engineering Index, has organized a staff which will mail index cards weekly to subscribers for the service, selecting all cards containing current information on the particular portions of the engineering field desired by the recipient. The number of publications (particularly those in foreign languages) will be increased to make this prompt review even more inclusive than former efforts.

—

Aluminum — the Metal and Its Alloys (A Critical Descriptive Treatise). By M. G. Corson, including chapter on "Structurography" prepared in cooperation with J. R. Vilella. D. Van Nostrand Co., New York, 1926. Pages 291, with 117 plates. Price, $8.

This book is addressed to "readers interested in aluminum," but special reference is made to those connected with the industry. The book is divided into six parts, and subject matter is indicated by the following titles:

Part 1.—Properties of Metallic Aluminum.
Part 2.—Systematic Description of Binary Aluminum Alloy Series.
Part 3.—Technology of Aluminum Alloys.
Part 4.—Aluminum and Corrosion.
Part 5.—Aluminum Alloys in Engineering Work.
Part 6.—"Structurography" of Aluminum and Its Alloys.

There is some additional matter in appendices and also a four-page subject index.

This is an individualistic rather than an orthodox work, both as to subject matter and manner of treatment. It seems likely to be of more interest and use to the research worker than to those engaged in the practical manufacture or use of aluminum. Together with a considerable body of useful information and stimulative ideas is an unfortunate scattering of inaccurate or misleading information, so that the uninformed reader must regard the statements with some degree of caution. Furthermore, instead of presenting a complete and balanced picture of the subject, the author seems to have selected and emphasized the subject matter to a large extent in accordance with his own experience and interest.

Good judgments are strangely mixed with opinions which to the reviewer seem poor. For example, the last paragraph on page 106 presents a very good statement of the properties of aluminum-copper alloys of low copper content. This is immediately followed by a paragraph stating that "aluminide of copper . . . becomes comparatively weak at temperatures as low as 150 deg. C., thus injuring the strength of the alloy as a whole." As a matter of fact, this constituent ($CuAl_2$) is one of the most effective in maintaining the strength of aluminum at elevated temperatures.

Some of the author's advice to the users of aluminum must certainly be taken with reservation. It is suggested, for example, that in certain products it should be insisted that the iron content should not exceed 0.2 per cent. Those familiar with the industry know that this is not practical at the present time, and, as a matter of fact, it is very doubtful whether such a limitation would produce any desirable results in a majority of products, even if it were practical. The discussion of piston alloys contains a pertinent statement questioning the importance of strength at high temperatures, but proceeds with some statements regarding hardness which are at variance with the best informed present opinion. It is stated that the use of magnesium, "as recommended by some authors," serves no rational purpose and that it is better to have a piston material with 28,000 lb. strength and 1.5 ft. lb. impact than one with 38,000 lb. strength but 0.5 ft. lb. impact. The facts are that magnesium is now used in practically all commercial aluminum pistons, and that the production of pistons still further hardened by heat treatment is considered to have been one of the major developments of the last few years.

In general, the book may be recommended to the investigator and the student in search of ideas and data to be considered critically, but is not recommended to the engineer or manufacturer who is looking for well established facts and conservative opinions about aluminum. R. S. A.

Protective Metallic Coatings. By Henry S. Rawdon. American Chemical Society, Monograph No. 40, 277 pages, 6 x 9 in. Chemical Catalog Co., Inc., New York. Price, $5.50.

When books come to the Book Review Editor, he usually casts about in his mind for the name of some man in his acquaintance who is reasonably familiar with the subject matter, and sends him the book with the request that he write a notice which will appraise the scope and quality of the book. But before this routine matter was attended to, this book on metallic coatings had answered questions on such varied things as the rate of solution of iron in a galvanizing kettle, the Crapo process, cadmium plating, planishing and the salt spray test.

Evidently it is too valuable to give away!

Doubtless Doctor Rawdon would disclaim any authoritative knowledge on many of the obscure points touched by the literature he has examined, but throughout this entire book there is every evidence that the notations have been made with nice discrimination and in the light of broad knowledge of metallurgical fundamentals. So the book is far more than a compendium of abstracts. It is a mine of information and suggestion for anyone who deals with corrosion resistance and surface protection.

Cements, Limes and Plasters: Their Materials, Manufacture and Properties. Third revised edition. By Edwin C. Eckel. Pages 700, 6 x 9 in., 161 figures. John Wiley & Sons, Inc., New York. Price $7.

A first impression is of a very well printed book. Paging through less hastily reveals a comprehensive treatment of the plastic materials used in engineering. If one stops to read here and there, he quickly discovers a lucid text, evidently written by an author with clear-cut opinions on many and diverse matters, and with no hesitation about allowing those opinions to modify his views about technology of his subject and to state the conclusions so reached clearly and vigorously.

It so happens that, aside from chapters of close interest to men in iron and steel production, such as the utilization of blast furnace slag, the text has other points worthy of note. One such is where an analysis of the major elements of cost is given, and the conclusion (doubtless verified by experience) that, if a cement mill sells its product for only enough to cover the cost of getting the raw materials, the cost of manufacture and the administrative and selling costs, then the mill would pay its way, yet would not remain in the hands of the original owners, and the end of several such financial reorganizations would find an obsolete plant and exhausted quarries. Such observations, of course, do not exclusively apply to the cement industry.

Manufacture of cement is now going through an interesting stage. As Mr. Eckel points out, Portland cement is commonly regarded as the typical representative of the entire group of engineering plastics. As a matter of fact, it is the most modern of all the cementing materials, some of which date back 10,000 years or more. And in the few brief years of its existence Portland cement had become so standardized by uniform specifications that no progress in manufacturing and no additional requirement by the consumer had been made. During the war the demand for cement of high early strength—concrete that could be used in 24 hr. instead of 24 days—was successfully met. With this advance made, engineers and researchers turned their attention to the additional problem of making a cement which would permanently resist alkaline ground water and sea water. Consequently the present day is one of rapid development; many new ideas are being proved. Mr. Eckel says that somewhere in this mass of attempts will be found the processes and products which will serve as the bases for the next long period of utilization and standardization.

At present, the high early strength Portland cements are being made by giving better attention to the raw material, the burning and to a finer grinding. Alkali-proof cements, on the other hand, have such different chemical compositions that they have been called alumina cements, and are made by complete melting, ordinarily in a blast furnace or electric furnace, rather than sintering or clinkering in a rotating kiln. Mr. Eckel's survey of the raw materials available in great tonnage indicates that in the not distant future the blast furnace will be charged with an aluminous iron ore, so low in silica that the slag will be one of the new cements and the pig iron will be a valuable by-product.

New Books Received

Safety and Production. A report by the American Engineering Council. Pages 414, 6½ x 9½ in., illustrated. Published by Harper & Brothers, 49 East Thirty-third Street, New York. Price, $5.

Elements of Economic Geology. By J. W. Gregory. Pages 312, 5 x 7½ in., illustrated. Published by E. P. Dutton & Co., 681 Fifth Avenue, New York. Price, $3.25.

Patent Essentials. By J. F. Robb. Pages 446, 6 x 8¾ in., illustrated. Published by Funk & Wagnalls Co., 354 Fourth Avenue, New York. Price, $5.

Descriptive Geometry. By William H. Kirchner and Henry C. T. Eggers. Pages 183, 6 x 9¼ in., illustrated. Published by McGraw-Hill Book Co., Inc., 370 Seventh Avenue, New York. Price, $2.25.

Abrasive Handbook. By Fred B. Jacobs. Pages 547, 6¼ x 9¼ in., illustrated. Published by Penton Publishing Co., Cleveland. Price, $5.

Employee Stock Purchase Plans in the United States. Pages 245, 6¼ x 9¼ in. Published by National Industrial Conference Board, Inc., 247 Park Avenue, New York. Price, $2.50.

Journal of the Institute of Metals, 1927. Vol. XXXVIII. Pages 813, 5½ x 8½ in., illustrated. Published by the Institute of Metals, 36 Victoria Street, London, S. W. 1, England.

Journal of the Iron and Steel Institute, 1927. Vol. CXVI. Pages 736, 5½ x 8½ in., illustrated. Published by the Iron and Steel Institute, 28 Victoria Street, London, S. W. 1, England.

Foundry Work. Second edition. By R. E. Wendt. Pages 236, 5 x 7¾ in., illustrated. Published by McGraw-Hill Book Co., 370 Seventh Avenue, New York. Price, $2.

Scientific Purchasing. By Edward T. Gushee and L. F. Boffey. Pages 196, 6 x 9¼ in., illustrated. Published by McGraw-Hill Book Co., Inc., 370 Seventh Avenue, New York. Price, $3.

Electric Heating. By Edgar A. Wilcox. Pages 469, 6¼ x 9¼ in., illustrated. Published by McGraw-Hill Book Co., Inc., 370 Seventh Avenue, New York. Price, $5.

Engineering Abstracts. No. 35. Pages 236, 5½ x 8½ in., illustrated. Published by the Institution of Civil Engineers, Great George Street, Westminster, S. W. 1, London.

Le Molle. (A treatise on the manufacture and theory of springs, in Italian.) Four volumes. By Piero Gradenigo. Pages 800, 6¾ x 10¼ in., illustrated. Published by S. Lattes & Co., Via Garibaldi, 3, Turin, Italy.

A Metallographic Study of the Path of Fatigue Failure in Copper. By Herbert F. Moore and Frank C. Howard. Bulletin 176, University of Illinois Engineering Experiment Station, Urbana, Ill. Pages 27, 6 x 9 in., paper binding. Price, 20c.

Industrial and Railroad Amalgamations. By Sir Josiah Stamp, chairman London, Midland & Scottish Railway. Pages 32, pamphlet, 5½ x 8½ in. Published by London General Press, 3 Arundel Street, Strand, London, W. C. 2, England. Price, 2s.

Largest Exports in Seven Years

May Shipments of Iron and Steel 25 Per Cent Above April—Imports Slightly Higher Than in April—Heavy Scrap Exports

WASHINGTON, June 26.—Aggregating 267,890 gross tons, exports of iron and steel products from the United States in May were the highest for any month since February, 1921, when they totaled 393,328 tons. The May export movement increased 52,706 tons over that of April, when the total was 215,184 tons. Exports for the five months ended with May, amounting to 1,096,690 tons, made a gain of 147,910 tons over the corresponding period of last year, when the total was 948,780 tons. The daily average movement for the 31 days of May was 8890 tons, compared with a daily average of 7172 tons during the 30 days of April. While one outstanding reason for the sharp stimulus in exports of May was the heavy movement of scrap, amounting to 59,417 tons, the largest movement of any single product, gains were made in 28 of the 39 classifications when compared with April, while 10 showed declines and one, pig iron, was identical with that of April, at 3701 tons.

Imports in May totaled 72,106 tons, reflecting a gain of only 527 tons over April's total of 71,579 tons. For the five months ended with May, imports aggregated 324,076 tons, an increase of 9161 tons over the corresponding period of 1927. A feature of the May import movement was the sharp drop in incoming shipments of pig iron, which amounted to 9732 tons, against 20,845 tons in April. There were gains in 18 of the 27 import classifications, some of only a few tons, and losses in the remaining nine.

The outward movement of scrap in May, 59,417 tons, represented an increase of 18,801 tons over April's total of 40,616 tons. The sharp increase in exports of scrap during the past few months is attributed largely to the embargoes or prohibitory export duties in force against this product in a number of foreign countries. Of the May scrap exports, 18,972 tons went to Italy; 16,827 tons to Canada; 8785 tons to Japan; 8435 tons to Poland and Danzig and 4858 tons to Germany.

Exports of ingots and semi-finished steel in May, 18,823 tons, showed an increase of 11,165 tons over April, totaling 7657 tons. Plain shapes exported in May, 18,498 tons, made a gain of 4845 tons over April with a total of 13,653 tons. Canada took 15,433 tons in May and Chile, 902 tons. A gain of 3591 tons was made in exports of black steel sheets in May, with a total of 15,272 tons, against 11,681 tons in April. Canada was the destination of 7849 tons of these exports in May, while Japan took 5140 tons. Exports of tin plate in May, 22,462 tons, made a gain of 2653 tons over April, when the total was 19,809 tons.

Tin plate exports in May, consistent with their usual course, were widely distributed, shipments going to Japan, 5438 tons; Canada, 4183 tons; China, 2870 tons; Greece, 1220 tons; Brazil, 1097 tons; Argentina, 1081 tons; Mexico, 1058 tons, and Italy, 1037 tons. Exports of plates in May, 13,163 tons, showed a gain of 3120 tons over April. Canada took 11,695 tons last month. Of the 13,726 tons of steel bars exported in May, a gain of 1066 tons over April's 12,660 tons, Canada took 10,850 tons and the United Kingdom 1042 tons. Galvanized sheets to the quantity of 14,175 tons were exported in May, a gain of 1641 tons over April, with 12,534 tons. Canada took 4498 tons in May; the Philippine Islands, 1875 tons; and Mexico, 1134 tons.

Exports of rails represented the largest decline in May, 18,251 tons, as against 24,449 tons in April, a drop of 6198 tons. The markets of Canada and Japan are showing less demand for foreign rails because apparently, those countries are supplying their own rails in greater quantity. Of the May shipments of rails, Canada took 3201 tons and Japan 2775 tons. The largest foreign buyer was Chile, which took 6184 tons; Brazil took 1806 tons. Casing and oil line pipe exports in May were 10,193 tons. Venezuela took 2641 tons; Colombia, 2139 tons; Mexico, 1678 tons; Argentina, 1280 tons; and Canada, 1018 tons. Exports of black welded pipe in May totaled 6090 tons, of which 1310 tons went to Japan, 1177 tons to Canada and 597 tons to Argentina.

Canada took 116,634 tons, or approximately 43 per cent, of the total May exports. For the five months Canada took 432,278 tons, or approximately 39 per cent, of the total exported during that period. Exports to Japan in May amounted to 28,007 tons and during the five months they aggregated 141,185 tons.

Great Britain and India were the sources of the largest imports of pig iron in May, supplying 4556 and 3026 tons respectively. Of the 5094 tons of ferromanganese imported during that month, 3468 tons came from Canada and 1551 tons from the United Kingdom. Of the 16,283 tons of manganese ore imported in May, 7372 tons came from Soviet Russia, 6560 tons from Brazil and 2335 tons from India. Chile, supplying 141,800 tons, accounted for more than two-thirds of the iron ore imports in May, totaling 211,270 tons.

Of the 16,010 tons of structural shapes imported that month, 8758 tons came from Belgium, 4357 tons from France and 2739 tons from Germany. Belgium supplied 5199 tons of the 9681 tons of steel bars imported in May; France, 1964 tons; Sweden, 1213 tons and Germany, 1170 tons. France furnished 7524 tons of the 9150 tons of cast iron pipe imported, and Belgium, 1619 tons. Of the 4125 tons of "other pipe" imported, largely seamless tubes, 2599 tons came from Germany, 546 tons from France, 376 tons from the United Kingdom and 347 tons from Canada.

Belgium led as the source of the total May imports, furnishing 19,951 tons. France was second, with 16,314 tons, and Germany third, with 10,839 tons.

Railroads Save by Reclaiming Old Material

ATLANTIC CITY, N. J., June 26.—Through reclamation of old materials, in accordance with the general policy of the rail carriers to bring about greater efficiency and economy in operation, substantial savings are being realized by the railroads. This was shown by a report by the committee on control of shop manufacturing orders for stock material, submitted at the closing session here last Friday of the ninth annual convention of the Purchases and Stores Division of the American Railway Association. As a result of this reclamation work, the railroads are making use of practically every bit of old material so long as it is possible and economical to do so.

Hundreds of articles, such as bolts, mail track brackets, steel for locomotive cabs, coach steps, drills, signal blades for semaphores, tongs for handling rails and ties, track levels, hinges for gates, steel rods of all kinds, metal plates, materials for switches, chisels, springs, cylinder heads and many other articles needed in railroad operation, are being converted by the railroads from old iron and steel. Out of old metallic roofing, empty powder cans or carbide cans emerge bright new tin buckets, cups or other tinware. Second-hand rails are made into guide rails, while carwheels which have become flat are again restored to active use by grinding.

Further Gain in Steel Barrels

Production of steel barrels in May exceeded the record-breaking total of April, with an aggregate of 696,281 units from 27 companies, according to reports to the Department of Commerce. The excess over April's 667,827 units was 4¼ per cent. The figure compares with production in May, 1927, of 588,077 barrels.

Shipments in May were very close to production, as was the case in April and March, both of which showed exceptionally high figures. Unfilled orders at the end of May included 324,549 units for shipment within 30 days and 932,568 units for later shipment.

Members of the Steel Barrel Manufacturers' Institute shipped 410,390 barrels during the month, and had 572,443 on order as of June 1. Their business in May was reported at $1,219,566. Capacity was engaged at the average rate of 61 per cent, being 28 per cent for I. C. C. barrels and 70 per cent for light barrels.

Locomotive fuel costs in April for Class 1 railroads are reported at $2.57 a net ton. This represents an increase of 1c. over the average cost for March. For the three reported districts, the costs in April vary from $2.13 for the Southern district to $2.90 for the Western district.

Continental Prices Slightly Easier

Light Buying but Mills Are Filled—French Await Stable Franc —Steel Cartel May Increase Quotas

(By Cable)

LONDON, ENGLAND, June 25.

CLEVELAND pig iron is quiet and one more blast furnace has been blown out. The Tyneside holiday week is being observed and the Glasgow Fair holidays begin in July, so that little improvement in general conditions is expected until August.

Hematite iron is steadier as a result of decreased output, but demand is still poor. Foreign ore is quiet and there is no indication of a termination in the Swedish miners' strike, so that prices are maintained.

Heavy steel products generally are quiet, but light materials are moving more freely, particularly to domestic consumers. Export demand is poor and mills rolling plates and shapes are in need of orders. In the past week, the Prime Minister interviewed steel makers, who are asking for measures to safeguard the heavy steel industry, and stated that the Government policy will not be changed under the present Parliament. The Canadian-Pacific is about to place orders for two 20,000-ton liners with British yards.

Tin plate bars are active and the market strong, with makers facing a continued shortage of scrap. Some sellers for forward delivery are asking up to £6 5s. ($30.44) per ton, delivered, for Welsh bars.

Tin plate is quieter as a result of the recent decline in the price of tin and consumers are anticipating lower prices. Makers, however, are well sold for many weeks. The minimum agreed price for tin plate wasters is now 17s. ($4.15) per base box, f.o.b. works port, and some sellers are asking 6d. (12c.) more.

Galvanized sheets are strong, with higher costs, and the agreed minimum price for No. 24 gage corrugated sheets in bundles has been increased to £13 7s. 6d. ($65.14) per ton, f.o.b. works port. Demand is generally confined to small lots. Black sheets are quieter.

Continental iron and steel demand is quieter and some prices have become easier as a result of the return of more works as sellers, but prices have been restrengthened by the Antwerp dock strike. Luxemburg reports quotations of the European Rail Makers' Association unchanged.

STEEL CARTEL TO MEET

Production Quotas May Be Increased—Polish Membership Still a Problem

BERLIN, GERMANY, June 10.—The International Steel Cartel meets at Düsseldorf, June 25. Discussion is expected to center upon the total production quota for the third quarter. The present quota is at the rate of 29,287,000 metric tons a year and, according to report, the Western European members of the cartel will propose an increase of about 2,000,000 tons. Another possibility is a proposal to increase only the quotas of Belgium and France.

In the first quarter of this year, all member countries exceeded their quotas of production for the first time since establishment of the cartel. The excess production of France was only 12,000 tons, on which a penalty of $4 per ton was levied. In the last quarter of 1927, the French members were 144,000 tons under their total quota and received a premium of $4 a ton. In the first quarter of this year Belgium was 77,680 tons over the quota. In April, however, these countries were again producing less than the fixed quotas, and if this has continued to be the case for the second quarter, there may not be so much pressure for an increase of the allotment.

The German attitude on increase of quotas is expected to depend upon whether or not a change in the present system of penalties is suggested. German members pay $1 a ton on overproduction for the domestic market and $4 a ton on overproduction which goes for export. The recent ratio of domestic to export production has been 72 to 28. In the first quarter of this year, the German quota was fixed at 3,161,000 tons, a figure which was exceeded by 1,052,000 tons. Germany, having paid heavy penalties in the past for

British and Continental European prices per gross ton, except where otherwise stated, f.o.b. makers' works, with American equivalent figured at $4.87 per £ as follows:

Durham coke, del'd.	£0 17½s.	to £0 17¾s.	$4.27	to $4.33
Bilbao Rubio ore*	1 2½		5.48

overproduction, is not inclined to agree to any rearrangement designed to relieve the Western producing countries, which have been profiting by underproduction.

The question of Polish membership in the International Steel Cartel has undergone no material change. The chief obstacle is the amount of export quota to be placed at the disposal of Polish mills. Originally Poland demanded 500,000 tons a year and the cartel offered 300,000 tons. Later Poland reduced its demand to almost the level offered. It is pointed out that, although the difference of opinion as to the proper export quota would prove insignificant if the proposed cartel selling syndicates are established, Poland, as an outsider, might undersell whatever price was officially fixed. However, there is no present prospect of any action being taken toward the formation of such syndicates, as the recent rise in European prices has temporarily made such action of less importance. Another question is that of Poland's joining the European Rail Makers' Association. At present Poland has a heavy tonnage of rail orders and is not disposed to permit the association to establish a maximum production.

The question of special treatment of members in the Central European group, Austria, Czechoslovakia and Hungary, has apparently been settled for the present. For the first two quarters of 1928 the penalties of this group were reduced by one-half and a commission was appointed to suggest a permanent regulation. This commission will probably report at the Düsseldorf meeting.

BELGIAN PRICES STABILIZING

Buying of Steel Is Light but Market Is Firm—Inquiries Appearing from South China

ANTWERP, BELGIUM, June 8.—Prices of iron and steel are becoming stable at the present level, and, although buying is rather cautious, mills seem to experience no difficulty in obtaining their full schedule of prices. Despite the lack of buying, producers are well booked with orders for delivery during the next few months and appear to be in a position to withstand pressure for lower quotations for several weeks. The situation seems favorable both in the export and home markets, as stocks both here and abroad are apparently small, and prices, even at the present level, are still under the pre-war market and below British and American quotations.

Export trade promises well for the future. Both German and French domestic business continue active and new business is developing in foreign markets, notably South China, which is inquiring for some desirable tonnages of material.

Pig Iron.—Despite the strength in steel products, pig iron shows a tendency toward weakness. Prices are being maintained fairly well, but competition is keen and the pig iron syndicate is not uniformly successful in maintaining its prices. The export quotation on No. 3 phosphoric foundry iron continues at £3 2s. 6d. ($15.25) per gross ton, f.o.b. Antwerp.

Semi-Finished Material.—Buying is light, but the market continues firm, with only limited tonnages available for immediate delivery. Blooms are scarce and mills have no difficulty in maintaining the market at £4 7s. 6d. ($21.45) per ton for 8-in. to £4 15s. ($23.30) per ton for 4-in. blooms, f.o.b. Antwerp. Billets are also firm at £4 16s. ($23.50) per ton for 3-in. to £4 17s. 6d. ($23.90) per ton for 2-in. billets, f.o.b. Antwerp. Mills show slightly more interest in sheet bar business, but exhibit no inclination to offer concessions from the present market level.

Finished Material—Prices of all steel products are firm, despite the lack of any substantial buying by consumers. Mills are showing greater willingness to accept orders, but only at the prevailing price level, although buyers are actively seeking concessions. Steel bars, however, appear to be somewhat easier in price. Orders are still difficult to place for early delivery. The current market ranges from £5 15s. 6d. to £5 16s. 6d. per ton (1.28c. to 1.29c. per lb.) for normal specifications. On rounds as low at £5 14s. per ton (1.26c. per lb.) is reported to have been done, although the usual quotation is £5 15s. (1.28c. per lb.), f.o.b. Antwerp. Beams are in good demand, with prices firm at £5 per ton (1.10c. per lb.), f.o.b. Antwerp. Corrugated bars are quoted at £5 18s. 6d. per ton (1.31c. per lb.). There is a good export demand for hot-rolled steel hoops, and the market is firm at £6 17s. 6d. per ton (1.51c. per lb.), f.o.b. Antwerp.

CZECHOSLOVAK BUSINESS GOOD

Domestic Trade Shows Large Increase—Skoda Works Had Profitable Year in 1927

PRAGUE, CZECHOSLOVAKIA, June 7.—Activity in the iron and steel markets was well maintained throughout 1927, and in the first quarter of this year domestic orders for pig iron exceeded the total for the corresponding quarter of 1927 by 28 per cent, while purchases of rolled steel products were 20 per cent greater. Much of this activity has been contributed by increased building operations throughout the country. Thus far this year exports of pig iron and steel products have continued at about the same level as in 1927, but no official statistics are yet available except on steel ingot output, which was 25 per cent greater during the first quarter than in the first quarter of last year.

The automobile industry is active, although importation of cars in the first quarter of 1928 was 11 per cent greater than in the first quarter of 1927. Exports, however, were 60 per cent greater. Imports of motor cars increased from the United States, Germany, Austria and Belgium and decreased from Italy and France. In the first quarter of this year 313 cars were received from the United States, which was about double the arrivals in the first quarter of 1927.

The Skoda Steel Works A. G. at Pilsen has declared a dividend for 1927 of 56 cr. ($1.66) per share, which compares with 50 cr. ($1.48) per share in the preceding business year. Net profits were 43,000,000 cr. ($1,272,800). The corporation reports a good year of business, as a result of increased domestic buying and active exports. Export business, however, was taken at low prices and this was offset in part by reducing production costs. The Polish branch of the Skoda Steel Works, established in 1927, has developed so satisfactorily that it is planned to add several new lines of production. The corporation has acquired a majority interest in the Uzinele Metalurgice Co., Budapest, Hungary, and has strengthened its position in Moravia by acquiring works which are to be used for electro-technical operations. The Czechoslovakian Berg-und-Huetten Co. has decided to establish a new rolling mill for sheets in Trinetz.

Izett, New German Steel, Not Impervious to Caustic Embrittlement

In an attempt to discover some steel not subject to caustic embrittlement which could be used for boilers fed with certain Western alkaline waters, Prof. S. W. Parr and F. G. Straub of the University of Illinois secured samples of "izett," the new type of steel reported by Dr. Ad. Fry in *Kruppsche Monatshefte*, November, 1926, page 185. Izett is said to show no aging effects after cold work. This steel could be cold worked and still have a high impact value, while the ordinary boiler steel would lose its impact strength after cold work. Doctor Fry's theory is that boiler plate is cold worked and highly stressed and then reheated to around 200 deg. C., which lowers the impact value of the steel. A steel of low impact value would crack more easily; consequently, he concludes that the service cracks encountered in boilers are due to the aged steel. He also made the statement that the new steel would not become embrittled under steam and caustic attack, and showed the results of tests where the new steel did not crack in caustic solution.

The results of tests conducted at the University of Illinois on three samples of this steel and described in Engineering Experiment Station Bulletin No. 177 showed that it is not any more resistant to embrittlement than regular American boiler plate. Its chemical analysis is carbon 0.17 per cent, manganese 0.41 per cent, phosphorus 0.020 per cent, sulphur 0.031 per cent, silicon 0.053 per cent, and nickel 0.030 per cent (possibly residual from ore or scrap). Physical properties as received are as follows: yield point, 32,000 lb. per sq. in.; ultimate strength, 56,500 lb. per sq. in.; reduction of area, 67.5 per cent.

This steel cracked in 20 to 24 hr. when loaded to 40,000 lb. per sq. in. and exposed to boiler water with 300 gm. NaOH per liter and steam pressure of 500 lb. per sq. in.

French Cast Iron Pipe Maker Appoints New American Agent

The foremost French maker of cast iron bell and spigot pipe, the Société Anonyme des Hauts-Fourneaux et Fonderies de Pont-a-Mousson of Nancy, has appointed the Herbert Kennedy Co., Inc., 475 Fifth Avenue, New York, as general sales agent in the United States. The Herbert Kennedy Co. was the first agent for Pont-a-Mousson pipe, appointed in 1920 for the United States, Canada, Central and South America and Cuba. In 1924, B. Nicoll & Co., 294 Madison Avenue, New York, were appointed exclusive agents for the United States, the Herbert Kennedy Co. retaining its agency for Canada, Cuba and the South and Central American countries.

Slight Increase in Orders for Commercial Steel Castings

WASHINGTON, June 23.—Orders for commercial steel castings in May totaled 84,824 tons, or 59 per cent of the monthly capacity of the 144,800 tons of the 128 concerns reporting to the Department of Commerce. They compare with 83,737 tons, or 58 per cent of capacity, in April. Production in May aggregated 91,638 tons, or 63 per cent of capacity, against 85,669 tons, or 59 per cent of capacity, in April.

Of the May orders, 34,954 tons was for railroad specialties, being 52 per cent of this class of capacity, compared with 32,810 tons, or 49 per cent of capacity, in April. Orders for miscellaneous castings in May totaled 49,870 tons, or 64 per cent of this class of capacity, against 50,927 tons, or 66 per cent, in April. For the five months ended with May orders for commercial steel castings were 433,595 tons, compared with 446,291 tons for the corresponding period of last year.

Production for the five months of 1928 totaled 432,233 tons, against 460,456 tons for the corresponding period of 1927.

To Classify Character of Coal for Different Industries

In connection with the convention of the National Association of Purchasing Agents, held at Kansas City, a meeting was held of the National Coal Committee, presided over by B. L. Verner, purchasing agent, Interstate Iron & Steel Co., Chicago. T. W. Harris, Jr., of the Du Pont company, chairman of the committee, suggested that for the coming year the association employ capable engineering service to prepare specifications covering a series of combustion conditions which, as far as possible, would classify average purchasing requirements of various lines of industry, such as the proper coal to be used under certain conditions and with certain equipment. It is planned to send such a query blank to coal users in the association, stoker manufacturers and coal operators.

Standard Sample of Ferrophosphorus

The United States Bureau of Standards has prepared a standard analyzed sample of ferrophosphorus containing 26.17 per cent of phosphorus. This standard is No. 90 in the series and costs $2 per sample of 75 gm. The sample may be paid for in advance with order or be sent by parcel post c.o.d. in the United States and its possessions. All foreign shipments require prepayment, together with 20c. additional for postage.

FRENCH AWAIT STABLE FRANC

Mills Unwilling to Contract Ahead Until New Value Is Known—Prices Still Below 1913

PARIS, FRANCE, June 11.—As stabilization of the franc (probably at about 124.48 to the pound sterling) is considered imminent, most steel works are unwilling to commit themselves to contracts for deliveries beyond three months. Only in a few instances, as in the case of the De Wendel works, are producers willing to book business for longer deliveries. On such protracted deliveries, works are demanding price increases, which they consider justified by the fact that the exact level of stabilization is not known. Present prices of French metallurgical products will probably undergo a slight advance if the franc is stabilized at 125 to 126 fr. to the pound sterling, as seems to be expected in some quarters.

Pig Iron.—No change in prices or general market conditions has developed. Negotiations for establishment of a syndicate to control hematite iron seem to have entered the final stage.

Semi-Finished Material.—The market is quiet, but prices are strong, with blooms at £4 11s. ($22.16) per ton, compared with £4 10s. ($21.92) per ton on June 1 and £4 5s. ($20.60) per ton on May 1. The price on June 1, 1913, was, on the basis of the present value of the franc, £5 ($24.35) per ton, f.o.b. Antwerp. Billet prices are £4 16s. ($23.38) per ton, compared with £4 14s. ($22.90) on June 1 and £4 10s. ($21.92) per ton on May 1. The June 1, 1913, price was £5 6s. ($25.81) per ton, f.o.b. Antwerp.

Finished Material.—The export price of steel bars seems to be stabilizing at £5 15s. to £5 16s. per metric ton (1.28c. to 1.29c. per lb.), f.o.b. Antwerp. The domestic market is active and some good orders are being booked from the French railroads, the French Navy and for export. Order books are well filled for three to five months, so that the stabilization of the franc is not expected to have a serious effect. The present price of bars, which has been fairly stable since June 1, compares with £5 5s. 6d. per ton (1.16c. per lb.) on May 1 and £5 10s. per ton (1.21c. per lb.) on June 1, 1913. Beams are quoted at £4 19s. per ton (1.09c. per lb.), which compares with £4 13s. 6d. per ton (1.02c. per lb.) on May 1 and £5 15s. per ton (1.28c. per lb.) on June 1, 1913.

Rails.—The current price is £6 10s. ($31.66) per ton, f.o.b. Antwerp, which compares with the pre-war price on June 1, 1913, of £6 ($29.22) per ton, Antwerp. The State Railways of Jugoslavia have placed an order with the Central European Steel Syndicate for 30,000 tons of rails. This syndicate includes Austrian, Czechoslovakian and Hungarian steel works.

Rustless Iron for Decorations

The latest use found for rustless iron is for decorative purposes for buildings, exterior and interior. Lyons, Ltd., one of the largest caterers in the world, which makes a specialty of securing the most prominent corner sites in London, described as "corner houses," has just opened the latest of this group, which is known as the Oxford Corner House, situated at the corner of Oxford Street and Tottenham Court Road, London. The new restaurant, which is a particularly massive and handsome building, seating 1200 on one floor, has the whole of the metal enrichment on the entrance doors made of rustless iron. In addition all the fittings of the serving counters, show cases and cash desks, and the various window show fittings are made of the same material. It is also used in the kitchens for the serving and cutting up tables, hot plates, and many small ovens as well.

Cooperating in Canada's Steel and Power Show, Toronto, Sept. 4-7, are the following organizations: Montreal Chapter of the American Society for Steel Treating and the Canadian section of the American Welding Society.

Export Company All Inclusive

New Steel Association, Permissive Under Webb Act, Includes Practically 100 Per Cent of the Exporting Companies

PENDING an expected announcement from the Federal Trade Commission, no statements from steel companies are obtainable respecting the newly formed Steel Export Association of America, of which information was given in these columns June 21, page 1773. While the initiative was taken by the export subsidiaries of the Bethlehem Steel Corporation and the United States Steel Corporation, in the filing of papers covering the formation of the export combination under the provisions of the Webb-Pomerene act, it now appears that practically every sizable steel company doing any export steel business has joined the association. This means that every member company of the former Consolidated Steel Corporation, for example, is in the new organization, together with the United States Steel Products Co. and the Jones & Laughlin Steel Corporation, both of which have heretofore remained altogether independent. There is no understanding that all companies will not seek export outlets as before, but through the export association they may discuss and establish export prices as a single corporate entity. For all practical purposes the new arrangement is calculated to govern 100 per cent of the exports of rolled steel from the United States—and it naturally looks to increasing exports or making them properly profitable.

Some of the effects expected from the export association are these:

Foreign buyers, often working in a more or less tight organization, will have less opportunity than before, or perhaps none at all, of pitting one seller against another and thereby realizing prices below the world level.

Less extreme price cutting in the competition with European steel producers in so-called neutral markets, through the possibility of a wider and clearer understanding of prices and a conception that prices will not play an unduly large part in the closing of business.

A definition clearer than now obtained of areas, or so-called spheres of influence, regarded as belonging primarily to the producers of one nation as against those of another.

It is assumed that Canadian business will not come under the purview of the Steel Export Association and also, as intimated, that the export departments of all the steel companies will maintain offices, here or abroad, as before. It is doubtful that the plans include any allocation of orders, on the score that the association is not likely to operate as an order-taking agency but chiefly as a price stabilizing agency.

Exporters and importers of iron and steel have ointed out that with the International Steel Cartel and the European Rail Makers' Association operating among Continental steel producers, a combination as inclusive of American steel production as the new association might work to limit imports of steel to this country.

The Consolidated Steel Corporation, as was mentioned in THE IRON AGE at the time of its disbandment, had been the largest and most important of the companies formed under the Webb Act for cooperation by American producers in the marketing of their products in foreign countries. It was incorporated Jan. 2, 1919, and went out of business in September, 1922. In its membership was the Bethlehem Steel Corporation, and the Lackawanna and Midvale Steel & Ordnance Co., both acquired by Bethlehem; the Youngstown Sheet & Tube Co. and the Brier Hill Steel Co. absorbed by Youngstown; the Republic Iron & Steel Co., and the Trumbull Steel Co., now a part of the Republic organization; the Lukens Steel Co., the Whitaker-Glessner Co., now of the Wheeling Steel Corporation, and the Sharon Steel Hoop Co., and it handled the export business of the Railway Steel Spring Co., the Standard Steel Works Co. and the Edgewater Steel Co.

RAILROAD EQUIPMENT

Erie Orders 900 Freight Cars—500 Gondolas Wanted for Export

The Erie Railroad has ordered 500 box cars and 400 automobile cars, leaving only 100 furniture cars to be purchased against its recent inquiry. Several foreign roads have issued inquiries for equipment in the American market, the largest being 500 gondola cars for the South African Railways. Details of the week's business follow:

South African Railways are inquiring for 500 20-ton, four-wheel gondola cars.

Erie Railroad has ordered 500 steel-sheathed, steel-framed box cars from Pressed Steel Car Co. and 400 automobile cars from Standard Steel Car Co. Action has not yet been taken on this road's inquiry for 100 furniture cars.

Chicago, St. Paul, Minneapolis & Omaha has ordered 250 stock cars from Pullman Car & Mfg. Corporation. This order was previously reported to unnamed bidder.

Missouri-Kansas-Texas has ordered 10 air-dump cars from Western Wheeled Scraper Co.

Chicago, Milwaukee, St. Paul & Pacific has purchased two 200-ton flat cars from Standard Steel Car Co.

Aluminum Co. of America has ordered two four-wheel switching locomotives from American Locomotive Co.

Canadian National is inquiring for three steel baggage and mail cars.

Union Pacific has made inquiry for four gas-electric rail motor cars and eight trailers.

Pittsburgh & Shawmut is inquiring for six caboose cars.

Southern Pacific will build nine locomotive tenders at its Houston, Tex., shops.

Lehigh & New England has made inquiry for six caboose cars.

Manila Railroad, Manila, P. I., is inquiring for 100 30-ton box cars.

Pacific Electric has ordered 18 interurban cars and 10 passenger coaches from St. Louis Car Co. This road also plans to recondition 198 cars in its own shops.

Chicago Great Western will buy three baggage and mail cars.

Montevideo Post Administration, Montevideo, Uruguay, has made inquiry for 20 open-top cars.

Elk Horn-Piney Coal Mining Co. has purchased 150 mine cars from Enterprise Wheel & Mining Car Corporation.

Southern Pacific has purchased 10 street cars from St. Louis Car Co.

A. Milne & Co., with headquarters at 745 Washington Street, New York, have been appointed sole agents for the United States and Canada for the cutlery sheets, file steels and special sections made by S. & C. Wardlow, Ltd., Sheffield, England.

James B. Clow & Sons, Chicago, have acquired through purchase of a majority of the stock a controlling interest in the National Cast Iron Pipe Co., Birmingham.

This Issue in Brief

Cut costs and save valuable floor space by utilizing overhead space as a storage carrier. Overhead conveyors, supplemented with trucks, are reducing the large amount American industry pays for material handling.—Page 1805.

Welds of superior strength and appearance are produced at high speed by use of "electronic tornado" carbon arc. Superimposing a strong magnetic field on the arc appears to give the arc a gyratory motion and controls the arc, says welding machine manufacturer.—Page 1810.

Duplexing steel is beset with difficulties owing to the unstable and varying factors of each charge. Valuable results would be gained by finding a working relationship between the different slags and the intensity of the reaction when raw iron is charged.—Page 1812.

Cuts Cost 10 per cent by using high-tensile, low-manganese plate for shipbuilding, in place of mild steel. The high strength of 1.25 per cent manganese steel permits a reduction in weight with no sacrifice of strength. British Navy now uses it for all important hull members.—Page 1813.

Good foundry coke should not exceed 2 per cent in volatile matter. Fixed carbon should be at least 86 per cent; ash should be 12 per cent or less, and sulphur not over 1 per cent, says member of A. S. T. M. committee on coke specifications.—Page 1814.

Go after foreign business if your product is exportable, but first make a thorough study of the market. Purchasing power, local competition, patents and advertising are points to be investigated. The Department of Commerce can give invaluable aid.—Page 1815.

Residual chromium in open-hearth steel bears no relation to the chromium contained in the scrap charged, metallurgist declares. The amount of chromium remaining in the refined steel depends entirely on the method of melting and the bath temperature during refining.—Page 1818.

Railroads fight proposal to connect Youngstown to Ohio River by means of railroad extension. They declare the move is an attack on the rate structure. Youngstown steel makers say that their land-locked position handicaps them in competition with other producers. Getting the benefit of low-cost river transportation is essential to their prosperity, they assert.—Page 1819.

Sharp gain in steel exports. In May 171,474 gross tons of finished steel left the country, a gain of 25 per cent over April and 12 per cent over May, 1927. Shipments for first five months now equal exports for same period of last year.—Page 1828.

Investigation is unsuccessful in correlating pipe corrosion with chemical and physical characteristics of soil. In some soils the pipe is practically free from corrosion, while in others serious corrosion results in a short time.—Page 1806.

Determines proportional limit of steel quickly, yet accurately, by check-test. To insure absence of slipping of the grips of extensometer when lower reading is taken, a load of 4500 lb. per sq. in. is put on and a reading taken. Then load is gradually increased to 38,000 lb. per sq. in. and a second reading is taken. Finally the load is reduced to 4500 lb. and a third reading taken. The last figure must not exceed the original figure by more than 0.0004 in.—Page 1813.

American boiler plate is just as good as new German steel for use with alkaline waters. "Izett," a new Krupp product, is said to show no aging effects after cold work, but tests reveal that it is no more impervious to caustic embrittlement than is American boiler plate.—Page 1831.

Makes double welds at rate of 40 ft. an hour for each head, using controlled arc. Electrode holders cross each other at a sharp angle, without blowing out either flame. Cost of welding ½-in. plates ranges from 3c. to 7c. a ft.—Page 1811.

To keep down repair costs on overhead conveyors see that erecting is done with extreme accuracy. Straight runs of I-beams must be absolutely straight, and at the roller turns the center line of the web of the beam should be exactly vertical with the center line of the chain.—Page 1806.

Nine hundred per cent gain in motor-driven rolling mill main drives in past eight years. In 1920 there were 157 motor-driven main drives, and now there are over 1500.—Page 1807.

Workers who absent themselves without sufficient reason do not hold jobs. The operator of a costly machine who takes a day off to go fishing, and thereby forces his machine to stand idle, is fast passing, for workers who do not report for work are called to strict account. The result is a much better attendance record than prevailed in the past. — Page 1838.

New May record for automotive vehicle production was established last month. The total number of vehicles made in the United States was 425,990.—Page 1839.

Sheet Mill Vitality

WITH the successful advent of the continuous mill for rolling strips to sheet mill widths, the suggestion was frequent about a year ago that the days of the old type sheet mill were numbered. Since sheets would be produced in the new mill at a large saving the hint was rather generally given that stockholders in companies operating the old type mills would show wisdom by selling out before the asset became a liability. But a year has gone by without the scrapping of any of the old type mills; the statistics of operation have shown a need for a large percentage of them, and while there have been one or two consolidations there are just as many sheet mill units now as twelve months ago. Moreover, obsolescence of the old type mill appears now to be somewhat remote.

It is interesting to look into the causes. Various sheet producers in adopting the continuous mill did so not with an idea of using it to make a finished product, but as a means of doing the work preliminary to finishing in a more rapid and economical way. At a meeting of the iron and steel division of the American Society of Mechanical Engineers held in Youngstown, Ohio, last November the continuous and four-high mills were freely discussed and the suggestion came out that, as there are many products which must have a finish and a thinness beyond what the mechanically operated mill can give, there is good reason for the retention of the hand-operated mill to perform the exacting finishing operations. To make the old mill supplement the new, moreover, would solve the financial problem that would have developed from the forced scrapping of the older mills.

Quite significant is the taking up of the idea of supplementary operation, as indicated in the announcement of one company that is building a wide strip mill and of another that has such a mill in operation, that a considerable part of the production of these mills will be marketed as strip mill breakdowns rather than as finished sheets or strips. The decision indicates a realization that, with two wide strip mill installations already in operation, with a monthly capacity of 30,000 tons, another with 25,000 tons and one building with 30,000 tons or more, to say nothing of the mill operating at Ashland and the one in the St. Louis district, the market is not broad enough to absorb profitably the product of these mills fully finished. Marketing of strip mill breakdowns means a narrowing of the demand for sheet bars, but probably a reduction in the cost of making finished sheets and black plate, so that eventually costs for strips and sheets will be much nearer parity.

Incidentally, and quite apart from these considerations, some sheet makers have been busy on their own account in finding methods calculated to lengthen the tenure of the pack-rolling mill. One interesting plan now in the making is the application of tin mill methods to sheet mill practice through the working of two mills as a unit and the use of continuous heating furnaces for sheet packs.

Call It by Its Right Name

AN attractive booklet comes from a manufacturing company, describing a new product. It says that after more than a dozen years of research a new alloy has been achieved, which has unusual properties of wear resistance, machinability, strength and toughness.

We do not doubt that such material as is described will give excellent service in many places, as the makers recommend, such as cams, brake drums, pistons, cylinders and dies, for the microscopic views contained in the booklet show that the product is a pearlitic cast iron—it contains rather short, discontinuous graphite flakes, in a matrix of sorbite and pearlite. The physical properties quoted (ultimate strength and yield point in tension both 35,000 lb. per sq. in.) are about what would be expected from a gray cast iron with 1.0 per cent combined carbon.

But what should be vigorously protested against is the makers' determination to call such material *steel*. The microscope shows it is not steel. It has excess carbon as graphite, and it is not malleable. It does not therefore correspond to the essential characteristics of steel, for steel is a malleable alloy of iron and iron carbide. A non-malleable alloy of iron, iron carbide and graphite cannot be a steel.

We believe the makers would do well to revise their publicity. To those prospective customers who may be influenced by scientific terms which they do not understand, "pearlitic cast iron" would be just as impressive as any name that includes the word "steel," even though preceded by a restrictive adjective. And among the other customers is a large and growing number of metallurgists who know the difference between cast iron and steel and who might be disposed to discount any statement of properties ascribed to a misnamed material.

New Thought in Stock Operations

CRITICISM has been passed of late on what has happened in the stock market itself and on the course of business men, alleged to be unduly interested in stock speculation to the detriment of their commercial affairs. One cannot but notice that the critics judge these matters of the stock market by old standards or traditions. Indeed they usually emphasize this, saying that collapses invariably did come. The question arises whether there have not been changes in respect to speculation and investment, comparable with those in industry, that call for new judgments of the securities market.

Suppose we apply old ideas to present practices in commerce. Here we have a manufacturer with a very limited inventory of raw materials. He used to carry much larger stocks and yet sometimes get caught with an insufficient supply. Is he not in danger? Or another manufacturer, with a small stock of finished product. There may be a sudden rush of demand, as there used to be in the good old days, and then he is going to lose customers to competitors.

To such suggestions the ready and sufficient answer is that times have changed. Orders for raw materials can be placed easily and transportation is prompt. The seller knows his customers' requirements within close limits and is assured that customers will not take sudden notions to purchase more than they need.

We see a cumulative increase in negotiable securities. Also we have an increase in population, an increase in physical assets per capita, and an increase in the proportion of the total assets that is represented by negotiable securities. There is a double increase in the supply of capital at a given moment; the total amount of capital has increased and at the same time there is an increase in mobility. Thus it is natural that the volume of share trading should be greater. The ticker's falling behind is not a measure of excessive trading. The ticker was made for stocks, not stocks for the ticker.

In the last five years this country has grown much more mentally than it has physically, great as the growth has been there. With increased information and better judgment trade depressions have been avoided which by old standards should have come. Already there has been some readjustment in the stock market and of an orderly character. The volume of brokers' loans, so much questioned, was reduced nearly $300,000,000 in a fortnight. Estimates of the reduction desired by the Federal Reserve management range between a half billion and a billion. When the inception of liquidation produced no great disturbance, further progress should not. No one can predict the final outcome, but when it is all over it is likely to be seen that the business or art of share trading has made progress in recent years as has been the case with so many lines of human activity.

Steady Automobile Production

LAST month's automobile production made a new high record for the month of May, production of passenger cars and trucks in the United States and Canada being 459,932, against 429,823 in 1927 and 446,118 in 1926. Even five years ago May showed 412,527. This month's production may be forecast at 450,000, with a small probable error.

A discussion in this department of THE IRON AGE of April 26 showed that large gains in automobile production disappeared quite a while ago and that not much deficit in supply, relative to general demand, accumulated last year. Now we can compare figures for periods three months later and they make the showing even more pronounced. It seems likely that for a time the best pair of calendar years will remain 1925-6 and the best twenty-four-month period that through March, 1927, just before the disappearance of the Ford model T.

For light on the probable future, the best use of the latest statistics is to set up twelve-month totals through June, as shown below, and calendar year totals are given in a separate column for comparison:

Production of Passenger Cars and Trucks, United States and Canada

	Twelve Months Through	
	June 30	Dec. 31
1922	....	2,639,373
1923	3,572,658	4,166,693
1924	4,149,840	3,736,164
1925	3,876,106	4,427,093
1926	4,669,608	4,503,352
1927	4,215,046	3,573,185
1928	3,729,715	....

Thus the best calendar year was 1926, ended a year and a half ago, while the best twelve-month through June ended two years ago. The best first half production was in 1926, two full years ago, while the best second half production was in 1925, two and a half years ago. The best twenty-four consecutive months ended March 31, 1927, a year and a quarter ago.

For the calendar year 1928 to pass 1926 a second half production of 2,150,000 is required, which would be 8 to 9 per cent under the first half production, whereas usually there is a much greater decrease. Such production may easily occur, but 1927-8 combined would still be under 1925-6.

What interests the steel trade is this, that it cannot expect a measurably larger tonnage outlet into the automobile industry in future than it had two and three years ago; yet it can expect a steadier monthly demand, therefore less pressure in spells to ship a large tonnage and likewise less question about prices in the off periods of demand.

ONE measure of the sounder condition of the British steel industry this year is a marked shrinkage in imports of iron and steel. In 1927 over 4,406,400 gross tons, or 367,200 tons per month, went into British ports—an amount never before equalled. The imports even exceeded the exports. To May 1, this year, imports averaged

276,200 tons per month, a decline of about 25 per cent. The falling off has been chiefly in semi-finished steel and in pig iron, though in most finished products the movement has been distinctly less. Leaders in the British industry have done well in thus checking the inrolling wave of cheap iron and steel from the Continent; but it is evident that much must be done in the removal of labor union restrictions if British steel is to regain its former place either at home or abroad.

The Day of the Financial Engineer

EVOLUTION in engineering societies has been an example of multiplication by division. Military engineering split off the civil section, which in turn parted to form the mechanical branch. From the latter was cleaved the electrical. More recently, new engineering branches have been formed by derivation from two parents. When chemistry began to require manufacturing equipment, the chemical engineering profession had its rise. Efficiency in industrial production invited the development of industrial engineers. Now, the increasing importance of finance in industrial organization seems to require the training of a new branch, that of financial engineers.

From the financial point of view, industrial operations present various aspects. Some are "bankable," meaning that they require the use of money for a definite short time, to be repaid by the proceeds of notes or contracts, and meanwhile are secured against failure to pay by the borrower's ownership of quick assets in the form of accounts and salable goods. Others are not "bankable," regardless of the various degrees of risk that may be involved. If permanent assets are or will be available as security, such as profit-making structures and equipment, with production and distribution systems of known effectiveness, such propositions may be acceptable to investment houses and in some cases even to trust companies.

Only practically experienced men are in position to appraise correctly the character of product and of the average purchasers, and therefore the probable percentage of accounts receivable which will be promptly and fully paid; also the value of factory inventories and their salability when considered as quick assets. Without the support of such information, the banker can only divide the borrower's book figures by two or some other arbitrary figure, and trust to his good character and presumed ability to redeem his promises. In the investment class, it takes the experienced engineer to decide whether producing equipment is the latest and to judge whether methods, men and management are capable of effective competition at continued profit. On the other hand many engineers are not qualified to determine the amounts needed for permanent and temporary financing, to forecast market changes and adjust operations to meet them successfully, and to distinguish between the ordinary and expected hazards of business and the extraordinary uncertainties which may upset all expectations, in producing a novel and untried device or opening a market among a new class of purchasers.

Financial men and engineers alike must take unknown chances when dealing with affairs which lie outside of their particular experience. Financial engineers, with education and training also in sound investment, banking and accounting practice, and with experience in manufacturing and industrial management, can give useful service to banks, investment houses and industrial operators and promoters. The advice of engineers with such a combination of abilities is helping greatly in the development of useful new industries and products, and preventing the loss of banking and investment funds in ill-planned industrial projects, and in prolonging the use of obsolescent equipment and inadequate methods of production and marketing.

Absenteeism on the Decrease

IN well-managed American manufacturing plants the number of absentee employees has decreased to a marked extent in the past few years. To take the experience of one large metal-working company, whereas formerly 7 per cent of the working force was absent as an average, now 3 per cent is considered normal. The effect upon manufacturing costs is easy to see. Overhead is lowered, general efficiency is raised. The industrial machine operates more smoothly and with greater productivity.

Three per cent of absenteeism is evidently not the low limit, as is demonstrated by some recent records which are illuminating in the possibilities they suggest, for they run well under 1 per cent. One plant employing 1500 men operated one month with only 96 days of absenteeism from all causes, which was the equivalent of four men out for the whole month. In another establishment employing 2300 men, absenteeism totaled 226 days, or the equivalent of nine men out for the month. In still another case, where 500 men were employed, in three months absenteeism totaled 35 days, an average of 12 days a month, and the equivalent of only one man out for less than one-half of the three months' period. These examples are extreme, of course, and it is not likely that such records could be maintained year in and year out. Yet they illustrate the new trend that is the result of several causes, one of the most important of which, no doubt, is the increased desire of workers to avail themselves of all possible money-earning employment.

Absenteeism divides into two classes, the avoidable and the unavoidable. There will always be some people out of a plant because of illness, accident, bereavement and like causes. The factors of sickness and injury have decreased steadily under modern shop conditions. Wholesome surroundings are a preventive of first-class importance. Most effective also is the work of the shop physician, whose treatment in the earliest stages of sickness reduces materially the number of cases of so serious a nature as to compel idleness. Also, the campaign for accident prevention and the compulsory treatment of the most trivial injuries have resulted in a great decrease of disabling, otherwise termed lost-time, accidents. A metal-working plant employing 5000 men reduced the number of disabling accidents from 129 in 1920 to 51 in 1927, and the expectation is that the number will go even lower this year.

But the major part of the reduction in absenteeism in recent years has been in the avoidable class.

In the past a certain number of employees felt free to take a day or two off now and then to attend to their private affairs, of business or pleasure. The day of making garden or going fishing in employment hours has passed. Discipline has tightened up. Workers who do not report for work are called to strict account. Once it was not uncommon for a man who operated a costly machine to stay out for a day's pleasure and let the machine stand idle. Nowadays in such a case the idler is informed that the machine must be kept going, and if he is not to be depended upon some one else will be found who will take the task seriously.

LARGE AUTOMOBILE OUTPUT

May Showed Greatest Total Since August, 1925 —Only 4 Per Cent Behind Record

WASHINGTON, June 25.—Production of motor vehicles in the United States during May totaled 425,990, of which 375,798 were passenger cars and 50,192 were trucks, according to reports received by the Department of Commerce from 157 manufacturers. This was the sixth largest month's production on record, having been exceeded only by March, April and August, 1926, and April and October, 1925; the last-named, the record, provided 442,114 vehicles. Output in April totaled 410,189 units, of which 364,877 were passenger cars and 45,312 trucks.

For the five months ended with May the total production was 1,805,060, of which 1,609,223 were passenger cars and 195,837 were trucks. This compares with a production of 1,747,007 during the corresponding period of 1927, the passenger car output being 1,523,891 and that of trucks 223,116.

Canada Makes New Record

Canadian production of motor vehicles in May totaled 33,942, of which 29,764 were passenger cars and 4178 were trucks, comparing with a production of 24,240 in April, of which 20,546 were passenger cars and 3694 were trucks. May provided by a wide margin a new high record for Canadian output; the largest previous total in any month was 25,708, in May, 1927. For the first five months Canadian production totaled 96,627, of which 82,562 were passenger cars and 14,065 were trucks. For the corresponding period of last year Canadian production totaled 106,973 units, of which 88,541 were passenger cars and 18,432 were trucks.

Iron and Steel Scrap Association of Chicago

The Iron and Steel Scrap Association, Chicago, has elected the following officers: President, Morton Teller, Teller Iron Co.; first vice-president, Walter Bregman, Price Iron & Steel Co.; second vice-president, E. G. Howell, Erman, Howell & Co., and treasurer, R. L. Jeffrey, R. L. Jeffrey Co. The directors are Ben Colitz, B. Kaplin, D. R. Cohen, Frank Parker, Sam Posen, M. Patinkin and W. Ross.

Pacific Coast Steel Co. to Build Bolt, Nut and Rivet Plant

The Pacific Coast Steel Co., San Francisco, will begin work immediately on a new bolt, nut and rivet and specialty forging plant which will adjoin its steel plant at South San Francisco. Decision to build the plant came as a result of a study of market conditions in the Bay region of California which has been made by the Pacific Coast company in conjunction with the industrial engineers of the San Francisco Chamber of Commerce.

The plant will represent an investment of $600,000 and is expected to start operating in the fall of the present year. The manufacturing department will be housed in a steel building 450 ft. x 100 ft., part of which will be three stories high. The machine shop and electric tool heating department will be 150 ft. x 80 ft. A full line of standard bolt products will be manufactured and the line of specialty forgings will be cared for as the market develops. The steel consumed by the local plant in the manufacture of its products will be made in the Pacific Coast company's mills in San Francisco. Storage and shipping space will total 20,000 sq. ft., and a minimum of 2000 tons of finished product can be carried at all times. Because of good rail connections the company will make 24-hr. deliveries to San Francisco Bay points in carload lots, and a truck delivery of 30 min. or less will be maintained for less than carload lots.

John Stetter, who recently owned and operated the Muncie Cap & Set Screw Co., Muncie, Ind., manufacturer of bolt products for automobiles, gas engines and other machines, will supervise and direct operations in the new plant. He has also been connected in a consulting capacity with the Southern California Iron & Steel Co., Los Angeles, which is affiliated with the Pacific Coast Steel Co.

National Distribution Conference in New York

Charles M. Schwab will speak at the Thursday morning session of the National Distribution Conference, which will be held at the Waldorf-Astoria, New York, June 28 and 29. As has been indicated in these columns, the conference is under the auspices of the bolt, nut and rivet industry and has been widely promoted by Charles J. Graham, president of the Bolt, Nut and Rivet Manufacturers' Association. At the opening of the Thursday morning session Mr. Graham will give a brief history of the association and an outline of its distribution plan.

The Thursday afternoon session will be devoted to a general discussion by various manufacturing and distributing interests represented at the conference. The aim is to develop sentiment and lead to action that will tend to correct conditions that have long been complained of in the selling of iron and steel and secondary products.

At the dinner Thursday evening there will be an address on "The Era of Efficiency" by James Francis Burke, general counsel of the Bolt, Nut and Rivet Manufacturers' Association, and Magnus W. Alexander, president National Industrial Conference Board, will discuss "Production, Distribution and Social Progress." On the program of Friday is an address by Col. William J. Donovan, acting attorney general of the United States, on "The Relation of Government to Business," and one by Gilbert H. Montague, general counsel of the National Welded Chain Association of the United States, on "Recent Steps in Business Self-Government."

Optimistic on Electrical Industry

Stockholders of the Westinghouse Electric & Mfg. Co. have ratified a change in the fiscal year of the company, to make it conform with the calendar year. Discussing business conditions, President E. M. Herr said they had not changed materially in the past several months. "There is perhaps at present a slight drop in volume," he said, "but this is offset by indications that, as soon as the Presidential nominating conventions are over, the volume will increase.

"I look for a rather good business year, not materially better than last year, but with a sufficient improvement in view to warrant confidence. The electrical industry is in a most fortunate position, for we have a continuous development which ever broadens its field of usefulness. These new fields of usefulness create new electrical markets and so continue the steady growth of the industry, at times when business in staple products may be slightly under normal."

Iron and Steel Markets

Steel Output Gains at Pittsburgh

Third Quarter Advance on Plates, Shapes and Bars Stimulates Specifying—Steel Consumption Well Maintained—Price Situation Irregular

STEEL consumption, which is no longer easily measured in view of the growth of miscellaneous uses for mill products, is holding up better than had been expected. As a rule, both specifications and new orders call for quick delivery, indicating that steel is being placed for actual requirements and not for stock, and total mill bookings bulk large. In the Greater Pittsburgh area, in fact, output has increased to 72 per cent of ingot capacity, compared with 70 per cent last week. Operations in the Chicago district, on the other hand, have declined three points to an 80 per cent rate.

The improvement at Pittsburgh is attributed, in part, to heavier specifying against second quarter contracts, particularly those covering plates, shapes and bars. On those products mills are making a more determined effort to establish a price of 1.90c., Pittsburgh, for the coming quarter, and, while some buyers regard this move as a defensive one, primarily intended to hold the market at the present level of 1.85c., others are taking the precaution to release the steel still due them.

The volume of mill bookings and the rate of production leave but little to be desired, considering the season. Operations at Chicago and Pittsburgh are from five to seven points higher than a year ago.

The price situation, however, is not so favorable. In contrast with the advanced quotations on plates, shapes and bars, prices on cold-drawn bars have been reduced $2 a ton and sheets have shown further weakness. Black sheets at 2.65c., Pittsburgh, and galvanized sheets at 3.50c., which is now the maximum rather than the minimum going price, are at the lowest levels since March, 1916.

At Cleveland, third quarter business in cold-rolled strip has been taken at a concession of $2 a ton, and the final abandonment of efforts to advance hot-rolled strip is seen in the acceptance of forward commitments at the same prices that ruled on second quarter contracts.

In semi-finished and primary materials the price trend is irregular. Basic pig iron in the Valleys has rebounded after dipping to $15.37 a ton, furnace, having advanced to $15.75 on a sale of 2500 tons. Alabama and Tennessee foundry iron, on the other hand, have again declined to $15.50, Birmingham, after an advance to $16 late in May.

Scrap prices are weak in all markets, and heavy melting steel at Pittsburgh has receded 25c. a ton for the second time in two weeks, now being at the lowest level since early in 1922.

In semi-finished steel the re-establishment of base-size billets at $33, Pittsburgh, or $1 a ton above recent prices, is now a possibility, but sheet bars, under the threat of competition from strip mill breakdowns, have been sold at $32, Youngstown, a drop of $1 a ton.

Among the major outlets for steel, building is the most active. Of 38,200 tons of fabricated steel work placed in the week, 12,000 tons was for a New York hotel. In Greater New York alone large projects likely to be placed during the summer total more than 100,000 tons, of which 20,000 tons is for a Brooklyn department store.

Tin plate mills are booked for 45 to 60 days, following generous specifications from can manufacturers.

Some of the Michigan automobile builders have sharply curtailed production and others have shut down for inventories and changes in models. Steel orders from the automobile industry have declined, but the demand for sheets and strip steel from that source is still large for this season.

Automobile production in May was 425,990 units, the sixth greatest total for any month and less than 4 per cent below the record of 442,114 established in October, 1925.

The new steel export association includes nearly, if not all, of the producing companies interested in exporting, and aims in part to secure export price stabilization, to combat foreign cooperative buying and, indirectly, to develop favorable areas for exports and at the same time to strengthen world price levels.

Exports of iron and steel in May were 267,890 gross tons—the largest total since February, 1921.

Reaching the lowest level since 1915, the pig iron composite price of THE IRON AGE has dropped to $17.21 a ton, from $17.23 held for the three preceding weeks. It is now just $1.50 lower than a year ago. The finished steel composite remains at 2.341c. a lb. for the fourth week, against 2.367c. a year ago.

*The average switching charge for delivery to foundries in the Chicago district is 61c. per ton.

On export business there are frequent variations from the above prices. Also, in domestic business, there is at times a range of prices on various products, as shown in our market reports on other pages.

Pittsburgh

Higher Production, Price Uncertainty, Basic Iron Rally and Weak Scrap

PITTSBURGH, June 26.—Steel ingot production in this and nearby districts averages a point or two higher than it did a week ago, in keeping with the fact that total orders for finished products have shown a moderate upturn in the past week. The hot-rolled products have made a notable good showing in point of releases by consumers. Little fault is found with the size of the aggregate specification in sheets, and tin plate is being ordered freely enough to lead some makers to defer promises of delivery against new business to the middle of August, or the first part of September. Specifications for strips and other steel products going into motor cars are holding up in surprising fashion.

It is evident from the developments of the week that consumption of steel has not decreased as much or as rapidly as it has in the past five years at this particular time, or as manufacturers had expected it to, drawing conclusions from the experiences of those years. Orders and specifications individually have been of moderate size, but they have been numerous and calling for such quick delivery as to create the impression that they represented actual requirements. Both orders and mill operations average higher than at this time last year.

The picture, however, is not such a happy one on the side of prices. Not much stability yet has developed in strips or sheets, while a reduction of $2 a ton in cold-finished steel bars is disturbing. It has created a rather awkward situation for makers of hot-rolled bars, who have been making some effort to establish an advance of $1 a ton on third-quarter contract tonnages. These quarters no longer begin in January, April, July and October, but one month later, since buyers have until the end of the calendar quarter to specify, and by taking advantage of that condition can secure shipments for a month's needs. This is taken to be an explanation of the absence at this time of much of a drive for third-quarter contracts.

Prices of semi-finished steel are very indefinite, but there are signs of formal third-quarter prices that will place billets and slabs at a premium over sheet bars, reversing the usual price order.

There has been a rally in basic iron since a week ago, the break in which had an effect upon steel prices and has made steel companies a little less eager to sell. The market has dropped another 25c. a ton on heavy melting steel scrap and still shows a sagging tendency. Despite some consumer interest, that grade has been sold at $14.50, but also has been refused at that price, which is the lowest level reached since the early part of 1922, when the recovery from the depression of the year before was beginning to get under way.

Pig Iron.—The market has recovered some of its recent decline in basic grade, which on a lot of 2500 tons went to $15.75, Valley furnace, as compared with $15.37, the price done on the last previous sale of Valley basic iron. There were only a few bidders for this 2500-ton lot, as the specification called for extremely low sulphur content, and the quotation of the unsuccessful bidders was $16, Valley furnace. It is believed the 10,000 tons of basic inquired for recently by a Wheeling district sheet maker has been bought, and that it will be supplied by other steel companies having comparatively low freight charges to destinations. The National Malleable & Steel Casting Co., Sharon, Pa., is inquiring for a round lot of basic iron. The market is distinctly firmer on this grade, because the effect of the recent break upon the steel market was bad and there seems to be a little less anxiety on the part of steel companies with surplus supplies to market them. Not much activity is noted in other grades, although a fair-sized aggregate tonnage of foundry iron is moving. In this grade $16.75, Valley furnace, for No. 2 grade has become the top price, and while no less is being done in the Pittsburgh market, that price has been shaded by as much as 25c. on shipments beyond this district. Malleable and Bessemer iron continue to move at $17, Valley furnace.

Prices per gross ton, f.o.b. Valley furnace:

Basic	$15.75 to $16.00
Bessemer	17.00
Gray forge	16.25 to 16.50
No. 2 foundry	16.75
No. 3 foundry	16.25 to 16.50
Malleable	17.00
Low phosphorus, copper free	26.50

Freight rate to the Pittsburgh or Cleveland district, $1.76.

Ferroalloys.—Although steel works operations are lower than a month ago, specifications on contracts for ferromanganese remain heavy, presumably because of a desire by consumers to defer paying the last half price, which is $5 a ton above the first half price. Users also are specifying well against contracts for the other commonly used ferroalloys. New business is light.

Refractories.—There is not enough business in clay fire and silica brick to give manufacturers an operation of as much as 50 per cent of their capacity. Actual consumption of refractories is probably as high as it ever has been, but instead of stocking as they did formerly, producers of iron and steel now wait until there is a need before buying. Blast furnace linings are being placed steadily enough and there is a steady movement of silica brick to the steel works, but productive capacity is large and satisfactory operation is made difficult by the hand-to-mouth character of the demand. The product is giving longer service than it did a few years ago and that also tends to make purchases less frequent. There is some shading of prices of silica brick, but, in general, prices are holding well at levels of the past several months.

Bars, Plates and Shapes.—There has been some quickening in the releases against second-quarter contracts and the past week's business has been satisfactory to makers in this district. Ordinarily, the specifications increase in the last week or ten days of each month to cover the requirements of the early part of the ensuing month, but recent improvement seems to be due in no small measure to a more earnest effort by the mills to establish 1.90c. as the third-quarter contract price. It is a little discomforting to makers of hot-rolled bars that the price of cold-finished bars has weakened at this particular time, since producers of the latter, accounting for no small part of the hot-rolled bars production, naturally will try to escape paying any advance. Plate business still reflects the lack of large railroad car orders, but order books of one maker have been helped by the line pipe order placed last week with local mills. Fabricated steel business is rather dull in this district, but there is a fairly constant demand for plain material.

Rails and Track Supplies.—There is only a moderately active new demand and old orders are pretty well worked out. Inquiry for 250 tons of light-section rails, believed to be for export, is before the market.

Wire Products.—While not really active, business is better than it has been recently. In nails, the betterment is partly due to the fact that manufacurers are less rigid as to prices, with few now asking more than $2.55, base, per keg, Pittsburgh. There is some resistance to $2.50, base, per 100 lb., on plain wire, but that price still is the ruling one.

Tubular Goods.—Interest still centers on line pipe. The Texas Co. has an inquiry out for 175 miles of 12-in. pipe and smaller mileages of 10-in., 6-in. and 4-in. pipe, while a 136-mile gas pipe line has been projected by the Inland Gas Corporation, to convey gas from Kentucky to West Virginia. There is a fairly steady demand for standard-weight pipe for building and construction, but oil well drilling still is much curtailed and oil country pipe consequently is not much wanted.

Sheets.—Specifications are coming to makers in this district in good volume and excepting the car building and car repair companies, all consuming industries are represented in the releases. Demand from the automobile body makers and motor car builders shows some urgency, but there is no real pressure for shipments from other sources of consumption, and the mill suspensions common around the Fourth of July, and expected next week, will not seriously hamper manufacturers in keeping customers supplied. Prices are just about where they were a week ago. Galvanized sheets, however, are weak and in a general way 3.50c., base Pittsburgh, is the top of the market, with even less being done on roofing and siding material. Mill operations range from 70 to 75 per cent of capacity.

Tin Plate.—This product stands out as the really active one of the entire list of steel products. Can manufacturers continue to figure on a big pack of perishable foods and to order freely against contracts, with the result that most tin plate makers now are booked against probable production for the next 45 to 60 days.

Cold-Finished Steel Bars and Shafting.—Quite unexpectedly the price was reduced late last week $2 per ton to 2.10c., base Pittsburgh or Chicago, and 2.15c., Cleveland. In view of the proposed advance of $1 a ton in hot-rolled bars on third quarter contracts, the only explanation for the decline in cold bars seems to be that some producers believed a lower price would stimulate a rather laggard interest in needs for the quarter starting July 1. There seems to have been no consumer pressure against the former price.

Cold-Rolled Strips.—Uncertainty in hot-rolled strip

	Chromium Nickel Vanadium	1.50	4.15
	Carbon Vanadium	0.95	3.60

Above prices are for hot-rolled steel bars, forging quality. The ordinary differential for cold-drawn bars is 1c. per lb. higher. For billets 4 x 4 to 10 x 10 in., the price for a gross ton is the net price for bars of the same analysis. For billets under 4 x 4 down to and including 2½ in. squares, the price is $5 a gross ton above the 4 x 4 billet price.

Slabs with sectional area of 16 in. or over carry the billet price; slabs with sectional area of 12 in. to 16 in. carry a $5 extra above the billet price and slabs with a sectional area under 12 in. carry the bar price.

Band sizes are 40c. per 100 lb. higher.

Rails

	Per Gross Ton
Standard, f.o.b. mill	$43.00
Light (from billets), f.o.b. mill	36.00
Light (from rail steel), f.o.b. mill	34.00
Light (from billets), f.o.b. Ch'go mill	36.00

Track Equipment

	Base Per 100 *Lb.*
Spikes, 9/16 in. and larger	$2.80
Spikes, ½ in. and smaller	2.80
Spikes, boat and barge	3.00
Tie plates, steel	2.15
Angle bars	2.75
Track bolts, to steam railroads	$3.80 to 4.00
Track bolts, to jobbers, all sizes, per 100 count	70 per cent off list

Welded Pipe

Base Discounts, f.o.b. Pittsburgh District and Lorain, Ohio, Mills

Butt Weld

Steel Inches	Black	Galv.	*Iron* Inches	Black	Galv.
⅛	45	19½	¼ to ⅜	+11	+39
¼ to ⅜	51	25½	½	22	2
½	56	42½	¾	28	11
¾	60	48½	1 to 1½	30	13
1 to 3	62	50½			

Lap Weld

2	55	43½	2	23	7
2½ to 6	59	47½	2½	26	11
7 and 8	56	43½	3 to 6	28	13
9 and 10	54	41½	7 to 12	26	11
11 and 12	53	40½			

Butt Weld, extra strong, plain ends

⅛	41	24½	¼ to ⅜	+19	+54
¼ to ⅜	47	30½	½	21	17
½	53	42½	¾	28	12
¾	58	47⅛	1 to 1½	30	14
1 to 1½	60	49½			
2 to 3	61	50½			

Lap Weld, extra strong, plain ends

2	53	42½	2	23	9
2½ to 4	57	46½	2½ to 4	29	15
4½ to 6	56	45½	4½ to 6	28	14
7 to 8	52	39½	7 to 8	21	7
9 and 10	45	32½	9 to 12	16	2
11 and 12	44	31½			

On carloads the above discounts on steel pipe are increased on black by one point, with supplementary discount of 5%, and on galvanized by 1½ points, with supplementary discount of 5%. On iron pipe, both black and galvanized, the above discounts are increased to jobbers by one point with supplementary discounts of 5 and 2½%.

Note.—Chicago district mills have a base two points less than the above discounts. Chicago delivered base is 2½ points less. Freight is figured from Pittsburgh, Lorain, Ohio, and Chicago district mills, the billing being from the point producing the lowest price to destination.

Boiler Tubes

Base Discounts, f.o.b. Pittsburgh

Lap Welded Steel		*Charcoal Iron*	
2 to 2¼ in.	27	1½ in.	+18
2½ to 2¾ in.	37	1¾ to 1⅞ in.	+ 8
3 in.	40	2 to 2¼ in.	— 2
3¼ to 3¾ in.	42½	2½ to 3 in.	— 7
4 to 13 in.	46	3¼ to 4½ in.	— 9

Beyond the above discounts, 7 fives extra are given on lap welded steel tubes and 2 tens and 5 on charcoal iron tubes on lots of 21,000 lb. and more.

Standard Commercial Seamless Boiler Tubes

Cold Drawn

1 in.	63	3 in.	48
1¼ to 1½ in.	55	3¼ to 3½ in.	50
1¾ in.	39	4 in.	53

2½ to 2¾ in.	42		

Hot Rolled

2 and 2¼ in.	40	3¼ and 3½ in.	56
2½ and 2¾ in.	48	4 in.	59
3 in.	54	4½, 5 and 6 in.	48

Less carloads, 4 points less. Add $8 per net ton for more than four gages heavier than standard. No extra for lengths up to and including 24 ft. Sizes smaller than 1 in. and lighter than standard gage to be held at mechanical tubes list and discount. Intermediate sizes and gages not listed take price of next larger outside diameter and heavier gage.

Seamless Mechanical Tubing

	Per Cent Off List
Carbon, 0.10% to 0.30%, base (carloads)	55
Carbon, 0.30% to 0.40%, base	50

Plus differentials for lengths over 18 ft. and for commercial exact lengths. Warehouse discounts on small lots are less than the above.

prices is reflected to some extent in cold-rolled strip prices, but it is seen in more numerous sales at the recent minimum price than in an outright decline. Specifications, although off from those of a month ago, are heavier than many expected they would be at that time.

Bolts, Nuts and Rivets.—Manufacturers report that third-quarter contracts are coming along well. Current buying and specifications are moderately heavy and sufficient to sustain plant operations at around 50 per cent of capacity. Prices show no change.

Semi-Finished Steel.—A strong effort is being made to reestablish base size billets to $33, Pittsburgh. Meanwhile, users are arguing for a lower price and holding back specifications on the ground that the price should be lower in view of the low levels on pig iron and scrap. Producers say that most of the billets and slabs now marketed go to strip makers, whose specifications are really for forging quality steel. It is probable that the third-quarter price will be set at $33. Sheet bars, on the other hand, are weak and recently sold at $32, Youngstown, and it is doubted that more could be obtained here. Indeed, in view of the probability that sheet bars are likely soon to face competition from strip-mill breakdowns, it is possible that, instead of sheet bars selling at more than billets and slabs, they will be lower when third-quarter contract prices are announced. On wire rods, $44, base Pittsburgh, appears to be out of the question, since they are available from more than one source at $42 and some business has been lost at that quotation.

Hot-Rolled Flats.—Viewed strictly from the angle of specifications, the market is quite satisfactory, but the price situation still leaves much to be desired by manufacturers. While the regular quotations rule on small lot orders, they do not mean much on the large tonnage business, particularly on widths of more than 3 in. There has been a report that another size bracket, taking in widths of 1½ in. and less, was to be set up, but investigation discloses that manufacturers are giving some attention to going to a single base size bracket.

Coke and Coal.—The market for spot coke still is very limited. With both wants and supplies very small, there is no occasion to change the prices that have ruled for several weeks. Quietly, there has been a fair amount of third-quarter contracting for furnace coke, and foundries have very generally renewed arrangements with regular sources of supply for the remainder of the year. The coal market shows neither real activity nor much strength. Lake cargo orders, which have been counted on to help the local situation, have not yet appeared in volume.

Old Material.—One steel maker in this district has bought a good-sized tonnage of heavy melting steel during the week. The material, which was of the better sort, was purchased at $14.50, representing a further recession of 25c. a ton. That price also is available for delivery to another Pittsburgh district point. Generally, however, steel makers are not much interested in the market, and, with short orders well covered, prices lack the support of dealer buying. On compressed sheets, $14 appears to be all that can be obtained, while $13 measures the limit on bundled sheet sides and ends. Machine shop turnings still are very weak, and, while dealers want more, $9 is all that can be obtained. Blast furnace scrap also is weak, with $10.50 now the top of the market. The steel foundry grades are sagging for want of demand, with railroad knuckles, couplers, springs and carwheels no longer quotable at more than $15.50 and some "distress" sales being made as low as $15. The low level to which basic iron has fallen has had an effect upon the value of heavy melting steel scrap. The belief that present prices of scrap would discourage collection of it has not been fulfilled, certainly not to the extent of narrowing the gap between supply and demand. Some liquidation of yard stocks by dealers also has helped to depress prices.

Prices per gross ton delivered consumers' yards in Pittsburgh and points taking the Pittsburgh district freight rate:

Basic Open-Hearth Furnace Grades:		
Heavy melting steel	$14.00 to	$14.50
Scrap rails	14.00 to	14.25
Compressed sheet steel		14.00
Bundled sheets, sides and ends		13.00
Cast iron carwheels	14.00 to	14.50
Sheets bar crops, ordinary	14.50 to	15.00
Heavy breakable cast	12.00 to	12.50
No. 2 railroad wrought	14.25 to	14.50
Heavy steel axle turnings	12.50 to	13.00
Machine shop turnings		9.00
Acid Open-Hearth Furnace Grades:		
Railroad knuckles and couplers	15.00 to	15.50
Railroad coil and leaf springs	15.00 to	15.50
Rolled steel wheels	15.00 to	15.50
Low phosphorus billet and bloom ends	19.00 to	19.50
Low phosphorus, mill plate	17.50 to	18.00
Low phosphorus, light grade	16.50 to	17.00
Low phosphorus sheet bar crops	17.50 to	18.00
Heavy steel axle turnings	12.50 to	13.00
Electric Furnace Grades:		
Low phosphorus punchings	16.50 to	17.00
Heavy steel axle turnings	12.50 to	13.00
Blast Furnace Grades:		
Short shoveling steel turnings	10.00 to	10.50
Short mixed borings and turnings	10.00 to	10.50
Cast iron borings	10.00 to	10.50
No. 2 busheling		9.00
Rolling Mill Grades:		
Steel car axles	18.00 to	18.50
No. 1 railroad wrought	10.50 to	11.00
Sheet bar crops	16.50 to	17.00
Cupola Grades:		
No. 1 cast	14.25 to	14.50
Rails 3 ft. and under	15.50 to	16.00
Malleable Grades:		
Railroad	14.00 to	14.50
Industrial	13.50 to	14.00
Agricultural	13.00 to	13.50

Wire, galvanized soft, base per 100 lb.	3.00 to 3.10
Common wire nails, per keg	3.00
Cement coated nails, per keg	3.05

Pittsburgh District More Active Than Last Year

Business and industrial activity in the Greater Pittsburgh district in the first half of June was at slightly higher average rate than in June of last year, but showed some falling off compared with the previous month, according to a survey by the Bell Telephone Co. of Pennsylvania. Pig iron production, based upon the number of furnaces active in relation to the number available, is placed at 65.4 per cent for June this year, compared with 60.3 per cent a year ago. Steel ingot production is estimated at 76 per cent, against 74.2 per cent in June, 1927; coal mine operation at 52.5 per cent, against 49.4 per cent a year ago; and building at 71 per cent against 69.5 per cent a year ago.

The machinery trades are rated at 83 per cent, a loss of 1 point from June, 1927; beehive oven coke production, at 13.4 per cent, contrasts with 27.2 per cent a year ago; and the railroad equipment industry, at 71.5 per cent, is seven points poorer than a year ago. The general average is given as 62.9 per cent, which compares with 63.6 per cent in May and 62 per cent in June, 1927.

Shevlin Engineering Co., engineer and contractor, specializing in installations of mechanical and power plant equipment, has taken new offices at 227 Fulton Street, New York.

Semi-Finished Steel, Raw Materials, Bolts and Rivets

Mill Prices of Semi-Finished Steel

Milled studs	70 and 5

Chicago

Good Structural Outlook But Operations Off 3 to 4 Per Cent

CHICAGO, June 26.—Third-quarter prices for the heavy tonnage steel mill products are as yet unannounced and this delay is in some measure accountable for the lack of interest being shown by consumers in requirements for the next three months. Producers of cold drawn bars have made reductions in prices for the coming quarter and in some commodities, such as nails, efforts to hold quotations at previously announced levels are not meeting with success.

The common impression that July and August will be comparatively dull months in business generally is leading purchasers to buy in small lots and so prices now being obtained for practically all commodities must be gaged on that score. Sales in plates, shapes and bars are measurably below shipments, which now represent only 80 per cent of ingot capacity, a drop of 3 to 4 points in the week. On the other hand specifications, though lower than last week, still represent a total tonnage not far from the current rate of deliveries. Characteristics of bar orders are that individual releases are small and the variations in sizes so great that often deliveries are made in a considerably longer time than mill schedules would indicate as being possible.

One promising feature of the steel business is the outlook in the structural market. The New York Central has ordered 1000 tons for a depot at South Bend, Ind. Action may be taken on the Austin High School, Chicago, this week, and the Fine Arts Building, Chicago, taking 5000 tons, may be placed by the middle of July. At Kansas City, Mo., close to 2500 tons will be needed for an assembly plant for the Chevrolet Motor Co.

Pig Iron.—Forward buying continues to drag, while current sales for close by delivery are increasing. Melters, particularly those having small capacity, are cautious both as to the trend in their businesses and prices for merchant iron. Compilation of June shipments shows them to total less than for May, but larger than in the sixth month of 1927. A user in Joliet, Ill., will buy 700 tons of foundry iron. A foundry in western Michigan has closed for 700 tons of 8 per cent silvery at the full schedule. Southern iron has been reduced 50c. a ton at Birmingham.

Prices per gross ton at Chicago:

Northern No. 2 foundry, sil. 1.75 to 2.25	$18.00
N'th'n No. 1 fdy., sil. 2.25 to 2.75	18.50
Malleable, not over 2.25 sil.	18.00
High phosphorus	18.00
Lake Superior charcoal averaging sil. 1.50	27.04
Southern No. 2 fdy. (all rail)	21.51
Southern No. 2 (barge and rail)	21.01
Low phos., sil. 1 to 2 per cent, copper free	$28.50 to 29.00
Silvery, sil. 8 per cent	29.79
Bessemer ferrosilicon, 14 to 15 per cent	46.79

Prices are delivered consumers' yards except on Northern foundry, high phosphorus and malleable, which are f.o.b. local furnace, not including an average switching charge of 61c. per gross ton.

Ferroalloys.—Spiegeleisen in the 19 to 21 per cent grade has gained strength at $33, Hazard, Pa., or $40.76, delivered Chicago. Reduction in steel mill operations is further indicated by lighter specifications for ferrosilicon. The ferromanganese market is quiet.

Prices delivered Chicago: 80 per cent ferromanganese, $112.56; 50 per cent ferrosilicon, $83.50 to $87.50; spiegeleisen, 19 to 21 per cent, $40.76.

Plates.—Little lies in promise for local plate mills except current tonnage from miscellaneous manufacturers. Car shops have practically completed issuing specifications against large equipment purchases, and with oil consumption gaining, the opinion is rather generally expressed that the stress of immediate storage facilities is at least temporarily relieved. Greater interest is being shown in the 12,000 tons of plates needed for a water line in Denver. The Marine Iron & Shipbuilding Co., Duluth, will require 1000 tons for three scows that it has under contract, and a boiler manufacturer in the Middle West will buy 5000 tons for third-quarter requirements. The 250 stock cars reported placed last week by the Omaha lines of the Chicago & North Western are now definitely known to have been taken by the Pullman Car & Mfg. Corporation. The Missouri, Kansas, Texas has ordered 10 air dump cars from the Western Wheeled Scraper Co., and the Chicago, Milwaukee, St. Paul & Pacific has closed for two 200-ton flat cars with the Standard Steel Car Co. Local producers figure that about 4000 tons of car materials will be needed for 400 cars which will be built in Western shops for the Erie Railroad. Plate deliveries have improved materially in the last month and most sizes can now be had in two to three weeks. The Chicago market is quotable at 2c., but this is being tested only by small tonnages. Third-quarter contracting is dull in the absence of stated price policies for the next three months.

Mill prices on plates, per lb.: 2.00c., base Chicago.

Structural Material.—Structural awards in miscellaneous orders total about 5000 tons for the week and fresh inquiry is for 3500 tons. At Chicago the largest single award was 3000 tons for the Harmon Sports Arena, and the Wisconsin Bridge Co. has taken 1000 tons for a bridge at Nelson, Ill., for the Chicago & North Western. Three fresh projects of 1000 tons each are before fabricators in the Omaha territory, and a bridge at Blair, Wis., calls for about 1000 tons. Taken as a whole, the structural steel market holds some promise that there will be a fair run of business, continuing well into midsummer. Inquiries are varied and it is quite noticeable that industrial projects are more numerous than for many months. Prices obtained by fabricators are not satisfactory from the standpoint of profits, but it can at least be said that prices bid by the shops are reasonably steady.

Mill prices on plain material, per lb.: 2.00c., base, Chicago.

Bolts, Nuts and Rivets.—Third-quarter contracting is near the end and there has been little opposition to prices. Total specifications are larger, as railroads' requirements grow and farm implement manufacturers find that stocks had been reduced below the practicable limit. The demand for small rivets is steady.

Reinforcing Bars.—Outstanding among awards for the week is 5000 tons of rail steel bars for the Merchandise Mart, Chicago. Smaller orders are also more in evidence, with purchases of 5 to 25 tons each unusually numerous. Shop backlogs have increased, though, because of the lateness of the season, it is improbable that operations will become heavier unless contractors press for deliveries. Fresh inquiries are increasing, lending added interest to a market that is showing more life. A printing press manufacturer in Chicago will erect a building requiring close to 600 tons of reinforcing bars. Prices are more stable than for many months past, though large-tonnage billet bar contracts are needed to give the market a real test. Orders and new inquiries are shown on page 1858.

Cold-Rolled Bars.—Local producers have announced a third quarter price of 2.10c., base, per lb., Chicago. Specifications for the first three weeks of June were fully up to the average in May. Forward contracting is actively under way.

Bars.—A sharp drop in specifications following two weeks in which orders entered at mills were unusually large gives further force to the thought that buyers having specified heavily against second quarter contracts are now in a strong position to hold out of the market at the time when third-quarter requirements should be given their attention. New buying in soft steel bars is accordingly dull. Improvement in delivery of mild steel bars is noteworthy, the range now being two to three weeks. The Chicago market is nominally at 2c. Sales are not large and orders at 1.95c., Chicago, are being taken. Readjustment in the automobile trade accounts for a smaller demand for alloy-steel bars. Prices for this commodity are steady and alloy differentials are holding. Several railroads have entered sizable orders for iron bars at 2c., Chicago. Both rail steel bar mills in this district are operating at capacity. Barn equipment manufacturers are especially busy and there is a better tone to the bed trade. It is now assured that June shipments will be the largest in the history of the local mills. Prices of rail steel are steady at 1.85c., while small tonnages bring 1.90c., Chicago Heights.

Mill prices per lb.: Soft steel bars, 2.00c., base, Chicago; common bar iron, 2.00c., base, Chicago; rail steel bars, 1.85c., base, Chicago Heights mill.

Wire Products.—A spurt in specifications from the manufacturing trade indicates anxiety on the part of buyers to make use of second-quarter contracts to the limit and it is rather generally accepted by producers that shipments against second quarter contracts will be willingly extended well into July. While some progress is being made in forward buying, there is evidence in this market, as in others, that buying in the summer months will be at close range. The jobbing trade is only moderately active, though past specifications and orders are helping to hold mill output at a level close to 65 per cent of capacity. There is little or no change in the nail market. Buyers are quiet and prices range from $2.60, base, per keg, Chicago, to $2.70. Scattered rains throughout most of the Middle West have done much to relieve the crop situation, which for a time did not look favorable. In the South heavy rainfall has resulted in damage to crops from floods and has made fields unworkable. Prices for wire and wire products are given on page 1843.

Rails and Track Supplies.—Local steel mills have taken miscellaneous orders for a total of 1000 tons of standard section rails. The demand for light rails is heavier, new orders totaling close to 1500 tons. Releases against rail contracts are favoring mills to hold operations at 80 per cent of capacity through this week, though it is not improbable that output will be cut in the next ten days. A fair tonnage of spikes, bolts and angle bars has been purchased this week, but operations in these departments have fallen. Tie plate shipments are heavy and output is close to capacity.

Prices f.o.b. mill, per gross ton: Standard-section open-hearth and Bessemer rails, $43; light rails, rolled from billets, $36. *Per lb.:* Standard railroad spikes, 2.80c.; track bolts with square nuts, 3.80c.; steel tie plates, 2.25c.; angle bars, 2.75c.

Coke.—Shipments of by-product foundry coke, though running somewhat below May, will compare favorably with the sixth month of 1927. Prices are steady at $8, f.o.b. local ovens, and $8.75, delivered in the Chicago switching district.

Sheets.—Operating schedules continue unusually close and it is not improbable that since there is one holiday next week several hot mills will not be started in that week and so afford a little more time for tonnage to accumulate and assure better operating conditions for the following week. The new low level in prices given last week appears to be holding moderately well. Although all sellers are dissatisfied with the price situation, there seems to be little opportunity to improve conditions. Demand for black sheets and galvanized sheets is dull and even in the blue annealed commodity buyers show little or no inclination to anticipate requirements beyond the next few weeks. Blue annealed sheets may be had in two to three weeks, black sheets in seven to ten days and galvanized sheets in ten days to two weeks.

Base prices per lb., delivered from mill in Chicago: No. 24 black, 2.80c.; No. 24 galvanized, 3.65c.; No. 10 blue annealed, 2.15c. Delivered prices at other Western points are equal to the freight from Gary plus the mill prices, which are 5c. per 100 lb. lower than the Chicago delivered prices.

Warehouse Prices, f.o.b. Chicago

	Base per Lb.
Plates and structural shapes	3.10c.
Soft steel bars	3.00c.
Reinforcing bars, billet steel	2.30c. to 3.00c.
Reinforcing bars, hard steel	2.00c. to 2.70c.
Cold-finished steel bars and shafting—	
Rounds and hexagons	3.60c.
Flats and squares	4.10c.
Bands	3.65c.
Hoops	4.15c.
Black sheets (No. 24)	3.95c.
Galvanized sheets (No. 24)	4.80c.
Blue annealed sheets (No. 10)	3.50c.
Spikes, standard railroad	3.55c.
Track bolts	4.55c.
Rivets, structural	3.60c.
Rivets, boiler	3.60c.
	Per Cent Off List
Machine bolts	60
Carriage bolts	60
Coach or lag screws	60
Hot-pressed nuts, squares, tapped or blank	60
Hot-pressed nuts, hexagons, tapped or blank	60
No. 8 black annealed wire, per 100 lb.	$3.30
Common wire nails, base per keg	3.10
Cement coated nails, base per keg	3.10

Cast Iron Pipe.—Buyers are showing more interest and prices are holding. The United States Cast Iron Pipe & Foundry Co. has taken 750 tons of pipe for West Allis, Wis., and 125 tons for Dayton, Ohio. The Lynchburg Foundry Co. has closed for 700 tons for Niles Center, Ill., and the McWane Cast Iron Pipe Co. will furnish 500 tons for Columbia, Ill. Chillicothe, Ohio, has ordered 115 tons from James B. Clow & Sons. Of special interest among fresh inquiries is 650 tons needed by the Santa Fe Railroad at Galesburg, Ill., and Morton Grove, Ill., will buy 1000 tons of 6 and 8-in. pipe. It is reported here that the 2500 tons wanted by Roseville, Mich., has been closed. New bids will be taken July 3 at St. Paul on 1100 tons of 6 to 16-in. pipe. Sellers are expecting a dull buying period in July and the first half of August.

Prices per net ton, delivered Chicago: Water pipe, 6-in. and over, $40.20 to $41.20; 4-in., $44.20 to $45.20; Class A and gas pipe, $4 extra.

Old Material.—The scrap market is more sluggish than in many weeks. Railroad shipments are heavy and match well with users requirements, so that both hold up orders, and requests for prompt delivery are the exception. Dealers are paying $12.75 a gross ton for heavy melting steel and $11 is a common price in dealer trades in hydraulic bundles. A producer of borings has sold 1500 tons to be delivered as made. Brokers are offering this grade to users at $9.50 a ton, but on the speculative possibilities of the 1500-ton purchase, the producer was paid $9.65, delivered. Railroad lists offered at 8000 tons by the St. Paul and 4000 tons by the Burlington.

Prices delivered consumers' yards, Chicago:

Per Gross Ton	
Basic Open-Hearth Grades:	
Heavy melting steel	$12.50 to $13.00
Shoveling steel	12.50 to 13.00
Frogs, switches and guards, cut apart, and miscellaneous rails	13.25 to 13.75
Hydraulic compressed sheets	11.25 to 11.75
Drop forge flashings	9.50 to 10.00
Forged, cast and rolled steel carwheels	15.50 to 16.00
Railroad tires, charging box size	15.75 to 16.25
Railroad leaf springs, cut apart	15.75 to 16.25
Acid Open-Hearth Grades:	
Steel couplers and knuckles	14.00 to 14.50
Coil springs	16.00 to 16.50
Electric Furnace Grades:	
Axle turnings	12.50 to 13.00
Low phosphorus punchings	14.50 to 15.00
Low phosphorus plate, 12 in. and under	14.00 to 14.50
Blast Furnace Grades:	
Axle turnings	9.50 to 10.00
Cast iron borings	9.00 to 9.50
Short shoveling turnings	9.00 to 9.50
Machine shop turnings	6.50 to 7.00
Rolling Mill Grades:	
Iron rails	13.50 to 14.00
Rerolling rails	14.75 to 15.25
Cupola Grades:	
Steel rails less than 3 ft.	15.50 to 16.00
Angle bars, steel	14.25 to 14.75
Cast iron carwheels	13.00 to 13.50
Malleable Grades:	
Railroad	12.50 to 13.00
Agricultural	11.50 to 12.00
Miscellaneous:	
*Relaying rails, 56 to 60 lb.	23.00 to 25.00
*Relaying rails, 65 lb. and heavier	26.00 to 31.00
Per Net Ton	
Rolling Mill Grades:	
Iron angles and splice bars	14.00 to 14.50
Iron arch bars and transoms	19.50 to 20.00
Iron car axles	23.00 to 23.50
Steel car axles	15.50 to 16.00
No. 1 railroad wrought	11.00 to 11.50
No. 2 railroad wrought	11.00 to 11.50
No. 1 busheling	9.50 to 10.00
No. 2 busheling	5.75 to 6.25
Locomotive tires, smooth	12.00 to 12.50
Pipes and flues	8.00 to 8.50
Cupola Grades:	
No. 1 machinery cast	13.50 to 14.00
No. 1 railroad cast	13.00 to 13.50
No. 1 agricultural cast	12.50 to 13.00
Stove plate	11.00 to 11.50
Grate bars	11.25 to 11.75
Brake shoes	10.50 to 11.00

---

*Relaying rails, including angle bars to match, are quoted f.o.b. dealers' yards.

Philadelphia

Steel Buyers Not Contracting—Pig Iron Quiet but Firm

Philadelphia, June 26.—Mill operations in eastern Pennsylvania continue at about the same rate as in the past few weeks, from 60 to 65 per cent, and shipments against current contracts are in fair volume. New business, however, is decidedly small and consumers show no interest in making new contracts for the next quarter. Apparently there will be a considerable number of extensions of present contracts, and then consumers will satisfy any additional requirements as they arise. The Pennsylvania Railroad, which has usually issued a call for bids on its quarter's requirements by this time, has only asked for prices on track material and about 160 tons of various sizes of steel pipe.

Most mills are asking 1.90c., Pittsburgh, on bars, 2.05c., Coatesville, on plates, and 2.05c., Bethlehem, on shapes for third-quarter delivery and the leading independent in eastern Pennsylvania has established these as its third-quarter prices. Current sales of material which will be delivered into next month, however, are being made at $1 a ton less, the second-quarter contract price, and with further generous specifications regarded as allowable under present contracts, the $1 a ton advance is not yet taken as definitely firm. Shapes continue slightly weaker than bars or plates, although the leading independent in this district has established 2.05c., Bethlehem, for the next quarter and the Pencoyd, Pa., producer is understood to have advanced its price to 2.05c., Pencoyd. Sheets are quiet and prices still show weakness, especially on galvanized.

Pig Iron.—Consumers exhibit but little interest in third-quarter contracting, evidently finding that shipments against their present commitments are sufficient to provide a satisfactory supply on their yards for use in the early part of the coming quarter. The price of No. 2 foundry is unchanged at $20, furnace, despite the lack of tonnage being offered. Pusey & Jones Co., Wilmington, Del., has closed on about 500 tons of foundry iron. The Consolidated Machine Tool Corporation, Rochester, N. Y., has bought about 600 tons of foundry grade for its Hilles & Jones plant at Wilmington, and the inquiry for third quarter of the American Engineering Co., Philadelphia, is still open. No sales of basic are reported.

Prices per gross ton at Philadelphia:

East. Pa. No. 2 plain, 1.75 to 2.25 sil.	$20.76
East. Pa. No. 2X, 2.25 to 2.75 sil.	21.26
East. Pa. No. 1X	21.76
Basic (delivered eastern Pa.)	$19.00 to 19.50
Gray forge	19.75 to 20.25
Malleable	21.00 to 21.50
Standard low phos. (f.o.b. New York State furnace)	22.00 to 23.00
Copper bearing low phos. (f.o.b. furnace)	23.50 to 24.00
Virginia No. 2 plain, 1.75 to 2.25 sil.	24.54
Virginia No. 2X, 2.25 to 2.75 sil.	25.04

Prices, except as specified otherwise, are delivered Philadelphia. Freight rates: 76c. to $1.64 from eastern Pennsylvania furnaces; $4.54 from Virginia furnaces

Bars.—Although 1.90c., Pittsburgh, is being quoted as the third-quarter contract price, business for delivery next month at 1.85c., Pittsburgh. Users of bars show but little interest in entering into further contracts, apparently believing that they can buy just as satisfactorily when their requirements arise during the coming quarter.

Shapes.—The leading independent in this district is asking 2.05c., Bethlehem, or 2.18c., Philadelphia, for next quarter, and the Pencoyd, Pa., mill is reported to have advanced its quotations $1 a ton to 2.05c., Pencoyd, or 2.11c., Philadelphia. Other eastern Pennsylvania sellers seem to be willing to accept business for current or future delivery at 2c., Bethlehem. The tonnage of fabricated steel in prospect is good, but prices are still low. Atlantic City, N. J., is the scene of considerable building activity.

Plates.—Current business is going in most cases at 2.05c., Coatesville, but this higher price is principally because of the small tonnage specified in most orders. Buyers believe that a desirable order would probably bring out a quotation of 2c., Coatesville, or 2.10c., delivered Philadelphia.

Sheets.—Blue annealed sheets range from 2c. to 2.10c., Pittsburgh, or 2.32c. to 2.42c., delivered Philadelphia, with new business mostly in carload lots or less. Black sheets are quiet at 2.65c., Pittsburgh, or 2.97c., Philadelphia, and concessions of $1 a ton are reported on desirable tonnages. Galvanized sheets are evidently being maintained at 3.50c., Pittsburgh, or 3.82c., delivered Philadelphia, despite reports of sales at concessions in other districts. Consumers seem to be fairly well covered in their requirements for the present and are not inclined to commit themselves for the future.

Warehouse Business.—Prices are being maintained unchanged and a moderate volume of small tonnage orders is reported. June will apparently rank among the good months of the year, but not the largest in point of tonnage.

Imports.—In the week ended June 23, pig iron arrivals at this port totaled 7224 gross tons, of which 6526 tons came from Great Britain, 49 tons from Norway and 649 tons from India. Steel imports consisted of 501 tons of steel skelp and 25 tons of wire rods from Germany, 41 tons of bars and 22 tons of bands from France, 1 ton of iron bars from Sweden and 35 tons of steel scrap from Great Britain.

Old Material.—Very little iron or steel scrap has been bought in the past week, but a tonnage of No. 1 steel has been purchased for shipment to Bethlehem, Pa., at $13 per ton, delivered. Recent purchases of No. 1 blast furnace scrap have totaled several thousand tons and were at $10 per ton, delivered to Steelton, Pa., and Sparrows Point, Md., and $9.50 per ton, delivered Bethlehem, Pa. All grades show a tendency toward weakness and sellers offer but little resistance to the efforts of buyers to obtain lower prices.

Prices per gross ton delivered consumers' yards, Philadelphia district:

No. 1 heavy melting steel	$13.00 to $13.50
Scrap T rails	12.50 to 13.00
No. 2 heavy melting steel	10.50 to 11.00
No. 1 railroad wrought	13.50 to 14.50
Bundled sheets (for steel works)	10.00 to 10.50
Machine shop turnings (for steel works)	10.50
Heavy axle turnings (or equivalent)	12.00
Cast borings (for steel works and rolling mill)	10.50
Heavy breakable cast (for steel works)	15.00 to 15.50
Railroad grate bars	11.00
Stove plate (for steel works)	11.00
No. 1 low phos., heavy, 0.04 per cent and under	17.50 to 18.00
Couplers and knuckles	14.50 to 15.00
Rolled steel wheels	14.50 to 15.00
No. 1 blast furnace scrap	9.50 to 10.00
Machine shop turnings (for rolling mill)	11.00 to 11.25
Wrought iron and soft steel pipes and tubes (new specifications)	12.00 to 12.50
Shafting	17.00 to 17.50
Steel axles	19.00 to 20.00
No. 1 forge fire	11.00 to 11.50
Cast iron carwheels	15.50 to 16.00
No. 1 cast	16.00 to 16.50
Cast borings (for chemical plant)	14.50 to 15.00
Steel rails for rolling	14.50 to 15.00

New York

Large Structural Projects Call for 100,000 Tons—Foundry Operations Spotty

NEW YORK, June 26.—Pig iron sales in this district during the week totaled 9000 tons. This aggregate is fair, in view of the small size of most current orders and the apparent disinclination of melters to commit themselves into the future. Foundry operations are spotty and in many cases a dearth of forward bookings in castings accounts for the conservatism in pig iron buying. Sufficient business is developing on a short-time basis, however, to sustain a fair average melt, and certain lines, notably radiator plants, are in a very satisfactory position. Manufacturers of heating equipment have just announced advances of 10 per cent on radiators and 5 per cent on boilers, following an advance of 5 per cent on radiators about a month ago. Prices on Buffalo foundry iron are steadier, and on the smaller tonnages $16.50, base furnace, is a commoner quotation, although $16, base, has not disappeared. Efforts of sellers to take advantage of barge and barge-and-rail rates have so increased the demand for water craft that the transportation companies are taking a more independent attitude on rates. The Worthington Pump & Machinery Corporation is in the market for 445 tons of foundry iron for Holyoke, Mass., 500 tons for Buffalo and 40 tons for Harrison, N. J. The General Electric Co. is inquiring for 150 tons of low phosphorus for Schenectady, N. Y. A Bridgeport, Conn., melter is inquiring for 200 tons of foundry for August to November delivery. The Consolidated Machine Tool Corporation, Rochester, N. Y., has placed 600 tons of foundry for its Hilles & Jones plant, Wilmington, Del. The Buffalo producer of silvery plans to blow out the furnace making that product July 1. Foreign iron is not competitive with domestic pig iron on a price basis, but there continues to be an inflow of Dutch and Indian iron for mixture purposes. Dutch iron in the No. 1X and lower silicon grades is quoted at $21, duty paid, port of entry.

Prices per gross ton, delivered New York district:

Buffalo No. 2 fdy., sil. 1.75 to 2.25	$20.91 to $21.91
East. Pa. No. 2 fdy., sil. 1.75 to 2.25	20.89 to 22.52
East. Pa. No. 2X fdy., sil. 2.25 to 2.75	21.39 to 23.02
East. Pa. No. 1X fdy., sil. 2.75 to 3.25	21.89 to 23.52

Freight rates: $4.91 from Buffalo, $1.39 to $2.52 from eastern Pennsylvania.

Ferroalloys.—There are a few inquiries for ferromanganese consisting of carload and 100-ton lots, but the market is generally very quiet. Sales of several carloads of spiegeleisen have been made in the past week, most of them at the higher price of $33, furnace. Specifications on contract are fairly satisfactory.

Finished Steel.—The close of the first half of the year finds this market in a rather spotty condition, the more favorable factors being a rather well sustained seasonal volume of specifications and orders for nearly all products and an unusually large amount of activity in fabricated structural steel. A Manhattan hotel placed during the week will take 12,000 tons of shapes and the volume of pending business has been increased by a department store building for Abraham & Straus in Brooklyn, which may require as much as 20,000 tons, a fifty-eight-story apartment building in Tudor City, New York, which will take about 10,000 tons, and another apartment project on the East River, which will take 7000 tons. These bring the prospective tonnage which will probably be placed during the summer for large projects alone well above the 100,000-ton mark. While prices on plain material are not all that might be desired, not much business is being placed at less than 2.14½c., New York, and some small jobs are being taken at figures ranging up to 2.19½c. When fabricated prices are unusually low it is often the fabricator's and not the mill's margin of profit that is reduced. The demand for standard pipe is good and the prices regular. The same might be said for tin plate. Plain wire is quiet, with 2.50c. per lb., Pittsburgh, the ruling price. In the nail market, however, there is weakness, and although some large producers are quoting 2.65c., Pittsburgh, 2.55c. is being done on a large amount of business. There is little activity in bars and plates and on the latter products some Eastern mills have not opened their third quarter books. It is expected, however, that 1.90c., Pittsburgh, will be quoted by all makers of both plates and bars, with little likelihood of an adequate test for the $1 advance for several weeks. Weakness in sheet prices continues to be the most unfavorable factor in the market, with quotations at the lowest levels in several years. Not since March, 1916, have black sheets been so low as 2.65c., Pittsburgh, the present ruling price in this territory. Some orders, nevertheless, are being placed at $1 and occasionally $2 higher, but the tendency seems toward weakness rather than strength. On the galvanized product, 3.50c., Pittsburgh, now represents the top of the market, with frequent concessions of

Warehouse Prices, f.o.b. New York

	Base per Lb.
Plates and structural shapes	3.30c.
Soft steel bars and small shapes	3.25c.
Iron bars	3.24c.
Iron bars, Swedish charcoal	7.00c. to 7.25c.
Cold-finished shafting and screw stock—	
Rounds and hexagons	3.40c.

---

*No. 28 and lighter, 36 in. wide, 20c. higher per 100 lb.

$1 and even $2 a ton. One must also go back 12 years to find this price equaled. Blue annealed sheets apparently have not dropped below 2c., Pittsburgh, although isolated instances are reported when $2 concessions were obtained. The narrower widths are still commanding 2.10c. in some cases. Strip prices are comparatively firm, with 1.85c., Pittsburgh or Cleveland, the minimum on the hot-rolled product, with a range extending to 2.30c. on the narrower widths. This territory is not compelled to meet the competition of the continuous sheet mills, which have brought out lower prices in some Western districts.

Mill prices per lb., delivered New York: Soft steel bars, 2.19c. to 2.24c.; plates, 2.12½c. to 2.22½c.; structural shapes, 2.14½c. to 2.19½c.; bar iron, 2.14c.

Reinforcing Bars.—The Kalman Steel Co. will furnish 2500 tons of bars on a job for the New York Dock Co. in Brooklyn. Outside of this project, which is one of the largest reported in recent weeks, the market has been rather inactive. The volume of small business is keeping up, but prospective work seems to be rather slow in developing. Prices are unchanged, although the generally quoted mill price of 2c., Pittsburgh, is admittedly weak on attractive tonnages.

Cast Iron Pipe.—Buying is confined to small lots, seldom in excess of 100 tons and principally by private users. Prices are apparently quite firm, with Northern makers maintaining the market at $37.60 to $38.60 per net ton, delivered New York, and Southern foundries quoting $32 to $33 per ton, base, Birmingham. An inquiry is in the market for the United States marine base at Paris Island, S. C., for 400 tons of 10-in., Class 250, centrifugal cast iron pipe.

Prices per net ton, delivered New York: Water pipe 6-in. and larger, $37.60 to $38.60; 4-in. and 5-in., $42.60 to $43.60; 3-in., $52.60 to $53.60; Class A and gas pipe, $4 to $5 extra.

Warehouse Business.—The volume of shipments from stock in June will apparently compare favorably with May, but be smaller than April business, which was about the best since the first of the year. A meeting of jobbers in this district is scheduled for Thursday, at which the differential between the mill and warehouse price will probably be considered. Black and galvanized sheet prices continue to show a range of 3.80c. to 4c. per lb., base, on black and from 4.50c. to 4.70c. per lb., base, on galvanized.

Old Material.—All grades of scrap show a tendency to weakness. No. 1 heavy melting steel has been bought at $13 per ton, delivered Bethlehem, Pa., the purchase totaling several thousand tons. No. 1 blast furnace scrap has been bought at $10 per ton, delivered Steelton and Sparrows Point, Md., and $9.50 per ton, delivered Bethlehem, so that the range of dealers' buying prices is $9 to $9.50 per ton, delivered. Recent purchases of yard grade of heavy melting steel have been at $10.50 per ton, and dealers are offering $10 per ton, delivered, except to Conshohocken, Pa., for which $10.50 to $11 per ton is paid.

Dealers' buying prices per gross ton, f.o.b. New York:

No. 1 heavy melting steel	$9.50 to	$9.85
Heavy melting steel (yard)	6.25 to	7.00
No. 1 heavy breakable cast	11.00 to	12.00
Stove plate (steel works)	7.00 to	7.25
Locomotive grate bars	7.00 to	7.50
Machine shop turnings	6.00 to	6.50
Short shoveling turnings	6.00 to	6.50
Cast borings (blast furnace or steel works)	6.00 to	6.50
Mixed borings and turnings	6.00 to	6.50
Steel car axles	14.50 to	15.00
Iron car axles	23.75 to	24.75
Iron and steel pipe (1 in. dia., not under 2 ft. long)		8.25
Forge fire	6.50 to	6.75
No. 1 railroad wrought	9.50 to	10.00
No. 1 yard wrought, long	8.00 to	8.50
Rails for rolling	10.00 to	10.50
Cast iron carwheels	11.00 to	11.50
Stove plate (foundry)	8.50 to	9.00
Malleable cast (railroad)		10.00
Cast borings (chemical)	10.75 to	11.25

Prices per gross ton, delivered local foundries:

No. 1 machinery cast	$14.00 to	$15.00
No. 1 heavy cast (columns, building materials, etc.), cupola size	12.00 to	13.00
No. 2 cast (radiators, cast boilers, etc.)	11.50 to	12.50

Coke.—Operations in the Connellsville district have been curtailed to 20 to 25 per cent of the total capacity, but prices of both foundry and furnace grades continue unchanged at about $3.50 per ton, Connellsville, for standard foundry and $2.50 to $2.75 per ton, Connellsville, for furnace coke. Special brands of foundry coke are quoted at $4.85, f.o.b. ovens, and delivered prices are: To northern New Jersey, Jersey City and Newark, $8.56 per net ton; to New York and Brooklyn, $9.44 per net ton. By-product foundry coke is unchanged at $9 to $9.40 per net ton, Newark or Jersey City, and from $10.06 to $10.29 per net ton, New York or Brooklyn.

Cleveland

Firm Effort to Get Advance on Heavy Products But Weakness in Others

CLEVELAND, June 26.—Mills outside of this territory appear to be taking a firm stand on the establishment of a 1.90c. price on steel bars, plates and structural material for the third quarter, but so far have made little effort to close contracts. However, a few small contracts have been taken at the advance. Some of the smaller mills are holding back, awaiting the final test of the price advance. A few consumers have made unsuccessful efforts to extend existing contracts into the third quarter. With only four days remaining in the present quarter, there has been no rush to get in specifications on the expiring 1.85c. contracts, although some mills report a slight gain in specifications. Local mills have taken some steel bar business for third-quarter shipment at the current price of 1.85c., mill, and an Ohio mill is quoting forging bars at 1.90c. for the third quarter. While mills are holding to the advance on the heavier rolled products, new weakness has developed in some other lines. Cold-finished steel bars have declined $2 a ton and some makers have made a similar concession on cold-rolled strip. While orders from the automotive industry have declined, the demand from this source for sheets and strip steel is unusually well maintained for this season. Some of the Michigan automobile plants have greatly reduced production and others have shut down two weeks for inventories and changes in models. However, motor car builders are ordering considerable steel for July shipment. Structural inquiry is light in this territory, the only good inquiry pending being for grade crossing elimination work in connection with the Cleveland Union Terminal project. It has developed that the inquiry reported last week in this connection involves only a portion of the work taking 8000 tons. The remainder will come out a little later.

Iron Ore.—The ore market is very dull, sales being limited to an occasional small lot. The consumption of Lake ore during May was 4,947,768 tons, an increase of 166,553 tons over April and comparing with 5,012,782 tons in May last year. On June 1 there was 13,942,157 tons of ore on hand at furnaces. The amount at furnaces and at Lake Erie docks on that day was 18,876,721 tons, as compared with 22,970,576 tons on the same date a year ago. Central district furnaces in May consumed 2,474,325 tons, an increase of 109,546 tons for the month. Lake front furnaces used 2,272,222 tons, a gain of 51,966 tons. All rail furnaces used 122,959 tons, a gain of 3738 tons and Eastern furnaces, 78,262 tons, an increase of 1213 tons. There were 173 furnaces using Lake ore in blast May 31, or an increase of 5 for the month.

Pig Iron.—The market became more active the past week, during which Cleveland interests sold 38,500 tons of foundry and malleable iron. The business was widely distributed geographically and by industries and in-

Warehouse Prices, f.o.b. Cleveland

	Base per Lb.
Plates and structural shapes	3.00c.
Soft steel bars	3.00c.
Reinforcing steel bars	2.25c. to 2.75c.
Cold-finished rounds and hexagons	3.65c.

No. 9 galvanized wire, per 100 lb.	3.30
Common wire nails, base per keg	2.85

*Net base, including boxing and cutting to length.

cluded both early shipment and third-quarter tonnage. Some of the orders were for lots of 3000 to 4000 tons. They came in part from automobile foundries that had been rather slow in making third-quarter contracts. Prices are holding closely to recent levels with a Lake furnace range of $16.25 to $17 for foundry and malleable iron, except for Michigan delivery, for which $17.50, furnace, is being quoted. There was a limited amount of buying in Cleveland at the recently reduced price of $17.50, furnace. Efforts are being made to get $18 for small lots. Shipments this month are expected to show a slight gain over May. While the demand from the automotive industry has slackened, this seems to have been more than offset by larger shipping orders from other industries. Shipments are good to stove and furnace manufacturers and to pump makers. The demand from jobbing foundries is rather slow.

Prices per gross ton at Cleveland:

N'th'n No. 2 fdy., sil. 1.75 to 2.25	$18.00 to	$18.50
Southern fdy., sil. 1.75 to 2.25		21.50
Malleable	18.00 to	18.50
Ohio silvery, 8 per cent		28.00
Basic Valley furnace	15.35 to	15.50
Standard low phos., Valley furnace		26.50

Prices, except on basic and low phosphorus, are delivered Cleveland. Freight rates: 50c. from local furnaces; $3 from Jackson, Ohio; $6 from Birmingham.

Strip Steel.—Price irregularities on cold-rolled strip have developed with concessions of $2 a ton to 2.65c., Cleveland, for 3 tons or over by two or more mills. Some third-quarter business has been taken at the reduction. Fender stock is unchanged at 4.10c. Most consumers of hot-rolled strip have covered for the third quarter at the same prices that they had for this quarter, or 1.75c., Pittsburgh, for 6-in. and wider material and 1.85c. for 3-in. to 6-in. strip, or $3 a ton below regular quoted prices. Specifications are fairly good.

Cold-Finished Steel Bars.—Makers have reduced prices $2 a ton to 2.10c., Pittsburgh, and 2.15c., Cleveland. The reduction was unexpected and is understood to have resulted from a concession made by one producer to a large Michigan automobile company. Following the reduction most consumers have placed third-quarter contracts at the new price and specifications against second-quarter contracts are being accepted at the lower price. Specifications are very satisfactory.

Wire Products.—While some third-quarter nail contracts have been taken at 2.65c., Cleveland, a 2.55c. price still applies to the large jobbing trade. Wire is firm at 2.50c.

Reinforcing Bars.—The regular price on billet steel bars is not being firmly held in this territory and rail steel bars are being affected by the competitive situation. While the latter are still quoted at 1.75c. mill, this will be shaded $1 a ton on a fair inquiry.

Warehouse Business.—Sales are fair and June business may show a slight gain over May. Consumers are getting such prompt mill deliveries that many do not feel it necessary to buy from jobbers. Galvanized sheets have become more active. Sheet prices are irregular. Other prices are firm.

Semi-Finished Steel. — Shipments are still being made at $32.50 to $33, Cleveland, for sheet bars and $33 for billets and slabs. While prices that will apply against third-quarter specifications have not been definitely announced, there is no expectation that they will be any higher.

Sheets.—Current orders are light and few consumers are showing an interest in third-quarter contracts. Keen competition has brought out concessions from recent minimum prices on blue annealed and galvanized sheets. On the former a 1.85c. Pittsburgh price came out on a good lot inquiry for material that meets continuous mill competition. However, 1.90c. is the usual minimum quotation. On galvanized sheets 3.45c., Valley, is being quoted and in one case as low as 3.40c., Valley, although some business is being taken at 3.50c., Pittsburgh. Black sheets range from 2.60c. to 2.70c., Pittsburgh. Auto-body sheets are firm.

Fluorspar.—The output of gravel fluorspar has been reduced somewhat by the shutting down of mines, including one Kentucky mine that has been producing 18,000 tons a year and from which all the material has been taken. As a result the supply is less plentiful than recently and this has given the market a firmer tone. Sales are limited to car lots, as most consumers are under contract.

Alloy Steel.—While specifications have fallen off sharply, being now about 50 to 60 per cent of mill capacity, the demand is about normal for this season. Most consumers have placed contracts for the third quarter at the quoted prices.

Bolts, Nuts and Rivets.—Bolts and nuts are moving in fair volume. Rivet orders are rather irregular. Third-quarter contracts are coming in well.

Coke.—The present price of Ohio by-product foundry coke has been re-established at $7.75 per ton, Painesville. Specifications are fair, but there is not much new business. Connellsville foundry coke is unchanged at $3.50 to $4.85, ovens.

Old Material.—The curtailment in mill operations is being reflected in a little slowing down of orders for scrap shipments against contracts. Prices on steelmaking grades are holding to recent quotations. However, the market has a rather weak tone and blast furnace scrap is being freely offered at $9.25, the higher quotation having virtually disappeared. There is no new demand from the mills. July scrap lists issued by the Michigan automobile companies are fairly large in spite of the slowing down of the automotive industry, these lists including Chevrolet, 4650 tons; Buick, 3800 tons; Dodge Brothers, Inc., 2800 tons; Chrysler, 2700 tons.

Prices per gross ton, delivered consumers' yards:

Basic Open-Hearth Grades		
No. 1 heavy melting steel	$13.00 to	$13.25
No. 2 heavy melting steel	12.50 to	12.75
Compressed sheet steel	12.50 to	13.00
Light bundled sheet stampings	11.50 to	11.75
Drop forge flashings	11.50 to	11.75
Machine shop turnings	6.50 to	6.75
No. 1 railroad wrought	11.50 to	12.00
No. 2 railroad wrought	13.50 to	13.75

Stove plate	12.00 to	12.50
Rails under 3 ft	16.75 to	17.25
Miscellaneous		
Railroad malleable	15.00 to	15.50
Rails for rolling	16.25 to	16.50

Little Activity in Detroit Scrap

Detroit, June 26.—There has been very little activity in the market on old material the past week and no strengthening factors are in sight. Prices are quoted without change.

Dealers' buying prices per gross ton f.o.b. cars, Detroit:

Heavy melting and shoveling steel	$11.00 to	$11.50
Borings and short turnings	7.00 to	7.50
Long turnings	5.75 to	6.25
No. 1 machinery cast	14.00 to	15.00
Automobile cast	19.00 to	20.50
Hydraulic compressed sheets	9.75 to	10.25
Stove plate	11.00 to	12.00
No. 1 busheling	8.50 to	9.00
Sheet clippings	6.00 to	6.50
Flashings	9.00 to	9.50

Plan for 1929 Machine Tool Exposition

With the recent appointment of a committee of five members, active planning of the details of the machine tool exposition, to be held in the fall of 1929 under the auspices of the National Machine Tool Builder's Association, has begun. J. Wallace Carrel, vice-president and general manager of the Lodge & Shipley Machine Tool Co., Cincinnati, is chairman of the committee. The other members are Henry Buker, vice-president Brown & Sharpe Mfg. Co., Providence; R. E. Flanders, manager Jones & Lamson Machine Co., Springfield, Vt.; R. M. Gaylord, vice-president Ingersoll Milling Machine Co., Rockford, Ill.; and James E. Gleason, president Gleason Works, Rochester, N. Y.

San Francisco

Larger Lettings of Structural Steel and Concrete Bars—Plate Demand Light

SAN FRANCISCO, June 23 (*By Air Mail*).—Consumers of iron and steel on the Pacific Coast are showing little interest in third quarter requirements and, as a result, both sales and inquiries have fallen off. The structural steel market is the most active one, and outstanding awards include 1700 tons for the Medico-Dental Building at Spokane, Wash., booked by the Hofius Steel & Equipment Co., and 1125 tons for the Kettle Falls, Wash., bridge, placed with the United States Steel Products Co.

During the first 12 days of June, Los Angeles building permits numbered 1276, with an estimated valuation of $4,580,907, as compared with 1280 permits and a valuation of $4,174,175 for the corresponding period in 1927. So far this year permits aggregate $47,393,043, compared with $53,011,977 for the same period last year.

Pig Iron.—Demand for foundry pig iron has shown no improvement, and few inquiries and sales are reported. Stocks on hand in foundry yards are apparently sufficient to take care of immediate requirements. Prices are unchanged.

Prices per gross ton at San Francisco:

*Utah basic	$25.00 to $26.00
*Utah foundry, sil. 2.75 to 3.25	25.00 to 26.00
**Indian foundry, sil. 2.75 to 3.25	24.00 to 25.00
**German foundry, sil. 2.75 to 3.25	24.25

*Delivered San Francisco.
**Duty paid, f.o.b. cars San Francisco.

Bars.—Reinforcing steel awards were heavier this week and totaled slightly over 1000 tons, compared with less than 600 tons for the previous two weeks. The largest letting called for 485 tons for a penstock, powerhouse and dam at Eugene, Ore., and was placed with an unnamed interest. Pending business is not heavy, the bulk of the inquiries involving lots of less than 70 tons each. Bids will be opened on July 16 for 2288 tons for Drainage Improvement District No. 26 at Los Angeles. A school at Seattle will require 300 tons, bids having gone in. Little improvement in the out-of-stock price in the San Francisco district is noted, and 1.80c. to 2c. per lb., base, continues to represent the range.

Plates.—The only award of the week was 575 tons for a carfloat for the Santa Fe Railroad at San Francisco, and was placed with the Moore Drydock Co. Awards so far this year are one-third less than the total for the corresponding period last year, aggregating less than 16,000 tons. Sacramento, Cal., will open bids next week on 100 tons of 3/16-in, plates for a 24-in. riveted pipe line. Prices are weak and, as little tonnage is being offered, the market has not yet been tested. Mill quotations range from 2.25c. to 2.30c., c.i.f. Coast ports.

Shapes.—Demand for structural material is well sustained, and awards this week were the heaviest in over a month. In addition to tonnages reported above, the Llewellyn Iron Works secured 900 tons for a factory for the Illinois, Pacific Glass Co. at Vernon, Cal., and the Baker Iron Works took 470 tons for an apartment in Los Angeles. New inquiries include 450 tons for a clinker storage building for the Pacific Coast Cement Co. at Seattle and 350 tons for an apartment in Los Angeles. Plain material from mill continues unchanged at 2.35c., c.i.f.

Cast Iron Pipe.—Only one cast iron pipe award of over 100 tons was reported this week. Los Angeles placed 1260 tons of 20-in. Class B pipe with the Grinnell Co. and 884 tons of 6 to 12-in. Class 250 pipe with the American Cast Iron Pipe Co. C. G. Claussen & Co., Inc., was low bidder on 300 tons of 4 to 10-in. Class B pipe for Burbank, Cal., and quoted on French pipe. Bids open on July 6 at Seattle, Wash., for 271 tons of 48-in. Class B pipe for a sewer project on West Hanford Street. San Diego, Cal., will open bids next week on 102 tons of 4 and 6-in. Class B pipe for the improvement of Market Street. Wells, Nev., has received bids on 224 tons of 4 to 10-in. Class C pipe, but may decide to purchase ingot iron riveted pipe.

Steel Pipe.—Inquiries are small. Activity in the oil fields in the southern part of California has not increased, and, from present indications, there is little likelihood of large tonnages coming out for figures in the next two or three months.

Coke.—The quiet condition reported in the market for pig iron is also found in the market for foundry coke, and sales and inquiries continue to cover small tonnages.

Warehouse Prices, f.o.b. San Francisco

Small angles, under $\frac{3}{16}$-in	3.55c.
Small channels and tees, ¾-in. to 2¾-in.	3.75c.
Spring steel, ¼-in. and thicker	5.00c.
Black sheets (No. 24)	4.95c.
Blue annealed sheets (No. 10)	3.90c.
Galvanized sheets (No. 24)	5.50c.
Structural rivets, ½-in. and larger	5.65c.
Common wire nails, base per keg	$3.40
Cement coated nails, 100-lb. keg	3.40

St. Louis

Award of 3000 Tons of Concrete Bars for Warehouse—Pig Iron More Active

ST. LOUIS, June 26.—Third quarter buying of pig iron developed during the week. In addition to several large sales, a number of inquiries are pending. Shipments are being well maintained, and the melt is being increased among foundries catering to the stove and agricultural implement trade. The St. Louis Gas & Coke Corporation sold 1300 tons of foundry grades to a northern Illinois stove plant, 1000 tons to another northern Illinois industry and 500 tons to an Indiana melter, all for third quarter shipment, while prompt shipment sales included 300 tons of malleable to a Chattanooga, Tenn., melter, 150 tons of foundry to a Tulsa, Okla., user and 100 tons of foundry to a Denver company. Prices are unchanged.

Prices per gross ton at St. Louis:

No. 2 fdy., sil. 1.75 to 2.25, f.o.b. Granite City, Ill.	$19.00
Northern No. 2 fdy., delivered St. Louis	20.16
Southern No. 2 fdy., delivered	19.92
Northern malleable, delivered	20.16
Northern basic, delivered	20.16

Freight rates: 81c. from Granite City to St. Louis; $2.16 from Chicago; $4.42 from Birmingham.

Coke.—Buying of domestic grades of coke is light, and by-product ovens are urging dealers and apartment house owners to place their orders now. The present price of domestic is $11 a ton, delivered St. Louis, and $6.75 at the ovens. The present price of foundry coke is $9.75, delivered St. Louis, and $9 at the ovens. New prices are expected to be announced on July 1.

Finished Steel.—The award of 3000 tons of reinforcing bars for the J. C. Penney Co. warehouse to the

Warehouse Prices, f.o.b. St. Louis

Laclede Steel Co. and the Missouri Rolling Corporation was the largest concrete bar purchase in some time. A 350-ton reinforcing bar order for a sewer also went to the latter company. There is pending 500 tons of concrete bars for a building for the American Railway Express, which also will require 1000 tons of structural steel. Manufacturers of farm equipment requiring galvanized sheets are active and the improvement in buying, as reported by the Granite City Steel Co., has been sufficient to cause that company to operate its galvanizing department at 75 per cent of capacity this week. The price situation is more stable. Business in blue annealed sheets is slow. Tin plate is in very good demand, and local operations on tin plate are at 100 per cent.

Old Material.—The market is quiet and some items are lower. Dealers have covered almost all of their contracts, and mills have indicated no desire to buy soon. Prices are up 50c. a ton on iron car axles, for which the demand, although not very large, is greater than the supply. Steel angle bars and railroad malleable have declined 25c. a ton. Railroad lists include: Union Pacific, 7500 tons; Chicago, Burlington & Quincy, 4500 tons; St. Louis-San Francisco, 1000 tons of miscellaneous scrap and nine carloads; Nickel Plate, 27 carloads; Mobile & Ohio, 26 carloads.

Dealers' buying prices, per gross ton,. f.o.b. St. Louis district:

Heavy melting steel	$11.00 to $11.50
No. 1 locomotive tires	12.00 to 12.50
Heavy shoveling steel	11.00 to 11.50
Miscellaneous standard-section rails, including frogs, switches and guards, cut apart	12.25 to 12.75
Railroad springs	13.50 to 14.00
Bundled sheets	8.50 to 9.00
No. 2 railroad wrought	11.25 to 11.75
No. 1 busheling	9.75 to 10.25
Cast iron borings	9.00 to 9.50
Iron rails	13.00 to 13.50
Rails for rolling	13.00 to 13.50
Machine shop turnings	7.00 to 7.50
Steel car axles	17.50 to 18.00
Iron car axles	25.50 to 26.00
Wrought iron bars and transoms	19.00 to 19.50
No. 1 railroad wrought	10.00 to 10.50
Steel rails, less than 3 ft.	15.00 to 15.50
Steel angle bars	11.75 to 12.25
Cast iron carwheels	13.25 to 13.75
No. 1 machinery cast	13.00 to 13.50
Railroad malleable	11.25 to 11.75
No. 1 railroad cast	13.00 to 13.50
Stove plate	11.00 to 11.50
Agricultural malleable	12.00 to 12.50
Relaying rails, 60 lb. and under	20.50 to 23.50
Relaying rails, 70 lb. and over	26.50 to 29.00

Birmingham

Foundry Pig Iron Reduced to $15.50—Mill Operations Maintained

BIRMINGHAM, June 26.—Pig iron producers reduced prices 50c. a ton on June 20 and are now quoting No. 2 foundry iron at $15.50, Birmingham. The reduction has stimulated interest in the market, and a fair tonnage has been booked. Although no real buying movement has developed, some consumers are covering their third quarter requirements, while others are buying through July and August. Most of the third quarter output of furnaces, however, is yet to be sold. Shipments continue active. The Tennessee company was scheduled to blow in one of its new furnaces at Fairfield, Ala., the early part of this week. The stack has a capacity of 600 tons per day. Otherwise furnace operations are unchanged, 18 being in blast. Of this number 10 are on foundry, six on basic, one on recarburizing iron and one on ferromanganese.

Prices per gross ton f.o.b. Birmingham district furnaces:

No. 2 foundry, 1.75 to 2.25 sil.	$15.50
No. 1 foundry, 2.25 to 2.75 sil.	16.50
Basic	$15.00 to 16.00

Finished Steel.—The market continues active in most lines, and forward bookings show a slight margin of increase over those of the previous week. Inquiries are favorable. Prices are steadier, with plates, shapes and soft steel bars now being quoted at a flat price of 2.05c. per lb., base Birmingham. Structural steel fabricators and bar manufacturers report light bookings, though inquiries are fair. Plant operations are well sustained. No change has been made in the number of active open-hearth furnaces during the past week, 16 being in operation. Of this number, the Tennessee company is working 12 and the Gulf States Steel Co. four.

Cast Iron Pipe.—Pressure-pipe buying was off slightly during the week. Orders were placed with the United States Cast Iron Pipe & Foundry Co. for about 2000 tons for Rock Hill, N. C., and 400 tons for Miami, Fla. Inquiries are light. However, some good-sized projects are to be up for figures within the next six or eight weeks. Shipments are active. Prices continue fairly firm at $32 to $33 per net ton, Birmingham, for 6-in. and larger diameters. Soil pipe business is up to normal for this season. A controlling interest in the National Cast Iron Pipe Co. was sold last week to James B. Clow & Sons, Chicago. The local company will retain its corporate identity.

Coke.—The market, as a whole, is dull. A few more orders have been booked for the last half and, to a large extent, the requirements for that period have now been covered. Pitch coke shipments aggregating about 1000 tons are under way to points on the coast of France. By-product coke is being shipped from time to time for California points. Foundry coke quotations are still $5 per net ton, Birmingham, on both spot and contract business.

Old Material. —Demand is lacking in all lines and current transactions are hardly worthy of mention. Quotations have been unchanged during the past two weeks and are only nominal in view of unusual dullness of the market.

Prices per gross ton delivered Birmingham district consumers' yards:

Heavy melting steel	$8.50 to $9.00
Scrap steel rails	11.00 to 11.50
Short shoveling turnings	7.50 to 8.00
Cast iron borings	8.00
Stove plate	13.50
Steel axles	19.00 to 20.00
Iron axles	20.00 to 21.00
No. 1 railroad wrought	10.00 to 10.50
Rails for rolling	13.00
No. 1 cast	14.25
Tramcar wheels	12.50 to 13.50
Cast iron carwheels	12.00 to 13.00
Cast iron borings, chemical	13.50 to 14.00

Canada

Canadian Pacific Buys 25,000 Tons of Rails—Good Demand for Building Steel

TORONTO, ONT., June 26.—Advance buying is beginning to develop in the Canadian pig iron markets. Several good-sized contracts have been closed for third quarter delivery. Local blast furnace representatives report a large volume of third quarter inquiries, calling for 300 to 2000 tons each. Spot sales continue good both in the Toronto and Montreal districts. Individual orders run from 50 to 200 tons, with occasional sales of as much as 500 tons. Water transportation is being featured in some contracts and delivery on this account is steadily becoming more popular. In keeping with the larger demand for pig iron in this country, production has advanced to the highest point since 1920, with eight blast furnaces active, or 63 per cent of total Canadian capacity. Stacks in blast include: Sault Ste. Marie, Ont., three; Hamilton, Ont., two; Port Colborne, Ont., one; Sydney, N. S., two. Canadian pig iron prices are unchanged.

Prices per gross ton:

Delivered Toronto	
No. 1 foundry, sil. 2.25 to 2.75	$23.10 to $23.60
No. 2 foundry, sil. 1.75 to 2.25	23.10 to 23.60
Malleable	23.10 to 23.60
Delivered Montreal	
No. 1 foundry, sil. 2.25 to 2.75	24.50 to 25.00
No. 2 foundry, sil. 1.75 to 2.25	24.50 to 25.00
Malleable	24.50 to 25.00
Basic	23.50 to 24.00
Imported Iron at Montreal Warehouse	
Summerlee	33.50
Carron	33.00

Rails.—The Canadian Pacific Railway has placed an order with the Algoma Steel Corporation, Sault Ste. Marie, Ont., for 25,000 tons of 100-lb. rails, with rail fastenings, etc. The Canadian National Railways have announced that they will purchase this year 160-000 tons of rails, with necessary fastenings, to cost approximately $9,000,000. At the present time rail mills at Sault Ste. Marie, Ont., and Sydney, N. S., have sufficient business on hand to keep them busy for a month or six weeks, and it is expected that the Canadian National orders will be awarded in time to assure continued operations almost to the end of the year.

Structural Steel.—While structural steel workers and employers have not entirely reached an agreement, men are back to work on a number of the larger structures in this city and it is expected that a final settlement will be reached shortly. Shipments of shapes are again being made against old contract, and buying has been resumed. A strong demand is reported for reinforcing bars throughout Ontario. For the MacLean Publishing Co. building addition, Toronto, 1500 tons of structural steel and 500 tons of reinforcing bars will be purchased within a few days; inquiries are also out for lots ranging from 200 to 1000 tons, which aggregate close to 15,000 tons for Toronto and Montreal alone.

Old Material.—Reductions recently announced in the Montreal market did not strengthen demand to any marked degree, but the advance in wrought iron and steel axles, carwheels and stove plate brought these grades into more prominence. In the Toronto district, dealers report a steady flow of small-tonnage orders; in addition inquiry is increasing for third quarter delivery and a few contracts have been closed. Old material prices are unchanged since a week ago.

Dealers buying prices:

Per Gross Ton	Toronto	Montreal
Heavy melting steel	$9.00	$7.00
Rails, scrap	10.00	9.00
No. 1 wrought	9.00	11.00
Machine shop turnings	7.00	5.00
Boiler plate	7.00	6.00
Heavy axle turnings	7.50	6.50
Cast borings	7.50	5.00
Steel turnings	7.00	5.50
Wrought pipe	5.00	5.00
Steel axles	14.00	20.00
Axles wrought iron	16.00	22.00
No. 1 machinery cast	....	16.00
Stove plate	....	13.00

Standard carwheels	13.00	....
Malleable scrap	13.00	....

Youngstown

Mill Operations Hold Around 70 Per Cent—Basic Iron Is Higher

YOUNGSTOWN, June 26.—The pace of steel buying and of plant operations does not vary much with manufacturers in this district. Steel ingot production at the outset of the month was around 70 per cent of capacity, and that is approximately the rate in the final week of the month. The automotive industry continues to take steel fairly freely, being one of the principal factors in the comparative steadiness of steel works engagement. Another sustaining influence is the good rate of operation of steel fabricating and stamping companies located in the district and depending entirely on local mills for their steel. Other important consuming industries, notably the oil fields, are not contributing as heavily as usual to the order books of the mills, although one of the local steel pipe makers is reported to be figuring on a gas pipe line, which, if ordered, will give pipe mill operations a brighter aspect. The needs in this line is said to amount to 50,000 tons, which would provide a good backlog for the maker understood to have the inside track on the order.

From the standpoint of bookings the pipe situation is the weakest of any of the products of the district. While hopes are revived by even the slightest signs of betterment in the oil industry, the fact remains that, outside of the California field, drilling is very light and in California the activities are chiefly deep drilling for the tapping of secondary wells. Only one such well is being sunk, whereas in former years it was common for as many as 100 wells to be in process of drilling in a field at one time. For drilling these deep wells, seamless casing is almost exclusively used and most of the pipe-making capacity of the district is for making welded pipe. A report that the advance in standard-weight and line pipe prices announced early in April is not being maintained is denied by local producers.

Bar business for local mills is at best only moderately active. Some third quarter contract business has been taken at 1.90c., base Pittsburgh, but, in view of the fact that current business is not readily obtained at more than 1.85c., base, and that rather than run the risk of losing specifications on existing contracts carrying that price some producers are extending second quarter contracts into the third quarter, doubts are expressed that the higher price can be established. In view of the reduction of $2 a ton on cold-finished steel bars, there is bound to be resistance on the part of makers to paying any higher price for hot-rolled bars.

Leading producers of black sheets here are holding to a minimum of 2.70c., base, and, while admitting that they are encountering lower prices, declare that 2.65c. or less usually refers to sales of special finishes carrying substantial extras that are profitable enough to make possible a reduction in the base price. On galvanized sheets 3.50c., base, is the common quotation but is not as low as some sales are being made. Hot-rolled strips are quoted at 1.90c., base, for 6-in. to 12-in. widths; 2.10c., base, for 3-in. to 6-in., and 2.20c., base, for less than 3-in. These prices, however, prevail on most sales, but on tonnage the large buyers still get concessions of $2 to $3 a ton, and even more if the net prices quoted on round lots of wide and narrow material were translated to a base price.

Efforts to stiffen the price of basic iron have met with some success, one fair-sized lot having been sold to an Ohio Valley steel maker at $15.75, Valley furnace, which represents an advance of 40c. a ton over the last previous sale. On this inquiry most producers quoted $16, Valley furnace. Local producers are not hopeful of getting any of the iron for the Follansbee Brothers Co. on account of lower freight charges enjoyed by Pittsburgh and Wheeling district furnaces.

The scrap market here is dull and soft. Heavy melting steel is quotable at $14.50 and compressed sheets at about 50c. a ton less, a decline of 50c. a ton from what could have been obtained a fortnight ago.

Pacific Northwest

Steel Rate War Looms—Concrete Bar Market Active

SEATTLE, June 23 (*By Air Mail*).—War threatens in freight rates on iron and steel for shipment to Pacific Coast points, following the action of the Illinois Central Railroad and the Redwood Steamship Lines putting into effect early this month a rate of 61c. from all points in Illinois and Indiana, as well as certain points in Kentucky, to San Francisco, Los Angeles, Alameda, Wilmington and Ashland, Cal. As yet the above rate applies only to the points named in California, and efforts to have the rate apply to all Pacific Coast points have brought a strong protest from Eastern railroads, and the matter is now in the hands of the Interstate Commerce Commission for adjudication.

The Illinois Central has made a rate of 31c. per 100 lb. from the points named above to New Orleans, and from there the Redwood Lines make a rate of 30c. via the Panama Canal to the California points, the same rate that is in effect from Eastern ports to all Pacific Coast points. The Eastern roads have attacked the 31c. rate, claiming it is contrary to law, and the matter is now in the hands of the Interstate Commerce Commission for settlement. If that body should decide that the rate is legal, and also allows it to apply to all Pacific Coast points, a cut in rates by the Eastern railroads, and also possibly by the Pacific Coast steamship lines, is almost certain to take place.

There has been a considerable falling off in new demand for iron and steel in the local market, and prices, too, are showing signs of weakness. Jobbers and consumers are buying only in small lots for immediate needs, and the threatened rate war on shipments of steel products to Pacific Coast points is helping to retard buying in any large quantities.

Plates.—Demand is very light. No large lots have been placed for some time, and no important business is in sight. The price range on plates for mill shipment is from 2.25c. for large lots to 2.30c. per lb. for small lots, c.i.f. Seattle.

Shapes.—The only large order in several weeks was 1620 tons for the Paulson Medico-Dental building, Spokane, Wash., taken by the Hofius Steel Equipment Co., Seattle. The Wallace Bridge & Structural Steel Co. has taken 200 tons for a clinker building for the new plant of the Pacific Coast Cement Co. The Wallace Falls Timber Co. is in the market for 200 tons for a bridge span at Index, Wash. Prices on shapes remain fairly firm at 2.35c. per lb., c.i.f. Seattle.

Pig Iron.—Foundry operations in the Seattle district are slow, and there is little demand for pig iron. Prices on Utah basic and No. 2 foundry are nominal at $25 to $26 per gross ton, delivered Seattle.

Rails.—An Eastern mill has taken 200 tons of 85-lb. sections for the Pacific Coast Railroad.

Bars.—There is some activity in reinforcing bars, but merchant bars are quiet. The Pacific Coast Steel Co. has taken 250 tons of reinforcing bars for the West Seattle Public School, 700 tons for the Lovejoy viaduct at Portland, Ore., and 150 tons for the Von Herberg building in Seattle. The Northwest Steel Rolling Mills, Inc., has taken 600 tons for the Peck & Wills warehouse in Seattle, 100 tons for a grain elevator in Vancouver, B. C., about 250 tons for State highway work along the Olympic peninsula and 150 tons for a viaduct at Mount Vernon, Wash. Bids are to be opened on July 6 for about 600 tons for the Beacon Hill tunnel in Seattle. We quote ordinary merchant steel bars at 2.30c. to 2.35c., base, per lb., c.i.f. Coast ports, and reinforcing bars at 2.20c. per lb. for large lots and up to 2.75c. and 3c. for small lots from stock and cut to lengths. Lower than 2.20c. per lb. on large lots is being done at southern California points.

Old Material.—There is little activity in foundry scrap, but there is a fair demand for steel melting scrap. Electric steel melting scrap is bringing $13 per gross ton, heavy melting steel scrap $11 per gross ton, and No. 1 cast iron scrap $12 to $13 per net ton, all f.o.b. Seattle. A recent sale of 300 tons of electric melting steel scrap was made at $13 per gross ton, delivered Seattle.

Buffalo

Sheets Weak—Scrap Offered Exceeds Consumption—Heavy Melting Lower

BUFFALO, June 26.—The only sizable pig iron transaction of the week was a sale of 2000 tons of foundry to an Erie, Pa., consumer. A slowing down in miscellaneous small orders was noted, although shipments continue good. The market in this district remains firm at $17, local furnace, for No. 2 plain, and at $17.50 for malleable. Eastern business is being quoted at prices figuring back to $16.50, Buffalo.

Prices per gross ton, f.o.b. furnace:

No. 2 plain fdy., sil. 1.75 to 2.25	$17.00
No. 2 foundry, sil. 2.25 to 2.75	17.50
No. 1X foundry, sil. 2.75 to 3.25	18.50
Malleable, sil. up to 2.25	17.50
Basic	$16.50 to 17.00
Lake Superior charcoal	27.28

Finished Steel.—The trade is quiet, with a fair volume of bars and shapes moving. Some sheet business is being placed, but prices are not so strong as recently. Structural and reinforcing bar lines have slowed down, but action on the material for the 26-story Rand building in this city is expected soon. Trade in bolts and nuts is fair, and wire mills report good operations and satisfactory bookings.

Warehouse Prices, f.o.b. Buffalo

	Base per Lb.
Plates and structural shapes	3.40c.
Soft steel bars	3.30c.
Reinforcing bars	2.75c.
Cold-finished flats, squares and hexagons	4.45c.
Rounds	3.95c.
Cold-rolled strip steel	5.85c.
Black sheets (No. 24)	4.30c.
Galvanized sheets (No. 24)	5.15c.
Blue annealed sheets (No. 10)	3.80c.
Common wire nails, base per keg	$3.65
Black wire, base per 100 lb	3.90

Old Material.—The market is weaker and less active. The only selling is an occasional car of malleable or No. 1 cast scrap. One of the larger consumers, it is reported, may suspend shipments from dealers for a month, because of heavy receipts of material, much of which is coming by boat. Scrap production is heavy, in excess of what the market will absorb. Railroad lists will close next week. Only two scrap yards in the district are active.

Prices per gross ton, f.o.b. Buffalo consumers' plants:

Basic Open-Hearth Grades	
No. 1 heavy melting steel	$14.00 to $14.50
No. 2 heavy melting steel	12.50 to 13.00
Scrap rails	13.50 to 14.00
Hydraulic compressed sheets	12.50 to 13.00
Hand bundled sheets	8.50 to 9.00
Drop forge flashings	12.00 to 12.50
No. 1 busheling	12.50 to 13.00
Heavy steel axle turnings	12.00 to 12.50
Machine shop turnings	7.75 to 8.25
Acid Open-Hearth Grades	
Railroad knuckles and couplers	15.00
Railroad coil and leaf springs	15.00 to 16.00
Rolled steel wheels	15.00
Low phosphorus billet and bloom ends	16.00 to 16.50
Electric Furnace Grades	
Heavy steel axle turnings	12.00 to 12.50
Short shoveling steel turnings	10.00 to 10.50
Blast Furnace Grades	
Short shoveling steel turnings	10.00 to 10.50
Short mixed borings and turnings	9.50 to 10.00
Cast iron borings	9.50 to 10.00
No. 2 busheling	9.00 to 9.25
Rolling Mill Grades	
Steel car axles	15.50 to 16.00

No. 1 machinery cast	14.50 to 15.00
Stove plate	13.00 to 13.25
Locomotive grate bars	11.50 to 12.00
Steel rails, 3 ft. and under	16.50
Cast iron carwheels	12.00 to 12.50
Malleable Grades	
Industrial	15.00
Railroad	15.00
Agricultural	15.00

Boston

Scrap Prices Weaken as Business Drops—Pig Iron Imports Light

BOSTON, June 26.—A Massachusetts foundry is reported to have purchased 1000 tons of No. 1X iron for third quarter delivery at a price almost equivalent to $16.50 a ton at Buffalo furnace. Otherwise sales in the past week comprised much smaller tonnages, with the aggregate approximating 4000 tons. Deliveries

Stove bolts	70 and 10

---

*Including quantity differentials.

range from prompt to fourth quarter, and the greater part of the iron sold is bringing the equivalent to $17 a ton, Buffalo furnace, for No. 2X. Reports that one stack is quoting unusually low prices are not substantiated by sales. There is no doubt, however, that furnaces are willing to shade prices on attractive tonnages, although holding on small lots. There are no open inquiries of importance in the market, and several large consumers who have been sounding out the market have decided to postpone buying, pending an improvement in their business.

Pig Iron Imports.—Low prices quoted on domestic pig irons are holding imports down to a minimum. Imports at this port during the first half of June totaled 396 tons, consisting of 346 tons of Indian and 50 tons of Scotch iron. This compares with 198 tons in the first half of May, this year; 1343 tons in the first half of June, last year; 2538 tons in the first half of June, 1926, and 3030 tons the first half of June, 1925.

Prices of foundry iron per gross ton delivered to most New England points:

Buffalo, sil. 1.75 to 2.25	$20.91 to $21.91
Buffalo, sil. 2.25 to 2.75	21.41 to 22.41
East. Penn., sil. 1.75 to 2.25	23.15 to 23.65
East. Penn., sil. 2.25 to 2.75	23.65 to 24.15
Virginia, sil. 1.75 to 2.25	25.71
Virginia, sil. 2.25 to 2.75	26.21
Alabama, sil. 1.75 to 2.25	22.41 to 24.27
Alabama, sil. 2.25 to 2.75	22.91 to 24.77

Freight rates: $4.91 from Buffalo, $3.65 from eastern Pennsylvania, $5.21 all rail from Virginia, $6.91 to $8.77 from Alabama.

Coke.—Only a moderate amount of by-product foundry coke is moving. The melt of New England foundries is barely holding its own. Demand for domestic coke, however, is in large volume, as retail dealers are stocking up heavily. Unseasonably cool and wet weather in the past week helped to swell domestic coke deliveries. It is believed that the Connecticut Coke Co., New Haven, Conn., will start up its new ovens about Sept. 15.

Fabricated Steel.—With labor troubles adjusted and construction resumed, the local fabricated steel market appears more active. Most of the jobs coming up are small ones, however, ranging from 75 tons down to 5 tons. Competition among fabricators is keen. A New Jersey fabricator took 200 tons at Quincy, Mass., at a price approximately 12 per cent under that of the lowest New England bidder.

Warehouse Business.—The movement of material out of warehouses is not as large as it was earlier in June, and considerably less than in May. Despite the slackening of business, prices on domestic stock are generally well maintained. Consumers' interest in imported material is tapering off, owing to unsatisfactory adjustments for rust, etc.

Cast Iron Pipe.—Massachusetts has awarded a contract to the C. & R. Construction Co. for a job calling for 4000 tons of 30-in. pipe, but it is not known what foundry will supply the pipe to the contractor. Beverly, Mass., has let 100 tons of 12-in. pipe to the Warren Foundry & Pipe Co. Marlboro, Mass., is calling for bids July 2 on about 100 tons of pipe, and Chelsea, Mass., will open bids the same day on 100 tons of 6-in. and 8-in. Private business in pipe is only fair, it being the quiet season in the market. Prices on small pipe remain firm, 4-in. at $45.10 to $46.10 a ton, delivered common Boston freight rate points, and 6-in. to 12-in. at $41.10 to $42.10. Concessions are still offered on larger pipe. The usual $5 differential is asked on Class A and gas pipe.

Warehouse Prices, f.o.b. Cincinnati

	Base per Lb.
Plates and structural shapes	3.40c.
Bars, soft steel or iron	3.30c.
New billet reinforcing bars	3.15c.
Rail steel reinforcing bars	3.00c.
Hoops	4.00c. to 4.25c.
Bands	3.95c.
Cold-finished rounds and hexagons	3.85c.
Squares	4.35c.
Black sheets (No. 24)	4.05c.
Galvanized sheets (No. 24)	4.90c.
Blue annealed sheets (No. 10)	3.60c.
Structural rivets	3.85c.
Small rivets	65 per cent off list
No. 9 annealed wire, per 100 lb.	$3.00
Common wire nails, base per keg	2.95
Cement coated nails, base 100 lb. keg	2.95
Chain, per 100	7.55
	Net per 100 Ft
Lap-welded steel boiler tubes, 2-in.	$18.00
4-in.	38.00
Seamless steel boiler tubes, 2-in.	19.00
4-in.	39.00

Old Material.—A further letdown in both buying and selling has developed, with accompanying weakness in prices. Pennsylvania mills are ordering little scrap, and the local export market has been at a standstill during the week. A steamer will load 5000 tons of steel for Danzig this week, however, and a similar amount is scheduled for shipment in July, which should liven up the market. Steel turnings, steel mill borings, skeleton, mixed borings and turnings and forged scrap are 25c. to 50c. a ton lower than a week ago. Prices on skeleton take a wide range. Material going to certain Pennsylvania points is $6.50 to $7 a ton on cars, shipping point, and to other points $5 to $5.50. Recent transactions include sales of cotton ties at $5.50 to $6 a ton on cars. About 250 tons of scrap rails will be required for the new local plant of the United States Gypsum Co. Buying of textile cast for New England delivery has stiffened prices on that grade.

Buying prices per gross ton, f.o.b. Boston rate shipping points:

No. 1 heavy melting steel	$8.00 to $8.50
Scrap T rails	8.00 to 8.50
Scrap girder rails	7.50 to 8.00
No. 1 railroad wrought	9.00 to 9.50
No. 1 yard wrought	7.00 to 7.50
Machine shop turnings	5.25 to 5.50
Cast iron borings (steel works and rolling mill)	5.25 to 5.50
Bundled skeleton, long	5.00 to 7.00
Forge flashings	6.50 to 7.00
Blast furnace borings and turnings	5.00 to 5.50
Forge scrap	5.50 to 6.00
Shafting	12.00 to 12.50
Steel car axles	14.50 to 15.00
Wrought pipe 1 in. in diameter (over 2 ft. long)	7.00 to 7.50
Rails for rolling	9.50 to 10.00
Cast iron borings, chemical	10.00 to 10.25

Prices per gross ton delivered consumers' yards:

Textile cast	$13.50 to $14.00
No. 1 machinery cast	14.00 to 14.50
No. 2 machinery cast	12.50 to 13.50
Stove plate	10.00 to 10.50
Railroad malleable	13.50 to 14.50

Cincinnati

Little Forward Buying Comes with Fall in Southern Pig Iron

CINCINNATI, June 26.—A decline of 50c. a ton in the price of Tennessee and Alabama iron for third-quarter delivery is the outstanding development in the market. While the new schedule of $15.50, base, Birmingham, has brought out some business, it is not expected to stimulate forward buying to a marked extent, because prices are so weak that there is little likelihood of improvement in the situation during at least the next 60 days. Under the circumstances users find no incentive for anticipating their needs beyond current requirements. Furthermore under the pressure of competition, Northern iron has shown signs indicating a movement toward lower levels and northern Ohio furnaces are reported to be accepting orders in southern Ohio and in Indiana at $16 to $16.25, base, furnace. While the newly established quotations of $15.50, for Southern iron may not serve the purpose of broadening markets at points along and north of the Ohio River, it will insure customers in that territory of their ability to secure iron from the South at as low or possibly lower prices as those to be had from Northern makers. Transactions in the past week have not totaled more than 3000 tons, the largest covering 500 tons of malleable iron to a Springfield, Ohio, company. Aside from an inquiry from the Buick Motor Co. for approximately 2500 tons of 14 to 16 per cent ferrosilicon, pending business is negligible.

Prices per gross ton, delivered Cincinnati:

So. Ohio fdy., sil. 1.75 to 2.25	$19.89 to $20.89
So. Ohio malleable	20.14 to 20.89
Alabama fdy., sil. 1.75 to 2.25	19.19
Alabama fdy., sil. 2.25 to 2.75	19.69
Tennessee fdy., sil. 1.75 to 2.25	19.19
Southern Ohio silvery 8 per cent	26.89

Freight rates, $1.89 from Ironton and Jackson, Ohio, $3.69 from Birmingham.

Finished Material.—Even though the beginning of the third quarter is close at hand and the new price of

Zinc, St. Louis	6.15	6.15	6.15	6.15	6.15	6.15

*Refinery quotation; delivered price ¼c. higher.

NEW YORK, June 26.—Tin has been the only active market, demand for the other metals being exceedingly light. Price changes have been almost negligible, quotations being firm in all markets except tin.

Copper.—The week has been the quietest in several months. Demand from domestic consumers has been confined to small lots and buying for foreign consumption, which has been heavy for a long time, has tapered off decidedly. Domestic consumers are well covered for July, but a few are buying small lots for nearby shipment. Foreign users will probably have to buy more July metal and there still remains considerable August shipments to be sold both here and abroad. Electrolytic copper for June-July-August delivery is quoted firm at 14.75c., delivered in the Connecticut Valley. Very little is heard of premiums for prompt shipment. The quotation of Copper Exporters, Inc., is unchanged at 15c., c.i.f. European ports. The Lake copper market is quiet, but very firm at 14.87½c., delivered.

Tin.—Sales for the week ended Saturday, June 23, were heavy at not less than 1700 tons. Consumers took some of this metal, but the bulk was absorbed by dealers. June 20 was the most active day with prices higher and sellers shy. Between 400 and 500 tons changed hands. Another good day was June 22 when 400 tons was sold. Yesterday, Monday, was a quiet day with not over 150 tons changing hands. Today the market has been only moderately active with spot Straits tin quoted at 46.25c., New York. Interest in spot tin is more active, but not on a large scale, and this is taken to indicate that some consumers are not fully supplied. Prices in London today were as follows: Spot standard, £215; future standard, £214 17s. 6d., and spot Straits, £208 per ton. The Singapore price was £209 10s. Arrivals thus far this month have been 4775 tons, with 5835 tons reported afloat.

Lead.—Prices are firm and unchanged at 6.15c., St. Louis, in the outside market and 6.30c., New York, as the contract price of the leading interest. Consuming demand is only moderate.

Zinc.—A fair amount of inquiry is reported today, but in general the market is and has been quiet. Prices are unchanged at 6.15c., East St. Louis, or 6.50c., New York, for prime Western, for early delivery, with a slight premium asked for futures. Ore prices are unchanged at $40, Joplin, at which about 7000 tons changed hands last week. Output is reported at around 11,000 tons. Producers are not forcing sales, and it is generally realized that consumers, not being covered ahead, must soon come into the market.

Nickel.—Quotations for wholesale lots of ingot nickel are unchanged at 35c. with shot nickel at 36c. and electrolytic nickel at 37c. per lb.

Antimony.—In a quiet market Chinese metal is quoted at 9.50c. to 9.75c., New York, duty paid, for all positions.

Aluminum.—Virgin metal, 98 to 99 per cent pure, is quoted at 23.90c. per lb., delivered.

Non-Ferrous Metals at Chicago

CHICAGO, June 26.—This market is quiet and prices lack strength except in zinc and copper. Prices in the old metals are holding in a dull market.

Prices, per lb., in carload lots: Lake copper, 14.75c.; tin, 50.25c.; lead, 6.25c.; zinc, 6.25c.; in less-than-carload lots, antimony, 12.75c. On old metals we quote copper wire, crucible shapes and copper clips, 10.75c.; copper bottoms, 9.75c.; red brass, 9.50c.; yel-

REINFORCING STEEL

Chicago Mercantile Mart Takes 5000 Tons—Awards of 16,125 Tons

WITH 5000 tons for the Chicago Mercantile Mart, 3000 tons for a warehouse in St. Louis and 2500 tons for a dock building in Brooklyn, awards reported to THE IRON AGE in the last week amounted to 16,125 tons. New projects totaled less than 1900 tons. Awards follow:

STATE OF VERMONT, 400 tons, 15 bridges to various companies.

BROOKLYN, 2500 tons, building for New York Dock Co., to Kalman Steel Co.

PHILADELPHIA, 300 tons, building for William Steel & Sons, to Kalman Steel Co.

CLEVELAND, 100 tons, Jewish hospital, to Pollak Steel Co.

CHICAGO, 450 tons of rail steel bars, Hyde Park State Bank, to unnamed bidder.

CHICAGO, 600 tons of rail and billet steel bars, Horder warehouse, to Joseph T. Ryerson & Son.

CHICAGO, 100 tons, Eleanor Club, to Joseph T. Ryerson & Son.

CHICAGO, 5000 tons of rail steel bars, Mercantile Mart, to Inland Steel Co.

CHICAGO, 250 tons, steam tunnels for University of Chicago, to Joseph T. Ryerson & Son.

ST. LOUIS, 3000 tons, warehouse for J. C. Penney Co.; McAnulty-Klein Co., general contractor, to Laclede Steel Co. and Missouri Rolling Mills Corporation.

ST. LOUIS, 370 tons, Rocky Branch sewer, to Missouri Rolling Mills Corporation.

EUGENE, ORE., 485 tons, dam, penstock and power house, to A. Guthrie & Co., Portland.

PORTLAND, ORE., 700 tons, Lovejoy viaduct, to Pacific Coast Steel Co.

LOS ANGELES, 225 tons, loft building, 1206 Maple Street, to unnamed interest.

SACRAMENTO, CAL., 120 tons, Cache Creek bridge, Tulare County, to unnamed interest.

SEATTLE, 175 tons, loft building, Eighth and Spring Streets, to unnamed interest.

SEATTLE, 250 tons, West Seattle public school, to Pacific Coast Steel Co.

SEATTLE, 150 tons, Von Herberg Building, to Pacific Coast Steel Co.

SEATTLE, 600 tons, Peck & Wills warehouse, to Northwest Steel Rolling Mills.

STATE OF WASHINGTON, 250 tons, highway work on Olympic peninsula, to Northwest Steel Rolling Mills.

VANCOUVER, B. C., 100 tons, grain elevator, to Northwest Steel Rolling Mills.

Reinforcing Bars Pending

Inquiries for reinforcing steel bars include the following:

FALL RIVER, MASS., 300 tons, technical high school.

CHICAGO, 570 tons, building for Miehle Printing Press Co.

ST. LOUIS, 500 tons, building for American Railway Express Co., at Union Station.

SEATTLE, 600 tons, Beacon Hill tunnel.

The C. G. Claussen Co., Inc., has been organized by Carl G. Claussen, formerly Pacific Coast manager for B. Nicoll & Co., New York, to handle the Pont-a-Mousson line of cast iron pipe and fittings in Oregon, Washington, California and the Hawaiian Islands. The main office of the new company has been opened in the Rialto Building, San Francisco, and a branch has been established in the W. M. Garland Building, Los Angeles, in charge of W. S. Conner.

Old Metals, Per Lb., New York

The buying prices represent what the large dealers are paying for miscellaneous lots from the smaller accumulators and the selling prices are those charged consumers after the metal has been properly prepared for their uses.

	Dealers' Buying Prices	Dealers' Selling Prices
Copper, heavy crucible	12.625c.	14.00c.
Copper, heavy and wire	12.50c.	13.50c.
Copper, light and bottoms	10.75c.	12.00c.
Brass, heavy	7.25c.	8.50c.
Brass, light	6.25c.	7.75c.
Heavy machine composition	9.75c.	11.00c.
No. 1 yellow brass turnings	8.50c.	9.375c.
No. 1 red brass or composition turnings	9.00c.	10.00c.
Lead, heavy	5.00c.	5.50c.
Lead, tea	4.00c.	4.50c.
Zinc	3.00c.	3.50c.
Sheet aluminum	12.75c.	14.50c.
Cast aluminum	12.50c.	14.00c.

FABRICATED STRUCTURAL STEEL

New York Hotel Award of 12,000 Tons in Total of 38,200 Tons

BOOKINGS of fabricated structural steel reported during the week totaled 38,200 tons, the largest being 12,000 tons for a New York hotel and 3000 tons for a mill building at Rome, Ga. New projects, amounting to 27,900 tons, included 7000 tons for an apartment building in New York and a number of jobs ranging from 1000 to 3000 tons. Awards follow:

BOSTON, 1800 tons, United States Gypsum Co. plant, to New England Structural Co.

SOMERVILLE, MASS., 350 tons, Boston & Maine Railroad bridge, to Boston Bridge Works, Inc.

QUINCY, MASS., 200 tons, Granite Trust Co. office building, to Harris Structural Co.

STATE OF VERMONT, 800 tons, several highway bridges; 200 tons to American Bridge Co. and remainder to several unnamed companies.

NEW YORK, 12,000 tons, New Yorker Hotel at Eighth Avenue, Thirty-fifth and Thirty-sixth Streets, to American Bridge Co.

NEW YORK, 760 tons in the following jobs as reported to the Structural Steel Board of Trade, Inc.: Cox bakery, Jamaica, to McClintic-Marshall Co.; Capital Club at 1260 Ocean Avenue, Brooklyn, and school at Bleeker and Vincent Streets, Maspeth, L. I., to George A. Just Co.

NEW YORK, 500 tons, Tammany Building at Union Square and Seventeenth Street, to Bethlehem Fabricators, Inc.

SYRACUSE, N. Y., 600 tons, mill building for Hoffmann Machinery Co., to American Bridge Co.

PHILADELPHIA 700 tons, State Theater, to Shoemaker Bridge Co.

PHILADELPHIA, 500 tons, North Broad Street Station, to McClintic-Marshall Co.

LANCASTER, PA., 500 tons, Fulton National Bank, to Shoemaker Bridge Co.

PENNSYLVANIA RAILROAD, 200 tons, bridges, to American Bridge Co.

ROME, GA., 3000 tons, mill building for American-Chatillon Co., to McClintic-Marshall Co.

DETROIT, 850 tons, Y. W. C. A. building; from F. R. Patterson Construction Co., general contractor, to Massillon Bridge & Structural Co.

DETROIT, 630 tons, building for Michigan Bell Telephone Co., to Whitehead & Kales Co.

DETROIT, 967 tons, Fort Road grade crossing separation for Pennsylvania, Wabash and Michigan Central railroads, to unnamed bidder.

LANSING, MICH., 300 tons, train sheds for Durant Motors, Inc., to Flint Structural Steel Co.

LANSING, MICH., 177 tons, municipal bridge over Grand River, to American Bridge Co.

GRAND RAPIDS, MICH., 150 tons, warehouse for Kroger Grocery & Baking Co., to Flint Structural Steel Co.

STATE OF MICHIGAN, 110 tons, highway bridges, to Massillon Bridge & Structural Co.

FAIRFIELD, OHIO, 400 tons, Government aerodome, to Pittsburgh-Des Moines Steel Co.

YORKVILLE, OHIO, 150 tons, plant extension for Wheeling Steel Corporation, to McClintic-Marshall Co.

AKRON, OHIO, 500 tons, Loew Theater, to Forest City Structural Co.

LUCAS COUNTY, OHIO, 350 tons, highway bridges, to American Bridge Co.

SOUTH BEND, IND., 1000 tons, passenger station, to McClintic-Marshall Co.

CHICAGO, 100 tons, garage at 868 North Clark Street, to Midland Structural Steel Co.

CHICAGO, 500 tons, St. Michael High School, to New City Iron Works, local.

CHICAGO, 100 tons, building for Interstate Iron & Steel Co., to American Bridge Co.

CHICAGO, 2700 tons, Harmon sports arena, to Duffin Iron Co.

NELSON, ILL., 1000 tons, bridge for Chicago & North Western Railroad, to Wisconsin Bridge Co.

KANSAS CITY, MO., 110 tons, warehouse for Corn Products Refining Co., to McClintic-Marshall Co.

SEATTLE, WASH., 200 tons, clinker building for Pacific Coast Cement Co., to Wallace Bridge & Structural Steel Co.

SPOKANE, WASH., 1600 tons, Paulsen Building, to Hofius Steel & Equipment Co.

SPOKANE, WASH., 1700 tons, Medico-Dental Building, to Hofius Steel & Equipment Co.

PULLMAN, WASH., 130 tons, home economics building for Washington State University, to Hofius Steel & Equipment Co.

EUGENE, ORE., 180 tons, dam, penstock and power house, to A. Guthrie & Co., Portland, Ore.

SAN FRANCISCO, 800 tons, 525 tons of plates and 275 tons of shapes, carfloat for Santa Fe, to Moore Dry Dock Co.

LOS ANGELES, 100 tons, factory, Sorenson Lane, to Llewellyn Iron Works.

LOS ANGELES, 470 tons, apartment building, 5930 Franklin Avenue, to Baker Iron Works.

LOS ANGELES, 170 tons, garage for Firestone Tire & Rubber Co., to McClintic-Marshall Co.

VERNON, CAL., 900 tons, factory for Illinois-Pacific Glass Co., to Llewellyn Iron Works.

Structural Projects Pending

Inquiries for fabricated steel work include the following:

HARTFORD, VT., 200 tons, State bridge.

NEW YORK, 7000 tons, combination apartment building, warehouse and garage at Forty-eighth and Forty-ninth Streets and East River.

STATE OF NEW YORK, 500 tons, highway bridges.

ATLANTIC CITY, N. J., 500 tons, extension to Chalfont-Haddon Hall; alternate bids on arc welded.

ATLANTIC CITY, 350 tons, Hotel Morton.

ATLANTIC CITY, 1000 tons, Embassy Theater.

PHILADELPHIA, 2000 tons, loft building at Eighth and Arch Streets.

PHILADELPHIA, 1000 tons, apartment building.

WASHINGTON, 2000 tons, bascule lift section of Arlington Memorial bridge.

SPARTANBURG, S. C., 1000 tons, mill building; Lockwood, Greene & Co., Inc., engineer.

LOUISVILLE, KY., 14,000 tons, highway bridge; bids taken July 6.

PITTSBURGH, 1100 tons, tipples and other construction for Pittsburgh Coal Co.

MENASHA, WIS., 350 tons, bascule span over Government canal; bids close June 29.

BLAIR, WIS., 1200 tons, highway bridge.

DULUTH, 1000 tons, three scows to be built by Marine & Shipbuilding Works, local.

HARVEY, ILL., 150 tons, building for Bliss & Laughlin, Inc.

MINNEAPOLIS, 600 tons, Wesley Temple.

ST. PAUL, 600 tons, building for St. Paul Fire & Marine Insurance Co.

KANSAS CITY, MO., 2400 tons, assembly plant for Chevrolet Motor Car Co.

OMAHA, NEB., 3000 tons, three projects before local fabricators.

INDEX, WASH., 200 tons, bridge span for Wallace Falls Timber Co.

OAKLAND, CAL., 170 tons, Niles Canyon bridge; bids July 16.

SAN FRANCISCO, 170 to 265 tons, Dollar Building addition; bids opened.

LOS ANGELES, 250 tons, apartment building in Hollywood; bids being taken.

LOS ANGELES, 350 tons, apartment building, Second Street and Gramercy Place; bids being taken.

LOS ANGELES, 138 tons, apartment building, 840 South Hobart Street; bids being taken.

The Colorado Fuel & Iron Co., Denver, has adopted group life insurance for all its employees. The Equitable Life Assurance Society, New York, has been named to underwrite the program, which will take effect on July 1 and will probably involve $20,000,000 of insurance. By this action more than 11.000 employees, located in properties stretching from Wyoming to the Mexican border, are offered $1,000 to $2,000 of life and total permanent disability protection, varied according to length of service, at a low cost, by reason of the participation of the company in the premium. This protection also extends to workers employed by subsidiary companies.

Cincinnati Iron and Steel Market

(Concluded from page 1856)

1.90c., base Pittsburgh, is scheduled to go into effect on bars, structural shapes and plates, users are continuing to specify at only a fair rate against old contracts. Whether the effort to secure $1 a ton more for next quarter's requirements will have the effect of forcing in tonnages at the old price before the end of the month seems doubtful, for consumers are not yet of the opinion that producers will not accept future bookings at 1.85c. However, several district offices of steel companies report that a number of customers have signed new contracts at 1.90c. Despite this favorable development, mills are having difficulty in getting users to commit themselves to the new schedule. The prolonged quietness in the structural steel market in this district has helped to weaken the position of sellers, who are in need of additional tonnages to maintain operations at a satisfactory level. Furthermore, fabricators also are suffering from the scarcity of major jobs and, as a result, their shops have little work ahead. The situation in sheets from the standpoint of prices is worse than a week ago. Mills that have been refusing to sell black sheets at less than 2.75c., base Pittsburgh, have lowered quotations $2 a ton to 2.65c., but on the higher finishes attractive orders are being booked by several independent producers at concessions of $2 to $3 a ton from the accepted base of 2.65c., Pittsburgh. In galvanized sheets, roofing stock is being sold in the South at delivered prices which figure back to 3.30c. to 3.35c., base Pittsburgh. These low quotations have been made by Northern makers who are competing with a Southern mill having a freight advantage to Southern points. Blue annealed has become fairly well stabilized at 1.90c. to 2c., and automobile body stock, at 4c. District sheet companies are operating mills at a rate approaching full capacity, and unfilled orders insure a continuation of the present production schedule for two weeks.

Reinforcing Bars.—The volume of small miscellaneous orders is holding up well, despite the absence of sizable projects. Prices are firm, with new billet bars selling at 1.85c., base Pittsburgh, and rail steel bars at 1.80c., base mill.

Warehouse Business.—Sales continue to maintain a small marginal advantage over those in May, and, unless there should be an unexpected drop in orders the coming week, bookings in June will exceed those of the previous month. Bars and structural steel are the leading products in volume of business. Quotations are showing strength.

Coke.—Shipments of by-product foundry and domestic coke this month are expected to approximate closely those in May. Although no announcement has been made by coke makers, prices during July probably will remain unchanged in both foundry and domestic grades. A local dealer has sold 8000 tons of Wise County beehive foundry coke to a Wisconsin melter. Demand for New River foundry coke is light.

Foundry coke prices per net ton delivered Cincinnati: By-product coke, $9.02; Wise County coke, $7.09 to $7.59; New River coke, $9.09 to $9.59. Freight rates, $2.14 from Ashland, Ky.; $2.59 from Wise County and New River ovens.

Old Material.—There have been few transactions in the past week, the market being exceptionally quiet. Steel plants in this district are accepting a fair amount of material on current contracts. Prices given below are largely nominal, because of the absence of buying.

Dealers' buying prices per gross ton f.o.b. cars, Cincinnati:

Heavy melting steel	$10.75 to $11.25
Scrap rails for melting	11.25 to 11.75
Loose sheet clippings	8.25 to 8.75
Bundled sheets	9.25 to 9.75
Cast iron borings	7.75 to 8.25
Machine shop turnings	7.25 to 7.75
No. 1 busheling	10.00 to 10.50
No. 2 busheling	6.00 to 6.50
Rails for rolling	12.50 to 13.00
No. 1 locomotive tires	12.75 to 13.25
No. 1 railroad wrought	10.00 to 10.50
Short rails	15.75 to 16.25
Cast iron carwheels	12.25 to 12.75
No. 1 machinery cast	15.25 to 15.75
No. 1 railroad cast	12.75 to 13.25
Burnt cast	7.50 to 8.00
Stove plate	8.25 to 8.75
Brake shoes	9.50 to 10.25
Railroad malleable	11.50 to 12.00
Agricultural malleable	11.00 to 11.50

PERSONAL

Franklin E. Bragg of N. H. Bragg & Sons, Bangor, Me., was elected president of the New England Iron and Hardware Association at the annual meeting held on June 19 in Boston. He has been vice-president of the organization and succeeds William A. Hopkins, Decatur & Hopkins Co., Boston, who has served two terms. William H. Bowe, Herrick Co., Boston, was elected vice-president to succeed Mr. Bragg. In addition to Messrs. Hopkins, Bragg and Bowe, the following directors were elected for the ensuing year: Charles A. Adams, John B. Varick Co., Manchester, N. H.; Charles W. Henderson, Jr., and R. H. Sanderson, E. P. Sanderson Co., Cambridge, Mass.; R. M. Boutwell, Standard Horse Shoe Co., Boston; Frank F. Chase, Chase, Parker & Co., Boston; F. Marsena Butts, Butts & Ordway Co., Boston; M. B. Damon, Fitchburg Hardware Co., Fitchburg, Mass.; C. C. Dodge, George F. Blake, Jr., & Co., Worcester, Mass.; George M. Gray, Peter Gray & Sons, Cambridge; G. M. Congdon, Congdon & Carpenter Co., Providence, R. I.; Quincy W. Wales, Brown-Wales Co., Boston, and C. D. Alexander, Emery, Waterhouse Co., Portland, Me. George J. Mulhall was reelected treasurer and clerk of the association.

—

S. Wells Utley, president Detroit Steel Castings Co., Detroit, was elected president of the Detroit Board of Commerce at a meeting of the board of directors held on June 19. Mr. Utley has been president of the American Foundrymen's Association for the last two years.

—

Herman Diederichs, director of Sibley School of Mechanical Engineering, Cornell University, has been made the first incumbent of a new professorship endowed by alumni of the University in memory of John E. Sweet, a member of the first faculty of Sibley College, one of the founders of the American Society of Mechanical Engineers and the inventor of the straight-line steam engine. Professor Diederichs is a graduate of Cornell, having received the degree of mechanical engineer in 1897.

—

John A. Coleman, 1006 Washington Avenue, Houston, Tex., has been appointed Texas representative for the Roller-Smith Co., 233 Broadway, New York, maker of electrical instruments and circuit breakers. He has had wide experience in the electrical business and in his territory.

—

Charles A. Terry, vice-president Westinghouse Electric & Mfg. Co., has been elected a director, taking the place left vacant by the death of Gen. Guy E. Tripp.

—

B. J. Matteson, industrial relations chief and industrial representative of the president of the Colorado Fuel & Iron Co., Denver, is retiring from that office. His assistant, William I. Reilly, has resigned, also, according to a report from Denver.

—

H. T. Weeks has been appointed representative in Colorado, Utah, Wyoming and northern New Mexico for the Roller-Smith Co., 233 Broadway, New York, maker of electrical instruments and circuit breakers. His headquarters are in the United States National Bank Building, Denver. He will handle the entire line of products put out by the company. He has had wide experience both in the electrical business and in the territory he will cover.

—

George Smith has been appointed vice-president of the Hanson-Van Winkle-Munning Co. (electro-plating equipment), Matawan, N. J. He will be in charge of the activities of the company in the Central and Western States. A native of New England, Mr. Smith entered business with the General Electric Co., Lynn, Mass. On Sept. 1, 1922, he joined A. P. Munning & Co., in charge of automatic electro-plating installations, directing the design of machinery. A year later he went to Roth Brothers & Co., Chicago, as vice-president and general manager, coming back now to the other organization under its present name.

Richard F. Grant has resigned as vice-president of the M. A. Hanna Co., Cleveland, and as president of the Susquehanna Collieries Co., anthracite division of the Hanna company, to become head of the newly formed sales corporation of the Lehigh Valley Coal Co. He has been succeeded as president of the Susquehanna company by James Prendergast, who has had charge of anthracite sales of the Hanna company.

—

J. M. Fuller, president Harrington & King Perforating Co., Chicago, is abroad on a vacation until September.

—

Robert A. Gillies, assistant superintendent of blast furnaces at the South works, Illinois Steel Co., Chicago, has been made superintendent of the Steel Company of Canada, Ltd., Hamilton, Ont. Mr. Gillies was first employed in the chemical laboratories of the South works. He was made assistant superintendent in 1925.

—

Robert L. Browne, 1425 Statler Office Building, Boston, has been appointed district sales representative of the Swift Electric Welder Co., Detroit, for the Eastern territory, comprising the State of New York and the New England States.

—

Hyman Botwinik, treasurer Botwinik Brothers, Inc., machinery merchant, New Haven, Conn., is leaving for a three or four months' pleasure and business trip to Europe, where he will visit England, France, Germany, Russia, Italy and other countries.

—

Raymond O. Abbott, who for three years has been secretary and treasurer of the National Pipe Bending Co., New Haven, Conn., has now been elected president and treasurer, succeeding H. S. Brown, who recently passed away. Wade G. Marks, sales promotion manager, was elected secretary. It is the aim and plans of the present officers to continue the company along the same general policy as under Mr. Brown's régime.

—

O. H. Davidson, president O. H. Davidson Equipment Co., 130 West Fourteenth Avenue, Denver, has been appointed district manager in the Rocky Mountain territory by the Oliver Iron & Steel Corporation, Pittsburgh. Mr. Davidson will represent the bolt, nut, rivet and pole line material departments of the Oliver company.

—

L. F. Dolan, 27 Hancock Street, Dorchester, Mass., will handle sales in Massachusetts for the Hill Clutch Machine & Foundry Co., Cleveland.

—

A. E. Woolam, Box 1089, Kalamazoo, Mich., is to handle Southern Michigan sales for the Hill Clutch Machine & Foundry Co., Cleveland.

—

George D. Buckwell, for the past eight years Pittsburgh district manager for the M. A. Hanna Co., Cleveland, has resigned, effective July 1, to become associated with the Sharpsville Furnace Co., with blast furnaces at Sharpsville, Pa., and Neville Island, Pittsburgh. He will serve as manager of sales of pig iron, coke and by-products.

—

George J. Lynch, who has been assistant district manager in the New York office of the Chicago Pneumatic Tool Co., has been appointed the company's district sales manager at St. Louis, with headquarters at 1931 Washington Avenue.

—

H. G. Graham has been named head of the metallurgical and inspection department of the Jones & Laughlin Steel Corporation, Pittsburgh. He succeeds F. S. Slocum, who retires July 1.

—

R. H. Clarke, vice-president and general manager of the Otis Steel Co., Cleveland, sailed a few days ago for an extended trip through Europe.

—

Thomas J. O'Brien, secretary and director of purchases for the Fort Pitt Malleable Iron Co., Pittsburgh, has severed that connection, after an association of more than 25 years with that company.

OBITUARY

FRED H. MCISAAC, secretary and treasurer of the Lamson & Sessions Co., Cleveland, died suddenly June 20, aged 43 years. He had long been identified with the bolt and nut industry in the Central West and was an active participant in convention work of the American Hardware Manufacturers' Association and various other organizations. Mr. McIsaac was born in Detroit and began his business career with the Kirk-Latty Mfg. Co., Cleveland, in 1901. He was advanced through various positions, finally becoming president of that company in 1926. When the company was consolidated with the Lamson & Sessions Co. he was made secretary and treasurer of the consolidated company.

F. H. MC ISAAC

—

SAMUEL RALPH JONES, a director and officer of the E. D. Jones & Sons Co., Pittsfield, Mass., paper mill machinery manufacturer, died June 21 at his home in that city, aged 50 years. He was well known in the New England pig iron and machine tool trade.

—

WILLIAM H. PETERS, vice-president and director of purchases, Jaeger Machine Co., Columbus, Ohio, maker of gas engines, died on June 20.

—

COL. CHARLES CLIFTON, chairman of the board, Pierce-Arrow Motor Car Co., Buffalo, died at his home in that city, June 21, after an illness of a week. He was in his seventy-fifth year. Mr. Clifton was born in Buffalo Sept. 20, 1853, and started his business career in 1871 as a clerk in the hardware store of Sidney Shepard & Co., Buffalo. His experience included work in the passenger department of the Erie Railroad and with other organizations, until, in 1897, he became secretary and treasurer of the George N. Pierce Co., Buffalo. When this company was reorganized in 1909 as the Pierce-Arrow Motor Car Co., he remained its treasurer until he was elected president in 1916. He had been chairman of the board since 1919. When the Automobile Manufacturers' Association was dissolved in 1904, giving place to the National Automobile Chamber of Commerce, Mr. Clifton became the first president and held that office for 23 years, resigning in March, 1927. Since that time he had been honorary president and director of the chamber. He was an officer of the National Guard from 1881 to 1893.

COL. C. CLIFTON

—

GUSTAV H. KOVEN, president L. O. Koven & Brother, range boiler manufacturer, Jersey City, died on June 11.

—

R. E. MOORE, sales manager for Gar Wood, Inc., motor boat manufacturer, died at the wheel of a speed boat which he was guiding on the Detroit River on June 17. In the boat with him at the time he collapsed were his wife and a party of friends; the boat ran wild for several minutes. Investigation showed that Mr. Moore, who was 37 years old, had suffered a heart attack.

—

J. JACOB PIPPART, founder, president and general manager of the Genesee Tack Co., Mount Hope Avenue, Rochester, N. Y., died at his home in that city on June 20 after a long illness.

—

WINFIELD S. BARNES, president Barnes Construction Co., Philadelphia, died on June 19 at the Frankford Hospital in that city, aged 48 years. He had been engaged in structural iron and steel fabricating for many years, and during the World War was head of the Winfield S. Barnes Engineering Corporation, which was active in the production of marine mines and depth bombs.

—

JOHN S. ROBERTS, formerly connected with the United States Cast Iron Pipe & Foundry Co., died at his home in Cleveland on June 18. He was born Aug. 31, 1863, and had been connected with the pipe industry for 34 years. For the last 14 years he has served as resident manager of the Cleveland shop of the United States company. Mr. Roberts was identified with all civic projects in Cleveland and was well known in the waterworks industry.

May Canadian Output of Pig Iron and Steel

TORONTO, June 25.—The production of pig iron in Canada in May amounted to 87,811 gross tons, which was 18 per cent over the 74,736 tons produced in the preceding month and compares with 78,987 tons reported for May, 1927. While the production of foundry iron fell off sharply, it was more than offset by increased output of basic iron and malleable. Foundry iron dropped from 21,539 tons in April to 7667 tons in May; basic iron rose from 52,346 tons in April to 68,945 tons in May, and while only 851 tons of malleable iron was produced in April, 11,199 tons were made in May.

For the five months ended with May the cumulative production of pig iron was 370,634 gross tons, an increase of 11 per cent over the 334,276 tons produced during the corresponding period of 1927. This year's output included 286,762 tons of basic iron; 62,108 tons of foundry iron and 21,762 tons of malleable iron. The bulk of the basic iron was made for the further use of producers, while most of the foundry and all of the malleable iron was for direct sale.

The producing furnaces during the month had a daily capacity of 3150 tons per day.

The production of ferroalloys in Canada during May at 4049 tons was 10 per cent under the 4505 tons produced in April.

The production of steel ingots and castings in Canada in May amounted to 117,655 tons, an increase of 4 per cent over the 112,780 tons of the previous month, and 22 per cent greater than the 96,711 tons produced in May last year. The gain for the month was wholly accounted for by the increased output of basic open-hearth steel ingots, which advanced to 112,488 tons from 106,868 tons in April.

For the five months ended with May the cumulative production of steel ingots and direct steel castings totalled 531,808 tons, an increase of 24 per cent over the 427,370 tons produced during the corresponding five months of 1927. This year's output to date included 512,533 tons of steel ingots and 19,275 tons of direct steel castings.

The Dominion Bureau of Statistics' index for prices (1913 = 100) was practically unchanged, being 141.7 for May as compared with 141.5 in April.

The Phoenix Steel Products Co., Phoenix, Ariz., has been appointed exclusive agent in Arizona for the products of the Truscon Steel Co., Youngstown, Ohio. The Phoenix company will have access to the complete stock of building products carried in the Los Angeles warehouse of the Truscon organization.

BETTER EXPORTS IN PROSPECT

American Mills Compete for Barbed Wire—China More Active—Importers Here Plan Tariff Protest

New York, June 26.—Export business with Far Eastern markets continues rather small, but many exporters see evidences of improvement in the outlook for foreign trade in iron and steel products. Although the Japanese market is quiet, there has recently been a slight increase in the volume of inquiry from Chinese merchants, particularly those in South China, and trade in certain products has been increasing in South American markets. Chinese buyers are actively seeking large and small tonnages of tin plate waste and tin plate waste waste, and some sizable shipments are reported being made both to Hong Kong and Shanghai. Recent sales of wire shorts have been at $40 per ton, c.i.f. Hong Kong, and $41 per ton, Shanghai, and there are numerous offers to buy at $39 per ton, c.i.f., which exporters here consider too low to permit a profit. China is also buying bar crop ends and plate ends and cuttings, some recent sales of which have been at $19 per ton, f.o.b. Sparrows Point, Md., and other Atlantic ports. This material is classified as scrap, and it is noteworthy that the May exports of scrap were unusually large, at about 59,000 tons.

Business with South American buyers has increased recently, as a result of larger buying of barbed wire, on which mills in the United States are evidently selling at $1 to $2 per ton lower than the present Continental quotations. On a recent inquiry for 500 tons of 50-lb. rails for Callao, Peru, Continental mills are understood to have been $1 or more per ton higher in price than the leading export interest in the United States, despite the fact that the ocean freight rate from European ports was slightly less than the rate from this country.

Japanese Exporters May Combine

Exporters to Japan have recently been quoting on desirable tonnages of wire rods, some of which are understood to have gone to the Canadian maker, which is again in the market for wire rod business, following a brief period in which the mill was fully booked with Canadian rail orders. The recently reported combination of the United States Steel Products Co. and the Bethlehem Steel Corporation in a common export organization may result in a slight change in the present methods of trading with Japan. The two leading Japanese export houses are understood to have cooperated recently in certain instances, when a large order was under consideration, and it is believed that, with the two leading export interests combined, the two leading Japanese exporters in this country may find it profitable to work more closely than formerly, as they will have less competitive prices to submit to Japanese buyers.

Foreign Steel Prices Decline

Quotations of Continental steel mills to importers in the United States have declined slightly in the past week, but in most cases not to exceed 2c. to 3c. per 100 lb. Plain steel bars, which were quoted at the peak at about 1.90c. per lb., base, c.i.f. New York, have dropped to about 1.88c. per lb., and structural shapes range from as low as 1.58c. per lb. to 1.68c. per lb., c.i.f. New York, the price depending upon the tonnage involved, sizes specified and the country of origin. European mills are apparently beginning to seek tonnage again, following several weeks in which most of them evinced no special interest in selling except at premium prices.

Importers to Protest Tariff Decision

The decision of the United States Treasury Department that bar-size channels, angles and tees should be classified under paragraph 304, covering bars, instead of under paragraph 312, covering structural material and building forms, will evidently be protested by the importers affected by the ruling. The decision of the Treasury Department, reported in The Iron Age, June 21, page 1762, was that bar-size channels, angles and tees, when in sizes less than 3 in., are not known as structural shapes as that term is used commercially. The report further pointed out that these sizes are bought and sold on a bar basis and not on the basis of structural shapes.

The importers of steel who are affected by this ruling, however, point to the specific and inclusive wording of paragraph 312, which covers structural shapes, as follows:

> Paragraph 312. Beams, girders, joists, angles, channels, car-truck channels, tees, columns and posts, or parts or sections of columns and posts, deck and bulb beams, and building forms, together with all other structural shapes of iron or steel, not assembled, manufactured or advanced beyond hammering, rolling or casting, one-fifth of 1c. per lb.; any of the foregoing machined, drilled, punched, assembled, fitted, fabricated for use, or otherwise advanced beyond hammering, rolling, or casting, 20 per cent ad valorem; sashes, frames and building forms, of iron or steel, 25 per cent ad valorem.

The importers claim that in this paragraph, the statement "building forms, together with all other structural shapes of iron or steel" covers the small, bar-size shapes in question.

What to Require in Foundry Coke

(*Concluded from page* 1814)

all times. This affects the slag, as ash with high alumina makes a very viscous slag.

Chemical analysis has little to do with the characteristics of coke, in the opinion of E. J. Lowry. This is particularly true of beehive coke. He cited a case in which 100 per cent Pocahontas coal, coked for 96 hr., made a poor product, as it was impossible to get the slag or the iron to run well with it. With by-product coke, he believes that best results are obtained when the cellular space is about 48 per cent of the volume.

That physical characteristics of coke are more important than the chemical analysis, however good an indication that may be, was the contention of another speaker. He called particular attention to the structure of the coke and to the shatter test. He expressed the opinion that fine material in a carload makes a lot of difference with the performance of the coke. Similar opinions were voiced by other speakers. Walter M. Saunders, Saunders & Franklin, Providence, R. I., believes the physical condition of coke is its most important characteristic, aside from the question of ash and sulphur. The piece should be large and strong and should burn readily.

Some Coke Breaks Up Readily

By-product coke appears to be especially sensitive to breaking up in handling, according to Mr. MacKenzie. He mentioned cases in which 2-in. coke generally gave better results than that graded as 3-in. coke; the larger piece broke up in going down to the melting zone and resulted in placing a greater quantity of small stuff down there.

Sulphur is present in coal in three forms—pyrites, sulphate and organic combinations—according to A. C. Porter, Lincoln Foundry Co., Lincoln, Neb. Whether this is true also of coke we do not know. There is room for investigation to learn about these forms of sulphur as regards coke. There is a great deal to be learned also about the connection between the chemical composition of the coke and its physical qualities. The amount and character of ash may affect the surface of the cellular openings and thus produce an effect upon the combustibility of the coke.

A plea for guidance was made by M. H. Moore, of the Piston Ring Co., Muskegon, Mich. He stated that his company turns out as much as 310,000 castings in a day and that 5 min. of poor operation of the cupola may result in 10,000 spoiled castings. For this reason, close control is essential.

In closing the discussion, Mr. Selvig spoke of means of obtaining correlation between laboratory tests and the practical results in the cupola. Among other things he mentioned a case in which by-product coke and beehive coke made from the same coal gave markedly different operating results. By-product coke produced a larger amount of clinker in the ash. The problem is squarely up to the foundrymen to tell the coke maker what properties in the coke they find most desirable.

Machinery Markets and News of the Works

SALES STILL AT GOOD RATE

Orders from Implement Makers Increase Bookings in Chicago District

More Equipment Required for Boston Schools —A Third List to Be Issued Later

MACHINE tool sales continue at the average rate of May, and in some centers, notably Chicago, there has been an increase in the volume of business. Orders placed by agricultural implement manufacturers have contributed to what appears will be one of the largest month's business in many years in the Chicago district.

The flow of new inquiry is fairly steady. A feature of the present activity is the widespread demand, both inquiries and orders coming from many different industries. This class of business is reported to have been the best in several years.

Stock taken of the volume of business placed during the first six months of 1928 indicates an increase of 15 to 20 per cent over the same period last year. The outlook for the last half of the year is regarded by some machine tool builders as fair, with possibly a slight let-down in July and August, due to the usual seasonal lull.

A second list of tools for the Hyde Park district school has been issued by the city of Boston. It comprises 25 items, including lathes, grinders and drilling machines. Another list, calling for milling machines and other comparatively large tools, is expected within a week.

Other inquiries include one from the General Electric Co., five turret lathes being among the machines required.

Sizable purchases have been made by the Caterpillar Tractor Co., Peoria, Ill., and the Case Threshing Machine Co., Racine, Wis. Deere & Co., Waterloo, Iowa, have practically closed their list.

New York

NEW YORK, June 26.

MACHINE TOOL business is expected by most sellers in this district to reach as large a total for June as in any previous month this year. There is also a fairly steady flow of new inquiries, promising continued activity. The Wright Aeronautical Corporation, Paterson, N. J., is still one of the outstanding buyers of tools in this territory. In addition to the substantial list of tools under inquiry for the extension to its plant on adjoining property, the company closed last week on a number of tools, including several engine lathes, a turret lathe and a tool grinder. The General Electric Co., Schenectady, is inquiring for a list of tools, including five turret lathes, and closed the past week on several lathes, boring mills and milling machines for its refrigerating machinery plant. Dwight P. Robinson & Co., New York, are in the market for a 10-in. and 16-in. engine lathes.

Recent machine-tool sales of Pratt & Whitney Co., have included 27 lathes, of which 18 13-in. engine lathes were in one order, five 16-in. lathes in another, and four 7-in. x 32-in. bench lathes in a third. Other recent sales by this company have included a No. 4 die sinker, two No. 1A and three No. 2 jig borers, 6-in. vertical shaper, 14-in. vertical surface grinder, 8-in. rotary surface grinder, two No. 3 bench universal milling machines and one 6-in. x 20-in. thread milling machine.

Niles-Bement-Pond Co., recently closed a No. 5 Newark gear cutting machine, 4-spindle Acme nut tapping machine, Ohio No. 2 universal milling machine, 32-in. shaper, No. 2 surface grinder, universal cutter grinder and three 3-ft. Morris radial drills.

Recent sales of squaring and gap shears by Kutscheid Mfg. Co., Chicago, totaled 16; buyers included Thompson-Starrett Co., New York; Fairchild Airplane Mfg. Co., Farmingdale, N. Y.; Sexauer & Lemke Co., Long Island City; Birmingham Fabricating Co., Birmingham; James Hunter Machine Co., North Adams, Mass.; Shull Co., Washington and Wadsworth-Core Machine & Equipment Co., Akron, Ohio.

General Cable Co., 114 Liberty Street, New York, manufacturer of electrical wires and cables, has acquired property at Mobile, Ala., and plans new works to cost more than $200,000 with equipment.

Nathan Langer, 81 East 125th Street, New York, architect, has plans for a two-story automobile service, repair and garage building, to cost about $110,000 with equipment.

F. R. Smith, 9219 New York Avenue, Jamaica, L. I., has plans for a storage and distributing plant at Creedmore, L. I., to include one-story machine shop, 65 x 80 ft. Morrell Smith, 161-10 Jamaica Avenue, Jamaica, is architect.

Decorated Metal Mfg. Co., 199 Sackett Street, Brooklyn, has awarded general contract without competition to Barney-Ahlers Construction Corporation, 110 West Fortieth Street, New York, for a six-story addition, to cost approximately $115,000 with equipment.

Cohen & Siegel, 45 West Fifty-seventh Street, New York, architects, have taken out permit for two-story automobile service, repair and garage building, to cost in excess of $300,000 with equipment.

Allen Air Appliance Co., Inc., Glens Falls, N. Y., recently formed by Edward J. McEwen, 262 Broadway, Fort Edward, N. Y., and associates, with capital of $200,000, is said to be planning early operation of plant for manufacture of compressed air equipment and other machinery. George S. Witham, 106 Main Street, Hudson Falls, N. Y., is interested in organization.

Louis J. and Fred Ziehm, 34 Clinton Avenue, Albany, N. Y., have awarded general contract to Jasper Myers, 90 State Street, for a three-story addition to their automobile service, repair and garage building, including improvements in present structure, to cost about $120,000 with equipment.

American Radiator Co., 40 West Fortieth Street, New York, has acquired about 3 acres at New Rochelle, N. Y., fronting on New York Central Railroad, improved with building of 80,000 sq. ft. floor space, and will establish a new factory branch and distributing plant.

Fairchild Airplane Mfg. Co., 270 West Thirty-eighth Street, New York, is reported planning a new aircraft factory and assembling plant at Farmingdale, L. I., to cost in excess of $75,000. A housing development for employees also is projected.

Farber & Kalkin, 1746 Pitkin Avenue, Brooklyn, architects, have plans for a two-story automobile service, repair and garage building, 120 x 175 ft., to cost close to $130,000 with equipment.

George B. Cortelyou, president Consolidated Gas Co., 130 East Fifteenth Street, Oscar H. Fogg, vice-president of same company and president American Gas Association, 420 Lexington Avenue, New York, and associates have organized Ensign-Reynolds, Inc., with capital of $250,000, to operate plant in New York district for manufacture of gas-fired appliances, primarily industrial heating apparatus. Operations will begin soon.

Board of Education, Union Free School District No. 5, Ticonderoga, N. Y., plans installation of manual traning equipment in new two-story high school, to cost $275,000, for which bids will be asked on general contract early in July. Tooker & Marsh, 101 Park Avenue, New York, are architects.

Leon Dynkin and Harry Shapiro, Jersey City, N. J., have leased former local plant of American Wire Form Co., at 265-73 Grant Avenue, one-story, 100 x 100 ft., and will remodel for manufacture of metal novelties.

Columbia Store Fixture Co., Newark, has purchased former factory of Roseville Novelty Works, 367-71 North Fifth Street, comprising one and two-story building, on site, 75 x 125 ft., and will occupy for new plant.

D. W. May, Inc., 380 Central Avenue, Newark, manufacturer of electrical equipment and supplies, has awarded general contract to Becker Construction Co., 361 Grove Street, for two one-story factory units, to cost close to $50,000. Marshall N. Shoemaker, 15 Central Avenue, is architect.

Turner Machine Co., 28 Eagle Street, Newark, manufacturer of tanning machinery, etc., will begin work early in July on one-story machine shop, 60 x 92 ft., for which general contract recently was let to Enstice Brothers, Inc., 111 Academy Street, to cost about $25,000 with equipment.

Joseph Weber, 132 Twenty-sixth Street, Guttenberg, N. J., architect, is drawing plans for two-story and basement automobile service, repair and garage building, 100 x 105 ft., at West New York, to cost about $130,000 with equipment.

James T. Gordon Co., 11 Park Place, New York, has been appointed sales representative for Hill Clutch Machine & Foundry Co., Cleveland, in metropolitan New York territory.

Royal Plating & Polishing Co., formerly at 144 Bleecker Street, Newark, N. J., has moved to its new two-story plant at 152 Bleecker Street. Frank P. Barile is president. New chromium plating equipment is being installed.

New England

BOSTON, June 25.

MACHINE-TOOL business is better than it appears on the surface. Two of the largest local houses so far this month have done a very good business in high priced equipment, at least 15 machines having been sold. Two other firms also report good business and a fifth company states that it has booked larger sales this month than in May. Lathes, radial drills, milling machines, grinding machines and miscellaneous equipment are involved in current business. Used tools sold the past week include a heavy-duty Cincinnati miller, a gear cutter, several 14-in. and 16-in. lathes and a few small milling machines, most of them to shops near Boston.

The city of Boston has issued its second list of tools for the Hyde Park district school. It includes approximately 25 items, including lathes, grinding machines, upright and sensitive drills and hack saws. Another list calling for milling machines and large tools is expected within a week. Bids for the first lot of lathes are in. This business, together with buying by the Boston & Albany against its list of tools, and by other New England railroads, is expected to liven up the market. New inquiries from industrial plants are few. Demand for small tools has dropped off.

Business with New England machine-tool builders is spotty, yet collectively they are moderately busy. A Hartford plant is exceptionally busy and is operating night shifts in certain departments. One Worcester grinding machine maker is very busy, and another quite active, while a maker of miscellaneous tools in that city is more busy than it has been in some time. At least one Bridgeport shop is well engaged, and a Vermont plant is reported busier than it has been in months.

Edlund Co., Burlington, Vt., maker of can openers, has moved into larger quarters and is gradually taking on equipment.

Bryant Electric Co., Bridgeport, Conn., which recently acquired the Hemco Electric Mfg. Co., has tentative plans for new equipment.

Kesterman Brothers, Cranston, R. I., jewelry manufacturers, will build a new plant to cost $30,000 without equipment. Bench tools will be required later.

L. G. Balfour Co., Attleboro, Mass., jewelry manufacturer, has started on a construction program to enlarge its output. It also has under consideration new metal-working equipment.

Kidder Press Co., National Woodworking Machinery Co., Dover, N. H., and the United Printing Machinery Co., Boston, have consolidated as the U. P. M. Kidder Press Co., Inc. At a future date it is planned to consolidate plants and possibly to purchase new equipment.

Work is about to start on a one-story, 75 x 135 ft. plant for Froiland Chain & Mfg. Co., 2543 Main Street, Springfield, Mass. Paul Froiland is president. Plans are private.

Farrel Foundry Co., Waterbury, Conn., has plans for a three-story, 35 x 200 ft. addition.

An expansion program is being arranged by Holyoke Co., Holyoke, Mass., manufacturer of covered wire and cables, etc., at its Springdale plant, consisting largely of installation of additional machinery.

A. L. Adams Paper Co., Baldwinsville, Mass., has asked bids on general contract for two-story addition to mill, 82 x 100 ft., to cost close to $50,000 with equipment. Leo Shlick, 314 Beacon Street, Boston, is engineer.

Royal Typewriter Co., Hartford, Conn., has awarded general contract to Denis O'Brien & Sons, 118 Asylum Street, for two five-story additions, 68 x 190 ft., and 68 x 70 ft., respectively, to cost about $250,000 with equipment. Greenwood & Noerr, 847 Main Street, are architects and engineers. Headquarters are at 316 Broadway, New York.

Meisel Press Mfg. Co., 944 Dorchester Avenue, Dorchester, Boston, manufacturer of printing presses, parts, etc., has asked bids on general contract for one and two-story addition, 100 x 220 ft., to cost in excess of $150,000 with equipment. H. S. Cleverdon, 46 Cornhill Street, is architect.

Automatic Equipment Co., Attleboro, Mass., has leased space in a local factory and plans early establishment of plant for manufacture of an automatic fire extinguisher and patented oil burner.

Connecticut Light & Power Co., 36 Pearl Street, New Britain, Conn., has filed plans for two-story equipment storage and distributing plant, with mechanical repair shop, to cost close to $150,000 with equipment.

Chicago

CHICAGO, June 25.

MACHINE-TOOL orders in June from agricultural implement manufacturers will make the total volume for this month one of the largest in many years. Deere & Co. have practically closed their list for the Waterloo plant and the Caterpillar Tractor Co., Peoria, Ill., and Case Threshing Machine Co., Racine, Wis., are closing large purchases. The Santa Fe is reported also to have bought all but one item remaining on its list issued early in the spring.

Fresh inquiry for individual machines is more promising and there is a substantial volume of business coming from miscellaneous sources. Quotations on the large machines needed by the General Electric Co. at Chicago have been forwarded to Schenectady for final action. A Chicago forging plant has purchased a turret lathe.

Contract has been let by Aurora Foundry Co., 385 Spruce Street, Aurora, Ill., to Lylle & Frenier, 421 Fulton Street, for one-story addition, 45 x 140 ft., to cost close to $25,000 with equipment.

Master Planter Co., 800 North Clark Street, Chicago, manufacturer of tractors, agricultural equipment, etc., has filed plans for one and two-story plant, 75 x 126 ft., to cost about $60,000 with equipment.

Village Council, Truman, Minn., is asking bids until July 10 for a 75,000-gal. steel water tank on 100-ft. tower, including all incidental equipment, for municipal waterworks. Toltz, King & Day, Inc., St. Paul, Minn., is engineer

Chicago, Burlington & Quincy Railroad Co., 547 West Jackson Boulevard, Chicago, has awarded general contract to Burrell Engineering & Construction Co., 513 West Jackson Boulevard, for a new grain elevator at Council Bluffs, Iowa, to cost about $85,000 with conveying, loading and other equipment.

Barnes Drill Co., Chestnut Street, Rockford, Ill., manufacturer of honing machines and other machine tools, has awarded general contract to Security Building Co., 1016 Charles Street, for a one-story addition, 80 x 145 ft., to cost more than $50,000 with equipment. A. G. Eliel, Stewart Building, is architect.

Board of Education, Minneapolis, Minn., is considering installation of manual training equipment in extensions to Nokomis junior high school, to cost about $275,000. Schuett & Meier Co., Thorpe Building, are engineers.

George Brumlik, Chicago, operating an automobile service, repair and garage in local Engineers' Building, has awarded general contract to B-W Construction Co., 720 Cass Street, for a new ten-story service, repair and garage unit 80 x 150 ft., to cost in excess of $350,000 with equipment.

Phillip Gollner Plumbing Supply Co., Thirty-third Street and Archer Avenue, Chicago, is said to be planning early rebuilding of portion of plumbing and heating equipment plant destroyed by fire June 15, with loss close to $200,000 with equipment.

Metz Mfg. Co., Seventeenth and Elm Streets, Dubuque, Iowa, manufacturer of sash, doors and other millwork products, will soon take bids for a three-story addition to cost close to $65,000. C. I. Krajewski, 730 Main Street, is architect.

Board of Education, Dixon, Ill., plans installation of manual training equipment in new three-story high school to cost $375,000, for which bids have been asked on general contract. Royer, Danely & Smith, Urbana, Ill., are architects.

Hostler Coal & Coke Co., 417 South Dearborn Street, Chicago, recently appointed sales agent for Chattanooga Solvay by-product coke, manufactured by Tennessee Products Corporation, will distribute egg and nut size coke north of Ohio River.

Chicago Hardware Foundry Co., North Chicago, Ill., will spend $50,000 for improvements at its various properties. A new core room and a pattern room is to be erected at Elkhart plant.

Newton Mfg. Co., Newton, Iowa, manufacturer of novelties, is spending $40,000 for plant improvements.

Kutscheid Mfg. Co., Chicago, reports sales of squaring and gap shears to Zouri Drawn Metal Co., Chicago Steel Service Co., Belmont Sheet Metal Works, Caine Steel Co., Hanley & Co., and Triner Scale & Mfg. Co., all in Chicago; Durand Steel Locker Co., Chicago Heights, Cutler-Hammer Co., Milwaukee, Hastings Equity Grain Bin Mfg. Co., Hastings, Neb.

Philadelphia

PHILADELPHIA, June 25.

BIDS will soon be asked by M. Harrison Bonner, 1032 North Sixty-seventh Street, Philadelphia, architect, for a four-story automobile service, repair and garage building to cost in excess of $200,000 with equipment.

Philadelphia Rapid Transit Co., 810 Dauphin Street, Philadelphia, is arranging for increase in preferred stock from $30,000,000 to $35,000,000, proceeds to be used for construction and improvements, including multi-story automobile service, repair and garage in connection with bus terminal; site has been purchased near Broad Street and Olney Avenue.

Board of Trustees, Drexel Institute of Arts, Science and Industry, Chestnut and Thirty-second Streets, has completed plans for new three-story engineering building, to cost more than $200,000 with equipment. Day & Zimmermann, Inc., 1600 Walnut Street, is construction engineer.

Robert N. Dippy, Medical Arts Building, Philadelphia, architect, has plans for a new cold storage and refrigerating plant, 50 x 168 ft., to cost in excess of $100,000 with equipment.

Philadelphia & Reading Railway, Reading Terminal, Philadelphia, has had plans approved by city for terminal yard at Logan, with car repair and reconditioning facilities, in connection with electrification of lines to Germantown and Chestut Hill.

Barbour Iron Works, Marion Street and Pennsylvania Railroad, Trenton, N. J., will soon begin superstructure for one-story addition, 76 x 150 ft., to cost more than $50,000 with equipment. Walter Hankin, 224 East Hanover Street, is architect.

South Williamsport School District, South Williamsport, Pa., is considering installation of manual training equipment in two-story high school to cost in excess of $225,000. Lawrie, Green & Co., Third and Forster Streets, Harrisburg, Pa., are architects.

Parless Coal Co., Deiblers, Pa., has leased local coal washery and property of Mid-Anthracite Co., and will establish plant for production of coal briquettes. Additional equipment will be installed.

Department of Property and Supplies, State Capitol, Harrisburg, Pa., B. E. Taylor, secretary, is asking bids until July 9 for 129 cast iron lamp standards for installation in Capitol Park.

Susquehanna Collieries Co., Mount Carmel, Pa., has authorized electrification of its local Cameron colliery, to cost more than $65,000 with equipment. Headquarters are in Commercial Trust Building, Philadelphia.

Joint School Boards of Westgrove, Avondale and London Grove Townships, Westgrove, Pa., plan installation of manual training equipment in two-story junior and senior high school to be erected about midway between first two noted townships, to cost $250,000, for which general contract has been let to W. M. Francis, duPont Building, Wilmington, Del. E. W. Martin, duPont Building, is architect; Calvert & Barnes, 2114 Sansom Street, Philadelphia, are mechanical engineers.

South Atlantic States

BALTIMORE, June 25.

PLANS are being considered by Eastern Shore Public Service Co., Salisbury, Md., for extensions in steam-operated electric power plant at Vienna, Md., to double present capacity, to cost close to $500,000. Extensions are also planned in transmission lines.

Piedmont Corporation, Bona Allen Building, Atlanta, Ga., is completing plans for installation of rock-crushing plant in connection with quarry at Lithonia, Ga., to cost more than $250,000 with machinery. Standard gage railroad line will be built between quarry and plant.

Charlotte Paper Co., 214 South College Street, Charlotte. N. C., is reported planning new factory for manufacture of folding paper boxes, cartons, etc., to cost more than $85,000 with machinery.

Union Brothers, 37 West Cross Street, Baltimore, manufacturers of furniture, will soon take bids on general contract for first unit of new factory to cost upward of $75,000 with equipment. Benjamin Frank, 517 North Charles Street, is architect.

Nitrate Agencies Co., Wilmington, N. C., manufacturer of fertilizer products, has closed arrangements with Atlantic Coast Line Railroad Co., Wilmington, for rebuilding local plant recently destroyed by fire, to be occupied under lease. New unit will provide for about twice capacity of former plant and is estimated to cost $100,000 with machinery. It is scheduled for completion early in fall.

Georgia Power & Light Co., Atlanta, Ga., will issue bonds in amount of $2,700,000, and preferred stock totaling 11,300 shares, no par value, portion of proceeds to be used for expansion and improvements, including transmission lines.

Southern Metal Novelties Co., Greenville, S. C., recently formed by W. W. McIver, 40 Tindal Avenue, and associates, is reported planning early operation of plant for manufacture of metal goods.

General purchasing officer, Panama Canal, Washington, is asking bids until July 13, for one power shovel, pipe threading and cutting machines, metal bending machines, pneumatic hoist, journal jacks, bolts, nuts, rivets, rack castings, pumping machinery, etc., Panama schedule 1885.

Standard Looms, Inc., Spartanburg, S. C., care of Isaac Andrews, 519 East Main Street, president, recently formed by Mr. Andrews and associates with capital of $750,000, has purchased property in Fernwood Farms district, East Spartanburg, for a plant to manufacture textile looms and kindred equipment, for which plans are being drawn by Lockwood, Greene & Co., Charlotte, N. C., architects and engineers. Plant will consist of main machine shop, 70 x 500 ft.; foundry, 80 x 300 ft., and other units, to cost more than $250,000 with equipment.

Standard Fertilizer Co., Inc., Williamston, N. C., has begun an expansion program to double approximately present capacity. New machinery will be installed, including bagging equipment, conveying, loading and other handling apparatus. Company is a subsidiary of Standard Wholesale Phosphate Co., Continental Building, Baltimore.

P. H. Hanes Knitting Co., Winston-Salem, N. C., plans construction of power plant in connection with six-story mill addition, entire project to cost in excess of $175,000 with machinery. Mees & Mees, Kinney Building, Charlotte, N. C., are architects and engineers.

Buffalo

BUFFALO, June 25.

INSTALLATION of manual training equipment is planned by Board of Education, Potsdam, N. Y., in new high school, estimated to cost $300,000, for which plans will be drawn by Lansing & Green, Sherman Trust Building, Watertown, N. Y., architects.

DuPont Cellophane Co., Inc., River Road, Buffalo, manufacturer of special glazed paperized products under special process, has awarded general contract to duPont Engineering Co., Wilmington, Del., an affiliated organization, for one-story and three-story additions, reported to cost in excess of $200,000 with equipment.

Daniel C. Hungerford, 65 Ontario Street, Corning, N. Y., and associates have organized Standard Mfg. Co., with capital of $50,000, to operate a local iron and steel fabricating plant. Operations will begin soon. Francis C. Williams, 169 Cedar Street, is also interested in new company.

Houde Engineering Corporation, 1392 West Avenue, Buffalo, manufacturer of automobile shock absorbers, will soon begin superstructure for a one-story addition to cost in excess of $85,000 with equipment.

H. E. Holbrook Co., Caledonia, N. Y., manufacturer of builders' hardware, etc., is considering rebuilding of portion of plant destroyed by fire June 15, with loss reported at more than $40,000 with equipment. Headquarters are at 89 Federal Street, Boston.

The Crane Market

OVERHEAD crane inquiry is still in fair volume, but users of locomotive cranes have been rather inactive recently. Most of the overhead inquiry is for single pieces of equipment with the exception of a sizable list for export to South Africa, specifications on which are available from the Department of Commerce, Washington, or Custom House, New York. Bids on this list are to be in by July 25. Sheffield Steel Corporation, Kansas City, Mo., will buy a 10-ton, 120-ft. overhead electric traveling crane. Few new inquiries have appeared for locomotive cranes, except for used equipment, business in which is slightly more active than in new cranes. About the largest outstanding list of cranes and steam shovels is the inquiry from Dwight P. Robinson & Co., New York, for export to Argentina. No action has been taken on this inquiry as yet.

Among recent purchases are:

Corson Construction Co., 1600 Bushwick Avenue, Brooklyn, 5-ton capacity truck crane from Browning Crane Co.

Hobbs, Peabody Co., Charlotte, N. C., 5-ton capacity truck crane from Browning Crane Co.

Dixie Fuel & Supply Co., Detroit, 18-ton, 8-wheel steam locomotive crane from Orton Crane & Shovel Co.

American Steel Foundries, East St. Louis, Ill., two 20-ton, 108-ft. span electric cranes from Manning, Maxwell & Moore, Inc.

Marquette Cement Mfg. Co., La Salle, Ill., a 30-ton, power house crane from unnamed bidder.

Northland Coal Co., Ltd., Buchan, Can., ¾ yard drag line from Northwest Engineering Co.

Weyerhaeuser Timber Co., Klamath Falls, Ore., crawler gasoline shovel crane from Northwest Engineering Co.

Farris Engineering Co., Pittsburgh, 15-ton gasoline crawler crane from Northwest Engineering Co.

The Power Corporation, New York, 1-yard gasoline crawler shovel for development work at Watertown, N. Y.

Thunder Lake Lumber Co., Rhinelander, Wis., ¾-yard gasoline crawler shovel from Northwest Engineering Co.

K. E. Treylor, Charleston, Miss., 1-yard drag line from Northwest Engineering Co.

W. S. Hardwick, Beardstown, Ill., 1¼-yard drag line from Northwest Engineering Co.

J. N. Pitts, Sturgus, Sask., 1¼-yard gasoline shovel from Northwest Engineering Co.

Missouri-Kansas-Texas, 33-ton locomotive crane from American Hoist & Derrick Co.

Bingham & Taylor Corporation, Buffalo, has been formed with capital of $150,000 to take over and expand company heretofore operating as Bingham & Taylor, with foundry at 575 Howard Street, specializing in production of electric steel castings. New organization will continue in same line. It is headed by James W. and William J. Gibney.

United States Hoffman Machinery Corporation, 329 Temple Street, Syracuse, N. Y., manufacturer of clothes-pressing machinery, has awarded general contract to Dawson Brothers Construction Co., Union Building, for two-story unit to cost about $75,000 with equipment. Portion of structure will be equipped as foundry.

Lincoln Radiator Corporation, Utica, N. Y., will remove to North Tonawanda, N. Y., on Aug. 1. W. S. Murray is general manager and Elmer S. Hering, treasurer.

Fitzgibbons Boiler Co., Inc., Oswego, is planning to erect a foundry on property adjoining its plant. Homer Addams, 570 Seventh Avenue, New York, is president of company.

Cleveland

CLEVELAND, June 25.

MACHINE-TOOL sales were light the past week and were confined to single machines. Little new inquiry developed. There are indications of a slowing down that usually occurs in the summer. However, the volume this month is expected to be about the same as in May. The market is dull in Detroit where several automobile manufacturers have sharply curtailed production previous to bringing out new models. The automotive industry is well equipped and only a moderate demand for machines for replacement and to fill in is expected from this source during the next few weeks.

Plans are being prepared by Ohio Foundry Co., 2469 East Seventy-first Street, Cleveland, for a one-story addition to No. 2 plant, 150 x 200 ft., to cost close to $100,000 with equipment. Carter-Richards Co., Engineering Building, is architect and engineer.

Electric Auto Light Co., Center Street, Fostoria, Ohio, manufacturer of automobile starting and lighting equipment, is reported planning an addition to cost more than $45,000 with equipment.

Snappy Radiator & Battery Service Co., 736 Cleveland Avenue, S.W., Canton, Ohio, will ask bids early in July for one-story addition, 40 x 85 ft., to cost about $30,000 with equipment.

Heller Brothers Co., Newcomerstown, Ohio, manufacturer of files, rasps, tools, etc., has awarded general contract to Burger Iron Co., Akron, Ohio, for one-story unit, totaling about 40,000 sq. ft. floor space, to cost more than $85,000. Company has been removing plant from Newark, N. J., to this location and carrying out expansion program.

City Ice & Fuel Co., 6611 Euclid Avenue, Cleveland, has plans for one-story ice-manufacturing plant to cost about $75,000 with equipment.

Thomas Larson, 433 Mead Street, Zanesville, Ohio, is at head of project to construct and operate a local automobile service, repair and garage building, to cost close to $150,000 with equipment.

Bluffton Mfg. Co., Bluffton, Ohio, manufacturer of washing machines, small gasoline engines, cream separators and stock founts, is moving its plant to Findlay, Ohio. H. D. Zehrbach is secretary-treasurer and general manager.

Cincinnati

CINCINNATI, June 25.

AS the end of June approaches, machine-tool builders, in checking over the volume of orders for first half of the year, find that business showed an increase of approximately 15 to 20 per cent over that in the same period of 1927. In fact, several important manufacturers report gains of as high as 30 per cent, but the experience of others brings the general average down somewhat. While a considerable percentage of the total sales was derived from the automobile industry, buyers in that field played a lesser part in purchasing machine-tools than in the previous year. Probably the outstanding feature has been the consistent sales to companies in many different industries, this class of business having been the best in several years. Machine-tool executives agree that the volume of orders placed in the past six months and the rate at which production has been sustained during that period have been especially satisfactory, in view of conditions prevailing in industry in general.

Builders are hesitant about venturing predictions for the last half of the year, but the general opinion is that buying should continue at a fairly steady pace during the next six months, possibly with a slight letdown in July and August because of the usual seasonal lull.

Sales in June are running about on a par with those of May. Several companies have had better business than last month, but these increases have been offset by the falling off in orders reported by other manufacturers. Foote Brothers Gear & Machine Co., Chicago, has contracted for a 16-ft. extension boring mill, and the Sante Fe has bought a 90-in. locomotive journal turning lathe. A local builder has sold two lathes for shipment to Russia.

Liebel-Flarsheim Co., 410 Home Street, Cincinnati, manufacturer of physical therapy and X-ray apparatus, has acquired a five-story building at Third and Plum Streets and will expend approximately $30,000 for improvements and additional equipment before removal.

Crane & Breed Casket Co., 1231 West Eighth Street, manufacturer of caskets, has purchased plant of O. Armleder Motor Truck Company, Central Parkway and will remove to this site. Approximately $100,000 will be spent in improvements.

O. Armleder Motor Truck Co., Central Parkway, Cincinnati, is preparing plans for erection of a new factory for manufacture of motor trucks.

May-Fiebeger Co., Newark, Ohio, has moved its plant to former factory of American Motor Truck Co. in that city.

Bids will soon be asked by Samuel Hannaford & Sons, Dixie Terminal Building, Cincinnati, architects, for construction of six-story automobile service, repair and garage building, to cost about $750,000 with equipment.

Board of Trustees, Wilberforce University, Xenia, Ohio, has plans for a one-story central power plant to cost $120,000, of which about $65,000 will be expended for equipment. Herbert B. Briggs, Ohio-Hartman Building, Columbus, Ohio, is State architect, in charge. Bids will be asked late in summer.

Inland Gas Corporation, Ashland, Ky., has awarded contract to Hope Engineering & Supply Co., Mount Vernon, Ohio, for installation of a pipe line for natural gas supply from fields in Knott and Floyd Counties, Ky., to Ashland and Olive Hill, Ky., about 140 miles. Project will include two compressor stations of 2000 hp. capacity.

Franciscan Fathers of Cincinnati, care of F. J. Sheblessy, Twelfth and Republic Streets, Cincinnati, architect, have plans for a three-story high school for boys on Carthage Pike, to be known as Roger Bacon High School for Boys, to cost $750,000 with vocational training department. Architect will soon take bids on general contract.

Prest-O-Lite Co., 30 East Forty-second Street, New York, manufacturer of acetylene gas apparatus, etc., has acquired property at Louisville, and plans early construction of branch plant, to cost about $40,000. Linde Air Products Co., Inc., an affiliated organization, has acquired adjoining site and is said to be arranging for immediate branch plant here, to cost close to like amount.

Sharondale Coal & Coke Co., Sharondale, Ky., is considering rebuilding of portion of plant, including tipple and head house, recently destroyed by fire, with loss reported at $60,000 including equipment.

Cardinal Fliers, Inc., Louisville, care of Hugh Nevin, Louisville, architect, has plans for airplane hangar, 80 x 200 ft., with repair and reconditioning facilities at Bowman Fields, to cost about $22,000 with equipment.

Monitor Sad Iron Co., Big Prairie, near Wooster, Ohio, is said to have plans for a one-story unit to replace portion of works recently destroyed by fire, with loss of about $25,000 including equipment.

Gulf States

Birmingham, June 25.

BOND issue of $4,000,000 will be sold by Palmer Corporation of Louisiana, Shreveport, La., N. C. McGowen, Shreveport, director, portion of proceeds to be used for extensions and improvements in natural gas properties at Monroe, Richland and Elm Grove, La., including pipe line construction.

City Council, Greenville, Miss., has plans for a municipal electric light and power house, to cost close to $40,000 with equipment. Burns & McDonnell Engineering Co., Interstate Building, Kansas City, Mo., are engineers.

Pure Oil Co., 35 East Wacker Drive, Chicago, has acquired four acres at Mobile, Ala., and plans construction of new storage and distributing plant, to cost in excess of $85,000 with equipment.

Public Utilities Co., Meridian, Miss., R. C. Heady, manager, has plans for a one-story ice-manufacturing plant to cost about $80,000 with machinery.

Texas Gulf Sulphur Co., Inc.. Gulf, Tex., has plans for a steam power station with initial capacity of 7500 hp., in connection with development of sulphur properties in this section; a one-story machine and repair shop, forge shop and other mechanical buildings will be built. Plans are in progress for a housing development for operatives. With machinery installation for sulphur mining and distribution, entire project is reported to cost in excess of $300,000. Headquarters are at 41 East Forty-second Street, New York.

Southern United Ice Co., Crystal Springs, Miss., will build an addition to ice-manufacturing plant, to cost more than $45,000 with equipment. It also plans construction of two-story cold storage and refrigerating plant at Jackson, Miss., to cost more than $50,000. G. E. Wells, Inc., 100 West Monroe Street, Chicago, is engineer in charge of both projects.

Corpus Christi Independent School District, Corpus Christi, Tex., has rejected bids recently received for new three-story high school, with manual training department, and will have revised plans drawn. It will cost upward of $200,000. Hardy & Curran, Nixon Building, are architects.

Board of Education, Montgomery, Ala., is considering installation of manual training department in three-story senior high school to cost in excess of $275,000, for which bids are being asked on general contract until July 31. Frederick Ausfeld, Shepherd Building, is architect.

City Commission, Denton, Tex., will soon begin plans for a municipal ice-manufacturing plant, approved by voters at special election June 16, to cost more than $45,000 with equipment.

Helium Division, Bureau of Mines, Department of Commerce, Washington, is said to have plans for new helium plant near Amarillo, Tex., for which a fund of close to $1,000,000 is available. Work will begin in fall., R. A. Cattell is chief engineer.

Bemis Brothers Bag Co., 601 South Fourth Street, St. Louis, is reported planning power house at burlap bag mill at Talladega, Ala. A machine shop will be built and an automobile service and garage. Entire project is estimated to cost more than $1,500,000. J. E. Sirrine & Co., Greenville, S. C., are engineers.

Moody Corporation, Esperson Building, Houston, Tex., W. L. Moody, 3d., president, has acquired oil properties in Howard and Glasscock Counties, and is reported planning early construction of pipe line. An oil refinery is also contemplated.

Pittsburgh

Pittsburgh, June 25.

THE appearance of the regular quarterly list of the Westinghouse Electric & Mfg. Co. has been the feature of the week. It contains about 50 items, calling for an expenditure of approximately $130,000. In general, inquiry has improved somewhat, but actual orders have not increased.

Bids will soon be asked by Pennsylvania Transfer Co., 298 Duquesne Way, Pittsburgh, for one-story automobile service, repair and garage building, to cost close to $90,000 with equipment. J. F. McWilliams, 127 North Highland Avenue, is architect.

Board of Education, 1500 Sixth Avenue, Altoona, Pa., is considering installation of manual training equipment in three-story and basement high school to cost $750,000, for which bids are being asked on general contract until July 23. Hersh & Scholler, Commerce Building, are architects.

Harry M. Waugh, Bluefield, W. Va., railroad contractor, is planning construction of a sand and gravel washing plant with capacity of about 750 tons per day, and will soon purchase screening bins, conveying equipment, washing equipment, loading machinery, etc.

Logan Bus Terminal, Inc., Logan, W. Va., has awarded general contract to G. C. Johnson Construction Co., Bluefield, W. Va., for a new motor bus terminal, with service and repair facilities, to cost about $85,000 including equipment.

Hubbard & Co., 6301 Butler Street, Pittsburgh, manufacturers of hardware, have filed plans for a one-story addition, 100 x 100 ft., to cost about $45,000, for which general contract recently was let to Rust Engineering Co., American State Bank Building.

T. L. Rose & Sons, 1104 House Building, Pittsburgh, have been appointed to handle sales in Pittsburgh territory for Hill Clutch Machine & Foundry Co., Cleveland.

Milwaukee

Milwaukee, June 25.

MACHINE-TOOL builders report a continuance of moderate activity, with order books holding their own. Much of the call for equipment is for replacement, but the aggregate is sufficient to keep shops busy at the average for the first five months of the year. June sales are expected to equal the May volume by most shops.

Kohler Co., Kohler, Wis., manufacturer of enameled sanitary equipment, self-contained electro-generating plants, etc., has contracted with Immel Construction Co., Bana Building, Fond du Lac, Wis., for a dry kiln addition, 125 x 500 ft. Building and equipment are estimated to cost about $250,000.

Armstrong Foundry Co., 1530 Junction Avenue, Racine, Wis., maker of gray iron castings, will take bids after July 2 for erection of a one-story shop addition, 75 x 80 ft., designed by J. Mandor Matson, local architect. An investment of about $35,000 is planned.

Pelton Steel Casting Co., 832 Elliott Place, Milwaukee, has increased its capitalization from $50,000 to $200,000 and contemplates additions and general improvements in plant. Arthur J. Ehne is president and general manager.

Appleton Machine Co., 618 South Oneida Street, Appleton, Wis., closes bids this week for erection of a new foundry, 80 x 100 ft., designed by W. F. Dolke, engineer, Evanston, Ill. It will cost about $75,000 complete.

Manitowoc Engineering Works, division of Manitowoc Shipbuilding Corporation, Manitowoc, Wis., has acquired manufacturing and selling rights of Speedcrane, formerly marketed by Moore Speed Crane Co., Chicago. Manitowoc company's representatives in New York are Forsythe Brothers, 30 Church Street. The Moore Speed Crane Co., 2916 West Twenty-sixth Street, Chicago, will continue as sales representative in that territory.

Indiana

INDIANAPOLIS, June 25.

WORK will be started by Van Camp Hardware & Iron Co., 401 West Maryland Street, Indianapolis, on one-story pipe shop, 80 x 180 ft., for storage and distribution, threading and cutting, to cost close to $30,000 with equipment.

J. B. Bayard, Vincennes, architect, has plans for a one-story automobile service, repair and garage building, 150 x 275 ft., to cost in excess of $125,000 with equipment.

Neal Coal Co., Littles, Pike County, is said to plan early rebuilding of tipple and buildings at local mines destroyed by fire June 19, with loss close to $90,000 including machinery.

Peabody Seating Co., North Manchester, recently formed with capital of $300,000, will take over and expand local plant and business of Peabody School Furniture Co. It is proposed to provide additional facilities for manufacture of school seats, as well as seats for public halls, etc. New company is headed by J. P. Peabody and J. J. Wolfe.

Crown Machine Co., Tuxedo Street and Newton Avenue, Indianapolis, will rebuild portion of plant destroyed by fire June 17, with loss reported at $35,000 including equipment.

St. Louis

ST. LOUIS, June 25.

BIDS will be received by David Stroud, city clerk, Kennett, Mo., until July 17 for equipment for municipal electric light and power plant, including one 120-hp. Diesel oil engine unit, direct-connected to 80-kw. generator, with exciter; and for two 240-hp. Diesel oil engine units, each connected to a 160-kw. generator, with exciters, switchboard and accessory equipment; also for complete power plant building. Burns & McDonnell Engineering Co., Interstate Building, Kansas City, Mo., is engineer.

Central Hardware Co., 811 North Sixth Street, St. Louis, is completing plans for one-story and basement storage and distributing plant to cost upward of $80,000 with equipment. Leo F. Abrams, Chemical Building, is architect.

Oklahoma Railway Co., Terminal Building, Oklahoma City, has plans for one-story repair shop, 100 x 175 ft., to cost close to $80,000 with equipment. G. B. Treat is company engineer.

Following recent stock issue of $3,534,000 by Consolidated Gas Utilities Co., Blackwell, Okla., a portion of fund to be used for extensions and improvements in natural gas lines and properties, company has authorized sale of bond issue in amount of $8,000,000, a considerable portion of fund to be used for purchase of plant and system of Larutan Gas Corporation, and for construction of 14-in. pressure pipe line from Amarillo, Tex., gas field to Enid, Okla.

Board of Education, Oklahoma City, Okla., plans installation of manual training equipment in new Capital Hill Senior High School, for which general contract has been let to Tankersly Construction Co., Tradesmen's National Bank Building, at $425,940. Layton, Hicks & Forsyth, Braniff Building, are architects.

Page Milk Co., Merrill, Wis., is said to be planning installation of boiler plant and machine shop at milk condensery at Coffeyville, Kan. Entire project will cost close to $180,000.

C. M. Conoway, Dallas, Tex., and associates, have plans for an ice-manufacturing plant, cold storage and refrigerating plant at Hoisington, Kan., reported to cost upward of $200,000. Herman Brand, Hoisington, will be in charge of general construction.

Arkansas Airports Co., Pine Bluff, Ark., recently formed by Felix G. Smart, 309 West Second Street, and associates, is arranging for bond issue of $75,000 and preferred stock issue of like amount, a portion of proceeds to be used for construction of airport, including hangar, repair and reconditioning shop, and oil storage and distributing station.

Board of Trustees, University of Arkansas, Fayetteville, has completed plans for one-story machine and pattern shop, 40 x 202 ft., and one-story foundry and forge shop, 30 x 152 ft. William N. Gladson, dean, school of engineering, is in charge.

McGraw Electric Co., Omaha, Neb., manufacturer of electrical products, has purchased business and property of Clark Electric Water Heater Co., heretofore owned and operated by Stoughton Mfg. Corporation, Stoughton, Wis. New owner will consolidate with its organization, and will develop facilities at Omaha plant for manufacture of Clark electric heaters and parts.

Ramsey Accessories Mfg. Corporation, manufacturer of piston rings and pistons, Holland, Mich., has purchased building formerly occupied by Davis Boring Tool Co., Spring and Forest Park Avenues, St. Louis, and will remove its factory and general offices to St. Louis. Company's branch at 4373 Duncan Avenue will be consolidated with main factory.

McNeal Machinery Co., Joplin, Mo., will handle sales in Kansas, Missouri and Oklahoma for Hill Clutch Machine & Foundry Co., Cleveland.

Detroit

DETROIT, June 25.

PLANT formerly operated by Alboy Mfg. Co., St. Clair, Mich., has been secured under lease by Pouliot Boat Co., Detroit, care of Russell J. Pouliot, 2968 Newport Street, and will be operated by new owner following remodeling and repairs. It is understood that considerable portion of initial production will be given over to speedboats.

Standard Oil Co. of Indiana, 1011 Fourth Avenue, Detroit, has awarded general contract to A. R. Crowe, 6658 Wagner Avenue, for a new storage and distributing plant at Pontiac, Mich., consisting of main three-story unit, and one-story automobile service, repair and garage building, adjoining, to cost about $150,000 with equipment.

Chevrolet Motor Co., 3044 West Grand Boulevard, Detroit, has completed plans for new plant at Saginaw, Mich., comprising foundry group for finished castings, with main one-story foundry, 280 x 530 ft.; one-story cleaning building, 110 x 320 ft.; two-story pattern shop, 100 x 183 ft.; one-story sand storage building, 100 x 220 ft., office, etc., to cost in excess of $1,000,000. Albert Kahn, Marquette building, is architect. Contract for sand molds, conveying equipment, etc., has been let to C. O. Bartlett & Snow Co., Cleveland

Evans Auto Loading Co., Dime Bank Building, Detroit, manufacturer of automobile loading equipment and devices, is said to be planning early erection of new branch factory at Eureka, Cal., for production of battery separators and kindred products. Initial plant will cost in excess of $50,000.

In connection with expansion program at Lansing plant, now under way, Durant Motors, Inc., 250 West Fifty-seventh Street, New York, has approved plans for an addition to power station, 30 x 160 ft., to cost approximately $200,000 with equipment. New boiler units of 2000 hp. capacity and other equipment will be installed. An air compressor plant will be erected on adjoining site.

Standard Automotive Parts Co., Muskegon, Mich., has plans for new one-story foundry, with laboratory building adjoining, to cost in excess of $40,000 with equipment. Frank P. Allen & Son, Grand Rapids, Mich., are architects.

Officials of Chrysler Corporation, Detroit, have formed De Sota Motor Corporation of Canada, Ltd., to operate a plant in Canada, likely in vicinity of Windsor, Ont., for manufacture of De Sota motor cars, soon to be marketed by parent company in United States.

R. B. Frantz, 116 North Washington Avenue, Saginaw, Mich., architect, has plans for a three-story automobile service, repair and garage building, to cost about $90,000 with equipment.

Rodgers Boiler & Burner Co., Muskegon, Mich., is said to be planning early rebuilding of portion of plant recently destroyed by fire, with loss close to $40,000 including equipment.

Pacific Coast

SAN FRANCISCO, June 20.

BIDS will be received by contracting officer, Quartermaster Corps, Fort Winfield Scott, Cal., until July 9 for Diesel engines for marine service, circular 1.

Yellow Cab Co., 1290 Bush Street, San Francisco, has plans for a three-story automobile service, repair and garage building, to cost about $300,000 with equipment. Powers & Ahnden, 605 Market Street, are architects.

Firestone Tire & Rubber Co., Akron, Ohio, has asked bids on general contract for a one and two-story factory branch and distributing plant, 80 x 185 ft., at Los Angeles, to cost close to $100,000 with equipment. Curlett & Beelman, Union Bank Building, Los Angeles, are architects. Local offices of company are at 1165 Figueroa Street.

Union Pacific Railroad Co., Pittock Block, Portland, has plans for a grain elevator on Swan Island, to cost $700,000 with screening, conveying, loading and other equipment. Engineering department is in charge.

Richfield Oil Co., 803 Savoy Hotel, Seattle, has plans for a new oil storage and distributing plant, to cost about $80,000 with equipment.

Utah Gas & Coke Co., Salt Lake City, Utah, operated by Middle West Utilities Co., 72 West Adams Street, Chicago, has purchased gas manufacturing and distributing plants of Utah Power & Light Co., at Salt Lake City and Ogden, Utah. New owner will take possession July 1 and contemplates extensions and improvements, with installation of additional equipment.

Oregon Packing Co., Portland, plans construction of power house, 30 x 40 ft., in connection with new one-story canning plant, 165 x 275 ft., at Yakima, Wash., entire project to cost about $50,000. L. T. Tennant, Yakima, is local manager, in charge.

Jacumba Land & Cattle Co., Jacumba, Cal., has plans for a new power plant at Jacumba Hot Springs, to cost about $50,000 with machinery. C. E. Shattuck, Stack Building, Los Angeles, is architect.

Verde Central Mines, Jerome, Ariz., has approved plans for a new mill and concentrator plant, 70 x 160 ft., to cost in excess of $175,000 with equipment.

Los Angeles Compress & Warehouse Co., San Pedro, Los Angeles, has plans for a new one-story cotton compress and distributing plant, 150 x 750 ft., to cost about $400,000 with machinery. Site has been purchased on Twenty-second Street. R. J. Cummings, Bankers' Mortgage Building, Houston, Tex., is engineer.

Canada

TORONTO, June 25.

ORDERS are appearing from widely scattered sources and cover a diversified line of tools. Taken as a whole, current business is slightly off and sales are below those of a month or six weeks ago. Local dealers and builders, however, look upon the lull as a seasonal let up and believe that business will again become active after the summer holiday. A good demand is reported for small tools.

Imperial Oil Co., head office Church and King Streets, Toronto, is inquiring for complete equipment for its proposed new repair shops at London, Ont. Building will be one story, 50 x 50 ft.

Standard Diamond Drill Co., New Liskeard, Ont., will start construction work immediately on a plant, 100 x 100 ft., for manufacture of diamond drills, etc. Company is inquiring for machinery. Hill, Clark & Francis, have general contract for erection.

Dominion Bridge Co. is arranging for erection of an addition to its plant on Sorauren Avenue, Toronto, for fabricating structural steel of a heavier type than is possible at present. When completed company will be in a position to handle all kinds of structural steel from its local shops.

Town Council, Antigonish, N. S., will make additions to its plant and equipment to supply additional electric light and power. Plans call for installation of an oil engine of 120-hp., generating unit, etc., to cost $15,000. John F. MacLellan is chairman of Council.

Link-Belt, Ltd., Toronto, has commissioned Ewart, Armer & Byam, Ltd., architect and engineer, Toronto, to prepare plans for a machine shop adjoining present plant. New unit will be 120 or 160 x 105 ft., arranged in a 45-ft. centre bay and two 30 ft. side bays. Connecting this unit and present factory will be a shipping building, 50 x 50 ft. Crane equipment includes a 10-ton and 3-ton bridge crane and a 5-ton overhead crane. Tenders will be called by middle of July, and construction is expected to start about Aug. 1.

Reid Brothers, 511 St. Catharine Street West, Montreal, have contract for an addition to cost $25,000 for Canadian Tube & Steel Products, Ltd., 107 Hamilton Street, Montreal.

Arco Co., Ltd., 16 Liberty Street, Toronto, has appointed Chapman & Oxley, Northern Ontario Building, Toronto, to prepare plans for erection of a factory at Weston, Ont., to cost $150,000.

Soper & Kent, 39-41 McNab Street North, Hamilton, Ont., are having plans prepared by W. L. Walsh, 304 Terminal Building, for erection of a three story and basement factory and office building, to cost $40,000.

Hydro Electric Power Commission of Ontario, University Avenue, Toronto, has approved construction of a third power development unit for Nipissing system at Elliott Chutes. Total installation will be about 1800 hp., and construction will be undertaken this summer.

Western Canada

Contract has been awarded by British Columbia Electric Railway Co., to C. C. Moore & Co., Vancouver, B. C., and San Francisco, for the construction of a $2,500,000 steam generating plant on Burrard Inlet, to be completed by September, 1932. Contract is for first 20,000-kw., turbo-generating units of a station which, it is expected, will ultimately contain four similar units.

Western Dominion Colleries, Ltd., 305 Trust & Loan Building, Winnipeg, will start work soon on construction of a briquetting plant at Bienfait, Sask., to cost $500,000.

Calgary Power Co., 315 Herald Building, Calgary, Alta., has started work on construction of a power development plant at Ghost River, Alta., to cost $2,500,000.

Foreign

A COMPANY in Porto Rico has plans for a hydroelectric power project on Rio Blanco River in Luquillo Mountain district in eastern part of island, to include construction of power dam and installation of 42-in. penstock, 14,000 ft. long. Entire project will cost about $800,000 with transmission line. Information regarding enterprise can be had at office of Bureau of Foreign and Domestic Commerce, Washington, reference Porto Rico No. 68612; also at office of American Consulate, San Juan, Porto Rico, J. R. McKey, assistant trade commissioner.

J. G. White Engineering Corporation, 43 Exchange Place, New York, will prepare plans and supervise construction of electrically-operated smelting plant and power station in Valdivia Lake section, Chile. New company has been formed to carry out project under name of Electro-Siderurgical de Valdivia. Generating station will have initial capacity of 30,000 hp., and smelter will occupy site of former steel mill at Port of Corral, on Pacific Ocean. Arrangements have been made with Bethlehem Steel Corporation for supply of iron ore from its properties at Tofo, vicinity of Valparaiso. Entire project is estimated to cost in excess of $6,000,000 and bond issue of $4,000,000 will soon be sold by new company in United States to provide part of sum.

East Prussian Power Co., Königsberg, East Prussia, Germany, is disposing of bond issue of $3,500,000 in United States, a portion of proceeds to be used for extensions and improvements in power plants and transmission system, including completion of new steam-operated generating plant at Elbing, now under way.

A cement manufacturing company at Ketton, England, plans construction of new mill on local site, to cost more than $1,400,000 with equipment. Information at office of Bureau of Foreign and Domestic Commerce, Washington; also at American Consulate, London, William L. Cooper, commercial attaché.

New Trade Publications

Small Pumps.—Tuthill Pump Co., 131 West Sixty-third Street, Chicago. Two folders of four pages each, illustrating and describing Typhoon pumps of model B and model C. Model B, designed for pumping oil to machine tools, is in two sizes, with capacities 30 and 90 gal. an hour. Model C is in six sizes, with capacities from ½ to 75 gal. a minute.

Chucks.—Union Mfg. Co., New Britain, Conn. Catalog No. 60, 64 pages, 5¼ x 7½ in. Independent chucks, three and four jawed, extra heavy, heavy and light pattern, iron body and all-steel, are described and illustrated. Faceplate jaws are included and sections are also devoted to geared scroll and geared screw chucks of universal and combination types. Boring machine, planer, milling machine, drill and a number of special chucks are shown. Dimensional data are given and price lists of complete units and parts.

Unit Air Conditioner.—Carrier Engineering Corporation, Newark, N. J. Bulletin of 16 pages describing in some detail, with illustrations, a unit air conditioner for industrial use. It is of a size which fits it for small factories. It is portable, requiring only simple water, steam and electric connections. It is driven by a motor of 1 hp.

Caterpillar Tractor. — Monarch Tractors Corporation, Springfield, Ill. Folder of four pages, illustrating and describing a gasoline-driven tractor weighing 13,500 lb. and designed for heavy work. The motor is of 60 hp., with a rated load capacity on the drawbar equivalent to 40 hp.

Packingless Valves.—International Oxygen Co., Newark, N. J. Folder of four pages illustrating and describing a valve for high pressure, which dispenses with the use of packing. It is of drop forged brass and has a safety device operating at 2600 to 2800 lb.

Direct-Drive Pump.—Lowville Machine & Vise Co., Lowville, N. Y. Folder of four pages illustrating and describing a new pump mounted with engine as a unit on one base and designed for isolated use. It is driven by a four-cycle engine of ¾ to 1½ hp. in the three sizes, and is rated from 22 to 75 gal. a minute.

Semi-Portable Air Compressor. — Pennsylvania Pump & Compressor Co., Easton, Pa. Bulletin 140 illustrating and describing a single-stage, double-acting air compressor driven from motor by multiple belts. The piston displacement is 65 cu. ft. of free air a minute.

Unit System for Pulverized Fuel.—Combustion Engineering Corporation, 200 Madison Avenue, New York. Catalog U-3 of 28 pages illustrates and describes the Lopulco unit system for burning pulverized coal. Several installation views are given, together with detailed description of the mill and its operation, the burner and furnace design.

Electric Furnace for Cyanide Hardening.—General Electric Co., Schenectady, N. Y. Bulletin GEA-972 of four pages illustrates a pot-type furnace for cyanide hardening at temperatures up to 1650 deg. Fahr. Four sizes are listed, with capacities ranging from 65 to 180 lb. of steel an hour. Inside dimensions of the pot vary from 8 to 16 in. in diameter and 12 to 24 in. in depth.

Steam Turbines.—General Electric Co., Schenectady, N. Y. Bulletins GEA-953 and GEA-957 illustrate and describe two types of steam turbines. The first is of a condensing and extraction type fitted with generator and ranging from 2000 to 7500 kw. The other is a mechanical-drive turbine, condensing or non-condensing, up to 600 hp. and up to 6000 r.p.m.

Thermaload Starter.—Monitor Controller Co., Baltimore. Loose-leaf folder (4 pages) describing standard sizes and junior sizes of motor starters, with illustrations of parts and price list for the equipment.

Flood Lighting.—Holophane Co., 342 Madison Avenue, New York. Folder describing a widespread light of 200 watts for general outdoor use. It is water-proof and dust-proof and is designed particularly for factory entrances, watchmen's gates, shipping platforms, warehouses, etc.

Electric Motors.—Louis Allis Co., Milwaukee, Wis. Bulletins 504, 505, 506 and 502A describing respectively, ship-ring motors, squirrel-cage motors, single-phase squirrel-cage condenser motors and inverted rotary converters. The bulletins are illustrated with installation views and sections and carry descriptions of the units covered.

Plugs and Receptacles.—Crouse-Hinds Co., Syracuse, N. Y. Bulletin 2111 of 16 pages illustrates and describes a wide variety of plugs and receptacles for making electric connections, particularly for portable machines and equipment. Prices and other particulars of the units are carried in the bulletin.

Dies and Taps.—National Acme Co., Cleveland. Booklet of 24 pages, devoted to the features of the company's line of self-opening die heads and collapsible taps and a chaser grinding fixture. Dimensional tables are included, and also tables showing thread sizes.

Portable Flood Lights.—Oxweld Acetylene Co., 30 East Forty-second Street, New York. Booklet describing the carbic light, which contains a carbide generator in the base, and a swivelled standard, holding or burner and reflector which can be pointed in any direction. Various styles operate from 5 to 12 hr. on one charge, at a reported cost of four to six cents per hour.

Concrete Roof Slabs.—Federal Cement Tile Co., 608 South Dearborn Street, Chicago. Bulletin of four pages illustrating and describing the use of long-span roof slabs of pre-cast concrete. The slabs are cast indoors under controlled conditions of temperature and moisture. They are designed particularly for industrial use and are recommended for roofs which are nearly flat.

Chain Hoists.—Union Manufacturing Co., New Britain, Conn. Folder of 16 pages illustrating and describing differential chain hoists together, with trolleys designed to run on I-beam rails. The price list covers units with capacities from ½ ton to 20 tons.

Steel Building Products.—Milwaukee Corrugating Co., Milwaukee. The Milcor Manual No. 20-E of 96 pages covers a wealth of material on steel products designed for various purposes in building construction. The manual is a data book on both materials and methods, and features expanded metal lath, interior metal trim and steel channels for partitions and ceiling supports. Engineering data on the use of these materials in conjunction with concrete, and data covering steel dome construction for concrete floors, are features of the book.

Electric Hoists.—Box Crane & Hoist Corporation, Station E, Philadelphia. Six-page folder illustrating and describing hand-operated traveling cranes fitted with electric hoisting equipment. Electric traveling cranes are included also. The sizes range from ¼ ton to 50 tons. The company is celebrating its fiftieth anniversary.

Insulation of Breechings and Stacks.—Celite Products Co., Los Angeles. Bulletin 141 of two pages illustrates and describes the method of applying insulation of breechings and stacks of boilers and furnaces generally. Sections showing successive layers of insulation or other material explain the method.

THE LAST WORD

(Contributed by the Reader Service Department of The Iron Age Publishing Co.)

IN his autobiography, Andrew Carnegie relates a conversation with William Borntraeger, who succeeded Andrew Kloman as superintendent of the mills.

When he came to the mills as shipping clerk, at $6 a week, Borntraeger had not a particle of mechanical knowledge, but he worked hard and before long so deep was his interest in steel-making that all of his expressions were based on mill practice. For example, one day he asked for a leave of absence, in order that he might visit Germany to marry his affianced and bring her to America.

"Of course, you may go," said the steel magnate, adding, "I suppose your sweetheart is a beautiful, tall, young German lady."

"Vell, Mr. Carnegie," was the response, "she is a leetle stout. *If I had the rolling of her I give her yust one more pass.*"

MIKE has been tending the lawn, trimming the hedge and sweeping the walks in front of the Packard plant for 25 years. Twenty years ago an attack of pneumonia kept him home for three weeks, but he hasn't been late or absent since.

Twelve years ago Mike's oldest son started with Packard, and nine years later young Mike, the second son, followed suit. Like their father, they rival the clock in punctuality.

But Mike is not entirely happy. He has a skeleton in his closet. If you get to know him well, he may tell you in poor English or good Polish about his third son, the "black sheep" of the family. He started with Packard in the family fashion, and for five years all went well. But temptation came. He joined the factory baseball team, made good, and turning his back on parents, Packard and prosperity, signed on a minor league team. Now he is distinguishing himself with the Philadelphia Athletics.

It's no use to explain to Mike that the boy makes more in a few months of "play" than the remainder of the family combined makes in a year of labor. For the boy is the "black sheep" who strayed from the Packard fold, and, as Mike shakes his head and sighs, you know you will never get him to believe that his third son is other than a failure.

CANNED smoke (see The Last Word, May 31) is no joke, we are informed by R. F. Sherfy, engineer, Columbus, Ohio, but is a synthetic substitute for the historic smoke house. In other words, canned smoke is used in curing hams, bacon, fish, etc. "Unfortunate being he," rhapsodizes Mr. Sherfy, "who never cautiously and fearsomely entered that small, isolated, dark and smelly smoke house, got salt in a fresh cut in his bare foot, escaped without getting scalped and ran frantically to the horse trough for relief."

Mechanically operated assembly lines are forbidden in Australia. The assembly line itself is permissible, but it must not be power-driven. In other words, the worker sets the pace. Nor are piece work rates allowed.

You might think that such restrictions as these would make the cost of manufactured goods high in Australia. They do.

Charles L. Wood is general manager of sales for the Carnegie Steel Co. His assistant is John E. Woods.

If your life has not been as stainless as it might be, and if you can't stand the heat, place your order now with the Asbestos Burial Casket Co., Lowville, N. Y.

Herbert Hoover makes a strong bid for the business paper vote, for recently he said, *"Only those may hope to succeed who are informed."* Which is another way of saying, "Read your trade paper if you want to get along."
